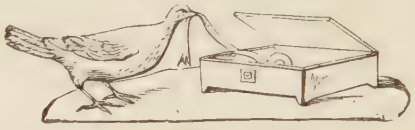
exceed our capacities for hearing. The ethics of the Pythagoreans consisted more in ascetic practice, and maxims for the restraint of the passions, especially of anger, and the cultivation of the power of endurance, than in scientific theory. What of the latter they had was, as might be expected, intimately connected with their number-theory. Happiness consisted in the science of the perfection of the virtues of the soul, or in the perfect science of numbers. Likeness to the Deity was to be the object of all our endeavours, man becoming better as he approaches the gods, who are the guardians and guides of men. Great importance was attached to the influence of music in controlling the force of the passions. Self-examination was strongly insisted on. The transmigration of souls was viewed apparently in the light of a process of purification. Souls under the dominion of sensuality either passed into the bodies of animals, or, if incurable, were thrust down into Tartarus to meet with expiation or condign punishment. The pure were exalted to higher modes of life, and at last attained to incorporeal existence. As regards the fruits of this system of training or belief, it is interesting to remark, that wherever we have notices of distinguished Pythagoreans, we usually hear of them as men of great uprightness, conscientiousness, and self-restraint, and as capable of devoted and enduring friendship. (See ARCHYTAS; DAMON; and PHINTIAS.) Existing works that bear the name of Pythagoras are spurious. See Günther, *Carmen Aureum* (Breslau, 1816); Schneeberger, *Die goldenen Sprüche des Pythagoras* (Münnerstadt, 1862). On the life of Pythagoras, see the Eng. version of the life by Iamblichus made by Taylor (London, 1818); and, in general, Ritter, *Geschichte der Pythagorischen Philosophie* (Hamburg, 1826); Brandis, *Ueber die Zahlenlehre der Pythagoreer und Platoniker* in the *Rheinisches Museum* for 1828; Gladisch, *Die Pythagoreer* (Posen, 1841); Grote, *History of Greece*, vol. iv. pp. 525–551; Langel, *Pythagore*, in the *Revue des Deux Mondes* for 1864, pp. 969–989; Rathgeber, *Grossgriechenland und Pythagoras* (Gotha, 1866); Baltzer, *Pythagoras der Weise von Samos* (Nordhausen, 1868); Chaignet, *Pythagore et la Philosophie Pythagorienne* (Paris, 1873); Gow, *Short History of Mathematics* (London, 1884); Zeller, *The Pre-Socratic Schools* (Eng. trans. 1882); and the article PHILOSOPHIA. (2) Of Rhegium, one of the most celebrated statuaries of Greece, probably flourished B.C. 480–430. His most important works appear to have been his statues of athletes.

Pytheas (*Πυθέας*). (1) An Athenian orator, distinguished by his unceasing animosity against Demosthenes. He had no political principles, made no pretensions to honesty, and changed sides as often as suited his convenience or his interest. Of the part that he took in political affairs only two or three facts are recorded. He opposed the honours which the Athenians proposed to confer upon Alexander, but he afterwards espoused the interests of the Macedonian party. He accused Demosthenes of having received bribes from Harpalus. In the Lamian War (B.C. 322) he joined Antipater, and had thus the satisfaction of surviving his great enemy Demosthenes. He is said to have been the author of the well-known saying that the orations of Demosthenes smelt of the lamp. (2) Of Massilia in Gaul, a celebrated Greek navigator, who sailed to the western and northern parts of Europe, and wrote a book containing the results of his discoveries. He probably lived in the time of Alexander the Great or shortly afterwards. He appears to have undertaken two voyages, one in which he visited Britain and Thulé, and of which he probably gave an account in his work on the Ocean; and a second, undertaken after his return from his first voyage, in which he coasted along the whole of Europe from Gadira (now Cadiz) to the Tanaïs (Don), and the description of which probably formed the subject of his *Periplus*. Pytheas made Thulé a six days' sail from Britain, and said that the day and the night were each six months long in Thulé; hence some modern writers have supposed that he must have reached Iceland, while others have maintained that he advanced as far as the Shetland Islands. But either supposition is very improbable, and neither is necessary; for reports of the great length of the day and night in the northern parts of Europe had already reached the Greeks before the time of Pytheas. There has been likewise much dispute as to what river we are to understand by the Tanaïs. The most probable conjecture is that, upon reaching the Elbe, Pytheas concluded that he had arrived at the Tanaïs, separating Europe from Asia. See Antichan, *Les Grands Voyages de Découvertes des Anciens* (Paris, 1891).

Pythia (*τὰ Πύθια*). The Pythian Games. Next to the Olympic Games, the most important of the four Greek national festivals. From B.C. 586 they were held on the Crissaean Plain below Delphi (originally called Pytho). They took place once in four years, in the third year of each Olympiad, in the Delphic month Bucatius, corresponding to a part of our middle of August. Before this time (B.C. 586) there used to take place at Delphi itself, once in eight years, a great festival in honour of Apollo, the traditional founder (Athen. xv. p. 701), in which the minstrels vied with one another in singing, to the accompaniment of the cithara, a paean in praise of the god, under the direction of the Delphic priests. After the first Sacred War, when the Crissaean Plain became the property of the priesthood, the Amphictyones introduced festivals once in four years, at which gymnastic contests and foot-races took place, as well as the customary musical contest. This contest also was further developed. Besides minstrels who sang to the cithara, players on the flute, and singers to accompaniment of the flute, took part in it, the last-named, however, for a short time only. The gymnastic and athletic contests, which were nearly the same as those held at Olympia, yielded in significance to the musical ceremonies, and of those the Pythian *νόμος* was the most important. It was a composition for the flute, worked out on a prescribed scheme, and celebrating the battle of Apollo with the dragon Python, and his triumph. (See DELPHI.) At first the prize for the victor was of some substantial value, but at the second festival it took the form of a wreath from the sacred bay tree in the Vale of Tempé. The victor also received, as in the other contests, a palm-branch. The judges were chosen by the Amphictyones. The Pythian, like the Olympic, Games were probably not discontinued till about A.D. 394. Minor Pythian Games were celebrated in other parts of the Greek world—e. g. at Ancyra in Galatia, at Aphrodisias in Caria, at Carthage, Delos, Miletus, Perinthus, Sicyon, etc. See Krause, *Die Pythien, Nemeen und Isthmien*, pp. 1–106.



Pythia (*Πυθία*). The priestess of Apollo at Delphi who pronounced the oracles. See DELPHI; ORACULUM.

Pythias (*Πυθιάς*). (1) The wife of Aristotle. (2) The daughter of Aristotle.

Pythius (*Πύθιος*). A Lydian, the son of Atys. He was a man of enormous wealth, which he derived from his gold mines in the neighbourhood of Celaenae in Phrygia. When Xerxes arrived at Celaenae, Pythius banqueted him and his whole army. His five sons accompanied Xerxes. Pythius, alarmed by an eclipse of the sun which happened, came to Xerxes, and begged that the eldest might be left behind. This request so enraged the king that he had the young man immediately killed and cut in two, and the two portions of his body placed on either side of the road, and then ordered the army to march between them (Herod. vii. 21).

Python (*πύθων*). A serpent sprung from the mud left by the deluge of Deucalion (q. v.). He was slain by Apollo. See APOLLO; DELPHI.

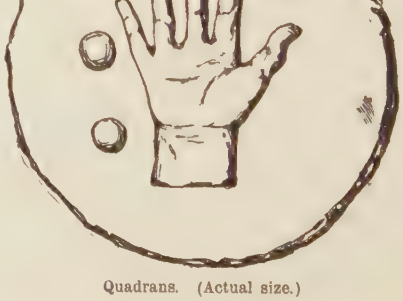
Pyxis (*πυξίς*). A small case made of box-wood (*πύξος*). It was used as a jewel-case or for the preservation of any small object of value (Petron. 110).

Pyxis. (Herculaneum.)

Pyxus (*πυξοῦς*). See BUXENTUM.

Q

Q, as a symbol.



IN LATIN.—Q = quaestiones, Quintus, quondam.
Q·Q = quicquid, quinquennalis, Quinti duo.
Q·A = quaestor aerarii, quotannis.
Q·D = quaestor designatus, quondam.
Q·M = qui militavit, quo minus.
Q·P = quaestoria potestate, quadrati pedes.
Q·V = qui vocatur.
Q·A·V(V·A) = qui annos(-is) vixit, qui vixit annos.
Q·C·A = quorum curam agebat.
Q·C·P = quinquennalis censoria potestate.
Q·C·R = quei cives Romani(erunt).
Q·E·D = quod eo die.
Q·M·C = qui militare coeperunt.
Q·P·F = qui primi fuerunt.
Q·B·F·F = quod bonum faustum felix(sit).
Q·D·R·A = qua de re agitur.
Q·E·C·F = (votum libens animo posuit) quoius eum compotem fecit.
Q·I·D·P = qui iure dicundo praeerit.
Q·P·A·P = quaestor pecuniae alimentorum publicorum.
Q·R·C·F = quando rex comitio fugit.
Q·V·P·Q = quoquoversus pedes quadratos.
Q·H·C·I·R = quo honore contentus impensam remisit.
Q·N·S·S·S = quorum nomina supra scripta sunt.
Q·S·P·P·S = qui sacris publicis praesto sunt.
Q·L·S·V·T·L = (dicite) qui legitis sit vobis terra levis.
Q·V·F·S·I·O = quod verba facta sunt in ordine.
Q·D·E·R·F·P·D·E·R·I·C = quid de ea re fieri placeret, de ea re ita censuerunt.

Quadi. A powerful German people of the Suevic race, who dwelt in the southeastern part of Germany, between Mount Gabreta, the Hercynian Forest, the Sarmatian Mountains, and the Danube. They were bounded on the west by the Marcomanni, with whom they were always closely united; on the north by the Gothini and Osi; on the east by the Iazyges Metanastae, from whom they were separated by the river Granuas (Gran); and on the south by the Pannonians, from whom they were divided by the Danube. In the reign of Tiberius the Quadi were taken under the protection of the Romans. In the reign of Marcus Aurelius, however, they joined the Marcomanni and other German tribes in the long and bloody war against the Empire, which lasted during the greater part of that emperor's reign. Their name is especially memorable in the history of this war by the victory which M. Aurelius gained over them in A.D. 174 (Dio Cass. lxxi. 8–20). Their independence was recognized by Commodus in A.D. 180. The Quadi disappear from history towards the end of the fourth century.

Quadra. (1) A square dining-table (Verg. *Aen.* vii. 115). See MENSA. (2) The plinth placed under the base of a column (Vitruv. iii. 4. 5). (3) Each of the narrow flat bands on a column forming respectively the upper and lower division between the hollow *scotia* and the swelling *torus* above and below it (Vitruv. iii. 5. 2). See COLUMNA.

Quadragesĭma. The fortieth part of imported goods (= 2½ per cent.) collected in some of the Roman provinces as a customs tax. See Wilmanns, *Exempla Inscript. Lat.* 1397, 1398; and the article PORTORIUM.

Quadrans (= *teruncius*). A Roman copper coin, a quarter of an *as* = 3 *unciae*. (See AS; NUMISMATICS; UNCIA.) The quadrans was the usual price paid for a bath. It was equivalent to about a quarter of a cent. The quadrans bore three balls to indicate the number of *unciae*, accompanied by an open hand, a dolphin, a strigil, a star, a head of Hercules or of Ceres, or a ship. The Greek term is *τετρᾶς*.

Quadrans. (Actual size.)

Quadrantal (also AMPHŎRA QUADRANTAL). A Roman measure of capacity, holding about twenty-four quarts (Fest. s. v. *publica pondera*, p. 24, ed. Müller). Half a quadrantal was an *urna;* one eighth, a *congius;* and one forty-eighth, a *sextarius.*

Quadrātae. Now Chiavasso; a Roman military station between Augusta Taurinorum (Turin) and Eporedia (Ivrea).

Quadrātus. (1) An early defender of the Christian religion, whose work (now lost) he dedicated to the emperor Hadrian in the year A.D. 126. Quadratus was in early life a resident of Asia Minor, and afterwards a bishop of the Church at Athens, but of the details of his career little is known. (2) ASINIUS. An author who wrote in Greek two historical works, one a history of Rome (Χιλιετηρίς) in the Ionic dialect, treating of the city from its foundation to the year A.D. 248, in which the Ludi Saeculares were celebrated; and a history of Parthia. Quadratus lived during the reigns of the emperors Philippus I. and Philippus II. (A.D. 244–249). (3) LUCIUS NINNIUS, a tribune of the plebs in B.C. 58, when he strongly sided with Cicero against his own colleague P. Clodius Pulcher (q. v.).

Quadrĭfrons. A surname of Ianus (q. v.). It is said that after the conquest of the Faliscans an image of Ianus was found with four foreheads (Serv. *ad* Verg. *Aen.* vii. 607). Hence a temple of Ianus Quadrifrons was afterwards built in the Forum Transitorium, which had four gates. The fact of the god being represented with four heads was considered by the ancients to be an indication of his being the divinity presiding over the year with its four seasons. See IANUS.

Quadrīga (*τέθριππον ἅρμα*). A chariot drawn by four horses, used in battle and in athletic games. (See CIRCUS.) The illustration represents a quadriga as depicted on an ancient terra-cotta lamp. (See CURRUS.) The driver of a quadriga is called *quadrigarius.*

Quadriga. (Rich.)

Quadrigarius, Q. CLAUDIUS. A Roman annalist who flourished B.C. 120–78. His work, which contained at least twenty-three books, commenced immediately after the destruction of Rome by the Gauls, and must in all probability have come down to the death of Sulla, since the seventh consulship of Marius was commemorated in the nineteenth book. By Livy he is uniformly referred to simply as Claudius or Clodius. By other authors he is cited as Quintius, as Claudius, as Q. Claudius, as Claudius Quadrigarius, or as Quadrigarius. From the caution evinced by Livy in making use of him as an authority, especially in matters relating to numbers, it would appear that he was disposed to indulge, although in a less degree, in the same exaggerations as characterize his contemporary Valerius Antias. He is warmly praised by Gellius (x. 13; xiii. 29; xv. 1). See LIVIUS.

Ianus Quadrifrons in the Forum Transitorium at Rome.

Quadrigātus (sc. *nummus*). A silver denarius having the device of a four-horse chariot (*quadriga*) on the reverse.

Quadrigatus. (Actual size.)

Quadrirēmis. A warship having four banks of oars. See NAVIS.

Quadrivium (*τετραόδιον*). (1) A place where four streets met (Juv. i. 64). (2) See LIBERALES ARTES.

Quadruplātor. A professional accuser in those cases under the Roman law which involved a pecuniary penalty (Cic. *Verr.* ii. 8. 22). The name probably owes its origin to the fact that the quadruplator professed to expose offences in which the fine was fixed at four times the damage, as, for example, a violation of the usury laws (Livy, vii. 28), and in which, therefore, his own reward would be large. See Geib, *Criminalprocess*, 106; and the article DELATOR.

Quaesītor. The Roman title of the president of an extraordinary or ordinary criminal court (*quaestio extraordinaria* or *perpetua*). According to Sulla's rules of procedure, six praetors chosen for criminal cases presided, and when this number was not sufficient additional judges, *iudices quaestionis*, were provided.

Quaestio. The Latin term for a court of inquiry, either *extraordinaria*, an extraordinary commission appointed by the Senate or people for special criminal cases, or *perpetua*, an ordinary criminal court for certain defined offences. The first court of this kind was held B.C. 149 to try a case of extortion.

In course of time, by the laws of Gaius Gracchus and of Sulla, the number of these tribunals was increased. In Cicero's time there were eight ordinary courts to try cases of extortion, high treason (*maiestas*), embezzlement (*peculatus*), unlawful canvassing for an office (*ambitus*), violence (*vis*), assassination, poisoning, and forgery. Every quaestio had a president (see QUAESITOR), either one of the praetors chosen by lot, or when the number of these was not sufficient, a *iudex quaestionis*, in addition to a certain number of sworn judges. See IUDEX.

It was open to any one except to women, infants, and those who were *infames*, to begin a criminal prosecution, even if he himself had not been the party injured. There was no public prosecutor; but the State, by means of pecuniary rewards and conferring of dignities, encouraged the prosecution of criminals. If, however, the accused party was found innocent, it was open to him to prosecute his accuser for chicanery. (See CALUMNIA.) The case was begun by the *postulatio*, a request, with a statement of the crime and name of the accused, for permission to prosecute, made to the praetor at an open sitting in the market-place. If several persons offered themselves as accusers, the choice was made by *divinatio* (q. v.). But besides the principal accuser, others were allowed, who signed the indictment, and were therefore called *subscriptores*. When permission had been obtained, there followed the *nominis delatio*, the handing in of the indictment; the *receptio* and *inscriptio*, the reception and entry of the same in the official list by the praetor; the *interrogatio*, the examination (also by the praetor) of the accused, who was now *reus* (q. v.). Unless he pleaded guilty or clearly proved his innocence, the *diei dictio*, or date of hearing the case, was fixed at the earliest in ten days, in special cases not till 100 days later. It was the duty of the complainant to collect in the meantime the necessary evidence and witnesses, and for this purpose he received an official authorization. At the sitting of the court, which was held publicly by the sworn judges (*cognitio*), after the judges and parties had been cited, the accuser delivered his accusation in a continuous speech, the *subscriptores* followed him, then the accused and his *patroni*. The duration of these speeches (*actiones*) was at first unlimited, but afterwards, to correct the abuse of this privilege, a water-clock was introduced, which limited the time of each speaker; the time allowed for the defence was about a third greater than that for the accusation. Then followed the proof (*probatio*) of the case. For this documents, circumstantial evidence, and declarations of witnesses were used. Next, unless the case was adjourned for the production of further proof (*ampliatio*), or for a new trial on the third day (*comperendinatio*), the votes of the judges on the question of guilt or innocence were taken. The voting was usually in secret. The judges received from the president wooden tablets covered with wax, on the one side inscribed with a C (*condemno*, "I condemn"), on the other with an A (*absolvo*, "I acquit"). They erased one of these letters and threw the tablets into an urn. In cases where they were unable to decide respecting the guilt or innocence of the accused, they could signify the same by writing on the tablet the letters N. L. (*non liquet*).

The result of the voting was then formally proclaimed by the president; and if a fine was inflicted, the amount (*litis aestimatio*) was then decided by the president and the sworn judges. A man once acquitted could not be retried for the same offence unless his acquittal had been procured by collusion (see PRAEVARICATIO) of the accuser. There was no way of altering the verdict of the sworn judges, and the punishment was exacted immediately after the sentence had been given. If it was one of degradation (*infamia*) or exile (*interdictio aquae et ignis*; see EXSILIUM), the man so punished could be reinstated in the rights he had forfeited (*restitutio in integrum*). This was done by a decree of the people; in later times, by the emperor's pardon. These courts of sworn judges lasted till the beginning of the third century A.D.

Quaestiōnes Naturāles. See SENECA.

Quaestiōnes Romānae. See PLUTARCH'S.

Quaestōres (from *quaero*, *quaesitor*, "the investigator," "searcher"). The Latin term originally given to two officials chosen by the king; they had to do with those suspected of capital offences. In the time of the Republic they performed the same duty under the consuls, by whom they were chosen every year. When the administration of justice in criminal cases came into the hands of the Comitia Centuriata, the quaestors received, in addition to their old privilege of pleading by the mandate of the consuls, which they lost later, the management of the State treasury (*aerarium*) in the temple of Saturn. They became recognized officials when they were elected at the Comitia Tributa under the presidency of the consuls (probably about B.C. 447). The quaestors had no regular badges of office. In 421 their number was doubled, and the plebeians received the right of appointing to the office of quaestor, though they did not exercise it till twelve years later. The four quaestors shared their duties, so that two of them acted as masters of the treasury (*quaestores aerarii*) and remained in the city (hence their name *quaestores urbani*), while the other two accompanied the consuls on campaigns, in order to administer the military chest.

It was part of the duty of the former two to collect the regular revenues of State (taxes and custom dues) and the extraordinary revenues (fines, levies for war, and money produced by the sale of booty); further, to make payments, which might not be made to the consuls except by special permission of the Senate; to control the accounts of income and expenditure, which were managed under their responsibility by a special class of officials (*scribae*); to make arrangements for public burials, for the erection of monuments, for the entertainment of foreign ambassadors, etc., at the expense of the treasury. Further, they preserved at their place of business—the temple of Saturn—the military standards, also the laws, the decrees of the Senate, and the plebiscita, and kept a register of the swearing in of the officials, which took place there.

After the subjection of Italy, four more quaestors were appointed in B.C. 267. They were stationed in different parts of Italy, at first at Ostia and Ariminum, probably to supervise the building of fleets. Sulla increased their number to twenty, ten of whom were appointed, in the place of the previous two, to accompany the proconsuls and propraetors to the provinces, two to help the consul who remained in the city, and two to help the other two original quaestors at their work in the city. The quaestors employed in the provinces (Sicily alone had two of these, stationed at Syracuse and Lilybaeum respectively) were principally occupied with finance; they managed the provincial treasury, and defrayed out of it the expenses of the army, the governor, and his retinue; any surplus they had to pay in to the State treasury at Rome, and to furnish an exact statement of accounts. The governor might appoint them his deputies, and if he died they assumed the command; in both of these cases they acted *pro praetore*—i. e. as propraetors. Caesar raised their number to forty, in order to be able to reward a greater number of his adherents; for the office gave admittance to the Senate, and the position of quaestor was looked upon as the first step in the official career. The age defined by law was from twenty-seven to thirty years. When the beginning of the magisterial year was fixed for January 1, the quaestors assumed office on December 5, on which day the quaestors in the *aerarium* decided by lot what the work of each should be.

Even under the Empire, when the normal number of quaestors was increased to twenty and the age reduced to twenty-five, the office of quaestor remained the first step to higher positions in the State. But the power of the quaestors grew more limited as the management of the treasury was intrusted to special *praefecti aerarii*, so that the city quaestors had only charge of the archives, to which the supervision of the paving of streets was added. After the division of the provinces between the emperor and the Senate, quaestors were only employed in the senatorial provinces, and were not abolished till the constitution of the provinces in general was altered by Diocletian. Four quaestors were told off for service to the consuls. The two *quaestores principis*, or *Augusti*, were a new creation: they were officers assigned to the emperors, if the latter were not consuls, in which case they would already be entitled to two quaestors. As secretaries to the emperor, they had to read his decrees to the Senate at its sittings. From these quaestors was developed, in the time of Constantine, the *quaestor Sacri Palatii*, the chancellor of the Empire.

Quail-fights. See VENATIONES.

Qualus (*τάλαρος*). A wicker basket. See CALATHUS.

Quariates. A people of Gallia Narbonensis on the river Druentia (Durance), below the modern Briançon (Pliny, *H. N.* iii. 35).

Quarries. See LAUTUMIAE.

Quartarius (*τέταρτον*). A measure of capacity, one fourth of the *sextarius* (pint).

Quasillus and **Quasillum** (*τάλαρις*). Diminutives of QUALUS and QUALUM.

Quaternio (*τετράς, τετράδιον*). A quire of four sheets (eight leaves) of paper; the origin of our word "quire."

Quattuorvĭri. The Roman term for an official body consisting of four men. See VIGINTISEXVIRI.

Quies. The Roman goddess of rest and tranquillity. She had a sanctuary on the Via Labicana, where travellers stopped to rest; and one outside the Porta Collina (Livy, iv. 41).

Quiētus, Q. Lusius. A Moorish chief who served with distinction under Trajan in both the Dacian and the Parthian Wars. Trajan made him governor of Iudaea, and raised him to the consulship in A.D. 116 or 117. After Trajan's death he returned to his native country, but he was suspected by Hadrian of fomenting the disturbances which then prevailed in Mauretania, and was shortly afterwards put to death by order of Hadrian (Dio Cass. lxviii. 8, 22, 30, 32; lxix. 2).

Quilt. See STRAGULUM.

Quinarius. A silver coin equal to a half-denarius, and worth about nine cents. See DENARIUS.

Quinarius. (Actual size.)

Quinctia (or **Quintia**) **Gens.** A Roman patrician gens, being one of the Alban houses that came to Rome with Tullus Hostilius. Its most distinguished branches bore the names Capitolinus, Cincinnatus, and Flaminius. See LUPERCALIA, p. 980.

Quinctilius Varus. See VARUS.

Quinctius Cincinnātus. See CINCINNATUS.

Quinctius Flamininus. See FLAMININUS.

Quincunx. (1) A copper Roman coin weighing five ounces (*quinque unciae*), whence the name. It was marked by five balls (cf. the illustration under QUADRANS), and was valued at five-twelfths of an *as*. It is extremely rare, there being no specimens even in the British Museum. (2) The name given to an arrangement of things by fives after the fashion of the points on a die, thus:

and to a series arranged in this way:

It was a favourite method of arranging trees (Cic. *De Sen.* 17). The French use the same word in the phrase *en quinconce*.

Quincupĕdal. A Roman graduated measuring-rod, five feet long (Mart. xiv. 92).

Quindecimvĭri. The Roman term for an official body consisting of fifteen men, especially that appointed for the inspection of the Sibylline Books. See SIBYLLAE.

Quinquagesĭma, sc. *pars.* (1) A Roman tax of the fiftieth part, or two per cent. on the value of all slaves who were sold. It was instituted by Augustus (Dio Cass. lv. 31). (2) A similar tax at Athens (*πεντηκοστή*) levied on exports and imports. See PENTECOSTÉ.

Quinquātrus and **Quinquātria** (neut. pl.). A festival celebrated at Rome on the 19th of March, in honour of Mars and, in a greater degree, of Minerva, whose temple had been founded on that day on the Aventine. An incorrect explanation of the name *quinquatrus*, which means the fifth day after the Ides (Varro, *L. L.* vi. 14), led to the festival in honour of Minerva being afterwards prolonged to five days. It was celebrated by all whose employment was under the protection of the goddess, such as teachers and their pupils. The latter obtained a holiday during the festival, and began a new course of study when it was over. The former received at this time their yearly stipend —the *minerval.* (See LUDUS LITTERARIUS.) The festival was also celebrated by women and children (as being spinners and weavers), by artisans and artists of every kind, and by poets and painters. The first day of the festival was celebrated with sacrifices by the State in honour of the founding of the temple. On the following days the gladiators performed, and there were social gatherings in the houses. On June 13th the minor Quinquatrus (*Quinquatrus minusculae*) took place. This festival lasted three days. It was celebrated by the guild of the flute-players, an important and numerous body at Rome. They honoured the goddess as their special patroness by meeting at her temple, by masked processions through the city, and by a banquet in the temple of the Capitoline Iupiter. See Livy, lx. 30; Ovid, *Fast.* vi. 651; Juv. x. 115; and Marquardt, *Staatsverwaltung*, iii. 566 in the second edition.

Quinquennāles. The officials chosen every five years in the Italian municipalities (see MUNICIPIUM), corresponding to the Roman censors. See CENSOR.

Quinquennalia. Roman games instituted by Nero in A.D. 60, in imitation of the Greek festivals (*πεντετηρίδες*). They included contests in music, gymnastics, and equestrian feats, and were also known from their founder as NERONIA or the AGON NERONEUS (Suet. *Nero*, 12). See LUDI.

Quinquerēmis (*τετρήρης*). A Roman ship of war with five banks of oars. See NAVIS.

Quinquertium. A Roman athletic contest corresponding to the Greek *πένταθλον.* See PENTATHLON.

Quinquevĭri. A name given by the Romans to any board of five commissioners such as under the Republic were frequently appointed by the extraordinary magistrates to carry out any particular measure, as the Quinqueviri Mensarii or bankers authorized to manage public loans and other financial matters, something like a modern syndicate. Other functions that were sometimes assigned to such commissioners were the repairs of the city walls and towers (Livy, xxv. 7), the formation of colonies (usually, however, done by *triumviri*), etc. There was also a regular board of five (*Quinqueviri cis Tiberim*) to guard against fires, breaches of public order, etc. (Livy, xxxix. 14).

Quintāna Porta. See CASTRA.

Quintia Gens. See QUINCTIA GENS.

Quintiliānus, MARCUS FABIUS. A celebrated Roman rhetorician, born about A.D. 35 at Calagurris in Spain. After he had received his training as an orator at Rome, he returned home about A.D. 59, but again visited Rome in A.D. 68 in the suite of Galba. He there began to practise as an advocate, and also gave instruction in rhetoric. In this latter capacity he achieved such fame that he was able to open a school of rhetoric in the reign of Vespasian, and received a salary from the State. After twenty years' work he retired from his public duties in A.D. 90, and after some time devoted himself to the education of the grandchildren of Domitilla, Domitian's sister, for which he was rewarded by the emperor with the rank of consul. Though materially prosperous, his happiness was disturbed by the loss of his young wife and his two sons. He died between A.D. 97 and 100.

Of his works on rhetoric, composed in his later years, we possess the one that is more important, that on the training of an orator (*De Institutione Oratoria*) in twelve books. This he wrote in two years; but it was not until after repeated revision that he published it, just before the death of Domitian in the year 96. He dedicated it to his friend, the orator Victorius Marcellus, that he might use it for the education of his son Geta. This work gives a complete course of instruction in rhetoric, including all that is necessary for training in practical elocution, from the preliminary education of boyhood and earliest youth to the time of appearance in public. It describes a perfect orator, who, according to Quintilian, should be not only skilful in rhetoric, but also of good moral character, and concludes with practical advice. Especially interesting is the first book, which gives the principles of training and instruction, and the tenth book, for its criticisms on the Greek and Latin prose authors and poets recommended to the orator for special study. Many of these criticisms, however, are not original. Quintilian's special model, and his main authority, is Cicero, whose classical style, as opposed to the style of his own time exemplified in Seneca, he imitates successfully in his work. A collection of school exercises (*Declamationes*) which bears his name is probably not by him, but by one of his pupils, though Ritter accepts many of them as genuine.

The most important MS. of the *Institutiones* is the Codex Ambrosianus of the eleventh century. Other complete MSS. are much later—of the fifteenth century—and are full of interpolations. Early editions of Quintilian are those of Gibson (Oxford, 1693), Burmann (Leyden, 1720), and Gesner (Göttingen, 1738). A great edition is that of Spalding, 4 vols. (Leipzig, 1798–1816), to which a fifth volume was added by Zumpt (1829), and a sixth containing a lexicon and indices by Bonnell (1834). The chief edition is that of Halm (Leipzig, 1868), revised by Meister (Prague, 1886). Book X. has been separately edited by Herzog (3d ed., Leipzig, 1833), Schneidewin (Helmst., 1831); Bonnell and Meister (3d ed., Berlin, 1882); G. T. Krüger and G. Krüger (Leipzig, 1888), and J. E. B. Mayor (Pt. i., Camb., 1892). An excellent index is that in the Lemaire edition (Paris, 1821). There is a good German translation by Bossler and Baur, revised by Meister (Prague, 1886); and an English version by Watson,

with notes based on Spalding, and may be found in the Bohn Classical Library. The *Declamationes* are edited by Ritter (1884).

Quintilis Mensis. See CALENDARIUM.

Quintillus, M. AURELIUS. The brother of the emperor M. Aurelius Claudius, who was elevated to the throne by the troops whom he commanded at Aquileia, in A.D. 270. But as the army at Sirmium, where Claudius died, had proclaimed Aurelian emperor, Quintillus put an end to his own life, seeing himself deserted by his own soldiers, to whom the rigour of his discipline had given offence (Eutrop. ix. 12; Zos. i. 47).

Quintĭpor, i.e. *Quinti puer.* A slave name (Varro *ap.* Non. 448. 15).

Quintius Capitolīnus Barbātus, TITUS. A celebrated Roman general in the early history of the Republic, and equally distinguished in the internal history of the State. He frequently acted as mediator between the patricians and plebeians, with both of whom he was held in the highest esteem. He was six times consul—namely, in B.C. 471, 468, 465, 446, 443, 439. Several of his descendants held the consulship, but none of these require mention except T. QUINTIUS PENNUS CAPITOLĪNUS CRISPĪNUS, who was consul in B.C. 208, and was defeated by Hannibal (Polyb. x. 32).

Quintus. An eminent physician at Rome, in the former half of the second century after Christ. He was so much superior to his medical colleagues that they grew jealous of his eminence, and formed a sort of coalition against him, and forced him to quit the city by charging him with killing his patients. He died about A.D. 148 (Galen, *De Praenot*).

Quintus Curtius. See CURTIUS.

Quintus Smyrnaeus. See CALABER, QUINTUS.

Quirinalia. A festival celebrated on February 17th of each year at Rome in honour of Quirinus, that being the date on which Romulus was said to have been carried up to heaven (Ovid, *Fasti*, ii. 457). The day was also called STULTŌRUM FERIAE or "Feast of Fools," for which see FORNACALIA.

Quirinālis Flamen. See FLAMEN.

Quirinālis Mons. A hill at Rome, added to the city by Servius Tullius (Liv. i. 44). Numa, indeed, had a house upon this mountain, but it was not considered a part of the city until enclosed within the Tullian wall. The temple of Romulus Quirinus, from which it derived its name, was built by Numa, but afterward reconstructed with greater magnificence by Papirius Cursor, the dictator (Liv. x. 46). It was the centre of the district called Alta Semita under Augustus. See ROMA.

Quirīnus. The Sabine name of Mars, as the god who brandished the lance (from the Sabine *curis*= Latin *quiris*, the lance). The Sabines worshipped him under this name as the father of the founder of their old capital, Cures, just as the Romans honoured Mars as the father of Romulus. When the Sabines migrated to Rome, they took the cult and the name of the god of their race to their new home on the Quirinal Hill. In this way Quirinus, though identical with Mars, had a distinct and separate worship on the slope of the Quirinal. He possessed a temple with priests (see FLAMEN; SALII) and a special festival. When, in the course of time, their connection was forgotten, Quirinus was identified with the deified Romulus, the son of Mars. The name is also applied to the Ianus or something in the Forum, which it seems to designate as the "Ianus of the Roman people" (Suet. *Aug.* 22).

Quirīnus, P. SULPICIUS. A native of Lanuvium, of obscure origin, but raised to the highest honours by Augustus. He was consul B.C. 12, and subsequently carried on war against some of the robber tribes dwelling in the mountains of Cilicia. In B.C. 1 Augustus appointed him to direct the counsels of his grandson C. Caesar, then in Armenia. About A.D. 5 he was made governor of Syria, and as such took a census of the Jews. He died in A.D. 21 (Dio Cass. liv. 25; Suet. *Tib.* 49; Tac. *Ann.* iii. 48).

Quirītes. A word of uncertain derivation. Mommsen regards it as composed of the root of *curis* (*quiris*), "a spear,"+ the root of *ire*, and hence ="the spearmen," "warriors." It was the name of the oldest inhabitants of Rome, the Latin Ramnes and the Sabine Tities taken together. Afterwards it became the name of the Roman people (*populus Romanus Quiritium* or *populus Romanus Quirites*) in home affairs, while *Romani* was used in connection with foreign affairs. It was the proudest of the designations of the Romans. *Quirites* was also used to indicate peaceable citizens, or civilians, as opposed to soldiers (*milites*) (Tac. *Ann.* i. 42; Suet. *Iul.* 70; Lucan, v. 358). See CIVITAS.

Quiritium Ius. See IUS.

Quiver. See ARCUS; PHARETRA.

Quiza (Κοΐζα). Now Giza, near Oran; a municipium on the coast of Mauretania Caesariensis in the northern part of Africa (Pliny, *H. N.* v. 19).

Quoit. See DISCUS.

R

R (P), as a symbol.

IN GREEK.—Only as a numeral = 17 (old system) $\rho' = 100$. $\,_{\rho} = 100{,}000$.

IN LATIN.—R = recessus, regnum, retro, revocatus, rubrica.

R·C = reficiendum curaverunt.

R·L = recte licet.

R·P = ratio privata.

R·T = ripa Tiberis.

R·P·C = rei publicae constituendae.

R·P·N = res publica nostra.

R·P·C·A = rei publicae causa abesse.

R·P·S·S = res publica supra scripta.

R·P·P·D·D = res publica Phnensium decreto decurionum.

Rabānus Maurus. A distinguished mediæval scholar, born at Mainz about A.D. 776, and educated at Fulda and at Tours under Alcuin. He taught with great success at Fulda, and in 847 was made archbishop of Mainz. His epitome of the Latin grammar of Priscianus (q. v.) was much used throughout the Middle Ages. See the Lives by his pupils Rudolphus and Trithemius prefixed to his collected works in Migne's *Patrologiae Cursus Completus*, vols. cvii.–cxii.; and the monographs by Spengler (1856), Köhler (1870), and Richter (1882). See LIBERALES ARTES.

Rabathmōba (Ῥαβαθμώβα). The Rabbath-Moab of the Old Testament; the ancient capital of the Moabites, on the eastern shore of the Dead Sea.

Rabbatamăna (Ῥαββατάμανα). The Rabbath-Ammon of the Old Testament; the ancient capital of the Ammonites in Peraea. Under Ptolemy II. (Philadelphus) it took the name PHILADELPHIA (Pliny, *H. N.* v. 74).

Rabirius. (1) GAIUS, an aged senator, accused in B.C. 63, by T. Labienus, tribune of the plebs, of having put to death the tribune L. Appuleius Saturninus in 100, nearly forty years before. (See SATURNINUS.) The accusation was set on foot at the instigation of Caesar, who judged it necessary to deter the Senate from resorting to arms against the popular party. The Duumviri Perduellionis (an obsolete tribunal) appointed to try Rabirius were C. Caesar himself and his relative L. Caesar. Rabirius was condemned, but appealed to the people in the Comitia Centuriata. The case excited the greatest interest, since it was not simply the life or death of Rabirius, but the power and authority of the Senate, which were at stake. Rabirius was defended by Cicero; but the eloquence of his advocate was of no avail, and the people would have ratified the decision of the duumvirs had not the meeting been broken up by the praetor, Q. Metellus Celer, who removed the military flag which floated on the Ianiculum. (2) Q. RABIRIUS POSTŬMUS was the son of the sister of the preceding. After the restoration of Ptolemy Auletes to his kingdom by means of Gabinius in B.C. 55, Rabirius repaired to Alexandria, and was invested by the king with the office of *dioecetes*, or chief treasurer. In this office his extortions were so terrible that Ptolemy had him apprehended; but Rabirius escaped from prison, probably through the connivance of the king, and returned to Rome. Here a trial awaited him. Gabinius had been sentenced to pay a heavy fine on account of his extortions in Egypt; and as he was unable to pay this fine, a suit was instituted against Rabirius, who was liable to make up the deficiency, if it could be proved that he had received any of the money of which Gabinius had illegally become possessed. Rabirius was defended by Cicero, and was probably condemned. (3) A Roman poet, who lived in the last years of the Republic, and wrote a poem on the Civil Wars. A portion of this, found at Herculaneum, has been edited by Kreyssig (Schneeberg, 1814); and by Bährens in his *Poetae Latini Minores* (1879).

Races and **Racing.** See CIRCUS; CURRUS; GYMNASIUM; HIPPODROMUS; OLYMPIA.

Racilius, LUCIUS. A friend of Cicero. He was tribune of the people in B.C. 56. He sided with Caesar in the Civil War and served in Spain in B.C. 48. Having conspired against Q. Cassius Longinus, the governor of that province, he was put to death (*Bell. Alex.* 52).

Rack. See ECULEUS; SUPPLICIUM.

Radagaisus. A Scythian who invaded Italy in the reign of the emperor Honorius, but was defeated by Stilicho near Florence (A.D. 408) and executed after his surrender, contrary to an express agreement (Oros. vii. 37).

Radius (ῥάβδος). (1) A pointed rod or wand, employed by professors of geometry, astronomy, or mathematics for describing diagrams in sand, etc. (Cic. *Tusc.* v. 23; Verg. *Ecl.* iii. 40). (2) (*ἀκτίς*). A ray of light, usually represented by artists as a sharp pointed spike; whence *corona radiis distincta* (Flor. iv. 2, 91), a crown ornamented with metal spikes to imitate the rays of the sun. (3) (*ἀκτίς, κνήμη*). The spoke of a wheel (Verg. *Georg.* ii. 444; Ovid, *Met.* ii. 318); so termed because it radiates from the nave, like a ray of light from a centre; hence *rota radiata* (Varro, *R. R.* iii. 5. 15), a wheel with spokes as contradistinguished from the solid wheel (*tympanum*), which had none.

Urania with Radius. (Pompeian painting.)

Raetia. See RHAETIA.

Raft. See RATIS.

Ragae. See RHAGAE.

Rags. See CENTO.

Rake. See PECTEN; RASTRUM.

Rallum (contracted from *radulum*). A scraper in the form of a spud, which a ploughman fixed on the butt end of his goad (*stimulus*), and used for scraping off the earth from the ploughshare (Pliny, *H. N.* xviii. 49, 2).

Radulum. (Rich.)

Ram. See ARIES.

Ramēses (RAAMSES), **Ramesses,** and **Ramses** (Egypt. *Ramessu*). The name of thirteen Egyptian kings belonging to the Eighteenth, Nineteenth, and Twentieth Dynasties. (See AEGYPTUS.) During their age most of the great monuments of Egypt were erected, and on the monumental inscriptions

Rameses II. (Head from Tanis.)

the name is of frequent occurrence under the form Ramessu. The second of the name, a famous warrior, is usually identified with the Pharaoh of the oppression, and Rameses III. with the Pharaoh of the Exodus, but the identification is not complete. Rameses III. is probably the same as Rhampsinitus (q. v.). In 1881 the mummy of Rameses II. was found at Deir-el-Bahari, and that of Rameses III. at Boulak in 1886. On the identification of Rameses II. with Sesostris, see SESOSTRIS. The reader is also referred to Edwards, *Pharaohs, Fellahs, and Explorers*, ch. iv. (N. Y. 1892).

Ramnes or **Ramnenses**. One of the three old patrician tribes at Rome (Varro, *L. L.* v. 55 and 81). See PATRICII; TRIBUS.

Rampart. See AGGER; VALLUM.

Ramses. See RAMESES.

Ranks. See ORDO.

Raphia (Ῥαφία) or **Raphēa** (Ῥάφεια). Now Repha; a seaport town in the extreme southwest of Palestine, beyond Gaza, on the edge of the desert.

Rapier. See GLADIUS.

Rapīna. See FURTUM.

Raptus Proserpĭnae. See CLAUDIANUS.

Rasĕnae. The Etruscans. See ETRURIA.

Rastrum, pl. RASTRI. (1) RASTRUM BIDENS (δίκελλα), a hoe or mattock. (2) RASTRUM QUADRIDENS (λίστρον?), a rake.

Ratiaria. Now Arcer; an important town in Moesia Superior on the Danube. It was the station for one of the Roman fleets (Ptol. iii. 9, 4).

Ratis (σχεδία). A raft; constructed as in modern times and used either for crossing rivers or for constructing pontoon-bridges (Livy, xxi. 27), or for short voyages from island to island (Thuc. vi. 2). The construction of a raft is described at length by Homer in the fifth book of the *Odyssey*.

Ratomăgus or **Rotomăgus**. Now Rouen; the chief town of the Vellocasses in Gallia Lugdunensis.

Rattle. See CREPUNDIA; SISTRUM.

Raudii Campi. See CAMPI RAUDII.

Raurăci. A people in Gallia Belgica, bounded on the south by the Helvetii, on the west by the Sequani, on the north by the Tribocci, and on the east by the Rhine. They must have been a people of considerable importance, as 23,000 of them are said to have emigrated with the Helvetii in B.C. 58, and they possessed several towns, of which the most important were Augusta (August) and Basilia (Basel or Bâle).

Rausia or **Rausium**. Now Ragusa; a town on the coast of Dalmatia whose importance begins only at a late period.

Ravenna. A town in Northern Italy, now Ravenna. An important place in Gallia Cisalpina, on the river Bedesis, and about a mile from the sea, though it is now about five miles in the interior, in consequence of the sea having receded all along this coast. Ravenna was situated in the midst of marshes, and was only accessible in one direction by land, probably by the road leading from Ariminum. It was said to have been founded by Thessalians (Pelasgians), and afterwards to have passed into the hands of the Umbrians, but it long remained an insignificant place, and its greatness does not begin till the time of the empire, when Augustus made it one of the two chief stations of the Roman fleet. Ravenna thus suddenly became one of the most important places in the north of Italy. When the Roman Empire was threatened by the barbarians, the emperors of the West took up their residence at Ravenna, which, on account of its situation and fortifications, was regarded as impregnable. After the downfall of the Western Empire, Theodoric also made it the capital of his kingdom; and after the overthrow of the Gothic dominion by Narses, it became the residence of the exarchs, or the governors of the Byzantine Empire in Italy, till the Lombards took the town, A.D. 752. Ravenna is remarkable for its possession of many fine specimens of early Christian art, which may be studied here to great advantage. See Finsler, *Ravenna in d. röm. Kaiserzeit* (Zürich, 1885).

Razor. See NOVACULA; TONSOR.

Readers. See ACROAMA; RECITATIONES.

Reaping-hook. See FALX.

Reātē. Now Rieti; an ancient town of the Sabines in Central Italy, said to have been founded by the Aborigines or Pelasgians, was situated on the Lacus Velinus and the Via Salaria. It was the chief place of assembly for the Sabines, and was subsequently a praefectura or a municipium. The valley in which Reaté was situated was so beautiful that it received the name of Tempé; and in its neighbourhood is the celebrated waterfall, which is now known under the name of the Fall of Terni or the Cascade delle Marmore.

Rebĭlus, C. Caninĭus. One of Caesar's legates in Gaul and in the Civil War. On the last day of December in B.C. 45, on the sudden death of the consul Q. Fabius Maximus, Caesar made Rebilus consul for the few remaining hours of the day (Cic. *Ad Fam.* vii. 30; Suet. *Iul.* 76).

Recarānus. See HERACLES.

Recepta; Actio de Recepto. An action against the master of a ship, an innkeeper, or the keeper of a livery-stable (*stabularius*) for the recovery of property intrusted to him. These persons were liable for the value of such property even though no neglect or *dolus malus* could be proven against them (Pompon. in *Dig.* xiv. 1, 3, 1).

Recinium. See RICINIUM.

Recitatiōnes. At Rome books were sometimes read aloud before their publication—a custom introduced in the time of Augustus by Asinius Pollio. At first these readings took place only before friends especially invited; afterwards they were publicly announced, and were held before great assemblies, either in the theatre or at the public baths or in the Forum, admission being open to all. Introduced, in the first instance, with a view to obtaining the criticisms of the audience, to help the author in the final revision of his work, they soon became of such importance that they determined the success of the work so recited. At the same time second-rate talent was often blinded to its imperfections by the exaggerated applause of a clique. In the time of the younger Pliny these recitations were so much in fashion that (in the April of a particular year) hardly a day passed without one (*Ep.* i. 13, § 1; cf. iii. 7, § 5; 18, § 4; v. 17, § 4; vii. 7; Juv. i. 3; iii. 9; vii. 70, with Mayor's notes). They seem to have continued until the sixth century A.D.

Reckoning. See NUMERI.

Recognitio. See EQUITES.

Recta Tunĭca. See REGILLA.

Recuperatōres. The Roman term for a sworn committee, or board, of three to five members, convened by the praetor. Such a board had to adjudicate at Rome and in the provinces in money cases (more especially on claims for compensation and damages). At first only cases between Romans and foreigners were heard in this way, and were settled within ten days. Afterwards a board of this kind decided on all legal points which had to be settled promptly. See IUDEX.

Reda (or RAEDA, a word cognate with *rota*, and wrongly spelled *rheda*). The Roman travelling-carriage with four wheels, furnished with several seats, so as to be adapted for the transport of a large party, with their luggage and necessaries (Juv. iii. 10; Mart. iii. 47, 5). It appears to have been in very general use among the Romans, both for town and country (Cic. *Mil.* 20; *Ad Att.* vi. 1; v. 17; Suet. *Iul.* 57); and probably resembled the French *char-à-banc* with a cover overhead, for the carriage itself, as well as its name, was of Gallic original (Quint. i. 5. 68). The annexed illustration is from a drawing by Ginzrot (*Wagen und*

Reda. (Ginzrot.)

Fahrwerke) after several models of carriages that appear on the columns of Trajan and M. Aurelius.

Redarius. (1) The driver of a *reda* (q. v.) (Cic. *Mil.* 10). (2) The maker of a *reda* (Capitol. *Max. et Balb.* 5).

Redemptor (*ἐργολάβος*). A contractor; like our own term, of general application for one who undertakes to perform any description of work, such as the building or repairing of a house, etc., for a stipulated amount (Cic. *Div.* ii. 21; Pliny, *H. N.* xxxvi. § 55).

Redhibitoria Actio. In Roman law an action to rescind a sale when the thing sold was found to possess a defect unknown to both buyer and seller (*Dig.* 21, 1).

Redicŭlus. A Roman deity who got his name from the belief that he induced Hannibal, when near the gates of Rome after his victory at Cannae, to return (*redire*) southward. On the Appian Way near the second mile-stone from the city was the Campus Rediculi; and the god had also a temple near the Porta Capena. He was probably one of the Lares of the city of Rome. See Festus, p. 282.

Redimicŭlum. A long lappet, or fillet attached to the *mitra* (Isidor. *Orig.* xix. 31, 5; Verg. *Aen.* ix. 616), or any other head-dress of similar character, for the purpose of fastening it under the chin; but the whole of which, when loose, would hang down over the shoulders and breast (Ovid, *Met.* x. 265). See MITRA.

Redimiculum. (Pompeian painting.)

Redŏnes. A people in the interior of Gallia Lugdunensis, whose chief town was Condaté (Rennes) (Caes. *B. G.* ii. 34; vii. 75).

Redux. An epithet of the goddess Fortuna (q. v.), as leading the traveller home in safety.

Regaliānus, Regalliānus, or Regilliānus. A Dacian who served with distinction under the emperors Claudius and Valerian. The Moesians, terrified by the cruelties inflicted by Gallienus on those who had taken part in the rebellion of Ingenuus, suddenly proclaimed Regalianus emperor, and quickly, with the consent of the soldiers, in a new fit of alarm, put him to death, A.D. 263. Hence he is enumerated among the Thirty Tyrants (q. v.).

Regia (*τὸ βασίλειον, ῥηγία*). Originally the building in which the king (*rex*), as the head of the State religion, performed the usual rites; and later, the one set apart for the Pontifex Maximus and perhaps for the Rex Sacrorum. (See PONTIFEX; REX SACRORUM.) The word is also the pure Latin equivalent of *basilica*. See BASILICA.

Regifugium. A Roman festival celebrated on February 24th perhaps to commemorate the expulsion of the kings (Ovid, *Fast.* ii. 685; Festus, s. h. v.). At this festival the Rex Sacrorum offered sacrifice on the Comitium, and then hastily fled. (See REX SACRORUM.) Probably in this case, as in many others, the sacrifice was originally regarded as a crime. The fact that the Salii were present is recorded by Festus (s. v. *Regifugium*); and possibly their presence had the same significance as the ceremony of leaping, etc., performed by them in March, presumably with a view to driving evil demons away from the city. See the *Classical Review*, v. 51 b; and Marquardt, *Staatsverwaltung*, iii. 324.

Regilla. The garment worn by the Roman bride on her wedding-day. It was woven in one piece in the old-fashioned way at the upright loom, and was also called *tunica recta*. See Festus, p. 286; and the article TELA.

Regilla or Tunica Recta.

Regillus, AEMILIUS. (1) MARCUS, a Roman, had been declared consul, with T. Otacilius, for B.C. 214, by the Centuria Praerogativa, and would have been elected, had not Q. Fabius Maximus, who presided at the Comitia, pointed out that there was need of generals of more experience to cope with Hannibal. Regillus died in B.C. 205, at which time he is spoken of as Flamen Martialis. (2) LUCIUS, son of the preceding, was praetor in B.C. 190, when he received the command of the fleet in the war against Antiochus.

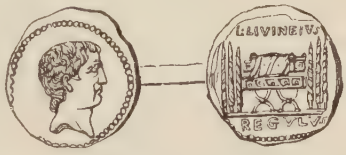
Regillus Lacus. A lake in Latium, memorable for the victory gained on its banks by the Romans over the Latins, B.C. 498 (Livy, ii. 19). It was east of Rome, in the territory of Tusculum, and between Lavicum and Gabii; but it cannot be identified with certainty with any modern lake, though it was probably the same as the Lago di Cornufelle. Macaulay's stirring ballad on the battle is well known to English readers.

Regĭmen. See LEGIO; TURMA.

Regio (*μοῖρα*). A district or division of a country or city. See ITALIA; ROMA.

Register. See ALBUM (in Appendix); TABULA.

Regium Flumen. The Roman name for the canal Naarmalcha (q. v.).



Regium Lepĭdi, Regium Lepĭdum, or simply **Regium,** also **Forum Lepĭdi.** Now Reggio; a town of the Boii in Gallia Cisalpina, between Mutina and Tarentum.

Regni. A people on the southern coast of Britain in what is now Sussex.

Regŭla (*κανών*). A ruler for drawing straight lines on plane surfaces; as the *perpendiculum* (*στάθμη*) was used for a vertical direction (Vitruv. vii. 3, 5). The name *regula* is also applied to the thread of the screw (Blümner, *Technologie*, iv. 124).

Regŭlus, M. Aquilius. An informer under Nero and Domitian. He acquired an immense fortune, and was flattered by the poet Martial in his usual fulsome strain (Mart. i. 13, 83, 112).

Regŭlus, Atilius. (1) M., consul B.C. 335, carried on war against the Sidicini. (2) M., consul 294, carried on war against the Samnites. (3) M., consul 267, conquered the Sallentini, took the town of Brundusium, and obtained in consequence the honour of a triumph. In 256 he was consul a second time with L. Manlius Vulso Longus. The two consuls defeated the Carthaginian fleet, and afterwards landed in Africa with a large force. They met with great and striking success; and after Manlius returned to Rome with half of the army, Regulus remained in Africa with the other half and prosecuted the war with the utmost vigour. The Carthaginian generals Hasdrubal, Bostar, and Hamilcar avoided the plains, where their cavalry and elephants would have given them an advantage over the Roman army, and withdrew into the mountains. There they were attacked by Regulus, and defeated with great loss; 15,000 men are said to have been killed in battle, and 5000 men with 18 elephants to have been taken. The Carthaginian troops retired within the walls of the city, and Regulus now overran the country without opposition. Numerous towns fell into the power of the Romans, and among others Tunis, at the distance of only twenty miles from the capital. The Carthaginians, in despair, sent a herald to Regulus to solicit peace; but the Roman general would only grant it on such intolerable terms that the Carthaginians resolved to continue the war, and hold out to the last. In the midst of their distress and alarm, success came to them from an unexpected quarter. Among the Greek mercenaries who had lately arrived at Carthage was a Lacedaemonian of the name of Xanthippus. He pointed out to the Carthaginians that their defeat was owing to the incompetency of their generals, and not to the superiority of the Roman arms; and he inspired such confidence in the people that he was forthwith placed at the head of their troops. Relying on his 4000 cavalry and 100 elephants, Xanthippus boldly marched into the open country to meet the enemy. In the battle which ensued Regulus was totally defeated; 30,000 of his men were slain; scarcely 2000 escaped to Clypea; and Regulus himself was taken prisoner with 500 more (B.C. 255). Regulus remained in captivity for the next five years, till 250, when the Carthaginians, after their defeat by the proconsul Metellus, sent an embassy to Rome to solicit peace, or at least an exchange of prisoners. They allowed Regulus to accompany the ambassadors on the promise that he would return to Rome if their proposals were declined, thinking that he would persuade his countrymen to agree to an exchange of prisoners in order to obtain his own liberty. This mission of Regulus is one of the most celebrated stories in Roman history. The orators and poets related how Regulus at first refused to enter the city as a slave of the Carthaginians; how afterwards he would not give his opinion in the Senate, as he had ceased by his captivity to be a member of that illustrious body; how, at length, when he was allowed by the Romans to speak, he endeavoured to dissuade the Senate from assenting to a peace, or even to an exchange of prisoners, and when he saw them wavering, from their desire of redeeming him from captivity, how he told them that the Carthaginians had given him a slow poison, which would soon terminate his life; and how, finally, when the Senate through his influence refused the offers of the Carthaginians, he firmly resisted all the persuasions of his friends to remain in Rome, and returned to Carthage, where a martyr's death awaited him. On his arrival at Carthage he is said to have been put to death with the most excruciating tortures.

Coin of a Livineius, with Head of Regulus.

It was related that he was placed in a chest covered over in the inside with iron nails, and thus perished; and other writers stated in addition that after his eyelids had been cut off he was first thrown into a dark dungeon, and then suddenly exposed to the full rays of a burning sun. When the news of the barbarous death of Regulus reached Rome, the Senate is said to have given Hamilcar and Bostar, two of the noblest Carthaginian prisoners, to the family of Regulus, who revenged themselves by putting them to death with cruel torments.

This celebrated tale, however, has not been allowed to pass without question in modern times. Many writers supposed that it was invented in order to excuse the cruelties perpetrated by the family of Regulus on the Carthaginian prisoners committed to their custody. Regulus was one of the favourite characters of early Roman story. Not only was he celebrated on account of his heroism in giving the Senate advice which secured him a martyr's death, but also on account of his frugality and simplicity of life. Like Fabricius and Curius he lived on his hereditary farm, which he cultivated with his own hands; and subsequent

ages loved to tell how he petitioned the Senate for his recall from Africa when he was in the full career of victory, as his farm was going to ruin in his absence and his family was suffering from want. See Wolff, *M. Atilii Reguli Vita* (1846); and Jäger, *M. Atilius Regulus* (1878).

(4) GAIUS, surnamed SERRĀNUS, consul B.C. 257, when he defeated the Carthaginian fleet off the Liparaean Islands, and obtained possession of the islands of Lipara and Melite. He was consul a second time in 250, with L. Manlius Vulso. The two consuls undertook the siege of Lilybaeum; but they were foiled in their attempts to carry the place by storm, and after losing a great number of men, were obliged to turn the siege into a blockade. This Regulus is the first Atilius who bears the surname *Serranus*. See SERRANUS.

Reii Apollināres. Now Riez; a Roman colony in Gallia Narbonensis, east of the Druentia (Durance).

Reins. See HABENA.

Reiske, JOHANN JAKOB. See article in Appendix.

Relatio. See SENATUS.

Relatiōnes. See SYMMACHUS.

Relegatio. Banishment from Rome; in imperial times a milder form of exile, which did not affect the rights as a citizen of the man sentenced to it. See DEPORTATIO; EXSILIUM.

Religio (RELLIGIO. The etymology of the word is doubtful. Cicero derived it from *relegere* [*N. D.* ii. 28, 72], which is supported by a passage in Gellius [iv. 9, 1]; but the probable base is that of the verb *ligare* [Serv. *ad* Verg. *Aen.* viii. 349; Lactant. iv. 28; Augustin. *Retract.* i. 13]; and the notion of binding seems to have been in the mind of Lucretius in using such expressions as *religionum nodis animos exsolvere* [i. 931; iv. 7]. See Munro on Lucret. i. 109; Mayor on Cic. *l. c.*; Corssen, *Aussprache*, i. 444 foll.; and for the spelling, Brambach, 131). The gods of the Greeks were originally personifications of the powers of nature, limited in their activity to that province of nature from the phenomena of which they are derived. As these phenomena were regarded as acts or sufferings of the gods in question, a cycle of myths was thus developed. In the minds of the people, the special significance of these myths necessarily vanished in proportion as the original connection of the gods with the phenomena of nature receded to the background, while greater prominence was given to the conception of the gods as personal beings holding sway, primarily in their own province of nature, and then beyond those limits, and no longer exclusively in connection with the powers of nature. In the oldest records of the intellectual life of Greece—the Homeric poems—this transition has already been carried out. The Homeric deities are exclusively occupied with the governing of mortals, whose whole life is represented as being under their influence; while traces of the old connection with the phenomena of nature are rarely found, and the old myths had long since become unintelligible tales, in which the actions of the gods appeared unreasonable and immoral, since their meaning was no longer clear. In regard to religion, as in other matters, the Homeric poems are of the utmost importance; for if in historical times a certain uniformity prevails in the representation of the deities, this may be traced in no small degree to the influence of Homer and of other poets (especially Hesiod) who were under his influence, and who gave distinct form to the vague representations of an earlier time. Nevertheless this uniformity only existed in a general way; in detail there was the greatest confusion, for the Greeks never attained to a uniform religious system and to fixed religious dogma. They possessed only a contradictory and ambiguous mythology. The only thing which was comparatively established was the traditional worship; but in this there was great diversity of place and time.

The common belief was that the gods were superhuman, though they were like mortals in form and in the ordinary necessities of life (food, drink, sleep); that they had power over nature and human beings; that all good and evil came from them; that their favour could be obtained by behaviour which was pleasing to them, and lost by that which displeased them. Among the Greek gods there was no representative of evil, neither in popular belief was there one of absolute perfection and holiness; and the deities were represented as being subject to moral weakness and deviation from right—a belief which was fostered by the traditional mythology. The gods possessed immortality, but did not exist from the beginning of all things.

I. In the opinion of the GREEKS, the ruling race of gods, the Olympians—so called from their abode, Olympus—were the third race of gods. The first ruler was Uranus (Heaven), who, by his mother Gaea (Earth), who bore him spontaneously, himself became the father of the Titans. He was expelled by his son Cronus, whose daughters, by his sister Rhea, were Hestia, Demeter, and Heré, and his sons, Hades (Pluto), Poseidon, and Zeus. He was himself expelled by his last-named son. When Zeus, by the aid of his brothers and sisters, had overcome the Titans, who rebelled against the new order of things, he divided the world with his brothers. The earth and Olympus remained common property; Hades obtained the nether world; Poseidon, the sea; Zeus, the heavens, and, as being the strongest and wisest, he also had authority over all the other gods, who worked his will, received from him their offices and spheres of action, and served him as helpers in the government of the universe. According to this division of province, the gods are divided into the divinities of heaven and earth and sea.

As in all religions founded on nature, so with the Greeks, the gods of heaven take the first place. They are specially called Olympians; and, in contrast to the gods of the earth and sea, are called the gods above, or the upper gods. The principal deities after Zeus are Heré, Athené, Apollo, Artemis, Aphroditē, Hephaestus, Ares, Hermes, and Hestia. Round them are grouped a number of minor deities, who either escort and serve the upper gods (as, for instance, Themis, and the Horae, the Graces, the Muses, Eros, Niké, Iris, Hebé, Ganymede), or else represent distinct phenomena of the heavens, as Helios (the sun), Selené (the moon), Eos (the dawn); or execute special services in the heaven-ordained government of the universe, as the goddess of birth, Eileithyia, the healing god Asclepius, and the goddesses of destiny (Moerae, Nemesis, Tyché). The gods of the sea, besides Poseidon and his spouse Amphitritē and his son Triton, are Oceanus and his offspring, Nereus and

the Nereids, Proteus, Ino (Leucothea), Melicertes (Palaemon), Glaucus (Pontius). The gods of the earth are Gaea herself, Rhea (Cybelé), Dionysus, Priapus, Pan, the Nymphs and Satyrs, Demeter and her daughter Persephoné, with her spouse Hades (Pluto). The last two are the rulers of the nether world, to which Hecaté and the Erinyes also belong.

The number of beings regarded as deities was never clearly defined. From the earliest times in Greece we find deities worshipped in one place who were not known in another. But some of these, as Dionysus and Pan, became common property in course of time; and the more lasting and more extensive the intercourse became with other peoples, more especially in the colonies, the introduction of foreign deities became greater. Some of these were identified with the gods already worshipped, while others preserved their original attributes, subject, of course, to modifications to suit the spirit of the Greeks. This aptitude for naturalizing foreign religions declined more and more as Greece ceased to flourish. On the other hand, some original deities lost their independence, and were merged into others, such as Helios and Apollo, Selené and Artemis. In the popular belief of the post-Homeric time, another numerous class of superhuman beings sprang up, which were regarded as being between gods and men, the demons (*δαίμονες*) and Heroes. See HEROS.

As to their nature and their number, there was less uniformity than in the case of the real gods. The Heroes had only local importance. Even in the case of the gods universally worshipped, it was by no means all (not even the most important) that had a place everywhere in the public worship. In the case of certain gods, their worship was only exceptional; and those gods who by order of the State were worshipped in any particular place did not necessarily enjoy forever the position to which they were entitled. Even Zeus, who was universally regarded as the highest of the gods, and figured in the cult of most of the different States, was not himself worshipped as supreme; but those gods who had always had the first place in the cult of the respective States took precedence over him, and these were not always divinities of preëminent importance. In Athens, Pallas Athené was worshipped as the principal deity, Heré in Argos; among the Dorians, especially at Delphi, Apollo; among the Ionians, Poseidon; at Rhodes, Helios; at Naxos, Dionysus; at Thespiae, Eros; at Orchomenus, the Charites (or Graces). Even in the case of the same deities, the local customs often differed considerably in respect of the names that were given to them, their attributes, and the form of worship. These differences were due partly to local causes and local opinions, partly to foreign influence, and were occasionally so considerable that doubts arose whether different deities were not really represented under the same name, as, for instance, Aphrodité.

The deities were supposed to be specially gratified by the careful observance of the traditional ritual. This continued to be carried on according to ancient custom, so that the details of these ancient cults were often curious, and their connection with the religious ideas on which they rested was often unintelligible. However, with the development of morality the view began to prevail that the observance of duties towards the State and fellow-men was also favoured by the gods as guardians of the providential order of the world; but, in the eyes of the multitude, the principal meaning of *εὐσέβεια* (piety) was the performance of the ordained worship of the gods. Again, the care of the State was confined to the outward forms of religion and to the maintenance of the traditional legal ritual. Alterations in this ritual and the introduction of new cults were only made by authority of the legislative power, usually after an oracle had been consulted to determine the divine will. Besides the worship of the deities recognized by the State, private objects of devotion were found everywhere. For instance, in the case of foreign deities at Athens, where there were many strangers either passing through or permanently resident, foreign religions were tolerated so long as they did not endanger the traditional worship or excite public disturbance by their outward ritual. Many such cults were naturalized in this way, and became, in course of time, part of the State religion. Conquest, again, contributed largely towards the introduction of novelties, for the acquisition of new territory involved that of the religious rites held therein. And, lastly, old religions, which had been looked upon as supremely holy, even if they were not absolutely superseded in the course of time, became less important in comparison with others of later origin.

Shrines, and the statues of the gods preserved in them, were the central points of the worship of the different deities. As long as the gods were not represented as having human form, stones, especially those fallen from heaven, or blocks of wood, were the objects of worship. By various stages of progress the gods were at length represented by actual images. At first they were made of wood, then of stone and metal. Clay, and even wax, were generally used for private objects of devotion. Though the real purpose of these symbols and images was to represent the divinity to the worshippers by means of a visible sign, nevertheless, in the popular belief, it was generally presumed that the divinity was actively present in them. Accordingly, the welfare of the State was often supposed to be bound up with the possession of certain symbols and images of the gods.

The decline of the Greek religion began with the decline of the State after the Peloponnesian War. Although the philosophers had already directed their assault against the belief of the people, which, with its anthropomorphism and its inconsistency, exposed itself in many ways to the attacks of the critical spirit, yet the faith of the multitude in the old gods remained unshaken, for it had long attributed the deliverance from the perils of the Persian Wars to their mighty and merciful influence. But after the Peloponnesian War the notions of the philosophers gained ground among the people and undermined the old belief, without, however, supplying any alternative to the religious feeling, which could no longer be satisfied with the outward forms of worship which still survived. With unbelief superstition came in, which was fostered (especially after the Macedonian epoch) by the foreign and barbarous cults, and the degenerate forms of mysticism which were imported from Asia and Egypt.

II. The Italian tribes, from which the ROMAN people sprang, had a common origin with the Greeks and a common foundation of religious

ideas; but on Italian soil these religious ideas received an essentially different direction. Like the Greeks, the Italians regarded the deities as persons separated as to sex and united in couples; but while the imaginative Greeks saw in their gods ideal forms full of individual life, the more sober mind of the Italian tribes, especially of the Romans, got no further than the abstract. Holding to the fundamental idea, they worshipped in the gods the abstract powers of nature, under whose influence man believed himself to be at every moment. The original Italian gods were grave and venerable, and, in a certain sense, more moral than those of the Greeks; but they lacked plastic form and poetic beauty. Accordingly, it is only with certain reservations that we can speak of a Roman mythology in a sense corresponding to that of the Greeks. The Romans lacked an Olympus and a Hades, and knew nothing of stories about the race and relationship and the love affairs of their deities. In this abstract nature of the Roman gods, it is intelligible that the Romans, during the first two hundred years from the foundation of Rome, possessed no images of their gods, but represented them by symbols—e. g. Iupiter by a flint-stone, Mars by a spear, Vesta by fire, which, even in later times, remained the symbol of the goddess. In the earliest Roman religion the deities of two Italian races, the Latins and the Sabines, were united, Rome having been originally peopled by the union of these tribes. The most important gods were the god of light and the god of all beginning, Ianus; the god of heaven, Iupiter, the greatest protector of the nation, with whom was joined the feminine element in Iuno, just as Iana (Diana) was connected with Ianus; Mars, originally the protector of agriculture, the ancestral god of the Latin race; Quirinus, originally the corresponding god of the Sabines; and Vesta, the goddess of the hearth of the State. Besides these principal deities, others were worshipped as patrons of the farmers and shepherds. Their activity extended over the earth, the fields, and the woods; they blessed the fruits of the field and garden, and gave prosperity to the cattle. Such were Tellus, Ceres, Saturnus and Ops, Liber and Libera, Faunus, Silvanus, Flora, Vertumnus, Pomona. The gods of the sea, however, who had such an important position in the Grecian mythology, had not nearly the same importance in Roman ideas as the gods of heaven and earth, for in the earliest times the sea was little regarded by the Romans. Another object of religious worship was the gods of the house and family, the Lares and Penates. But, besides these, there was an unlimited number of divine beings; for the Romans assumed that there were divine representatives of every inanimate or animate object, of every action and every event. Not only did every human being possess a special protector (*genius*, q. v.), but a number of deities watched over his development from conception to birth, and his further growth, mentally and bodily. See INDIGITAMENTA.

Again, there were manifold protecting gods for the different events of life, as Tutanus and Tutilina, who were invoked in times of trouble; Orbona, invoked by childless couples; and Febris, the goddess of fever. There were also separate gods for separate employments, and for the places where they were carried on. In this way the different institutions and phases of agriculture possessed special deities such as Robigus and Robigo, protectors of the crops against blight. So, also, with the different branches of cattle-breeding (Bubona, goddess of the breeding of horned cattle; Epona, goddess of the breeding of horses; Pales, of the breeding of sheep). Similarly with the separate parts of a house: Forculus, god of the door; Cardea, goddess of the hinge; Limentinus and Limentina, deities of the threshold. To these divine beings fresh ones were continually added, as the inclination of the Romans to recognize and trace divine influence in every single event led to the establishment of new cults after every new revelation of divine power. In this way the introduction of bronze coinage led to a *deus Aesculanus*, and later that of silver coinage to a *deus Argentinus*. Historical events gave an impulse to the personification of intellectual and moral qualities, such as Concordia, Honos, Virtus, Mens, etc. The same principle which recognized that there were some gods unknown, or, at any rate, not worshipped at Rome, led to the tolerance of private performance of foreign cults. Hence, also, it came about that the gods of conquered countries found a place in the Roman state religion, and occasionally were even introduced into the actual worship of Rome. In the latter case, however, the home deities preserved their rights in so far as the shrines of the newly imported deities were outside the limits of what was called the Pomerium (q. v.).

The religion of the Romans was gradually but completely altered by the influence of that of the Greeks. This influence made itself felt as early as the time of the latest kings. Shrines of the gods were first introduced under the elder Tarquin, and under the last Tarquin three supreme gods of the State were established—Iupiter, the representative of supreme power; Iuno, of supreme womanhood; Minerva, of supreme wisdom. These three deities received, as a token of their inseparability, a common temple on the Capitol, and were therefore called the Capitoline gods. This Greek influence was firmly established at the end of the time of the kings by the Sibylline Books, which originated among the Greeks of Asia Minor. (See SIBYLLAE.) By means of these a number of Greek and Asiatic gods were in course of time introduced into the Roman cult, partly as new deities, such as Apollo, Cybelé (*Magna Mater*), Aesculapius; partly under the names of native gods, with whom they were often identified in a very superficial way, as Demeter with Ceres, Dionysus with Liber, Persephoné with Libera, Aphrodité with Venus; and with them were introduced many innovations in the old established worship of the gods, especially the *Lectisternium* (q. v.). When, after the Second Punic War, Greek ideas irresistibly made their way in Rome, it became more and more common to identify the gods of Rome with those of Greece; and thus the original significance of many Roman deities was either obscured or even entirely lost. Divinities highly venerated of old were put into the background, and those of less importance came to be regarded as supreme, owing to their supposed analogy to Greek gods. In this way the following twelve were established by analogy to the Greek form of religion: Iupiter (Zeus), Iuno (Heré), Neptunus (Poseidon), Minerva (Athené), Mars (Ares), Venus (Aphrodité), Apollo, Diana (Artemis), Vulcanus (Hephaestus), Vesta (Hestia), Mercurius (Hermes), and Ceres (Demeter).

The Roman religion was from the beginning an affair of State. Religious, as well as political, institutions emanated from the kings, who, as high priests, organized the worship by law and laid the foundation of a law of ritual. The second king, Numa, was regarded as the real founder of the Roman cult, and of the priesthood charged with the carrying out of the same. After the kings had been abolished, religion was still controlled by the State, and the priests continued to be State officials, who were empowered by the State, on the one hand, to superintend the performance of the different cults, and, on the other (and this was the more important office), to give judgment in all matters of religion. They thus exercised considerable influence. Under the Republic, the royal prerogative of formulating decrees in all matters of religion was transferred to the Senate. As the Roman State in early times was exclusively composed of patricians, the public religion was originally their exclusive property; the plebs were not allowed to participate in that religion, and were only allowed to worship the Roman gods in private. Therefore, in the long struggle in which the plebs, with their ever-increasing power, endeavoured to secure their rights (a struggle that ended in B.C. 300), it was a question of religion as well as of politics. As regards the worship of the gods, according to Roman ideas, a pure and moral life was pleasing to them and gained their favour. This was, however, conditional on the exact performance of the outward ritual which the system of religion ordained for their cult. It consisted in a very prolonged ceremonial, performed according to the strictest injunctions and with painful minuteness of detail. This ceremonial was performed in public and private life, so that no community lacked its special shrines and sacrifices (see SACRA), and nothing of any importance was undertaken without religious sanction, which involved in particular the discovery of the divine will by means of certain signs (see AUGUR). The forms of outward worship were retained long after the decay of belief in the gods had set in. This decay was caused by the preponderance of the Greek element, and the contemporary introduction of Greek enlightenment; and it soon spread to the forms of worship. During the greater part of the republican period, the priests allowed religion to take a secondary place to politics, and, either from indifference or ignorance, neglected their official duties. Under the Empire, when the deification of deceased emperors was introduced (see APOTHEOSIS), an attempt was made to give an artificial life to the ancient forms of worship; but religious feeling could not be rekindled by forms which had long lost their meaning. When this feeling revived, it preferred, as in Greece, to find refuge in strange Oriental rites, especially those of Mithras and of Isis and Serapis, which, by means of their mysteries and their expiatory ceremonies, offered a certain degree of satisfaction, though, at the same time, they led the way to every conceivable kind of superstition.

The suppression of paganism began in the fourth century, from the time when Constantine decided in favour of Christianity, in A.D. 324. It commenced in the eastern half of the Roman Empire, while in the western half, and at Rome in particular, the Roman form of worship remained essentially undisturbed until the reign of Theodosius the Great (379–395), the resolute exterminator of paganism. In A.D. 394 the Olympic Games were held for the last time; in Rome the endowment of all public forms of worship out of the funds of the State was withdrawn, the priests were driven from the temples, and the temples closed. Nevertheless certain heathen customs long survived, such as the auguries of the consuls and some few festivals that admitted of being celebrated without offering sacrifice or entering a temple. Thus the Lupercalia were not abolished until 494, when they were transformed into a Christian festival.

Religiōsi Dies. See DIES.

Relish. See CENA; VICTUS.

Remancipatio. See EMANCIPATIO.

Remedia Amōris. See OVIDIUS.

Remi. One of the most powerful people in Gallia Belgica, inhabited the country through which the Axona flowed, and were bounded on the south by the Nervii, on the southeast by the Veromandui, on the east by the Suessiones and Bellovaci, and on the west by the Nervii. They formed an alliance with Caesar, when the rest of the Belgae made war against him, B.C. 57. Their chief town was Durocortorum, afterwards called Remi (Rheims) (Ptol. ii. 9, 12).

Remigium. A term used collectively of the oars of a ship; and also of the whole body of rowers (ἐἰρεσία).

Remmius Palaemon, QUINTUS. A Roman grammarian of the first century A.D., a native of Vicentia (Vicenza), and originally a slave. After receiving his freedom, he opened a school at Rome, where he taught with such success as to become the most noted grammarian of his age. His personal character is described as infamous (Juv. vi. 451; vii. 215; Sueton. *Gramm.* 23). He is said to have been the first to introduce the study of Vergil into the Roman schools as a text-book. The satirist Persius was one of his pupils. Several existing treatises are sometimes ascribed to him, but

with no good reason. See Marschall, *De Remmii Palaemonis Libris Grammaticis* (Leipzig, 1887).

Remulcum (ῥῦμα). A rope for towing a ship.

Remuria. See LEMURIA.

Remus (ἐρετμός). An oar. See NAVIS.

Remus. See ROMULUS.

Renaissance. A name given to the great intellectual movement in the fourteenth and fifteenth centuries—a period which saw the transition from the Middle Ages to modern times. It began in the revolt of men of culture against the intellectual sterility and narrowness of the mediaeval spirit, and especially against scholasticism, whose pedantic and dogmatic narrowness had reached the extreme point of its development. The Renaissance began in Italy, and its first period (1300 to 1375) was marked by a universal revival of interest in classic literature and the classic ideals. It was a great revolt against bigotry and in favor of mental freedom, and its first sign was a passion for the largeness and richness of the pagan world. Traces of this feeling can be seen in Dante (1265–1321), who, although thoroughly mediaeval in his sympathies, chose Vergil as his model, and who, in the vigour and magnificence of his own verse, was a striking contrast to the dull formalists who had before his time written for the men of the Middle Age. Petrarch (1304–1374) is the first true son of the Renaissance. In his poem written in Latin hexameter on the subject of the Second Punic War and entitled *Africa*, he boldly followed the classic models, as he suggested the ancient Roman grace and freedom in his Italian *Rime*. He travelled in foreign countries and thus knew a larger world than his predecessors; and he may be said to have rediscovered Greek, which for some six centuries had been lost to the western world. His friend and disciple Boccaccio studied that language, and by his master's advice made a translation of Homer into Latin. Greeks were now encouraged to come from Constantinople to Italy, and in 1396 the learned Manuel Chysoloras began to teach in the chair of Greek founded at the instance of Salutato and Palla degli Strozzi at Florence. A Platonic academy was opened in the same city under the patronage of Cosimo de' Medici. Greek texts were brought from Constantinople, Europe was ransacked for copies of the long unused Latin classics, copyists multiplied them, libraries were founded, and schools for the study of both Greek and Latin in their classic forms were opened at Rome, Mantua, Verona, and many other towns. Pope Nicholas V. earnestly fostered the new movement, and laid the foundation of the great Vatican collection; Cardinal Bessarion greatly aided in the formation of the Library of St. Mark at Venice. Individual scholars went about looking for manuscripts of lost authors, for coins, medals, bronzes—anything that could give a better knowledge of classical antiquity. Among these men, the most famous were Poggio Bracciolini, who brought to light once more Quintilian, Lucretius, part of Cicero, Columella, Vitruvius, Silius Italicus and Asconius; and Cyriacus of Ancona, who sounded the key-note of the new movement in his famous saying, "I go to awake the dead." See BRACCIOLINI.

The second period of the Renaissance begins about 1375, and is marked by a continued zeal for classical study, and by the development of a broad learning and the new view of the intellectual life which is known as Humanism. By this time the movement had spread to Germany and France and the northern countries generally, where it developed into the wide scholarship and sound learning of men like Erasmus (q. v.), Melanchthon, Reuchlin (q. v.), the Scaligers, Muretus, and Casaubon. The movement had now gone far beyond the mere revival of classical studies, and was felt in every department of life. In philosophy it gradually replaced the purely formal methods of thought that scholasticism had fostered; in science it led to the great discoveries of Galileo and Copernicus; in architecture it brought about the revival of the classic style; in art it developed the new school of painting of which Michael Angelo and Raphael in Italy were the great names, and still another school in the Netherlands and Flanders; in religion its influence is seen in the revolt of Luther; and it indirectly inspired the passion for exploration that led to the discovery of the New World.

Rent. See VECTIGALIA.

Renuntiatio. The Roman term for the solemn and formal announcement of the names of the magistrates elected at the Comitia (q. v.) by the votes of the people. The announcement was made by the returning officer who presided at the election, and was necessary to give validity to the election.

Repagŭla. The bolt of a door. See IANUA.

Repast. See CENA.

Repetundārum Crimen (from *repetundae pecuniae*, "money which is ordered to be restored"). The name given by the Romans to the charge brought against officials for extorting money from Roman subjects or allies. Such charges were at first brought before the Senate, which heard the case itself, or else passed it on to a commission, or, again, caused it to be brought before the Comitia by the tribunes. At last, in B.C. 149, a standing court of justice (see QUAESTIO PERPETUA), in fact, the first in Rome, was instituted by the Lex Calpurnia, containing more precise definitions of acts liable to punishment, with forms of legal procedure, and determining the amount of the penalty. The increasing inclination of the officials to use the administration of the provinces as means of enriching themselves at the expense of the provincials led to repeated legislation with a view to increasing the penalty. The last law on the subject was Caesar's Lex Iulia, which was the basis of the procedure in such cases under the Empire. During that period, in consequence of the improved condition of provincial government, extortion on the part of officials became much rarer. Such extortion was generally punished by a fine of four times the amount extorted. It was also attended with a certain degree of disgrace (*infamia*), even if a still more severe punishment were not

added for other offences committed at the same time and included in the indictment, e.g. the offence of *laesa maiestas*.

Repositorium. A piece of furniture employed by the Romans for bringing upon table the various dishes comprised in a course (Plin. *H. N.* xviii. § 90), and which was placed with its contents upon a table in the dining-room (Petron. 60, 4). It consisted of a large covered box or case (whence *theca repositorii*, Petron. 39, 3), either round or square, and sometimes made of choice woods inlaid with tortoise-shell, and enriched by ornaments of silver (Fenestella *ap.* Plin. *H. N.* xxxiii. § 52; Petron. 35, 2). The whole case was moreover divided into a number of stories, one above the other, each of which held a separate tray (*ferculum*) furnished with dishes like the dinner-baskets in which a French restaurateur sends out a dinner to his customers. This is clear from Petronius 36, 1 and 2. Compare also 35, 1 and 2, where a *repositorium* is placed upon the table, and, after the first division has been removed, another tray containing a different course of entrées is exposed to view—*superiorem partem repositorii abstulerunt. Quo facto, videmus infra, scilicet in altero ferculo, altilia*, etc.—which passage distinctly points out the difference between a *repositorium* and a *ferculum*.

Repotia. See MATRIMONIUM, p. 1016.

Repudium. See DIVORTIUM.

Res. See DOMINIUM.

Resaina (Ῥέσαινα), **Resaena**, **Resina** (Ῥέσινα). Now Ras-el-Ain. A city of Mesopotamia, near the sources of the Chaboras, on the road from Carrae to Nisibis. After its restoration and fortification by Theodosius, it was called THEODOSIOPŎLIS.

Rescriptum. See CONSTITUTIONES.

Reservoir. See AQUAE DUCTUS; FONS; LACUS.

Responsa. A name given to the official opinions given by those jurists who received from the Roman emperor the *ius respondendi*. See IUS.

Restitutio ("reinstating"). A term applied by the Romans to the cancelling of a legal decision, especially to the restoration of rights of citizenship forfeited by condemnation in a criminal court. Under the Republic this restoration could be legally obtained only by a vote of the people. Under the Empire, the emperor alone possessed the privilege of granting it.

Reté and **Retis**; dim. **Reticŭlum** (*δίκτυον*), a net. Nets were made most commonly of flax or hemp, whence they are sometimes called lina (*λίνα*). The meshes (*maculae*, *βρόχοι*, dim. *βροχίδες*) were great or small according to the purposes intended. By far the most important application of network was to the three kindred arts of fowling, hunting, and fishing. In fowling the use of nets was comparatively limited. In hunting it was usual to extend nets in a curved line of considerable length, so as in part to surround a space into which the beasts of chase, such as the hare, the boar, the deer, the lion, and the bear, were driven through the opening left on one side. This range of nets was flanked by cords, to which feathers dyed scarlet and of other bright colors were tied, so as to flare and flutter in the wind. The hunters then sallied forth with their dogs, dislodged the animals from their coverts, and by shouts and barking drove them first within the *formido*, as the apparatus of string and feathers was called, and then, as they were scared with this appearance, within the circuit of the nets. In the drawing below three servants with staves carry on their shoulders a large

Hunting-nets. (Ince-Blundell Marbles.)

net, which is intended to be set up as already described. In the lower figure the net is set up. At each end of it stands a watchman holding a staff. Being intended to take such large quadrupeds as boars and deer (which are seen within it), the meshes are very wide (*retia rara*). The net is supported by three stakes (*στάλικες*, *ancones*, *vari*). To dispose the nets in this manner was called *retia ponere*, or *retia tendere*. The upper border of the net consists of a strong rope, which was called *σαρδών*. Fishing-nets (*ἁλιευτικὰ δίκτυα*) were of different kinds. Of these the most common were the *ἀμφίβληστρον*, or casting-net (*funda*, *iaculum*, *retinaculum*) and the *σαγήνη*—i. e. the drag-net, or seine (*tragum*, *tragula*, *verriculum*).

Retiarius. See GLADIATORES, p. 732.

Retractatiōnes. See AUGUSTINUS.

Reuchlin, JOHANN, also known by his Graecized name of CAPNIO. A distinguished scholar, born at Pforzheim, December 28, 1455. He was educated at Schlettstadt and at Paris, where he studied Greek under Hermonymus, a Spartan, and became exceedingly proficient in writing Latin. These pursuits he continued at Basel, where he wrote his Latin dictionary, entitled *Vocabularius Brevilioquus* in 1476. (See LEXICON.) After further travels he began lecturing at Tübingen (1481), whence he went to Heidelberg (1496). Reuchlin did much for the promotion of Greek studies in Germany, and himself edited a number of Greek texts (e. g. of Xenophon, Aeschines, Demosthenes), besides writing a Greek grammar. He became professor at Ingolstadt in 1520. His later years were given to the study of Hebrew and to semi-theological controversy. He died at Liebenzell, June 30, 1522. See the lives by Barham (London, 1843); Geiger (1871), and Horawitz (1877), and the critical monograph by Holstein (1888).

Reudigni. A people in the north of Germany, on the right bank of the Albis, north of the Langobardi (Tac. *Germ.* 40).

Reus. The term used by the Romans for the person accused, especially in a criminal trial. In such a case custom required the accused to appear in public in the garb of mourning, with beard and hair in an unkempt condition, in neglected attire, and stripped of every sign of rank. The mere accusation involved some suspension of legal rights, preventing the reus from standing for any office and from exercising the functions of a judge. The higher officials were exempt from criminal accusation while in office and when engaged in the dis-

charge of public business. Lastly, lawsuits between two persons connected by ties of family or office, such as parents and children, patrons and clients, were regarded as inadmissible.

Revenues. See DECUMA; EISPHORA; PENTACOSTÉ; PORTORIUM; VECTIGALIA.

Rex (*βασιλεύς, ἄναξ*). A king. I. GREEK.—In the Heroic Age, as depicted in the poems of Homer, the kingly form of government was universal. The authority of these kings and its limitations were derived not from any definite scheme or written code, but from the force of traditionary usage and the natural influence of the circumstances in which the kings were placed, surrounded as they were by a body of chiefs and nobles, whose power was but little inferior to that of the kings themselves. Even the title *βασιλῆες* is applied to them as well as to the king. The maintenance of regal authority doubtless depended greatly on the possession of personal superiority in bravery, military prowess, wisdom in council, and eloquence in debate. When old age had blunted his powers and activity, a king ran a great chance of losing his influence. There was, however, an undefined notion of a sort of divine right connected with the kingly office, whence the epithet *διοτρεφής*, so commonly applied to kings in Homer. The characteristic emblem of the kingly office was the *σκῆπτρον*. (See SCEPTRUM.) Our information respecting the Grecian kings in the more historical age is not ample or minute enough to enable us to draw out a detailed scheme of their functions. Respecting the kings of Sparta the reader is referred to the article EPHORI. As an illustration of the gradual limitation of the prerogatives of the king or chief magistrate, the reader may consult the article ARCHON. The title basileus was sometimes applied to an officer who discharged the priestly functions of the more ancient kings, as in Athens. See ARCHON.

II. ROMAN.—Rome was originally governed by kings. All the ancient writers agree in representing the king as elected by the people for life, and as voluntarily intrusted by them with the supreme power in the State. No reference is made to the hereditary principle in the election of the first four kings; and it is not until the fifth king, Tarquinius Priscus, obtained the sovereignty that anything is said about the children of the deceased king. Since the people had conferred the regal power, it returned to them upon the death of the king. But as a new king could not be immediately appointed, an Interrex forthwith stepped into his place. (See INTERREGES.) The necessity for an immediate successor to the king arose from the circumstance that he alone had had the power of taking the *auspicia* on behalf of the State; and as the *auspicia* devolved upon the people at his death, it was imperative upon them to create a magistrate to whom they could delegate the *auspicia*, and who would thus possess the power of mediating between the gods and the State. Originally the peoples consisted only of the *patres* or *patricii;* and accordingly, on the death of the king, we read *res ad patres redit*, or, what is nearly the same thing, *auspicia ad patres redeunt*. The Interrex was elected by the whole body of the patricians, and he appointed (*prodebat*) his successor, as it was a rule that the first Interrex could not hold the Comitia for the election; but it frequently happened that the second Interrex appointed a third, the third a fourth, and so on, till the election took place. The Interrex presided over the Comitia Curiata, which were assembled for the election of the king. The person whom the Senate had selected was proposed by the Interrex to the people in a regular *rogatio*, which the people could only accept or reject, for they had not the initiative and could not themselves propose any name. If the people voted in favour of the rogation, they were said *creare regem*, and their acceptance of him was called *iussus populi*. But the king did not immediately enter upon his office. Two other acts had still to take place before he was invested with the full regal authority and power. First his *inauguratio* had to be performed, as it was necessary to obtain the divine will respecting his appointment by means of the *auspices*, since he was the high-priest of the people. The ceremony was performed by an augur, who conducted the newly-elected king to the Arx, or citadel, and there placed him on a stone seat with his face turned to the south, while the people waited below in anxious suspense until the augur announced that the gods had sent the favourable tokens confirming the king in his priestly character. The *inauguratio* did not confer upon him the *auspicia*, for these he obtained by his election to the royal office, as the Comitia were held *auspicato*. The second act which had to be performed was the conferring of the *imperium* upon the king. The *curiae* had only determined by their previous vote who was to be king, and had not by that act bestowed the necessary power upon him; they had, therefore, to grant him the *imperium* by a distinct vote. Accordingly the king himself proposed to the *curiae* a *lex curiata de imperio*, and the *curiae* by voting in favor of it gave him the *imperium*. Livy in his first book makes no mention of the *lex curiata de imperio*, but he uses the expressions *patres auctores fierunt, patres auctores facti;* and these expressions are equivalent to the *lex curiata de imperio* in the kingly period. The king possessed the supreme power in the earliest times, and the Senate and the Comitia Curiata were very slight checks upon its exercise. In the first place, the king alone possessed the right of taking the auspices on behalf of the State; and as no public business of any kind could be performed without the approbation of the gods expressed by the auspices, the king stood as mediator between the gods and the people, and in an early stage of society must necessarily have been regarded with religious awe. (See AUGUR.) Secondly, the people surrendered to the king the supreme military and judicial authority by conferring the *imperium* upon him. The king was not only the commander in war, but the supreme judge in peace. Seated on his throne in the Comitium, he administered justice to all comers, and decided in all cases which were brought before him, civil as well as criminal. Again, all the magistrates in the kingly period appear to have been appointed by the king and not elected by the *curiae*. Further, the king was not dependent upon the people for his support; but a large portion of the public land belonged to him, which was cultivated at the expense of the State on his behalf. He had also the absolute disposal of the booty taken in war and of the conquered lands. It must not, however, be supposed that the authority of the king was absolute. The Senate and the assembly of the people must have formed some check upon his power. But these were not independent

bodies possessing the right of meeting at certain times and discussing questions of State. They could only be called together when the king chose, and, further, could only determine upon matters which the king submitted to them. The only public matter in which the king could not dispense with the coöperation of the Senate and the *curiae* was in declarations of war. There is no trace of the people having had anything to do with the conclusion of treaties of peace. The insignia of the king were the *fasces* with the axes (*secures*), which twelve lictors carried before him as often as he appeared in public, the *trabea*, the *sella curulis*, and the *toga praetexta* and *picta*. The *trabea* appears to have been the most ancient official dress, and is assigned especially to Romulus: it was of Latin origin, and is therefore represented by Vergil as worn by the Latin kings. The *toga praetexta* and *picta* were borrowed, together with the *sella curulis*, from the Etruscans, and their introduction is variously ascribed to Tullus Hostilius or Tarquinius Priscus.

See Mommsen, *Staatsrecht*, ii. pp. 1–17; id. *History of Rome*, i. ch. iv. pp. 66–70; Walter, *Geschichte des röm. Rechts*, § 17; and Seeley's introduction to his edition of the first book of Livy.

Rex Nemorensis. See ARICIA.

Rex Sacrōrum (or REX SACRIFICŪLUS), "the king of sacrifices." The name given by the Romans to a priest who, after the abolition of the royal power, had to perform certain religious rites connected with the name of king. He resembles the King Archon of the Athenian constitution. He was always a patrician, was chosen for life by the Pontifex Maximus with the assistance of the whole pontifical college (of which he became a member), and was inaugurated by the augurs. Although he was externally of high rank and, like the Pontifex Maximus, had an official residence in the Regia, the royal abode of Numa, and took the chair at the feasts and other festivities of the *pontifices*, yet in his religious authority he ranked below the Pontifex Maximus, and was not allowed to hold any public office, or even to address the people in public. His wife (like the wives of the flamens) participated in the priesthood. Our information as to the details of the office is imperfect. Before the knowledge of the calendar became public property, it was the duty of the Rex Sacrorum to summon the people to the Capitol on the Calends and Nones of each month, and to announce the festivals for the month. On the Calends he and the *regina* sacrificed, and at the same time invoked Ianus. Of the other sacrifices known to us we may mention the Regifugium on Feb. 24th, when the Rex Sacrorum sacrificed at the Comitium, and then fled in haste. This has been erroneously explained as a commemoration of the flight of Tarquinius Superbus, the last of the Roman kings; but it is much more probably one of the customs handed down from the time of the kings themselves, and perhaps connected with the purificatory sacrifice from which the month of February derived its name. At the end of the Republic the office, owing to the political disability attaching to the holder, proved unattractive, and was sometimes left unfilled; but under Augustus it appears to have been restored to fresh dignity, and in imperial times it continued to exist, at any rate, as late as the third century. See Mommsen, *Röm. Staatsrecht*, ii. 13–15 (3d ed.); Marquardt, *Staatsverwaltung*, iii. 321–324 (2d ed.).

Rex, MARCIUS. (1) QUINTUS, Roman praetor B.C. 144, built the aqueduct called Aqua Marcia. (2) QUINTUS, Roman consul in B.C. 118, founded in this year the colony of Narbo Martius in Gaul. (3) QUINTUS, Roman consul in 68, and proconsul in Cilicia in the following year. Being refused a triumph on his return to Rome, he remained outside the city till the Catilinarian conspiracy broke out in 63, when the Senate sent him to Faesulae to watch the movements of C. Mallius or Manlius, Catiline's general (Sulla, *Cat.* 32).

Rha (Ῥᾶ). Now the Volga; a great river of Asia, first mentioned by Ptolemy, who describes it as rising in the north of Sarmatia, in two branches, Rha Occidentalis and Rha Orientalis (the Volga and the Kama), after the junction of which it flowed southwest, forming the boundary between Sarmatia Asiatica and Scythia, till near the Tanaïs (Don), where it suddenly turns to the southeast, and falls into the northwestern part of the Caspian (Ptol. v. 9; vi. 14).

Rhadamanthus (Ῥαδάμανθος) and **Rhadamanthys** (Ῥαδάμανθυς). The son of Zeus and Europa, and brother of King Minos of Crete. From fear of his brother he fled to Ocalea in Boeotia, and there married Alcmené (Pausan. viii. 53, 2). In consequence of his justice throughout life, he became, after his death, one of the judges in the lower world (Plato, *Min.* p. 320) or in the Islands of the Blessed (Pind. *Ol.* ii. 75), where he has for his associates Aeacus and Minos. The name points to an Egyptian origin of the myth.

Rhaetia and **Raetia** (the latter is preferable). A Roman province south of the Danube, was originally distinct from Vindelicia, and was bounded on the west by the Helvetii, on the east by Noricum, on the north by Vindelicia, and on the south by Cisalpine Gaul, thus corresponding to the Grisons in Switzerland, and to the greater part of the Tyrol. Towards the end of the first century, however, Vindelicia was added to the province of Rhaetia, whence Tacitus speaks of Augusta Vindelicorum as situated in Rhaetia. At a later time Rhaetia was subdivided into two provinces, Rhaetia Prima and Rhaetia Secunda, the former of which answered to the old province of Rhaetia, and the latter to Vindelicia. (See VINDELICIA.) Through Rhaetia runs the principal chain of the Alps called the Alpes Rhaeticae. In it rise some of the great rivers of Northern Italy—the Athesis (Adige) and the Addua (Adda)—besides the Oenus (Inn). The early inhabitants of Rhaetia were said to be Etruscans, and down to a late date a dialect of Etruscan was spoken in parts of the country. (See Strabo, pp. 204, 292, 313; Pliny, *H. N.* iii. 133; and Polybius, xxxiv. 10—the last being the earliest mention of the Rhaeti.) In the Roman period, the preponderant race were the Kelts, who were not subdued until the reign of Augustus. The chief towns were Tridentinum (Trent) and Augusta Vindelicorum (Augsburg). See Planta, *Die alte Rätien* (1872); and Oberziner, *I Reti* (1890).

Rhagae. An important city of ancient Media whose remains, mod. Persian *Raï*, are still pointed out about five miles southeast of Teheran. The city appears as Ῥάγαι in Arrian's *Anab.* iii. 20, 2. It is probable, moreover, that on the site of the origi-

nal city destroyed by earthquake, Seleucos Nicator founded Ῥάγεια or Ῥάγα, called also Εὐρωπός (Strabo, pp. 514, 524; see also Ptolemy, 6, 5, 4). In the Old Persian Inscriptions (bk. ii. 72; iii. 2) RAGĀ is the name of a province; compare Ῥαγιανὴ Μηδία of Isidor of Charax. As a city, *Ragha* is twice mentioned in the Avesta, Vd. i. 16; Ys. xix. 18; and also several times by later Persian and Mohammedan writers, being specially connected with the name of Zoroaster (q. v.), apparently as his birthplace. There are a number of allusions to *Rages* in the Apocryphal Scriptures (Judith, i. 5, 15; Tobit, i. 14; v. 5; vi. 10). The fate of this once prosperous city, which was destroyed in the Parthian wars, rebuilt anew as Assacia under the Arsacid rulers, flourishing later as *Rai*, but finally in the twelfth century destroyed by the Tartars, and now lying in interesting ruins, affords an instructive lesson taught by the records of the past.

Rhamnus (Ῥαμνοῦς). Now Obrio Kastro; a demus in Attica, belonging to the tribe Aeantis, which derived its name from the ῥάμνος, a kind of prickly shrub. Rhamnus was situated on a small rocky peninsula on the east coast of Attica, sixty stadia from Marathon. It possessed a celebrated temple of Nemesis, who is hence called by the Latin poets *Rhamnusia dea* or *virgo* (Catull. lxvi. 71; Ovid, Trist. v. 819). A colossal statue of the goddess in this temple was the work of Agoracritus, the pupil of Phidias (Strabo, p. 396), or possibly by Phidias himself (Pausan. i. 33, 2). Remains of the temple still exist.

Rhampsinītus (Ῥαμψίνιτος). Rameses or Ramses III., one of the ancient kings of Egypt, who succeeded Proteus, and was himself succeeded by Cheops. Rhampsinitus belongs to the Twentieth Dynasty, and is known in inscriptions by the name of Ramessu-pa-neter. He is said to have stored up immense wealth in a stone treasury with a secret entrance, regarding the robbery of which Herodotus tells a very entertaining story (bk. ii. 121 foll.), resembling a similar tale narrated of the treasury built by Agamedes and Trophonius at Orchomenus, for which see TROPHONIUS. Rhampsinitus is said by Herodotus to have descended alive into Hades and to have won at dice from Persephoné (or Demeter) a golden napkin.

Rhapsōdus (ῥαψῳδός). A Greek term derived from ῥάβδω, originally designating the man who adapted the words to the epic song—i. e. the epic poet himself, who in the earlier time recited his own poetry. Afterwards the term especially denoted one who made the poems of others a subject of recitation.

At first such rhapsodists were generally poets themselves; but, with the gradual dying out of epic poetry, they came to hold the same position as was afterwards held by the actors, professionally declaiming the lays of the epic poets. Epic verses were originally sung to musical accompaniment, but after the time of Terpander, as lyric poetry became more independently cultivated, the accompaniment of stringed instruments fell into disuse; and then gradually, instead of a song-like recitation, a simple declamation, in which the rhapsodist held a branch of bay in his hand, came to be generally adopted. This had happened even before the time of Plato and Aristotle (see especially Plato's *Ion*). As in earlier times the singers moved from place to place, in order to get a hearing at the courts of princes or before festive gatherings, so the rhapsodists also led an unsettled and wandering life. At Athens (Lycurg. *Leocr.* § 102) and many other towns, as at Sicyon, before the time of the tyrant Clisthenes (Herod. v. 67), public recitations of the Homeric poems were appointed, at which the rhapsodists competed with one another for definite prizes, and thus found opportunity to display their art. It is true that other epic poems, and even the iambic poetry of Archilochus and Simonides of Amorgus, were also recited by rhapsodists; still at all times the labours of such reciters continued to be devoted in the first place to Homeric poetry (Pindar, *Nem.* ii. 2; Plato, *Ion*, 530 D; *Rep.* 599 E; *Phaedr.* 252 B). Hence they were also called Homeridae and Homeristae (Aristot. in *Athenaeus*, 620 B). It was to the older rhapsodists that the Homeric poems primarily owed their wide diffusion among the Greeks. In the course of time the high esteem in which the rhapsodists originally stood began to decline, because many practised their art as a matter of business and in a purely mechanical fashion. Still their employment survived long beyond the classical time, and not only did the public competition continue to exist, but it was also the custom to introduce rhapsodists at banquets and on other occasions. See EPOS; HOMERUS.

Rhapta (τὰ Ῥαπτά). A port on the eastern coast of Africa, the capital of Barbaria or Azania. It was the southernmost seaport known to the ancients, and was situated on the river RHAPTUS (Ptol. i. 9, 1).

Rhea (Ῥέα, Ep. and Ion. Ῥεία, Ῥείη, Ῥέη). A goddess whom the Greek legends identify as a representation of the fruitfulness of nature. She was the daughter of Uranus and Gaea, wife of her brother, the Titan Cronus, by whom she gave birth to the Olympian gods, Zeus, Hades, Poseidon, Heré, Hestia, Demeter. For this reason she was generally called the "mother of the gods." One of her oldest places of worship was Crete, where in a cave, near the town of Lyctus or else on Mounts Dircé or Ida, she was said to have given birth to Zeus (q. v.), and to have hidden him from the wiles of Cronus. The task of watching and nursing the new-born child she had intrusted to her devoted servants the Curetes, earth-born demons, armed with weapons of bronze, who drowned the cry of the child by the noise which they made by beating their spears against their shields. The name of Curetes was accordingly given to the priests of the Cretan Rhea and of the Idaean Zeus, who executed noisy war-dances at the festivals of those gods. In early times the Cretan Rhea was identified with the Asiatic CYBĒLĒ or CYBĒBĒ, "the Great Mother," a goddess of the powers of nature and the arts of cultivation, who was worshipped upon mountains in Mysia, Lydia, and Phrygia.

Turreted Head of Cybelé. (Caylus, *Recueil d'Antiq* v. pl. 3.)

In the former character she was a symbol of the procreative power of nature; in the latter, she originated the cultivation

of the vine and agriculture, together with all forms of social progress and civilization, which depend upon these. Thus she was regarded as the founder of towns and cities, and therefore it is that art represents her as crowned with a diadem of towers.

The true home of this religion was the Phrygian Pessinus, on the river Sangarius, in the district afterwards known as Galatia, where the goddess was called Agdistis (Strabo, p. 567) or Angdistis, from a holy rock named Agdus upon Mount Dindymus above the town. Upon this mountain, after which the goddess derived her name of Dindymené, stood her earliest sanctuary as well as her oldest effigy (a stone that had fallen from heaven), and the grave of her beloved Attis (q. v.). Her priests, the emasculated Galli, here enjoyed almost royal

Rhea, or Cybelé. (From a Roman Lamp.)

honour. In Lydia she was worshipped, principally on Mount Tmolus, as the mother of Zeus and the foster-mother of Dionysus. There was also a temple of Cybelé at Sardis. Her mythical train was formed by the Corybantes, answering to the Curetes of the Cretan Rhea; these were said to accompany her over the wooded hills, with lighted torches and with wild dances, amid the resounding music of flutes and horns and drums and cymbals. After these the priests of Cybelé were also called Corybantes, and the festivals of the goddess were celebrated with similar orgies, in the frenzy of which the participators wounded each other or, like Attis, mutilated themselves. Besides these there were begging priests, called Metragyrtae and Cybebi, who roamed from place to place as inspired servants and prophets of the Great Mother. On the Hellespont and on the Propontis, Rhea-Cybelé was likewise the chief goddess; in particular in the Troad, where she was worshipped upon Mount Ida as "the Idaean Mother," and where the Idaean Dactyli (q. v.) formed her train. From Asia this religion advanced into Greece. After the Persian Wars it reached Athens, where in the Metroum, the temple of the Great Mother, which was used as a State record-office, there stood the ideal image of the goddess fashioned by Phidias (Pausan. i. 3, § 5). The worship of Cybelé did not, however, obtain public recognition here, any more than in the rest of Greece, on account of its orgiastic excesses and the offensive habits of its begging priests. It was cultivated only by particular associations and by the lower ranks of the people.

In ROME the worship of the Great Mother (*Magna Mater*) was introduced for political reasons in B.C. 204, at the command of a Sibylline Oracle, and for the purpose of driving Hannibal out of Italy. An embassy was sent to bring the holy stone from Pessinus; a festival was founded in honour of the goddess, to be held on April 2–4 (the Megalesia, from the Greek Μεγάλη Μήτηρ=*magna mater*); and in 217 a temple on the Palatine was dedicated to her. The service was performed by a Phrygian priest, a Phrygian priestess, and a number of Galli (emasculated priests of Cybelé), who were allowed to pass in procession through the city in accordance with their native rites. Roman citizens were forbidden to participate in this service, though the praetor on the Palatine and private persons among the patricians celebrated the feast by entertaining one another, the new cult being attached to that of Maia or Ops. The worship of Cybelé gained by degrees an ever-wider extension, so that under the early Empire a fresh festival was instituted, from March 15–27, with the observance of mourning, followed by the most extravagant joy. In this festival associations of women and men and the religious board of the Quindecimviri (q. v.) took part. In the first half of the second century A.D. the Taurobolia and Criobolia were added. In these ceremonies the person concerned went through a form of baptism with the blood of bulls and rams killed in sacrifice, with the object of cleansing him from pollutions and bringing about a new birth. The oak and pine were sacred to Rhea-Cybelé (see ATTIS), as also the lion. She was supposed to traverse the mountains riding on a lion, or in a chariot drawn by lions. In art she was usually represented enthroned between two lions, with the mural crown on her head and a small drum in her hand.

Rhea Silvia or **Ilia**. See ROMULUS.

Rhedŏnes. See REDONES.

Rhegium (Ῥήγιον). Now Reggio; a celebrated Greek town on the coast of Bruttium, in the south of Italy, was situated on the Fretum Siculum, or the strait which separates Italy and Sicily. Rhegium was founded about the beginning of the first Messenian War, B.C. 743, by Aeolian Chalcidians from Euboea and by Doric Messenians, who had quitted their native country on the commencement of hostilities between Sparta and Messenia. Even before the Persian Wars Rhegium was sufficiently powerful to send 3000 of its citizens to the assistance of the Tarentines, and in the time of the elder Dionysius it possessed a fleet of eighty ships of

Coin of Rhegium.

war. This monarch, having been offended by the inhabitants, took the city and treated it with the greatest severity. Rhegium never recovered its former greatness, though it still continued to be a place of considerable importance. The Rhegians having applied to Rome for assistance when Pyrrhus was in the south of Italy, the Romans placed in the town a garrison of 4000 soldiers, who had been levied among the Latin colonies in Campania.

These troops seized the town in B.C. 279, killed or expelled the male inhabitants, and took possession of their wives and children. The Romans were too much engaged at the time with their war against Pyrrhus to take notice of this outrage; but when Pyrrhus was driven out of Italy they took signal vengeance upon these Campanians, and restored the surviving Rhegians to their city. Rhegium was the place from which persons usually crossed over to Sicily, but the spot at which they embarked was called Columna Rhegina (Torre di Cavallo), and was 100 stadia north of the town See Axt, *Zur Topographie von Rhegion und Messana* (Grimma, 1887).

Rhenēa (Ῥήνεια), also **René** (Ρήνη). Anciently called Ortygia and Celadussa, an island in the Aegaean Sea and one of the Cyclades, west of Delos, from which it was divided by a narrow strait only four stadia in width (Strabo, p. 486).

Rhenus (*Rhein* in German, *Rhine* in English). (1) One of the great rivers in Europe, forming in ancient times the boundary between Gaul and Germany, rises in Mount Adulas (St. Gothard), not far from the sources of the Rhone, and flows first in a westerly direction, passing through the Lacus Brigantinus (Lake of Constance) till it reaches Basilia (Basle), where it takes a northerly direction, and eventually flows into the ocean by several mouths. The ancients spoke of two main arms into which the Rhine was divided on entering the territory of the Batavi, of which the one on the east continued to bear the name of Rhenus, while that on the west, into which the Mosa (Maas or Meuse) flowed, was called Vahalis (Waal). After Drusus, in B.C. 12, had connected the Flevo Lacus (Zuyder-Zee) with the Rhine by means of a canal (in making which he probably made use of the bed of the Yssel), we find mention of three mouths of the Rhine. Of these the names, as given by Pliny, are: on the west, Helium (the Vahalis of other writers); in the centre, Rhenus; and on the east, Flevum; but at a later time we again find mention of only two mouths. The Rhine is described by the ancients as a broad, rapid, and deep river. It receives many tributaries, of which the most important are the Mosella (Moselle) and Mosa (Maas or Meuse) on the left, and the Nicer (Neckar), Moenus (Main), and Luppia (Lippe) on the right. Its whole course amounts to about 950 miles. The inundations of the Rhine near its mouth are mentioned by the ancients. Caesar was the first Roman general who crossed the Rhine. He threw a bridge of boats across the river, probably in the neighbourhood of Cologne. (See PONS.) There is a history of the river Rhine from Keltic to modern times by Mehlis, 3 vols. (Berlin, 1876–79). (2) Reno, a tributary of the Padus (Po) in Gallia Cisalpina, near Bononia, on a small island in which Octavianus, Antony, and Lepidus formed the celebrated Second Triumvirate.

Rhesus (Ῥῆσος). (1) A river-god in Bithynia, one of the sons of Oceanus and Tethys. (2) Son of king Eïoneus in Thrace. He marched to the assistance of the Trojans in their war with the Greeks. An oracle had declared that Troy would never be taken if the snow-white horses of Rhesus should once drink the water of the Xanthus and feed upon the grass of the Trojan plain. But as soon as Rhesus had reached the Trojan territory, and had pitched his tents late at night, Odysseus and Diomedes penetrated into his camp, slew Rhesus himself, and carried off his horses. The story is the subject of a play ascribed to Euripides, but regarded by many as not genuine.

Rhetorĭca. I. GREEK. Among the Greeks ῥητορική (sc. τέχνη) comprised the practical as well as the theoretical art of speaking, and *rhetor* denoted an orator no less than a teacher of oratory. Among the Romans it denoted only the latter, the actual speaker being called *orator*. The first men who reduced oratory to a system capable of being taught appeared among the Sicilian Greeks, who, according to the testimony of the ancients, were distinguished for the keenness of their understanding and their love of disputation (Cic. *Brut.* 46). The Syracusan Corax (circ. B.C. 500) is said to have been the first who elaborated systematic rules for forensic speeches, and laid them down in writing in a manual on the art of rhetoric (τέχνη). His pupil Tisias (born circ. 480), and after him the Leontine Gorgias, further cultivated the art, and from about 427 carried it to Greece itself, and in particular to Athens, whither he went to ask for an alliance against Syracuse. So far as existing evidence shows, his rhetorical rules were of a highly artificial character, involving the use of studied antitheses and a multitude of tropes. He may, in fact, be regarded as the founder of the so-called Asiatic style of eloquence. In the judicial proceedings and the assemblies of the people the practice of oratory had long been familiar at Athens, though it had not been reduced to technical rules, and oratory had had a conspicuous representative in Pericles. At Athens the theory of oratory was further cultivated by the Sophists (σοφισταί, "men who professed knowledge or wisdom"). Their instruction in style and rhetoric was enjoyed by numerous Athenians, who desired, by the aid of study and practice, to attain to expertness in speaking. See SOPHISTAE.

The first Athenian who, besides imparting instruction in the new art, applied it practically to speaking in the assemblies of the people and before courts, and who published speeches as patterns for study, was Antiphon (died B.C. 411), the earliest of the so-called Ten Attic Orators. In his extant speeches the oratorical art is shown still in its beginnings. These, with the speeches interwoven in the historical work of his great pupil Thucydides, give an idea of the crude and harsh style of the technical oratory of the time; while the speeches of Andocides (who died about 399), the second of the Ten Orators, display a style that is still uninfluenced by the rhetorical teaching of the age. The first really classical orator is Lysias (died about 360), who, while in possession of all the technical rules of the time, handles with perfect mastery the common language of every-day life. Isocrates (436–338) is reckoned as the father of artistic oratory properly so called; he is a master in the careful choice of words, in the rounding off and rhythmical formation of periods, in the apt employment of figures of speech, and in everything which lends charm to language. By his mastery of style he has exercised the most far-reaching influence upon the oratorical diction of all succeeding time. Of the three kinds of speeches which were distinguished by the ancients —POLITICAL (or DELIBERATIVE), FORENSIC, and SHOW-SPEECHES (or DECLAMATIONS)—he specially cultivated the last. Among his numerous pupils

is Isaeus (about 400–350), who, in his general method of oratory, closely follows Lysias, though he shows a more matured skill in the controversial use of oratorical resources. The highest point was attained by his pupil Demosthenes (q. v.), the greatest orator of antiquity (384–322); next to him comes his political opponent Aeschines (389–314). The number of the Ten Orators is completed by their contemporaries Hyperides, Lycurgus, and Dinarchus. In the last of these the beginning of the decline of oratorical art is already clearly apparent.

To the time of Demosthenes belongs the oldest manual of rhetoric which has been preserved to us—that of Anaximenes of Lampsacus. This is founded on the practice of oratory, and, being intended for immediate practical use, shows no trace of any philosophical groundwork or philosophical research. It is edited by Spengel (Zürich, 1844). Greek rhetoric owes to Aristotle its proper reduction into a scientific system. In contrast to Isocrates, who aims at perfection of form and style, Aristotle, in his *Rhetoric*, lays special stress on subject-matter, and mainly devotes himself to setting forth the means of producing conviction. In fact, Aristotle regards rhetoric as the counterpart of logic and closely allied with it. See the fine introduction and analysis by Cope in Cope and Sandys' edition of the treatise (3 vols. 1877). When Athens had lost her liberty, practical oratory was more and more reduced to silence; the productions of the last orators, such as Demetrius of Phalerum, were only a feeble echo of the past. Demetrius is said to have been the first to give to oratorical expression a tendency towards an elegant luxuriance. He was also the first to introduce the custom of making speeches upon imaginary subjects by way of practice for deliberative and forensic speaking.

In later times the home of oratory was transferred to the free Hellenic or hellenized communities of the coasts and islands of Asia Minor, especially Rhodes. On the soil of Asia a new style was developed, called the Asiatic. Its Asiatic originator is said to have been Hegesias of Magnesia near Mount Sipylus. He flourished in the latter half of the third century. In avowed opposition to the method of Demosthenes, who spoke in artistically formed periods, Hegesias not only went back to the simpler constructions of Lysias, but even endeavoured to outvie the latter in simplicity, breaking up all that he had to say into short sentences, and carefully avoiding periods of any length (Cic. *Orat.* 226). On the other hand, he sought to give a certain vividness to his speeches by an elaborately arranged order of words and by a far-fetched and often turgid phraseology. This was the prevailing fashion until the middle of the first century B.C. Even in Rome it had numerous followers, especially Hortensius, until by the influence of Cicero it was so utterly crushed out that Hegesias was soon forgotten, even among the Greeks. A peculiar kind of oratory (the so-called Rhodian) prevailed in Rhodes, where a closer approach was again made to the Attic models, and particularly to the representatives of the simple style, such as Hyperides. Conspicuous orators of this school were Apollonius and Molon, both of Alabanda in Caria, in the first half of the first century B.C. These two orators are expressly distinguished from one another by Strabo, p. 655; but they are confounded even by Quintilian, who erroneously speaks of Apollonius Molon (iii. 1, 16; xii. 6, 7).

The theory of oratory remained until about the end of the second century B.C. exclusively in the hands of the philosophers, and was little regarded by the Asiatic orators. After that time the orators and practical teachers of the art again applied themselves with eagerness to theoretical studies; the theorists adopted an eclectical method, seeking to combine the philosophical and more scientific proceeding of Aristotle with that of Isocrates, which addressed itself rather to the turns of phrase and the outward forms of oratory. The most noteworthy system was introduced by Hermagoras of Temnos (about B.C. 120), whose writings, which are no longer extant, supplied the chief foundation for the theoretical studies of the Romans at the beginning of the first century B.C. The system of rhetoric elaborated by him was afterwards further worked out and improved in detail. In the time of the Empire the rhetorical schools in general flourished, and we possess an extensive rhetorical literature of that age reaching as far as the fifth century A.D. It includes the works of authors who mainly treated of the literary and aesthetic side of rhetoric, especially those of Dionysius of Halicarnassus, the champion of Atticism and of refined taste, and the unknown author of the able treatise, Περὶ Ὕψους (see LONGINUS); also those of technical writers, such as Hermogenes, the most noteworthy representative of the scholastic rhetoric of the age, Apsines, Menander, Theon, Aphthonius, and others. On the revival of Greek oratory after the end of the first century, and particularly in the second century, see SOPHISTAE, and the works mentioned at the end of this article.

II. ROMAN. As among the Athenians, so also among the Romans, the institutions of the State early gave occasion for the practice of political and forensic oratory. Until the end of the third century B.C. this oratory was wholly spontaneous. The speech of the aged Appius Claudius Caecus, delivered in 280 against the peace with Pyrrhus, and afterwards published, was long preserved as the earliest written monument of Roman oratory. Numerous political speeches were published by the well-known Marcus Porcius Cato, the most noteworthy orator during the first half of the second century. After the Second Punic War, in spite of all the opposition of Cato and of those who thought with him, Greek culture forced its way irresistibly into Rome, and the Romans became eager to conform to the Greek theory of oratory also. Servius Sulpicius Galba (circ. B.C. 144) is spoken of as the first man who composed his speeches in accordance with the rules of Greek art, and not long afterwards the younger Gracchus, who died in 121, proved himself a consummate orator through the combination of natural gifts and art. Even at this time the publication of orations after delivery was a general custom, and men were already to be met with who actually wrote speeches for others. At the beginning of the first century B.C. the most noteworthy orators were Marcus Antonius and Lucius Licinius Crassus.

Rhetorical instruction was originally imparted by Greeks. In the first decade of the first century the freedman Plotius Gallus came forward as a teacher of rhetoric, and other Latin teachers followed him. These found a large number of hear-

ers, but the censors interfered to stop the practice, as an innovation on the custom of their forefathers. It is true that this attempt to oppose the current, which had already set in, was in vain. Still it was only by freedmen that rhetorical instruction in Latin was given until the time of Augustus, when the Roman knight Blandus was the first free-born man who came forward as a public teacher of rhetoric. Even the Latin rhetoricians derived their theory exclusively from Greek sources, especially from Hermagoras, to whose influence the two earliest extant rhetorical writings of the Roman school are to be referred; these are the work of the pseudo-Cornificius, and the production of Cicero, *De Inventione*. Cicero (q. v.), the greatest orator of Rome and the only orator of the Republic of whom any complete speeches are extant, composed in his later years several other valuable writings upon rhetorical subjects, founded on his practice as an orator—viz. the *De Oratore*, the *Brutus*, and the *Orator*. Besides Cicero, the last age of the Republic possessed a series of other conspicuous orators, such as Hortensius (q. v.), Caelius, Brutus, and, above all, Caesar. A few more representatives of the oratory of the Republic survived to the time of Augustus. The most important of these is Asinius Pollio. But, with the old constitution, the occasions and materials for oratory also disappeared under the Monarchy, and the hindrances and limitations to its public exercise increased in the same proportion. Practice was gradually superseded by theory, orators by rhetoricians, speeches by declamations. The exercises of the rhetorical schools, which now became one of the chief centres of intellectual life, paid almost exclusive attention to the form, and dealt with imaginary subjects of political and forensic oratory, called *suasoriae* and *controversiae*, which were as far as possible removed from the practice of life. A vivid picture of these exercises is preserved in the reminiscences of the rhetorician Seneca, the father of the well-known philosopher. The manner of speaking contracted in the schools was adopted on the few occasions on which practical oratory could still be exercised, and these occasions were accordingly turned into exhibitions of theatrical declamation. It was in vain that men like Quintilian, in his work on the training of an orator (*Institutio Oratoria*), and Tacitus, in his *Dialogus*, pointed to the true classical patterns, and combated the fashion of their time, from which even they were not entirely free. Like these, the younger Pliny belongs to the end of the first century A.D.; his *Panegyricus*, addressed to Trajan, the only monument of Roman oratory after Cicero preserved in a complete form, became the model for the later panegyrists. In the second century A.D. Fronto, and the school named after him, sought to revive the old Roman spirit by a tasteless imitation of archaic expressions and forms of speech. The same style is practised, though with more ability, by the African Apuleius. After the end of the third century the oratorical art had its chief seat in the towns of Gaul, especially in Trèves (Treviri) and Bordeaux (Burdigala). Here a style of oratory was matured which possessed a certain smoothness and copiousness in words, but showed great lack of ideas. Upon the representatives of this style, the "Panegyrists," see PANEGYRICUS.

(1872); Westermann, *Geschichte der röm. Beredsamkeit* (1835); Demarteau, *L'Éloquence Républicaine de Rome* (1870); Tivier, *De Arte Declamandi apud Romanos* (1868); Poiret, *L'Éloquence Judiciaire à Rome* (1887); Ritter, *Die Quintilianische Declamationen* (1881); and Sears, *The History of Oratory* (Chicago, 1896). The Greek rhetorical writers are edited by Spengel (Stuttgart, 1828); and the minor Latin writers by Halm (Leipzig, 1863).

Rhetrae (*ῥῆτραι*). Specially the name of the ordinances of Lycurgus. The word *ῥῆτρα* means a solemn compact, either originally emanating from or subsequently sanctioned by the gods, who are always parties to such agreements. The rhetrae of Lycurgus emanated from the Delphian god; but the kings, senators, and people all bound themselves, both to each other and to the gods, to obey them. Plutarch mentions four rhetrae (*Lyc.* 6 and 13), and describes them as relating to (*a*) the building of a temple to Zeus and Athenê; (*b*) the division of the people into *φυλαί* and *ὠβαί*; (*c*) the establishment of the Senate (*γερουσία*); and (*d*) the assemblage of the people at the time of the full moon.

Rhiānus (Ῥιανός) of Crete. A distinguished Alexandrian poet and grammarian, who flourished in B.C. 222. Some of his epigrams are present in the Greek Anthology. His remains are edited by Saal (Bonn, 1831).

Rhinocolūra (*τὰ Ῥινοκόλουρα*) or **Rhinocorūra** (*τὰ Ῥινοκόρουρα*). Now Kasr-el-Arish. The frontier town of Egypt and Palestine, lying in the midst of the desert, at the mouth of the brook (El-Arish) which was the boundary between the countries, and which is called in Scripture the River of Egypt. The name of it hence signifies "Cut-off-Noses," and is said to have been given it because it was the place to which criminals thus mutilated were banished under the Aethiopian dynasty of kings of Egypt (Strabo, p. 759).

Rhinthon (Ῥίνθων). A Greek comic poet, son of a potter of Tarentum, who lived about B.C. 300, and invented a style of composition of his own, which was much diffused in Magna Graecia, and is said to have been imitated even by the Romans. It was called the *Hilarotragoedia* (Ἱλαροτραγῳδία)—i. e. cheerful tragedy. It was a travesty of tragic myths by the intermixture of comic scenes. The scanty fragments of the thirty-eight plays of Rhinthon do not give us any adequate idea of this kind of composition. See PARODIA.

Rhinthonĭca Fabŭla. See RHINTHON.

Rhipaei Montes (*τὰ Ῥιπαῖα ὄρη*). The name of a lofty range of mountains in the northern part of the earth, respecting which there are diverse statements in the ancient writers. The name seems to have been given by the Greek poets quite indefinitely to all the mountains in the northern parts of Europe and Asia. Thus the Rhipaei Montes are sometimes called the Hyperborei Montes.

(See HYPERBOREI.) The later geographical writers place the Rhipaean Mountains northeast of Mount Alaunus on the frontiers of Asiatic Sarmatia, and state that the Tanaïs rises in these mountains. According to this account the Rhipaean Mountains may be regarded as a western branch of the Ural Mountains (Mela, i. 19, 18; Pliny, *H. N.* iv. 78).

Rhium (Ῥίον). Now Castello di Morea. A promontory in Achaia, opposite to the promontory of Antirrhium (Castello di Romelia), on the borders of Aetolia and Locris, with which it formed the narrow entrance to the Corinthian Gulf, which strait is now called the Little Dardanelles.

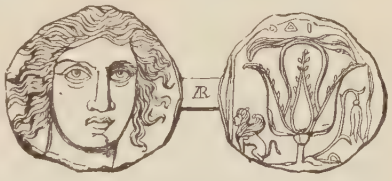
Rhizon (Ῥίζων) or **Rhizinium**. A town of Dalmatia. It was a stronghold of Queen Teuta (q. v.).

Rhizus (Ῥίζους). A town of Magnesia in Thessaly.

Rhoda (Ῥόδη) or **Rhodus** (Ῥόδος). Now Rozas. A Greek emporium on the coast of the Indigetae in Hispania Tarraconensis, founded by the Rhodians, and subsequently occupied by the inhabitants of Massilia (Livy, xxxiv. 8).

Rhodănus. Now the Rhône. One of the chief rivers of Gaul, which rises in Mount Adulas, on the Pennine Alps, not far from the sources of the Rhine, flows first in a westerly direction, and, after passing through the Lacus Lemanus, turns to the south, passes by the towns of Lugdunum, Vienna, Avenio, and Arelaté, receives several tributaries, and finally falls by several mouths into the Sinus Gallicus in the Mediterranean. The Rhône is a very rapid river, and its upward navigation is therefore difficult, though it is navigable for large vessels as high as Lugdunum (Lyons), and by means of the Arar still farther north.

Rhodé (Ῥόδη). See RHODOS.



Rhodius (Ῥόδιος). Probably the Brook of the Dardanelles. A small river of the Troad, mentioned both by Homer and Hesiod. It rose on the lower slopes of Mount Ida, and flowed northwest into the Hellespont, between Abydus and Dardanus, after receiving the Selleïs from the west.

Rhodŏpé (Ῥοδόπη). One of the highest mountain ranges in Thrace. It extends from Mount Scomius, east of the river Nestus and the boundaries of Macedonia, towards the coast, in a southeasterly direction. The river was sacred to Dionysus (Hor. *Carm.* iii. 25, 12).

Rhodōpis (Ῥοδῶπις). A celebrated Greek courtesan, of Thracian origin. She was a fellow-slave with the poet Aesop, both of them belonging to the Samian Iadmon. She afterwards became the property of Xanthus, another Samian, who carried her to Naucratis in Egypt, in the reign of Amasis, and at this great seaport she carried on the trade of an hetaera for the benefit of her master. While thus employed, Charaxus, the brother of the poetess Sappho, who had come to Naucratis as a merchant, fell in love with her, and ransomed her from slavery for a large sum of money. She was in consequence attacked by Sappho in a poem. She continued to live at Naucratis, and with the tenth part of her gains she dedicated at Delphi ten iron spits, which were seen by Herodotus. She is called Rhodopis by Herodotus, but Sappho in her poem spoke of her under the name of Doricha. It is therefore probable that Doricha was her real name, and that she received that of Rhodopis, which signifies the "rosy-cheeked," on account of her beauty. Cf. Herod. ii. 134, 135; Athen. p. 596; Suid. s. v.

Rhodos (Ῥόδος), sometimes called **Rhodé** (Ῥόδη). A daughter of Poseidon and Helia, or of Helios and Amphitrité, or of Poseidon and Aphrodité, or lastly of Oceanus. From her the island of Rhodes is said to have derived its name, and in this island she bore to Helios seven sons. (Pind. *Ol.* vii. 72.)

Rhodus (Ῥόδος). Now Rhodos, Rhodes; the most easterly island of the Aegaean, or, more specifically, of the Carpathian Sea, lying off the southern coast of Caria, due south of the promontory of Cynossema (Cape Aloupo), at the distance of about twelve geographical miles. Its length, from northeast to southwest, is about forty-five miles; its greatest breadth about twenty to twenty-five. In early times it was called Aethraea and Ophiussa, and several other names. There are various mythological stories about its origin and peopling. Its Hellenic colonization is ascribed to Tlepolemus, the son of Heracles, before the Trojan War, and after that war to Althaemenes. Homer mentions the three Dorian settlements in Rhodes—namely, Lindus, Ialysus, and Camirus; and these cities, with Cos, Cnidus, and Halicarnassus, formed the Dorian Hexapolis, which was established, from a period of unknown antiquity, in the southwest corner of Asia Minor. Rhodes soon became a great maritime State, or rather confederacy, the island being parcelled out between the three cities above mentioned. The Rhodians made distant voyages and founded numerous colonies.

Coin of Rhodes.

At the beginning of the Peloponnesian War, Rhodes was one of those Dorian maritime States which were subject to Athens; but in the twentieth year of the war, B.C. 412, it joined the Spartan alliance, and the oligarchical party, which had been depressed, and their leaders, the Eratidae, expelled, recovered their former power under Dorieus. In 408 the new capital, called RHODUS, was built, and peopled from the three ancient cities of Ialysus, Lindus, and Camirus. At the Macedonian conquest the Rhodians submitted to Alexander, but upon his death expelled the Macedonian garrison. In the ensuing wars they formed an alliance with Ptolemy, the son of Lagus, and their city, Rhodes, successfully endured a most famous siege by the forces of Demetrius Poliorcetes, who at length, in admiration of the valour of the besieged, presented them with the engines he had used against the city, from the sale of which they defrayed the cost of the celebrated Colossus (q. v.). At length they came into connection with the Romans, whose alliance they joined, with Attalus, king of Pergamus, in the war against Philip III. of Macedon. In the ensuing war with Antiochus the Rhodians gave the Romans great aid with their fleet; and in the subsequent partition of the Syrian possessions of Asia Minor,

they were rewarded by the supremacy of Southern Caria, where they had had settlements from an early period. A temporary interruption of their alliance with Rome was caused by their espousing the cause of Perseus, for which they were severely punished (B.C. 168); but they recovered the favour of Rome by the important naval aid they rendered in the Mithridatic War. In the Civil Wars they took part with Caesar, and suffered in consequence from Cassius (42), but were afterwards compensated for their losses by the favour of Antonius. They were at length deprived of their independence by Claudius; and their prosperity received its final blow from an earthquake, which laid the city of Rhodes in ruins, in the reign of Antoninus Pius, A.D. 155. See Biliotti and Cottret, *L'Île de Rhodes* (1881); and Torr, *Rhodes in Ancient Times* (1885), which gives a good bibliography.

Rhoecus (Ῥοῖκος). (1) A Centaur, who, in conjunction with Hylaeus, pursued Atalanta in Arcadia, but was killed by her with an arrow. The Roman poets call him Rhoetus, and relate that he was wounded at the nuptials of Pirithoüs. (2) The son of Phileas or Philaeus, of Samos, an architect and statuary, who flourished about B.C. 640. He is said to have invented the art of casting statues in bronze and iron (Pausan. viii. 14. 5; x. 38. 3), and was the architect of the beautiful temple of Heré in his native island (Herod. iii. 60). It is known, however, that the casting of bronze had been known to the Phœnicians before his time, so that he merely introduced the art into Greece. See STATUARIA ARS.

Rhoetēum (τὸ Ῥοίτειον ἄκρον). Now Cape Intepeh or Barbieri; a promontory, or a strip of rocky coast, breaking into several promontories, in Mysia, on the Hellespont, near Aeantium, with a town of the same name.

Rhoetus (Ῥοῖτος). (1) A Centaur. See RHOECUS. (2) One of the giants who were slain by Dionysus; he is usually called Eurytus.

Rhombus. See TURBO.

Rhompaea, Romphaea (ῥομφαία), and **Rumpia.** A military weapon peculiar to the Thracians (Gell. x. 25); but whether belonging to the class of swords or of spears is a matter of doubt, though the latter seems the more probable. At all events, it was characterized by prodigious length (Livy, xxxi. 29), and by having, like the Roman *pilum*, a wooden shaft of the same dimensions as the iron head affixed to it (Val. Flacc. vi. 98).

Rhotacism. A technical term of scientific grammar, applied to the change of a voiced *s* (*z*) to *r* between two vowels. In Greek this change is rare, as in that language the intervocalic *s* regularly passed into *h* and then disappeared, leaving no trace of its existence, while in Latin it is regularly changed to *r*. (Cf. the Gk. μῦς, μυ-ός, Lat. *mus, mu-r-is:* Gk. νυός, Lat. *nu-r-us.*) In the dialect of Greek spoken in Elis, rhotacism occurred instead of loss of *s*, and so in some late Laconian words influenced by the usage of the neighbouring Elis. In Latin rhotacism is a regular law, for though there are many apparent exceptions to it, examination shows that in most of these cases the *s* was not originally intervocalic or else that the word is of (*a*) foreign or (*b*) late origin. For instance, in *causa* the *s* is not changed to *r* because it represents probably *ss*, Cicero having written it *caussa.* In many compounds *s* is not changed to *r* because it is to be regarded as an initial rather than as an intervocalic consonant — e. g. *desilio, positura.* In many other words the apparently intervocalic *s* represents a substitution for another original letter — e. g. *esuries* (√*ed* of *edo*), *prosa* (*provorsa*), *rosa* (cf. ῥόδον), *casa* (√*skad*, hence *cadta*). Such words as *basium, casium, gaesum, siser,* and probably *asinus* are non-Latin in their origin. The real exceptions to the operation of the regular change to *r* do not amount to more than a half dozen, such as *vasa, nasus, agaso, caseus;* and the exceptions are the basis of a special law known as CONWAY'S LAW, first set forth by Mr. R. S. Conway, in 1887, as a sort of corollary to Verner's Law. (See VERNER'S LAW.) Conway's Law is as follows: Medial *s* between words after an unaccented syllable became *r*, but after an accented syllable it was retained except when followed by *i* or *u* and preceded by *i* or *u* or a long vowel or diphthong; while medial *s* before nasals after an unaccented syllable was lost without compensation; after an accented syllable if arising before the period of rhotacism it was lost with compensatory lengthening of the preceding vowel (e. g. *aenus, primus*); if arising during the period of rhotacism it became *r* (e. g. *carmen, verna*).

Rhotacism in Latin is said to have been effected in the fourth century B. C., as Cicero says (*Ad Fam.* ix. 21) that L. Papirius, who was consul in B.C. 336, was the first of his family to give up the older spelling Papisius. But the change in general was probably effected earlier, for proper names are notoriously the last to suffer alterations of form.

Rhotacism occurs also in the Teutonic branches of the Indo-Germanic group of languages. (Cf. Germ. *eisen*, Engl. *iron;* Germ. *blasen*, Engl. *blare;* Engl. sing. *was*, plur. *were.*) The unvoiced *s* first passes into the voiced *s* (*z*) and thence to lingual *r*, for the position of the vocal organs in pronouncing *z* is substantially the same as that required for *r*.

See V. Henry, *Comparative Grammar of Greek and Latin*, pp. 74–76 (Engl. trans. New York, 1890); Roby, *Latin Grammar*, vol. i. pp. 98 foll.; Joret, *De Rhotacismo* (1875); Walter, *Rhotacism in the Italic Languages* (1877); and Conway, *Verner's Law in Italy* (London, 1887).

Rhoxolāni or **Roxolāni.** A warlike people in European Sarmatia, on the coast of the Palus Maeotis, and between the Borysthenes and the Tanaïs, usually supposed to be the ancestors of the modern Russians (Tac. *Hist.* i. 79).

Rhyme. The recurrence of similar sounds at the end of successive lines of verse was not formally recognized by the Greeks and Romans of classical times as a legitimate feature of poetical composition; and having a definite metrical system based upon the laws of syllabic quantity, the need was not especially felt of the added pleasure which the ear receives from rhyme. Nevertheless, rhyme is found in both Greek and Latin verse — in Greek probably as a sort of accident of composition which did, however, heighten the enjoyment of the listener, and in Latin sometimes as a consciously sought device. The two languages, therefore, stand on a different footing in this respect. (See Jahn's *Jahrbuch* for 1830, p. 256; Casaubon, *ad* Pers. i. 93, 94.) When the rhyme occurs in Homer, as in the following (*Il.* i. 225, 226),

Ἀτρεΐδην προσέειπε καὶ οὔπω λῖγε χόλοιο
Οἰνοβαρές, κυνὸς ὄμματ' ἔχων, κραδίην δ' ἐλάφοιο,

it has no especial significance, and simply occurs with probably no design on the poet's part. In Latin the function of rhyme is more important. The early (native) verse being accented like our own and rough in its structure, did undoubtedly introduce the element of rhyme to please the ear, so that when Ennius transplanted the metrical system of the Greeks and forced the Latin language to conform to its general requirements, he still retained some of the native peculiarities in his lines—especially alliteration and rhyme. (See ALLITERATION.) The following is a striking example of the conscious use of the latter:

Haec omnia vidi inflammari,
Priamo vi vitam evitari,
Iovis aram sanguine turpari.

And so in another of the older poets quoted by Cicero (*Tusc.* i. 28):

Caelum nitescere, arbores frondescere,
Vites laetificae pampinis pubescere,
Rami bacarum ubertate incurvescere.

As the system based on quantity became more and more definitely established, however, rhyme occurs less frequently, until in Vergil it appears to be almost studiously avoided except in rare instances where it heightens the effect by giving a sonorous swell to an impressive utterance, as is the case in the following (*Ecl.* iv. 50–51):

Aspice convexo nutantem pondere mundum
Terrasque tractusque maris caelique profundum!

See also *Georg.* ii. 500, 501; *Aen.* i. 319, 320; iii. 656, 657; iv. 256, 257; v. 385, 386; viii. 620, 621.

Ovid, partly because of his indolence and partly because his less severe taste probably enjoyed the richness of the melodic effect, uses rhyme with much greater frequency than Vergil; and he also admits the so-called Leonine rhyme, as in the following:

Quem mare carpentem, substrictaque crura gerentem,

and

Quot caelum stellas, tot habet tua Roma puellas,

and in the pentameter intentionally frequent:

Quaerebant flavos per nemus omne favos.

These Leonine rhymes became more and more frequent in the Silver Age of the language, and render easy the transitional reversion from the classic system to the popular one, as men's knowledge of the laws of quantity grew uncertain owing to the influx of foreign writers and a less careful training in the schools. See LEONINI VERSUS.

Ovid often uses the rhyme to point a climax precisely as Shakspeare does in many of the soliloquies and studied declamatory passages of his plays—e. g. at the end of Macbeth's famous soliloquy:

Hear it not, Duncan, for it is a knell
That summons thee to heaven or to hell!

and in the spirited address of Henry V. to his troops:

Cheerly to sea; the signs of war advance!
No king in England if not king in France!

The summing up of the whole matter is briefly as follows: rhyme was a subordinate element in the early popular poetry; it was suppressed during the Golden Age of literature, but as learning waned it again came to the front and resumed its place in the compositions of poets, so that in the Christian hymns it has practically supplanted the quantitative system, and appears as fully as in modern poetry.

The toleration and even fondness of the Romans for assonances may be seen even in their prose, as when they bring together such similar words—e. g. *florem et colorem* (Cic. *Brut.* 87), *veram et meram* (Pliny). For a full list of examples, see Näke in the *Rheinisches Museum* for 1829, pp. 392–401. When precisely the same syllables are repeated in successive words it is called PARECHESIS (*παρήχησις*)—e. g. *vi vitam* (in the first passages given above); *pleniore ore* (Cic. *De Offic.* i. 18); *pares res* (Hor. *Sat.* i. 3, 121). When successive words have the same ending, it is called HOMOEOTELEUTON (*ὁμοιοτέλευτον*).

See Bähr, *Geschichte der röm. Lit.* ii. p. 681; Schuch, *De Poësis Latinae Rhythmis et Rimis* (1856); Poggel, *Grundzüge einer Theorie des Reims* (1836); Grimm, *Zur Geschichte des Reims* (1855); two papers in *Gebaveri Anthologia Dissertatiorum*, pp. 265 foll. and 299 foll. (Leipzig, 1733); the introduction to Trench's *Sacred Latin Poetry*, 3d ed. (London, 1874); and the articles HYMNUS; LEONINI VERSUS.

Rhyndăcus (Ῥυνδακός). Now Edrenos; a considerable river of Asia Minor. Rising in Mount Dindymené, opposite to the sources of the Hermus, it flows north through Phrygia, then turns northwest, then west, and then north through Lake Apolloniatis, into the Propontis. From the point where it left Phrygia, it formed the boundary of Mysia and Bithynia.

Rhyparographus (*ῥυπαρογράφος*). A painter of low, coarse, obscene, and trivial subjects, among which are enumerated scenes of ordinary life, interiors of barbers' shops, cobblers' stalls, animals, and objects of still-life (Pliny, *H. N.* xxxv. 37), such as those for which the Dutch and Flemish schools have become celebrated. It is clear from the adjective which gives the governing sense to the term (*ῥυπαρός*, "foul," "dirty"), that works of this description were held in low estimation by the talented and accomplished people of Greece; but the coarser-minded and more material Romans, whose love of art and taste was far less pure, being acquired or affected, not innate, set the highest value upon them, and bought them at prices oftentimes extravagant. See PICTURA.

Rhypes (Ῥύπες). One of the twelve cities of Achaia, situated between Aegium and Patrae. It was destroyed by Augustus, and its inhabitants removed to Patrae (Pausan. vii. 18. 7).

Rhytium (Ῥύτιον). A town in Crete, mentioned by Homer.

Rhyton (*ῥυτόν*) and **Rhytium**. A kind of drinking-horn. Originally it was probably made of an ox-horn (*κέρας*). Later, it had an opening at the bottom from which the person drank (Athen. xi. p. 497 e).

Rhyton from Pompeii. (*Museo Borbonico.*)

Ribbons. See FASCIA; INFULA; LEMNISCUS; VITTA.

Ricĭmer. The Roman "King-maker," was the son of a Suevian chief, and was brought up at the court of Valentinian III. He served with distinction under Aëtius, in the reign of Valentinian III. In A.D. 456 he commanded the fleet of the emperor Avitus, with which he gained a great vic-

tory over the Vandals, and in the same year he deposed Avitus; but as he was a barbarian by birth, he would not assume the title of emperor, but gave it to Majorian, intending to keep the real power in his own hands. But as Majorian proved more able and energetic than Ricimer had expected, he was put to death in 461 by order of Ricimer, who now raised Libius Severus to the throne. On the death of Severus in 465, Ricimer kept the government in his own hands for the next eighteen months; but in 467 Anthemius was appointed emperor of the West by Leo, emperor of the East. Ricimer acquiesced in the appointment, and received the daughter of Anthemius in marriage; but in 472 he made war against his father-in-law, and took Rome by storm. Anthemius perished in the assault, and Olybrius was proclaimed emperor by Ricimer, who died, however, forty days after the sack of Rome (Procop. *Vand.* i. 7, 57).

Ricina. One of the Ebudae Insulae (Hebrides). See Ptol. ii. 2, 11.

Ricinium and **Recĭnus.** A covering for the head worn by the Roman women; probably a sort of mantle with a hood or cowl attached to it. It was worn by mime-players (Fest. s. v. *Rica*), by women before funerals, and by *camilli* at sacrifices.

Riddles. See Aenigma.

Rings. See Anulus.

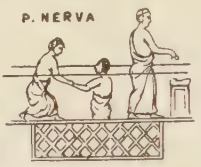
Riscus (ῥίσκος). A wardrobe for feminine attire (Ter. *Eun.* iv. 6. 15).

Ritschl, Friedrich Wilhelm. See article in the Appendix.

Roads. See Via.

Robbery. See Furtum; Latro.

Robigalia. See Robigus.



Robīgo. See Robigus.

Robīgus, the male, **Robīgo,** the female deity among the Romans (Tertull. *Spect.* 5), who protected the corn from blight (*robigo*) (Varro, *L. L.* vi. 16). On April 25th a festival called the Robigalia, supposed to have been instituted by Numa, was held in their honour in their grove, distant nearly five miles from Rome. The citizens marched to the spot in white festal attire, under the conduct of the *flamen Quirinalis,* Robigus having at first apparently represented only a particular function of Mars (or Quirinus), as protector of the arable land. After a prayer, accompanied by offerings of incense and wine, for the preservation of the ripening seed, the flamen offered sacrifice with the entrails of a young sorrel dog and a sheep. Certain races were also held.

Robur. See Carcer, p. 277.

Rogatio. A law proposed by the Roman magistrates. See Lex, p. 940; Magistratus.

Rogatōres. Officers appointed to act at the Roman Comitia (q. v.), whose duty it was to stand at the nearest end of the bridge (*pons suffragiorum*), which each citizen ascended in order to record his vote upon coming out from the enclosure (*ovile*) in which he had been previously mustered with the other members of his century, and to present a balloting token (*tabella*) to every one of them in turn, by whom it was taken and thrown into the box (*cista*) placed at the opposite extremity of the bridge. The illustration, from a coin, explains the entire process, showing at bottom the railing which enclosed the *ovile,* a voter ascending the bridge and receiving his ballot from the *rogator,* while another one at the opposite end is engaged in depositing his in the box.

Rogator at the Ovilé.

The term, however, originated before the practice of secret voting had obtained, when the poll-clerk had only to ask (*rogare*) the citizens how they intended to vote, and to register the result upon a waxed tablet containing a list of the candidates by making a mark or point (*punctum*) against the name of each one as a suffrage was recorded in his favour (Cic. *N. D.* ii. 4; id. *Div.* ii. 35; id. i. 17; id. *Sen.* 11; id. *Pis.* 15).

Rogus. A funeral pyre. See Funus.

Roma (Ῥώμη). Rome. Rome lies on the river Tiber, about fourteen miles, in a straight line, from the sea. Its latitude (41° 53′ N.) is the same as that of Chicago; its longitude (12° 29′ E.) corresponds very nearly with that of Venice and of Leipzig. Its site forms a part of the gently rolling volcanic plain which lies between the sea and the Sabine and Alban Mountains, extending from Cape Linaro, on the north, as far south as Astura and the Pontine Marshes. The earlier city was confined to the left bank of the river, which here pursues a very winding course and, dividing, surrounds a small, flat island; but before the end of the Republic a considerable suburb had sprung up on the right bank, which became the fourteenth Regio in the division of the city under Augustus.

The oft-mentioned hills of Rome are low, and now, with some exceptions, of gentle slope. In ancient times they were more steep; for the intervening depressions (and to a less extent the lower parts of the hills themselves) have been covered, to the depth of nine, twelve, and in places even thirty feet, by the accumulation of débris. They are partly spurs, or irregular projections, from the line of bluffs which marks the descent from the general altitude of the Campagna into the valley of the Tiber, partly isolated masses nearer the river-bed. To the former class belong the Quirinal and Viminal hills, whose highest elevation above the surface of the Tiber (this being reckoned at 21.98 feet above sea-level) is about 158 feet; the Esquiline, with its two spurs Cispius (151 feet) and Oppius (161 feet); and the Caelian (141 feet), which is separated from both the Esquiline and the Aventine by valleys. The hills standing by themselves are the Capitoline (the two summits 141 feet, the depression between them 98 feet above the Tiber), which was originally connected with the Quirinal by a ridge; the Palatine (141 feet); and the Aventine (128 feet). To the north of the Quirinal, but not counted as one of the Seven Hills, was the Collis Hortorum, now the Pincio (164 feet). The small elevation southwest of the Aventine (Mons Testaceus, now Monte Testaccio, 115 feet) is entirely artificial, being composed chiefly of fragments of pottery. Along the right bank stretched the high ridge of the Ianiculum (253 feet), with its continuation, Mons Vaticanus.

Between the Quirinal and the Tiber was the level Campus Martius, at first a training-field outside the walls, in later times built upon and included within the city limits. The cattle-mart

Plan of Rome.

(Forum Boarium) lay between the Palatine and the Tiber, the Circus Maximus between the Palatine and the Aventine. On the low ground north of the Palatine, stretching towards the Capitoline, was the Forum (often called Forum Romanum, or Forum Magnum, to distinguish it from the imperial forums), the spot in which the life of Rome centred; as it became too small for the congestion of business, relief was sought by building a series of extensions (Fora Caesarum) on the north side. The Colosseum (Amphitheatrum Flavium), the greatest monument of Roman architecture, stands in the depression between the Palatine, Esquiline, and Caelian Hills. See AMPHITHEATRUM.

In its development as a city Rome passed through several stages, some of which are clearly defined. Numerous indications point to the Palatine Hill as the seat of earliest settlement. At a remote period it was fortified by a strong wall of well-squared tufa blocks, laid without mortar; fragments of this wall have been discovered on the south and west sides. At least three gates gave access to the hill-top thus enclosed: the Porta Mugonia (*vetus porta Palatii*, cf. fig. 7) on the north side, the River-gate (Porta Romanula) on the west side, and a third, of which the name is uncertain, on the south side. To the latest times the Romans regarded the Palatine with especial reverence, and there cherished certain memorials associated with their oldest legends, such as the Hut of Romulus (Casa Romuli), which, though no doubt built of wood, and straw-thatched, was kept in repair, and was still standing in the fourth century A.D. See DOMUS, p. 536.

How long the Palatine city sufficed for the needs of the population cannot even be conjectured. After a time the limits seem to have been extended so as to include the Cispius, the Oppius, and the depression between them (Fagutal), together with the valley lying between these and the Palatine (Subura), as well as the small spur which the Palatine throws out towards the northeast (Velia), and a portion of its slope on the northwest side (Cermalus). To the city thus formed of seven parts (the original Palatine city being counted as one) the name Septimontium appears to have been given; but evidence regarding it is both meagre and unsatisfactory. More is known about the boundaries of Rome in the next stage of development, when enlarged by the addition of the Quirinal, Viminal, and Caelian Hills. It was now divided into four wards (*regiones*; cf. Varro, *L. L.* v. 45), the first (Regio Suburana) comprising the Caelian Hill and the Subura; the second (Esquilina), the Cispius, Oppius, and Fagutal; the third (Collina), the Quirinal and Viminal Hills; the fourth (Palatina) included the Palatine, Cermalus, and Velia. The Capitoline Hill was made a part of the city, but not set off as a separate ward; it was retained as a common sanctuary and fortress. Of the fortifications, by which this city of the four wards must have been protected, no trace has yet been found.

The bounds of Rome in the period with which the name of Servius Tullius is connected can be

made out, for a large portion of the circuit, with exactness; for they were unchanged during the whole time of the Republic, and were marked by a line of imposing fortifications (*agger Servii Tullii*), remains of which have been discovered at many points. The Aventine Hill was now included within the limits, which were extended also further to the east on the Quirinal, Viminal, and Esquiline Hills. The wall of Servius was pierced by a number of gates, of which those most frequently mentioned are the Porta Carmentalis, at the foot of the Capitoline; the Porta Collina and Porta Esquilina, on the east side; and especially the Porta Capena, which opened into the Appian Way. The area bounded by the wall was about two square miles.

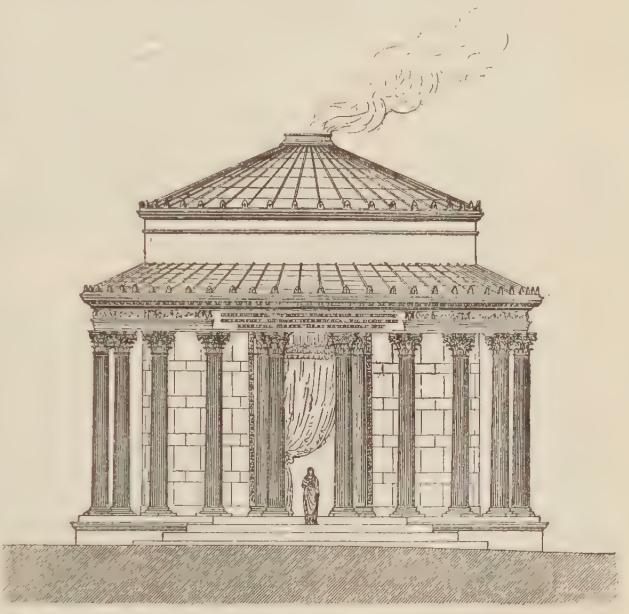
By the time of Augustus, Rome had extended beyond the Servian wall on every side. In B.C. 8 he divided the whole city, including the parts beyond the Servian limits, into fourteen wards (indicated on the Plan by Roman numerals). In each ward was afterwards placed a watch-house (*excubitorium*) for the *vigiles*, of whom there were seven cohorts (=about 7000 men), so distributed that each cohort looked after two wards; the duties of the *vigiles* were those of our policemen and firemen combined. The wards were subdivided into precincts (*vici;* the *vicus* as a subdivision is much older than the time of Augustus), each comprising a group, or block, of buildings; over the precincts were the precinct-masters (*magistri vicorum*), whose duties included not only the general oversight of other matters, but especially provision for the worship of the Lares Compitales (q. v.), to which the worship of the Genius of Augustus was added.

This larger Rome was finally fortified by a massive wall, commenced by Aurelian in A.D. 271, but not finished till the reign of Probus (A.D. 276–282). The Aurelian wall, as it is generally called (on the Plan, *Murus Aureliani et Probi*), was about 54 feet high on the outside, faced with brick, and strengthened (at any rate after the first restoration) by 381 square towers. It was repaired by Arcadius and Honorius in A.D. 403, afterwards by other rulers, and by several Popes; the greater part is still standing. It was constructed in great haste, as is shown by the large use of materials taken from other structures, and by the fact that walls previously erected for different purposes (e. g. see Plan, *Castra Praetoria* and *Amphitheatrum Castrense*), whose aggregate length amounted to about one sixth of the entire circuit, were incorporated in it as they stood. There were originally fourteen gates, vaulted, and flanked with round towers, besides the posterns, or small passages used for purposes of traffic in time of peace; the number was raised to fifteen by the enlargement of the Porta Pinciana from a postern to a gate of full size, probably by Honorius (*Bull. Com. Arch.* 1892, p. 102). The whole length of the wall was 11.7 miles (18837.50 m.); the area enclosed by it was 5.019 square miles, less than one-eighth the area of New York City.

The religious boundary of Rome, the Pomerium (q. v.), was not moved forward at the same time with the civil and military limits. The Pomerium of the city in the period when it comprised four wards and the Capitoline remained unchanged till the time of Sulla, who caused an extension to be made, but for some reason did not include the Aventine; this was outside the Pomerium till the reign of Claudius. Only he who had extended the territorial limits of Rome was entitled to the distinction of enlarging the Pomerium. After Sulla, at least Claudius, Nero, Vespasian, and Titus availed themselves of the privilege; and the line of Aurelian's wall for considerable distances seems to have coincided with a Pomerium previously fixed, perhaps also with an earlier limit of taxation for provisions brought into the city.

The population of Rome in the different periods cannot be estimated, even approximately; but, to judge from the area within the Aurelian wall, it can hardly at any time have exceeded 1,800,000.

The Tiber within the Aurelian wall was spanned by several bridges. The earliest was the Pons Sublicius, which was constructed of wood so that it could be cut down easily on the approach of an enemy; it was kept in repair, on religious grounds, even after bridges of stone stood above and below it. Next came the bridges connecting the island with the two banks, Pons Fabricius and Pons Cestius, both originally of wood, but renewed in stone in the first century B.C. The first stone bridge was the Pons Aemilius, also called Lapideus, dating from B.C. 142. The others were Pons Agrippae (reign of Augustus), Pons Aurelius (probably dating from the reign of Caracalla), and Pons Probi (reign of Probus). Frequently reckoned with these are two bridges outside the walls — the famous Mulvian Bridge (Pons Mulvius or Milvius, B.C. 109), two miles north on the Via Flaminia; and the Pons Aelius by the Campus Martius, built by Hadrian. Nero's bridge (Pons Neronis) was broken down, perhaps as early as the time of Hadrian. See PONS.



Along the Tiber were wharfs. The river-bed was skilfully adjusted — far more skilfully than under the system adopted some years ago and put into effect at enormous expense by the Italian engineers — to the great variation in the volume of water carried down, which at flood-height has been known to measure fourteen times the amount flowing when the river is at its ordinary level. The channel was graded at three elevations, so as to make three stages. Thus at the Pons Aelius the bottom division, for low water, was 218.2 feet wide; the middle division, for ordinary height, 319.9 feet wide; while to the upper division, designed to carry off the water in time of flood, a width of 442.9 feet was given (*Bull. Com. Arch.* 1893, p. 15). A complicated system of drains led into the Tiber through several large main sewers. Of the latter the Cloaca Maxima is justly celebrated as one of the best examples of early hydraulic construction. According to tradition it was built in the time of the Tarquins. Starting in the Subura, it followed a very irregular course, which was perhaps determined by the channel of a primitive brook (*Mitth.* 1891, p. 86). It passed beneath the Forum at the lowest point, under the east end of the Basilica Iulia, and emptied into the Tiber by the Forum Boarium. The channel of the Cloaca Maxima was paved with polygonal blocks of lava, and vaulted with large voussoirs of a hard kind of tufa (*lapis Gabinus*) laid without mortar; to give greater solidity at the mouth, the vaulting there for some distance was composed of voussoirs of peperino (*lapis Albanus*) arranged in three rings. The dimensions of the channel vary; where it is largest, at the opening into the Tiber, it is 14.75 feet wide and 18.96 feet high, measured from the

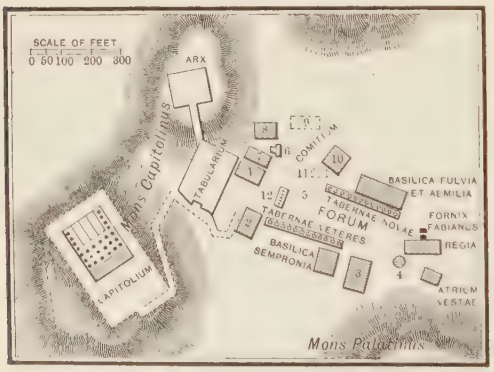
pavement to the middle of the vault (*Ant. Denkm.* 1889, Taf. 37). See CLOACA.

The architecture of Rome in the early days was unpretentious. Even the temples, built after Etruscan patterns, were low and of common materials covered with stucco. The streets were narrow and crooked; as a large amount of wood was used in construction, it is not surprising that between the years B.C. 215 and 50 seven terrible conflagrations swept over the parts of the city along the Tiber and about the Forum; inundations of the river also at times caused great destruction. Not till near the end of the Republic did ambitious citizens direct their energies towards the erection of fine public buildings, such as Pompey's theatre;* some, in the same period, as Lucullus and Aemilius Scaurus, lavished money upon palatial residences, which they ornamented with costly marbles. Cicero, patriot that he was, found Rome inferior to Capua not only in general appearance, but particularly in the matter of streets; and he speaks contemptuously of the building materials—*in latere aut in caemento, ex quibus urbs effecta est* (*Div.* II. xlvii. 99; *Leg. Agr.* II. xxxv. 96). He himself had a house on the north slope of the Palatine which cost him 3,500,000 sesterces (about $144,000); the house of Aemilius Scaurus is said to have been sold to the infamous Clodius for the enormous sum of nearly 15,000,000 sesterces (about $615,000).

Iulius Caesar formed large plans for the beautifying of Rome, but in the midst of their accomplishment his life was cut short. Augustus completed the edifices which his adoptive father had left unfinished, and inaugurated a new epoch in the extent to which he carried not only the erection of buildings, but also the restoration of earlier structures (the temples restored by him numbered eighty-two) and the use of fine materials, especially marble and travertine (*lapis Tiburtinus*); his saying that he "found the city of brick and left it of marble" was no idle boast (Suet. *Aug.* 28; cf. Mommsen, *Res Gestae Divi Aug.* 19–21). His example was followed by other emperors, among whom the greatest builders were Vespasian, Titus, Trajan, and Hadrian; of lower rank than these as regards the architectural style, though not the size, of their buildings (chiefly *Thermae*), were Caracalla, Diocletian, and Constantine. Roman architecture was at its best in the period from Augustus to Hadrian.

The contributions of the Romans to the progress of the arts were greater in the field of architecture than in any other. From the time of Sulla they freely adopted the architectural forms of the Greeks; but with these they combined the extensive use of the round arch, and gradually worked out a system which enabled them to erect immense structures, such as lay within the range of neither the Greek nor the Etruscan architecture. Lacking the Greek sensitiveness to perfect proportion, they relied, for effect, more upon massiveness than upon symmetry, and indulged in greater richness of decoration than Greek taste would have allowed. Under the Empire they ransacked the known world for the choicest marbles, as well as for the hard stones, the granites, and porphyries; these they turned to account in every conceivable way, larger masses being used for columns and other architectural members, thin slabs for incrustation, and small fragments for mosaics. (See MUSIVUM OPUS.) Surfaces finished in stucco were decorated in brilliant colours, frequently with complicated designs, sometimes with paintings of high merit (see PICTURA); bas-reliefs also were painted. In their adaptation of the Greek orders of architecture the Romans made changes affecting alike the shaft, capital, and architrave. (See COLUMNA.) Borrowing also from the Greeks the plan of the oblong temple and that of the hill-side theatre, they altered both; at the same time, contrary to Greek practice, they raised their temples upon high foundations, and gave to their theatres a full elevation on the exterior. (See AEDES; THEATRUM.) But apart from these, they so developed several architectural types as to make them distinctively Roman; such were the circus (q. v.), the amphitheatre (see AMPHITHEATRUM), the basilica (q. v.), baths (see THERMAE), the triumphal arch (see ARCUS), the commemorative column (see COLUMNA COCHLIS), the round tomb (see MAUSOLEUM; SEPULCRUM), and the aqueduct, so far as this was constructed above ground on the principle of the arcade. The Roman roads also, though in the modern view belonging rather to the domain of engineering than to that of architecture, were equally characteristic (see VIA); and certain of their bridges, as that at Alcántara in Spain, command universal admiration. No other city has been able to boast of so great a number and variety of beautiful or impressive structures as Rome in the first half of the fourth century A.D. Accord-

Temple of Vesta. (Restoration.)



* Very little is known of the architectural character of the early basilicas about the Forum.

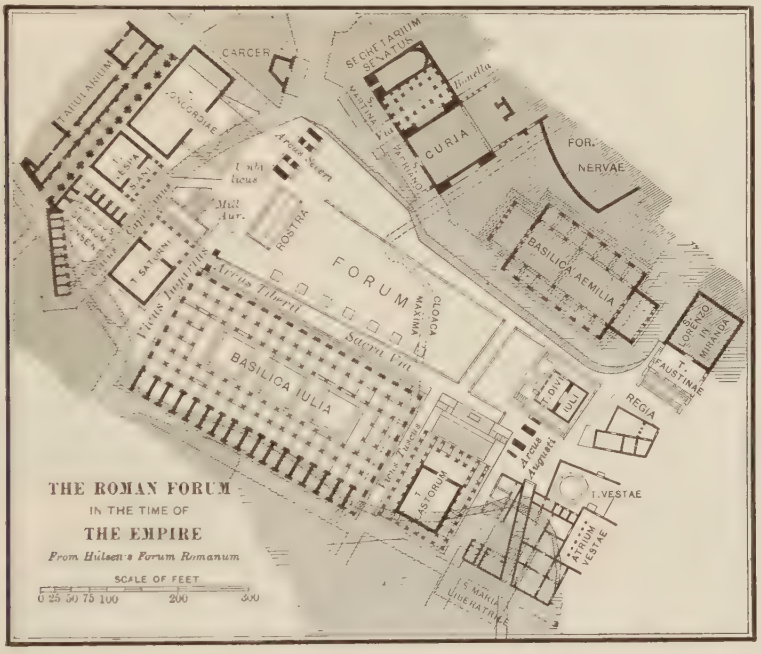
ing to a Catalogue dating from that period, the city contained 2 circuses, 2 amphitheatres, 3 theatres, 10 basilicas, 11 thermae, 36 arches of marble, 2 commemorative columns, 6 obelisks (imported from Egypt), 423 temples, 1790 *domus*—that is, extensive private residences, or palaces, of the wealthy—, besides which there were reckoned 46,602 tenements (*insulae*); the open places were adorned with 2 *colossi* (probably those of Nero and Augustus), 22 "great horses" (presumably counting not merely the large equestrian statues, as that of Marcus Aurelius, now in the square of the Capitol, but also groups of which horses formed a part, as those of the Dioscuri on the Capitoline and the Quirinal), to which are added 80 gilded and 77 ivory statues of the gods, no mention being made of the countless lesser statues on every side.

The number of obelisks in Rome is known to have been about twice that given in the Catalogue. Of the 19 aqueducts by which, according to the Catalogue, the city was supplied with water, part were branches. The principal aqueducts were: Aqua Appia, built in B.C. 312; Anio Vetus, for the Esquiline Hill, B.C. 272; Aqua Marcia (B.C. 144) and Aqua Tepula (B.C. 125), extending to the Capitoline; three constructed in the reign of Augustus: Aqua Iulia (B.C. 33), in the line of the Marcia and Tepula; Aqua Virgo (B.C. 19), for the Campus Martius; and Aqua Alsietina (B.C. 2), for his *naumachia* on the right bank of the Tiber; Anio Novus, built by Caligula; Aqua Claudia, by Claudius; Aqua Traiana, by Trajan, the last on the right bank; Aqua Severiana and Aqua Alexandrina, constructed to supply baths, the former by Septimius, the latter by Alexander, Severus. According to Lanciani's calculations, the amount of water brought in daily by the aqueducts in the time of Nerva (before the last three named in the list were built) was about 23,839,793 cu. ft. (cu. m. 675,092; see his *I Comentarii di Frontino*, p. 362). Three of the aqueducts have been repaired and are in use—the Aqua Marcia, Aqua Virgo, and Aqua Traiana. See AQUAEDUCTUS.

The names and dates of the more noteworthy buildings will now be given in connection with a rapid survey of the City according to its main divisions, commencing with the Capitoline Hill.

On the northern summit of the Capitoline was the Stronghold (*Arx*) of the earlier city. Within its walls were the Auguraculum, an open place where auspices were taken; the Temple of Iuno Moneta, with which the Mint was connected; and a Temple of Concord, built in B.C. 217; but their location is uncertain. On the southern summit was the most magnificent of all Roman temples, that of Iupiter Optimus Maximus, called the Capitolium. It stood in an *area*, on a high platform, and was nearly square, being Etruscan in plan and style; the sum of the four sides measured perhaps 760 feet. The front part was a triple colonnade; behind this were the three large *cellae*, the middle one for Iupiter, the other two for Minerva and Iuno. The original edifice is ascribed to the Tarquins, but it was not dedicated till the first year of the Republic, B.C. 509. It became a repository of the richest booty and votive offerings. In B.C. 83 it was burned to the ground; it was rebuilt, with richer adornment, the second temple being dedicated in B.C. 69. Again filled with treasures, it fell a prey to flames in A.D. 69. It was rebuilt a third time on the same plan, but as a Corinthian hexastyle, only to be burned again in A.D. 80. It was restored with great splendour, the fourth temple being dedicated by Domitian in A.D. 82. It was not again destroyed by fire, but remained to be dismantled by plunderers.

1. Temple of Concord.
2. Temple of Saturn.
3. Temple of Castor.
4. Temple of Vesta.
5. Probable location of the Temple of Ianus.
6. Prison—Carcer.
7. Probable location of the Basilica Opimia.
8. Probable location of the Basilica Porcia.
9. Probable location of the Curia Hostilia.
10. Curia Iulia.
11. Probable location of the Rostra before 44 B.C.
12. Rostra, after 44 B.C.
13. Probable location of the Temple of Iupiter Stator.

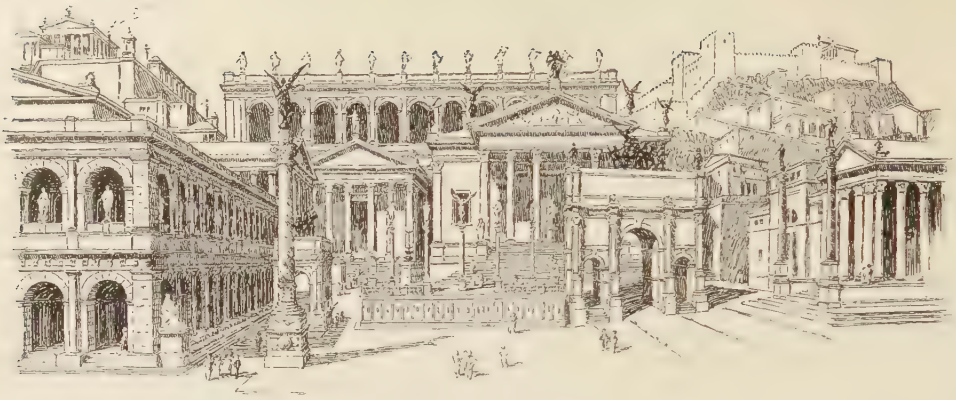


Plan of the Capitol and Forum in time of the Republic.

The Capitol was reached from the Forum by a graded road (*Clivus Capitolinus*, paved in B.C. 174), from which a branch led to the Arx. Of the open places, shrines, and private buildings on the Capitoline outside the Capitol and the Arx very little is known. The Tarpeian Rock was on the southeast side. On the slope of the Capitoline overlooking the Forum was the Tabularium, a depository for archives, erected in B.C. 78.

The northeast and southwest sides of the Forum in early times were lined with small shops (*tabernae*), which eventually were removed to make room for public buildings. The very ancient shrine of Ianus stood somewhere near the middle of the northwest side; the round Temple of Vesta at the southeast corner. The Palace of the Vestals (*Atrium Vestae*), southeast of the temple, was greatly changed by enlargements and restorations; near it was the official residence of the Pontifex Maximus (*Regia*). In the vaults of the Temple of Saturn (dedicated B.C. 497) the public treasure was kept (see AERARIUM); the eight Ionic columns remaining belong to a later restoration. The three beautiful Corinthian columns still standing on the foundation of the Temple of Castor (dedicated B.C. 484) date from a restoration in B.C. 6. The Temple of Concord was likewise of early date (dedicated B.C. 366); but the existing plan and fragments date from a remodelling of the edifice in B.C. 7. Under the Empire temples were erected in honour of Iulius Caesar (*Templum Divi Iulii*, marking the spot where his body was burned, dedicated B.C. 29); of Vespasian (three Corinthian columns remain); of Faustina, wife of Antoninus Pius, dedicated to him also after his death in A.D. 161 (now the Church of S. Lorenzo in Miranda); and of Romulus, the small son of Maxentius, who died in A.D. 309; this last building, of circular form (now incorporated in the Church of SS. Cosmas and Damian), lies just beyond the Temple of Faustina, northeast of the Forum. In A.D. 367 a series of twelve chapels, containing gilded statues of the Olympian divinities, was erected in the southwest corner (*Porticus Deorum Consentium*).

The oldest of the basilicas was the Basilica Porcia, built by the elder Cato in B.C. 184; this and the Basilica Opimia (B.C. 121) were removed, as the ground was needed for the extensions of the Forum. The Basilica Fulvia et Aemilia, built in B.C. 179, north of the shops, was extended afterwards to the edge of the Forum; as this side has not been excavated, its foundations cannot be traced. The Basilica Sempronia (B.C. 170) was erected on the site of the house of Scipio Africanus Maior, and was itself replaced by the magnificent Basilica Iulia, which was begun by Iulius Caesar in B.C. 54 and completed by Augustus. See BASILICA.

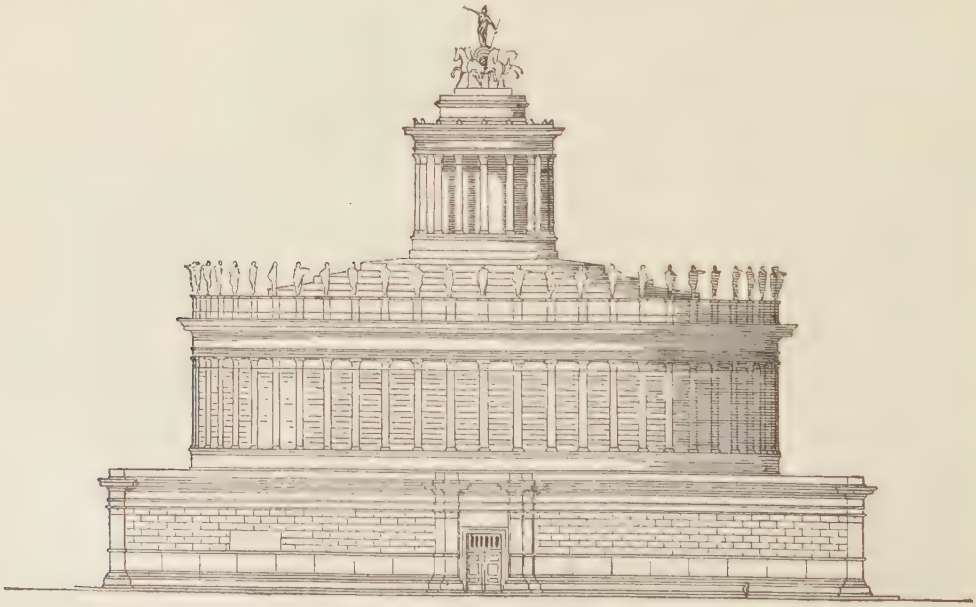


The open space of the Forum was paved with large blocks of stone. Along the south side passed the Holy Way (*Via Sacra*), the course of which varied somewhat in different periods. Across this, at the point where it entered the Forum (north of the *Regia*), was the Arch of the Fabii (*Fornix Fabianus*), erected in B.C. 121; south of the Temple of Iulius Caesar was the Arch of Augustus (B.C. 19), who commenced the erection of a new Senate-house (*Curia Iulia*, finished by Augustus) and the rebuilding of the Rostra at the upper end of the Forum; when the Rostra began to be used in the new location is a matter of doubt. The Platform in its final form was about 78 feet long, 33 feet wide, and 10 feet high; the top was adorned with statues. A second Speakers' Platform (*Rostra Iulia*) was erected in front of the Temple of Iulius Caesar, forming part of the façade, and was ornamented with the beaks of ships taken at the battle of Actium. Near the southwest corner of the Rostra was the Golden Milestone (*Milliarium Aureum*), erected by Augustus, from which distances were calculated on the Roman roads; at the northwest corner Constantine set up the Umbilicus Romae, in the form of a cone, as the ideal centre of the city and the Roman world. There is much uncertainty in regard to the plan and location of several other structures about the Forum, as the Secretarium Senatus and Graecostasis. Somewhere near the middle of the open space was the Lacus Curtius,

and at the upper end of the Basilica Iulia, the Arch of Tiberius (A.D. 16)—all these commemorating famous victories. The Arch of Septimius Severus (A.D. 203) is in a good state of preservation, though the six horses and the chariot which stood upon it, with Victory placing a crown upon the head of Severus, have long since disappeared. Several columns surmounted by statues stood in the Forum; the latest of them, the tasteless Column of Phocas (A.D. 608), is still in place, without the image.

Near the northwest corner of the Forum was the only prison in Rome (*carcer*), comprising a large upper and smaller lower dungeon, the latter of very ancient construction. East of the prison was the open space of the Comitium (q. v.). Here were the ancient Senate-house (*Curia Hostilia*) and the Speakers' Platform, called Rostra, because ornamented with the beaks of the ships taken from the Antiates in B.C. 338. Both were removed by Caesar, which appears to have become a dry *puteal* by the time of Augustus; near the Temple of Castor was the Lacus Iuturnae, which was still known in the Middle Ages.

The first extension of the Forum, made by Iulius Caesar (*Forum Caesaris* or *Forum Iulium*, see Map of Rome), was east of the Arx; in the centre was a Temple of Venus Genetrix, in front of which stood a bronze statue of Caesar's war-horse (Suet. *Caes.* 61). On the east side of this Augustus built a second extension (*Forum Augusti*), in which was the splendid Temple of Mars Ultor (dedicated B.C. 2), adorned with costly works of art. Nearer the Forum Romanum Vespasian laid off a similar area, and erected in it the magnificent Temple of Peace (*Templum Pacis*). This was connected with the forums of Caesar and Augustus by the Forum of Nerva, which was planned and almost finished by his predecessor Domitian; the boundary-wall

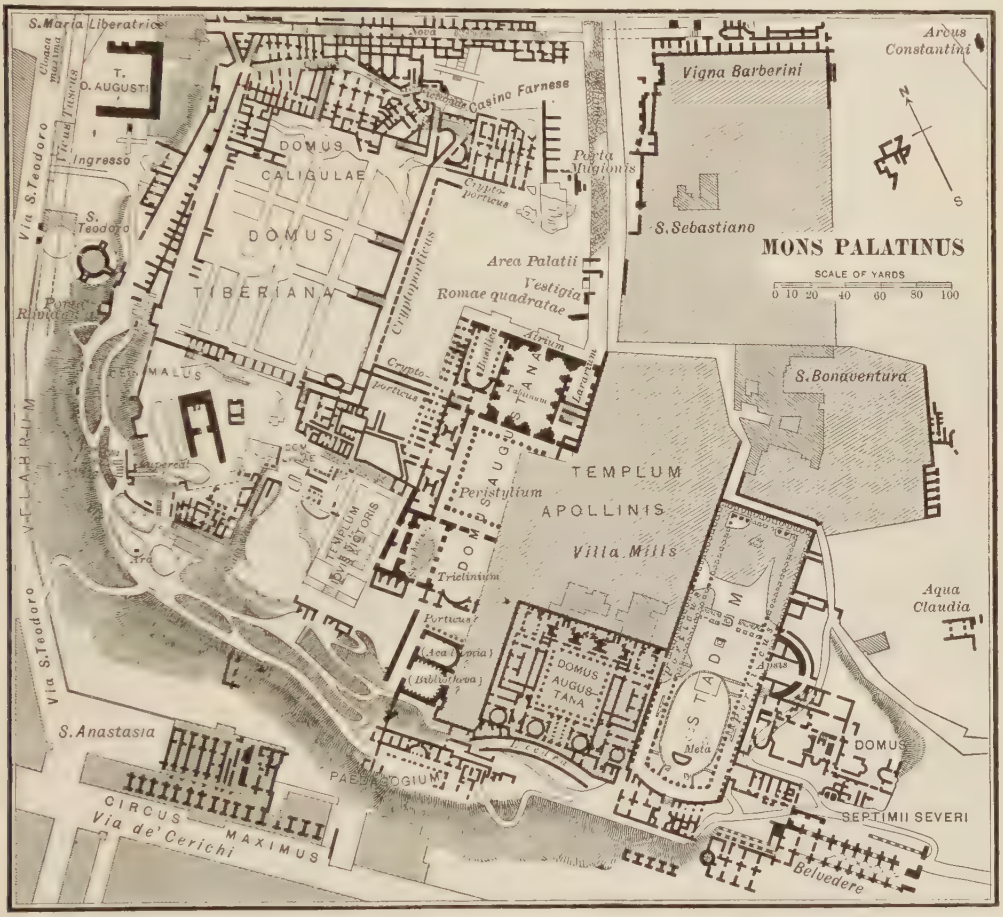


Restoration of the Forum.

was richly ornamented with Corinthian columns and reliefs, and in it was a prostyle hexastyle Temple of Minerva, also of the Corinthian order. The last and finest of the imperial forums was that of Trajan, who cut away the ridge between the Capitoline and Quirinal to make room for it. It was entered from the Forum of Augustus through a high triumphal arch. From this the visitor passed into an area with colonnades on either side, which opened out into two semicircular extensions; at the upper end of the latter was the great Basilica Ulpia. Beyond the Basilica was a small area in which rose the immense column of Trajan (without the base 97 feet, = 100 Roman feet, high), adorned with reliefs celebrating his campaigns against Decebalus. On either side of this were two buildings in which a large library was stored (*Bibliotheca Ulpia*); just beyond them Hadrian erected a temple in honour of Trajan and Plotina.

The greater part of the Palatine Hill in the Republican period was given up to the residences of wealthy citizens. There were, however, several temples the location of which, even now that a considerable portion of the hill has been excavated, has not been determined with exactness. Somewhere on the northern side was the very ancient Temple of Victory; farther down towards the Via Sacra lay the Temple of Iupiter Stator. Of later date were the Temple of the Magna Mater (dedicated B.C. 191), and the Temple of Iupiter Victor (see Plan), which seems to have been changed into a temple of the Sun by Elagabalus. But these temples were eclipsed in splendour by the Temple of Apollo, dedicated B.C. 28; the site of this, and of the library connected with it, has not yet been cleared.

Augustus, who was born on the Palatine, made it a place of imperial residence. His palace, enlarged by the additions of his successors (*Domus Augustana*), became the nucleus of a complex of palatial edifices to the magnificence of which the world has elsewhere afforded no parallel. (The arrangement in general, so far as the excavations have gone, may be made out from the Plan.) Ti-



Restoration of Hadrian's Mausoleum.

berius seems to have had a separate palace before his father's death (*Domus Tiberiana*). Caligula added to this; and, utilizing the roofs of intermediate buildings, he made a bridge from the Palatine to the Capitoline. Nero, after the nine-days fire in July, A.D. 64, extended his Golden House (*Domus Aurea*) over the Velia and even to the Esquiline; together with the Palace on the Palatine it must have covered about a square mile, but the parts beyond the Palatine were removed by the following emperors. The Stadium was probably built by Hadrian. Septimius Severus extended the palace beyond the Stadium; at the southeast corner, overlooking the Via Appia, he erected the Septizonium, a beautiful marble balcony in at least three stories. On the slope of the Palatine at the middle of the south side was the Paedagogium, a school for the pages of the imperial household.

North of the Palatine ran the Via Sacra, connecting at the east end with a street that skirted the southeast side and led into the Via Appia near the Porta Capena. Across the Via Sacra at the highest point of the Velia was the Arch of Titus, commemorating his victories over the Jews in A.D. 70 (dedicated in A.D. 81 by Domitian). Near this was the magnificent Temple of Venus and Rome, built by Hadrian, with two great apsidal niches facing in opposite directions (partly incorporated in the church of S. Francesca Romana). Further towards the Forum was the Basilica of Constantine, the main part of which was erected by Maxentius before B.C. 312; its remains are among the most impressive in Rome. At the end of the Via Sacra the triumphal Arch of Constantine is still standing, not far from the Colosseum. See ARCUS.

The Colosseum (probably so named from the colossus of Nero, more than 100 feet high, which stood near it) was commenced by Vespasian, and dedicated by Titus in A.D. 80, but it seems not to have been entirely finished till later. It is in the form of an ellipse, the circuit of which measures nearly one-third of a mile (1728 feet), the major axis

Plan of the Palatine.

615 feet, the minor axis 510 feet; the area is about 5.7 acres. The four stories furnished seats for 87,000 spectators. More ample still was the Circus Maximus, which was first provided with a permanent structure by Caesar; his building was in three stories, the first of stone, the other two of wood, and was about 2130 feet long, seating 150,000 spectators. This Circus was several times burned, rebuilt, and enlarged; before A.D. 79 it accommodated 250,000 spectators, and at the beginning of the fourth century its capacity is said to have reached the incredible number of 485,000. See AMPHITHEATRUM.

The other great buildings in the eastern part of

Rome were the Thermae of Titus (Reg. III.), erected in A.D. 80 on a part of the site of the Golden House. The Thermae of Caracalla (*Thermae Antoninianae*, Reg. XII.) could accommodate at one time 1600 bathers, and were of unparalleled magnificence. The quadrangular enclosure (see Map of Rome) measures more than a fifth of a mile (1081 feet) on each side, and the ruins now have something of the appearance of a great fortress. On the Quirinal (Reg. VI.) were the immense Thermae of Diocletian (dedicated in A.D. 305), part of the remains of which have been turned to use in modern edifices, and the Thermae of Constantine, which, though restored as late as A.D. 443, have left few traces. See THERMAE.

The public edifices in the Campus Martius were numerous and important. Here was the Theatre of Pompey (erected B.C. 55); with this was connected the Porticus Pompei, together with the Exedra, in which stood the statue of Pompey mentioned in the narratives of the death of Caesar. Nearer the Capitoline and the Tiber were the Theatre of Marcellus, of which an imposing section of exterior wall is still to be seen, and the Theatre of Balbus, both dedicated in B.C. 11; among other buildings erected during the reign of Augustus were the Porticus of Octavia and Porticus of Philippus, both named after relatives of the emperor, the Thermae of Agrippa, and the original Pantheon. The Pantheon in its present form, dating from the reign of Hadrian (though the inscription of Agrippa is still on the front of the Portico), is not only in a better state of preservation than any other Roman edifice, but ranks high among remarkable buildings. Its plan has the form of a circle 140 feet in diameter on the inside, with a rectangular portico sustained by sixteen Corinthian columns of granite 39 feet high. Over the round structure, which is of brick, is a massive dome 140 feet at its highest point above the paved floor; the building is lighted by an aperture, 30 feet in diameter, at the centre of the dome. Near the Tiber, in the northern part of the Campus Martius, was the huge Mausoleum of Augustus, the chambers of which were used as burial-places for members of the imperial family down to Nerva. To his reign also belonged the completion of the new Saepta, commenced by Iulius Caesar; this, originally an open space marked off to facilitate voting by centuries, was now surrounded by marble porticos, and provided with elaborate barriers of division. The Stadium, built by the emperor Domitian for Greek games, had seats for 30,000 spectators; the Circus of Flaminius (B.C. 221) was probably still larger. In the Campus Martius were many temples, early and late, as those of Hope (*Templum Spei*), of Neptune (eleven columns remain), and of the Egyptian Isis. The Column of Marcus Aurelius, similar to that of Trajan, is well preserved; the triumphal arches across the Via Lata have disappeared.

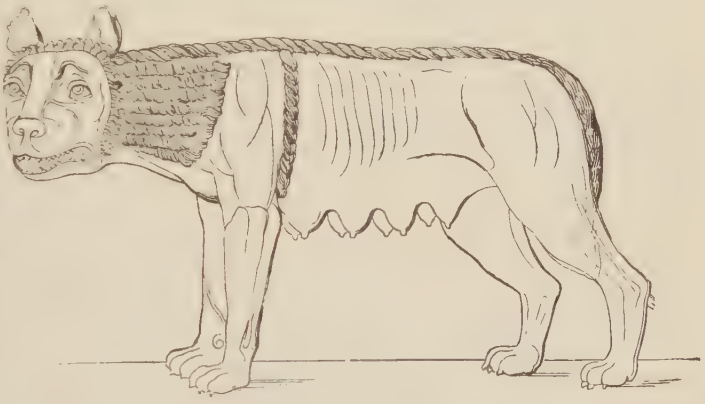
The famous Temple of Aesculapius, founded in B.C. 291, was on the island in the Tiber. On the right bank of the river was a Circus, built for the most part by Caligula, but named after Nero. East of this Hadrian erected his massive Mausoleum (now Castello di S. Angelo), in the form of a drum of masonry, 240 feet in diameter, resting on a square base measuring 341 feet on the sides; the whole structure was about 165 feet high, and on the top was a gilded statue of the emperor. Near by he built a Circus.

The Palatine Hill as seen from the Capitoline (1893).

BIBLIOGRAPHY. — Indispensable for more than superficial study of the subject are the publications devoted to the presentation and discussion of new discoveries and the results of investigation: *Notizie degli Scavi*, a monthly report of all excavations and "finds" in Italian territory (from 1876); *Bullettino della Commissione Archeologica comunale di Roma* (from 1873); *Monumenti antichi pubblicati per cura della R. Accademia dei Lincei* (from 1891; vol. i., e. g., contains *L'Itinerario di Einsiedeln e l'Ordine di Benedetto Canonico*, by Lanciani, and Mommsen's *Commentarium Ludorum Saecularium Quintorum*). Of especial value are the publications of the German Archaeological Institute: *Mittheilungen des Kaiserlich Deutschen Archäologischen Instituts, Römische Abtheilung* (from 1886; following the *Annali* and *Bulletino*, 1829–85); *Jahrbuch des K. D. Arch. Inst.* (from 1886), with the *Archäologische Anzeiger* (from 1886; following the *Archäologische Zeitung*, 1843–85); and the *Antike Denkmäler*

(from 1886; following the *Monumenti Inediti*, 1829–1885). The contributions of the French School at Rome appear in the *Mélanges d'Archéologie et d'Histoire* (from 1881).

Middleton's *Remains of Ancient Rome* (2 vols. London, 1892; enlarged edition of *Ancient Rome in 1885*) and Burn's *Rome and the Campagna* (London, 1876; small edition, with the title *Ancient Rome and its Neighbourhood*, London, 1895) are attractive in appearance, but untrustworthy in regard to details; of greater merit, so far as they go, are *The Roman Forum* (London, 1877) and *The Marvels of Rome* (edition of the *Mirabilia Urbis Romae*, London, 1889), by F. M. Nichols; Hülsen's *Forum Romanum* (English edition, Rome, 1893) contains two admirable reconstructions; worthy of recommendation also are the panorama by Bühlmann and Wagner, *Rom mit dem Triumphzug des Kaisers Constantin im Jahre 312*, with descriptive text by F. von Reber (Munich, 1890), and the reconstruction of the Baths of Diocletian by Paulin, *Les Thermes de Dioclétien* (Paris, 1890). There is a succinct but clear description of the ruins at Rome in Baedeker's *Central Italy and Rome* (11th edition, Leipzig, 1893). An interesting account of late discoveries is given by Lanciani in *Ancient Rome in the Light of Recent Discoveries* (Boston, 1888) and *Pagan and Christian Rome* (Boston, 1893). Prof. Lanciani is publishing a detail map of Rome, scale 1.1000; the 48 sheets appear in 8 *fasciculi* (Milan; fasc. 1–3, 1893–95). An excellent brief handbook is Otto Richter's *Topographie der Stadt Rom* (Nördlingen, 1889; reprinted from Müller's *Handbuch der klass. Alterthumswissenschaft*). Jordan's *Topographie der Stadt Rom im Alterthum* (Berlin, vol. i. pt. i. 1878, pt. ii. 1885, vol. ii. 1871) is of much value; Gilbert's *Geschichte und Topographie der Stadt Rom im Alterthum* (Leipzig, 3 pts. 1883, 1885, 1890) is less satisfactory. Among later works on Roman architecture, Choisy, *L'Art de Bâtir chez les Romains* (Paris, 1873), and Durm, *Die Baukunst der Römer* (in his *Handbuch der Architektur*, vol. ii. Darmstadt, 1885), are worthy of special mention. The inscriptions of the city of Rome are collected in vol. vi. of the *Corpus Inscriptionum Latinarum*. For the other ancient sources, and for fuller reference to modern works (including collections of engravings), the bibliographies at the beginning of the works by Richter, Burn, and Middleton, cited above, may be consulted; and a review of the literature since 1887 by Hülsen will be found in the *Mittheilungen*, vols. iv., vi., vii., and viii.



Romānae Quaestiōnes. See PLUTARCHUS.

Romances. See NOVELS AND ROMANCES.

Romulea. An ancient town of the Hirpini in Samnium, on the road from Beneventum to Tarentum.

Romulĭdae. A patronymic given to the Roman people from Romulus, their first king, and the founder of the city (Verg. *Aen.* viii. 638).

Romŭlus. The name of the mythical founder of Rome. According to the popular Roman tradition, recorded in the first book of Livy, he was the son of Mars and Ilia or Rhea Silvia, daughter of Numitor, and was born at the same birth with Remus. Amulius, who had usurped the throne of Alba, in defiance of the right of his elder brother Numitor, ordered the infants to be thrown into the Tiber, and their mother to be buried alive, the doom of a vestal virgin who violated her vow of chastity. The river happened at that time to have overflowed its banks, so that the two infants were not carried into the middle of the stream, but drifted along the margin, till the basket which contained them became entangled in the roots of a wild vine at the foot of the Palatine Hill. At this time a she-wolf, coming down to the river to drink, suckled the infants, and carried them to her den among the thickets hard by. Here they were found by Faustulus, the king's herdsman, who took them home to his wife Laurentia, by whom they were carefully nursed, and named Romulus and Remus. The two youths grew up, employed in the labours, the sports, and the perils of the pastoral occupation of their foster-father. But their royal blood could not be quite concealed. Their superior mien, courage, and abilities soon acquired for them a decided superior-

The Capitoline Wolf.

ity over their young compeers, and they became leaders of the youthful herdsmen in their contests with robbers or with rivals. Having quarrelled with the herdsmen of Numitor, whose flocks were accustomed to graze on the neighbouring hill Aventinus, Remus fell into an ambuscade, and was dragged before Numitor to be punished. While Numitor, struck with the noble bearing of the youth, and influenced by the secret stirrings of nature within, was hesitating what punishment to inflict, Romulus, accompanied by Faustulus, hastened to the rescue of Remus. On their arrival at Alba, the secret of their origin was discovered, and a plan was speedily organized for the expulsion of Amulius and the restoration of their grandfather Numitor to his throne. This was soon accomplished; but the twin-brothers felt little disposition to remain in a subordinate position at Alba, after the enjoyment of the rude liberty and power to which they had been accustomed among their native hills. They therefore requested from their grandfather permission to build a city on the banks of the Tiber, where their lives had been so miraculously preserved. Scarcely had this permission been granted, when a contest arose between the two brothers respecting the site, the name, and the

sovereignty of the city which they were about to found. Romulus wished it to be built on the Palatine Hill, and to be called by his name; Remus preferred the Aventine, and his own name. To terminate their dispute amicably, they agreed to refer it to the decision of the gods by augury. Romulus took his station on the Palatine Hill, Remus on the Aventine. At sunrise Remus saw six vultures, and immediately after Romulus saw twelve. The superiority was adjudged to Romulus, because he had seen the greater number; against which decision Remus remonstrated indignantly, on the ground that he had first received an omen. Romulus then proceeded to mark out the boundaries for the wall of the intended city. This was done by a plough with a brazen ploughshare, drawn by a bull and a heifer, and so directed that the furrow should fall inward. The plough was lifted and carried over the spaces intended to be left for gates; and in this manner a square space was marked out, including the Palatine Hill, and a small portion of the land at its base, termed Roma Quadrata. This took place on the 21st of April, on the day of the festival of Pales, the goddess of shepherds. While the wall was beginning to rise above the surface, Remus, whose mind was still rankling with his discomfiture, leaped over it, scornfully saying, "Shall such a wall as that keep your city?" Immediately Romulus, or, as others say, Celer, who had charge of erecting that part of the wall, struck him dead to the ground with the implement which he held in his hand, exclaiming, "So perish whosoever shall hereafter overleap these ramparts."

By this event Romulus was left the sole sovereign of the city; yet he felt deep remorse at his brother's fate, buried him honourably, and, when he sat to administer justice, placed an empty seat by his side, with a sceptre and crown, as if acknowledging the right of his brother to the possession of equal power. To augment as speedily as possible the number of his subjects, Romulus set apart, in his new city, a place of refuge, to which any man might flee, and be there protected from his pursuers. By this device the population increased rapidly in males, but there was a great deficiency in women; for the adjoining States, regarding the followers of Romulus as little better than a horde of brigands, refused to sanction intermarriages. But the schemes of Romulus were not to be so frustrated. In honour of the god Consus, he proclaimed games, to which he invited the neighbouring States. Great numbers came, accompanied by their families, and, at an appointed signal, the Roman youth, rushing suddenly into the midst of the spectators, snatched up the unmarried women in their arms, and carried them off by force. The outrage was immediately resented, and Romulus found himself involved in a war with all the neighbouring States. Fortunately for Rome, though those States had sustained a common injury, they did not unite their forces in the common cause. They fought singly, and were each in turn defeated; Caenina, Crustumerium, and Antemnae fell successively before the Roman arms. Romulus slew with his own hands Acron, king of Caenina, and bore off his spoils, dedicating them, as *spolia opima*, to Iupiter Feretrius. The third part of the lands of the conquered towns was seized by the victors, and such of the people of these towns as were willing to remove to Rome were received as free citizens. In the meantime, the Sabines, to avenge the insult which they had sustained, had collected together forces under Titus Tatius, king of the Quirites. The Romans were unable to meet so strong an army in the field, and withdrew within their walls. They had previously placed their flocks in what they thought a place of safety, on the Capitoline Hill, which, strong as it was by nature, they had still further secured by additional fortifications. Tarpeia, the daughter of the commander of that fortress, having fallen into the hands of the Sabines, agreed to betray the access to the hill for the ornaments they wore upon their arms. At their approach she opened the gate, and, as they entered, they crushed her to death beneath their shields. From her the cliff of the Capitoline Hill was called the Tarpeian Rock. The attempt of the Romans to regain this place of strength brought on a general engagement. The combat was long and doubtful. At one time the Romans were almost driven into the city, which the Sabines were on the point of entering along with them, when fresh courage was infused into the fugitives in consequence of Romulus vowing a temple to Iupiter Stator, and by a stream of water which rushed out of the Temple of Ianus and swept away the Sabines from the gate. The struggle was renewed during several successive days with various fortune and great mutual slaughter. At length the Sabine women who had been carried away, and who were now reconciled to their fate, rushed with loud outcries between the combatants, imploring their husbands and their fathers to spare on each side those who were now equally dear. Both parties paused; a conference began, a peace was concluded, and a treaty framed, by which the two nations were united into one, and Romulus and Tatius became the joint sovereigns of the united people. But, though united, each nation continued to be governed by its own king and Senate. During the double rule of Romulus and Tatius a war was undertaken against the Latin town of Cameria, which was reduced and made a Roman colony, and its people were admitted into the Roman State, as had been done with those whom Romulus previously subdued. Tatius was soon afterwards slain by the people of Laurentum, because he had refused to do them justice against his kinsmen, who had violated the laws of nations by insulting their ambassadors.

The death of Tatius left Romulus sole monarch of Rome. He was soon engaged in a war with Fidenae, a Tuscan settlement on the banks of the Tiber. This people he likewise overcame, and placed in the city a Roman colony. This war, extending the Roman frontier, led to a hostile collision with Veii, in which he was also successful, and deprived Veii, at that time one of the most powerful cities of Etruria, of a large portion of its territories, though he found that the city itself was too strong to be taken. The reign of Romulus now drew near its close. One day, while holding a review of his army, on a plain near Lake Capra, the sky was suddenly overcast with gloom and a tempest of thunder and lightning arose. The people fled in dismay; and when the storm abated, Romulus, over whose head it had raged most fiercely, was nowhere to be seen. A rumour was circulated that during the tempest he had been carried to heaven by his father, the god Mars. This opinion was speedily confirmed by the report of Iulius Proculus, who declared that, as he was

returning by night from Alba to Rome, Romulus appeared before him in a form of more than mortal majesty, and bade him go and tell the Romans that Rome was destined by the gods to be the chief city of the earth; that human power should never be able to withstand her people; and that he himself would be their guardian god Quirinus (Plut. Romulus; Livy, i. 4). The traditional date of the translation of Romulus to heaven is B.C. 716. For a criticism of the legend and its relation to Roman history, see Lewis, *An Inquiry into the Credibility of Ancient Roman History* (1855); Ihne, *Early Rome*, Engl. trans. (N. Y. 1878); and Niebuhr's *History of Rome*, vol. i. Engl. edition (1859). In defence of the historical value of the legend, see Ampère, *Histoire Romaine à Rome* (Paris, 1871).

Romŭlus Augustŭlus. See AUGUSTULUS.

Romŭlus Silvius. See SILVIUS.

Rorarii. The name given in the old Roman legion to the citizens of the lowest property-class, who were armed only with a dart and a sling. These had to open the fighting in the capacity of skirmishers, and, when the close combat began, to withdraw behind the line. In later times their place was taken by the *velites* (q. v.). See EXERCITUS; LEGIO.

Rosciānum. Now Rossano; a fortress on the east coast of Bruttium between Thurii and Paternum.

Roscillus. A chief of the Allobroges who served Caesar in his Gallic campaigns, but sided with Pompey in the Civil War (B.C. 48).

Roscius. (1) LUCIUS, a Roman ambassador sent to Fidenae in B.C. 438. (2) SEXTIUS, of Ameria, a town in Umbria, accused of the murder of his father, and defended by Cicero (B.C. 80) in an oration which is still extant. (3) QUINTUS, the most celebrated comic actor at Rome, was a native of Solonium, a small place in the neighbourhood of Lanuvium. His histrionic powers procured him the favour of many of the Roman nobles, and, among others, of the dictator Sulla, who presented him with a gold ring, the symbol of equestrian rank. Roscius enjoyed the friendship of Cicero, who constantly speaks of him in terms both of admiration and affection. Roscius was considered by the Romans to have reached such perfection in his profession that it became the fashion to call every one who became particularly distinguished in the histrionic art by the name of Roscius. He realized an immense fortune by his profession, and died in B.C. 62. See HISTRIO. (4) OTHO. See OTHO.

Rosetta Stone. See HIEROGLYPHICS.

Rostra (properly "the ships' prows," from *rostrum*, the iron-bound prow [literally, "beak"] of a ship). The orators' platform in the Forum at Rome, so called because it was embellished with the bronze prows of the ships of the Latin fleet captured at Antium in B.C. 338 (Livy, viii. 14). Besides these it was also decorated with other monuments of the greatness of Rome, such as the Laws of the Twelve Tables, the Columna Rostrata (q. v.) of Duilius, and numerous statues of men of mark. Originally it stood between the part of the Forum called the Comitium and the Forum proper, opposite the Curia; but in B.C. 44 Caesar moved it to the north end of the Forum under the Capitol (Cic. *Phil.* ix. 2), and here built up part of it by the employment of the old materials. It was not completed until after his death, by Antonius. This new platform, which was afterwards repeatedly restored, appears by the existing remains to have consisted of an erection eleven feet higher than the pavement of the Forum, about seventy-eight feet in length, and thirty-three feet in depth. The front was decorated with two rows of ships' prows. The way up to the platform was at the back. This platform also was used down to the latest times of the Empire as a place for setting up honorary statues. The Rostra Iulia, so called to distinguish it from the other rostra, was the projecting *podium* of the Heroüm of Iulius Caesar, built by Augustus. Affixed to this were the prows of the vessels captured at Actium (Dio Cass. li. 19; Middleton, *Ancient Rome*, p. 179). See FORUM.

Rostrāta Columna. See COLUMNA ROSTRATA.

Rostrāta Corōna. See CORONA.

Rostrum. The beak of a ship. See NAVIS, p. 1078.

Rota. A wheel. See ANTLIA; CURRUS; MOLA; TYMPANUM.

Rotomăgus. See RATOMAGUS.

Roxāna (Ῥωξάνη). Daughter of Oxyartes the Bactrian. She fell into the hands of Alexander the Great on his capture of the hill-fort in Sogdiana named "the Rock," B.C. 327. Alexander was so captivated by her charms that he married her. Soon after Alexander's death (233) she gave birth to a son (Alexander Aegus), who was admitted to share the nominal sovereignty with Arrhidaeus, under the regency of Perdiccas. Roxana afterwards crossed over to Europe with her son, placed herself under the protection of Olympias, and threw herself into Pydna along with the latter. In 316 Pydna was taken by Cassander; Olympias was put to death; and Roxana and her son were placed in confinement in Amphipolis, where they were murdered by Cassander's orders in 311 (Plut. *Alex.*; Arrian, *Anab.* vii. 27; Diod. bks. xviii. and xix.).

Roxolāni. See RHOXOLANI.

Rubi. Now Ruvo; a town in Apulia, on the road from Canusium to Brundusium. Many vases have been found in the tombs on its site.

Rubĭco and **Rubĭcon.** A small river in Italy, falling into the Adriatic a little north of Ariminum, forming the boundary in the republican period between the province of Gallia Cisalpina and Italia proper. It is celebrated in history on account of Caesar's passage across it at the head of his army, by which act he declared war against the Senate. See Suet. *Iul.* 31; and the article CAESAR.

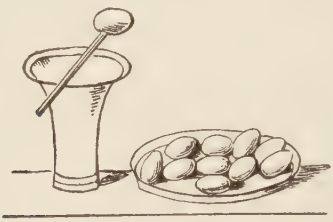
Rubra Saxa, called RUBRAE BREVES (sc. *petrae*) by Martial. A small place in Etruria, only a few miles from Rome, near the river Cremera, and on the Via Flaminia. Near this place Constantine won his great victory over Maxentius in A.D. 312.

Rubrēsus Lacus. A lake near Narbo in Gaul.

Rubrīca. Red ochre. The word is used of a law, because the titles of these were engrossed in red (Pers. v. 90).

Rubrum Maré. See ERYTHRAEUM MARÉ.

Ruby. See GEMMA.



Rudder. See GUBERNACULUM.

Rudens. "The Cable." A play of Plautus. See PLAUTUS.

Rudiae. Now Rotigliano or Rugge; a town of the Peucetii in Apulia, on the road from Brundusium to Venusia, was originally a Greek colony, and afterwards a Roman municipium. Rudiae is celebrated as the birthplace of Ennius (Sil. Ital. xii. 393).

Rudiarius. See GLADIATORES.

Rudĭcŭla (*κύκηθρον*). Diminutive of *rudis* (q. v.). A wooden spoon (Columell. xii. 46, 3) for beating up, stirring, or mixing together different ingredients while boiling, stewing, or making decoctions

Rudicula. (Pompeian painting.)

(Cato, *R. R.* 95, 1). The example, from a picture of still life at Pompeii, exhibits a plate of eggs, together with the vessel and spoon for beating them up.

Rudis. The wooden foil of the gladiators. On the discharge of a gladiator from further service, he was presented with a rudis marked with the letters SP (i. e. *spectatus*). Cf. Hor. *Epist.* i. 1, 2, with the commentators. See GLADIATORES.

Rufīnus. (1) P. CORNELIUS RUFĪNUS. A Roman who was consul in B.C. 290 with M'. Curius Dentatus, and in conjunction with his colleague brought the Samnite War to a conclusion, and obtained a triumph in consequence. He was consul a second time in 277, and carried on the war against the Samnites and the Greeks in Southern Italy. The chief event of his second consulship was the capture of the important town of Croton. In 275 Rufinus was expelled from the Senate by the censors C. Fabricius and Q. Aemilius Papus, on account of his possessing ten pounds of silver plate. The dictator Sulla was descended from this Rufinus. His grandson was the first of the family who assumed the surname of Sulla. (2) LICINIUS RUFĪNUS. A jurist who lived under Alexander Severus. There are in the Digest seventeen excerpts from twelve books of *Regulae* by Rufinus. (3) The chief minister of state under Theodosius the Great, and an able but at the same time a treacherous and dangerous man. He instigated Theodosius to those cruel measures which brought ruin upon Antioch, A.D. 390. After the death of Theodosius in 395, Rufinus exercised paramount influence over the weak Arcadius; but towards the end of the year a conspiracy was formed against him by Eutropius and Stilicho, who induced Gainas, the Gothic ally of Arcadius, to join in the plot. Rufinus was in consequence slain by the troops of Gainas. (4) Surnamed TYRANNIUS or TURRANIUS, or TORĀNUS. A celebrated ecclesiastical writer, born probably about A.D. 345 in Italy. He was at first an inmate of the monastery at Aquileia, and he afterwards resided many years at a monastery in Palestine, where he became very intimate with St. Jerome. The two friends afterwards quarrelled, and Jerome attacked Rufinus with the utmost vehemence on account of his supporting the tenets of Origen. After remaining in the East for about twenty-six years, Rufinus returned to Italy in 397, where he published a Latin translation of the Apology for Origen by Pamphilus, and of the books of Origen, *De Principiis*, together with an original tract, *De Adulteratione Librorum Origenis*. In the preface to the *De Principiis* he quoted a panegyric which Jerome had at an earlier period pronounced upon Origen. This led to a bitter correspondence between the two former friends, which was crowned by the *Apologia* of the one *adversus Hieronymum*, and the *Apologia* of the other *adversus Rufinum*. Rufinus died in Sicily in 410, to which island he had fled upon the invasion of Italy by Alaric. Several of his works are extant, the chief edition being that of Vallarsi (Verona, 1745). (5) The author of a little poem in twenty-two lines, *Pasiphaës Fabula ex Omnibus Metris Horatianis*, which, as the name imports, contains an example of each of the different metres employed by Horace. His date is quite uncertain, but he may be the same person with the following. Edited by Bährens in the *Poet. Lat. Min.* vol. v. (6) A grammarian of Antioch, whose treatise *De Metris Comicis*, or rather extracts from it, is contained in the *Grammatici Latini* of Keil, vi. 569. (7) The author of thirty-eight epigrams in the Greek Anthology. His date is uncertain, but there can be no doubt that he was a Byzantine. His verses are of the same light amatory character as those of Agathias, Paulus, Macedonius, and others.

Rufius or **Rufus Festus Avienus.** See AVIENUS.

Rufus, L. CAECILIUS. The brother of P. Sulla by the same mother, but not by the same father. He was tribune of the plebs B.C. 63, when he rendered warm support to Cicero, and in particular opposed the agrarian law of Rullus. In his praetorship, B.C. 57, he joined most of the other magistrates in proposing the recall of Cicero from banishment.

Rufus, M. CAELIUS. A young Roman noble distinguished as an elegant writer and eloquent speaker, but equally conspicuous for his profligacy and extravagance. Notwithstanding his vices he lived on intimate terms with Cicero, who defended him in B.C. 56 in an oration still extant. The accusation was brought against him by Sempronius Atratinus, at the instigation of Clodia Quadrantaria, whom he had lately deserted. Clodia charged him with having borrowed money from her in order to murder Dion, the head of the embassy sent by Ptolemy Auletes to Rome, and with having made an attempt to poison her. In 52 Caelius was tribune of the plebs and in 50 aedile. During the years 51 and 50 he carried on an active correspondence with Cicero, who was then in Cilicia, and many of the letters which he wrote to Cicero at that time are preserved in the collection of Cicero's Letters. On the breaking out of the Civil War in 49 he espoused Caesar's side, and was rewarded for his services by the praetorship in 48. Being at this time overwhelmed with debt, he availed himself of Caesar's absence from Italy to bring forward a law for the abolition of debts. He was, however, resisted by the other magistrates and deprived of his office; whereupon he went into the south of Italy to join Milo (q. v.), whom he had secretly sent for from Massilia. Milo was killed near Thurii be-

fore Caelius could join him, and Caelius himself was put to death shortly afterwards at Thurii.

Rufus Ephesius. So called from Ephesus, the place of his birth. A celebrated Greek physician, who lived in the reign of Trajan (A.D. 98–117), and wrote several medical works, some of which are still extant.

Rufus, M. Minucius. The colleague of Q. Fabius (B.C. 217) in the Second Punic War. See Fabius.

Rufus, Q. Curtius. See Curtius.

Rufus, Sextus. See Sextus Rufus.

Rufus, Valgius. See Valgius.

Ruga (*ῥυτίς*). Literally, a wrinkle; whence, the worm of a screw (Pliny, *H. N.* xviii. 74; and Cochlea), and a small, irregular crease or fold in a piece of drapery, contradistinguished from *sinus*, a deep and loose one, and from *contabulatio*, a straight and regular one (Pliny, *H. N.* xxxv. 34; Macrob. *Sat.* ii. 9).

Rugii. An important people in Germany, who originally dwelt on the coast of the Baltic between the Viadus (Oder) and the Vistula. After disappearing a long time from history, they are found at a later time in Attila's army; and after Attila's death they founded a new kingdom on the northern bank of the Danube, in Austria and Hungary, the name of which is still preserved in the modern Rugiland. They have left traces of their name in the country which they originally inhabited, in the modern Rügen, Rügenwalde, Rega, Regenwalde (Tac. *Germ.* 43; Prop. *B. G.* ii. 14).

Rullus, P. Servilius. Tribune of the plebs B.C. 63. He proposed an agrarian law, which Cicero attacked in three orations, which have come down to us. The law was in reality aimed against the power of the Senate and was instigated by Caesar, but it was presently withdrawn by Rullus himself.

Rumīna and **Rumīnus** (from *rumis* or *ruma*, "a teat"). Ancient Italian pastoral deities, who protected the suckling cattle and received offerings of milk (Varro, *R. R.* ii. 2, 5; ii. 11, 15). In Rome their sanctuary stood at the foot of the Palatine Hill, in the neighbourhood of the Lupercal; in the same place was the Ruminal fig-tree (probably a primitive emblem of the nurturing goddess; the *Rumina ficus* of Ovid, *Fasti*, ii. 412), under which Romulus and Remus were said to have been suckled by the wolf. (See Romulus.) The name Ruminus was also applied to Iupiter as the nourisher of all things (St. August. *De Civ. Dei*, vii. 11).

Runcīna (*ῥυκάνη*). A carpenter's plane, for smoothing and levelling surfaces in wood (Pliny, *H. N.* xvi. § 82), of which an example is afforded by a sepulchral marble at Rastadt, which is furnished with a handle, and shows the holes through which the shavings (*ramenta*) turned up.

Runcina. (Rich.)

Rupilius, Publius. A Roman, consul in B.C. 132, who prosecuted with the utmost vehemence all the adherents of Tib. Gracchus, who had been slain in the preceding year. As proconsul in Sicily in the following year he made various regulations for the government of the province, which were known by the name of Leges Rupiliae. Rupilius was condemned in the tribunate of C. Gracchus, B.C. 123, on account of his illegal and cruel acts in the prosecution of the friends of Tib. Gracchus.

Ruscĭno. A town of the Sordones or Sordi, in the southeastern part of Gallia Narbonensis, at the foot of the Pyrenees. It is now Rousillon.

Rusellae. Now Grosseto; one of the most ancient cities of Etruria, situated on an eminence east of Lake Prelius and on the Via Aurelia. The walls of Rusellae still remain, and are some of the most ancient in Italy, being fine specimens of the so-called Cyclopean architecture. See Cyclops; Murus.

Russātus. Literally "clothed in red"; a word especially applied to a charioteer (*auriga*) in the chariot races of the Circus who belonged to the Reds (*factio russata*). See Pliny, *H. N.* vii. § 54, and the article Circus.

Rustĭcus, L. Iunius Arulēnus. A friend and pupil of Paetus Thrasea, and an ardent admirer of the Stoic philosophy. He was put to death by Domitian because he had written a panegyric upon Thrasea (Tac. *Ann.* xvi. 25; *Hist.* iii. 90). See Thrasea.

Rutabŭlum. (1) A fire-shovel, employed by bakers and smiths for throwing up the embers and ignitable matter in their ovens and forges (Festus, s. v.; Isidor. *Orig.* xx. 8, 6); whence it is commonly mentioned in conjunction with the tongs (*forceps*) (Suet. *Aug.* 75). The word is another form of *rutrum* (q. v.). (2) A wooden shovel, used for stirring together and amalgamating the new-made wine (*mustum*) with that which was boiled down (*defrutum*) and other ingredients infused into it.

Rutēni. A people in Gallia Aquitanica, on the frontiers of Gallia Narbonensis, in the modern Rovergne. Their chief town was Segodunum, later Civitas Rutenorum, now Rodez.

Rutilius Lupus. See Lupus.

Rutilius Namatiānus, Claudius. A Latin poet of Gallic birth who in the fifth century of our era wrote an elegiac poem in several books, of which the first (644 lines) and a fragment of the second are extant. It describes his return from Rome to Gaul (*De Reditu*, also called *Itinerarium*). Rutilius was a pagan and attacked both the Jews and the Christian priests. Edited by L. Müller (Leipzig, 1870).

Rutilius Rufus, Publius. A Roman statesman and orator. He was military tribune under Scipio in the Numantine War, praetor B.C. 111, consul in 105, and legatus in 95 under Q. Mucius Scaevola, proconsul of Asia. While acting in this capacity he displayed so much honesty and firmness in repressing the extortions of the publicani that he became an object of fear and hatred to the whole body. Accordingly, on his return to Rome, he was impeached of malversation (*de repetundis*), found guilty, and compelled to withdraw into banishment, B.C. 92. He is said to have written a history of Rome in Greek (Livy, xxxix. 52; Gell. vi. 14).

Rutrum and dim. **Rutellum.** A sort of hoe which differed from the *rastrum* in having the handle fixed perpendicularly into the middle of the blade. It was used in breaking clods (Verg. *Georg.* i. 105).

Rutŭba. Now Roya; a river on the coast of Liguria, which flows into the sea near Album Intemelium.

Rutŭli. An ancient people in Italy, inhabiting

a narrow strip of country on the coast of Latium, a little to the south of the Tiber. Their chief town was Ardea, which was the residence of Turnus (q. v.). They were subdued at an early period by the Romans, and disappear from history (Livy, i. 56). See TURNUS.

Rutŭpae or **Rutupiae.** Now Richborough; a port of the Cantii, in the southeast of Britain, where there are still several Roman remains. The place was famous for the excellent oysters exported thence to Rome (Juv. iv. 141).

Rye Bread. See PISTOR.

S

S, as a symbol.

GREEK.—Σ = Σέξτος, Σέραπις, σεβαστῷ. As a numeral = 18 (old system). σ′ = 200, ,σ = 200,000.

ROMAN.—S = Saeculum, salve, Saturnus, scriba, scripsit, secundae, Semis, sententia, sepultura, Servius, servus, sestertium, Severus, Sextus, si, Sicilia, Silvanus, singuli, situs, solvit, Spurius, stipendia, studiosus, suppurationes.

S·S = sancto sacrum, semper scriptus, senatus sententia, siti sunt, subscriptus, sumptu suo, susceptum solvit.

S·S·S = sicut (summa) supra scripti, supra scripti sunt.

S·A = Severiana Alexandrina (legio), Silvanus Augustus, somnus aeternalis.

S·C = sacra cognoscens, singularis consularis, scribendum curaverunt, sub cura.

S·D = sancta dea, Silvanus (Sol) deus, sinistra decumanum.

S·F = sacris faciundis.

S·H = semihora, summa honoraria.

S·I = stlitibus iudicandis.

S·M = sanctae memoriae, secundum municipium, Sol Mithras, solvit merito, submedicus.

S·N = sestertii nummi.

S·P = servus publicus, sub praefectus.

S·V = se vivo, spectavit victor.

S·C·C = senatus consulto curavit.

S·D·M = sacrum diis manibus, sine dolo malo.

S·F·S = sine fraude sua.

S·L·P = sibi liberis posterisque.

S·M·D = sacrum matri Deum.

SS·DD·NN = salvis dominis nostris (duobus).

S·V·Q = sine ulla querella.

S·C·F·C = senatus consulto faciendum curavit.

S·C·D·D = socii cultores domus divinae.

S·C·D·T = senatus consulto de thesauro.

S·L·L·M = solvit laetus libens merito.

S·P·Q·R = senatus populusque Romanus.

S·P·S·P = sibi posterisque suis posuit.

S·T(V)·T·L = sit tibi (vobis) terra lēvis.

S·D·L·S·D = sacerdos dei Liberi, sacerdos deae.

S·P·D·D·D = sua pecunia dono dedit dedicavit.

S·P·P·L·D·D·D = sua pecunia posuit loco dato decreto decurionum.

S·L·R·I·C·Q·O·O·R·E = siremps lex res ius caussaque omnibus omnium rerum esto.

S·Q·H·A·P·E·S·S·A·V·D·F = si quis hanc arcam post excessum suprascriptorum aperire voluerit, dabit fisco.

Saba (O. T. Sheba). (1) The capital of the Sabaei (q. v.), in Arabia Felix, lay on a high woody mountain, and was pointed out by an Arabian tradition as the residence of the "Queen of Sheba," who visited King Solomon. (2) There was another city of the same name in the interior of Arabia Felix, where a place Sabea is still found, nearly in the centre of El-Yemen. (3) A seaport town of Aethiopia, on the Red Sea, south of Ptolemaïs Theron.

Sabăcon (Σαβακῶν, Shabaka). A king of Aethiopia, who invaded Egypt in the reign of the blind king Anysis, whom he dethroned and drove into the marshes. The Aethiopian conqueror then reigned over Egypt for fifty years, but at length quitted the country in consequence of a dream, whereupon Anysis regained his kingdom This is the account which Herodotus received from the priests (ii. 137–140); but it appears from Manetho that there were three Aethiopian kings who reigned over Egypt, named Sabacon, Sebichus, and Taracus, whose collective reigns amount to forty or fifty years (B.C. 700–666), and who form the twenty-fifth dynasty of that writer. The account of Manetho is to be preferred to that of Herodotus.

Sabaei (Σαβαῖοι) or **Sabae** (Σάβαι) (O. T. Shebaïim). One of the chief peoples of Arabia, dwelt in the southwest corner of the peninsula, in the most beautiful part of Arabia Felix, the north and centre of the province of El-Yemen. So at least Ptolemy places them (vi. 7, 23); but the fact seems to be that they are the chief representatives of a race which, at an early period, was widely spread on both sides of the southern part of the Red Sea, where Arabia and Aethiopia all but joined at the narrow strait of Bab-el-Mandeb; and hence, probably, the confusion often made between the Sheba and Seba of Scripture, or between the Shebaiim of Arabia and the Sebaiim of Aethiopia. Their country produced all the most precious spices and perfumes of Arabia. Their capital was Saba (Dio Cass. liii. 29).

Sabaria or **Savaria.** The modern Stein on the Auger. A town in Pannonia, where Severus was proclaimed emperor (Aurel. Vict. *Ep.* 19).

Sabăté. Now Trevignano; a town of Etruria on the lake called LACUS SABATĪNUS, now Lago di Bracciano.

Sabatīni. A people in Campania, who derived their name from the river Sabatus (Sabbato), a tributary of the Calor, which flows into the Vulturnus (Livy, xxvi. 33).

Sabazius (Σαβάζιος). A Thracian and Phrygian deity, whom the Greeks usually identified with Dionysus (Diod. iv. 4), and sometimes also with Zeus. His orgiastic worship was very closely connected with that of the Phrygian mother of the gods, Rhea-Cybelé, and of Attis. Along with this it was introduced into Athens in the fifth century B.C. (Aristoph. *Vespae*, 9; *Lysistr.* 388; Demos. *De Cor.* § 260). In later times it was widely spread in Rome and Italy, especially in the latter days of paganism. Like many of the Oriental deities, he represented the flourishing life of nature, which sinks in death, always to rise again. As an em-

blem of the yearly renovation of nature, the symbol specially appropriated to him was the snake. Accordingly, at the celebration of his mysteries, a golden snake was passed under the clothes and drawn over the bosom of the initiated (Clemens Alexandr. *Protrept.* p. 6). In the *Characteres* of Theophrastus, when the superstitious man "sees a serpent in his house, if it be the red snake, he will invoke Sabazius" (ch. 28, ed. Jebb).

Sabbath. See IUDAEI.

Sabelli. See SABINI.

Sabīna. The grand-niece of the Roman emperor Trajan. By the influence of Plotina, Trajan's wife, Sabina was married to Hadrian (A.D. 100), but the marriage proved to be an unhappy one, and she took her own life (about A.D. 138). It was reported that her husband had poisoned her, but this is unworthy of belief (Spart. *Hadr.* 1, 2, 11, 23; Oros. vii. 13).

Sabīna, Poppaea. A woman of surpassing beauty, but licentious morals. She was the daughter of T. Ollius, but assumed the name of her maternal grandfather, Poppaeus Sabinus, who had been consul A.D. 9. She was first married to Rufius Crispinus, and afterwards to Otho, who was one of the boon companions of Nero. The latter soon became enamoured of her; and in order to get Otho out of the way, Nero sent him to govern the province of Lusitania (58). Poppaea now became the acknowledged mistress of Nero, over whom she exercised absolute sway. Anxious to become the wife of the emperor, she persuaded Nero first to murder his mother Agrippina (59), who was opposed to such a disgraceful union, and next to divorce and shortly afterwards put to death his innocent and virtuous wife Octavia (62). She then became the wife of Nero. In 65 Poppaea, being pregnant, was killed by a kick from her brutal husband (Suet. *Nero*, 35).

Poppaea Sabina.

Sabīni. See ITALIA; OSCI; ROMA; SAMNIUM.

Sabiniāni. See SABINUS.

Sabīnus, Masurius. One of the most celebrated Roman jurists, a pupil of Ateius Capito in the time of Tiberius, and founder of the school of jurists called after him, that of the *Sabiniani*. See ATEIUS CAPITO; IURISPRUDENTIA.

Sabis. (1) Now the Sambre. A broad and deep river in Gallia Belgica and in the territory of the Ambiani, falling into the river Mosa. (2) A small river on the coast of Carmania. (3) See SAPIS.

Sabrăta. Another name for Abrotonum (q. v.).

Sabre. See ACINACES.

Sabrīna, also called **Sabriāna.** Now the Severn. A river in the west of Britain, which flowed by Venta Silurum into the ocean (Tac. *Ann.* xii. 31).

Sacădas (Σακάδας). An eminent musician of Argos. He established at Sparta the second great school of Greek music, of which Thaletas was the real founder. See MUSICA.

Sacae (Σάκαι). One of the most numerous and most powerful of the Scythian nomadic tribes, who had their abodes east and northeast of the Massagetae, as far as Serica, in the steppes of Central Asia, which are now peopled by the Kirghiz Khasaks, in whose name that of their ancestors is traced by some geographers. They were very warlike, and excelled especially as cavalry and as archers both on horse and foot. The name of the Sacae is often used loosely for other Scythian tribes, and sometimes for the Scythians in general (Herod. iv. 6; v. 113). See SCYTHIA.

Saccus (σάκκος). Any kind of sack or bag. (1) A purse for holding money, especially a beggar's wallet. (2) A net for the hair. (See COMA.) (3) A sieve for straining wine (*saccus vinarius*); also called simply *linum* (Mart. xiv. 103) or *lintea* (id. xiv. 104).

Sacellum. The Latin name for a small sanctuary, which was a mere altar, or an enclosed uncovered place with an altar, or a little temple with either an altar or an image for purposes of worship. In Rome the greater part of these sanctuaries were among the oldest and holiest places of worship.

Sacellum at Pompeii.

Sacerdos (ἱερεύς). A priest; a person whose duty it was to perform certain rites associated with the relations existing between the State, or some organized body within the State, and the gods.

In GREECE, the word ἱερεύς (fem. ἱέρεια) is found as early as Homer, and denotes a person charged with definite and permanent religious duties—prayer, sacrifice, purification, or prophecy, or all of these combined. He was regularly associated with some special place of worship, as a temple or shrine, and was the minister of the god to whom the temple or shrine was dedicated (Pollux, i. 14). Priests, however, were not the only persons who exercised these functions, for we find them also performed by kings and magistrates, and also by heads of families and clans; so that it is evident that the priestly office had no exclusive right to the exercise of liturgical observances. They were, however, even in Homer's time, held in honour (*Il.*

v. 78), and even regarded as possessed of a species of divinity. Besides the name ἱερεύς, Homer also uses the terms ἀρητήρ and θυόσκοος.

In historic times, the priest was required to be a citizen of the State, so that in Athens no μέτοικος could act as such; and if the worship were one peculiar to a family or clan, he must be a full member of it. Priestesses enjoyed some of the rights granted to male citizens—e. g. the right of pleading before the council, and of signing documents. They were usually women of rank and family. For both priests and priestesses, bodily purity was a requisite, and this not only a moral but a physical purity. The priest must not touch a dead body, and a death in the family of the priest sometimes served to forfeit the office, and always acted as a temporary disqualification. Some priesthoods could only be filled by virgins (Pausan. ii. 33, 3), while the priests of the Ephesian Artemis were eunuchs, and boy priests are also mentioned (*C. I. G.* 6206). There was, however, no general regulation as to age, nor was marriage prohibited by any general law. Priests were appointed sometimes by hereditary descent, as in the case of the Eumolpidae at Athens (*C. I. A.* ii. 410), sometimes by election (*C. I. G.* 2270, 18), and sometimes by purchase (*C. I. G.* 2656).

The duties of a priest were partly administrative and partly liturgical. The first class of duties comprised the care of the temple, the regulation of the worshippers, and the management of the revenues. In keeping order he was assisted by officers like the modern vergers (ῥαβδοφόροι, κλειδοῦχοι, ζάκοροι, νεωκόροι). (For the chief liturgic duties, see SACRIFICIUM.) The privileges of a priest were special precedence, the use of a house, and a share of the perquisites arising from the sacrifices—e. g. specific portions of the victims (*C. I. A.* 610, 631), and fees, and also presents given by the worshippers (Aristoph. *Plut.* 676). The dress of a priest was not, in general, especially distinctive, except for the wreath worn on the head while sacrificing. The hair was also, in some cases, worn long. In some special rites, however, an ornamental dress was worn, as at the Eleusinia and in the cult of the dead (Aesh. *Eumen.* 982). See ELEUSINIA. On the frieze of the Parthenon, the priests appear in a long *chiton*.

For various classes of Greek priests, see the articles ELEUSINIA; EUMOLPIDAE; HIEROPOEI; SACRIFICIUM; and compare the articles MYSTERIA; ORACULA; RELIGIO.

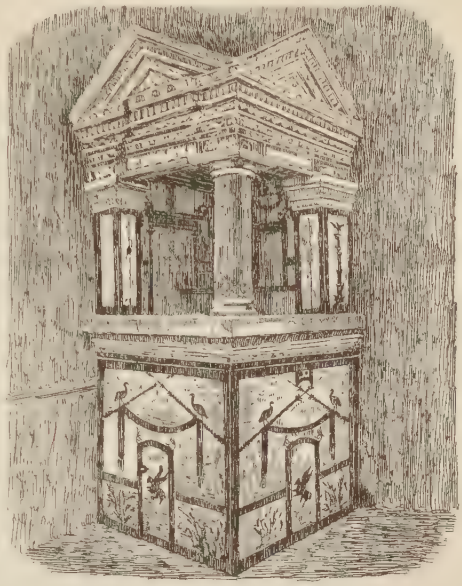
At ROME, in comparison with the civil magistrates, all priests were regarded as *homines privati;* though all of them, as priests, were sacerdotes publici, in so far as their office (*sacerdotium*) was connected with any worship recognized by the State. The appellation of *sacerdos publicus* was, however, given principally to the chief pontiff and the Flamen Dialis, who were at the same time the only priests who were members of the Senate by virtue of their office. All priestly offices or *sacerdotia* were held for life, without responsibility to any civil magistrate. A priest was generally allowed to hold any other civil or military office besides his priestly dignity. Some priests, however, formed an exception, for the Duumviri, the Rex Sacrorum, and the Flamen Dialis were not allowed to hold any State office, and were also exempt from service in the armies. Their priestly character was, generally speaking, inseparable from their person as long as they lived; hence the augurs and Fratres Arvales retained their priestly character even when sent into exile, or when they were taken prisoners. It also occurs that one and the same person held two or three priestly offices at the same time. Thus we find the three dignities of Pontifex Maximus, augur, and Decemvir Sacrorum united in one individual. Bodily defects incapacitated a person at Rome, as among all ancient nations, from holding any priestly office. All priests were originally patricians, but from the year B.C. 367 the plebeians also began to take part in the sacerdotia (see PLEBES); and those priestly offices which down to the latest times remained in the hands of the patricians alone, such as that of the Rex Sacrorum, the Flamines, Salii, and others, had no influence upon the affairs of the State.

As regards the appointment of priests, the ancient writers unanimously state that at first they were appointed by the kings, but after the sacerdotia were once instituted, each college of priests—for nearly all priests constituted certain corporations called *collegia*—had the right of filling up, by *coöptatio*, the vacancies which occurred. (See PONTIFEX.) Other priests, on the contrary, such as the Vestal Virgins and the Flamines, were appointed (*capiebantur*) by the Pontifex Maximus, a rule which appears to have been observed down to the latest times; others again, such as the Duumviri Sacrorum, were elected by the people, or by the *curiae*, as, for example, the *curiones*. But in whatever manner they were appointed, all priests after their appointment required to be inaugurated by the pontiffs and the augurs, or by the latter alone. Those priests who formed colleges had originally, as we have already observed, the right of *coöptatio;* but in the course of time they were deprived of this right, or at least the coöptatio was reduced to a mere form, by several laws, called *leges de sacerdotiis*, such as the Lex Domitia, Lex Cornelia, and Lex Iulia; their nature is described in the article PONTIFEX, and what is there said in regard to the appointment of pontiffs applies equally to all the other colleges. All priests had some external distinction, as the *apex*, *tutulus*, or *galerus*, the *toga praetexta*, as well as honorary seats in the theatre, circus, and amphitheatre. Most of the priestly colleges possessed landed property, and some priests had also a regular annual salary (*stipendium*), which was paid to them from the public treasury. This is expressly stated in regard to the Vestal Virgins, the augurs, and the *curiones*, and may therefore be supposed to have been the case with other priests also. The Pontifex Maximus, the Rex Sacrorum, and the Vestal Virgins had moreover a *domus publica* as their place of residence.

See Martha, *Les Sacerdoces Athéniens;* Boissier, *La Religion Romaine;* and the articles AUGUR; AUGUSTALES; EPULONES; EXTISPEX; FLAMEN; HARUSPEX; PONTIFEX; SACRIFICIUM; SALII; SIBYLLINI LIBRI; TEMPLUM; VESTALES.

Sacerdos, MARIUS PLOTIUS. A Latin grammarian, perhaps of the end of the third century A.D., who wrote in Rome an *ars grammatica* in three books. The third treats of metre. See Keil, *Grammatici Latini*, vi. 417.

Sacer Mons. (1) An isolated hill in the country of the Sabines, on the right bank of the Anio and west of the Via Nomentana, three miles from



Rome, to which the plebeians repaired in their celebrated secessions (Livy, ii. 32; Dionys. vi. 45). (2) A mountain in Hispania Tarraconensis near the Minius.

Sacra. The Latin term for all transactions relating to the worship of the gods, especially sacrifice and prayer. They are either *sacra privata* or *publica*. The former were undertaken on behalf of the individual by himself, on behalf of the family by the *pater familias*, or on behalf of the gens by the whole body of the gentiles. The centre of the domestic service of the gods is formed by the worship of the Penates and Lares. In particular cases recourse was also had to certain specified deities. Besides this, private sacra were attached to particular families; these passed to the heir with the succession and became a burden on him. Hence an inheritance without sacra (*hereditas sine sacris*) proverbially signified an unimpaired piece of good fortune (Plaut. *Capt.* 775; *Trin.* 483). As the family had sacra, so also had the gens (q. v.), which had arisen out of the family by expansion. These were performed by a sacrificial priest (*flamen*) appointed from among the gentiles, the celebration taking place in his own house or in a special sacellum in the presence of the assembled gentiles. The *sacra publica* were undertaken *pro populo* collectively (1) by the *curiae, pagi*, or *vici*, into which the community was divided, whence such sacrifices were called *sacra popularia;* or (2) by the individual gentes and societies (see SODALITAS), to which the superintendence of a particular cult had been committed by the State; or (3) by the magistrates and priests of the Roman State. The sacra of the gentes were with few exceptions performed in public, though the multitude present remained silent spectators; only in a few cases did they take part in the procession to the place of worship or in the sacrificial feast. See RELIGIO.

Sacramentum. The Roman term for the military oath of allegiance, originally the preliminary engagement entered upon with the general by newly enlisted troops (Cic. *De Off.* i. 11, § 36; Livy, xxii. 38, § 2). The oath was taken first by the legates and tribunes. These officers then administered it to the soldiers in the following manner: one soldier in each legion recited the formula of the oath, and the rest were called up by name, and, coming forward one by one, swore to the same oath with the words *idem in me*—i. e. "the same (holds good) for me." The oath remained in force only till the next campaign, and whenever there was a new general a new oath was taken. After the introduction of the twenty years' service by Marius (about B.C. 100), the men raised for service took the oath, not one by one, but all together and for the whole time of service, in the name of the State, afterwards in that of the emperor.

Sacramentum in the oldest and most general form of civil lawsuit, named after it *legis actio per sacramentum*, is a deposit made beforehand by the parties in the suit. It was originally five sheep or five oxen, according to the value of the object in dispute, afterwards a sum of money at the rate of ten *asses* for each sheep and one hundred for each ox. The deposit was given back to the successful party, while that of the loser was originally applied to religious purposes; afterwards it went to the *aerarium*, or public treasury. See IUS IURANDUM.

Sacrarium. A place in which sacred things were kept (Suet. *Tib.* 51). In temples it probably

Sacrarium. (Pompeii.)

stood directly behind the wall of the *cella*. See Marquardt, *Staatsverwaltung*, iii. 168.

Sacra Via. The principal street in Rome. It ran from the valley between the Caelian and Esquiline Hills, through the arch of Titus, and past the Forum Romanum, to the Capitol. See ROMA; VIAE.

Sacred Chickens. See AUGUR.

Sacred Wars. A name given to three great struggles in the history of Greece in which the Amphictyonic Council was concerned. (1) The war waged at the behest of the Amphictyons against the Phocian city of Cirrha (B.C. 595–585), the accusation being that the Cirrhaeans had levied excessive tolls on pilgrims and had maltreated women on their return from the temple at Delphi. As the result of the war, the city was razed to the ground (Aesch. *c. Ctes.* p. 68; Strabo, ix. p. 418; Athen. xiii. p. 560). (2) and (3) See PHILIPPUS.

Sacrificium (*θυσία*). Sacrifices among the ancients formed the chief part of every religious act. According to the kind of sacrifice offered, they were divided into (1) bloodless offerings and (2) blood-offerings. The former consisted in first-fruits, viands, and cakes of various shape and make, which were some of them burned and some of them laid on the altars and sacrificial tables, and removed after a time; libations of wine, milk, water with honey or milk, and frankincense, for which in early times native products (wood and the berries of cedars, junipers, bay-trees, etc.) were used. Asiatic spices, such as incense and myrrh, scarcely came into use before the seventh century in Greece or until towards the end of the Republic at Rome.

For blood-offerings cattle, goats, sheep, and swine were used by preference. Other animals were only employed in special cults. Thus horses were offered in certain Greek regions to Poseidon

and Helios, and at Rome on the occasion of the October feast to Mars; dogs to Hecaté and Robigus, asses to Priapus, cocks to Asclepius, and geese to Isis. Sheep and cattle, apparently, could be offered to any gods among the Greeks. As regards swine and goats, the regulations varied according to the different regions. Swine were sacrificed especially to Demeter and Dionysus, goats to the last-named divinity and to Apollo and Artemis as well as to Aphrodité, while they were excluded from the service of Athené, and it was only at Sparta that they were presented to Heré. At Epidaurus they might not be sacrificed to Asclepius, though elsewhere this was done without scruple. Part of the spoils of the chase—such as the antlers or fell of the stag, or the head and feet of the boar or the bear—was offered to Artemis Agrotera.

Sacrificial Attendant (Roman relief.)

As regards the sex and colour of the victims, the Romans agreed in general with the Greeks in following the rule of sacrificing male creatures to gods, female to goddesses, and those of dark hue to the infernal powers. At Rome, however, there were special regulations respecting the victims appropriate to the different divinities. Thus the appropriate offering for Iupiter was a young steer of a white colour, or at least with a white spot on its forehead; for Mars, in the case of expiatory sacrifices, two bucks or a steer; the latter also for Neptune and Apollo; for Vulcan, a red calf and a boar; for Liber and Mercury, a he-goat; for Iuno, Minerva, and Diana, a heifer; for Iuno, as Lucina, a ewe lamb or (as also for Ceres and the Bona Dea) a sow; for Tellus, a pregnant, and for Proserpina a barren, heifer; and so on.

The regulations as regards the condition of the victims were not the same everywhere in Greece. Still, in general with them, as invariably with the Romans, the rule held good that only beasts which were without blemish, and had not yet been used for labour, should be employed. Similarly, there were definite rules, which were, however, not the same everywhere, concerning the age of the victims. Thus, by Athenian law, lambs could not be offered at all before their first shearing, and sheep only when they had borne lambs. The Romans distinguished victims by their ages as *lactantes*, sucklings, and *maiores*, full grown. The sacrifice of sucklings was subject to certain limitations: young pigs had to be five days old, lambs seven, and calves thirty. Animals were reckoned *maiores* if they were *bidentes*—i. e. if their upper and lower rows of teeth were complete. There were exact requirements for all cases as regards their sex and condition, and to transgress these was an offence that demanded expiation. If the victims could not be obtained as the regulations required, the pontifical law allowed their place to be taken by a representation in wax or dough, or by a different animal in substitution for the sort required. In many cults different creatures were combined for sacrifice—e. g. a bull, a sheep, and a pig (see SUOVETAURILIA), or a pig, a buck, and a ram, and the like. In State sacrifices victims were sometimes sacrificed in great numbers; e. g. at the Athenian festival in commemoration of the victory at Marathon 500 goats were slain. (See HECATOMBÉ.) Human sacrifices as a means of expiation were not unknown to the earliest Greek and Roman worship, and continued in certain cases (e. g. at the feast of the Lycaean Zeus and of Iupiter Latiaris) until the imperial period. Where, however, they continued to exist, criminals who were in any case doomed to death were selected, and in many places opportunity was further given them for escape. As a rule, these human sacrifices gave way to symbolical exercises in which the rite either merely suggested the original form, or else for human victims effigies or puppets were substituted. Of the former kind was the symbolical whipping of the Spartan boys at the altar of Artemis Orthia till blood was drawn (see DIAMASTIGOSIS); of the latter was the casting of puppets made of rushes into the Tiber in May (see ARGEI), and the use of *oscilla*. See Pausan. ix. 8, 1; vii. 19, 2; Macrob. i. 7, 34; and Mannhardt, *Wald- und Feldkülte*, pp. 265 foll.

In general, it was considered that purity in soul and body was an indispensable requirement for a sacrifice that was to be acceptable to a divinity. Accordingly, the celebrant washed at least his hands and feet, and appeared in clean (for the most part, white) robes. One who had incurred bloodguiltiness could not offer sacrifice at all; he who had polluted himself by touching anything unclean, particularly a corpse, needed special purification by fumigation. Precautions were also taken to insure the withdrawal of all persons who might be otherwise unpleasing to the divinity; from many sacrifices women were excluded; from others, men; from many, slaves and freedmen. At Rome, in early times, all plebeians were excluded by the patricians.

The victims were generally decked out with ribbons and wreaths (*infulae*, *vittae*), and sometimes the cattle had their horns gilded. If the creature voluntarily followed to the altar or even bowed its head, this was considered as a favourable sign; it was an unfavourable sign if it offered resistance or tried to escape. In that case, with the Romans, the object of the sacrifice was deemed to be frustrated. Among the Greeks those who took part in the sacrifice wore wreaths; a firebrand from the altar was dipped in water, and with the water thus consecrated they sprinkled themselves and the altar. They then strewed the head of the victim with baked barley-grains, and cast some hairs cut from its head into the sacrificial fire. After those present had been called upon to observe a devout silence, and avoid everything that might mar the solemnity of the occasion, the gods were invited, amid the sound of flutes or hymns sung to the lyre and dancing, to accept the sacrifice propitiously. The hands of the worshippers were raised, or extended, or pointed downwards, according as the prayer was made to a god of heaven, of the sea, or of the lower world respectively. The victim was then felled to the ground with a mace or a hatchet, and its throat cut with the sacrificial knife. During this operation the animal's head was held up if the sacrifice belonged to the upper gods, and bowed down if it belonged to those of the lower world or the dead. The blood caught from it was, in the former case, poured round the altar; in the latter, into a ditch. In the case just men-

tioned the sacrifice was entirely burned (and this was also the rule with animals that were not edible), and the ashes were poured into the ditch. In sacrifices to the gods of the upper world, only certain portions were burned to the gods, such as thigh-bones or chine-bones cut off the victim, some of the entrails, or some pieces of flesh with a layer of fat, rolled round the whole, together with libations of wine and oil, frankincense, and sacrificial cakes. The remainder, after removing the god's portion, as it was called, for the priests engaged in the sacrifice, was either roasted at once for the sacrificial banquet and so consumed, or taken home. Festal sacrifices at the public expense were often combined with a public meal. Sacrifice was made to the gods of the upper air in the morning; to those of the lower world in the evening.

Among the Romans, as among the Greeks, reverent silence prevailed during the sacrificial operations in case a careless word should become an evil omen, and to prevent any disturbance by external surroundings a flute-player played and the offerer of the sacrifice himself veiled his head during the rite. The prayer, formulated by the *pontifices*, and unintelligible to the priests themselves from its archaic language (Quint. i. 6, 40), was repeated by the votary after the priest, who read it from a written form, as any deviation from the exact words made the whole sacrifice of no avail. As a rule, the worshipper turned his face to the east, or, if the ceremony took place before the temple, to the image of the divinity, grasping the altar with his hands; and, when the prayer was ended, laid his hands on his lips, and turned himself from left to right (in many cults from right to left), or, again, walked round the altar and then seated himself. Then the victim (*victima* if a large one, *hostia* if a small one), selected as being without blemish, was consecrated, the priest sprinkling salted grains of dried and pounded spelt (*mola salsa*) and pouring wine from a cup upon its head, and also in certain sacrifices cutting some of the hairs off its head, and finally making a stroke with his knife along the back of the creature from its head to its tail. Cattle were killed with the mace, calves with the hammer, small animals with the knife, by the priest's attendants appointed for the purpose, to whom also the dissection of the victims was assigned. If the inspectors of sacrifice (see HARUSPEX) declared that the entrails (*exta*), cut out with the knife, were not normal, this was a sign that the offering was not pleasing to the divinity; and if it was a male animal which had been previously slaughtered, a female was now killed. If the entrails again proved unfavourable, the sacrifice was regarded as of no avail. On the other hand, in the case of prodigies, sacrifices were offered until favourable signs appeared. In other sin-offerings there was no inspection of entrails. Sin-offerings were either entirely burned or given to the priests. Otherwise the flesh was eaten by the offerers, and only the entrails, which were roasted on spits, or boiled, were offered up, together with particular portions of the meat, in the proper way, and placed in a dish upon the altar, after being sprinkled with *mola salsa* and wine. The slaughter of the victim took place in the morning, while the *exta* were offered at evening, the intervening time being taken up by the process of preparation. See A. Lang, *Myth, Ritual, and Religion*, 2 vols. (1887); Tylor, *Primitive Culture*, 2 vols. (1871); Frazer, *Totemism* (1887); Hartung, *Die Religion der Römer* (1836); the excellent accounts in Marquardt's *Privatleben der Römer*, pp. 183 foll., and in Gardner and Jevons, *Greek Antiquities*, bk. iii. ch. 6 (1895), and cf. the article RELIGIO.

Sacrilegium (*sacra*+*lego*, cf. Hor. *Sat.* i. 3, 117). The Roman name for the crime of stealing objects consecrated to some god or deposited in a consecrated place (Sen. *De Ben.* 7, 7). In Cicero's time the word was extended to cover also any damage or insult to sacred things (Cic. *N. D.* iii. 40, 94), and later still, to want of respect to the emperor. (See MAIESTAS.) A *Lex Iulia* punished sacrilege with *interdictio aqua et igni*, but for this *deportatio* was ultimately substituted; and under the Empire the heavier penalties of burning alive and *damnatio ad bestias* were inflicted (*Dig.* xlviii. 13, 6). Cf. HIEROSYLIAS GRAPHÉ.

Sacriportus. A small place in Latium, of uncertain site, memorable for the victory of Sulla over the younger Marius in B.C. 82.

Sacristan. See AEDITUUS.

Sacrum Promontorium. (1) Now Cape St. Vincent, on the western coast of Spain. (2) Cape Corsa, the northeastern point of Corsica. (3) Cape Iria, also Makri, Efta Kavi or Jedi Burum—i. e. "seven points," the extreme point of Mount Cragus, in Lycia, between Xanthus and Telmissus. (4) Cape Khelidoni, another promontory in Lycia, near the confines of Pamphylia, and opposite the Chelidonian islands, whence it is also called PROMONTORIUM CHELIDONIUM.

Saddle. See EPHIPPIUM; SAGMA.

Sadyattes (Σαδυάττης). A king of Lydia, succeeded his father Ardys, and reigned B.C. 629–617. He carried on war with the Milesians for six years, and at his death bequeathed the war to his son and successor, Alyattes. See ALYATTES.

Saeculāres Ludi. See LUDI, p. 972.

Saecŭlum. See LUDI, p. 972.

Saepīnum or **Sepīnum.** Now Sepino; a municipium in Samnium, on the road from Allifae to Beneventum.

Saetăbis. (1) Now Alcoy; a river on the southern coast of Hispania Tarraconensis, west of the Sucro. (2) Or SETĂBIS (Jativa), an important town of the Contestani, in Hispania Tarraconensis, and a Roman municipium, was situated on a hill south of the Sucro, and was celebrated for its manufacture of linen.

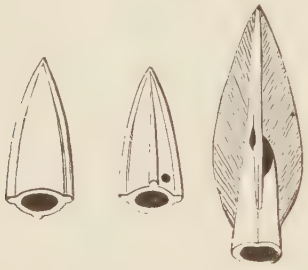
Saga ("a wise woman," cognate with *sagax*). A sorceress or fortune-teller, one deeply versed in occult lore (Hor. *Carm.* i. 27, 21), and with no malignity of disposition necessarily implied. For the ancient belief in witches, see the article STRIGA.

Roman Fortune-teller. (Pompeian painting.)

Sagalassus (Σαγαλασσός or Σελγησσός). Now Allahsun; a large fortified city of Pisi-

dia, near the Phrygian border, a day's journey southeast of Apamea Cibotus. It lay, as its large ruins still show, in the form of an amphitheatre on the side of a hill, and had a citadel on a rock thirty feet high.

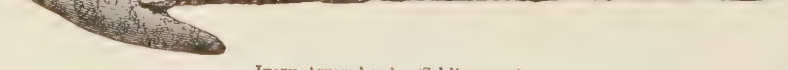
Sagarii. See SAGUM.



Sagăris. A river of European Sarmatia, falling into a bay in the northwest of the Euxine, which was called after it SAGARĬCUS SINUS, and which also received the river Axiaces.

Sagartii (Σαγάρτιοι). According to Herodotus, a nomad people of Persis. Afterwards they are found, on the authority of Ptolemy, in Media and the passes of Mount Zagros (Herod. i. 25).

Sagēna (σαγήνη). A seine or drag-net for taking fish. One end of it was floated by corks (*cortices*), and the other was sunk and extended by leaden weights. See Alciphron, *Epist.* i. 17; Manil. *Astron.* v. 678.

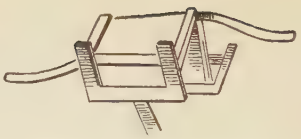


Sages, THE SEVEN. See SEVEN SAGES.

Sagitta (ὀϊστός, ἰός, τόξευμα). An arrow. Ancient arrows like those of modern times were feathered and tipped with metal (Hes. *Scut. Her.* 130–134). The point was called ἄρδις (Herod. i. 215). Flint arrow-heads have been found in Italy; and the Aethiopians in the army of Xerxes used

Greek Arrow-heads from Attica.

arrows tipped with a sharp stone (Herod. vii. 69); but Greek arrows were generally pointed with bronze, and this as early as Homer, who uses the epithet χαλκήρης of one (*Il.* xiii. 650, 662). The Homeric arrow-head, however, was three-tongued, and had barbs (ὄγκοι, *Il.* lv. 151). The Romans called barbed arrows *hamatae* and *aduncae;* and did not poison the ends (*venenatae sagittae*), as did the Getae, Scythae, and Mauri. Arrows were used



Ivory Arrow-head. (Schliemann.)

in warfare to carry fire. By this means Xerxes set the Athenian acropolis on fire (Herod. viii. 52), and Caesar used fire-arrows to set fire to Antony's ships (Pollux, i. 37). Archers were called *sagittarii* by the Romans, but in earlier times *arquites*. See ARCUS.

Sagittarii. The bowmen of the Roman armies. These were generally raised by levy or furnished by the allies. The Cretan, Balearic, and Asiatic bowmen were especially celebrated.

Sagma (σάγμα). A pack-saddle used on beasts of burden for loading goods, and opposed to the riding-saddle, for which see EPHIPPIUM.

Sagma. (Pompeian painting.)

Sagmarius. A pack-animal. See SAGMA.

Sagmĭna. Another name for the sacred herbs (*verbenae*) given by the consul or praetor to the Fetiales whenever they went forth to demand reparation of a foreign people or to make a treaty. They were torn by the roots from the enclosure of the Capitol and carried by a person known as the *verbenarius*. For particulars, see FETIALES.

Sagra. A small river in Magna Graecia, on the southeastern coast of Bruttium, falling into the sea between Caulonia and Locri.

Sagrus. Now Sangro; a river of Samnium, flowing into the Adriatic (Ptol. iii. 1, 19).

Sagum. (1) A Keltic word. The military cloak of the Roman soldiers, which consisted of a four-cornered piece of cloth worn over the armour and

Lictor with Sagum. (Bas-relief in the Museum at Verona.)

fastened upon the shoulder by a clasp. It was a symbol of war, as the toga was a symbol of peace, so that *sagati* = *milites*, as opposed to *togati*, "civilians." (2) A saddle-cloth placed under a saddle of any sort (Veget. *Vet.* iii. 59, 2).

Saguntum, more rarely **Saguntus.** Now Murviedro, said to have been founded by the Zacynthians: a town of the Edetani or Sedetani, in Spain, south of the Iberus, on the river Palantias, about three miles from the coast. Although south of the Iberus, it had formed an alliance with the Romans: and its siege by Hannibal, B.C. 219, was the immediate cause of the Second Punic War (Livy, xxi. 14 foll.). The ruins of a theatre and a temple of Bacchus are extant at Murviedro, which is a corruption of *muri veteres*. The town was celebrated for its manufacture of beautiful cups. The name Saguntum is a phonetic corruption of Ζάκυνθος.

Sails. See NAVIS.

Saïs (Σαΐς). Now Sa-el-Hajjar; a great city of Egypt, in the Delta, on the eastern side of the Canopic branch of the Nile. It was the ancient capital of Lower Egypt, and contained the palace and burial-place of the Pharaohs as well as the tomb of Osiris. The city gave its name to the Saïtes Nomos. Here was the chief seat of the worship of Nit, who had a great temple, where every year a "Feast of Lamps" was celebrated by multitudes from all parts of Egypt. The place was also a famous centre of Egyptian learning, and to it many Greeks resorted for instruction. The story of the mysterious veiled statue at Saïs, of which Schiller has written a ballad, and which is the subject of a romance by Novalis, appears to be only a creation of Greek fancy.

Saïtis (Σαΐτις). A surname of Athenê, under which she had a sanctuary on Mount Pontinus, near Lerna, in Argolis. The name was traced by the Greeks to the Egyptians, among whom Athenê was said to have been called Saïs (Herod. ii. 75).

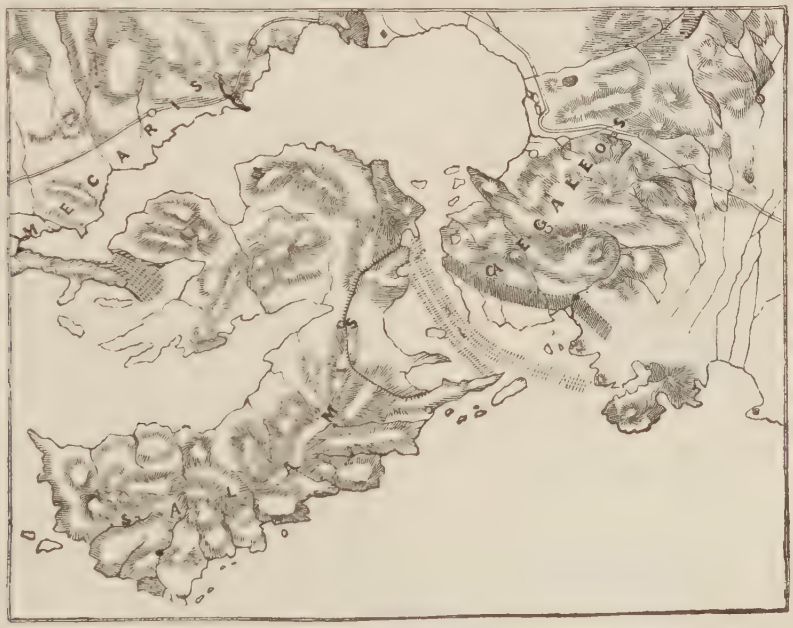
Sala. (1) Now the Saale; a river of Germany, between which and the Rhine Drusus died. It was a tributary of the Albis. (2) Now the Saale; also a river of Germany, and a tributary of the Moenus (Main), which formed the boundary between the Hermunduri and Chatti, with great salt springs in its neighbourhood.

Salacia. A Roman goddess of the salt water. She was identified with the Greek Amphitritê, and regarded as the wife of Neptune. See NEPTUNUS; POSEIDON.

Salamis (Σαλαμίς). (1) Now Koluri; an island off the west coast of Attica, and forming the southern boundary of the Bay of Eleusis. It is best known from the great naval victory of the Greeks over the Persian fleet of Xerxes in B.C. 480. See XERXES. (2) A city in Cyprus said to have been founded by Teucer, son of Telamon. See TEUCER.

Salapia. Now Salpi. An ancient town of Apulia, in the district Daunia, was situated south of Sipontum, on a lake named after it. It is not mentioned till the Second Punic War, when it revolted to Hannibal after the battle of Cannae; but it subsequently surrendered to the Romans, and delivered to the latter the Carthaginian garrison stationed in the town.

Salapīna Palus. Now the Lago di Salpi; a lake of Apulia, between the mouths of the Cerbalus and Aufidus.



Salaria. A town of the Bastetani, in Hispania Tarraconensis, and a Roman colony.

Salaria Via. A Roman road which ran from the Porta Salaria through Fidenae, Reate, and Asculum Picenum, to Castrum Truentinum, and thence along the coast to Ancona.

Salarium. A Roman term signifying properly the allowance of salt which the governor furnished for the magistrates and officers who formed his retinue; then the gratification in money which took the place of the salt. Under the Empire it was the pay (*stipendium*) of the imperial magistrates, as well as of the physicians and professors in the service of the State, though still used also in the early sense (Pliny, *H. N.* xxxi. 89; Hist. Aug. *Ant. P.* 11).

Salassi. A brave and warlike people in Gallia Transpadana, in the valley of the Duria (Val d'Aosta), at the foot of the Graian and Pennine Alps, whom some regarded as a branch of the Salyes or Salluvii, in Gaul. Their chief town was Augusta Praetoria (Aosta).

Saldae. Now Bougie; a large town of Northern Africa, originally belonging to the kingdom of Mauretania, and later to Mauretania Caesariensis. See Boissier, *L'Afrique Romaine* (1894).

Salamis.

Salentīni or **Sallentīni.** A people in the southern part of Calabria, who dwelt around the promontory Iapygium, which is hence called **Salentī-**

MARSHALL HIGH SCHOOL LIBRARY MINNEAPOLIS

num or **Salentīna**. They laid claim to a Greek origin, and pretended to have come from Crete into Italy under the guidance of Idomeneus (Verg. *Aen.* iii. 400). They were subdued by the Romans at the conclusion of their war with Pyrrhus, and having revolted in the Second Punic War were again easily reduced to subjection (Livy, *Epit.* 15).

Salernum. Now Salerno. An ancient town in Campania, at the innermost corner of the Sinus Paestanus, situated on a hill near the coast. It was made a Roman colony B.C. 194; but it attained its greatest prosperity in the Middle Ages, after it had been fortified by the Lombards.

Salgăma (*τὰ ἁρμαῖα*). Pickles. Roots, herbs, or fruits preserved in brine (Columell. x. 117; xii. 4).

Salganeus or **Salganea**. A small town of Boeotia, on the Euripus, and on the road from Anthedon to Chalcis.

Salientes. See FONS.

Salii (*Σαλίοι*, "dancers," from *salio*). An old Italian *collegium* of priests of Mars, said to have been introduced at Rome by Numa and doubled by Tullus Hostilius. The earlier college was called the SALII PALATĪNI and the later the SALII AGONĀLES or COLLĪNI. The former derived their name from their *curia* on the Palatine Hill; the latter, from the Colline Gate, near which stood their sanctuary on the Quirinal. Both colleges consisted of twelve life-members of patrician family, and recruited their numbers from young men, whose parents were required to be still living; at their head was a *magister*, a *praesul* (leader in the dance), and a *vates* (leader in the song). The cult of the Palatine Salii had to do with Mars, that of the Colline with Quirinus; but the chief connection of both was with the sacred shields, *ancilia*. (See illustration.) The chief ceremonial of the Salii was in March, the beginning of the campaigning season. On March 1st, they began a procession through the city, each of them dressed in an embroidered tunic, a bronze breastplate, and a peaked helmet, girt about with a sword, with one of the holy shields on the left arm, and in the right hand a staff, while trumpeters walked in front of them.

Salii with Ancilia. (Gruter.)

At all the altars and temples they made a halt, and, under the conduct of the two leaders, danced the war-dance in three measures, from which they take their name of Salii or "dancers," accompanying it by singing certain lays, beating their shields meanwhile with the staves. Every day the procession came to an end at certain appointed stations, where the shields were kept over the night in special houses, and the Salii themselves partook of a meal proverbial for its magnificence (Hor. *Carm.* i. 37, 2). Until March 24th the *ancilia* were in motion; within this time some special festivities were also held, in which the Salii took part. On March 11th there was a chariot-race in honour of Mars (*Equiria*) and a sacrificial feast in honour of the supposed fabricator of the shields, Mamurius Veturius; on the 19th was the ceremony of the cleansing of the shields, and on the 23d the cleansing of the holy trumpets (*tubae*) of the priests, called the *tubilustrium*. The days on which the *ancilia* were in motion were accounted solemn (*religiosi*), and on these days men avoided marching out to war, offering battle, and concluding a marriage. In October, the close of the campaigning season, the *ancilia* were once more brought out, in order to be cleansed in the Campus Martius. The lays of the Salii, called *axamenta* (from *axare*, "to repeat," a word found in Festus), were referred to Numa Pompilius, and were written in the archaic Saturnian verse, and in such primitive language, that they were scarcely intelligible even to the priests themselves, and as early as the beginning of the first century B.C. were the object of learned interpretation (Quint. i. 6, 40). Two or three connected bits of these lays have come down to us. The most intelligible is the following, reconstructed by Bergk, in a rude Saturnian measure:

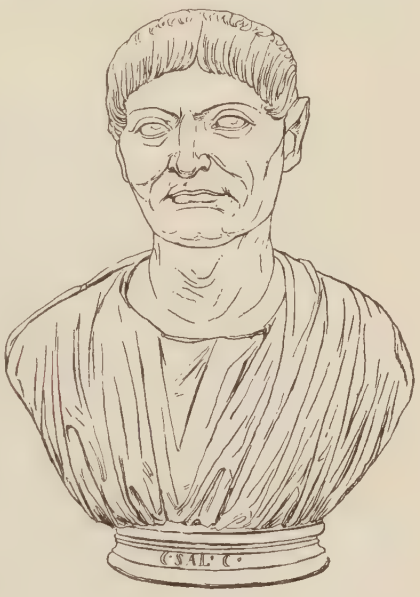
‖ *Cumé tonás, Leucésie,* | *práe tét tremónti,* ‖
Quom tibéi cúneí | *déxtumúm tonáront;* ‖

i. e. *Cum tonas, Lucetie* (thou god of light), *prae te tremunt, cum tibi cunei* (bolts of lightning) *a dextra tonuerunt*. (See Wordsworth, *Fragments and Specimens of Early Latin*, 564–566; Allen, *Early Latin*, p. 74). Besides Mars, other deities, such as Ianus, Iupiter, and Minerva, were invoked in them; the invocation of Mamurius Veturius formed the close (Ovid, *Fasti*, iii. 260 foll.). After the time of Augustus the names of individual emperors were also inserted in the lays.

Salīnae. Salt-works; the name of several towns which possessed salt-works in their vicinity. (1) A town in Britain, on the eastern coast, in the southern part of Lincolnshire. (2) A town of the Suetrii, in the Maritime Alps, in Gallia Narbonensis, east of Reii. (3) Torre delle Saline, a place on the coast of Apulia, near Salapia. (4) A place in Picenum, on the river Sannus (Salino). (5) Torda, a place in Dacia. (6) SALĪNAE HERCULEAE, near Herculaneum, in Campania.

Salinātor, Livius. (1) MARCUS, consul B.C. 219, with L. Aemilius Paulus, carried on war along with his colleague against the Illyrians. On their return to Rome, both consuls were brought to trial on the charge of having unfairly divided the booty among the soldiers. Paulus escaped with difficulty, but Livius was condemned. The sentence seems to have been an unjust one, and Livius took his disgrace so much to heart that he left the city and retired to his estate in the country, where he lived some years without taking any part in public affairs (Livy, xxii. 35). In 210 the consuls compelled him to return to the city, and in 207 he was elected consul a second time with C. Claudius Nero. He shared with his colleague in the glory of defeating Hasdrubal on the Metaurus. (For details, see CLAUDIUS NERO.) Next year (206) Livius was stationed in Etruria, as proconsul, with an army, and his imperium was prolonged for two successive years. In 204 he was censor with his

former colleague in the consulship, Claudius Nero. The two censors had long been enemies; and their long-smothered resentment now burst forth, and occasioned a great scandal. Livius, in his censorship, imposed a tax upon salt, in consequence of which he received the surname of *Salinator*, which seems to have been given him in derision, but which became, notwithstanding, hereditary in his family (Livy, xxix. 37; Val. Max. ii. 9, 6; vii. 2, 6). (2) Gaius, curule aedile B.C. 203, and praetor 202, in which year he obtained Bruttii as his province. In 193 he fought under the consul against the Boii, and in the same year was an unsuccessful candidate for the consulship. (3) Gaius, praetor B.C. 191, when he had the command of the fleet in the war against Antiochus. He was consul 188, and obtained Gaul as his province (Livy, xxxvii. 9–25).



Salinum, dim. **Salillum**. A salt-cellar; usually of silver, but among the poorer classes merely a shell (Hor. *Sat.* i. 3, 14). It was probably set in the middle of the table and had a sort of sanctity, inasmuch as salted meal (*mola salsa*) was offered to the Lares.

Sallentini. See Salentini.

Sallustius or **Salustius** (Σαλούστιος). (1) The Praefectus Praetorio under the emperor Julian, with whom he was on terms of friendship. Sallustius was a heathen, but dissuaded the emperor from persecuting the Christians. He was perhaps the author of a treatise Περὶ θεῶν καὶ κόσμου, which is still extant. If so, he was attached to the doctrines of the Neo-Platonists. The best edition of this treatise is by Orelli (Zürich, 1821). (2) A Cynic philosopher of some note, who lived in the latter part of the fifth century after Christ. He was a native of Emesa in Syria, and studied successively at Emesa, Alexandria, and Athens. Sallustius was suspected of holding somewhat impious opinions regarding the gods. He seems at least to have been unsparing in his attacks upon the fanatical theology of the Neo-Platonists.

Sallustius Crispus, Gaius. (1) A famous Roman historian, belonging to a plebeian family. He was born B.C. 86, at Amiternum, in the country of the Sabines. He was quaestor about 59, and tribune of the plebs in 52, the year in which Clodius was killed by Milo. In his tribunate he joined the popular party, and took an active part in opposing Milo. It is said that he had been caught by Milo in the act of adultery with his wife Fausta, the daughter of the dictator Sulla; that he had received a beating from the husband; and that he had been only let off on payment of a sum of money. In 50 Sallust was expelled from the Senate by the censors, probably because he belonged to Caesar's party, though some give as the ground of his ejection from the Senate the act of adultery already mentioned. In the Civil War he followed Caesar's fortunes. In 47 we find him praetor elect, by obtaining which dignity he was restored to his rank. He nearly lost his life in a mutiny of some of Caesar's troops in Campania, who had been led thither to pass over into Africa. He accompanied Caesar in his African war (46), and was left by Caesar as governor of Numidia, in which capacity he is charged with having oppressed the people, and enriched himself by unjust means. He was accused of maladministration before Caesar, but it does not appear that he was brought to trial. The charge is somewhat confirmed by the fact of his becoming immensely rich, as was shown by the expensive gardens which he formed (*horti Sallustiani*) on the Quirinalis. He retired into privacy after he returned from Africa, and he passed quietly through the troublesome period after Caesar's death. He died in the year 34, about four years before the battle of Actium. The story of his marrying Cicero's wife, Terentia, ought to be rejected.

It was probably not till after his return from Africa that Sallust wrote his historical works. (*a*) The *Catilina*, or *Bellum Catilinarium*, is a history of the conspiracy of Catiline during the consulship of Cicero, 63. The introduction to this history, which some critics admire, is only a feeble and rhetorical attempt to act the philosopher and moralist. The history, however, is valuable. Sallust was a living spectator of the events which he describes, and considering that he was not a friend of Cicero, and was a partisan of Caesar, he wrote with fairness. The speeches which he has inserted

Bust of Sallust. (St. Petersburg.)

in his history are certainly his own composition; but we may assume that Caesar's speech was extant, and that he gave the substance of it. (*b*) The *Iugurtha*, or *Bellum Iugurthinum*, contains the history of the war of the Romans against Iugurtha, king of Numidia, which began in 111, and continued until 106. It is probable that Sallust was led to write this work from having resided in Africa, and that he collected some materials there. He cites the Punic Books of King Hiempsal, as authority for his general geographical description (*Iug.* 17). The Jugurthine War has a philosophical introduction of the same stamp as that to the *Catilina*. As a history of the campaign, the Jugurthine War is of no value: there is a total neglect of geographical precision, and apparently not a very strict regard to chronology. (*c*) Sallustius also wrote *Historiarum Libri Quinque*, which were dedi-

cated to Lucullus, a son of L. Licinius Lucullus. The work is supposed to have comprised the period from the consulship of M. Aemilius Lepidus and Q. Lutatius Catulus (78), the year of Sulla's death, to the consulship of L. Vulcatius Tullus and M. Aemilius Lepidus (66), the year in which Cicero was praetor. This work is lost, with the exception of fragments which have been collected and arranged. They contain, among other things, several orations and letters. Some fragments belonging to the third book, and relating to the war with Spartacus, have been published from a Vatican MS. in the present century, and a number of others were found in 1886 by Hauler in an Orleans palimpsest. (*d*) *Duae Epistolae de Re Publica Ordinanda*, which appear to be addressed to Caesar at the time when he was engaged in his Spanish campaign (49) against Petreius and Afranius, and are attributed to Sallust; but the opinions of critics on their authenticity are divided. (*e*) The *Declamatio in Sallustium*, which is attributed to Cicero, is generally admitted to be the work of some rhetorician, the matter of which is the well-known hostility between the orator and the historian. The same opinion is generally maintained as to the *Declamatio in Ciceronem*, which is attributed to Sallust.

Some of the Roman writers considered that Sallustius imitated the style of Thucydides (Quint. x. 1), and he has himself greatly influenced the style of Tacitus. His language is generally concise and perspicuous: perhaps his love of brevity may have caused the ambiguity that is sometimes found in his sentences. He also affected archaic words. Though he has considerable merit as a writer, his art is always apparent. He had no pretensions to great research or precision about facts. His reflections have often something of the same artificial and constrained character as his expressions. One may judge that his object was to obtain distinction as a writer; that style was what he thought of more than matter. He has, however, probably the merit of being the first Roman who wrote what is usually called history. He was not above his contemporaries as a politician; he was a party man, and there are no indications of any comprehensive views, which had a whole nation for their object. He hated the nobility, and depicted their vices in a spirit of bitter exaggeration.

There are many MSS. of Sallust, especially at Paris. These Codices Parisini, of the tenth and eleventh centuries (P, P^1, P^2), are the best, all being distinguished by a lengthy lacuna after *Iug.* 103, supplied from a second "family" of MSS. written later, and represented by several codices at Munich. Remains of the orations and letters of Sallust are preserved in two MSS. of the tenth century—one at Berne, and one in the Vatican. These give also annotations by an unknown grammarian.

There are separate editions of the *Catilina* by Cook (1884); Turner (1887); Eussner (1887), and Herbermann (New York, 1890); of the *Iugurtha* by Herzog (Leipzig, 1840); Schmalz (Gotha, 1866), and Brook (London, 1885). The fragments of his *Historiae* are given in Jordan's edition of the Sallust (1887); and separately edited by Maurenbrecher (fasc. i. and ii., Leipzig, 1891–93). Complete editions of Sallust are those of Gerlach (Basel, 1832), Kritz (1828, 1856), Dietsch (1859, 1864), Jordan (Berlin, 1876, 1887), and with English notes by Merivale (1852), Long (1860, revised by Frazer, 1890), and Capes (1884). There are lexicons to Sallust by Eichert (Hanover, 1864) and Mollweide (Strassburg, 1887). A good English translation is that of Pollard (1882). On the style, see Constans, *De Sermone Sallustiano* (Paris, 1880); and in general the monographs by Vogel (Mainz, 1857), Jäger (Salzburg, 1884), and Rambeau (Burg, 1879).

(2) The grandson of the historian's sister, adopted by Sallust and made his heir. He was the principal adviser of Augustus Caesar after the retirement of Maecenas. He died in A.D. 20 (Hor. *Carm.* ii. 2; Tac. *Ann.* i. 6; ii. 40; iii. 30).

Salmācis. See HERMAPHRODITUS.

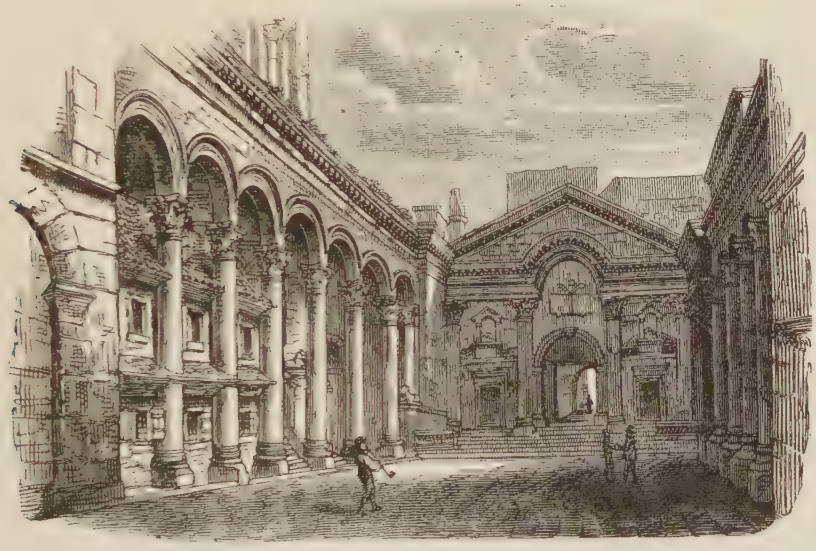
Salmantĭca. Now Salamanca, called HELMANTĬCA or HERMANDICA by Livy and ELMANTĬCA by Polybius (iii. 14). An important town of the Vettones in Lusitania, south of the Durius, on the road from Emerita to Caesaraugusta (Saragossa).

Salmasius, CLAUDIUS (Claude de Saumaise). A classical scholar, born at Semur in Burgundy, April 15th, 1588. His father, Bénigne de Saumaise, himself an accomplished scholar, gave him his first instruction, and at the age of ten the boy translated Pindar and wrote both Greek and Latin verse. He studied philosophy at Paris under the direction of Casaubon (q. v.), and later (1606) went to Heidelberg, where he took a course in jurisprudence, and studied so hard as greatly to injure his health, sitting at his desk through the whole of two nights out of every three, and adding to his linguistic resources a knowledge of Hebrew, Arabic, Coptic, and other languages. In 1631 he was called to Leyden to succeed Scaliger. He spent a year in Sweden (1650) at the solicitation of Queen Christina, but returned to Holland at the end of that time. In 1606 he discovered the Greek anthology of Kephalas at Heidelberg. (See ANTHOLOGY.) He died at Spa, September 6th, 1658.

Salmasius enjoyed a wide reputation for his great learning, which has been equalled by few. He was styled "the miracle of the world," "the most learned of all living men," but he lacked critical insight and system, so that he left nothing of lasting value to the world of learning. He is best remembered to-day for his abusive controversy with Milton over the question of the death of Charles I., and Milton's blindness was the result of excessive labour in the production of his answer to Salmasius.

Salmasius published *Plinianae Exercitationes* (1629); an edition of the *Augusta Historia* (1620); *Florus* (1629); *De Lingua Hellenistica* (1643); *De Re Militari Romanorum* (1657). See the eulogistic life of Salmasius prefixed to the collection of his letters (Leyden, 1656); L. Müller, *Geschichte der class. Philogie in den Niederlanden* (Leipzig, 1869); and for his controversy with Milton, Masson's *Life of Milton* (1876–79).

Salmōna (Σαλμώνη) or **Salmonia.** A town of Elis, in the district Pisatis, on the river Enipeus, said to have been founded by Salmoneus.



Salmōneus (Σαλμωνεύς). Son of Aeolus and Enareté and brother of Sisyphus. He originally lived in Thessaly, but emigrated to Elis, where he built the town of Salmoné. His presumption and arrogance were so great that he deemed himself equal to Zeus, and ordered sacrifices to be offered

to himself; nay, he even imitated the thunder and lightning of Zeus, but the father of the gods killed him with his thunderbolt, destroyed his town, and punished him in the lower world (Verg. *Aen.* vi. 585). His daughter Tyro bore the patronymic Salmonis.

Salmydessus (Σαλμυδησσός), called HALMYDESSUS (Ἁλμυδησσός), also in later times Midja or Midjeh. A town of Thrace, on the coast of the Euxine, south of the promontory Thynias. The name was originally applied to the whole coast from this promontory to the entrance of the Bosporus; and it was from this coast that the Black Sea obtained the name of Pontus Axinos, or inhospitable.

Salo. Now the Xalon; a tributary of the Iberus, in Celtiberia, which flowed by Bilbilis, the birthplace of Martial, who frequently mentions it in his poems (i. 49; x. 20).

Salōna, Salōnae, or Salon. Now Salona; an important town of Illyria, and the capital of Dalmatia, was situated on a small bay of the sea. The emperor Diocletian was born at the small village of Dioclea, near Salona; and after his abdication he retired to the neighbourhood of this town,

Court of the Palace of Diocletian at Spalatro.

and here spent the rest of his days. The remains of his magnificent palace are still to be seen at the village of Spalatro, the ancient Spolatum, three miles south of Salona.

Salonīnus, P. LICINIUS CORNELIUS VALERIĀNUS. The son of the Roman emperor Gallienus, and grandson of the emperor Valerian. He was put to death in Greece when Postumus captured Colonia Agrippina (Cologne) in A.D. 259, at which time Saloninus was about seventeen years of age (Trebell. Poll. *Salonin.*).

Salpensa. A Latin colony in Hispania Baetica, between Hispalis (Seville) and Gades (Cadiz). In 1851, an important inscription was discovered here containing part of a code of laws given to the place in the reign of Domitian (about A.D. 81–84). See the *C. I. L.* ii. 1963–64; Bruns, *Font.* 136.

Salpinx (σάλπιγξ). The Greek name for the long trumpet, like the Roman *tuba*, with which

Salpinx.

the signals were given in the army. It was also employed in religious ceremonies. See TUBA.

Saltatio (ὄρχησις, χόρευσις). Dancing. The dancing of the Greeks and Romans had little in common with the exercise which goes by that name in modern times. It may be divided into two kinds, gymnastic and mimetic; that is, it was intended either to represent bodily activity, or to express by gestures, movements, and attitudes certain ideas or feelings, and also single events or a series of events, as in the modern ballet. All these movements, however, were accompanied by music; but the terms ὄρχησις and *saltatio* were used in so much wider a sense than our word dancing that they were applied to designate gestures even when the body did not move at all (*saltare solis oculis*, Apul. *Met.* x. p. 251).

We find dancing prevalent among the Greeks from the earliest times. It is frequently mentioned in the Homeric poems: the suitors of Penelopé delight themselves with music and dancing (*Odyss.* i. 152); and Odysseus is entertained at the court of Alcinoüs with the exhibitions of very skilful dancers, the rapid movements of whose feet excite his admiration (*Odyss.* viii. 265). Skilful dancers were at all times highly prized by the Greeks: we read of some who were presented with golden crowns, and had statues erected to their honour, and their memory celebrated by inscriptions.

The lively imagination and mimetic powers of the Greeks found abundant subjects for various kinds of dances, and, accordingly, the names of no less than two hundred different dances have come down to us. It would be inconsistent with the nature of this work to give a description of all that are known: only the most important can be mentioned, and such as will give a general idea of the dancing of the ancients.

Dancing was originally closely connected with religion. Plato thought all dancing should be based on religion, as it was, he says, among the Egyptians. It has been shown under CHORUS that the chorus in the oldest times consisted of the whole population of a city, who met in a public place to offer up thanksgivings to the god of their country by singing hymns and performing dances. These dances, which, like all others, were accompanied by music, were therefore of a strictly religious nature; and in all the public festivals, which were so numerous among the Greeks, dancing formed a very prominent part. We find, from the earliest times, that the worship of Apollo was connected with a religious dance called Hyporchema (q. v.). All the religious dances, with the exception of the Bacchic and the Corybantian, were very simple, and consisted of gentle movements of the body, with various turnings and windings around the altar: such a dance was the *γέρανος*, which Theseus is said to have performed at Delos on his return from Crete. The Dionysiac or Bacchic and the Corybantian were of a very different nature. In the former, the life and adventures of the god were represented by mimetic dancing (see DIONYSIA); the dance called *Βακχική* was a satyric dance, and chiefly prevailed in Ionia and Pontus; the most illustrious men in the State danced in it, representing Titans, Corybantians, satyrs, and husbandmen, and the spectators were so delighted with the exhibition that they remained sitting the whole day to witness it, forgetful of everything else. The Corybantian was of a very wild character: it was chiefly danced in Phrygia and in Crete: the dancers were armed, struck their swords against their shields, and displayed the most extravagant fury; it was accompanied chiefly by the flute. The following wood-cut, from the Museo Pio-Clementino, is supposed to represent a Corybantian dance. Respecting the dances in the theatre, see CHORUS.

Corybantian Dancers. (Krause.)

Dancing was applied to gymnastic purposes and to training for war, especially in the Doric States, and was believed to have contributed very much to the success of the Dorians in war, as it enabled them to perform their evolutions simultaneously and in order.

There were various dances in early times which served as a preparation for war; hence Homer calls the hoplitae *πρυλέες*, a war-dance having been called *πρύλις* by the Cretans. Of such dances the most celebrated was the Pyrrhic (*ἡ Πυρρίχη*), of which the *πρύλις* was probably only another name.

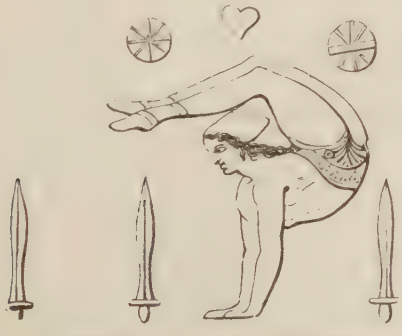
The invention of this dance is placed in the mythical age, and is usually assigned to one Pyrrhicos; but most of the accounts agree in assigning it a Cretan or Spartan origin, though others refer it to Pyrrhus or Neoptolemus, the son of Achilles, apparently misled by the name, for it was undoubtedly of Doric origin. It was danced to the sound of the flute, and its time was very quick and light, as is shown by the name of the Pyrrhic foot (˘˘), which must be connected with this dance: and from the same source came also the Proceleusmatic (˘˘˘˘), or challenging foot. The Pyrrhic dance was performed in different ways at various times and in various countries, for it was by no means confined to the Doric States. Plato describes it as representing, by rapid movements of the body, the way in which missiles and blows from weapons were avoided, and also the mode in which the enemy was attacked. In the non-Doric States it was probably not practised as a training for war, but only as a mimetic dance: thus we read of its being danced by women to entertain a company. It was also performed at Athens at the greater and lesser Panathenaea by Ephebi, who were called Pyrrhichists (*Πυρριχισταί*), and were trained at the expense of the choragus.

The following illustration, taken from Sir W. Hamilton's vases, represents three Pyrrhichists, two of whom, with sword and shield, are engaged in the dance, while the third is standing with a sword. Above them is a female balancing herself on the

Pyrrhic Dancers.

head of one, and apparently in the act of performing a somersault; she, no doubt, is taking part in the dance, and performing a very artistic kind of *κυβίστησις*, or tumbling, for the Greek performances of this kind surpass anything we can imagine in modern times. A woman spectator, sitting, looks on at the exhibition.

The Pyrrhic dance was introduced into the public games at Rome by Iulius Cæsar, when it was danced by the children of the leading men in Asia and Bithynia. It seems to have been much liked by the Romans; it was exhibited both by Caligula and Nero, and also frequently by Hadrian. Athenæus says that the Pyrrhic dance was still practised in his time (the third century A.D.) at Sparta.



Other kinds of dances were frequently performed at entertainments, in Rome as well as in Greece, by courtesans, many of which were of a very indecent and lascivious nature (Macrob. *Sat.* ii. 10;

Dancing-girl. (Pompeian painting.)

Plaut. *Stich.* v. 2, 11), resembling the *tango* of the modern Spaniards, and the *danse du ventre* of the Egyptian and Hindu dancing-girls. The dancers seem to have frequently represented Bacchanals; many such dancers appear in the paintings found at Herculaneum and Pompeii in a variety of graceful attitudes. (*Museo Borbonico*, vol. vii. tav. 34–40; vol. ix. tav. 17; vol. x. tav. 5, 6, 54.)

Among the dances performed without arms one of the most important was the ὄρμος, which was danced at Sparta by youths and maidens together: the youth danced first some movements suited to his age, and of a military nature; the maiden followed in measured steps and with feminine gestures. Another common dance at Sparta was the *Bibasis* (βίβασις), which was much practised both by men and women. The dance consisted in springing rapidly from the ground, and striking the feet behind; a feat of which a Spartan woman in Aristophanes (*Lysistr.* 28) prides herself. The number of successful strokes was counted, and the most skilful received prizes. We are told by a verse which has been preserved by Pollux (iv. 102), that a Laconian girl had danced the *bibasis* a thousand times, which was more than had ever been done before.

Acrobatic Dancer (Museo Borbonico.)

In many of the Greek States the art of dancing was carried to great perfection by females, who were frequently engaged to add to the pleasures and enjoyment of men at their symposia. These dancers always belonged to the courtesans. Xenophon (*Symp.* ix. 2–7) describes a mimetic dance which was represented at a symposium where Socrates was present. It was performed by a maiden and a youth, belonging to a Syracusan, who is called the ὀρχηστοδιδάσκαλος, and represented the loves of Dionysus and Ariadné.

Dancing was common among the Romans in ancient times in connection with religious festivals and rites, and was practised, according to Servius (*ad* Verg. *Ecl.* v. 73), because the ancients thought that no part of the body should be free from the influence of religion. The dances of the Salii, which were performed by men of patrician families, are spoken of elsewhere. (See SALII.) There was another old Roman dance of a military nature, called *bellicrepa saltatio*, which is said to have been instituted by Romulus, after he had carried off the Sabine women, in order that a like misfortune might not befall his State (Festus, *s. v.*). Dancing, however, was not performed by any Roman citizen except in connection with religion; and it is only in reference to such dancing that we are to understand the statements that the ancient Romans did not consider dancing disgraceful, and that not only freemen but the sons of senators and noble matrons practised it (Quintil. *Inst. Orat.* i. 11, 18). In the later times of the Republic we know that it was considered highly disgraceful for a freeman to dance: Cicero reproaches Cato for calling Murena a dancer (*saltator*), and adds, "Nemo fere saltat sobrius, nisi forte insanit" (*Pro Muren.* 6, 13; *In Pison.* 10, 22). The professional dancing-girls at Rome came from foreign countries, oftenest from Spain; and those of Gades (Cadiz) were especially noted for the indecent suggestiveness of their performances.

The mimetic dances of the Romans, which were carried to such perfection under the Empire, are described under PANTOMIMUS. Respecting the dancers on the tight-rope, see FUNAMBULUS.

Hell.* p. 807; Schömann, *Antiq.* p. 58; Becker-Göll, *Charikles*, i. 166; Blümner, *Privatleben*, p. 505; Marquardt, *Privatleben*, p. 109; Czerwinski, *Geschichte der Tanz-Kunst* (1862); and Voss, *Der Tanz und seine Geschichte* (1868).

Saltĭcae Fabŭlae. See PANTOMIMUS.

Salus. A Roman goddess, the personification of health, prosperity, and the public welfare. In the first of these three senses she answers closely to the Greek Hygeia (q. v.), and was accordingly represented in works of art with the same attributes as the Greek goddess. In the second sense she represents prosperity in general. In the third sense she is the goddess of the public welfare (Salus publica or Romana). In this capacity a temple was vowed to her in the year B.C. 307 by the censor C. Iunius Bubulcus, on the Quirinal Hill, which was afterwards decorated with paintings by C. Fabius Pictor. She was worshipped publicly on the 30th of April, in conjunction with Pax, Concordia, and Ianus. Salus was represented, like

Fortuna, with a rudder, a globe at her feet, and sometimes in a sitting posture, pouring from a patera a libation upon an altar, round which a serpent is winding. The goddess Strenia among the Sabines is the counterpart of the Roman Salus.

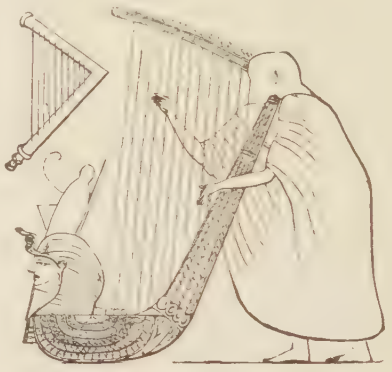
Salutatio. The morning greeting which Romans of rank were in the habit of receiving from clients, friends, and admirers in the *atrium* during the first two hours of the day; for this purpose the callers gathered in the vestibule even before sunrise (Mart. iv. 8; Pliny, *Ep.* iii. 12).

Salve. See COLLYRIUM; UNGUENTUM.

Salvīanus. A native of Colonia Agrippina (Cologne), one of the early fathers of the Christian Church. He led a religious life at Massilia during the greater part of the fifth century, and died in that city. Salvianus was the author of several works on devotional subjects, of which there are yet extant a treatise "on the Providence of God" (*De Gubernatione Dei*, etc.), in eight books; another in four books, written against avarice (*Adversus Avaritiam*), and nine pastoral letters. His works are edited by Halm (Berlin, 1877), and Pauly (Vienna, 1883).

Salvius Iuliānus. See IULIĀNUS.

Salvius Otho. See OTHO.



Salyes or **Salluvii.** The most powerful and most celebrated of all the Ligurian tribes, inhabited the southern coast of Gaul from the Rhone to the Maritime Alps. They were troublesome neighbours to Massilia, with which city they frequently carried on war. They were subdued by the Romans, in B.C. 123, after a long and obstinate struggle, and the colony of Aquae Sextiae was founded in their territory by the consul Sextius.

Samăra. See SAMAROBRIVA.

Samarīa (Σαμάρεια; Hebr. *Shomron*). (1) A district of Palestine extending along the coast from near Caesarea to Joppa on the south. (See PALESTINA.) (2) An important city of Palestine on a line west of the Jordan River. It was founded by Omri, King of Israel, in the tenth century B.C., and was the capital of the Israelites until taken by Shalmaneser of Assyria, about B.C. 720. When the Jews returned from the Babylonian captivity, those of the Samaritans who worshipped Jehovah offered to assist them in rebuilding the temple at Jerusalem; but their aid was refused, and hence arose the lasting hatred between the Jews and the Samaritans. This religious animosity reached its height when, in the reign of Darius Nothus, the son of the Jewish high-priest, having married the daughter of Sanballat, governor of Samaria, went over to the Samaritans and became high-priest of a temple which his father-in-law built for him, on Mount Gerizim, near Sichem. The erection of this temple had also the effect of diminishing the importance of the city of Samaria. Under the Syrian kings and the Maccabean princes, we find the name of Samaria used distinctly as that of a province, which consisted of the district between Galilee on the north and Judaea on the south. Samaria was taken by Alexander the Great, by Ptolemy I. (B.C. 312), and by Demetrius Poliorcetes (B.C. 276). In the persecution of Antiochus Epiphanes, the Samaritans escaped by conforming to the king's edicts and dedicating the temple on Mount Gerizim to Zeus Hellenius (B.C. 167). As the power of the Asmonean princes increased, they attacked the Samaritans; and, about B.C. 110, the Jewish leader John Hyrcanus took and destroyed the temple on Mount Gerizim and the city of Samaria. The latter seems to have been soon rebuilt. Pompey assigned the district to the province of Syria, and Gabinius fortified the city anew. Augustus gave the district to Herod, who greatly renovated the city of Samaria, which he called Sebasté in honour of his patron. By the fourth century A.D. Samaria had ceased to be a place of any importance. There still exist remains of a basilica of the time of Herod, and of a Roman temple. See Appel, *De Reb. Samar. sub Imperio Romanorum* (1874).

Samarobrīva, afterwards AMBIĀNI. Now Amiens; the chief town of the Ambiani in Gallia Belgica, on the river Samara, whence its name, which signifies Samara Bridge.

Sambūca (*σαμβύκη* and *σανδύκη*). A triangular, stringed instrument resembling a harp, having

Egyptian Sambuca. (Wilkinson.)

a piercing tone (Pers. v. 95). When played, its pointed end stood downwards.

Samé (Σάμη) or **Samos** (Σάμος). The ancient name of Cephallenia. (See CEPHALLENIA.) It was also the name of one of the four towns of Cephallenia. The town Samé or Samos was situated on the eastern coast, opposite Ithaca, and was taken and destroyed by the Romans, B.C. 189 (Livy, xxxviii. 28).

Samnītes. See GLADIATORES.

Samnium (*Sabnium* qs. *Sabinium*). A country in the centre of Italy, bounded on the north by the Marsi, Peligni, and Marrucini, on the west by Latium and Campania, on the south by Lucania, and on the east by the Frentani and Apulia. The Samnites were an offshoot of the Sabines, who emigrated from their country between the Nar, the Tiber, and the Anio, before the foundation of Rome, and settled in the country afterwards called Samnium. This country was at the time of their migration inhabited by Opicans, whom the Samnites conquered, and whose language they adopted; for we find at a later time that the Samnites spoke Opican or Oscan. See OSCI.

Samnium is a country marked by striking physical features. The greater part of it is occupied by a huge mass of mountains, called at the present day the Matese, which stands out from the central line of the Apennines. The circumference of the Matese is between seventy and eighty miles, and its greatest height is 6000 feet. The most impor-

tant tribes of the Samnites were the Caudini and Pentri, of whom the former occupied the south side and the latter the north side of the Matese. To the Caudini belonged the towns of Allifae, Telesia, and Beneventum; to the Pentri, those of Aesernia, Bovianum, and Sepinum. Besides these chief tribes, we find mention of the Caraceni, who dwelt north of the Pentri, and to whom the town of Aufidena belonged; and of the Hirpini, who dwelt southeast of the Caudini, but who are sometimes mentioned as distinct from the Samnites.

The Samnites were distinguished for their bravery and love of freedom. Issuing from their mountain fastnesses, they overran a great part of Campania; and it was in consequence of Capua applying to the Romans for assistance against the Samnites that war broke out between the two peoples in B.C. 343. The Romans found the Samnites the most warlike and formidable enemies whom they had yet encountered in Italy; and the war, which commenced in B.C. 343, was continued with few interruptions for the space of fifty-three years. It was not till B.C. 290, when all their bravest troops had fallen, and their country had been repeatedly ravaged in every direction by the Roman legions, that the Samnites sued for peace and submitted to the supremacy of Rome. They never, however, lost their love of freedom; and accordingly they not only joined the other Italian allies in the war against Rome in B.C. 90, but, even after the other allies had submitted, they continued in arms. The Civil War between Marius and Sulla gave them hopes of recovering their independence; but they were defeated by Sulla before the gates of Rome (82) the greater part of their troops fell in battle, and the remainder were put to death. Their towns were laid waste, the inhabitants sold as slaves, and their place supplied by Roman colonists. See ITALIA; OSCI; UMBRIA.

Samos (Σάμος). Now Samo, Turk. Susam Adassi; one of the principal islands of the Aegaean Sea, lying in that portion of it called the Icarian Sea, off the coast of Ionia, from which it is separated only by a narrow strait formed by the overlapping of its eastern promontory Posidium (now Cape Colonna) with the westernmost spur of Mount Mycalé, Promontorium Trogilium (now Cape S. Maria). This strait, which is little more than three-fourths of a mile wide, was the scene of the battle of Mycalé. The island is formed by a range of mountains extending from east to west, whence it derived its name; for Σάμος was an old Greek word signifying a mountain: and the same root is seen in Samé, the old name of Cephallenia, and Samothracé—i. e. the Thracian Samos. The circumference of the island is about eighty miles. It was and is very fertile; and some of its products are indicated by its ancient names, Dryusa, Anthemura, Melamphyllus, and Cyparissia. According to the earliest traditions, it was a chief seat of the Carians and Leleges, and the residence of their first king, Ancaeus; and was afterwards colonized by Aeolians from Lesbos, and by Ionians from Epidaurus.

In the earliest historical records, we find Samos decidedly Ionian, and a powerful member of the Ionic Confederacy. Thucydides tells us that the Samians were the first of the Greeks, after the Corinthians, who paid great attention to naval affairs. They early acquired such power at sea, that, besides obtaining possession of parts of the opposite coast of Asia, they founded many colonies; among which were Bisanthé and Perinthus, in Thrace; Celenderis and Nagidus, in Cilicia; Cydonia, in Crete; Dicaearchia (Puteoli), in Italy; and Zanclé (Messana), in Sicily. After a transition from the state of a monarchy, through an aristocracy, to a democracy, the island became subject to the most famous of the so-called "tyrants," Polycrates (B.C. 532), under whom its power and splendour reached their highest pitch, and Samos would probably have become the mistress of the Aegaean but for the murder of Polycrates. At this period the Samians had extensive commercial relations

Coin of Samos.

with Egypt, and they obtained from Amasis the privilege of a separate temple at Naucratis. Their commerce extended into the interior of Africa, partly through their relations with Cyrené, and also by means of a settlement which they effected in one of the Oases, seven days' journey from Thebes. The Samians now became subject to the Persian Empire, under which they were governed by tyrants, with a brief interval at the time of the Ionian revolt, until the battle of Mycalé, which made them independent, B.C. 479. They now joined the Athenian Confederacy, of which they continued independent members until B.C. 440, when an opportunity arose for reducing them to entire subjection and depriving them of their fleet, which was effected by Pericles after an obstinate resistance of nine months' duration. In the Peloponnesian War (q. v.), Samos held firm to Athens to the last; and in the history of the latter part of that war, the island becomes extremely important as the headquarters of the exiled democratical party of the Athenians. Transferred to Sparta after the battle of Aegospotami (405), it was soon restored to Athens by that of Cnidus (394), but went over to Sparta again in 390. Soon after, it fell into the hands of the Persians, being conquered by the satrap Tigranes; but it was recovered by Timotheus for Athens. In the Social War, the Athenians successfully defended it against the attacks of the confederated Chians, Rhodians, and Byzantines, and placed in it a body of two thousand *cleruchi* (B.C. 352). After Alexander's death, it was taken from the Athenians by Perdiccas (323), but restored to them by Polysperchon (319). In the subsequent period, it seems to have been rather nominally than really a part of the Graeco-Syrian kingdom: we find it engaged in a long contest with Priené on a question of boundary, which was referred to Antiochus II., and afterwards to the Roman Senate. In the Macedonian War, Samos was taken by the Rhodians again, B.C. 200. In the Syrian War, the Samians took part with Antiochus the Great against Rome.

Little further mention is made of Samos till the time of Mithridates, with whom it took part in his first war against Rome, on the conclusion of which it was finally united to the province of Asia, B.C.

84. Meanwhile it had greatly declined, and during the war it had been wasted by the incursions of pirates. Its prosperity was partially restored under the propraetorship of Q. Cicero, B.C. 62, but still more by the residence in it of Antony and Cleopatra (32), and afterwards of Octavianus, who made Samos a free State. It was favoured by Caligula, but was deprived of its freedom by Vespasian, and it sank into insignificance as early as the second century, although its departed glory is found still recorded, under the emperor Decius, by the inscription on its coins, Σαμίων πρώτων Ἰωνίας.

Samos may be regarded as almost the chief centre of Ionian manners, energies, luxury, science, and art. In very early times there was a native school of statuary, at the head of which was Rhoecus, to whom tradition ascribed the invention of casting in metal. (See STATUARIA ARS.) In the hands of the same school architecture flourished greatly; the Heraeum, one of the finest of Greek temples, was erected in a marsh, on the western side of the city of Samos; and the city itself, especially under the government of Polycrates, was furnished with other splendid works, among which was an aqueduct pierced through a mountain. Samian architects became famous also beyond their own island; as, for example, Mandrocles, who constructed Darius's bridge over the Bosporus. Samian pottery was well known, and was in vogue in Greece and Italy in the second century B.C., and was imitated by the potters of Gaul and Britain. It was of a reddish colour, with reliefs. The island was the birthplace of Pythagoras (Herod. iv. 95), and of several minor poets and historians.

The capital of the island was the city SAMOS, on the southeastern coast. It had a magnificent harbour, and was adorned with many fine buildings, especially a temple of Heré (Heraeum), which in the time of Herodotus was the largest temple in existence (Herod. iii. 60; Pausan. vii. 4). It was of the Ionic order. Excavations made in 1880 show that its façade was one of some 150 feet.

See Guérin, *Patmos et Samos* (Paris, 1856); Tozer, *Islands of the Aegean* (1890); Curtius, *Geschichte von Samos* (1877); Bürchner, *Das Ionische Samos* (1892).

Samosăta (τὰ Σαμόσατα). Now Samisat, the capital of the province, and afterwards kingdom, of Commagené, in the north of Syria, stood on the right bank of the Euphrates, northwest of Edessa. It is celebrated in literary history as the birthplace of Lucian, and in church history as that of the heretic Paul, bishop of Antioch, in the third century. Nothing remains of it but a heap of ruins.

Samothrācé (Σαμοθράκη), **Samothrāca**, and **Samothracia** (Σαμοθρᾳκία). A small island in the north of the Aegaean Sea, opposite the mouth of the Hebrus in Thrace. It was the chief seat of the mysterious worship of the Cabiri. (See CABEIRIA.) The political history of Samothrace is of little importance. The Samothracians fought on the side of Xerxes at the battle of Salamis; and at this time they possessed on the Thracian mainland a few places, such as Salé, Serrhion, Mesambria, and Tempyra. In the time of the Macedonian kings, Samothracé appears to have been regarded as a kind of asylum, and Perseus accordingly fled thither after his defeat by the Romans at the battle of Pydna.

Sampsicerămus. The name of a petty prince of Emesa in Syria; a nickname given by Cicero to Cn. Pompeius (*Ad Att.* ii. 14, 16, 17, 23).

Sanchuniăthon (Σαγχουνιάθων). Said to have been an ancient Phœnician writer, whose works were translated into Greek by Philo Byblius, who lived in the latter half of the first century of the Christian era. A considerable fragment of the translation of Philo is preserved by Eusebius in the first book of his *Praeparatio Evangelica;* but it is now generally agreed among modern scholars that the work was a forgery of Philo. The fragments are published separately by Orelli (Leipzig, 1823). In 1835 a MS. purporting to be the entire version by Philo was said to have been found in the Portuguese convent of Sta. Maria de Merinhão. The Greek text of this was edited by Wagenfeld (Bremen, 1837) and translated into German (Lübeck, 1837). It was soon found to be a forgery, and the story of its discovery to be a falsehood. See Renan, *Mémoire sur Sanchoniathon* (1858).

Sancus. Usually called SEMO SANCUS. (See SEMONES.) A genius worshipped by the Sabines, Umbrians, and Romans, representing holiness and good faith in human life. In Rome he was principally worshipped under the name DEUS FIDIUS (from *fides*, "faith") as god of oaths, god of the public laws of hospitality and of nations, also of international intercourse and of the safety of the roads, which were placed under his protection. An oath in his name could be taken only under the open sky; therefore even his temple had a hole in the roof, and, when an oath by him was taken at home, the man swearing went into the uncovered court. On account of many points of resemblance he was identified with Hercules. He had a temple on the Quirinal (the foundation of which was celebrated June 5th), and another on the island in the Tiber (Ovid, *Fasti*, vi. 213–218).

Sandalium (σανδάλιον and σάνδαλιν). A Greek covering for the foot, worn principally by women, consisting of a thick sole of wood, cork, or leather, with a strap carried over the foot in front of the socket of the great toe, passed between this and the second toe, and tied to the other bands fastened to the edge of the sole before and behind. The back was supported by strap-work, which was often very neatly intertwined above the ankles.

Soles of the more simple kind were bound underneath the foot by a strap running crosswise over the instep, or by two straps fastened to the side-edges and tied together in a knot or by a clasp. Soles were also worn, which were provided with a close-fitting piece of leather at the heel and with a piece of leather, sometimes broad, at the sides. These last were so laced together by straps round the ankles that the toes and the flat of the foot remained uncovered. See SOLEA.

Woman's Sandal. (*Museo Borbonico*, vii. 39.)

Sandrocottus (Σανδρόκοττος). An Indian king in the time of Seleucus Nicator, who ruled over the powerful nation of the Gangaridae and Prasii on the banks of the Ganges (Plut. *Alex.* 62; Arr. *Anab.* v. 6, 2).

Sangallenses Sortes. A book of oracles found in a fragmentary condition at St. Gallen in Switzerland in a MS. of Merobaudes. They are derived from a Greek source and are written in popular Latin. Edited by Winnefeld (Bonn, 1887).

Sangarius (Σαγγάριος), **Sangăris** (Σάγγαρις), or **Sagăris** (Σάγαρις). Now Sakariyeh. The largest river of Asia Minor after the Halys; it had its source in a mountain called Adoreus, near the little town of Sangia, on the borders of Galatia and Phrygia, whence it flowed first north through Galatia, then west and northwest through the northeastern part of Phrygia, and then north through Bithynia, of which it originally formed the eastern boundary. It fell at last into the Euxine, about half way between the Bosporus and Heraclea (Strabo, p. 543).

Sangia. See SANGARIUS.

Sanguicŭlus. A sort of blood-pudding made by the Romans from the blood of a kid (Pliny, *H. N.* xxviii. 58).

Sannio. (From an engraved gem.)

Sannio. A name of the buffoon in the Roman mimes, derived from *sanna* ("a grimace"), whence come the Italian *Zanni* and our Zany (Cic. *De Orat.* ii. 61).

Sannyrion (Σαννυρίων). An Athenian comic poet who flourished about B.C. 407. His excessive leanness was ridiculed by Strattis and Aristophanes (Athen. p. 551).

Santŏnes or **Santŏni.** A powerful people in Gallia Aquitanica, dwelling on the coast of the ocean, north of the Garumna (Garonne). Under the Romans they were a free people. Their chief town was Mediolanum, afterwards Santones (Saintes) (Caes. *B. G.* i. 10).

Santra. A Roman writer on grammar and literature of the first century B.C. (Suet. *Gramm.* 14). Mercklin (*Phil.* iii. 344) thinks him an African.

Saocŏras (Σαόκορας). A river of Mesopotamia emptying into the Euphrates (Ptol. v. 18). It has not been satisfactorily identified.

Sapa (ἕψημα). The must of new wine, boiled down and used for strengthening other wine. See VINUM.

Sapaei (Σαπαῖοι). A people in Thrace, dwelling on Mount Pangaeus, between Lake Bistonis and the coast (Herod. vii. 110).

Sapaudia. A district in Gaul south of Lake Geneva (Ammian. Marc. xv. 11). Its name is the origin of the modern Savoy.

Saphar (Σάφαρ), **Sapphar** (Σάπφαρ), and **Taphar** (Τάφαρον). Now Dhafar; a city of Arabia on the southern coast of Arabia Felix. It was the capital of the Homeritae to whom the Sapharitae belonged (Ptol. vi. 6, 25).

Sapis. Now the Savio. A small river in Gallia Cisalpina, rising in the Apennines, and flowing into the Adriatic south of Ravenna, between the Po and the Aternus (Lucan, ii. 406).

Sapo (σάπων). A Keltic word, the original of our "soap," though it denoted not a detergent, but a sort of pomade used for colouring the hair a light brown. It was made with goat's tallow and ashes, and was sold in balls, in which form it was imported by the Romans from Germany and Gaul, and used to bleach the hair (Pliny, *H. N.* xviii. 191; Mart. viii. 33, 20; xiv. 26); Beckmann, *History of Inventions*, ii. p. 92 (London, 1846); and Blümner, *Technologie*, i. 161.

Sapor. See PERSIA.

Sapphire. See GEMMA.

Sappho (Σαπφώ; Aeolic, Ψάπφα). One of the two great leaders of the Aeolian school of lyric poetry, Alcaeus being the other. She was a native of Mitylené, or, as some said, of Eresos in Lesbos, and flourished towards the end of the seventh century B.C. Her father's name was Scamandronymus, who died when she was only six years old. She had three brothers, Charaxus, Larichus, and Eurigius. Charaxus was violently upbraided by his sister in a poem, because he became so enamoured of the courtesan Rhodopis at Naucratis in Egypt as to ransom her from slavery at an immense price. Sappho was contemporary with Alcaeus, Stesichorus, and Pittacus. That she was not only contemporary, but lived in friendly intercourse, with Alcaeus is shown by existing fragments of the poetry of both. Of the events of her life we have no other information than an obscure allusion in the Parian Marble and in Ovid (*Her.* xv. 51) to her flight from Mitylené to Sicily to escape some un-

Sappho. (From the painting by Alma-Tadema.)

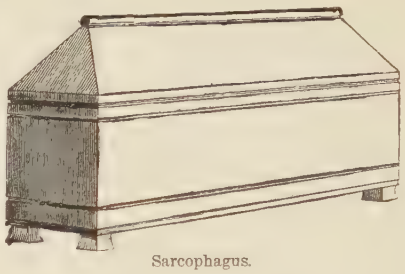
known danger, between B.C. 604 and 592; and the common story that being in love with Phaon, and finding her love unrequited, she leaped down from the Leucadian Rock. This story, however, seems to have been an invention of later times. The name of Phaon does not occur in one of Sappho's fragments, and there is no evidence that he was mentioned in her poems. As for the leap from the Leucadian Rock, it is a mere metaphor, taken from an expiatory rite connected with the worship of Apollo, which seems to have been a frequent poetical image. At Mitylené Sappho appears to have been the leader of a feminine literary set, most of the members of which were her pupils in poetry, fashion, and gallantry, so that from this association later writers have attempted to prove that the moral character of Sappho was not free from all reproach; and it is difficult to read the fragments which remain of her verse without being forced to come to the conclusion that a woman who could write such poetry could not be the pure woman that her modern apologists would have her. (See the defence of Sappho by Welcker [1816] and the various papers in the *Rheinisches Museum* for 1857–58.) Of her poetical genius, however, there cannot be a question. The ancient writers agree in expressing the most unbounded admiration for the passion, sincerity, and grace of her poetry. Already in her own age the recitation of one of her poems so affected Solon that he expressed an earnest desire to learn it before he died. Her lyric poems formed nine books, but of these only fragments have come down to us. The most important is a splendid ode to Aphrodité, of which we perhaps possess the whole. The best editions of the fragments is by Neue (Berlin, 1827), and that in Bergk's *Poet. Lyrici Graeci*, vol. iii. (4th ed. 1882). The fragments are all collected and translated into English by Wharton with a full bibliography in his *Sappho* (Chicago, 1895). See Arnold, *Sappho* (Berlin, 1871); Schöne, *Untersuchungen über das Leben der Sappho* (Leipzig, 1867); and Poestion, *Griechische Dichterinnen* (Vienna, 1876). There is a metrical translation of the fragments by Gasby-Smith (Washington, 1891).

Saraballa (*Σαράβαλλα*) and **Sarabāra** (*Σαράβαρα*). A name given to the loose trousers worn by the Asiatics and also by the Northern peoples. See BRACAE.

Sarancae, Sarangae (*Σαράγγαι*). A people of Sogdiana (Herod. iii. 93).

Sarāpis. See SERAPIS.

Sarāpis (*σάραπις*). A tunic whose use was restricted to the kings of Persia. It was of a purplish colour with a stripe of white down the front (Plaut. *Poen.* v. 5, 33).



Sarāvus. Now the Saar; a river of Gaul flowing into the Mosella on the right (Auson. *Mosell.* 367).

Sarcĭna. A pack or bundle, especially the "kit" of a Roman soldier carried by him on the march and comprising his arms, clothing, and rations (Caes. *B. G.* i. 24).

Sarcinātor. See SARTOR.

Sarcinātrix (*ἀκέστρια*). The feminine of *sarcinator*. See SARTOR.

Sarcophăgus (*σαρκοφάγος*). Literally, "flesh-devouring." A name given to a kind of limestone quarried at Assos in Troas, and remarkable for possessing the peculiar power of consuming or eating away the flesh and bones, with the exception of the teeth, of a body enclosed within it, in the short period of forty days (Pliny, *H. N.* xxxvi. 27). On account of this property it was extensively employed for making coffins, when the corpse was buried entire without burning; and

Sarcophagus.

thence the term came to be used in a general sense for any kind of coffin or tomb, without regard to the materials of which it was made (Juv. x. 172). See SEPULCRUM.

Sarcŭlum and **Sarcŭlus** (*σκαλίς*). A light hoe, smaller than the *ligo* (q. v.), used in weeding gardens, etc. (Pliny, *H. N.* xix. 33).

Sarculum. (Roman bas-relief.)

Sardanapālus (*Σαρδανάπαλος*). The last king who reigned over the Assyrian Empire of Nineveh. The account given of him by Ctesias asserts that he passed his time in his palace unseen by any of his subjects, dressed in woman's apparel, and surrounded by concubines. At length Arbaces, satrap of Media, and Beletys, the noblest of the Chaldaean priests, resolved to renounce allegiance to such a monarch, and advanced at the head of a formidable army against Nineveh. But all of a sudden the effeminate prince threw off his luxurious habits and appeared an undaunted warrior. Placing himself at the head of his troops, he twice defeated the rebels, but was at length worsted and obliged to shut himself up in Nineveh. Here he sustained a siege for two years, until at length, finding it impossible to hold out any longer, he collected all his treasures, wives, and concubines, and placing them on an immense pile which he had constructed, set it on fire, and thus destroyed both himself and them. The enemies then obtained possession of the city. This is the account of Ctesias, which has been preserved by Diodorus Siculus and which has been followed by most subsequent writers and chronologists (see Diod. ii. 21; Syncell. p. 359; August. *C. D.* xviii. 21), and has been taken as the subject of a very spirited dramatic fragment by Lord Byron entitled *Sardanapalus*. The death of Sardanapalus and the fall of the Assyrian Empire were placed B.C. 876. Modern writers however have shown that the whole narrative of Ctesias is mythical, and must not be received as genuine history. It is contradicted by the statements in Herodotus and the Christian writers. Sardanapalus is to be identified with the King Ashurbanipal, of whom many cuneiform records survive, and who made two successful expeditions against Egypt

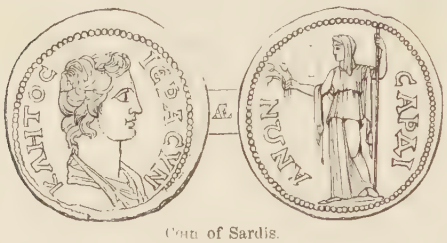
(B.C. 670–650); but was defeated in B.C. 646, when Cyaxares, King of Media, and the governor of Babylon took Nineveh and destroyed it, Sardanapalus perishing in the flames. See Bezold's *Catalogue of the Cuneiform Tablets in the Kouyunjik Collection in the British Museum*, 3 vols. (1889–93); and the article ASSYRIA.

Sardemisus. A branch of Mount Taurus on the borders of Pisidia and Pamphylia, as far as Phaselis in Lycia (Pliny, *H. N.* v. 96).

Sardes. See SARDIS.

Sardi. See SARDINIA.

Sardinia (ἡ Σαρδώ or Σαρδών; later Σαρδανία or Σαρδηνία). Sardinia, a large island in the Mediterranean, is in the shape of a parallelogram, upwards of 140 miles in length from north to south, with an average breadth of 60. It was regarded by the ancients as the largest of the Mediterranean islands, and this opinion, though usually considered an error, is now found to be correct; since it appears by actual measurement that Sardinia is a little larger than Sicily. Sardinia lies in almost a central position between Spain, Gaul, Italy, and Africa. A chain of mountains runs along the whole of the eastern side of the island from north to south, occupying about one third of its surface. These mountains were called by the ancients Insani Montes, a name which they probably derived from their wild and savage appearance, and from their being the haunt of numerous robbers. Sardinia was very fertile, but was not extensively cultivated, in consequence of the uncivilized character of its inhabitants. Still the plains in the western and southern parts of the island produced a great quantity of corn, of which much was exported to Rome every year. Among the products of the island one of the most celebrated was the *Sardonica herba*, a poisonous plant, which was said to produce fatal convulsions in the person who ate of it. These convulsions agitated and distorted the mouth so that the person appeared to laugh, though in excruciating pain; hence the well-known *risus Sardonicus* (Σαρδώνιος γέλως, see Suidas, s. h. v.). Sardinia contained a large quantity of the precious metals, especially silver, the mines of which were worked in antiquity to a great extent. There were likewise numerous mineral springs; and large quantities of salt were manufactured on the western and southern coasts. The Greeks called the island ICHNŪSA (Ἰχνοῦσα), from its shape, which suggested a footprint, and SANDALIOTIS as resembling a sandal (Pausan. x. 17, 2; Sil. Ital. xii. 358; Pliny, *H. N.* iii. 85).



The population of Sardinia was of a very mixed kind. To what race the original inhabitants belonged we are not informed; but it appears that Phœnicians, Tyrrhenians, and Carthaginians settled in the island at different periods. The Greeks are also said to have planted colonies in the island, but this account is very suspicious. Sardinia was known to the Greeks as early as B.C. 500, since we find that Histiaeus of Miletus promised Darius that he would render the island of Sardo tributary to his power. It was conquered by the Carthaginians at an early period, and continued in their possession until the end of the First Punic War. Shortly after this event the Romans availed themselves of the dangerous war which the Carthaginians were carrying on against their mercenaries in Africa to take possession of Sardinia, B.C. 238. It was now formed into a Roman province under the government of a praetor; but a large portion of it was only nominally subject to the Romans; and it was not till after many years and numerous revolts that the inhabitants submitted to the Roman dominion. Sardinia continued to belong to the Roman Empire till the fifth century, when it was taken possession of by the Vandals. See La Marmora, *Voyage en Sardaigne*, 5 vols. (2d ed. Paris, 1837–57); Edwardes, *Sardinia and the Sardes* (London, 1889); and the history by Manno, 4 vols. (Turin, 1825, and Florence, 1858).

Sardis or **Sardes** (*αἱ Σάρδεις*, Ion. Σάρδιες, contracted Σάρδῐς). One of the most ancient and famous cities of Asia Minor, and the capital of the great Lydian monarchy, stood on the southern edge of the rich valley of the Hermus, at the northern foot of Mount Tmolus, on the little river Pactolus, 30 stadia (three geographical miles) south of the junction of that river with the Hermus (Herod. v. 101). On a lofty precipitous rock, forming an outpost of the range of Tmolus, was the almost impregnable citadel, which some suppose to be the Hydé of Homer, who, though he never mentions the Lydians or Sardis by name, speaks of Mount

Valley of the Hermus with Acropolis of Sardis.

Tmolus and the Lake of Gyges (*Il.* xx. 385). The erection of this citadel was ascribed to Meles, an ancient king of Lydia. It was surrounded by a triple wall, and contained the palace and treasury of the Lydian kings. At the downfall of the Lydian Empire, it resisted all the attacks of Cyrus, and was only taken by surprise. The story is told by Herodotus, who relates other legends of the fortress. The rest of the city, which stood in the plain on both sides of the Pactolus, was very slightly built, and was repeatedly burned down, first by

Coin of Sardis.

the Cimmerian Gauls in the seventh century B.C., then by the Greeks in the great Ionic revolt, and again, in part at least, by Antiochus the Great (B.C. 215); but on each occasion it was restored. Under the Persian and Greco-Syrian Empires, it was the residence of the satrap of Lydia. The rise of Pergamum greatly diminished its importance; but under the Romans it was still a considerable city, and the seat of a *conventus iuridicus* (Pliny, *H. N.* v. 111). In the reign of Tiberius, it was almost entirely destroyed by an earthquake, but was restored by the aid of that emperor (Tac. *Ann.* ii. 47). It was one of the seven Christian Churches of the province of Asia. In 1402 it was totally demolished by Tamerlane; but the triple wall of its acropolis can still be traced, and there are remains of the temple of Cybelé, a theatre, the stadium, and other structures, together with some vestiges of the necropolis, four miles distant from the city across the river Hermus. The site of the city is still called Sart. See LYDIA.

Sardōum Maré or **Sardonĭcum Maré** (*τὸ Σαρδῷον πέλαγος*). That part of the Mediterranean Sea which lies to the west and south of the island of Sardinia (Herod. i. 166; Pliny, *H. N.* iii. 75).

Sarissa (*σάρισσα*). A long lance used by the Macedonian hoplites for thrusting, and by the light cavalry. In the time of Philip and Alexander the Great it was eighteen feet in length, but was afterwards reduced to fourteen feet. Because of this weapon, the light cavalry were called *σαρισσοφόροι*. See Livy, ix. 19; xxxviii. 7; Polyb. xviii. 12; and the articles ARMA; EXERCITUS; PHALANX.

Alexander with Sarissa. (Pompeian mosaic.)

Sarmătae (*Σαρμάται*) or **Sauromătae** (*Σαυρομάται*). A people of Asia, dwelling on the northeast of the Palus Maeotis (Sea of Azov), east of the river Tanaïs (Don), which separated them from the Scythians of Europe. See SARMATIA.

Sarmatia (*Σαρματία*). The eastern part of Poland and southern part of Russia in Europe. A name first used by Mela for the part of northern Europe and Asia extending from the Vistula (Wisla) and the SARMATĬCI MONTES on the west, which divided it from Germany, to the Rha (Volga) on the east, which divided it from Scythia; bounded on the southwest and south by the rivers Ister (Danube), Tibiscus (Theiss), and Tyras (Dniester), which divided it from Pannonia and Dacia, and, farther, by the Euxine, and beyond it by Mount Caucasus, which divided it from Colchis, Iberia, and Albania; and extending on the north as far as the Baltic and the unknown regions of northern Europe. The people from whom the name of Sarmatia was derived inhabited only a small portion of the country. The greater part of it was peopled by Scythian tribes; but some of the inhabitants of its western part seem to have been of German origin, as the Venedi on the Baltic, and Iazyges, Rhoxolani, and Hamaxobii in southern Russia; the chief of the other tribes west of the Tanaïs were the Alauni or Alani Scythae, a Scythian people who came out of Asia and settled in the central part of Russia. The whole country was divided by the river Tanaïs (Don) into two parts, called respectively SARMATIA EUROPAEA and SARMATIA ASIATICA; but it should be observed that, according to the modern division of the continent, the whole of Sarmatia belongs to Europe. It should also be noticed that the Chersonesus Taurica (Crimea), though falling within the specified limits, was not considered as a part of Sarmatia, but as a separate country.

In a general way the name Sarmatia is often used very indefinitely of the whole of northeastern Europe. The historical sources of our knowledge of Sarmatia in ancient times are collected and discussed by Kalina, *De Fontibus*, etc. (1872).

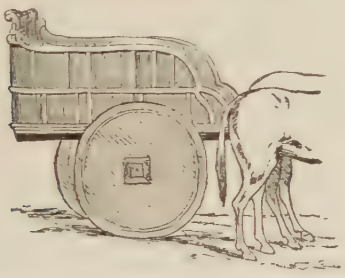
Sarmatĭcae Portae (*Σαρματικαὶ Πύλαι*). The pass of Dariel. The central pass of the Caucasus, leading from Iberia to Sarmatia. It was also called Caucasiae Portae. See CAUCASUS.

Sarmatĭci Montes (*τὰ Σαρματικὰ ὄρη*). A range of mountains in Central Europe, extending from the sources of the Vistula to the Danube, between Germany on the west and Sarmatia on the east. They form a part of the Carpathian range.

Sarmatĭcus Oceănus (*Σαρματικὸς Ὠκεανός*) and PONTUS, SARMATĬCUM MARÉ. The Baltic. A great sea, washing the northern coast of European Sarmatia. The same name is sometimes given by the Roman poets to the Black Sea (Ovid, *Pont.* iv. 10, 38).

Sarmizegethūsa. The chief town of Dacia, near the modern Vachely or Gradischte, on the river Sargetia (Stral). It was the residence of the Dacian kings, and after Trajan's conquest of the country was made a Roman colony (Dio Cass. lv. 23).

Sarnus. Now the Sarno; a river in Campania, flowing by Nuceria, and falling into the Sinus Puteolanus near Pompeii (Strabo, p. 247).



Saron (Σάρων). The Sharon of the Old Testament; a plain in Palestine extending along the coast of Joppa towards Caesarea.

Saronĭcus Sinus (Σαρωνικὸς Κόλπος). The Gulf of Aegina. A bay of the Aegaean Sea lying between Attica and Argolis, and commencing between the promontory of Sunium in Attica and that of Scyllaeum in Argolis. It contains the islands of Aegina and Salamis.

Sarpēdon (Σαρπήδων). (1) The son of Zeus and Europa, and brother of Minos and Rhadamanthus. Being involved in a quarrel with Minos about Miletus, he took refuge with Cilix, whom he assisted against the Lycians. He afterwards became king of the Lycians, and Zeus granted him the privilege of living three generations (Herod. i. 173; Apollod. iii. 1, 2). (2) Son of Zeus and Laodamia, or, according to others, of Evander and Deïdamia, and a brother of Clarus and Themon. He was a Lycian prince, and a grandson of the preceding. In the Trojan War he was an ally of the Trojans, and distinguished himself by his valour, but was slain by Patroclus (*Il.* v. 475; xii. 292; xvi. 480). Apollo, by the command of Zeus, cleansed Sarpedon's body from blood and dust, covered it with ambrosia, and gave it to Sleep and Death to carry into Lycia, there to be honourably buried (*Il.* xvi. 667).

Sarpedonium Promontorium (ἡ Σαρπηδονίη ἄκρα). A promontory of Thrace, between the mouths of the rivers Melus and Erginus, opposite the island of Imbros (Herod. vii. 58).

Sarrācum. A wagon or cart used in ancient Italy, and resembling the *plaustrum* (q. v.). It

Supposed form of Sarracum. (Herculanean painting.)

was used for heavy carting, especially by farmers (Cic. *ap.* Quint. viii. 3. 21).

Sars. The Sar; a river on the western coast of Spain (Mela, iii. 1).

Sarsīna. Now Sarsina; an ancient town of Umbria, on the river Sapis, southwest of Ariminum, and subsequently a Roman municipium, celebrated as the birthplace of the comic poet Plautus.

Sarta (Σάρτη). Now Sykia; a town on the eastern coast of the Sithonian promontory of Chalcidicé (Herod. vii. 122).

Sartāgo (τήγανον). The name of a kitchen utensil, usually translated "frying-pan" (Juv. x. 64).

Sartago. (Naples Museum.)

Sartor and **Sarcinātor** (ἀκεστής). A tailor; but not in the modern sense of the word, as ancient garments did not need to be cut out and fitted. The word, therefore, means one who patches and repairs clothes (Alciphr. *Epist.* iii. 27; Plaut. *Aul.* iii. 5, 41).

Sarus (Σάρος). Now Seihan; a considerable river in the southeast of Asia Minor. Rising in the Anti-Taurus, in the centre of Cappadocia, it flows south past Comana to the borders of Cilicia, where it receives a western branch that has run nearly parallel to it; and thence, flowing through Cilicia Campestris in a winding course, it falls into the sea a little east of the mouth of the Cydnus and southeast of Tarsus (Xen. *Anab.* i. 4, 1).

Saso or **Sasōnis Insŭla.** Now Saseno, Sassono, Sassa. A small rocky island off the coast of Illyria, north of the Acroceraunian promontory, much frequented by pirates (Pliny, *H. N.* iii. 152).

Saspīres or **Sapīres** (Σάσπειρες, Σάπειρες). A Scythian people in Asia, south of Colchis and north of Media, according to Herodotus (i. 104; iv. 37); but placed by Apollonius Rhodius (ii. 397) on the shores of the Euxine.

Sassanĭdae. The name of a Persian dynasty that reigned from A.D. 226 to 651. See PERSIA.

Sassŭla. A town in Latium, belonging to the territory of Tibur (Livy, vii. 19).

Satăla (τὰ Σάταλα and ἡ Σάταλα). (1) A town in the northeast of Armenia Minor, important as the key of the mountain passes into Pontus. It stood at the junction of four roads leading to places on the Euxine, a little north of the Euphrates, in a valley surrounded by mountains, 325 Roman miles from Caesarea in Cappadocia, and 135 from Trapezus. (2) A town in Lydia near the Hermus.

Satchel. See BULGA; PERA.

Saticŭla. A town of Samnium, situated upon a mountain on the frontiers of Campania (Livy, ix. 21, 22).

Satĭra (earlier form *satura*, from *satur*). A name which the Romans applied to a species of literature which they believed peculiarly their own (*Graecis intacti carminis*, Hor. *S.* i. 10, 66; *satura quidem tota nostra est*, Quint. x. 1, 93). The names of all other kinds of poetry indicate their Greek origin. It is probable that *satura* originally expressed the idea of fulness, abundance, which by special application was extended to mean variety, miscellany, promiscuity, without order. This secondary meaning occurs occasionally in all periods of the literature in the phrase *per saturam* or *in saturam*: *Sei quid in saturam feretur* (*Lex Repetund.* 72, *C. I. L.* i. p. 62); *per saturam aedilem factum* (Lucil. 1, 18 M); *non secundum edicti perpetui ordinationem, sed passim et quasi per saturam collectum, et utile cum inutilibus mixtum* (Justin. Praef. Dig. p. xv.). The term *satura* was applied to a statute with separate provisions, a bill with "riders" (Fest. 314 M; Gloss. Philox.); to a kind of poetry treating of various subjects (Paulus, *Excerpt.* 315 M); to an intermingling of prose and verse (Quint. x. 1, 95); to a mixture of dried grapes, pearled barley and nuts, sprinkled with a preparation of wine (*mulsum*); to a kind of sausage (Varro *ap.* Diom. p. 486 K); and to a dish of various kinds of fruit offered to Ceres (Acro, on Hor. *S.* 1, 1). It is also mentioned by the grammarians as coming from *satyri* (Diom. 485 K). The idea of medley pervades the entire use of the word in the literature, and fittingly describes one of the chief characteristics of the satura in the various stages of development.

Keller and others ignore this, and meet with many difficulties in attempting to connect the dramatic satura with *σάτυροι*, satyrs, and the literary satura with *σάτυροι*, the works of a certain Timon of Phlius. Mommsen and Ribbeck would derive *satura* from *satur*, but explain the latter as coming from *σάτυροι* in a very roundabout way.

According to Livy's condensed and somewhat confused account of the old dramatic satura (vii. 2), it would seem that the Romans were indebted to Etruria for certain of its elements. At the celebration of the harvest-home and other rural festivals, the light-hearted, merry people of Latium had long been accustomed to the jovial banter of the Fescennine verses, an entertainment consisting of dialogues of coarse jokes and personal abuse in metrical form, perhaps enlivened by the exhilarating tones of the pipe, or by the beating of time with the feet. In B.C. 364 the magistrates invited a band of Etrurian actors to Rome in the hope of staying the ravages of a terrible pestilence. These actors danced a sort of pantomime to the accompaniment of regularly composed music, and so pleased the people with their performance that the Roman youths — the same ones, no doubt, whose quick wit and dramatic power had made them the leaders in the merriment of their native entertainments — began to imitate the Etruscan actors and to combine the elements of the musical pantomime with the metrical dialogues of the Fescennine raillery, to which they applied the name *satura*, "medley," from its composite nature. (Cf. Ital. *farsa*, Fr. *farce*, Arabic *Quassîde* as applied to poetry, and Juvenal's term *farrago* for his Satires.) As the *satura* developed under the control of the Roman youths and the acting became more and more an art, it finally passed into the hands of professional actors, and the young Romans contented themselves with the less exacting performances of afterplays (*exodia*), to which the Atellanae also were reduced after the introduction of the regular drama. Livy's account covers a wide sweep in the development of the native drama.

If, as Mommsen and Wilamowitz (*Hermes*, ix. 331) maintain, the *fabula Atellana*, with its stock characters and rudimentary plot, developed in Latium long before the introduction of the regular drama under Greek influence, then the old dramatic satura was the intermediate step in the growth of the native Italian drama. As the *Versus Fescennini* were superseded by the satura as a dramatic entertainment, but lived on in the scurrilous verses of the marriage celebration and triumphal songs; so the satura, supplanted by the *fabula Atellana* and the regular drama, passed into that branch of poetry known as the literary satire.

Not a few recent scholars have questioned the very existence of an early dramatic satura, and, with Leo and Hendrickson, have regarded it a mere fiction of Livy in his attempt to construct for Roman literature what he learned from Aristotle (*Poet.* 4–5) to have existed in Greece. Leo attempts to prove it a fictitious parallel to the Greek satyr-drama, and Hendrickson to the old Attic comedy. To agree with them, one must believe that the Roman genius was unequal to the task of perfecting the native drama beyond the stage of the rude Fescennine verses, though we know that it sprang up and thrived independently in various parts of Greece and under various conditions. The chief reason for questioning the account of Livy—repeated with slight additions by Valerius Maximus (xi. 4, 4)—is the resemblance to Aristotle's description of the origin of comedy. The obscure reference in Euanthius, *De Com.* (ante med.) to satire as *aliud genus fabulae* and *quod genus comoediae* shows that the dramatic satura was in his time a mere name, and its place in the growth of literature forgotten.

It is a fair inference from Livy (vii. 2, 8), that Andronicus, *qui ab saturis ausus est primus argumento fabulum serere*, had been in the habit of writing saturae before he turned to the regular drama; and in all probability the satura of Naevius, mentioned by Festus, 257 (M), is one of the last examples of the old dramatic satura rather than the beginning of the new literary satire. The conservative spirit of Naevius, his plebeian sympathies, and his adherence to the old Saturnian verse, in which the early saturae were probably written (the verse from Naevius's satura is apparently Saturnian), render this all the more probable.

With Ennius, an originator in so many lines, satura took on a new form. The success of the new drama with regular plot killed the demand for the old dramatic medley. The new plays, however, were moulded on the type of the New Attic Comedy, the comedy of manners, and gave little opportunity for the display of satire and ridicule which were so characteristic a part of the Roman genius, and which formerly found free play in the old-time burlesques. Ennius, therefore, remodelled the old satura, retaining the name, the spirit, and the essential features. The whole body of literary satire exhibits in varying degrees certain definite characteristics. The language does not rise to the height of the other styles of poetry; Horace speaks of his Satires as *sermones*, "conversations," and his muse as *pedestris*. It exhibits everywhere the peculiarities of the *sermo familiaris*. There is a strong tendency to dramatic form. Dialogue is an important feature in all satura down to Juvenal, and traces occur even in his bold declamatory style. Unusual laxity in structural arrangement, easy change of topic, and variety of metres are noticeable in the early writers. In some authors—e. g. Varro, Petronius, and Seneca—a mixture of prose and verse appears; and in all there is a great deal of obscenity, characteristic of its peculiar origin. The satirical spirit, in the modern sense of the word, varies in different authors according to their natural disposition, and to their political, social, and moral environment. The Romans recognized two kinds of satire: *Satira dicitur carmen apud Romanos nunc quidem maledictum et ad carpenda hominum vitia archeae comoediae charactere compositum, quale scripserunt Lucilius et Horatius et Persius, et olim carmen quod ex variis poematibus constabat satira vocabatur, quale scripserunt Pacuvius et Ennius*, Diom. (Suet.), i. 485 (K). This classification has been accepted too literally by modern scholars. Ennius was preëminently an epic poet, tragedian, and scholar, but the subjects of some of his saturae, the Greek writers who influenced him (the Sillographi, etc.), and his own known rationalistic tendencies, assure us that there was at least subtle satire lurking in many of his poems, if there were not also open ridicule. He was more influential perhaps than any other writer in moulding Roman thought on Greek lines, in introducing Greek culture, in awakening scepticism in religion, and in dispelling superstition. It

is more than probable that this was accomplished somewhat by the spirit of satire and ridicule in his poem *Epicharmus*, which apparently reduced the gods of mythology to the elements of nature, and in the rationalistic poem, *Euhemerus*, or *Sacra Historia*. The indecencies of Sotades were, no doubt, ridiculed in the *Sota;* and the only reason for supposing that the *Heduphagetica* was not a parody of epic grandeur on the subject of high living was that Ennius is said to have died of the gout. The *Scipio* can be shown to be a part of his saturae, and it is probable that the *Ambracia* celebrated the deeds of his patron Fulvius Nobilior in the east, as the Scipio did those of Africanus in Africa. All the minor poems were perhaps collected under the title *Saturae*, and formed four and perhaps six or more books. See ENNIUS.

Lucilius, a Roman knight of influence, living at a time of great social and political unrest, that of the Gracchi, narrowed the scope of satire and stamped it so deeply with the spirit of invective that he was sometimes spoken of as its very founder (Hor. *S.* i. 10, 48). His criticism of men and affairs, instead of being vindictive and personal, like the lampoons of the Greek iambic writers, was ethical and partisan in tone, and animated by the spirit of the Old Attic Comedy (Hor. *S.* i. 4, 6), or of the editorial page of the modern newspaper. His "Miscellanies" included the greatest variety of subjects: avarice, gluttony, literature, grammar, friendship, philosophy, religion, superstition, public men, a journey to Sicily, a country dinner, his mistress, contentment with his own lot, his fame, etc., and gave, no doubt, a faithful picture of his times. He employed fables, tales, and dialogue, as did Ennius before him, and spoke either in his own person or in the words of another, as best suited his purpose. We have but fragments of his thirty books, some 1100 in number, too brief to discover the "keen wit and great versatility," the "wonderful learning and freedom" attributed to him by ancient critics. He began writing in trochaic septenarii, essayed other metres, and finally decided upon hexameters, which comprised twenty-one out of the thirty books, and became the usual form for later satire. See LUCILIUS.

The next important writer of saturae was Marcus Terentius Varro, a man of good social standing, prominent in affairs of state, a prolific writer, and the greatest of Roman scholars (Quintil. x. 1, 95). He wrote 150 books of satire like those of Ennius in form, except that prose was intermingled with a great variety of metres—more than twenty different kinds of verse occur in the 591 fragments. He was an old-fashioned man, with a strong sense of humour and real poetic genius. Thoroughly familiar with the spirit of the good old times and conscious of the rapid degeneration about him, he attempted to attract and instruct the young and unlearned with his mass of wise and good-humoured sketches, which treat of almost every conceivable subject, from philosophy down to the common-places of daily life (Cic. *Acad.* i. 2, 8). He imitated Menippus, the Cynic philosopher and satirist, whose style and manner may be seen in the works of Lucian; and no doubt the same gentle irony and mild satire pervaded the *Saturae Menippeae*. See VARRO.

Horace admired the rough vigour and caustic wit of Lucilius's satires, and made them the models of his own; but his humble social position and his former republican alliance prevented him from attacking, in a direct personal way, the evils of society and the State. The less personal subjects of Lucilius's verse—avarice, luxury, philosophy, superstition, the follies of men, etc.—he reviewed in a spirit of gentle irony or mild satire. It would appear from some of his satires—so close is the resemblance, even in details—that the only merit he claimed in his earlier poems was to reproduce his master's thoughts in a more polished and refined style. See HORATIUS.

Persius, a young Stoic of noble birth and high ideals, wrote six satires in strained and obscure language. On every page there are reminiscences of Horace, though there was little in common between the circumspect man of society and the callow, unsophisticated philosopher. In form and spirit his satires conform to the standard type. See PERSIUS.

The *Satira* of Petronius resembles Varro's in the medley of prose and various kinds of verse, but it is in reality a sort of satirical romance written in a masterly manner. Only about 100 pages from the fifteenth and sixteenth books remain, full of realistic pictures of society, literary criticism, ghost stories, anecdotes, adventures, all rich in wit and humour, but exceedingly obscene. The fine biographical details are, of course, all fiction. See PETRONIUS.

Juvenal is the last of the well-known satirists whose works are extant, and his writings exhibit in a more limited degree than any others the characteristic features of the literary satire. Dialogue has almost vanished; the dramatic element is nearly supplanted by the rhetorical; fables, tales, and anecdotes are lacking; the personal, autobiographical feature is not to be found; the peculiarities of the *sermo familiaris* are chiefly limited to the choice of words; the thought often rises to the heights of true poetry; the structure of the individual satires shows an advance in the more artistic relation of unity and variety; hexameter is the only metre. On the other hand, the remaining characteristics are unusually intensified. The spirit of raillery and mild satire of the preceding poets has become bitter invective. The inordinate amount of obscenity is somewhat mitigated in effect by the tone of denunciation, but he so parades this in some satires that we question whether he was not really infatuated by it. His pictures of later Rome are drawn in the terribly realistic manner of Hogarth. See IUVENALIS.

The history of satire presents a regular and organic structural development, while the spirit varies with the character of the author and his environment. Its scope is narrowed in its descent from writer to writer, but broadened when its growth is considered by periods. At all times it was one of the most effective instruments of reform; and our knowledge of Roman civilization would be vastly enriched if we had the works of all the twenty-eight or thirty writers who we know cultivated this branch of literature.

Some of the more important articles on the general subject of satire are: Casaubon, *De Satyr. Graec. Poesi et Rom. Sat.* (Paris, 1605, and Halle, 1774); Scheibe, *De Sat. Rom. Orig. et Progressu* (Zittau, 1849); O. Jahn, *Satura*, in *Hermes*, 2, p. 225; Nettleship, *The Roman Satura* (Oxford, 1878, reprinted in his *Lectures and Essays*, ii.); Grubel, *De Sat. Rom. Orig. et Progressu* (Posen, 1883); Keller,

Ueber d. Wort Satura, in *Philol.* 45, p. 389; Funck, *Satur u. die davon abgeleiteten Wörter* (Kiel, 1888); ibid., Wölfflin's *Archiv*, v. p. 32; Leo, *Varro und die Satira*, in *Hermes*, 24, p. 67; Hendrickson, *The Dramatic Satura and the Old Comedy at Rome*, in the *American Journal of Philology*, xv. 1, p. 1.

Satisdatio. See ACTIO in the Appendix.

Satniŏïs (Σατνιόεις). Now Tuzla; a river in the southern part of the Troad, flowing into the Aegaean Sea (*Il.* vi. 34).

Satrae (Σάτραι). A Thracian people on the Strymon (Herod. vii. 110).

Satrĭcum. Now Casale di Conca; a town in Latium, near Antium (Livy, ii. 39).

Satŭra. See SATIRA.

Satŭrae Palus. Now Lago di Paola; a lake or marsh in Latium, formed by the river Nymphaeus, and near the promontory Circeium. See POMPTINAE PALUDES.

Saturium or **Saturēium.** Now Saturo; a town in the south of Italy, near Tarentum, celebrated for its horses (Hor. *Sat.* i. 6, 59).

Saturnalia. A Roman festival in honour of Saturnus (q. v.). It was held late in December at the end of the vintage and harvesting, and was in early times the prototype of the English Harvest Home and the American Thanksgiving Day. At all periods it was a season of absolute relaxation, of merriment, and even license. While it continued, no business could be transacted, the law courts were closed, the schools kept holiday, to commence a war was impious, and even to punish a malefactor involved pollution (Macrob. *Sat.* i. 10, 16; Pliny, *Epist.* viii. 7). Special indulgences were granted to the slaves of each domestic establishment; they were relieved from all ordinary toils, were permitted to wear the *pilleus*, the badge of freedom, received full license of speech, and partook of a banquet attired in the clothes of their masters, and were waited upon by them at table (Macrob. *Sat.* i. 7; Dio Cass. lx. 19; Athen. xiv. 44). All classes devoted themselves to feasting and mirth, presents were interchanged among friends, wax tapers (*cerei*) being the common offering of the more humble to their superiors, and crowds thronged the streets, shouting *Io Saturnalia!* (hence *clamare Saturnalia*), while sacrifices were offered with uncovered head, from a conviction that no ill-omened sight should interrupt the rites of such a happy day. Many of the peculiar customs of this festival exhibit a remarkable resemblance to the sports of our own Christmas and of the Italian Carnival. Thus on the Saturnalia public gambling was allowed by the aediles, just as in the days of our ancestors the most rigid were wont to countenance card-playing on Christmas-eve; the whole population threw off the toga, wore a loose gown, called *synthesis* (q. v.), and walked about with the *pilleus* on their heads, which reminds us of the dominos, the peaked caps, and other disguises worn by masques and mummers; the *cerei* were probably employed as the *moccoli* now are on the last night of the Carnival; and lastly, one of the amusements in private society was the election of a mock king (Tac. *Ann.* xiii. 15; Lucian, *Saturn.* 4), which at once calls to recollection the characteristic ceremony of Twelfth Night.

During the Republic, although the whole month of December was considered as dedicated to Saturn, only one day, the XIV. Kal. Ian., was set apart for the sacred rites of the divinity. When the month was lengthened by the addition of two days upon the adoption of the Julian Calendar, the Saturnalia fell on the XVI. Kal. Ian., which gave rise to confusion and mistakes among the more ignorant portion of the people. To obviate this inconvenience, and allay all religious scruples, Augustus enacted that three whole days, the 17th, 18th, and 19th of December, should in all time coming be hallowed, thus embracing both the old and new style (Macrob. i. 10). Under the Empire the merry-making lasted for seven days, and three different festivals were celebrated during this period. First came the Saturnalia proper, commencing on XVI. Kal. Dec., followed by the Opalia (from Ops, the wife of Saturnus), anciently coincident with the Saturnalia, on XIV. Kal. Ian.; these two together lasted for five days, and the sixth and seventh were occupied with the Sigillaria (Sen. *Epist.* xii. 3), so called from the little earthenware figures (*sigilla, oscilla*) exposed for sale at this season, and given as toys to children. See Marquardt, *Staatsverwaltung*, iii. 586 foll.; Preller, *Röm. Myth.* p. 413.

Saturnia. (1) An ancient name of Italy. (See ITALIA; SATURNUS.) (2) Now Saturnia, formerly called Aurinia; an ancient town of Etruria, said to have been founded by the Pelasgians, was situated in the territory of Caletra, on the road from Rome to Cosa, about twenty miles from the sea (Pliny, *H. N.* iii. 52). (3) See SATURNIUS.

Saturnii Versus. See SATURNIUS VERSUS.

Saturnīnus. (1) One of the Thirty Tyrants (q. v.). He was a general of Valerian, by whom he was much beloved. Disgusted by the debauchery of Gallienus, he accepted from the soldiers the title of emperor, but was put to death by the troops, who could not endure the sternness of his discipline (Trebell. Poll. *Trig. Tyr.* 22). (2) A native of Gaul and an able officer, appointed by Aurelian commander of the Eastern frontier, and proclaimed emperor at Alexandria during the reign of Probus, by whose soldiers he was eventually slain (Vopisc. *Saturn.*).

Saturnīnus. (1) L. APULĒIUS, a Roman who was quaestor in B.C. 104 and tribune of the people in B.C. 102. He was closely allied with Marius and his party, and was very popular with the commons. He became a candidate for the tribuneship for the second time in B.C. 100. At the same time Glaucia, who next to Saturninus was the greatest demagogue of the day, offered himself as a candidate for the praetorship, and Marius for the consulship. Marius and Glaucia carried their elections; but A. Nonius, a partisan of the aristocracy, was chosen tribune instead of Saturninus. Nonius, however, was murdered on the same evening by the emissaries of Glaucia and Saturninus; and early the following morning Saturninus was chosen to fill the vacancy. As soon as he had entered upon his tribunate, he brought forward an agrarian law, which led to the banishment of Metellus Numidicus, as is related elsewhere. (See METELLUS, 10.) Saturninus proposed other popular measures, such as a *lex frumentaria*, and a law for founding new colonies in Sicily, Achaia, and Macedonia. In the Comitia for the election of the magistrates for the following year, Saturninus obtained the tribunate for the third time, and along with him there was chosen a certain Equitius, a run-

away slave, who pretended to be a son of Tiberius Gracchus. Glaucia was at the same time a candidate for the consulship; the two other candidates were M. Antonius and C. Memmius. The election of M. Antonius was certain, and the struggle lay between Glaucia and Memmius. As the latter seemed likely to carry his election, Saturninus and Glaucia hired some ruffians who murdered him openly in the comitia. This last act produced a complete reaction against Saturninus and his associates. The Senate declared them public enemies, and ordered the consuls to put them down by force. Marius was unwilling to act against his friends, but he had no alternative, and his backwardness was compensated by the zeal of others. Driven out of the Forum, Saturninus, Glaucia, and the quaestor Saufeius took refuge in the Capitol, but the partisans of the Senate cut off the pipes which supplied the Capitol with water. Unable to hold out any longer, they surrendered to Marius. The latter did all he could to save their lives: as soon as they descended from the Capitol, he placed them for security in the Curia Hostilia, but the mob pulled off the tiles of the Senate-House, and pelted them with the tiles till they died. The Senate gave their sanction to these proceedings by rewarding with the citizenship a slave of the name of Scaeva, who claimed the honour of having killed Saturninus. Nearly forty years after these events, the tribune T. Labienus accused an aged senator, Rabirius, of having been the murderer of Saturninus. See RABIRIUS.

(2) CLAUDIUS, a jurist from whose *Liber Singularis de Poenis Paganorum* there is a single excerpt in the Digest. He was praetor under Antoninus Pius. (3) POMPĒIUS, a contemporary of the younger Pliny, is praised by the latter as a distinguished orator, historian, and poet. Several of Pliny's letters are addressed to him. (4) C. SENTIUS, one of the persons of distinguished rank who deserted Sex. Pompeius in B.C. 35, and passed over to Octavian. He was consul in 19, and was afterwards appointed to the government of Syria. Three sons of Saturninus accompanied him as legati to Syria, and were present with their father at the trial of Herod's sons at Berytus in B.C. 6. (5) VENULĒIUS, a Roman jurist, is said to have been a pupil of Papinianus, and a *consiliarius* of Alexander Severus. There are seventy-one excerpts from his writings in the Digest.

Saturnius. That is, "son of Saturnus," a term used as a surname of Iupiter, Neptune, and Pluto. For the same reason the name of Saturnia is given both to Iuno and Vesta.

Saturnius Versus. "Saturnian verse." The earliest (native) verse of the ancient Italians, of which at the present time only fragments exist in the shape of religious songs and ritualistic formulas, is accentual rather than quantitative in its metrical character, and is hardly to be reduced to a definite system. The verse, however, in general (*numerus Italicus*) seems to be based upon a series of four *theses*, sometimes separate but usually combined in twos and threes. The following prayer to Mars (Cato, *R. R.* 141) is an example:

Márs páter té précor | quáesóque úti sies | vólens própítíus.

Of these early rhythms, the so-called "Saturnian verse" is the most regular, as it is the one of which we have the greatest number of existing examples. It consists of two parts, each containing three *theses*. As to its exact character there are three theories: (*a*) the Accentual Theory; (*b*) the Quantitative Theory; and (*c*) the Modified Accentual Theory.

(*a*) ACCENTUAL THEORY.—This regards the Saturnian line as divided into two halves, the first having three *theses* and the second either three or two. If only two, the second half of the line usually has an introductory unaccented syllable (Anacrusis). The quantity of the syllables plays no part in the scansion of the verse. Examples are the following:

Quóius fórma virtútei || parísuma fúit

and

Dábunt málum Metélli || Naévió poétae.

(*b*) QUANTITATIVE THEORY.—This regards the Saturnian as a trochaic senarius with Anacrusis and a caesura after the third *arsis* or (rarely) after the third *thesis*. Short syllables may be lengthened by the *ictus* or metrical accent, and hiatus is allowed everywhere, being most common in the caesura. Examples are the following:

Eorúm sectám sequóntur || múlti mórtáles

and

Cornéliús Lucius || Scípió Barbátus

and

Quoīus fórma virtutēi || parísumá fúit.

Scholars differ greatly in their explanation of the verse in applying the quantitative theory, some using protraction freely, others rejecting the *diastolé* or lengthening of short vowels. The former regard the normal number of feet in each hemistich as four, e. g.

Dabúnt malúm Metélli || Naévió poétae—

thus assimilating this scheme to that of the *numerus Italicus* in general as described above.

(*c*) MODIFIED ACCENTUAL THEORY.—This regards the number of *theses* in the first hemistich as three, and that in the second hemistich as two, with the accent falling at the beginning of each line. The number of syllables in the first hemistich is normally seven, in the second six, admitting, however, an extra short syllable where the ordinary pronunciation would suppress or slur it. A final short vowel is elided; otherwise partial (semi-) hiatus is allowed, and at the caesura a full hiatus. After the first two feet there is an alternation between words accented on the first and those accented on the second syllable. Examples are:

Dábunt málum Metélli | Naévio poétae

and

Príma incédit Céreris | Prosérpina púer.

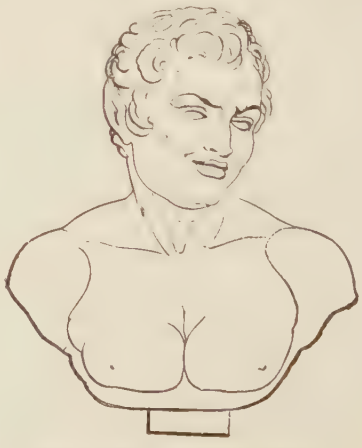
The name "Saturnian" is applied to the verse either because much used in the early harvest songs in honour of Saturn or from the general meaning of "ancient" attached to the adjective *Saturnius*. (Cf. Verg. *Ecl.* iv. 6; and Nettleship, *Lectures and Essays*, i. pp. 55-57). Bentley regarded the verse as Greek in its origin, but the general opinion now held makes it indigenous to Italy; Hermann viewing it as Etruscan rather than Italian, but with no good reason. It is, in fact, a measure that finds its counterpart in the early literature of other Indo-European peoples, in the Spanish epic of the *Cid*, and in the *Nibelungenlied;* while every one is familiar with Macaulay's identification of it with the nursery line—

The queen was in her parlour || eating bread and honey.

The Saturnian verse was used by the poet Naevius in writing his epic on the Punic War (*Bellum Punicum*), and by Livius Andronicus in his Latin version of the *Odyssey*. See LIVIUS; NAEVIUS.

Reference may be made to the following works: Hermann, *Doctrina Metr.* iii. 9; Bernhardy, *Röm. Lit.* pp. 70 foll.; Klotz, *Altrömische Metrik* (1890); Lindsay, *The Latin Language*, pp. 128 (note), 132, 159 (1894); id. in the *American Journal of Philology*, vol. xiv.; Teuffel in *Jahn's Jahrbücher*, lxvii. pp. 281 foll.; Westphal, *Allgemeine Metrik*, pp. 251–256 (1865); Spengel in *Philologus*, xxiii. pp. 81–113; Bücheler in *Jahn's Jahrbücher*, lxxvii. p. 61; Streuber, *De Inscriptionibus Quae ad Numerum Saturnium Referuntur* (Zürich, 1845); Ritschl, *Saturniae Poeseos Reliquiae* (Bonn, 1854); Allen, *Early Latin*, pp. 12, 13 (1880); and Gildersleeve and Lodge, *Lat. Grammar*, pp. 462, 463 (1894). Weise in a treatise published at Quedlinburg (1839) tries to show traces of the Saturnian in Plautus. For the identity between the Saturnian and the Old German epic line, see the monograph by Bartsch (Leipzig, 1867).

Saturnus. A mythical king of Italy, to whom was ascribed the introduction of agriculture and the habits of civilized life in general. The name is connected with the verb *sero*, sup. *satum*. The



Bust of Saturnus. (Vatican.)

Romans invariably identified Saturnus with the Greek Cronos, and hence made the former the father of Iupiter, Neptune, Pluto, Iuno, etc. (see CRONOS); but there is, in reality, no resemblance between the attributes of the two deities, except that both were regarded as the most ancient divinities in their respective countries. The resemblance is much stronger between Demeter and Saturn, for all that the Greeks ascribe to their Demeter is ascribed by the Italians to Saturn. Saturnus, then, deriving his name from sowing, is called the introducer of civilization and social order, both of which are inseparably connected with agriculture. His reign is conceived for the same reason to have been the Golden Age of Italy, and more especially of the Aborigines, his subjects (Varro, *R. R.* iii. 1, 5). As agricultural industry is the source of wealth and plenty, his wife was Ops, the representative of plenty (Varro, *L. L.* v. 57). By a confusion of Saturn with Cronos and this with the word Χρόνος, he is also spoken of as the god of time (Cic. *N. D.* ii. 25, 64); and Curtius identifies him with the Sun god of the Phœnicians, i. e. Baal (iv. 3, 15).

The legend ran that the god came to Italy in the reign of Ianus, by whom he was hospitably received, and that he formed a settlement on the Capitoline Hill, which was hence called the Saturnian Hill. At the foot of that hill, on the road leading up to the Capitol, there stood in aftertimes the temple of Saturn. Saturn then taught the people agriculture, suppressed their savage mode of life, and introduced among them civilization and morality. The result was that the whole country was called Saturnia, or the land of plenty. Saturn was suddenly removed from earth to the abodes of the gods, whereupon Ianus erected an altar to him in the Forum. It is further related that Latium received its name (from *lateo*) from this disappearance of Saturn, who for the same reason was regarded by some as a divinity of the nether world. The statue of Saturnus was hollow and filled with oil, probably to denote the fertility of Latium in olives; in his hand he held a crooked pruning-knife, and his feet were surrounded with a woollen ribbon. In the pediment of the temple of Saturn were seen two figures resembling Tritons with horns, and whose lower extremities grew out of the ground; the temple itself was used as the treasury of the State, and many records also were deposited in it. On the Saturnalia or feast held in honour of Saturn at Rome, see SATURNALIA.

Satŷri (Σάτυροι) and Doric **Titŷri** (Τίτυροι). The name of a class of beings in Greek mythology, who are inseparably connected with the worship of Dionysus, and represent the luxuriant vital powers of Nature. They are commonly said to be the sons of Hermes and Iphthima, or of the Naïades. The Satyrs are represented with bristly hair, the nose blunt and somewhat turned upward, the ears pointed at the top, like those of animals, with two small horns growing out of the top of the forehead, with a tail like that of a horse or goat, and with teat-like protuberances (φήρεα) on the neck. In works of art they are represented at different stages of life; the older ones were commonly called

Satyr's Head. (Glyptothek, Munich.)

Sileni, and the younger ones are termed Satyrisci. The Satyrs are always described as fond of wine (whence they often appear either with a cup or a *thyrsus* in their hand), and of every kind of sensual pleasure, whence they are seen sleeping, playing musical instruments, or engaged in voluptuous dances with nymphs. Vase-painters represent them as resembling also the Bacchantes and (rarely) Iris. They are dressed with the skins of animals, and wear wreaths of vine, ivy, or fir. Like all the gods dwelling in forests and fields, they were greatly dreaded by mortals. Later writers, especially the Roman poets, confound the Satyrs with the Italian Fauni, and accordingly represent them with larger horns and goats' feet, although originally they were quite distinct kinds of beings. They are also incorrectly identified with the Panes. See FAUNUS; PAN; SILENUS.

Satyric Drama. One of the three varieties of the Attic drama. Its origin may be traced back to Pratinas of Phlius (about B.C. 500). It is probable that, after settling in Athens, he adapted the old dithyramb with its chorus of Satyrs, which was customary in his native place, to the form of tragedy which had been recently invented in Athens. This new kind of drama met with so much approval and was so much developed by Pratinas himself as well as by his son Aristeas, by Choerilus, by Aeschylus, and the dramatists who succeeded him, that it became the custom to act a satyric drama after a set of three tragedies. The intensity of the preceding plays was thus relieved, while the chorus of Satyrs and Sileni, the companions of Dionysus, served to indicate the original connection between that divinity and the drama. The material for a satyric drama, like that for a tragedy, was taken from an epic or legendary story, and the action, which took place under an open sky, in a lonely wood, the haunt of the Satyrs, had generally an element of tragedy; but the characteristic solemnity and stateliness of tragedies was somewhat diminished, without in any way impairing the splendour of the tragic costume and the dignity of the heroes introduced. The amusing effect of the play did not depend so much on the action itself, as was the case in comedy, but rather on the relation of the chorus to that action. That relation was in keeping with the wanton, saucy, and insolent, and at the same time cowardly, nature of the Satyrs. The number of persons in the chorus is not known; probably there were either twelve or fifteen, as in tragedy. In accordance with the popular notions about the Satyrs, their costume consisted of the skin of a goat, deer, or panther, thrown over the naked body, and besides this a hideous mask and bristling hair. The dance of the chorus in the satyric drama was called *σίκιννις* or *σίκιννον*, and consisted of a fantastic kind of skipping and jumping. The only satyric play now extant is the *Cyclops* of Euripides (translated into English by Shelley), though the *Alcestis* of the same poet has some satyric features. The Romans did not imitate this kind of drama in their literature (Marius Victor, in *Gram. Lat.* vi. 82), although, like the Greeks, they composed amusing afterpieces following their serious plays. See Welcker, *Griech. Tragödie*, 1361; and EXODIUM.

Satyrĭcon or (better) **Satirĭcon.** See PETRONIUS.

Satўrus (*Σάτυρος*). (1) A king of Bosporus, son of Spartacus I. He reigned B.C. 407 or 406–393. He maintained friendly relations with Athens. He was slain at the siege of Theudosia in 393, and was succeeded by his son Leucon. (2) A king of Bosporus, who was the eldest of the sons of Paerisades I., whom he succeeded in B.C. 311, but reigned only nine months. (3) A distinguished comic actor at Athens, who is said to have given instructions to Demosthenes in the art of giving full effect to his speeches by appropriate action. (See DEMOSTHENES.) (4) A distinguished Peripatetic philosopher and historian, who lived in the time of Ptolemy Philopator, if not later. He wrote a collection of biographies, among which were lives of Philip and Demosthenes, and which is frequently cited by ancient writers.

Sauconna. A late name of the Gallic river Arar, whence comes its modern name Saône (Amm. Marcel. xv. 11).

Saufēius. (1) GAIUS, a Roman quaestor, B.C. 100. He was a follower of L. Saturninus (q. v.), and, taking refuge with him in the Capitol, was slain with his leader (Cic. *Pro Rab.* 7). (2) LUCIUS, a Roman knight who was a friend of Atticus. His valuable property in Italy was confiscated by the triumvirs, but restored to him at the intercession of Atticus (Nepos, *Att.* 12).

Sauroctŏnos (*σαυροκτόνος*, "lizard slayer"). A special name of Apollo (q. v.) as represented in a famous statue by Praxiteles (Pliny, *H. N.* xxxiv. 19).

Sauromătae. See SARMATAE.

Sauromātes (*Σαυρομάτης*). The name of several kings of Bosporus who are known for the most part only from their coins, which are of the period from Augustus to Constantine.

Saverrio, P. SULPICIUS. (1) A Roman consul (B.C. 304) who waged war with the Samnites, and in whose consulship (B.C. 229) two new tribes—the Aniensis and Terentina—were formed (Livy, ix. 49; x. 9). (2) A son of the preceding, consul in B.C. 279 with P. Decius Mus in the war against Pyrrhus (Val. Max. ix. 1).

Savo. Now the Savone; a river in Campania, which flows into the sea south of Sinuessa.

Savus. Now the Save or Sau; a navigable tributary of the Danube, which rises in the Carnic Alps, forms first the boundary between Noricum and Italy, afterwards between Pannonia and Illyria, and falls into the Danube near Singidunum (Pliny, *H. N.* iii. 139).

Saxa, DECIDIUS. A native of Celtiberia, and originally one of Caesar's common soldiers (Caes. *B. C.* i. 66). He eventually accompanied Antony to the East, and was made by him governor of Syria. Here he was defeated by the younger Labienus and the Parthians, and was slain in the flight after the battle (B.C. 40) (Dio Cass. xlvii. 35; xlviii. 24).

Saxa, Q. VOCONIUS. A tribune of the plebs, B.C. 169, who proposed the *lex Voconia*. See VOCONIA LEX.

Saxa Rubra. See RUBRA SAXA.

Saxŏnes. A German people originally dwelling in the southern part of the Cimbria Chersonesus between the rivers Albis (Elbe) and Chalusus (Trave), in what is now Holstein. They are not mentioned in history before A.D. 282, when they

are described as bold and skilful sailors, engaging in piratical raids upon the coast of Gaul (Eutrop. vii. 13). They afterwards headed a powerful league which took their name, and at last occupied the country between the Elbe, the Rhine, the Lippe, and the German Ocean (Ptol. ii. 11, 11) With the Jutes and Angles they invaded Britain in the fifth century A.D.

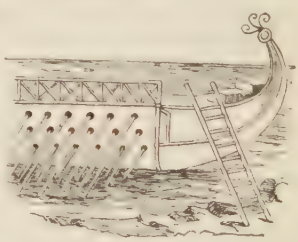
Saxum Quadrātum. A rock of volcanic formation, so called from the rectangular masses into which its native fissures divide themselves. The earlier buildings at Rome are made of this material — e. g. the so-called Mamertine Prison, the Cloaca Maxima, and the substructure of the Capitol (Livy, vi. 4, 12).

Saxum Sacrum. The rock on the Aventine Hill at Rome, near which Remus took the auspices. See Cic. *Dom.* 53, 136; and ROMULUS.

Scabbard. See VAGINA.

Scabellum. A small square stool with a single step or a single height. The word is a diminutive of *scamnum* (q. v.). Cf. Quint. i. 4, 12.

Scaeva, CASSIUS. A centurion in Caesar's army, who distinguished himself by his extraordinary feats of valor at the battle of Dyrrhachium (Suet. *Jul.* 68; Val. Max. iii. 2, 23).



Scaevŏla. The name of a distinguished family of the Mucian gens. (1) GAIUS MUCIUS SCAEVŎLA. When King Porsena was besieging Rome, G. Mucius went out of the city with the intention of killing him, but by mistake stabbed the king's secretary instead of Porsena himself. The king in his passion and alarm ordered him to be burned alive, upon which Mucius thrust his right hand into a fire which was already lighted for a sacrifice, and held it there without flinching. The king, amazed at his firmness, ordered him to be removed from the altar, and bade him go away free and uninjured. To make some return for his generous behaviour, Mucius told him that there were three hundred of the first youths of Rome who had agreed with one another to kill the king; that the lot fell on him to make the first attempt, and that the rest would do the same when their turn came. Porsena being alarmed for his life, which he could not secure against so many desperate men, made proposals of peace to the Romans, and evacuated the territory. Mucius received the name of Scaevola, or "left-handed," from the loss of his right hand (Livy, ii. 12 and 13). (2) P. MUCIUS SCAEVŎLA, tribune of the plebs in B.C. 141, praetor in 136, and consul in 133, the year in which Tib. Gracchus lost his life. In 131 he succeeded his brother Mucianus as Pontifex Maximus. Scaevola was distinguished for his knowledge of the *ius pontificium*. His fame as a lawyer is recorded by Cicero in several passages. (3) Q. MUCIUS SCAEVŎLA, the augur, married the daughter of C. Laelius, the friend of Scipio Africanus the younger. He was tribune of the plebs in B.C. 128, plebeian aedile in 125, and as praetor was governor of the province of Asia in 121, the year in which C. Gracchus lost his life. He was prosecuted after his return from his province for the offence of *repetundae*, in 120, by T. Albucius, but was acquitted. He was consul in 117. He lived at least to the tribunate of P. Sulpicius Rufus, 88. Cicero, who was born in 106, informs us that after he had put on the *toga virilis*, his father took him to Scaevola, who was then an old man, and that he kept as close to him as he could, in order to profit by his remarks. After his death Cicero became a hearer of Q. Mucius Scaevola, the Pontifex. The augur was distinguished for his knowledge of the law; but none of his writings are recorded. He is one of the speakers in the treatise *De Oratore*, in the *Laelius*, and in the *De Republica* (i. 12). (4) Q. MUCIUS SCAEVŎLA, Pontifex Maximus, was tribune of the plebs in B.C. 106, curule aedile in 104, and consul in 95, with Licinius Crassus, the orator, as his colleague. After his consulship Scaevola was proconsul of Asia, in which capacity he gained the esteem of the people under his government. Subsequently he was made Pontifex Maximus. He lost his life in the consulship of C. Marius the younger and Cn. Papirius Carbo (82), having been proscribed by the Marian party. The virtues of Scaevola are recorded by Cicero, who, after the death of the augur, became an attendant (*auditor*) of the Pontifex. The purity of his moral character, his exalted notions of equity and fair dealing, his abilities as an administrator, an orator, and a jurist, place him among the first of the illustrious men of all ages and countries. He is the first Roman to whom we can attribute a scientific and systematic handling of the *ius civile*, which he accomplished in a work in eighteen books. He also wrote a book on legal definitions, which is the oldest work quoted in the Digest.

Scaffolding. See SCANSORIA MACHINA.

Scalae (κλῖμαξ). (1) A ladder or any contrivance for making an ascent. The usual form of ancient ladder was identical with our own, as shown in the annexed illustration. (2) A ship's ladder, let down the side of a vessel, as shown below. (3) The staircase in a house, usually constructed like our own (Livy, xxxix. 14). Sometimes they were enclosed by side-walls, so that the person using the stair was concealed. These were called "Greek stairs" (*scalae Graecae*, Vitruv. ix. *Praef.* 7), and were often used as hiding-places (Cic. *Mil.* 15; Hor. *Epist.* iii. 15). (4) In very late Latin, the word is used of stirrups.

Scalae. (Column of Trajan.)

Scala. (Roman fresco painting.)

Scaldis. Now the Scheldt. An important river in the north of Gallia Belgica, flowing into the ocean, but which Caesar erroneously makes a tributary of the Mosa (*B. G.* vi. 33).

Scale. See LIBRA; TRUTINA.

Scalĭger. The Latinized form of a family name originally Italian (della Scala) and afterwards French (de l'Escale), made famous as that of two great classical scholars. (1) IULIUS CAESAR SCALĬGER, born in 1484 and claiming descent from an illustrious family of Verona, but by his enemies said to be the son of a sign-painter. After serv-

ing in the army under the emperor Maximilian, he entered the University of Bologna, where he remained a short time, and then took service in the French armies in Italy, winning the approval of King Francis for gallantry and remarkable feats of strength. He became naturalized as a French subject in 1528, when he settled at Agen and began practice as a physician. He had learned some Greek and prided himself on his Latin style, so that he felt called upon to attack Erasmus with bitter invectives for his satire on the stylists of Italy entitled *Ciceronianus*, a satire which Scaliger interpreted as an attack on Cicero himself. Scaliger died in 1558. His chief works were a grammar, *De Causis Linguae Latinae*, in thirteen books and of much value; a commentary on Theophrastus; an edition of Aristotle, *De Animalibus*, with notes; commentaries on Hippocrates, *De Insomniis;* and some Latin poems of considerable merit. Scaliger was a man of fine natural gifts but of a coarse and jealous nature, and with an education too unsystematic to enable his powers to appear in their true greatness. See Nisard, *Les Gladiateurs de la République des Lettres* (Paris, 1860); Bourousse de Laffore, *Jules César de l'Escale* (Agen, 1860); Magen, *Documents sur Julius Caesar Scaliger et sa Famille* (Agen, 1873).

(2) Joseph Justus Scalĭger. The tenth child of Julius Caesar Scaliger, born at Agen in 1540. He studied as a boy at the Collège de Guyenne in Bordeaux, and was also trained by his father, who made him copy from eighty to two hundred lines of Latin verse every day, besides writing an original Latin theme. After his father's death, the young man went to Paris, where he studied at the University under Adrian Turnebus, from whom he learned Greek, reading all Homer in twenty-one days and the whole body of Greek poetry in four months. His linguistic studies advanced, until at last he boasted of being able to speak thirteen languages, ancient and modern. After travelling in Italy, England, and even Scotland, he settled at Valence in France (1570), and pursued a course of study under the jurist Cujacius; and from 1572 to 1574 was professor in the academy at Geneva founded by Calvin. About this time he began producing the great works that secured him the primacy among the classical scholars of Europe. Among these productions are to be mentioned his *Coniectanea* to Varro's *Lingua Latina* (1565); his *Catalecta Vergilii*, etc. (1572); his editions of Festus (1575), Catullus, Tibullus, and Propertius (1577); Manilius (1579); and especially a remarkable treatise on the Eusebian chronology, *De Emendatione Temporum* (1583); a *Thesaurus Temporum* (1606); twenty-four indices to Gruter's *Thesaurus Inscriptionum Latinarum* (1601); a numismatical treatise, *De Re Nummaria* (1616); besides *Opuscula* (1610), and *De Arte Critica* (1619).

In 1583 Scaliger was called to Leyden to succeed Justus Lipsius (q. v.), and at this university he spent the rest of his life. To his influence and example Holland owes the long line of illustrious scholars that follow one another so closely in the seventeenth century and whose memory is still cherished. His later years were made unhappy by the numerous controversies in which he became engaged, and whose motives sprang largely from the *odium theologicum*. An outrageous but immensely able attack made upon him by the Jesuit scholar Gaspar Scioppius is believed to have actually hastened Scaliger's death. This attack was contained in a treatise styled *Scaliger Hypobolimaeus*, and ridiculed Scaliger's pretensions to aristocratic descent, holding him up to the scorn of all Europe as a base-born impostor and an atheist. Scaliger died in 1609. His great learning, keen critical faculty, and rare achievements have led men to regard him as, on the whole, the first scholar of all time. Niebuhr spoke of him as standing "on the summit of real and universal knowledge, as no one after him has done." Pattison calls his "the most richly stored intellect that ever spent itself in acquiring knowledge."

See Bernays, *Joseph Justus Scaliger* (Berlin, 1855); Nisard, *Les Gladiateurs de la République des Lettres* (Paris, 1860); id. *Juste Lipse, Joseph Scaliger, et Isaac Casaubon* (Paris, 1852); and Pattison, *Essays*, vol. i. (Oxford, 1889). A bibliography of the writings of Scaliger in their different editions is given by Bernays.

Scalmus (*σκαλμός*). The thole—a strong wooden stay on the inside of a vessel to which the oar was attached by means of a strip (*struppus*) in order to hold it firmly in place (Cic. *Brut.* 53).

Scalpellum (*σμιλίον*). A scalpel; a small surgeon's knife used in cutting away flesh or in opening a vein (Cic. *Pro Sest.* 65; Celsus, ii. 10).

Scalprum (*σμίλη, κολαπτήρ*). A sharp instrument for cutting, varying in form and use from a common chisel (*scalprum fabrile*) driven by a mallet (Livy, xxvii. 49), to a penknife. The word is also applied to a pruning-hook (see Falx), to a cobbler's knife (Pollux, vii. 83), and a surgical instrument (see Scalpellum).

Scalptor. See Scalptura.

Scalptorium. An instrument in the shape of a human hand used for scratching parts of the body that were not otherwise easily accessible (Mart. xiv. 83).

Scalptūra or **Sculptūra**, originally signified cutting figures out of a solid material, but was more particularly applied to (1) the art of cutting figures into the material (intaglios), which was chiefly applied to producing seals and matrices for the mints; and (2) the art of producing raised figures (cameos), which served for the most part as ornaments. Sculpture in our sense of the word was usually designated by the term *statuaria* (*ars*). The first artist who is mentioned as an engraver (*scalptor*) of stones is Theodorus, the son of Telecles, the Samian, who engraved the stone in the ring of Polycrates (q. v.). The most celebrated among them was Pyrgoteles, who engraved the seal-rings for Alexander the Great. Several of the successors of Alexander and other wealthy persons adopted the custom of adorning their gold and silver vessels, *crateres*, candelabra, and the like, with precious stones on which raised figures (cameos) were worked. The art was in a particularly flourishing state at Rome under Augustus and his successors, in the hands of Dioscurides and other artists, many of whose works are still preserved. Numerous specimens of intaglios and cameos are still preserved in the various museums of Europe. See Gemma.

Scamander (*Σκάμανδρος*). (1) A river in the western part of the north coast of Sicily, falling into the sea near Segesta. (2) The celebrated river of the Troad. (See Troas.) As a mythological

personage, the river-god was called Xanthus by the gods. His contest with Achilles is described by Homer (*Il.* xxi. 136 foll.).

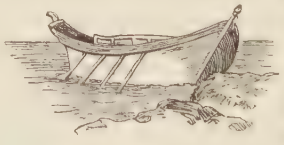
Scamandrius. Son of Hector and Andromaché, whom the people of Troy called Astyanax, because his father was the protector of the city of Troy. See ASTYANAX.

Scamboníidae (Σκαμβωνίδαι). A demus in Attica, between Athens and Eleusis, belonging to the tribe Leontis.

Scamnum. A stool or step placed by the side of a bed. It was larger than the *scabellum* and smaller than the *gradus* (q. v.). The word is also applied to any small footstool, especially to one with a double step.

Scandēa (Σκάνδεια). The harbour of Cythera. See CYTHERA.

Scandia, Scandinavia, or **Scatinavia.** The name given vaguely by the ancients to Norway, Sweden, and the surrounding islands, such as Fünen, Zealand, and Laaland. The Scandinavian peninsula was very imperfectly known even to the later Romans, who regarded it as an island or rather as a collection of islands which Ptolemy calls SCANDIAE. The geographers speak of a lofty mountain which they call Sevo, and of a Sinus Codanus, which is possibly the Cattegat. (See Ptol. ii. 11, 33; Pliny, *H. N.* iv. 96; and Mela, iii. 3, 6). The people inhabiting the country were called by Pliny and Tacitus, Hilleviones (Tac. *Germ.* 44).



Scandĭla. Now Scandole. A small island in the northeast of the Aegaean Sea, between Peparethos and Scyros.

Scandŭla (σχίδαξ). A shingle, used in early times for covering houses in place of the tiles (see TEGULA) that were afterward commonly employed. Shingles were used in Rome until about the third century B.C. (Pliny, *H. N.* xvi. 15).

Scansoria Machĭna (ἀκροβατικὴ μηχανή). A scaffolding for working on plans at an elevation from the ground (Vitruv. x. 1, 1).

Scantia Silva. A wood in Campania (Pliny, *H. N.* ii. 240).

Scapha (σκάφη). A skiff or cutter carried on large vessels to be lowered for use as required (Caes. *B. C.* iii. 24). They were rowed with from one to three pairs of oars.

Scapha. (Pompeian painting.)

Scapté Hylé (Σκαπτὴ Ὕλη). Also called, but less correctly, SCAPTESŸLÉ, a small town on the coast of Thrace, opposite the island of Thasos. It contained celebrated gold mines, which were originally worked by the Thracians. Thucydides here arranged the materials for his history (Plut. *Cim.* 4; Marcell. *Thucyd.* 19).

Scaptia. A town in Latium from which one of the Roman tribes derived its name (Livy, viii. 17).

Scaptius, PUBLIUS. A Roman who traded in Cilicia, lending money to the people of Salamis in Cyprus, and using the troops of Appius Claudius to enforce his usurious terms. Cicero deprived him of the prefecture of Salamis which Claudius had given him, and refused him any further military aid (Cic. *Ad Att.* v. 21; vi. 1–3; xv. 13).

Scapŭla. (1) P. OSTORIUS. A Roman governor of Britain about A.D. 50, who defeated the powerful tribe of the Silures, took prisoner their king, Caractacus, and sent him in chains to Rome (Tac. *Ann.* xii. 31–39). (2) A son of the preceding, condemned for treason by Nero.

Scapus (σκᾶπος). (1) The shaft of a column; that which supports the capital, and rests upon the base (Vitruv. iii. 5). (2) The shaft of a pillar which supports one end of a stair in a staircase. (3) (καυλός). The shaft or stem of a lamp-stand (*candelabrum*). (4) The "yarn-beam" of a weaver's loom (Lucret. v. 1352).

Scarbantia or **Scarabantia.** Now Oedenburg. A town in Pannonia Superior (Pliny, *H. N.* iii. 146).

Scardus or **Scordus Mons** (τὸ Σκάρδον ὄρος). A range of lofty mountains, forming the boundary between Illyria and Dardania.

Scarphé (Σκάρφη), **Scarphēa** (Σκάρφεια) or **Scarphia** (Σκαρφία). A town of the Epicnemidii Locri, at which the roads leading through Thermopylae united (Livy, xxxiii. 3).

Scarpōna or **Scarponna.** Now Charpeigne; a town in Gallia Belgica.

Scato or **Cato,** VETTIUS. An Italian general in the Marsic War (B.C. 90) who defeated the Roman consuls in two successive battles. Being taken prisoner, he was stabbed to death by his own slave, to escape the disgrace of being punished by his captors (App. *B. C.* i. 40–43).

Scaurus, AEMILIUS. (1) MARCUS, a Roman who raised his family from obscurity to the highest rank among the Roman nobles. He was born in B.C. 163. His father, notwithstanding his patrician descent, had been obliged, through poverty, to carry on the trade of a coal merchant, and left his son a very slender patrimony. The latter had thought at first of carrying on the trade of a money-lender; but he finally resolved to devote himself to the study of eloquence, with the hope of rising to the honors of the State. He likewise served in the army, where he appears to have gained some distinction. He was curule aedile in 123, and obtained the consulship in 115, when he carried on war with success against several of the Alpine tribes. In 112 he was sent at the head of an embassy to Iugurtha; and in 111 he accompanied the consul, L. Calpurnius Bestia, as one of his legates, in the war against Iugurtha. The Numidian king bestowed large sums of money upon both Bestia and Scaurus, in consequence of which the consul granted the king most favourable terms of peace. This disgraceful transaction excited the greatest indignation at Rome; and C. Mamilius, the tribune of the people (110) brought forward a bill by which an inquiry was to be instituted against all those who had received bribes from Iugurtha. Although Scaurus had been one of the most guilty, such was his influence in the State that he contrived to be appointed one of the three quaesitores who were elected under the bill for the purpose of prosecuting the criminals. But, though he thus secured himself, he was unable to save any of his accomplices. Bestia and many others were condemned. In 109, Scaurus was censor with M. Livius Drusus. In his consulship he restored the Milvian Bridge, and constructed the Aemilian Way, which ran by Pisae and Luna as

far as Dertona. In 107 he was elected consul a second time, in place of L. Cassius Longinus, who had fallen in battle against the Tigurini. In the struggles between the aristocratical and popular parties, Scaurus was always a warm supporter of the former. He was several times accused of different offences, chiefly by his private enemies; but such was his influence in the State, that he was always acquitted. He died about B.C. 89. By his wife Caecilia Scaurus had three children, two sons mentioned below, and a daughter Aemilia, first married to M'. Glabrio, and next to Cn. Pompey, subsequently the triumvir. (2) MARCUS, eldest son of the preceding, and stepson of the dictator Sulla, whom his mother Caecilia married after the death of his father. In the Third Mithridatic War he served under Pompey as quaestor. The latter sent him to Damascus with an army, and from thence he marched into Iudaea, to settle the disputes between the brothers Hyrcanus and Aristobulus. Scaurus was left by Pompey in the command of Syria with two legions. During his government of Syria he made a predatory incursion into Arabia Petraea, but withdrew on the payment of 300 talents by Aretas, the king of the country. He was curule aedile in B.C. 58, when he celebrated the public games with extraordinary splendour. The temporary theatre which he built accommodated 80,000 spectators, and was adorned in the most magnificent manner. Three hundred and sixty pillars decorated the stage, arranged in three stories, of which the lowest was made of white marble, the middle one of glass, and the highest of gilt wood. The combats of wild beasts were equally astonishing. One hundred and fifty panthers were exhibited in the circus, and five crocodiles and a hippopotamus were seen for the first time at Rome. In the year 56 he was praetor, and in the following year governed the province of Sardinia, which he plundered without mercy. On his return to Rome he was accused of the crime of *repetundae*. He was defended by Cicero, Hortensius, and others, and was acquitted, notwithstanding his guilt. He was accused again in 52, under Pompey's new law against bribery, and was condemned. He married Mucia, who had been previously the wife of Pompey, and by her he had one son. (3) Younger son of No. 1, fought under the proconsul, Q. Catulus, against the Cimbri at the Athesis, and having fled from the field, was indignantly commanded by his father not to come into his presence; whereupon the youth put an end to his life. (4) MARCUS, son of No. 2, and Mucia, the former wife of Pompey the triumvir, and consequently the half-brother of Sex. Pompey. He accompanied the latter into Asia, after the defeat of his fleet in Sicily, but betrayed him into the hands of the generals of M. Antonius, in 35. After the battle of Actium, he fell into the power of Octavian, and escaped death, to which he had been sentenced, only through the intercession of his mother, Mucia. (5) MAMERCUS, son of No. 5, was a distinguished orator and poet, but of a dissolute character. He was a member of the Senate at the time of the accession of Tiberius, A.D. 14, when he offended that suspicious emperor by some remarks which he made in the Senate. Being accused of *maiestas* in 34, he put an end to his own life.

Scaurus, M. AURELIUS, consul suffectus B.C. 103, was three years afterwards consular legate in Gaul, where he was defeated by the Cimbri, taken prisoner, and put to death (Vell. Pat. ii. 12).

Scaurus, Q. TERENTIUS. A well-known Roman grammarian who lived in the reign of Hadrian (Gell. xi. 15, 3). His son was lictor to the emperor Verus. Scaurus wrote a work on grammar (*Ars Grammatica*), besides commentaries on Plautus, Vergil, and the *Ars Poetica* of Horace. There still exists an abridgment of a treatise by him, *De Orthographia*, of some importance for the history of the Latin language; and another of a treatise on adverbs, prepositions, etc. Scaurus draws largely from Varro, and takes some account of the early Latin. The abridgments are given by Keil in his *Grammatici Latini* (vii. 11, 1–29; vii. 29, 3–33). See Bücheler in the *Rheinisches Museum*, xxxiv. 384.

Scelerātus Campus. A place in Rome, close to the Porta Collina, where Vestals who had broken their vows were entombed alive. See VESTALES.

Scena. The old Latin name for a hatchet with two edges (Fest. s. h. v.).

Scena. See THEATRUM.

Scenae (Σκηναί). "The tents"; a town of Mesopotamia near the border of Babylonia. Here dwelt the Scenitae.

Scenītae (Σκηνῖται, "dwellers in tents"). The general name used by the Greeks for the Bedawee (Bedouin) tribes of Arabia Deserta.

Scepsis (Σκῆψις, probably Eski-Upshi, or Eski-Shupshe). An ancient city in the interior of the Troad, southeast of Alexandria, in the mountains of Ida. Here the manuscripts of Aristotle and Theophrastus were buried to prevent their transference to Pergamum. (See Strabo, p. 608, and the article ARISTOTELES.) At Scepsis, Metrodorus, the philosopher, and Demetrius, the grammarian, were born.

Scepticism. A philosophical school founded by Pyrrho of Elis (about B.C. 365–275), which refused to acknowledge that truth was obtainable by the perception of the senses and the cognizance of the mind. In existing literature it is chiefly represented by the physician Sextus Empiricus. See PHILOSOPHIA.

Sceptrum (σκῆπτρον). Originally a long staff like the shaft of a spear (Justin. xliii. 3) used as a support in walking and to give dignity to the bearer. Later it became a badge of royal office. See BACULUM.

Scerdilaidas (Σκερδιλαίδας) or **Scerdilaedus** (Σκερδίλαιδος). A king of Illyria, who was in all probability a son of Pleuratus, and younger brother of Agron, both of them kings of that country. After the defeat and abdication of Teuta (B.C. 229), he probably succeeded to a portion of her dominions, but did not assume the title of king till after the death of his nephew Pinnes. He carried on war for some years against Philip, king of Macedonia, and thus appears as an ally of the Romans. He probably died about 205, and was succeeded by his son Pleuratus.

Scheda and **Schida** (σχίδη). See PAPYRUS.

Schedia (Σχεδιά). A town of Lower Egypt (Strabo, p. 800).

Schema Alcmanĭcum (σχῆμα Ἀλκμανικόν). A name given to the use of a verb in the plural (or dual) number with a noun in the singular when

there follows another noun to which the verb has also reference—e. g. in Homer (*Il.* v. 774):

ἦχι ῥοὰς Σιμόεις συμβάλλετον ἠδὲ Σκάμανδρος.

So also *Od.* xi. 513; *Il.* xx. 138. The grammarians say that the construction was frequent in the poems of Alcman, whence the name.

Schema Pindarĭcum (*σχῆμα Πινδαρικόν*) or **Schema Boeotĭcum** (*σχῆμα Βοιωτικόν*). A name given to the use of a masculine or feminine subject in the plural joined with a verb in the singular —e. g. in Pindar (*Olymp.* xi. [x.]):

ὕμνοι ὑστέρων ἀρχαὶ λόγων τέλλεται.

Other instances (the construction is a rare one) are found in Herod. vi. 86 (in an oracle); Hom. *Hymn. in Cer.* 279; Pind. *Pyth.* x. 71; Hesiod, *Theog.* 321; and with the noun in the dual number in *Il.* xxiii. 477. In Attic writers the construction is usually limited to *ἔστι* and *ἦν* placed at the beginning of the sentence, so that the subject follows the verb and the expression is somewhat impersonal in its form, as in the French *Il est des hommes*, etc. Cf. Soph. *Trach.* 520; Eurip. *Ion*, 1146; Plato, *Euthyd.* p. 302 C; and for further instances, see Jelf, *Greek Grammar*, 386.

Scheria. See PHAEACES.

Schoenobătes (*σχοινοβάτης*). A rope-dancer. See FUNAMBULUS.

Schoenus (*Σχοῖνος*). A town of Boeotia on a river of the same name (Strabo, p. 408).

Schoenūs (*Σχοινούς*). A harbour of Corinth at the narrowest part of the Isthmus (Strabo, pp. 369, 380).

Scholium (*σχόλιον*). A note or comment. The name is especially applied to the short marginal notes made upon the MSS. of the Greek and Latin classics by grammarians and others, who are hence called Scholiasts. See GLOSSA.

Schools. See EDUCATION; LUDUS LITTERARIUS.

Schools of Medicine. See MEDICINA.

Schools of Philology. See PHILOLOGIA.

Schools of Philosophy. See PHILOSOPHIA.

Sciadephoria (*σκιαδηφορία*). A service performed at Athens by the daughters of the resident aliens (*μέτοικοι*), who at the Panathenaea carried the parasols of the Athenian maidens (Pollux, vii. 134). The wives of the *metoeci* on the same occasion carried a water-vessel (see HYDRIAPHORIA), and the aliens themselves vessels full of cakes and other offerings (*σκαφηφορία*) to the goddess. The duties thus imposed upon the resident aliens and their families were intended to mark them out as a class inferior in dignity to the citizens. See Schömann, *Ant. Iuris Publici*, p. 190; Hermann, *Staatsalterth.*, § 115, n. 10.

Sciăthus (*Σκίαθος*). Now Skiatho; a small island in the Aegaean Sea, north of Euboea and east of the Magnesian coast of Thessaly, with a town of the same name upon it. Near it both the Greek and the Persian fleets were stationed at the time of the invasion by Xerxes (Herod. vii. 176; viii. 7).

Scillūs (*Σκιλλοῦς*). A town of Elis in the district Triphylia, on the river Selinus, twenty stadia south of Olympia. Here Xenophon, when banished from Athens, lived for more than twenty years, and built a sanctuary to Artemis (Xen. *Anab.* v. 3, 7; Pausan. v. 6, 5; Strabo, p. 344).

Scimpodium (*σκιμπόδιον*). A couch or sofa, resembling a modern invalid's chair (Gell. xix. 10, 1).

Sciōné (*Σκιώνη*). The chief town in the Macedonian peninsula of Pallené, on the western coast. It revolted from Athens in the Peloponnesian War, and being taken by Cleon, the male inhabitants were put to death and the women and children sold as slaves (Thuc. iv. 120, 133).

Scioppius, KASPAR (KASPAR SCHOPPE). A classical scholar and famous controversialist, who was born at Neumark, May 27, 1576. He studied at Heidelberg, Altorf, and Ingolstadt, and after visiting Rome in 1598 and being converted to Roman Catholicism, became widely known as the able and unsparing critic of the great Protestant scholars, publishing many pamphlets and controversial tracts. He was a man of great learning and possessed a style of unusual power and precision, and all of these qualities are exhibited in the well-known diatribe which he launched against Joseph Scaliger and which hastened the death of that great scholar. (See SCALIGER.) Scioppius died at Padua, November 19, 1649. His principal works are a grammar (*Grammatica Philosophica*), published in 1628; *Verisimilium Libri Quatuor* (1596); *Suspectae Lectiones* (1597); *De Arte Critica* (1597); *Paradoxa Litteraria* (1628); and a treatise *De Scholarum et Studiorum Ratione* (1636). See Nisard, *Les Gladiateurs de la République des Lettres* (Paris, 1860).

Scipio (*σκίπων*). A staff or sceptre, etymologically the same as *sceptrum* (q. v.).

Scipio. The name of an illustrious patrician family of the Cornelian gens. This name, which signifies a stick or staff, is said to have been given to the founder of the family, because he served as a staff in directing his blind father. This family produced some of the greatest men in Rome, and to them she was more indebted than to any others for the empire of the world. The family tomb of the Scipios was discovered in 1780, on the left of the Appia Via, about four hundred paces within the modern Porta S. Sebastiano. The inscriptions and other curiosities are now deposited in the Museo Pio-Clementino at Rome.

(1) P. CORNELIUS SCIPIO, *magister equitum* B.C. 396, and consular tribune 395 and 394. (2) L. CORNELIUS SCIPIO, consul 350. (3) P. CORNELIUS SCIPIO BARBĀTUS, consul 328, and dictator 306. He was also Pontifex Maximus. (4) L. CORNELIUS SCIPIO BARBATUS, consul 298, when he carried on war against the Etruscans, and defeated them near Volaterrae. He also served under the consuls in 297, 295, and 293 against the Samnites. This Scipio was the great-grandfather of the conqueror of Hannibal. The genealogy of the family can be traced with more certainty from this time. (5) CN. CORNELIUS SCIPIO ASĪNA, son of No. 4, was consul 260, in the First Punic War. In an attempt upon the Liparaean Islands, he was taken prisoner with seventeen ships. He probably recovered his liberty when Regulus invaded Africa, for he was consul a second time in 254. In this year he and his colleague, A. Atilius Calatinus, crossed over into Sicily and took the town of Panormus. (6) L. CORNELIUS SCIPIO, also son of No. 4, was consul 259. He drove the Carthaginians out of Sardinia and Corsica, defeating Hanno, the Carthaginian commander. He was censor in 258. (7) P. CORNELIUS SCIPIO ASĪNA, son of No. 5, was consul 221, and carried on war, with his colleague M. Minucius

Sarcophagus of L. Cornelius Scipio Barbatus.

Rufus, against the Istri, who were subdued by the consuls. He is mentioned again in 211, when he recommended that the Senate should recall all the generals and armies from Italy for the defence of the capital, because Hannibal was marching upon the city. (8) P. Cornelius Scipio, son of No. 6, was consul, with Ti. Sempronius Longus, in 218, the first year of the Second Punic War. He sailed with an army to Gaul, in order to encounter Hannibal before crossing the Alps; but, finding that Hannibal had crossed the Rhône, and had got the start of him by a three days' march, he resolved to sail back to Italy and await Hannibal's arrival in Cisalpine Gaul. But as the Romans had an army of twenty-five thousand men in Cisalpine Gaul, under the command of two praetors, Scipio sent into Spain the army which he had brought with him, under the command of his brother, Cn. Scipio. On his return to Italy, Scipio took the command of the army in Cisalpine Gaul, and hastened to meet Hannibal. An engagement took place between the cavalry and light-armed troops of the two armies. The Romans were defeated; the consul himself received a severe wound, and was only saved from death by the courage of his young son Publius, the future conqueror of Hannibal. Scipio now retreated across the Ticinus, crossed the Po also, first took up his quarters at Placentia, and subsequently withdrew to the hills on the left bank of the Trebia, where he was joined by the other consul, Sempronius Longus. The latter resolved upon a battle, in opposition to the advice of his colleague. The result was the complete defeat of the Roman army, which was obliged to take refuge within the walls of Placentia. In the following year (217), Scipio, whose imperium had been prolonged, crossed over into Spain. He and his brother Gneius continued in Spain until their death in 211, and did the most important service for their country by preventing reinforcements being sent to Hannibal from Spain. In 215 they transferred the war from the Ebro to the Guadalquivir and won two great victories at Illiturgis and Intibilis. They fortified an important harbour at Tarraco and regained Saguntum, and by adroit policy induced Syphax to turn against the Carthaginians in Africa; but in 212, having to confront three armies under Hasdrubal Barca, Hasdrubal Gisgo, and Mago, they enlisted 20,000 Celtiberians and divided their armies. This was a fatal step. The Spaniards were untrustworthy, and the armies of the Scipios were defeated separately and both the brothers were slain by the Carthaginians (Polyb. iii.; Livy, xii.–xxv.; App. *Annib.* 5–8; *Hisp.* 14–16). (9) Cn. Cornelius Scipio Calvus, son of No. 6, and brother of No. 8, was consul 222, with M. Claudius Marcellus. In conjunction with his colleague he carried on war against the Insubrians. In 218 he carried on war as the legate of his brother Publius for eight years in Spain, as has been related above (Polyb. ii. 34; Plut. *Marcell.* 6, 7).

(10) P. Cornelius Scipio Africanus Maior, son of No. 8, was born in B.C. 237. (According to Livy, xxvi. 18, and Val. Max. iii. 7, 1, he was born in 234, but the authority of Polybius should be followed, who says that he was twenty-seven when he went to Spain.) He was unquestionably one of the greatest men of Rome, and he acquired at an early age the confidence and admiration of his countrymen. His enthusiastic mind led him to believe that he was a special favourite of the gods; and he never engaged in any public or private business without first going to the Capitol, where he sat some time alone, enjoying communication with the gods. For all he proposed or executed he alleged the divine approval; and the Roman people gave credit to his assertions and regarded him as a being almost superior to the common race of men (Livy, xxvi. 19). There can be no doubt that Scipio himself believed in the divine revelations which he asserted to have been vouchsafed to him; and the extraordinary success which attended all his enterprises must have deepened this belief. He is first mentioned in 218 at the battle of the Ticinus, when he saved the life of his father as has been already related. He fought at Cannae two years afterwards (216), when he was already a tribune of the soldiers, and was one of the few Roman officers who survived that fatal day. He was chosen along with Appius Claudius to command the remains of the army, which had taken refuge at Canusium; and it was owing to his youthful heroism and presence of mind that the Roman nobles, who had thought of leaving Italy in despair, were prevented from carrying their rash project into effect. He had already gained the favour of the people to such an extent that he was elected aedile in 212, although he had not yet reached the legal age. In 210, after the death of his father and uncle in Spain, the Romans resolved to increase their army in that country, and to place it under the command of a proconsul. But when the people assembled to elect a proconsul, none of the generals of experience ventured to sue for so dangerous a command. At length Scipio, who was then barely twenty-four, offered himself as a candidate, and was chosen with enthusiasm to take the command. His success in Spain was striking and rapid. In the first campaign (210) he took the important city of Carthago Nova, and in the course of the next three years he drove the Carthaginians entirely out of Spain, and became master of that country. He returned to Rome in 206, and was elected consul for the following year (205), although he had not yet filled the office of praetor, and was only thirty years of age. He was anxious to cross over at once to Africa, and bring the contest to an end at the gates of Carthage; but the oldest members of the Senate, and among them Q. Fabius Max-

imus, opposed his project, partly through timidity and partly through jealousy of the youthful conqueror. All that Scipio could obtain was the province of Sicily, with permission to cross over to Africa; but the Senate refused him an army, thus making the permission of no practical use. But the allies had a truer view of the interests of Italy than the Roman Senate, and from all the towns of Italy volunteers flocked to join the standard of the youthful hero. The Senate could not refuse to allow him to enlist volunteers; and such was the enthusiasm in his favour that he was able to cross over to Sicily with an army and a fleet contrary to the expectations and even the wishes of the Senate. After spending the winter in Sicily, and completing all his preparations for the invasion of Africa, he crossed over to the latter country in the course of the following year. Success again attended his arms. The Carthaginians and their ally Syphax were defeated with great slaughter, and the former were compelled to recall Hannibal from Italy as the only hope of saving their country. The long struggle between the two peoples was at length brought to a close by the battle fought near the city of Zama on the 19th of October, 202, in which Scipio gained a decisive and brilliant victory over Hannibal. Carthage had no alternative but submission, but the final treaty was not concluded till the following year (201). Scipio returned to Italy in 201, and entered Rome in triumph. He was received with universal enthusiasm, and the surname of Africanus was conferred upon him. The people wished to make him consul and dictator for life, and to erect his statue in the Comitia, the Rostra, the Curia, and even in the Capitol, but he prudently declined all these invidious distinctions. As he did not choose to usurp the supreme power, and as he was an object of suspicion and dislike to the majority of the Senate, he took no prominent part in public affairs during the next few years. He was censor in 199 with P. Aelius Paetus, and consul a second time in 194 with Ti. Sempronius Longus. In 193 he was one of the three commissioners who were sent to Africa to mediate between Masinissa and the Carthaginians; and in the same year he was one of the ambassadors sent to Antiochus at Ephesus, at whose court Hannibal was then residing. The tale runs that he had there an interview with the great Carthaginian, who declared him the greatest general that ever lived. The compliment was paid in a manner the most flattering to Scipio. The latter had asked, "Who was the greatest general?" "Alexander the Great," was Hannibal's reply. "Who was the second?" "Pyrrhus." "Who the third?" "Myself," replied the Carthaginian. "What would you have said, then, if you had conquered me?" asked Scipio, in astonishment. "I should then have placed myself before Alexander, before Pyrrhus, and before all other generals." In 190 Africanus served as legate under his brother Lucius in the war against Antiochus the Great. Shortly after his return, he and his brother Lucius were accused of having received bribes from Antiochus to let the monarch off too leniently, and of having appropriated to their own use part of the money which had been paid by Antiochus to the Roman State. The details of the accusation are related with such discrepancies by the ancient authorities that it is impossible to determine with certainty the true history of the affair, or the year in which it occurred. It appears, however, that there were two distinct prosecutions, and the following is perhaps the most probable history of the transaction. In 187, two tribunes of the people of the name of Petillii, instigated by Cato and the other enemies of the Scipios, required L. Scipio to render an account of all the sums of money which he had received from Antiochus. L. Scipio accordingly prepared his accounts, but as he was in the act of delivering them up, the proud conqueror of Hannibal indignantly snatched them out of his hands, and tore them into pieces before the Senate. But this haughty conduct appears to have produced an unfavourable impression, and his brother, when brought to trial in the course of the same year, was declared guilty, and sentenced to pay a heavy fine. The tribune C. Minucius Augurinus ordered him to be dragged to prison and there detained till the money was paid; whereupon Africanus rescued his brother from the hands of the tribune's officer. The contest would probably have been attended with fatal results had not Tiberius Gracchus, the father of the celebrated tribune, and then tribune himself, had the prudence to release Lucius from the sentence of imprisonment. The successful issue of the prosecution of Lucius emboldened his enemies to bring the great Africanus himself before the people. His accuser was M. Naevius, the tribune of the people, and the accusation was brought in 185. When the trial came on, and Africanus was summoned, he proudly reminded the people that this was the anniversary of the day on which he had defeated Hannibal at Zama, and called upon them to follow him to the Capitol, in order there to return thanks to the immortal gods, and to pray that they would grant the Roman State other citizens like himself. Scipio struck a chord which vibrated in every heart, and he was immediately followed by crowds to the Capitol. Having thus set all the laws at defiance, Scipio immediately quitted Rome, and retired to his country seat at Liternum. The tribunes wished to renew the prosecution, but Gracchus wisely persuaded them to let it drop. Scipio never returned to Rome. He passed his remaining days in the cultivation of his estate at Liternum; and at his death is said to have requested that his body might be buried there, and not in his ungrateful country. The year of his death is equally uncertain; but he probably died in 183. Scipio married Aemilia, the daughter of L. Aemilius Paulus, who fell at the battle of Cannae, and by her he had four children, two sons (Nos. 12, 13), and two daughters, the elder of whom married P. Scipio Nasica Corcu-

Scipio Africanus Maior. (Capitol.)

lum (No. 17), and the younger Tiberius Gracchus, and thus became the mother of the two celebrated tribunes. (See CORNELIA.) (11) L. CORNELIUS SCIPIO ASIATĪCUS, also called ASIAGĔNES or ASIAGĔNUS, was the son of No. 8, and the brother of the great Africanus. He served under his brother in Spain; was praetor in B.C. 193, when he obtained the province of Sicily; and consul in 190, with C. Laelius. The Senate had not much confidence in his abilities, and it was only through the offer of his brother Africanus to accompany him as a legate that he obtained the province of Greece and the conduct of the war against Antiochus. He defeated Antiochus at Mount Sipylus, in 190, entered Rome in triumph in the following year, and assumed the surname of Asiaticus. The history of his accusation and condemnation has been already related in the life of his brother. He was a candidate for the censorship in 184, but was defeated by the old enemy of his family, M. Porcius Cato, who deprived Asiaticus of his horse at the review of the *equites*. It appears, therefore, that even as late as this time an *eques* did not forfeit his horse by becoming a senator. (12) P. CORNELIUS SCIPIO AFRICĀNUS, elder son of the great Africanus, was prevented by his weak health from taking any part in public affairs. Cicero praises his oratiunculae and his Greek history, and remarks that, with the greatness of his father's mind he possessed a larger amount of learning. He had no son of his own, but adopted the son of L. Aemilius Paulus (see below, No. 15). (13) L. or CN. CORNELIUS SCIPIO AFRICĀNUS, younger son of the great Africanus. He accompanied his father into Asia in B.C. 190, and was taken prisoner by Antiochus. This Scipio was a degenerate son of an illustrious father, and only obtained the praetorship, in B.C. 174, through Cicereius, who had been a secretary of his father, giving way to him. In the same year he was expelled from the Senate by the censors. (14) L. CORNELIUS SCIPIO ASIATĪCUS, a descendant of No. 11, belonged to the Marian party, and was consul B.C. 83 with C. Norbanus. In this year Sulla returned to Italy: Scipio was deserted by his troops, and taken prisoner in his camp along with his son Lucius, but was dismissed by Sulla uninjured. He was, however, included in the proscription in the following year (82), whereupon he fled to Massilia, and passed there the remainder of his life. His daughter was married to P. Sestius.

(15) P. CORNELIUS SCIPIO AEMILIĀNUS AFRICANUS MINOR, was the younger son of L. Aemilius Paulus, the conqueror of Macedonia, and was adopted by P. Scipio (No. 12), the son of the conqueror of Hannibal. He was born about B.C. 185. In his seventeenth year he accompanied his father Paulus to Greece, and fought under him at the battle of Pydna, 168. Scipio devoted himself with ardour to the study of literature, and formed an intimate friendship with Polybius, when the latter came to Rome along with the other Achaean exiles in 167. (See POLYBIUS.) At a later period he also cultivated the acquaintance of the philosopher Panaetius, and he likewise admitted the poets Lucilius and Terence to his intimacy, and is said to have assisted the latter in the composition of his comedies. (See TERENTIUS.) His friendship with Laelius, whose tastes and pursuits were so congenial to his own, has been immortalized by Cicero's celebrated treatise entitled *Laelius sive de Amicitia*. Although thus devoted to the study of polite literature, Scipio is said to have cultivated the virtues which distinguished the older Romans, and to have made Cato the model of his conduct. If we may believe his panegyrists, he possessed all the simple virtues of an old Roman, mellowed by the refining influences of Greek civilization. Scipio first served in Spain with great distinction as military tribune under the consul L. Lucullus in 151. On the breaking out of the Third Punic War in 149 he accompanied the Roman army to Africa, again with the rank of military tribune. Here he gained still more renown. By his personal bravery and military skill he repaired, to a great extent, the mistakes of the consul Manilius, whose army on one occasion he saved from destruction. He returned to Rome in 148, and had already gained such popularity that when he became a candidate for the aedileship for the following year (147) he was elected consul, although he was only thirty-seven, and had not therefore attained the legal age. The Senate assigned to him Africa as his province, to which he forthwith sailed, accompanied by his friends Polybius and Laelius. He prosecuted the siege of Carthage with the utmost vigour. The Carthaginians defended themselves with the courage of despair, and the Romans were unable to force their way into the city till the spring of the following year (146). The inhabitants fought from street to street, and from house to house, and the work of destruction and butchery went on for days. The fate of this once magnificent city moved Scipio to tears, and anticipating that a similar catastrophe might one day befall Rome, he repeated the lines of the *Iliad* (vi. 448), in which Hector bewails the approaching fall of Troy. After reducing Africa to the form of a Roman province, Scipio returned to Rome in the same year, and celebrated a splendid triumph on account of his victory. The surname of Africanus, which he had inherited by adoption from the conqueror of Hannibal, had been now acquired by him by his own exploits. In 142 Scipio was censor, and in the administration of the duties of his office he attempted to repress the growing luxury and immorality of his contemporaries. His efforts, however, were thwarted by his colleague Mummius, who had himself acquired a love for Greek and Asiatic luxuries. In 139 Scipio was accused by Ti. Claudius Asellus of *maiestas*. Asellus attacked him out of private animosity, because he had been deprived of his horse, and reduced to the condition of an *aerarius* by Scipio in his censorship. Scipio was acquitted, and the speeches which he delivered on the occasion obtained great celebrity. It appears to have been after this event that Scipio was sent on an embassy to Egypt and Asia to attend to the Roman interests in those countries. The long continuance of the war in Spain again called Scipio to the consulship. He was appointed consul in his absence, and had the province of Spain assigned to him in 134. His operations were attended with success; and in 133 he brought the war to a conclusion by the capture of the city of Numantia after a long siege. He now received the surname of NUMANTĪNUS in addition to that of Africanus. During his absence in Spain Tiberius Gracchus had been put to death. Scipio was married to Sempronia, the sister of the fallen tribune, but he had no sympathy with his reforms, and no sorrow for his fate. Upon his return to Rome in 132, he did not disguise his sentiments, and when asked

in the assembly of the tribes by C. Papirius Carbo, the tribune, what he thought of the death of Tiberius Gracchus, he boldly replied that he was justly slain (*iure caesum*). The people loudly expressed their disapprobation; whereupon Scipio proudly bade them to be silent. He now took the lead in opposing the popular party, and endeavoured to prevent the agrarian law of Tiberius Graechus from being carried into effect. In order to accomplish this object, he proposed in the Senate (129) that all disputes respecting the lands of the allies should be taken out of the hands of the commissioners appointed under the law of Tiberius Gracchus, and should be committed to other persons. This would have been equivalent to an abrogation of the law; and accordingly Fulvius Flaccus, Papirius Carbo, and C. Gracchus, the three commissioners, offered the most vehement opposition to his proposal. In the Forum he was accused by Carbo with the bitterest invectives as the enemy of the people, and upon his again expressing his approval of the death of Tiberius Gracchus, the people shouted out, "Down with the tyrant!" In the evening he went home with the intention of composing a speech for the following day; but next day he was found dead in his room. The most contradictory rumours were circulated respecting his death, but it was generally believed that he was murdered. Suspicion fell upon various persons; his wife Sempronia and her mother Cornelia were suspected by some; Carbo, Fulvius, and C. Gracchus by others. Of all these, Carbo was most generally believed to have been guilty, and is expressly mentioned as the murderer by Cicero. The general opinion entertained by the Romans of a subsequent age respecting Scipio is given by Cicero in his work on the Republic, in which Scipio is introduced as the principal speaker. (16) P. Cornelius Scipio Nasīca, that is, "Scipio with the pointed nose," was the son of Cn. Scipio Calvus, who fell in Spain in B.C. 211. He is first mentioned in 204 as a young man who was judged by the Senate to be the best citizen in the State, and was therefore sent to Ostia along with the Roman matrons to receive the statue of the Idaean Mother, which had been brought from Pessinus. He was curule aedile in 196; praetor in 194, when he fought with success in Further Spain; and consul 191, when he defeated the Boii, and triumphed over them on his return to Rome. Scipio Nasica was a celebrated jurist, and a house was given him by the state in the Via Sacra, in order that he might be more easily consulted. (17) P. Cornelius Scipio Nasīca Corculum, son of No. 16, inherited from his father a love of jurisprudence, and became so celebrated for his discernment and for his knowledge of the pontifical and civil law, that he received his surname of Corculum. He married a daughter of Scipio Africanus the elder. He was consul for the first time in 162, but abdicated, together with his colleague, almost immediately after they had entered upon their office, on account of some fault in the auspices. He was censor in 159 with M. Popilius Laenas, and was consul a second time in 155, when he subdued the Dalmatians. He was a firm upholder of the old Roman habits and manners, and in his second consulship he induced the Senate to order the demolition of a theatre, which was near completion, as injurious to public morals. When Cato repeatedly expressed his desire for the destruction of Carthage, Scipio, on the other hand, declared that he wished for its preservation, since the existence of such a rival would prove a useful check upon the licentiousness of the multitude. He was elected Pontifex Maximus in 150. (18) P. Cornelius Scipio Nasīca Serapio, son of No. 17, is chiefly known as the leader of the Senate in the murder of Tiberius Gracchus. He was consul in 138, and in consequence of the severity with which he and his colleague conducted the levy of troops, they were thrown into prison by C. Curiatius, the tribune of the plebs. It was this Curiatius who gave Nasica the nickname of Serapio, from his resemblance to a person of low rank of this name; but, though given him in derision, it afterward became his distinguishing surname. In 133, when the tribes met to re-elect Tiberius Gracchus to the tribunate, and the utmost confusion prevailed in the Forum, Nasica called upon the consuls to save the Republic; but as they refused to have recourse to violence, he exclaimed, "As the consul betrays the State, do you who wish to obey the laws follow me;" and, so saying, he rushed forth from the temple of Fides, where the Senate was sitting, followed by the greater number of the senators. The people gave way before them, and Gracchus was assassinated as he attempted to escape. In consequence of his conduct on this occasion, Nasica became an object of such detestation to the people, that the Senate found it advisable to send him on a pretended mission to Asia, although he was Pontifex Maximus, and ought not, therefore, to have quitted Italy. He did not venture to return to Rome, and after wandering about from place to place, died soon afterwards at Pergamum. (19) P. Cornelius Scipio Nasīca, son of No. 18, was consul 111, and died during his consulship. (20) P. Cornelius Scipio Nasīca, son of No. 19, praetor in 94, is mentioned by Cicero as one of the advocates of Sextus Roscius of Ameria. He married Licinia, the second daughter of L. Crassus, the orator. He had two sons, both of whom were adopted, one by his maternal grandfather, L. Crassus, in his testament, and is therefore called L. Licinius Crassus Scipio, and the other by Q. Caecilius Metellus Pius, consul 80, and is therefore called Q. Caecilius Metellus Pius Scipio. This Scipio became the father-in-law of Cn. Pompey the triumvir, and fell in Africa in 46. His life is given under Metellus, No. 15. (21) Cn. Cornelius Scipio Hispallus, son of L. Scipio, who is only known as a brother of the two Scipios who fell in Spain. Hispallus was praetor 179, and consul 171. (22) Cn. Cornelius Scipio Hispallus, son of No. 21, was praetor 139, when he published an edict that all Chaldaeans (i. e. astrologers) should leave Rome and Italy within ten days.

See Capellmann, *De Scipionibus* (1841).

Sciras or **Sclerias**. A follower and imitator of Rhinthon. See Rhinthon.

Sciras (Σκίρας). A surname of Athenê given from a temple in the Attic port of Phalerum, built by a soothsayer, Scirus, of Dodona (Pausan. i. 1, 4; ii. 36, 3).

Scirītae. A body of light infantry in the Spartan army, consisting of the περίοικοι (q. v.) of the district Sciritis.

Scirītis (Σκιρῖτις). A wild and mountainous district in the north of Laconia, on the borders of Arcadia, with a town called Scirus.

Sciron (Σκίρων, also Σκείρων). A famous robber who infested the frontier between Attica and Megaris. He not only robbed the travellers who passed through the country, but compelled them on the Scironian Rock to wash his feet, and then kicked them into the sea while they were thus employed. At the foot of the rock there was a tortoise, which devoured the bodies of the robber's victims. He was slain by Theseus (Plut. *Thes.* 10). See THESEUS.

Scironia Saxa (Σκιρωνίδες πέτραι). Now Derveni Bouno. Large rocks on the eastern coast of Megaris, between which and the sea there was only a narrow, dangerous pass, called the Scironian Road. The name of the rocks was derived from that of the celebrated robber Sciron.

Scironĭdes (Σκιρωνίδης). An Athenian general who served at the siege of Miletus and against Chios in B.C. 412–411 (Thuc. viii. 25, 30, 54).

Scirophoria (τὰ Σκιροφόρια). An Athenian festival celebrated on the 12th of the month Scirophorion (June–July), called after it. It was in honour of Athené (or, according to some, Demeter and Koré), who was worshipped under the name of Sciras near Sciron, a spot on the Sacred Way leading from Athens to Eleusis. It had its name from the large white sunshade (σκίρον) beneath which the priestess of Athené (the patron goddess of the city), the priest of Erechtheus, and the priest of Helios went to Sciron to sacrifice. The sunshade was a symbol of heavenly protection against the rays of the sun, which began to burn more intensely during the month of the festival. This protection was invoked with special reason, for the dry limestone rock was thinly covered by a meagre surface of soil in the neighbourhood of Athens, and particularly near Sciron itself. In this, as in other festivals of invocation, there were also expiatory offerings; and hence they carried in the procession the hide of a ram that had been sacrificed to Zeus as the mild and gracious deity. See A. Mommsen, *Heortologie*, pp. 440 foll.

Scirpea. A wagon-body of basket-work. See PLAUSTRUM.

Scirpicŭlus. A sort of wicker basket. See CALATHUS.

Scirri or **Sciri.** A people variously described as Sarmatian (Pliny, *H. N.* iv. 97) and Scythian (Iornand. *R. G.* 49). To them belonged Odoacer (q. v.).

Scissor. A carver. See CENA, p. 313.

Scissors. See FORFEX.

Scobīna. A rasp for scraping wood (Pliny, *H. N.* xi. 68).

Scobis. Sawdust, which was used by the Romans for sprinkling upon the floor of rooms, especially of dining-rooms, as on the *terrasses* of modern French cafés and the floors of bar-rooms (Hor. *Sat.* ii. 4, 81; Juv. xiv. 67). In the houses of the wealthy, this sawdust was often coloured red or a bright yellow (Petron. 68). Elagabalus used gold-dust for the same purpose (Lamprid. *Elagab.* 31). The name is also used of filings of metals (cf. Blümner, *Technologie*, iv. 256).

Scodra. Now Scodar or Scutari; one of the most important towns in Illyricum, on the left bank of the river Barbana, at the southeast corner of the Lacus Labeatis, and about seventeen miles from the coast.

Scodrus. See SCARDUS.

Scolion (σκόλιον, sc. μέλος). A short lyrical poem, usually consisting of a single strophe, and intended to be sung after dinner over the wine. The ancients ascribed its invention to Terpander, and it received its first development among the Lesbians, and was written by such masters of song as Alcaeus, Sappho, Praxilla, Timocreon, Simonides, and Pindar. The last mentioned, however, gave it a more artistic form, with several strophes, in accordance with the rules of Dorian lyric verse. This class of poetry found a congenial home in the brilliant and lively city of Athens, where, to the very end of the Peloponnesian War, it was the regular custom at banquets, after all had joined in the paean, to pass round a lyre with a twig of myrtle, and to request all guests who had the requisite skill to sing such a song on the spur of the moment. To judge from the specimens that have been preserved, their contents were extremely varied: invocations of the gods, gnomic sayings, frequently with allusions to common proverbs and fables, and the praises of the blessings and pleasures of life. The most famous scolion was that by a certain Callistratus on Harmodius and Aristogiton, who had killed the tyrant Hipparchus, son of Pisistratus. It consists of four strophes, but the last three are only variations of the first. See HARMODIUS.

Scolŏti. See SCYTHIA.

Scolus (Σκῶλος). (1) A town in Boeotia, on the north slope of Mount Cithaeron (Herod. ix. 15). (2) A hamlet in Macedonia near Olynthus (Thuc. v. 18).

Scombraria. Now Islote; an island on the southeastern coast of Spain off Carthago Nova (Carthagena). It got its name from the mackerel (*scombri*) caught near by, from which the Romans prepared a sort of fish sauce (*garum*) resembling caviare (Strabo, p. 159).

Scomius Mons (τὸ Σκόμιον ὄρος). A mountain in Macedonia, which runs east of Mount Scardus, in the direction of north to south towards Mount Haemus.

Scopae (κάλλυντρον). A broom; usually made of twigs or rushes bound together (*scopae virgeae*, Cato, *R. R.* 156), and also of butcher's-broom (*ruscus*), palms, tamarisks, and myrtle. See Becker-Göll, *Gallus*, i. 35.

Scopas (Σκόπας). (1) An Aetolian, who held a leading position among his countrymen at the period of the outbreak of the war with Philip and the Achaeans (B.C. 220). He commanded the Aetolian army in the first year of the war; and he is mentioned again as general of the Aetolians, when the latter people concluded an alliance with the Romans to assist them against Philip (211) (Livy, xxxvi. 24). After the close of the war with Philip, Scopas and Dorimachus were appointed to reform the Aetolian constitution (204). Scopas had only undertaken the charge from motives of personal ambition; on finding himself disappointed in this object, he withdrew to Alexandria. Here he was received with the utmost favour by the ministers of the young king, Ptolemy V., and appointed to the chief command of the army against Antiochus the Great. At first he was successful, but was afterwards defeated by Antiochus at Panium, and reduced to shut himself up within the walls of Sidon, where he was ultimately compelled by fam-

ine to surrender (Joseph. *Ant.* xii. 3, 3). Notwithstanding this ill success he continued in high favour at the Egyptian court; but having formed a plot in 296 to obtain by force the chief administration of the kingdom, he was arrested and put to death (Polyb. xiii. 1; xvi. 18, 39).

(2) A distinguished sculptor, a native of Paros, who appears to have belonged to a family of artists in that island. He flourished from B.C. 395 to 350. He was probably somewhat older than Praxiteles, with whom he stands at the head of that second period of perfected art which is called the Later Attic School (in contradistinction to the Earlier Attic School of Phidias), and which arose at Athens after the Peloponnesian War. Scopas was an architect and a statuary as well as a sculptor. He was the architect of the Temple of Athené Alea at Tegea, in Arcadia, which was commenced soon after B.C. 394. He was one of the artists employed in executing the bas-reliefs that decorated the frieze of the Mausoleum at Halicarnassus in Caria. A portion of these bas-reliefs are now deposited in the British Museum. Among the single statues and groups of Scopas, the best known in modern times is his group of figures representing the destruction of the sons and daughters of Niobé. In Pliny's time the statues stood in the Temple of Apollo Sosianus (Pliny, xxxvi. 28). The remaining statues of this group, or copies of them, are all in the Florence Gallery, with the exception of the so-called Ilioneus at Munich, which some suppose to have belonged to the group. There is a head of Niobé in the collection of Lord Yarborough, which has some claim to be considered as the original. But the most esteemed of all the works of Scopas, in antiquity, was his group which stood in the shrine of Cn. Domitius in the Flaminian Circus, representing Achilles conducted to the island of Leucé by the divinities of the sea. It consisted of figures of Poseidon, Thetis, and Achilles, surrounded by Nereids, and attended by Tritons, and by an assemblage of sea monsters. See the monograph by Urlichs (1863); Perry, *Greek and Roman Sculpture*, pp. 378 foll. (1882); and the article STATUARIA ARS.

Scopas (Σκόπας). Now the Aladan; a river of Galatia, falling into the Sangarius, from the east, at Iuliopolis.

Scopŭla. A wisp-broom or hand-broom, used for cleaning the inside of jars (Cato, *R. R.* 26).

Scordisci. A people in Pannonia Superior, are sometimes classed among the Illyrians, but were the remains of an ancient and powerful Celtic tribe. They dwelt between the Savus and Dravus.

Scordiscus. A saddle. See EPHIPPIUM.

Scorpio. A kind of engine for projectiles, in earlier times identical with the catapult, and in later times with the *onager*. See TORMENTUM.

Scoti. A people mentioned, together with the Picti, by the later Roman writers as one of the chief tribes of the ancient Caledonians (Oros. i. 2; Amm. Marc. xxvii. 8, 4; Isid. *Orig.* xiv. 6). They dwelt in the south of Scotland and in Ireland; and from them the former country has derived its name. See Innes, *Ancient Inhabitants of Scotland* (1729); Skene, *Celtic Scotland* (last ed. 1886); and CALEDONIA.

Scotĭtas (Σκοτίτας). A district in the north of Laconia (Paus. iii. 10, 6).

Scotland. See BRITANNIA; CALEDONIA; SCOTI.

Scotussa (Σκότουσσα). A very ancient town of Thessaly, in the district Pelasgiotis, near the source of the Onchestus.

Scourge. See FLAGELLUM.

Screw. See COCHLEA.

Scribae ("writers," from *scribere*). The highest class among the inferior paid officials at Rome. (See APPARITOR.) They did not perform ordinary writers' services, which were usually assigned to slaves, but occupied the position of clerks, registrars, accountants, and secretaries. Of special importance were the *scribae quaestorii* attached to the *tribuni aerarii*. They formed three commissions of ten members each, and kept the accounts of the treasury. Two of their number were also attached to each provincial quaestor as accountants. The scribae also of the different aediles and tribunes appear to have formed a commission of ten members, while those taken from among them by the consuls, praetors, and censors seem to have been employed only during their term of office. The *pontifices* also had their scribae. See Mommsen, *Röm. Staatsrecht*, i. 331–339 (3d ed.); and for the Greek scribes, see GRAMMATEUS; NOTAE.

Scribilīta or **Scriblīta.** A sort of cake made of cheese and flour and eaten hot from the oven, with honey poured over the top (Cato, *R. R.* 78; Petron. 35; Mart. iii. 17).

Scribonia. Wife of Octavianus, afterwards the emperor Augustus, had been married twice before. By one of her former husbands, P. Scipio, she had two children—P. Scipio, who was consul in B.C. 16, and a daughter, Cornelia, who was married to Paulus Aemilius Lepidus, censor in B.C. 22. Scribonia was the sister of L. Scribonius Libo, who was the father-in-law of Sex. Pompey. Augustus married her in B.C. 40, on the advice of Maecenas, because he was then afraid that Sex. Pompey would form an alliance with Antony to crush him; but having renewed his alliance with Antony, Octavian divorced her in the following year (B.C. 39), on the very day on which she had borne him a daughter, Iulia, in order to marry Livia. Scribonia long survived her separation from Octavian. In A.D. 2 she accompanied, of her own accord, her daughter Iulia into exile to the island of Pandataria.

Scribonius Curio. See CURIO.

Scribonius Largus. A Roman physician who accompanied the emperor Claudius to Britain in A.D. 43. Between that year and A.D. 48 he compiled a treatise on medical prescriptions (*Compositiones Medicamentorum*), which we possess in a somewhat imperfect form. It contains 271 prescriptions tested by himself, and arranged according to the parts of the body, from the head downwards. The *editio princeps* is that of Ruellius (Paris, 1528), and it was subsequently edited by Rhodius (with a lexicon, Padua, 1655), and Bernhold (Strassburg, 1786). The standard edition is now that of Helmreich (Leipzig, 1887).

Scribonius Libo. See LIBO.

Scribonius Procŭlus. See PROCULUS.

Scrinium. A circular box or case for holding books, papers, etc. It must have closely resembled

the *capsa*, yet Pliny (*H. N.* xvi. 84) distinguishes between them; whence it has been surmised that the scrinium was a *capsa* divided into compartments. See CAPSA.

Scriptōres Historiae Augustae. See AUGUSTAE HISTORIAE SCRIPTORES.

Scriptūra. A part of the revenue of the Roman Republic derived from the lease of such parts of the *ager publicus* as could be used for pasture (*pascua publica*). They were let by the censors to the publicans. (See PUBLICANI.) Those who grazed cattle on these lands were called *pecuarii* and paid for their use. Such cattle were registered (*scripti*), whence the name *scriptura*. When the pasture-lands were assigned to individual owners this tax disappeared. Cf. Pliny, *H. N.* xviii. 11; Cic. *Pro Flacco*, 8, 18.

Scrupŭlum. The smallest gold coin of the Romans, now very rare. It was in weight one-third of the *denarius*.

Sculponea. The wooden shoe of the Roman peasants and slaves. It was really little more than a thick sole of wood bound to the foot, as in the accompanying illustration.

Sculponea.

Sculptor. One who works in marble (Pliny, *H. N.* xxxvi. 5). See SCALPTURA; STATUARIA ARS.

Sculptūra. See STATUARIA ARS.

Scultenna. Now the Panaro. A river in Gallia Cispadana, rising in the Apennines, and flowing to the east of Mutina into the Padus (Po).

Scurra. A buffoon; a hanger-on of rich men. See PARASITUS.

Scutĭca. A whip with a thong of leather (Mart. x. 62). See FLAGELLUM.

Scutum (*θυρεός*). The large oblong shield generally adopted by the Roman infantry instead of the round buckler (*clipeus*), at the period when the military ceased to serve without pay. It was about four feet long by two and a half wide; formed out of boards, like a door (whence the Greek terms *θύρα* and *θυρεός*), firmly joined together and covered over with coarse cloth, under an outer coating of raw-hide, attached and strengthened round

Roman Soldiers with Shields. (Bartoli.)

the edges by a metal rim. The men of each legion had their shields painted of a different colour and charged with distinctive symbols (Livy, i. 43; viii. 8; Pliny, *H. N.* xvi. 77; Verg. *Aen* viii. 662; Veg. *Mil.* ii. 18; Polyb. ii. 30, 3; vi. 23, 2). See ARMA; CLIPEUS.

Scylăcé (Σκυλάκη) or **Scylaceïon.** An ancient city on the coast of Mysia Minor, at the foot of Mount Olympus, said to have been founded by the Pelasgians; and Herodotus (i. 57) speaks of the peculiar dialect spoken here in his time as "Pelasgian." See PELASGI.

Scylacium (Σκυλάκιον), also **Scylacēum** (Σκυλακεῖον), or **Scylletium** (Σκυλλήτιον). Now Squillace. A Greek town on the east coast of Bruttium, situated on the two adjoining hills at a short distance from the Coast, between the rivers Caecinus and Carcines. From this town the SCYLACIUS or SCYLLETĬCUS SINUS (Σκυλλητικὸς κόλπος) derived its name. It was at one time a dependency of Crotona, but was colonized by the Romans in B.C. 124, and again under Nerva.

Scylax (Σκύλαξ). (1) A native of Caryanda, in Caria, who was sent by Darius Hystaspis on a voyage of discovery down the Indus. Setting out from the city of Caspatyrus and the Pactyican district, Scylax reached the sea, and then sailed west through the Indian Ocean to the Red Sea, performing the whole voyage in thirty months (Herod. iv. 44). There is still extant a *Periplus* bearing the name of Scylax, but which could not have been written by the subject either of this or of the following article. The work is edited by C. Müller in the *Geographi Graeci Minores* (1861); and by Fabricius (1878). See Antichan, *Les Grands Voyages de Découvertes des Anciens* (Paris, 1890). (2) Of Halicarnassus, a friend of Panaetius, distinguished for his knowledge of the stars, and for his political influence in his own State (Cic. *Div.* ii. 42).

Scylax (Σκύλαξ). A river of Pontus emptying into the Iris.

Scylitzes or **Scylitza, IOANNES.** A Byzantine historian who flourished A.D. 1081. His works cover the period from A. D. 811 to 1801. Edited with Cedrenus by Bekker (Bonn, 1838).

Scylla (Σκύλλα) and **Charybdis** (Χαρυβδίς). The names of two rocks between Italy and Sicily. In the one nearest to Italy was a cave, in which dwelt Scylla, a daughter of Crataeis, a fearful monster, barking like a dog, with twelve feet, and six long necks and heads, each of which contained three rows of sharp teeth. The opposite rock, which was much lower, contained an immense fig-tree, under which dwelt Charybdis, who thrice every day swallowed down the waters of the sea, and thrice threw them up again (Hom. *Od.* xii. 73–110; 235–259; 430–444). This is the Homeric account; but later traditions give different accounts of Scylla's parentage. Heracles is said to have killed her, because she stole some of the oxen of Geryon; but Phorcys is said to have restored her to life. Vergil (*Aen.* vi. 286) speaks of several Scyllae, and places them in the lower world. Charybdis is de-

Scylla. (From a coin of Agrigentum.)

scribed as a daughter of Poseidon and Gaea, and as a voracious woman, who stole oxen from Heracles, and was hurled by the thunderbolt of Zeus into the sea. See Tzetz. *ad* Lycophr. 650; Eustath. p. 1719; Serv. *ad* Verg. *Aen.* iii. 420.

Scylla. See NISUS.

Scyllaeum (Σκύλλαιον). (1) Now Sciglio. A promontory on the coast of Bruttium, at the northern entrance to the Sicilian Strait, where the monster Scylla was supposed to live. See SCYLLA. (2) Now Scilla or Sciglio. A town in Bruttium, on the above-named promontory. There are still remains of the ancient citadel. (3) A promontory in Argolis, on the coast of Troezen, forming, with the promontory of Sunium in Attica, the entrance to the Saronic Gulf.

Scylletĭcus Sinus. See SCYLACIUM.

Scylletium. See SCYLACIUM.

Scyllis. See DIPOENUS.

Scymnus (Σκύμνος). A native of Chios, who wrote a *Periegesis*, or description of the earth, in prose, and which is therefore different from a Periegesis in iambic trimeter which has come down to us, and which describes the coast of Europe from the Pillars of Hercules to Apollonia in Pontus. This latter work is dedicated to King Nicomedes, probably Nicomedes III. (B.C. 91–96) of Bithynia. It is edited by Meineke (Berlin, 1846); and by C. Müller in the *Geographi Graeci Minores* (Paris, 1841).

Scyphus (σκύφος). A bowl-shaped cup.

Scyros (Σκῦρος). Now Scyro. An island in the Aegaean Sea, east of Euboea, and one of the Sporades. Here Thetis concealed her son Achilles in woman's attire among the daughters of Lycomedes, and here also Pyrrhus, the son of Achilles by Deidamia, was brought up. According to another tradition the island was conquered by Achilles, in order to revenge the death of Theseus, who is said to have been treacherously destroyed in Scyros by Lycomedes. The bones of Theseus were discovered by Cimon in Scyros, after his conquest of the island, B.C. 476, and were conveyed to Athens, where they were preserved in the Theseum (Thuc. i. 98; Diod. Sic. xi. 60). From this time Scyros continued subject to Athens till the period of the Macedonian supremacy; but the Romans compelled the last Philip to restore it to Athens, B.C. 196 (Livy, xxxiii. 30).

Scytălé (σκυτάλη). A staff, used especially in Sparta by the ephors for their secret despatches to officials, particularly to commanders, in foreign countries (Plut. *Lysand.* 19; Gell. xvii. 9, 3; Suid. s. h. v.). A narrow strip of white leather was wound about a round staff so that the edges came exactly together; it was then written on crosswise, and sent to its destination after being unrolled again. What had been written could only be read when the strip was again wound round an exactly similar staff, such as was given to every official when going abroad on public service. See NOTAE.

Scythae (Σκύθαι). A corps of archers among the Athenians, formed of State slaves, who performed the duties of police and were also employed in war. See DEMOSII.

Scythe. See FALX.

Scythia (Σκυθιά, and Σκυθική sc. γῆ). A name variously used by the ancients at different periods of history. The Scythia of Herodotus comprises, to speak generally, the southeastern parts of Europe, between the Carpathian Mountains and the river Tanaïs (Don). The Greeks became acquainted with this country through their settlements on the Euxine; and Herodotus, who had himself visited the coasts of the Euxine, collected all the information he could obtain about the Scythians and their country, and embodied the results in a most interesting digression, which forms the first part of his fourth book. He describes the country as a square of 4000 stadia (400 geographical miles) each way, the western boundary being the Ister (Danube) and the mountains of the Agathyrsi; the southern the shores of the Euxine and Palus Maeotis, from the mouth of the Ister to that of the Tanaïs, this side being divided into two equal parts, of 2000 stadia each, by the mouth of the Borysthenes (Dnieper); the eastern boundary was the Tanaïs, and on the north Scythia was divided by deserts from the Melanchlaeni, Androphagi, and Budini. It corresponded to the southern part of Russia in Europe. The people who inhabited this region were called by the Greeks Σκύθαι, a word of doubtful origin, which first occurs in Hesiod; but, in their own language, Σκόλοτοι, i. e. Slavonians. They were believed by Herodotus to be of Asiatic origin; and his account of them, taken in connection with the description given by Hippocrates of their physical peculiarities, has been regarded as proof that they were a part of the great Mongol race, who wandered, from unknown antiquity, over the steppes of Central Asia; yet the general drift of opinion at the present time is toward assigning to them Aryan affinities. Herodotus says further that they were driven out of their abodes in Asia, north of the Araxes, by the Massagetae; and that, migrating into Europe, they drove out the Cimmerians. If this account be true, it can hardly but have some connection with the irruption of the Cimmerians into Asia Minor, in the reign of the Lydian king Ardys, about B.C. 640.

The Scythians were a nomadic people, that is, shepherds or herdsmen, who had no fixed habitations, but roamed over a vast tract of country at their pleasure, and according to the wants of their cattle. They lived in a kind of covered wagons, which Aeschylus describes as "lofty houses of wicker-work, on well-wheeled chariots" (*Prom. Vinc.* 710). They were filthy in their habits, never washing, fought on horseback, scalped their enemies, and drank out of their skulls when slain. They kept large troops of horses, and were most expert in cavalry exercises and archery; and hence, as the Persian king Darius found, when he invaded their country (B.C. 507), it was almost impossible for an invading army to act against them. They simply retreated, wagons and all, before the enemy, harassing him with their light cavalry, and leaving famine and exposure, in their bare steppes, to do the rest. Like all nomadic races, they were divided into several hordes, the chief of whom were called the Royal Scythians; and to these all the rest owned some degree of allegiance. Their government was a sort of patriarchal monarchy or chieftainship. An important modification of their habits had, however, taken place, to a certain extent, before Herodotus described them. The fertility of the plains on the north of the Euxine, and

the influence of the Greek settlements at the mouth of the Borysthenes and along the coast, had led the inhabitants of this part of Scythia to settle down as cultivators of the soil, and had brought them into commercial and other relations with the Greeks. Accordingly, Herodotus mentions two classes or hordes of Scythians who had thus abandoned their nomad life; first, on the west of the Borysthenes, two tribes of Hellenized Scythians, called Callipidae and Alazones; then, beyond these, "the Scythians who are ploughers (Σκύθαι ἀροτῆρες), who do not grow their corn for food, but for sale"; these dwelt about the river Hypanis (Boug), in the region now called the Ukraine, which is still, as it was to the Greeks, a great corn-exporting country. Again, on the east of the Borysthenes were "the Scythians who are husbandmen" (Σκύθαι γεωργοί), i. e. who grew corn for their own consumption: these were called Borysthenitae by the Greeks; their country extended

Scythian Horseman. (Sculptures at Kertch).

three days' journey east of the Borysthenes to the river Panticapes. Beyond these, to the east, dwelt "the nomad Scythians (νομάδες Σκύθαι), who neither sow nor plough at all." Herodotus expressly states that the tribes east of the Borysthenes were not Scythian. Of the history of these Scythian tribes there is little to state, beyond the tradition already mentioned, that they migrated from Asia and expelled the Cimmerians; their invasion of Media, in the reign of Cyaxares, when they held the supremacy of Western Asia for twenty-eight years, and the disastrous expedition of Darius into their country. In later times they were gradually overpowered by the neighbouring people, especially the Sarmatians, who gave their name to the whole country. (See SARMATIA.) Meanwhile, the conquests of Alexander and his successors in Central Asia had made the Greeks acquainted with tribes beyond the Oxus and the Iaxartes, who resembled the Scythians, and belonged, in fact, to the same race, and to whom, accordingly, the same name was applied. Hence, in writers of the time of the Roman Empire, the name of Scythia denotes the whole of Northern Asia, from the river Rha (Volga) on the west, which divided it from Asiatic Sarmatia, to Serica on the east, extending to India on the south. It was divided by Mount Imaüs into two parts, called respectively SCYTHIA INTRA IMAÜM, i. e. on the northwestern side of the range, and SCYTHIA EXTRA IMAÜM, on its southeastern side. The later Scythians overran Parthia (B.C. 128), and also invaded Northern India, where they maintained themselves for several centuries. The Jats and Rajputs of modern India have by some scholars been regarded as the descendants of these Scythian invaders.

See the editions of Herodotus by Rawlinson and Sayce; Neumann, *Die Hellenen im Skythenland* (1855); Müllenhoff and Kuno, *Die Skythen* (1871); Fressl, *Skytho-Saken* (1886); and Krause, *Tuisko-Land* (1891).

Scythīni (Σκυθινοί). A people on the western border of Armenia, through whose country the Greeks under Xenophon marched four days' journey (*Anab.* iv. 7, 18).

Scythīnus (Σκυθῖνος). A native of Teos. He versified the philosophic treatise of Heraclitus (q. v.), of which a fragment is preserved in Stobaeus. Edited by Müller in his *Frag. Hist. Graec.*

Scythopŏlis (Σκυθόπολις). The Old Test. Beth-shan, now Beisan. An important city of Palestine, in the southeast of Galilee, according to the usual division, but sometimes also reckoned to Samaria, sometimes to Decapolis, and sometimes to Coele-Syria. It is often mentioned in Old Testament history, in the time of the Maccabees, and under the Romans. It had a mixed population of Canaanites, Philistines, and Assyrian settlers (Pliny, *H. N.* v. 74). Under the late Roman Empire it became the seat of the archbishop of Palestina Secunda, and it continued a flourishing city to the time of the first Crusade.

Scythotauri, Tauri Scythae, or Tauroscўthae. A people of European Sarmatia near the Crimea (Pliny, *H. N.* iv. 85).

Sea-captain. See NAVARCHUS.

Sealing-wax. See CERA.

Seals. See SIGILLUM.

Seats. See SELLA.

Sebasté; in Latin, AUGUSTA. (1) Now Ayash, a city on the coast of Cilicia Aspera. (2) Now Segikler, a city of Phrygia, northwest of Eumenia. (3) A city in Pontus, also called Cabira. (See CABIRA.) (4) See SAMARIA.

Sebennўtus (Σεβέννυτος). Now Semennout. A considerable city of Lower Egypt, in the Delta, on the western side of the branch of the Nile, called after it the Sebennytic Mouth. It was the capital of the Nomos Sebennytes or Sebennyticus (Ptol. iv. 5, 50).

Sebēthus. Now the Maddalena. A small river in Campania, flowing around Vesuvius, and falling into the Sinus Puteolanus at the eastern side of Neapolis (Naples). See NEAPOLIS.

Sebīnus Lacus. Now the Lago Seo; a lake in Gallia Cisalpina (Pliny, *H. N.* ii. 224).

Secespĭta. A sort of sacrificial knife, made of iron, with an ivory handle (Fest. s. h. v.).

Secespita. (From a frieze at Rome.)

Secretary. See GRAMMATEUS; SCRIBAE.

Secret writing. See NOTAE; SCYTALÉ.

Secular Games. See LUDI, p. 974.

Secundus, P. Pomponius. (1) A distinguished Roman poet, who lived in the reigns of Tiberius, Caligula, and Claudius. He was one of the friends of Seianus, and on the fall of that minister in A.D. 31, was thrown into prison, where he remained till the accession of Caligula in 37, by whom he was

released. He was consul in 41, and in the reign of Claudius commanded in Germany, when he defeated the Chatti (Tac. *Ann.* v. 8; xi. 13; xii. 28). Secundus was an intimate friend of the elder Pliny, who wrote his life in two books (Quint. x. 1, 98). His tragedies were the most celebrated of his literary compositions. (2) IULIUS, a Roman orator, and a friend of Quintilian, is one of the speakers in the *Dialogus de Oratoribus* of Tacitus.

Secūris (*πέλεκυς*). An axe or hatchet used for a variety of purposes, as for a weapon (Curt. iii. 4); for sacrificing victims (Hor. *Carm.* iii. 23, 12); or for felling trees (Ovid, *Trist.* iv. 2, 5). When it had a small second edge projecting at the back of the regular blade it was called *securis dolabrata* (see DOLABRA), and *securis simplex* to distinguish it from the two-edged axe (*bipennis*; cf. Pallad. *R. R.* i. 43). The name is also given to the symbolical axe carried by the lictor in the *fasces* (see FASCES), and indicating the power of death which the State possessed. A pickaxe is also sometimes called *securis* (Stat. *Silv.* ii. 2, 87).

Secūtor. See GLADIATORES, p. 734.

Sedan-chair. See LECTICA.

Sedecŭla (*διφρίσκος*). A low seat or stool; a settee (Cic. *Ad Att.* iv. 10).

Sedes (*ἕδρα*). The generic term for any seat. For special kinds of chairs, benches, etc., see CATHEDRA; SEDECULA; SEDILE; SELLA.

Sedetāni. See EDETANI.

Sedigĭtus, VOLCATIUS. A Roman writer, from whose work *De Poëtis* Gellius (xv. 24) has preserved thirteen iambic senarii, in which the principal Latin comic dramatists are enumerated in the order of merit. In this "Canon," as it has been termed, the first place is assigned to Caecilius Statius, the second to Plautus, the third to Naevius, the fourth to Licinius, the fifth to Attilius, the sixth to Terentius, the seventh to Turpilius, the eighth to Trabea, the ninth to Luscius, the tenth, *antiquitatis causa*, to Ennius.

Sedīle. In the singular, a general name for a seat. In the plural (*sedilia*), a row of seats in the theatre (Pliny, *Epist.* v. 6).

Sedulius, CAELIUS. A Christian poet of the second half of the fifth century; he died when still young. At first he wrote secular poetry, but afterwards composed a poem in five books on the miracles of Christ (*Carmen Paschale*), a simple narrative following the gospels, in many points imitating Vergil. This was followed by a prose version (*Opus Paschale*), laboured and bombastic in style; also by an elaborate comparison of the Old and New Testaments in fifty-five couplets, and a hymn to Christ in twenty-three quatrains of iambic dimeters, remarkable for the partial employment of rhyme as a musical element. The verses commence with the successive letters of the alphabet. Portions of this hymn have always been in use in the Church of Rome. We quote the first two stanzas:

A solis ortus cardine
Ad usque terrae limitem,
Christum canamus Principem,
Ortum Maria Virgine.

Beatus Auctor saeculi
Servile corpus induit;
Ut carne carnem liberans
Ne perderet quos condidit.

Edited by Arevalus (Rome, 1794); and Hulmer (Vienna, 1885). See HYMNUS.

Sedūni. An Alpine people in Gallia Belgica, east of the Lake of Geneva, in the valley of the Rhone, in the modern Vallais (Caes. *B. G.* iii. 1, 7).

Sedusii. A German people, forming part of the army of Ariovistus, when he invaded Gaul in B.C. 58. Their site can not be determined (Caes. *B. G.* i. 51).

Segesta. One of the Dii Indigetes; a god of sowing. See INDIGETES.

Segesta. Now Alcamo; the later Roman form of the town called by the Greeks EGESTA (*Ἔγεστα*) or AEGESTA (*Αἴγεστα*), in Vergil ACESTA; situated in the northwest of Sicily, near the coast between Panormus and Drepanum. It is said to have been founded by the Trojans on two small rivers, to which they gave the names of Simoïs and Scamander; hence the Romans called it a colony of Aeneas (Thucyd. vi. 2; Dionys. i. 52). Its ruins are still very beautiful, and include the remains of a Doric temple of the sixth century B.C.

Segestes. A Cheruscan chieftain, the opponent of Arminius. He warned the Roman general, Varus, of the movements of Arminius, but the warning was disregarded. (See ARMINIUS; VARUS.) In B.C. 14, Segestes was forced by his followers into a war with the Romans, but afterwards made peace with them and was allowed to live at Narbonne for the rest of his life (Tac. *Ann.* i. 55–59; Flor. iv. 12).

Segestré or **Segestrium** (*στέγαστρον*). A covering or wrapper of any material, as straw (Varro, *L. L.* v. 166), or fur (Fest. s. h. v.).

Segmentum. An ornament attached to women's dresses, in the shape of strips of gold tissue or other rich material, sewed upon the skirts in parallel lines and running around it like tucks (Isidor. *Orig.* xix. 22, 18).

Segni. A German people in Gallia Belgica, between the Treveri and Eburones, the name of whom is still preserved in the town of Sinei or Signei (Caes. *B. G.* vi. 32).

Segobrīga. The chief town of the Celtiberi, in Hispania Tarraconensis, southwest of Caesaraugusta (Saragossa), near the modern Priego.

Segontia or **Seguntia.** A town of the Celtiberi, in Hispania Tarraconensis, sixteen miles from Caesaraugusta (Saragossa).

Segovia. (1) Now Segovia; a town of the Arevaci, on the road from Emerita to Caesaraugusta. A magnificent Roman aqueduct is still extant at Segovia. (2) A town in Hispania Baetica on the Flumen Silicensé, near Sacili.

Segusiāni. One of the most important peoples in Gallia Lugdunensis, bounded by the Allobroges on the south, by the Sequani on the east, by the Aedui on the north, and by the Arverni on the west. In their territory was the town of Lugdunum (q.v.), the capital of the modern province (Caes. *B. G.* i. 10; vii. 64).

Segusio. Now Susa; the capital of Segusini and the residence of King Cottius, was situated in Gallia Transpadana, at the foot of the Cottian Alps. The triumphal arch erected at this place by the Gallic leader Cottius in honour of Augustus is still extant.

Seiānus, AELIUS. A Roman statesman, born at Vulsinii in Etruria. He was the son of Seius Strabo, who was commander of the praetorian troops at

the close of the reign of Augustus, A.D. 14 (Tac. *Ann.* iv. 1). In the same year Seianus was made the colleague of his father in the command of the praetorian bands; and upon his father being sent as governor to Egypt, he obtained the sole command of these troops. He ultimately gained such influence over Tiberius that this suspicious man, who was close and reserved to all mankind, opened his bosom to Seianus, and made him his confidant. For many years he governed Tiberius; but, not content with this high position, he formed the design of obtaining the imperial power. With this view he sought to make himself popular with the soldiers, and gave posts of honour and emolument to his creatures and favourites. With the same object he resolved to get rid of all the members of the imperial family. He debauched Livia, the wife of Drusus, the son of Tiberius; and by promising her marriage and a participation in the imperial power, he was enabled to poison Drusus with her connivance and assistance (A.D. 23). An accident increased the credit of Seianus, and confirmed the confidence of Tiberius. The emperor, with Seianus and others, was feasting in a natural cave, between Amyclae, which was on the seacoast, and the hills of Fundi. The entrance of the cave suddenly fell in and crushed some of the slaves; and all the guests, in alarm, tried to make their escape. Seianus, resting his knees on the couch of Tiberius, and placing his shoulders under the falling rock, protected his master, and was discovered in this posture by the soldiers who came to their relief. After Tiberius had shut himself up in the island of Capreae, Seianus had full scope for his machinations; and the death of Livia, the mother of Tiberius (A.D. 29), was followed by the banishment of Agrippina and her sons Nero and Drusus. Tiberius at last began to suspect the designs of Seianus, and felt that it was time to rid himself of a man who was almost more than a rival. To cover his schemes and remove Seianus from about him, Tiberius made him joint consul with himself in A.D. 31. He then sent Sertorius Macro to Rome with a commission to take the command of the praetorian cohorts. Macro, after assuring himself of the troops, and depriving Seianus of his usual guard, produced a letter from Tiberius to the Senate, in which the emperor expressed his apprehensions of Seianus. The consul Regulus conducted him to prison, and the people loaded him with insult and outrage. The Senate on the same day decreed his death, and he was immediately executed. His body was dragged about the streets and finally thrown into the Tiber. Many of the friends of Seianus perished at the same time, and his son and daughter shared his fate (Tac. *Ann.* iv. 41–59, 74; v. 6–9; Suet. *Tib.*; Dio Cass. lvii., lviii.; Juv. x. 65–86). The story of Seianus is the subject of a play by Ben Jonson, entitled *Sejanus*, produced in 1603. See TIBERIUS.

Seisachtheia (*σεισάχθεια*, "a shaking off of burdens"). A term used for the removal of the burden of debt effected by Solon. All debts were cancelled, and the securing of debts upon the person of the debtor was made illegal, as in the Roman *tabulae novae*. See Aristot. *Polit. Ath.* 6; and SOLON.

Seiŭgis. A chariot drawn by six horses harnessed abreast of one another (Livy, xxxviii. 35).

Seius Strabo. See SEIANUS.

Selēné (*Σελήνη*). The Greek goddess of the moon, daughter of the Titan Hyperion and Theia, sister of Helios and Eos. She was described as a beautiful woman with long wings and golden diadem, from which she shed a mild light (Homer, *Hymns*, xxxii. 7), riding in a car drawn by two white horses or mules or cows. The horns of the latter symbolized the crescent moon. In later times she was identified with Artemis (or else with Hecaté and Persephoné), as was Helios with Phoebus Apollo, and therefore was herself called Phoebé. After this she was also regarded as a huntress and archer, recognizable by her crescent as the goddess of the moon. She was worshipped on the days of the new and full moon. She bore to Zeus a daughter, Pandia, worshipped at Athens with her father at the festival of Pandia (Demosth. *Or.* 21, § 9). On her love for Endymion, see ENDYMION. The Romans called her LUNA, and had two temples to her at Rome—one on the Aventine and one on the Palatine.

Seleucīa, and rarely **Seleucēa** (*Σελεύκεια*). The name of several cities in Asia, built by Seleucus I., king of Syria. (1) SELEUCIA AD TIGRIN (*ἡ ἐπὶ τοῦ Τίγρητος ποταμοῦ, πρὸς Τίγρει, ἀπὸ Τίγριος*), also called SELEUCIA BABYLONIA (*Σ. ἡ ἐν Βαβυλῶνι*), SELEUCIA ASSYRIAE, and SELEUCIA PARTHŌRUM. A great city on the confines of Assyria and Babylonia, and for a long time the capital of Western Asia, until it was eclipsed by Ctesiphon. Its exact site has been disputed; but the most probable opinion is that it stood on the western bank of the Tigris, north of its junction with the Royal Canal, opposite to the mouth of the river Delas or Silla (Diala), and to the spot where Ctesiphon was afterwards built by the Parthians. It was a little to the south of the modern city of Bagdad. Perhaps a better site could not be found in Western Asia. It commanded the navigation of the Tigris and Euphrates, and the whole plain of those two rivers; and it stood at the junction of all the chief caravan roads by which the traffic between Eastern and Western Asia was carried on. In addition to these advantages, its people had, by the gift of Seleucus, the government of their own affairs. It was built in the form of an eagle with expanded wings, and was peopled by settlers from Assyria, Mesopotamia, Babylonia, Syria, and Iudaea. It rapidly rose, and eclipsed Babylon in wealth and splendour. Even after the Parthian kings had become masters of the banks of the Tigris, and had fixed their residence at Ctesiphon, Seleucia, though deprived of much of its importance, remained a very considerable city. In the reign of Titus, it had, according to Pliny, 600,000 inhabitants. It was burned by Trajan in his Parthian expedition, and again by L. Verus, the colleague of M. Aurelius Antoninus, when its population is given by different authorities as 300,000 or 400,000. It was again taken by Severus, and from this blow it never recovered. In Julian's expedition it was found entirely deserted. See Fabian, *De Seleucia Babylonia* (1869); and Schneiderwirth, *Seleucia am Tigris* (1874). (2) SELEUCIA PIERIA (*Σ. Πιερία, ἡ ἐν Πιερίᾳ, ἡ πρὸς Ἀντιοχείᾳ, ἡ πρὸς θαλάσσᾳ, ἡ ἐπιθαλλασσία*, called Seleukeh or Kepse, near Suadeiah). A great city and fortress of Syria, founded by Seleucus in April, B.C. 300, one month before the foundation of Antioch. It stood on the site of an ancient fortress, on the rocks overhanging the sea, at the foot of Mount Pieria, about four miles north of the

Orontes, and twelve miles west of Antioch. Its natural strength was improved by every known art of fortification, to which were added all the works of architecture and engineering required to make it a splendid city and a great seaport, while it obtained abundant supplies from the fertile plain between the city and Antioch. The remains of Seleucus I. were interred at Seleucia, in a mausoleum surrounded by a grove. In the war with Egypt, which ensued upon the murder of Antiochus II., Seleucia surrendered to Ptolemy III. Euergetes (B.C. 246). It was afterwards recovered by Antiochus the Great (219). In the war between Antiochus VIII. and IX. the people of Seleucia made themselves independent (109 or 108). Afterwards, having successfully resisted the attacks of Tigranes for fourteen years (84–70), they were confirmed in their freedom by Pompey. The city had fallen entirely into decay by the sixth century of our era. There are considerable ruins of the harbour and mole, of the walls of the city, and of its necropolis. The surrounding district was called Seleucis.

(3) SELEUCIA AD BELUM, a city of Syria, in the valley of the Orontes, near Apamea. Its site is doubtful. (4) SELEUCIA TRACHEŌTIS (Selefkeh), an important city of Cilicia Aspera, built by Seleucus I. on the western bank of the river Calycadnus, about four miles from its mouth, and peopled with the inhabitants of several neighbouring cities. It had an oracle of Apollo, and annual games in honour of Zeus Olympius. It vied with Tarsus in power and splendour, and was a free city under the Romans. It has remarkable claims to renown both in political and literary history—in the former as the place where Trajan and Frederick Barbarossa died; in the latter as the birthplace of the philosophers Athenaeus and Xenarchus, of the sophist Alexander, the secretary of M. Aurelius Antoninus, and of other learned men. On its site are still seen the ruins of temples, porticoes, aqueducts, and tombs. (5) SELEUCIA IN MESOPOTAMIA (Bir), on the left bank of the Euphrates, opposite to the ford of Zeugma, was a fortress of considerable importance in ancient military history. (6) A considerable city of Margiana, built by Alexander the Great, in a beautiful situation, and called Alexandria. It was destroyed by the barbarians and rebuilt by Antiochus I., who named it Seleucia after his father Seleucus I. The Roman prisoners taken at the defeat of Crassus by the Parthians were settled here by king Orodes. (7) SELEUCIA IN CARIA. See TRALLES.

There were other cities of the name of less importance in Pisidia, Pamphylia, Palestine, and Elymaïs.

Seleucĭdae. See SELEUCUS.

Seleucis (Σελευκίς). The most beautiful and fertile district of Syria, containing the northwestern part of the country between Mount Amanus on the north, the Mediterranean on the west, the districts of Cyrrhesticé and Chalybonitis on the northeast, the desert on the east, and Coele-Syria and the mountains of Lebanon on the south.

Seleucus (Σέλευκος). The name of several kings of Syria. (1) Surnamed NICĀTOR, the founder of the Syrian monarchy, reigned B.C. 312–280. He was the son of Antiochus, a Macedonian of distinction among the officers of Philip II., and was born about B.C. 358. He accompanied Alexander on his expedition to Asia, and distinguished himself particularly in the Indian campaigns. After the death of Alexander (323) he espoused the side of Perdiccas, whom he accompanied on his expedition against Egypt; but he took a leading part in the mutiny of the soldiers, which ended in the death of Perdiccas (321). In the second partition of the provinces which followed, Seleucus obtained the wealthy and important satrapy of Babylonia. In the war between Antigonus and Eumenes, Seleucus afforded efficient support to the former; but after the death of Eumenes (316), Antigonus began to treat the other satraps as his subjects. Thereupon Seleucus fled to Egypt, where he induced Ptolemy to unite with Lysimachus and Cassander in a league against their common enemy. In the war that ensued Seleucus took an active part. At length, in 312, he recovered Babylon; and it is from this period that the Syrian monarchy is commonly reckoned to commence. This era of the Seleucidae, as it is termed, has been determined by chronologists to the 1st of October, 312. Soon afterwards Seleucus defeated Nicanor, the satrap of Media, and followed up his victory by the conquest of Susiana, Media, and some adjacent districts. For the next few years he gradually extended his power over all the eastern provinces which had formed part of the empire of Alexander, from the Euphrates to the banks of the Oxus and

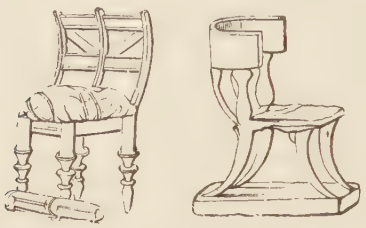
Coin of Seleucus Nicator.

the Indus. In 306 Seleucus followed the example of Antigonus and Ptolemy, by formally assuming the royal title and diadem. In 302 he joined the league formed for the second time by Ptolemy, Lysimachus, and Cassander, against their common enemy Antigonus. The united forces of Seleucus and Lysimachus gained a decisive victory over Antigonus at Ipsus (301), in which Antigonus himself was slain. In the division of the spoil, Seleucus obtained the largest share, being rewarded for his services with a great part of Asia Minor (which was divided between him and Lysimachus) as well as with the whole of Syria, from the Euphrates to the Mediterranean.

The empire of Seleucus was now by far the most extensive and powerful of those which had been formed out of the dominions of Alexander. It comprised the whole of Asia, from the remote provinces of Bactria and Sogdiana to the coasts of Phœnicia, and from the Paropamisus to the central plains of Phrygia, where the boundary which separated him from Lysimachus is not clearly defined. Seleucus appears to have felt the difficulty of exercising a vigilant control over so extensive an empire, and accordingly, in 293, he consigned the government of all the provinces beyond the Euphrates to his son Antiochus, upon whom he bestowed the title of king, as well as the hand of his own youthful wife, Stratonicé, for whom the prince had conceived a violent attachment. In

288, the ambitious designs of Demetrius (now become king of Macedonia) once more aroused the common jealousy of his old adversaries, and led Seleucus again to unite in a league with Ptolemy and Lysimachus against him. After Demetrius had been driven from his kingdom by Lysimachus, he transported the seat of war into Asia Minor, but he was compelled to surrender to Seleucus in 286. The Syrian king kept Demetrius in confinement till three years afterwards, but during the whole of that time treated him in a friendly and liberal manner. For some time jealousies had existed between Seleucus and Lysimachus; but the immediate cause of the war between the two monarchs, which terminated in the defeat and death of Lysimachus (281), is related in the life of the latter. Seleucus now crossed the Hellespont in order to take possession of the throne of Macedonia, which had been left vacant by the death of Lysimachus; but he had advanced no farther than Lysimachia, when he was assassinated by Ptolemy Ceraunus, to whom, as the son of his old friend and ally, he had extended a friendly protection. His death took place in the beginning of 280, only seven months after that of Lysimachus, and in the thirty-second year of his reign. He was in his seventy-eighth year. Seleucus appears to have carried out, with great energy and perseverance, the projects originally formed by Alexander himself for the Hellenization of his Asiatic empire; and we find him founding, in almost every province, Greek or Macedonian colonies, which became so many centres of civilization and refinement. Of these no less than sixteen are mentioned as bearing the name of Antiochia, after his father; five that of Laodicea, from his mother; seven were called after himself Seleucia; three from the name of his first wife, Apamea; and one Stratonicea, from his second wife, the daughter of Demetrius. Numerous other cities, whose names attest their Macedonian origin—Beroea, Edessa, Pella, etc.—likewise owed their first foundation to Seleucus.

(2) Surnamed Callinīcus (246–226), the eldest son of Antiochus II. by his first wife Laodicé. The first measure of his administration, or rather that of his mother, was to put to death his stepmother Berenicé, together with her infant son. This act of cruelty produced the most disastrous effects. In order to avenge his sister, Ptolemy Euergetes, king of Egypt, invaded the dominions of Seleucus, and not only made himself master of Antioch and the whole of Syria, but carried his arms unopposed beyond the Euphrates and the Tigris. During these operations Seleucus kept wholly aloof; but when Ptolemy had been recalled to his own dominions by domestic disturbances, he recovered possession of the greater part of the provinces which he had lost. Soon afterward Seleucus became involved in a dangerous war with his brother Antiochus Hierax, who attempted to obtain Asia Minor as an independent kingdom for himself. This war lasted several years, but was at length terminated by the decisive defeat of Antiochus, who was obliged to abandon Asia Minor and take refuge in Egypt. Seleucus undertook an expedition to the East, with the view of reducing the revolted provinces of Parthia and Bactria, which had availed themselves of the disordered state of the Syrian Empire to throw off its yoke. He was, however, defeated by Arsaces, king of Parthia, in a great battle, which was long after celebrated by the Parthians as the foundation of their independence. After the expulsion of Antiochus, Attalus, king of Pergamus, extended his dominions over the greater part of Asia Minor; and Seleucus appears to have been engaged in an expedition for the recovery of these provinces, when he was accidentally killed by a fall from his horse, in the twenty-first year of his reign, 226. He left two sons, who successively ascended the throne, Seleucus Ceraunus and Antiochus, afterward surnamed the Great. His own surname of Callinicus was probably assumed after his recovery of the provinces that had been overrun by Ptolemy.

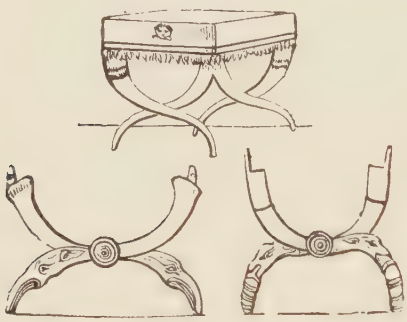


(3) Surnamed Ceraunus (226–223), eldest son and successor of Seleucus II. The surname of Ceraunus ("Thunderbolt") was given him by the soldiery, apparently in derision, as he appears to have been feeble both in mind and body. He was assassinated by two of his officers, after a reign of only three years, and was succeeded by his brother, Antiochus the Great. (4) Surnamed Philopātor (187–175), was the son and successor of Antiochus the Great. The defeat of his father by the Romans, and the ignominious peace which followed it, had greatly diminished the power of the Syrian monarchy, and the reign of Seleucus was, in consequence, feeble and inglorious, and was marked by no striking events. He was assassinated in 175 by one of his own ministers. He left two children: Demetrius, who subsequently ascended the throne; and Laodicé, married to Perseus, king of Macedonia. (5) Eldest son of Demetrius II., assumed the royal diadem on learning the death of his father, 125; but his mother, Cleopatra, who had herself put Demetrius to death, was indignant at hearing that her son had ventured to take such a step without her authority, and caused Seleucus also to be assassinated. (6) Surnamed Epiphānes, and also Nicātor (95–93), was the eldest of the five sons of Antiochus VIII. (Grypus). His uncle, who laid claim to the kingdom, was defeated and slain by him. Presently, however, Seleucus was himself expelled from Syria by Antiochus Eusebus. He retired to Cilicia, where he made himself master of the city of Mopsuestia, whose citizens presently revolted against him and burned the palace, in whose flames Seleucus himself perished.

Selgé (Σέλγη). One of the chief of the independent mountain cities of Pisidia, stood on the south side of Mount Taurus, on the Eurymedon, just where the river breaks through the mountain chain. Its people were the most warlike of all the Pisidians, and claimed descent from the Lacedemonians, even inscribing the name Λακεδαίμων on their coins (Strabo, p. 570). Ruins of the ancient city still exist.

Selīnūs (Σελινοῦς). (1) A small river on the southwestern coast of Sicily, flowing by the town of the same name. (2) Now Crestena, a river of Elis, in the district Triphylia, near Scillus, flowing into the Alpheus west of Olympia. (3) Now Vostitza, a river of Achaia, rising in Mount Erymanthus. (4) A tributary of the Caicus, in Mysia, flowing by the town of Pergamum. (5) Now Castel Vetrano, one of the most important towns in Sicily, situated upon a hill on the southwestern coast and upon a river of the same name. It was founded by the Dorians from Megara Hyblaea, on the eastern coast of Sicily, B.C. 628. It soon attained great prosperity; but it was taken by the

Carthaginians in 409, when most of its inhabitants were slain or sold as slaves and the greater part of the city destroyed. The ruins of the ancient city are of great extent and magnificence, the temple of Zeus being one of the largest of which remains still exist. (6) Now Selenti, a town in Cilicia, situated on the coast.



Sella (*δίφρος*). The generic term for a seat. Chairs of every variety of shape were used by the ancients. (See CATHEDRA; LECTICA; SEDECULA; SOLIUM; THRONUS; TRIPUS.) A camp-chair was

Sellae. (The first from a Pompeian painting; the second from a bronze original in the Vatican.)

called *sella castrensis* (Nero, *Galba*, 18). A night-stool was called *sella familiarica* (Varro, *R. R.* i. 13, 4).

Sella Curūlis. The Latin term for the chair of office belonging to the curule magistrates (consuls, praetors, curule aediles, dictator, *magister equitum*, and *flamen Dialis*), and also to the emperors. It was of ivory, without a back, and with curved legs, like those of a camp-stool, so arranged that

Forms of Sella Curulis. (Naples, and the Vatican.)

it could be folded up. The seat was of plaited leather straps. The curule magistrates sat on this seat while engaged in all official business, and also took it with them in war.

Sella Equestris. A saddle. See EPHIPPIUM.

Sellaria. A room furnished with benches or chairs (*sellae*). Cf. Pliny, *H. N.* xxxiv. 8, 19.

Sellasia (*Σελλασία*). A town in Laconia, north of Sparta, near the river Oenus. Here was fought a great battle between Cleomenes III. and Antigonus Doson in B.C. 221, resulting in the defeat of the former (Polyb. ii. 65–70).

Sellēis (*Σελλήεις*). (1) A river in Elis, on which the Homeric Ephyra stood, rising in Mount Pholoë, and falling into the sea south of the Peneus. (2) A river near Sicyon. (3) A river in Troas, near Arisbé, and a tributary of the Rhodius.

Selli or **Helli.** See DODONA.

Sellisternium. A religious celebration offered to the Roman female deities, resembling the *lectisternium* (q. v.), the main difference being that their images were ranged on seats or benches (*sellae*), and not on couches (*lecti*). See Val. Max. ii. 1, 2; Tac. *Ann.* xv. 44.

Selymbria (*Σηλυμβρία*) or **Selybria** (*Σηλυβρία*, Doric, *Σαλαμβρία*). Now Selivria. An important town in Thrace situated on the Propontis. It was a colony of the Megarians, and was founded earlier than Byzantium.

Sembella. A Roman coin equal to half of a *libella* or the twentieth part of a *denarius* (Varro, *L. L.* v. 174). No specimen is now preserved.

Semĕlé. See DIONYSUS.

Sementīvae Feriae. A festival of seed-time, celebrated in honour of Tellus (q. v.). See FERIAE.

Semiobŏlus (*ἡμιόβολος*). Half an obol; the Attic = nearly two cents, and the Aeginetan = nearly three cents.

Semirămis (*Σεμίραμις*) and **Ninus** (*Νῖνος*). The mythical founders of the Assyrian Empire of Ninus or Nineveh. Ninus (the Greek name for Rimmon Mirari) was a great warrior, who built the town of Ninus or Nineveh about B.C. 2182, and subdued the greater part of Asia. Semiramis was the daughter of the fish-goddess Derceto of Ascalon in Syria by a Syrian youth; but, being ashamed of her frailty, she made away with the youth, and exposed her infant daughter. But the child was miraculously preserved by doves, who fed her till she was discovered by the shepherds of the neighbourhood. She was then brought up by the chief shepherd of the royal herds, whose name was Simmas, and from whom she derived the name of Semiramis. Her surpassing beauty attracted the notice of Onnes, one of the king's friends and generals, who married her. He subsequently sent for his wife to the army, where the Assyrians were engaged in the siege of Bactra, which they had long endeavoured in vain to take. Upon her arrival in the camp she planned an attack upon the citadel of the town, mounted the walls with a few brave followers, and obtained possession of the place. Ninus was so charmed by her bravery and beauty that he resolved to make her his wife, whereupon her unfortunate husband put an end to his life. By Ninus Semiramis had a son, Ninyas, and on the death of Ninus she succeeded him on the throne. According to another account, Semiramis had obtained from her husband permission to rule over Asia for five days, and availed herself of this opportunity to cast the king into a dungeon, or, as is also related, to put him to death, and thus obtained the sovereign power. Her fame threw into the shade that of Ninus; and later ages loved to tell of her marvellous deeds and her heroic achievements. She built numerous cities, and erected many wonderful buildings; and several of the most extraordinary works in the East, which were extant in a later age, and the authors of which were unknown, were ascribed by popular tradition to this queen. In Nineveh she erected a tomb for her husband, nine stadia high and ten wide; she built the city of Babylon, with all its wonders; and she constructed the hanging gardens of Media, of which later writers give us such strange accounts (cf. Herod. i. 184). Besides conquering many nations of Asia, she subdued Egypt and a great part of Aethiopia, but was unsuccessful in an attack which she made upon India. After

a reign of forty-two years she resigned the sovereignty to her son Ninyas, and disappeared from the earth, taking her flight to heaven in the form of a dove. The fabulous nature of this narrative is apparent. It is probable that Semiramis was originally a Syrian goddess, perhaps the same who was worshipped at Ascalon under the name of Astarté, or the Oriental Aphrodité, to whom the dove was sacred. Hence the stories of her voluptuousness, which were current even in the time of Augustus (Ov. *Am.* i. 5, 11). The stories that were current about Semiramis and Ninus are told by Diodorus Siculus, who drew largely upon Ctesias (q. v.). See Diod. bk. ii.; Ael. *Var. Hist.* vii. 1; and Lenormant, *La Légende de Sémiramis* (Brussels, 1873). See NINUS.

Semissis. Half an *as*. It bore the same device as the *as*, but with the letter S. See As.

Semnae (σεμναί, "the dread ones"). A name of the Erinyes (q. v.).

Semnŏnes, more rarely **Semnŏnes**. A German people, described by Tacitus as the most powerful tribe of the Suevic race, dwelt between the rivers Viadus (Oder) and Albis (Elbe), from the Riesengebirge in the south as far as the country around Frankfort on the Oder and Potsdam in the north (Tac. *Germ.* 39; Ptol. ii. 11, 15).

Semōnes. The Latin name for certain supernatural beings. They appear to have been, like the Lares, a kind of Genii, or demigods, and guardian deities of the State. The word has often been connected with *se-*, to sow (cf. *se-men*); and would thus mean "sowers." Others would make it *semihomōnes*, demigods. On the Semones and Semo Sancus, see SANCUS.

Semo Sancus. See SANCUS.

Sempronia. (1) The daughter of Tib. Gracchus, censor in B.C. 169, and sister of the two celebrated tribunes, married Scipio Africanus Minor. (2) Wife of D. Iunius Brutus, consul in B.C. 77, was a woman of great personal attractions and literary accomplishments, but of a profligate character. She took part in Catiline's conspiracy, though her husband was not privy to it (Sall. *Cat.* 25, 40).

Sempronia Gens. A Roman gens of great antiquity, one of whose members was consul in B.C. 497, only twelve years after the expulsion of the kings. Of the many families in this gens, the Atratini were patricians, and the Aselliones, Blaesi, Gracchi, Sophi, Tuditani, and others, plebeians.

Sempronius Gracchus. See GRACCHUS.

Semuncia. See UNCIA.

Sena. (1) Now Senigaglia, styled GALLĬCA, and sometimes called SENOGALLIA; a town on the coast of Umbria, at the mouth of the small river Sena, founded by the Senones. (2) Now Siena, a town in Etruria, and a Roman colony, on the road from Clusium to Florentia (Tac. *Hist.* iv. 45).

Sena Insŭla. An island off the western part of Brittany, where there was an oracle of a Keltic goddess in charge of nine maidens, who professed to raise or lull the sea by their songs (Mela, iii. 6).

Senātus. The Roman Senate, or council of elders (*senes*), seems to have been, originally, an assembly of the chiefs of the different clans or houses (*gentes*), such as we find among nearly all Aryan peoples. Before the independent powers of these clans had been seriously diminished by the development of the royal prerogative, this assembly was probably the highest authority in the community. In the earliest Roman tradition, however, its normal function is to advise the king, and, in certain cases, to approve or disapprove his propositions. Its members, the "fathers," were chosen (*lecti*) by the reigning king; but the latter was bound by custom to choose them from the *gentes*, one representative of ripe age (*maior natu*) from each *gens*. The number of Senators therefore corresponded with the number of *gentes*, and it was only by the creation of new *gentes* that new elements could be introduced into the Senate (*patres minorum gentium*). Tarquin the Elder is said to have brought the Senate in this way to the strength which was subsequently regarded as normal—viz. three hundred. Upon the death of the king, and until his successor was chosen, the Senate assumed (or resumed) the government of the city, which it conducted through a series of senatorial *interreges*. See INTERREGES.

With the establishment of the Republic the Senate became the council of the chief magistrates. Its members were selected at first by the consuls, later by the censors. For a century and a half it remained, essentially at least, a patrician body, and served as the chief bulwark of the patrician power. The tradition that plebeians were summoned to the Senate by the later kings is scarcely credible; the statement that the earlier consuls admitted them is almost equally questionable.* It seems certain, at all events, that they were not regularly admitted, or admitted in any considerable number, until the middle or latter part of the fourth century B.C., when it was provided by a *lex Ovinia* that the censors should select *ex omni ordine optimum quemque*. The "best men" were interpreted, by usage, to be those who had been elected by the people to the higher magistracies; and ultimately the fact of election seems to have given the magistrate-elect seat and voice in the Senate. It was only when the list of ex-magistrates had been exhausted that others were appointed, preference being then given to citizens who had distinguished themselves in war. It was customary, at each census, to reappoint all surviving members of the Senate. The censors might indeed pass over (*praeterire*) the name of a senator, and thus exclude him, but only for cause stated. The Senate of the later Republic was accordingly a body of ex-magistrates, with what amounted to a life tenure.

ORGANIZATION AND PROCEDURE.—As an advisory body, the Senate met only when its advice was required—i. e. upon the call of a magistrate. Meetings were usually (but not necessarily) held in the Curia Hostilia, and on the Kalends or the Ides. A *lex Pupia* forbade meetings of the Senate at times when the Comitia were assembled, and a *lex Gabinia* ordered daily meetings through the

* It is stated that there were but 136 *gentes* in existence when the Republic was established, and that the Senate was brought up to its normal strength (300) by the free selection of the balance. It is also stated that all, or at least a portion, of the senators thus selected were plebeians; but this seems merely an inference from the other statement, and is, of course, in no sense a necessary inference. Among modern writers the dispute turns largely on the interpretation of the phrase *patres conscripti*. Many hold that the *patres* were patricians, the *conscripti* plebeians. Others assert that the *patres* were those who sat as representatives of the *gentes*, and that the rest, whether patricians or plebeians, were *conscripti*. Others again deny that there was any distinction between *patres* and *conscripti*, and translate the phrase, "enrolled senators."

month of February for the transaction of foreign and diplomatic business. The quorum required seems to have varied with the nature of the business before the house; for dispensation from a law it was fixed at 200. Penalties were imposed for unexcused failure to attend.

The magistrate who seeks the advice of the Senate (*senatum consulit*) acts as its chairman. He may lay before its members a distinctly formulated proposition which they are to approve or disapprove, or may submit (*referre*) a question on which their several opinions (*singulae sententiae*) are desired. In the latter case he calls upon the senators *nominatim*, in the order of their official rank—the *princeps* or dean of the Senate first, then the ex-censors, then the *consulares*, and so on down to the *quaestorii*, observing within each rank the order of seniority. Each senator sets forth his opinion at such length as he sees fit. The speeches may be interrupted by questions or corrections, and these may give rise to a running debate (*altercatio*). If the opinion of the Senate is clear, no vote need be taken; if not, the magistrate formulates the question (*verba facit*) and takes the sense of the Senate by a division (*discessio*). Senators who had held no elective office had the right of voting only, not the right of speech; hence they were termed "foot-senators" (*pedarii*). A number of questions might, of course, be submitted to the Senate at a single session. The order of business depended upon the pleasure of the magistrate, with one exception—*res divinae* took precedence of *res publicae*.

The Senate had neither secretaries nor, until the time of Iulius Caesar, records. The decision reached was written out by the presiding magistrate with the aid of a committee of senators. Except during the struggle between the orders, when the *senatus consulta* were kept in the temple of Ceres, the place of deposit was the *aerarium*.

Powers.—The advice of the Senate had to be obtained on certain matters of especial gravity, and might be obtained whenever it was desired. In theory, the advice that it gave was not binding, either upon the king or the republican magistrates. In fact, however, a resolution of the Senate, if less than a command, was much more than a counsel. Under the kings the Senate represented organizations older than the monarchy or the State itself. In its later republican form it included all the political experience and nearly all the political influence of the commonwealth. In the royal and early republican periods it was the guardian of the sacred traditions of the people. In the later Republic it represented, as against the magistrates with their brief terms and division of functions, as against the people with their varying impulses, the permanency and the unity of the policy of the State. In those matters in which custom accorded to its opinion the highest authority—in matters of religion, for example, and in questions of war and peace—it was practically a revolutionary act for the king or the magistrates to proceed in a course which the Senate discountenanced. Both in the royal period, therefore, and under the Republic, the Senate exercised an important restraining influence. In the later republican period its influence became more positive. It had, indeed, no organs for the enforcement of its will except the magistrates in office; but these seldom dared to refuse their aid. Most of them were members of senatorial families and had obtained office through family influence. To cross the will of the Senate was to imperil their own careers and those of their sons. During the conflict between the orders, the Senate had lost much of its authority; but when, at the close of this conflict, it was so reorganized as to include the leading representatives of all the great families, plebeian as well as patrician, it became more powerful than ever before. In the last two centuries of the Republic, in consequence of the increasing importance of Rome's foreign relations, which it had always directed, and the multiplication of subject-provinces which were under its special supervision, the Senate became the supreme power in the State. The selfish use of this power provoked the democratic reaction which established the Empire.

Among the rights attributed to the Senate, at one time or another, were the preliminary discussion of bills (*rogationes*) before their submission to the people; the examination and approval of the list of candidates for election; the quashing of popular resolves and of elections because the proper forms (particularly those required by religion) had not been observed; dispensation from laws in special cases, and the granting of privileges (especially corporate privileges); and, finally, the suspension of the ordinary laws in periods of stress and peril. In the early Republican period, the Senate claimed the right of ultimate approval or disapproval of laws and elections, but these claims were negatived by the *lex Publia* (B.C. 339) and the *lex Maenia* (B.C. 287). As regarded the provincial subjects of Rome, *senatus consulta* had the force of laws.

For a time the Senate exercised a sort of criminal jurisdiction, especially in the case of religious and political offences, through investigating committees (*quaestiones*); but these "questions" were ultimately transformed into permanent courts and made independent of the Senate.

In the field of administration the Senate exercised full control over the public finances. It fixed the taxes to be collected and the manner of their collection, voted appropriations, examined and verified the accounts of the treasury officials. It controlled the entire provincial administration. In the field of foreign relations nothing was done without its authorization. It sent and received ambassadors (*legati*), and conducted or controlled all diplomatic negotiations. It heard and acted upon the complaints of the allied cities and adjusted their differences. In the later Republican period wars were declared and treaties of peace and of alliance were ratified by the Comitia; but it was regarded as unconstitutional to bring these matters before the people without the previous authorization of the Senate.

In the republican, as in the royal, period the Senate carried on the government in case of *interregnum*. An *interregnum* existed, according to the republican theory, when both consuls died or resigned.

Finally, the Senate claimed an indefinite right of watching over and providing for the weal of the State (*salus rei publicae*), and it exercised an undisputed supremacy in strictly religious matters, except where these fell within the competence of the special priestly colleges.

The Senate of the Empire.—With the establishment of the Empire the powers of war and of

peace and the control of Rome's foreign relations passed from the Senate to the emperor. Half of the provinces were ruled by the emperor's legates, and over the government of the rest he exercised an effective control. An imperial *fiscus* and an imperial war-treasury (*aerarium militare*) were established, and under Nero imperial praefects took the place of the senatorial quaestors in the old *aerarium*. On the other hand, the Senate gained new powers at the cost of the popular assembly: it passed laws and elected the magistrates. It also obtained a criminal jurisdiction concurrent with that of the ordinary courts. Some of these powers were afterwards withdrawn; but the bestowal and the withdrawal were alike matters of form. The substance of power was with the emperor: the magistrates from whom the Senate was still recruited were his nominees, and their election by the Senate was simply a ratification of the imperial choice. By virtue of his censorial powers, moreover, he could purge and reconstruct the Senate as he pleased. Senators were appointed more and more frequently without the form of election to any magistracy, and the number of provincials in the Senate steadily increased. The title *princeps senatus*, which the emperor assumed, obtained a new meaning: it indicated that he was the permanent president of the Senate.

The transfer of legislative power to the Senate carried with it one prerogative of great apparent importance—that of appointing the new emperor when the office became vacant, or at least of clothing him with imperial power. This right also proved unsubstantial: the succession was regularly determined either by the will of the deceased emperor or by the will of the army. The passing of the *lex de imperio* became as purely formal as the other acts of the Senate.

Sulla had raised the number of senators to 400; Iulius Caesar to 900. Augustus fixed it at 600. Regular meetings were held on the Kalends and Ides of each month. At first an attendance of 400 was required. It soon became necessary to increase the penalty of unexcused absence and also to reduce the legal quorum.

Ordo Senatorius.—The fact that the Senate was regularly recruited from a limited number of families had given to these families, even in the republican period, something of the character of a class. The formal distinctions accorded to the senators themselves (*latus clavus*, reserved seats at spectacles, etc.); their exclusion, not only from revenue-farming and other contracts with the government, but also from trade, and the extension of these prohibitions to the sons of senators, were steps towards the legal recognition of a senatorial order. In the imperial period this movement was completed. The senatorial census or property qualification was fixed at one million sesterces. The formal and ceremonial distinctions of the senators were multiplied, and were extended to their families. Class privileges were accorded them. Marriages between children of senators and persons of servile origin (*libertini*), previously regarded as unsuitable, were made illegal.

Municipal Senates.—In the self-governing cities of Italy and of the provinces, the whole municipal government was modelled on that of Rome, and the constitutions and functions of their city senates, or municipal councils in particular (*decuriones, curiae*), were closely analogous to those of the Roman Senate.

See P. Willems, *Le Sénat de la République Romaine* (1883); Hoffmann, *Der römische Senat;* Mommsen, *Römisches Staatsrecht* (3d ed. 1887); Karlowa, *Römische Rechtsgeschichte*, §§ 4, 50–52, 68.

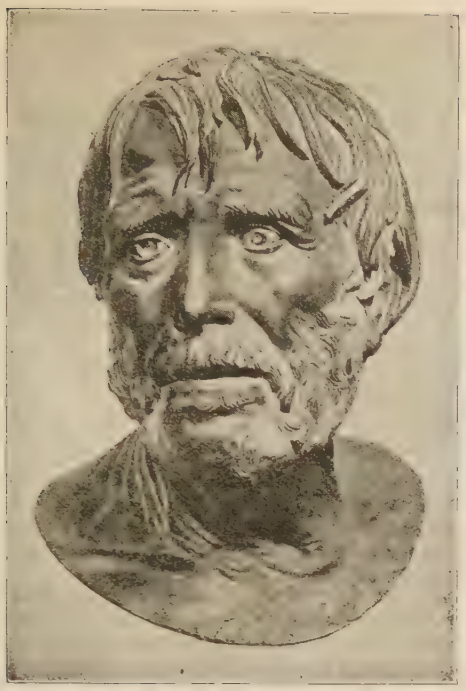
Senĕca. (1) Marcus or Lucius Annaeus (the praenomen being uncertain), usually called Seneca Rhetor to distinguish him from his more celebrated son, was a native of Corduba in Spain. His birth may be placed about B.C. 60 and his death shortly after that of Tiberius (A.D. 37). His family was of equestrian rank and in good circumstances: his character, as revealed in his writings and described by his son, was marked by sobriety, industry, and sternness. We know little of his life, except that he resided on two occasions at least and for several years at Rome, where he is usually supposed, though on insufficient evidence, to have practised as a speaker and professor of rhetoric, without, however, attaining any very high distinction. He informs us that, except Cicero, he had listened to all the great masters of Roman eloquence; and Cicero he might have heard had he been willing to brave the risks of a visit to Rome while the Civil Wars were raging. But then, as for the greater part of his long life, he preferred the quiet dignity of his estate in Spain; and it was there that, when well advanced in middle age, he married Helvia, a lady of good lineage and ancient virtue, by whom he had three sons, all of whom attained distinction—Novatus, better known as the Gallio of the Acts of the Apostles; Seneca the philosopher; and Mela, father of the brilliant poet Lucan.

Seneca was the author of a Roman history extending from the commencement of the Civil Wars to the close of the reign of Tiberius. To this work two allusions—one in Lactantius (*Inst.* vii. 15, § 14) and one in Suetonius (*Tib.* 73)—must be referred. From the former we gather that, like Tacitus, he commenced his history by a brief generalizing retrospect of Rome's entire past, in which he compared the various epochs of her development to those of a human life. Lucius Seneca, in a fragment of a lost biography of his father, claims for it a place among the literary monuments of the age; but with some diffidence, as if conscious that his filial piety overpowered his critical judgment. At all events, we hear nothing of it from any other source. His other work, a series of reminiscences of contemporary rhetoricians, written in his old age, has, to a great extent, survived. It consists of ten books of *Controversiae*, or discussions of legal cases, and one book of *Suasoriae*, or themes for rhetorical declamation. The *Suasoriae* were written last, but come first in order of publication from grounds of educational convenience. The commencement is lost. The first, second, ninth, and tenth books of *Controversiae*, with their prefaces, are almost perfect. The gaps in the other books are partially filled up by an abridgment (*excerpta*) of the fourth or fifth century, the prefaces to books v., vi., and viii., however, being lost. These prefaces are by far the most interesting portion of the work. They are written by Seneca in his own person, and con-

tain, besides pleasant commonplaces and sallies of genial humour, many valuable criticisms of the different speakers quoted, expressed in a pure and classical Latin. The *Controversiae*, which are almost entirely made up of quotations, are for the most part treated under three heads: first, the *Sententiae*, or opinions of the rhetoricians as to the applicability of the law to the question proposed; second, the *Divisio*, or distribution of the legal argument into its various points or subdivisions, each of which is considered separately; and thirdly, the *Colores*, or pleas for consideration, which, while admitting the fact, extenuate its gravity or alter its legal complexion.



It is evident that a considerable proportion of the rhetorical quotations was in Greek, declamatory exercises being indifferently undertaken in either language; but as the book was used exclusively in the Western Empire, the Greek portions were to a great extent discarded, and but few are now preserved. It is remarkable that Seneca himself displays a purer taste and literary style than any of the rhetoricians he quotes, in most of whom the characteristics of the Silver Age are already prominent.

The subjects of the *Suasoriae* are of the kind ridiculed by Juvenal: "Shall Alexander cross the ocean to find a new world to conquer?" "Shall Cicero plead with Antony for his life?" "Shall Leonidas withdraw from Thermopylae?" etc. They are mere school exercises, and, though ingenious and often eloquent, can hardly be called profitable reading.

Bibliography. — In the earliest editions the above writings are mixed up with those of Seneca the philosopher, and were not separated before the editions of N. Faber (Paris, 1587–98) and A. Schott (Heidelberg, 1603–4; Paris, 1607–13). An edition was issued by Gronovius (Leiden, 1649; Amsterdam, 1672). Modern critical editions are those of C. Bursian (Leipzig, 1857); A. Kiessling (Leipzig, 1872); H. J. Müller (Prague, 1887). The following critical notices are mostly from Teuffel: H. Höfig, *De Sen. Rhet. IV. Codd. MSS. Schottianis* (Görlitz, 1858); J. Vahlen, *Rhein. Mus.* 13, 546; A. Kiessling, ib. 16, 50; *Beitr. z. Krit. lat. Prosaiker*, 32 (Basle and Geneva, 1864); *Neue Beitr. zur Kr. des Rh. S.* (Hamburg, 1871); Cl. Konitzer, *Quaest. in Sen. Crit.* (Breslau, 1864); *Beitr. z. Krit. des Rh. Sen.* (Breslau, 1866); R. Wachsmuth, *Quaest. in Sen.* (Posen, 1867); O. Rebling, *Obss. Crit. in Sen. Patrem.* (Göttingen, 1868); C. Bursian, *Spicilegium Crit. in Sen.* (Zürich, 1869); H. T. Karsten, *Spicil. Crit.* 33 (Leiden, 1881); *Elocutio Rhetorica Sen. Rhet.* (Rotterdam, 1881). Also J. Körber, *Ueber den Rhetor Sen.* (pp. 1–23, 58–66) *und die röm. Rhet. seiner Zeit* (pp. 23–58) (Marburg, 1864); O. Gruppe, *Quaestiones Annaeanae* (pp. 24–47) (Stettin, 1873); M. Sander, *Quaest. Syntacticae in Sen. Rhet.* (Greifswald, 1872); *D. Sprachgebrauch des Rhet. Sen.* (Waren, 1877–80); A. Ahlheim, *De Sen. Rhet. usu Dicendi* (Giessen, 1886); *L. A. Senecae Oratorum et Rhetorum Sententiae Divisiones Colores*, ed. H. J. Müller (*Bibl. Script. Gr. et Rom.* ed. Carl Schenkl) (Vienna, 1887).

(2) L. Annaeus, second son of the preceding, was born at Corduba about B.C. 3. He was from infancy of a delicate constitution, and liable to serious illnesses, in one of which he owed his life to the devoted care of his maternal aunt, in whose company, he tells us, he was brought to Rome. His instructors there were the eminent philosophers Fabianus, Attalus, and Sotion, under whom he studied with unremitting ardour, carrying his zeal for their precepts so far as to cultivate a somewhat ostentatious asceticism. His prudent father, alive to the jealousy of the court, recommended less perilous forms of virtue. Caligula, who affected to be a severe critic of Seneca's style, unquestionably envied his talent, and had marked him out for destruction, but was induced to spare his feeble health, which seemed to threaten an early grave. Under Claudius, Seneca rapidly rose to eminence. As quaestor he had the promise of a political career opened to him. He was also a successful pleader, a skilful professor of eloquence, and a leader in the world of fashion. But he had made powerful enemies. An intimacy was known to exist between him and Iulia Livilla, youngest daughter of Germanicus, which was liable to an unfavourable construction; so that when Messalina by her intrigues effected the exile of the princess, she was able to involve Seneca in a similar fate (A.D. 41). He was banished to Corsica, where he spent eight years, a fretful and helpless spectator of events. With the downfall of Messalina his fortunes revived. Agrippina, wishing to use him as the instrument of her ambitious projects, and perhaps, as Dio insinuates, captivated by his engaging person, contrived to secure his appointment as tutor to her son, the young Nero, then eleven years of age, and already destined for the throne. This was a position exactly suited to Seneca's genius. There is every reason to believe that he endeavoured to imbue his pupil's mind with maxims of wisdom and clemency; and the early part of Nero's reign, the "golden *quinquennium*" of justice and mercy, was long remembered as due to the influence of Seneca and Burrus, who jointly administered the State. It soon became evident, however, that Nero could not be controlled. The tutor tried to retain his influence by dangerous and unworthy concessions to the vices of the pupil, but without success. It was Nero who held Seneca bound by the magnetism of fear, of a more violent will, and of imperial splendours. The minister was compelled to follow the downward course of Nero's policy, giving such colour as his practised rhetoric afforded to its odious features till Agrippina's murder—the motive of which he was called upon to embody in a state-paper—brought the climax to a long series of inconsistencies between profession and practice, and showed him at once the moral hollowness and the actual insecurity of his position. From this time Nero seems to have turned against him; and although the long-foreseen blow did not descend until A.D. 65, when Piso's conspiracy gave a decent pretext for accusing him, yet for several years Seneca had been prepared for death, and had made generous, but ineffectual, attempts to disarm the emperor's malice. Bidden to effect his own death, the philosopher, with his high-born and beautiful wife Paulina, who insisted on dying with him, opened his veins. Paulina was restored by her friends to life, though with difficulty: he, after suffering excruciating agony, which he endured with cheerfulness, discoursing to his friends on the glorious realities to which he was about to pass, was at length suffocated by the vapour of a stove.

Seneca is undoubtedly the most brilliant figure of his time, and, except Tacitus, the most impor-

So-called Bust of Seneca the Philosopher. (Naples Museum.)

tant thinker and writer of the post-Augustan Empire. He embodied all the leading characteristics of the age, with which, unlike the majority of Roman citizens, he was in thorough harmony; and consequently he has been judged with more prejudice even by posterity than might have been expected.

That he was a truly great or good man can scarcely be maintained; that he was even a great thinker is open to question; but the inconsistencies of a life passed amid such overpowering temptations must not blind us to his real earnestness of purpose, or to the merit of exercising, under constant risk, a restraining influence on perhaps the vilest character known to history. It is impossible to doubt Seneca's love for virtue. Amid exaggerations, conceits, paradoxes, follies, the moral end is always held out as the only one worthy of being consistently followed, to which every kind of speculative knowledge is subordinate. His death, though not without a conscious study of effect, was a truly noble one; and we must believe him sincere when, on comparing himself with others and reconsidering his actions and omissions, he declares that he can look back with satisfaction upon his life. His opinion, thrice expressed, to the effect that true wisdom will not seek for an impracticable standard of purity in a hopelessly corrupt age, must be referred to the lower level of moral excellence, which Stoicism considered alone compatible with public life, and not to the ideal of the unencumbered, untempted sage.

Of Seneca's poetical writings, some few epigrams are preserved in the *Anthologia Latina*. We possess also nine tragedies correctly ascribed to him, viz.: *Hercules Furens*, *Troades* (or *Hecuba*), *Phoenissae* (not all genuine), *Medea*, *Phaedra* (or *Hippolytus*), *Oedipus*, *Agamemnon*, *Thyestes*, and *Hercules Oetaeus*, and one *praetexta*, the *Octavia*, incorrectly ascribed. Doubts have been thrown on the identity of the tragedian with the philosopher, but they are quite unfounded. The tragedies no doubt belong to his earlier life, and probably were written, partly during his exile, partly after his return to Rome, to assist the poetic proclivities of Nero. They are free imitations of Greek originals, which have in most cases survived so as to admit of a comparison. Both in dramatic power and loftiness of tragic feeling the Latin plays are immeasurably inferior. They abound, however, in brilliant declamation, philosophic contemplation, and witty aphorisms. They can hardly have been intended for the stage, to which they are wholly unsuited; but they are admirably fitted for declamatory reading, though even for this purpose overloaded with rhetoric.

Seneca's prose works were numerous and important; a considerable portion are lost, but the larger and more valuable part remains. Among the former are his speeches, written to be delivered by Nero, a treatise *De Situ Indiae*, another *De Situ et Sacris Aegypti*, another *De Motu Terrarum*; several treatises on moral philosophy, viz.: *Exhortationes*, *De Officiis*, *De Immatura Morte*, *De Superstitione*, *De Matrimonio*, *Quo Modo Amicitia Continenda Sit*, *De Paupertate*, *De Misericordia*, *De Remediis Fortuitorum*, and *De Verborum Copia*; a biography of his father, a panegyric on Messalina, and several books of letters. His extant works comprise (*a*) the twelve so-called dialogues, viz.: *Ad Lucilium de Providentia*, *Ad Serenum de Animi Tranquillitate*, *Ad S. de Otio*, *Ad S. de Constantia Sapientis*, *Ad Novatum de Ira Libri III.*, *Consolatio ad Marciam*, *Consolatio ad Polybium*, *Consolatio ad Helviam Matrem*, *De Vita Beata ad Gallionem*, *De Brevitate Vitae ad Paulinum*; (*b*) three books, *Ad Neronem de Clementia*; (*c*) seven books, *De Beneficiis ad Aebutium Liberalem*; (*d*) twenty books of moral letters, *Ad Lucilium* (but the collection is incomplete); (*e*) seven books, *Naturales Quaestiones*, addressed to Lucilius; (*f*) a political satire on the death and apotheosis of Claudius, called by Dio ἀποκολοκύντωσις, which is of interest as the only remaining example of the Satura Menippea; (*g*) fourteen spurious letters of a correspondence with St. Paul, which seem to have imposed upon St. Jerome (*De Vir. Illust.* 12). See EPISTOLA.

From this catalogue it will be seen how wide was the field embraced by Seneca's genius. Little need be said about his scientific works, except that they show no mean acuteness of conjecture and considerable knowledge of physical theories, though these are often subordinated to an ethical purpose. His views of nature are in the main Stoic, and his examples are probably drawn from Greek sources.

It is on his moral treatises that Seneca's fame rests. In the particular department that he selected, viz., the application of certain leading principles to practical life, he excels all other writers of antiquity. Nominally a Stoic, he belonged really to the Eclectic School, culling precepts from every form of doctrine with impartial appreciation. "The remedies of the soul," he says, "have been discovered long ago: it is for us to learn how to apply them." On this text his system is a comment. It requires, above all else, a thorough knowledge of the human heart, and in this Seneca is preëminent. In that dark and perilous period, when universal mistrust prevailed,

the moralist must be able to dive into the secret recesses of the soul, drawing to light its hidden disquiet, and fortifying it against the blows of circumstance or the deeper thrusts of human turpitude. No writer, ancient or modern, shows a more complete mastery of the pathology of mind. Many of his letters are of the nature of sermons; others are spiritual meditations; others, brilliant attacks on the falsehood and vice of the time. In all these is the same incisiveness of style, the same fertility of illustration, the same varied experience, the same emphatic and reiterated pressing home of his point. This last feature is apt to weary the reader; and Seneca, well aware of the danger, endeavours, by every artifice of rhetorical ingenuity, to maintain the interest of his theme. "To impress the dull conscience, reiteration is a necessity: to knock once at the door when night is come is never enough: you must knock frequently and hard." This leads him to use a tone of exaggeration which, by its seeming insincerity, does injustice to the writer's heart, and has caused him to be too severely judged. His religious and moral maxims so often approximate to those of Christianity that the fathers of the church adopted the view that he had adopted their faith, to which the fictitious correspondence with St. Paul seemed to lend support. The coincidences, however, though sufficiently remarkable, are accidental only, and arise from the character of his mind, which was essentially that of a "seeker after God."

Senia. Now Segna; a Roman colony in Liburnia in Illyricum.

Senio. The six-spot in dice. See TALUS; TESSERA.

Senŏnes. A powerful people in Gallia Lugdunensis, dwelling along the upper course of the Sequana (Seine). Their chief town was Agendicum, afterwards called Senones (Sens) (Caes. *B. G.* ii. 2). A portion of this people crossed the Alps about B.C. 400, in order to settle in Italy, and took up their abode on the Adriatic Sea between the rivers Utis and Aesis (between Ravenna and Ancona), after expelling the Umbrians. In this country they founded the town of Sena. They not only extended their ravages into Etruria, but marched against Rome and took the city, B.C. 390. From this time we find them engaged in constant hostilities with the Romans, till they were at length completely subdued, and the greater part of them destroyed by the consul Dolabella in B.C. 283. See GALLIA.

Sentinel. See EXCUBIAE; VIGILES.

Sentīnum. Now Sassoferrato; a fortified town in Umbria, not far from the river Aesis. In the third Samnite War (B.C. 295), Quintus Fabius here defeated the Gauls and Samnites (Livy, x. 27). See DECIUS.

Sentius Saturnīnus. See SATURNINUS.

Sepias (Σηπιάς). Now St. George. A promontory in the southeast of Thessaly, in the district Magnesia, on which a great part of the fleet of Xerxes was wrecked.

Seplasia. One of the principal streets in Capua, where perfumes and luxuries of a similar kind were sold (Cic. *In Pis.* 11, 24). See UNGUENTUM.

Sepphōris (Σεπφωρίς). Now Sefurieh; a city of Palestine, in the middle of Galilee. It was an insignificant place until Herod Antipas fortified it, and made it the capital of Galilee, under the name of DIOCAESAREA.

Septem Aquae. A place in the territory of the Sabini, near Reaté.

Septem Fratres (Ἑπτὰ Ἀδελφοί). A mountain on the north coast of Mauretania Tingitana at the Fretum Gaditanum (Strait of Gibraltar).

Septem Maria. The lagoons at the mouth of the river Padus (Po). See Pliny, *H. N.* iii. 120.

Septempĕda. Now San Severino; a municipium in the interior of Picenum, on the road from Auximum to Urbs Salvia (Pliny, *H. N.* iii. 111).

Septerion (Σεπτήριον). A festival celebrated every nine years at Delphi, in memory of the slaying of the serpent Python by Apollo. See Plut. *Quaestiones Gr.* 12, and *Def. Orac.* 15.

Septimius Geta. See GETA.

Septimius Serēnus. See SERĒNUS.

Septimius Sevērus. See SEVERUS.

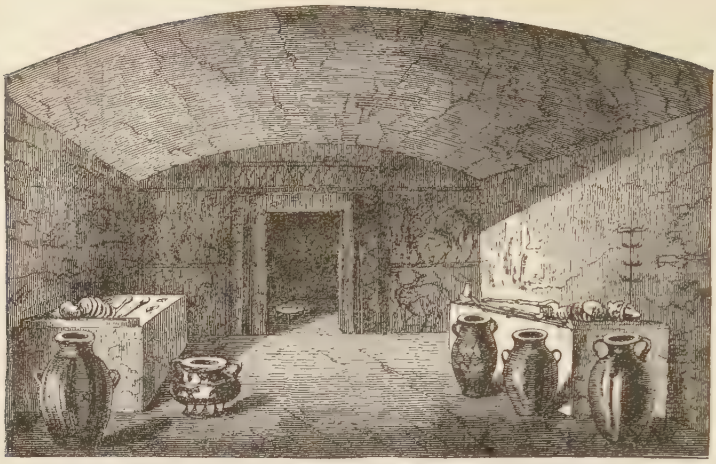
Septizonium. See the Appendix.

Sepulcrum. A tomb. Sepulchres cut in the rock were in common use among both the Greeks and the Romans, and in many places, especially in Lycia and in Asia Minor, they are found in vast numbers, some of them being highly ornate and elaborate. In Lycia they are generally built in imitation of a wooden building, and reproduce in stone the minutest details of wood-construction. The interior consists of a low chamber with stone couches, upon which the bodies were placed. Tombs in form like a sarcophagus (see SARCOPHAGUS) are also found, some of them with an arch as in the annexed example. Others are in the shape of a high square column or pedestal with a projecting cornice, as in the so-called Harpy Monument now in the British Museum. Temple-tombs or heroa (ἡρῷα) also occur in Asia Minor, these having a central chamber on a high base (*podium*), surrounded by a colonnade. The highest development of this sepulchral type is seen in the famous Mausoleum at Halicarnassus in Caria, a restoration of which is shown in the illustration on p. 1018. For elaborate rock-cut tombs, see the illustration in the article MYRA, p. 1069. An early form of tomb apparently much favored in Greece was the domed or "bee-hive" tomb, in which a large chamber is built in a circular form of courses of stone which gradually overlap so as to form a dome-shaped building, though not a true dome. The space for this chamber is excavated in the side of a hill and is approached by a stone-lined passage (δρόμος) cut into the slope of the hill. The best example of such a tomb is the so-called Treasury of Atreus at Mycenae, shown on p. 452.

Lycian Tomb. (Fellows.)

The tombs of the Etruscans were nearly always subterranean, consisting of chambers hewn out of the rock either below the surface of the earth or projecting horizontally into a cliff. The earliest Etruscan tombs date from the sixth century B.C. Temple-tombs also occur of which the following illustration gives an example.

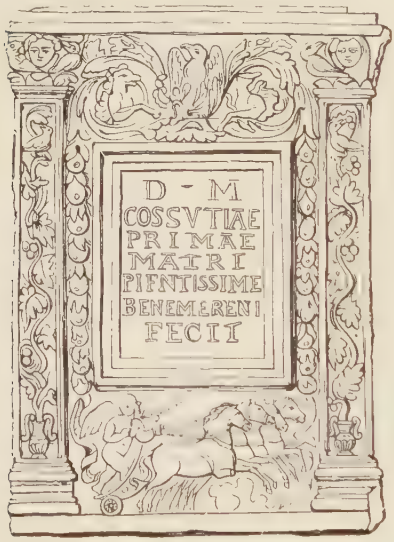
The Etruscan tombs generally imitated the abode of the living; they are frequently adorned with paintings, and the bodies recline upon stone couches accompanied by vases and other objects, as shown in the illustration on the following page.



Etruscan Temple-tomb at Norchia.

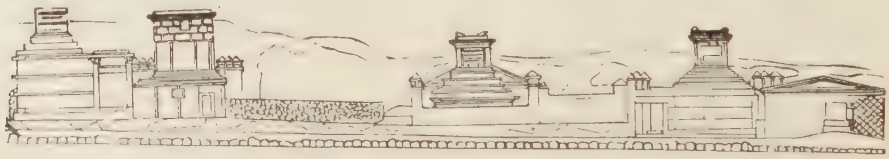
The Roman tombs were usually placed by the side of the roads leading out of the city, many of which are still preserved, among them the pyramidal tomb of C. Cestius, near the Porta Ostiensis (see illustration, p. 1346), the tomb of Caecilia Metella (see illustration, p. 1037) on the Appian Way, and the tomb of the Scipios, also on the Appian Way. The most splendid of the Roman sepulchral edifices that still remain is the Mausoleum of Hadrian, shown in the illustration on p. 1018.

Another style of Roman tomb built to contain a large number of bodies was the *columbarium*, consisting of a building containing a large number of niches, flat at the bottom and arched at the top, each niche as a rule being intended to hold two urns (*ollae*). The *columbarium* used for the burial of the servants and freedmen of the emperor Augustus, and especially of the empress Livia, on the Appian Way, contained room for upwards of 3000 *ollae*. See Lanciani, *Ancient Rome*, pp. 129, 130; and the article COLUMBARIUM.



Bodies were also interred in graves. The normal form of the Greek grave was that familiar to us—a hole or trench dug in the ground. In Attica in early times the dead were buried in their own houses (Plut. *Minos*, 315 D), but the later rule was for the interment to take place outside of the city walls, frequently by the side of the roads as at Rome. The Roman laws of the Twelve Tables forbade burial within the city, though exceptions were made in the case of distinguished persons—e. g. C. Fabricius (Cic. *De Leg.* ii. 23, 58). The Vestal Virgins and the emperors were also buried within the city. The Romans used besides trenches deep pits like wells (hence the name *puticuli*, from *puteus*, a well). Etruscan graves were frequently lined with stone. Gravestones were of various sorts both in Greece and Italy: (*a*) κόνισκοι, or

Interior of Etruscan Tomb at Veii.



The bodies, if burned, were placed in urns or in earthenware coffins, such as are shown in the following illustration. Within the tombs were always placed objects of all kinds, often of considerable value, and these are an extremely important source of knowledge regarding ancient arts, such as pottery, vase-painting, jewelry, gem-engraving, terra-cotta work, etc. The contents of tombs have also included strigils, swords, perfume-bottles, lamps, needles, pins, mirrors, rings, brooches, wreaths, diadems, and vessels for food, in some of which bits of food are still actually preserved.

round columns with a moulding at the top, beneath which was the inscription; (*b*) πλάκες, rectangular slabs lying upon the ground; (*c*) στῆλαι (see STELA); (*d*) *aediculae* or shrine-shaped stones, the top being supported by pilasters; (*e*) *mensae*, large rectangular blocks of stone; (*f*) *hydriae* or vases of marble; (*g*) θῆκαι, round or square stone receptacles which held the ashes; (*h*) *sarcophagi* (see SARCOPHAGUS).

Roman Mortuary Inscription. (British Museum.)

The following illustration shows the plan of the street at Pompeii usually called the Street of Tombs. See POMPEII.

Street of Tombs. (Pompeii.)

Earthenware Coffins. (Stackelberg.)

Urn for Ashes of the Dead. (Pompeii.)

Sequăna (Σηκοάνας). Now the Seine; one of the principal rivers of Gaul, rising in the central parts of that country, and flowing through the province of Gallia Lugdunensis into the ocean opposite Britain. It is 346 miles in length. Its principal affluents are the Matrona (Marne), Esia (Oise), with its tributary the Axona (Aisne), and Incaunus (Yonne). This river has a slow current, and is navigable beyond Lutetia Parisiorum (Paris) (Caes. *B. G.* i. 1; Ptol. ii. 8, 2).

Sequăni. A powerful Celtic people in Gallia Belgica, inhabiting the country since called Franche Comté and Burgundy. In the later division of the provinces of the Empire the country of the

Sequani formed a special province under the name of Maxima Sequanorum. They derived their name from the river Sequana, which had its source in the northwestern frontiers of their territory. Their chief town was Vesontio (Besançon) (Caes. *B. G.* i. 1, 3, 10–12; Lucan, i. 425).

Sequester, Vibius. The name attached to a glossary which professes to give an account of the geographical names contained in the Roman poets. It is in seven sections, to which in some MSS. is added a chapter giving an account of the seven wonders of the world. It has been edited by Bursian (Zürich, 1867).

Sera. A bolt or bar. See Ianua.

Sera. See Serica.

Serapēum. See Alexandria; Serapis.

Serapio. A surname of P. Cornelius Scipio Nasica (B.C. 138). See Scipio.

Serapion (*Σεραπίων*). A physician of Alexandria, who lived in the third century B.C., and belonged to the Empirical school of medicine. He was an opponent of the teachings of Hippocrates, but none of his works is now extant.

Serāpis or **Sarāpis** (*Σάραπις*; Egyptian, *Asar-hapi = Osiris-Apis*). The Egyptian god Osiris (q. v.), in the character of god of the lower world; his corresponding incarnation as the god of the upper world was the bull Apis. (See Apis.) His worship was first independently developed in the time of the Ptolemies in Alexandria, the most beautiful ornament of which city was the magnif-

Serapis. (Vatican.)

icent temple of Serapis, the Serapeum. By the elimination of foreign elements, the conception of the god was so widely extended as to include the Egyptian Osiris, the Greek Pluto, the Greek god of healing, Asclepius, and Zeus-Iupiter. This new worship (together with the cult of Isis) rapidly spread from Egypt over the Asiatic coast, the Greek islands, and Greece itself, and found a firm footing even in Rome and Italy, in spite of repeated interference on the part of the State. Under the Empire, particularly in the time of Hadrian, it extended throughout the Roman world. (See Isis.) There was a fine temple to Serapis at Puteoli, of which remains still exist.

Serapis was especially worshipped as a god of healing, and with his temples were connected dream-oracles that were much resorted to. He was represented, like Pluto, with an animal by his side, having the head of a dog, lion, or wolf, and a serpent coiled round its body. As Zeus-Serapis he is to be seen in the colossal bust in the Vatican, with a *modius*, or corn-measure, the symbol of the lower world, upon his head.

Serbōnis Lacus. See Sirbonis Lacus.

Serdĭca or **Sardĭca**. Now Sofia; an important town in Upper Moesia, and the capital of Dacia Interior, derived its name from the Thracian people Serdi. It bore in the Middle Ages the name of Triaditza (Eutrop. ix. 14, 22; Amm. Marc. xxx. 16).

Serēnus Annaeus. A friend of the philosopher Seneca, who dedicated to him his treatises *De Tranquillitate* and *De Constantia* (Sen. *Epist.* 63).

Serēnus, Aulus Septimius. A Roman lyric poet of the time of Hadrian, who wrote of the country and of rural scenes in artificial style. Only fragments of his works remain, and those are edited by Bährens in his *Frag. Poët. Rom.* 384 (1888).

Serēnus Sammonĭcus. A Roman physician and author who lived in the time of Severus and Caracalla. The latter caused him to be put to death in A.D. 212. To him, or more probably to his son Quintus Serenus, the instructor of the second Gordianus, must be attributed a didactic poem on medicine (*De Medicina Praecepta*), in 115 well-written hexameters, a collection of domestic prescriptions much used in the Middle Ages. It mostly follows Pliny. It is edited by Bährens in his *Poetae Lat. Min.* (Leipzig, 1886). On the diction and prosody, see Baur, *Quaestiones Sammoniceae* (Giessen, 1886).

Seres. See Serica.

Serf. See Servus.

Sergia Gens. A patrician gens tracing its descent from the Trojan Sergestus (Verg. *Aen.* v. 121). Catiline was a member of this gens.

Sergius. (1) See Catilina. (2) A Roman grammarian of uncertain date, though later than the fourth century A.D. Two small treatises of his are printed in Keil's *Grammatici Latini*, iv. 486–565.

Seria. A kind of cask used by the Romans.

Serĭca (*ἡ Σηρική*). A country in the extreme east of Asia, famous as the native region of the silkworm, which was also called *σήρ*; and hence the adjective *sericus* for "silken." The name was known to the Western nations at a very early period, through the use of silk, first in Western Asia, and afterwards in Greece. It is clear, however, that until some time after the commencement of our era the name had no distinct geographical signification. The Serica of Ptolemy corresponds to the northwestern part of China and the adjacent portions of Thibet and Chinese Tartary. The capital, Sera, is supposed by most to be Singan, on the Hoang-ho, but by some Peking. The Great Wall of China is mentioned by Ammianus Marcellinus (xxiii. 6, 64) under the name of *Aggeres Serium*. See Sericum.

Serĭca Vestis. See Sericum.

Serĭcum (*σηρικόν, βομβύκια*). Silk. Silk was known to the Greeks and Romans, who generally

supposed that it grew upon leaves and was scraped off them (Strabo, xv. p. 693). It was imported overland from China through Samarcand and the Persian Gulf, and thence to Phœnicia (or Egypt) and Rome (Procop. *Anecd.* 25), probably in woven pieces. Silk soon became popular, and was worn even by men (Tac. *Ann.* ii. 33), so that its use became the subject of legislative enactment, as by Tiberius, who discouraged it, and Caligula, who approved of it (Suet. *Cal.* 52). It was always very expensive, and at one time, at least, sold for its weight in gold (Vopisc. *Aurel.* 45). It was frequently mixed with flax or wool (*subserica* and *tramoserica*), from which a garment of pure silk was distinguished by the name *holoserica*. Raw silk began to be produced in Europe in the reign of Justinian (A.D. 530), silkworms having then been brought to Constantinople by monks, and the production of silk was long a flourishing industry, though it was a government monopoly. See Pariset, *Histoire de la Soie*, i. pp. 1–90; Wardle, *Silk* (1888); and Blümner, *Technologie*, i. 192.

Seriphus (Σέριφος). Now Serpho; an island in the Aegaean Sea, and one of the Cyclades. It is celebrated in mythology as the island where Danaë and Perseus landed after they had been exposed by Acrisius, where Perseus was brought up, and where he afterwards turned the inhabitants into stone with the Gorgon's head. Seriphus was colonized by Ionians from Athens, and it was one of the few islands which refused submission to Xerxes. The island was employed by the Roman emperors as a place of banishment for State criminals (Tac. *Ann.* ii. 85; iv. 21; Juv. x. 170).

Sermo Plebēius. A term used, in contradistinction to the classic Latinity of Cicero or Caesar, to designate the speech of the common people, at Rome and in the provinces, which later became the basis of the modern Romance languages. Its relation to literary Latin has been subject to frequent misconception: thus, the two are not separate languages, although too often erroneously so termed; nor, on the other hand, is the Sermo Plebeius in any sense either the parent or the offspring of the classic speech. They are rather two kindred dialects, which, while steadily diverging, trace their origin to a common source in the speech of early Rome, the *prisca Latinitas*.

The differentiation between the popular and cultured speech begins properly with the early Roman poets; for, prior to the birth of a national literature, the language lacked the stability essential to a linguistic standard. It is noteworthy that Livius Andronicus, Naevius, and Ennius were all of them natives of Magna Graecia, and that accordingly Rome owes her first impulse in literature, as in the other arts, to external sources. These literary pioneers naturally regarded their native Greek as the highest criterion of excellence, and strove successively to impart something of its ease and grace to the rather unwieldy forms and heavy quantities of archaic Latin. The process of refining and polishing the language in accordance with Greek rules was continued by the famous literary circle which centred in the younger Scipio, to an extent best realized by a comparison of the plays of Terence, whose style is all but Ciceronian, with those of Plautus, which remain the best surviving specimens of early plebeian Latin.

Classic Latin, thus carefully fostered, culminated at length in the cadenced prose of Cicero and the harmonious rhythm of the Augustan poets — a proud achievement for the grammarians, but gained at the expense of the vitality of the language. Its growth had been checked before its natural resources were developed. Its vocabulary remained deficient; its rules for accent and quantity were borrowed; its later development was so largely artificial as to be necessarily unstable. Even in Livy and Tacitus there are seen the beginnings of the decadence which was destined to blight the later literature, and which was hastened by the steady encroachment of the Sermo Plebeius.

The latter, rude and untrammelled, was free to enlarge its vocabulary and modify its constructions to meet the needs of the people's slowly broadening horizon. It was essentially the language of the shops and streets, of the soldier and camp-follower, the slave and rustic—in short, of all but the privileged literary class. In the early period, the reciprocal influence exerted by the two diverging branches of the language was slight, for the literary circle was strictly limited, while the great mass of the people lived and died untouched by the new culture. Gradually, however, as knowledge became more general, and facilities for learning increased, the influence of the cultured language filtered slowly downward through the different grades of society, until all except the remoter rural districts must have felt the leaven of its influence. Conversely, the Sermo Plebeius, with its expressive slang phrases and hardy neologisms, became a more and more convenient source to draw upon, so that with each generation a larger proportion of plebeian forms and constructions found their way upward into the cultured speech. Hence arose a compromise, in the shape of the *sermo cotidianus*, the free-and-easy medium of every-day life, which facilitated communication between the classes, and into which the most cultured speakers were apt to relapse when conversing with their family and friends. Below this, down to the *lingua rustica*, the rudest form of the country districts, the language shaded off through numerous gradations, all possessing the same essential characteristics, and differing only in degree. The furthest division of the language which, with our present knowledge, it is safe to make is threefold—into *sermo urbanus*, *sermo cotidianus*, and *sermo plebeius*.

I. Provincial Latin.—The history of the Sermo Plebeius in the provinces presents certain peculiar features, which are noteworthy because they go far towards explaining the origin of those dialectic differences which resulted in the separate Romance languages. It was always the policy of Rome to force her speech, as well as her customs, upon the nations that she subjugated, and to that end Latin was made the official language of the provinces. The standard of Latinity, however, was not so easily regulated, the conquered people naturally acquiring it from the Romans with whom they earliest came in immediate contact—the common soldiers, petty officials, itinerant merchants, the rank and file that followed in the track of the successful armies. Accordingly, while provincial Latin is far from being synonymous with the Sermo Plebeius, and while many of the leading families must have spoken as pure a Latin as any heard at Rome, yet the plebeian element was more marked, more universal, extending higher in the social ranks, and even giving a distinctive local

colour to provincial literature. The important point, however, is that, while the different provinces were acquired at long intervals, the Sermo Plebeius, which thus formed successively the basis of African, Spanish, and Gallic Latin, was itself undergoing a slow but constant evolution, and the form which Caesar's legions introduced into Gaul was very different from the speech of the soldiers who, a century earlier, had followed the younger Scipio to Carthage. It would be absurd to claim that the language, once established in a province, became crystallized, never to change again. On the contrary, and notably in the case of the African Latin, the later development is most striking; but, owing to its comparative isolation from the influence of the classic speech, plebeian Latin in the provinces tended to preserve certain archaic features much longer than at Rome, a condition quite analogous to that observed in the French of Quebec, or the English of the New England colonies. Accordingly, the Latin of the several provinces represents a varying degree of archaism, in the order of their dates of conquest; and one may search in vain in the Gallic writer Marcellus Empiricus for many of the archaisms prevalent in the works of the Africans Tertullian, Arnobius, and Caelius Aurelianus. The dialectic differences thus established played a far larger part than did any of the rapidly supplanted native tongues, in the ultimate separation of the Romance languages. Thus, Spanish, Portuguese, Catalonian, Provençal, French, and Roumanian show, in the order given, successive stages of the Sermo Plebeius, while Italian, representing the vulgar speech in its native land, where its ultimate development was reached, is the most advanced of all, excepting in the dialectic forms spoken in the island of Sardinia, Rome's earliest external conquest, which retain to this day many characteristics, such as accented ĭ and ŭ, and the *k*-sound after *e* and *i*, which must have been lost from the plebeian Latin at an early date, as they are wanting in the other Romance languages.

II. Sources.—The sources for our knowledge of the Sermo Plebeius are fairly abundant, but of very diverse degrees of importance. No one deliberately wrote in vulgar Latin, but only when, through carelessness or ignorance, he failed to attain the classic standard. Even the language of Plautus's slaves, and the realistic dialogue of Trimalchio and his *colliberti* in the *Satira* of Petronius, are softened to meet the exigencies of literature. Accordingly, the characteristics of plebeian speech must be gleaned from isolated statements of Roman grammarians, errors of orthography and syntax found in inscriptions, or in writers of inferior Latinity, and lastly from the corroborative evidence of the Romance languages. The testimony of Roman writers, however, although of the first importance, is extremely meagre, dealing largely with anomalies of vocabulary and style. The only ancient work bearing directly upon the subject, of which we have knowledge, that of T. Lavinius *De Verbis Sordidis*, has unfortunately perished. The most important existing document of this class is the curious grammatical fragment, the *Appendix Probi* (contained in the *Grammatici Latini*, ed. Keil), but whether of general, or merely local, authority is uncertain, for although some authorities regard it as an African production, its source is still problematic.

Among inscriptions the most important are the Pompeian wall inscriptions (in the *Corpus Inscriptionum Latinarum*, vol. iv.), comprising the careless scribblings of schoolboys, slaves, etc., on houses and public buildings, and containing many important clues to popular Latin in Southern Italy. The inscriptions from Gaul, Spain, and Africa are also useful in tracing dialectic changes. But the chief value of inscriptions, wherever found, is for the light they throw upon plebeian pronunciation, since the ignorant stone-cutters often spelled as they pronounced, and, unlike the equally ignorant scribes, left their errors recorded in an enduring form.

Turning to literature, we find a mass of material, which needs, however, careful discrimination. The scanty remnants of the early writers are all valuable, for plebeian Latin preserved many features of the *prisca Latinitas* long after they had been discarded by the classic speech; and in the Augustan age archaism was to a large extent synonymous with vulgarism. Plautus and the other early comic poets are of especial value, since their works were intended for the people and are accordingly written down to their level. Even Terence contains a certain plebeian element which had probably become traditional on the comic stage. Cato, famous as the opponent of Greek culture, naturally favoured the earlier and ruder form of speech, and his *De Agricultura* forms our unique source for the early *sermo rusticus*.

For the classic and Silver Latin period, material is more abundant. The *Bellum Hispaniense* and other supplements to Caesar's *Commentarii* are probably mild specimens of the *sermo militaris*. Cicero, elsewhere the standard of Latinity, assumes in his letters, as he himself confesses, a more colloquial tone: *Quid tibi ego in epistolis uideor? Nonne plebeio sermone agere tecum?* (*Ad Fam.* ix. 21); and they remain our best example of the *sermo cotidianus* of the upper classes. Satire, from its very nature and origin, required a less elevated style than other forms of poetry, and the satires of Horace, Persius, and Juvenal all afford a fruitful source for vulgarisms. There are also numerous writers on technical subjects, skilful in their several provinces, but weak in point of grammar: thus the architect Vitruvius, who would write correctly if he could, apologizes for his ignorance and begs that *si quid parum ad regulam artis grammaticae fuerit explicatum ignoscatur* (i. 1, 17). The elder Pliny, whose *Historia Naturalis* is confessedly a literary mosaic, is a treasure-house of plebeian vocabulary. The chief source, however, in ante-Hadrian Latin is and must remain the *Cena Trimalchionis* of Petronius, the narrative of which is told in the easy colloquial language of the upper classes, while the conversation of Trimalchio's circle is fairly redolent with vulgarisms, popular proverbs, and the current slang of the streets. See Petronius.

For post-classical Latin the entire range of literature is useful: for although departures from the classic norm must not be indiscriminately stigmatized as plebeian, few writers of the decadence escaped some taint of popular Latin. Of especial interest are Fronto, Gellius, and Apuleius, whose numerous archaisms are due as much to the *sermo Africus* as to the retrogressive movement begun under the emperor Hadrian. The later African writers are also of great importance, notably Ter-

tullian, Arnobius, Commodian, and Augustine; for although African Latin has left no modern representative, it was the great vitality of that idiom which imprinted upon ecclesiastical Latin its distinctive character, and thus indirectly imparted a tinge, especially in vocabulary and syntax, to the modern Romance languages.

As specimens of very late Latin, where the language is on the verge of disintegration, Anthimus, the historians Fredegarius and Gregory of Tours, and the *Regula Monachorum* of St. Benedict, recently edited by Wölfflin (Leipzig, 1895), are very instructive.

III. Characteristics of Plebeian Latin.—(*a*) *Phonetics.*—The main changes occur in the vowel-system. Latin originally possessed five vowels—*a, e, i, o, u*—which might be long or short. Plebeian Latin, however, gives early proof of a growing qualitative difference, long vowels tending to become close, short vowels open. That all qualitative difference was eventually lost appears from the Romance languages, and is further evidenced by the growing frequency of false quantities in Christian poets after the third century (Commodian, Ausonius, Dracontius, etc.), and by the substitution of stress accent for metrical accent in late popular songs. Owing to such changes, *ĭ* tended early to merge in *ē*, and *ŭ* in *ō* soon after: see Varr. *R. R.* 1, 2, 14, *rustici viam veham appellant*, and the admonitions of Prob. *App.* 197, 25, *columna, non "colomna"*; id. 198, 23, *puella, non "poella"* (compare the Italian, *penna, pera; pollo, torre* = Latin *pinna, pira, pullus, turris*). Similarly the diphthongs *ae, au*, tended to weaken to *e, o*: see Varro, *L. L.* v. 97, *in Latio rure "edus"; qui in urbe, ut in multis, a addito, aedus;* Fest. 202, 13, *orata, genus piscis, appellatur a colore auri quod rustici "orum" dicebant, ut auriculas "oriculas"* (compare the Ital. *povero, toro;* Span. *pobre, toro* = Lat. *pauper, taurus*). Unaccented *au*, closely followed by *u*, weakened to *a*: see Caper, 108, 6, *ausculta, non "asculta"* (compare the Ital. *Agosto*, Fr. *Août* = Lat. *Augustus*). A result of the stress accent was frequent syncope of unaccented vowels, notably between liquids and mutes: see Prob. *App.* 198, 3, *calida, non "calda," frigida, non "frigda"* (compare *domnus* = *dominus* [Plaut.], *mattus* = *maditus* [Petr.], and Ital. *caldo, freddo*, Fr. *chaud, froid*). From the second century, a prosthetic *i* became frequent before *st, sc, sp*, etc., mainly in inscriptions, and has survived to some extent in the Romance languages (compare Fr. *étude, écrire* = Lat. *studium, scribere*).

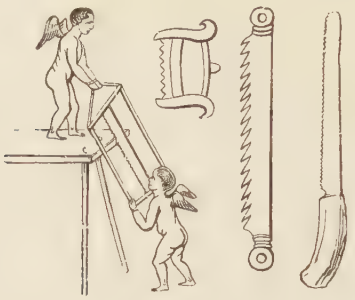
The majority of Latin consonants have passed unaltered into the Romance language and exhibit few distinctly plebeian features. The most important changes, the assibilation of *ti* before a vowel and of *c* and *g* before *e* and *i*, belong to the latest period of Latinity. In post-Hadrian Latin *b* became confounded with *v* (comp. forms like *Berecundus, inbicto, berbeces*, from the second-century inscriptions; Prob. *App.* 198, 7, *alveus, non "albeus"*; Ital. *avere, inverno;* Fr. *avoir, hiver* = Lat. *habere, hibernum*). The aspirate was frequently misapplied, as to-day in Cockney English: Catullus (*Carm.* 84) ridicules forms like *chommoda, hinsidias* as a vulgar affectation (cf. Nigid. *ap.* Gell. xiii. 6, 3, *rusticus fit sermo si aspires perperam;* Caper, vii. 102, 12, *alica, non "halica"*). Final consonants were often neglected. Thus final *m*, lightly sounded even in classic Latin, was disregarded in the popular speech (cf. Prob. *App.* 199, 14, *passim, non "passi"; numquam, non "numqua"; pridem, non "pride"; olim, non "oli"*). The failure of final *s* to make position, a usage common in early poetry, had become *"subrusticum"* in Cicero's day (*Orator*, 48, 161): its omission becomes frequent in the second-century inscriptions. In Pompeian wall inscriptions final *t* is sometimes wanting (comp. forms like *ama, valia, peria*). The Sermo Plebeius carried assimilation much further than the classic speech: *nn* for *nd* was probably due to Osco-Umbrian influence. Comp. Prob. *App.* 197, 24, *"candela," non "cannela,"* and forms like *dispennite* (Plaut.), *verecunnus* (*Inscrr. Pomp.*), with Oscan *upsannam* = Lat. *operandum*. Such forms are now common in the Neapolitan dialect. *tt* for *ct* is found in the fourth century inscriptions—e. g. *lattucae, ottobris* (cf. Prob. *App.* 198, 30: *auctor, non "auttor,"* and Ital. *notte, ottavo, pittore* = Lat. *noctem, octavus, pictor*. *tt* for *pt* is seen in inscriptional forms, such as *Settembris, scritus* (cf. Ital. *Settembre, scritto*); *ss* for *sp*, or *ps*. Comp. also the vulgar form *issa* for *ipsa* in Martial (i. 1 [9]): *scriserunt* (*Inscr.*); Ital. *scrissi*.

(*b*) *Word-Formation.*—The contrast between the Romance languages and classic Latin is nowhere sharper than in vocabulary. Many familiar classic words have vanished, plebeian forms surviving in their place; so the vulgar *bucca, caballus*, have replaced *os* (gen. *oris*), *equus* (cf. the French *bouche, cheval;* Ital. *bocca, cavallo*). Still oftener the simple Latin word has survived only in a derivative form, a condition due to the plebeian fondness for ponderous derivatives and compounds. The popular language was burdened with substantives in *-bulum, -mentum*, and *-monium*, and adjectives in *-bundus, -lentus*, and *-osus;* frequentative, inchoative, and desiderative verbs, diminutives, and prepositional compounds all abounded. Everywhere the effort was apparent to compensate by volume of sound for native poverty of thought. Such derivatives often differed but slightly, if at all, in meaning from the simple word, as the Romance languages testify (cf. the French *abeille, corbeille*, from Lat. diminutives *apicula, corbicula; chanter, jeter*, from frequentatives *cantare, iactare*). Through such misuse, words tended to wear out quickly, and it became necessary to reinforce them. Hence arose double diminutives, like *homullulus, lapillulus;* double frequentatives, like *cantitare, ductitare;* verbs with reduplicated prepositions, as *con-colligere, per-per-ire*, etc. The same fondness for lengthened forms is seen in the numerous compound suffixes resulting from secondary derivation, such as *-bili-tas, -osi-tas, -tor-ius, -ill-are*, or by deliberate compounding of separate endings, as *-astellus, -ul-aster, -idini-tas, -eli-tas*. Furthermore, the two processes of composition and derivation are used in combination; a growing proportion of derivative verbs are compounded with prepositions, while the growing tendency to derive substantives and adjectives from compound verbs by preference gave rise to such forms as *stultiloquentia, vaniloquentia* (Plaut.), *circumspicientia* (Gell.), *disconvenientia, impraescientia, subtililoquentia* (Tert.), *suffumigatorius, superinunctorius* (Cass. Fel.); and such were often further compounded, notably with *in-* privative. Comp. *inrecogitatio* (Tert.), *incoinquinabilitas* (Fulg. Rusp.).

(*c*) *Inflection.*—The radical process by which case-forms and tense-endings were largely replaced in the Romance languages by prepositions and periphrastic conjugations belongs under the head

of syntax. The following are the principal anomalies of plebeian inflection: transfers from the fourth declension to the second, and from the fifth to the first, even in Plautine Latin, thus anticipating the loss of the fourth and fifth in Romance languages. Comp. *senatus, -i, tumultus, -i, ecfigia* for *effigies* (Plaut.); transfers from the third declension to second: cf. *vasum, ossum* (Plaut.), *pauper, a, um* (Plaut., Petr.), and Ital. *vaso, osso, povero*. Substitutions of nominal endings in pronominal declension: *ipsus, istus;* gen. sing. *isti, ulli;* dat. sing. fem. *aliae, totae* (all in Plaut.). Numerous irregular comparatives and superlatives, made from superlative forms, as *postremior, extremior* (Apul.), *extremissimus* (Tert.), *minissimus* (Arnob.), or from other words not usually compared in classic Latin, as *ipsissimus, geminissimus, patruissimus* (Plaut.), *pathicissimus* (Mart.), *caenidior* (Catull.). Adverbs in *-ter*, formed irregularly from adjectives in *-us: avariter, firmiter, largiter* (Plaut.), *improbiter* (Petr.). The use of active forms, in place of deponent verbs: cf. *laeto, opitulo* (Liv. Andr.), *ioco, nicto* (Plaut.), *aemulo* (Apul.), *carnifico, vesco* (Tert.). Transfers from the third to the fourth conjugation (so frequent in the Romance languages): cf. *aggrediri, moriri* (Plaut.), Ital. *morire*. The formation of the fourth declension future in *-ibo*, by analogy with *-abo, -ebo:* cf. *nescibo, audibis, scibimus* (Plaut.). The unusual formation of certain perfects with the normal ending *-ivi:* cf. *posivi, institivi, potivi*, etc. Similarly the use of the normal imperatives *face, duce*, etc., for usual *fac, duc*.

(*d*) *Syntax.*—Neuter nouns tended to become masculine, more rarely feminine: cf. *caelus, fatus, vinus, triclinia* (Petr.), and the loss of the neuter in Ital., Span., etc. From the Romance standpoint, great importance attaches to the tendency to develop syntax at the expense of inflectional forms. Thus case-constructions were gradually replaced by prepositions: the partitive genitive by *de*, the dative of indirect object by *ad*, the instrumental ablative by *cum*. From early times the accusative tended to assume the functions of other cases — e. g. of the ablative after *utor, fruor, fungor*, etc., or of the dative after verbs of pleasing, trusting, etc. Gradually a confusion arose between the cases, and we find *in* construed indifferently with accusative or ablative; later *cum, de, ex* occur with the accusative; *ante, per*, etc., with the ablative. Adjectives were compared with the help of adverbs, such as *bene, magis, plus:* cf. Fr. *bien joli*, Span. *mas grande*, Ital. *più forte*. There was a tendency to use the verbs *esse, habere* as auxiliaries to form periphrastic tenses. The uses of the subjunctive mood were gradually curtailed from the time of Plautus the indicative occurs in indirect questions, and in later Latin purpose is often expressed by the infinitive. Conversely, the infinitive with *verba sentiendi et declarandi* is constantly replaced by the indicative (more rarely the subjunctive) with *quod, quia, quoniam* in post-classic Latin: cf. *dixi quod mustella comedit* (Petr.), Fr. *j'ai dit que . . .* Finally, plebeian Latin is partial to double negatives: *nemini nihil satis est* (Petr.); cf. Ital. *non fa niente*, Fr. *je n'ai point*.



IV. Bibliography.—Most of the literature concerning the Sermo Plebeius is embodied in monographs, dealing either with special grammatical points or with the style of the individual writers. There exists as yet no comprehensive treatise covering the subject as a whole, although the results of modern scholarship have been to some extent embodied in such recent works as Stolz and Schmalz's *Lateinische Grammatik*, in Müller's *Handbuch der klassischen Alterthumswissenschaft*, vol. ii. (2d ed. Munich, 1890); Lindsay's *The Latin Language* (Oxford, 1894); and the new *Historische Grammatik der lateinischen Sprache*, of which only the first volume, by Prof. Stolz (*Einleitung, Lautlehre, Stammbildungslehre*), has yet appeared (Leipzig, 1894–95). The following list includes the more important works bearing upon this subject: Wölfflin, *Zum Vulgärlatein*, in the *Philologus*, vol. xxxiv. pp. 137–165; O. Rebling, *Versuch einer Charakteristik der römischen Umgangssprache* (2d ed. Kiel, 1882); Herm. Rönsch, *Itala und Vulgata* (Marburg and Leipzig, 1869); A. von Guericke, *De Linguae Vulgaris Reliquiis apud Petronium et in Inscriptionibus Parietariis Pompeianis* (Gumbinnen, 1875); E. Ludwig, *Bericht über die in den Jahren 1873–76 erschienenen Schriften über Vulgärlatein und spätere Latinität*, in Bursian's *Jahresbericht*, vol. vi. pp. 238 foll., and the same author's *De Petronii Sermone Plebeio* (Marburg, 1869); G. Koffmane, *Geschichte des Kirchenlateins*, pts. i. and ii. (Breslau, 1879–81); Ott, *Die neueren Forschungen im Gebiete des Bibel-Latein*, in the *Neue Jahrbuch für Philologie* (1874), pp. 757–792, 833–867; Storm, *Romance Languages*, in the *Encyclopaedia Britannica* (9th ed.), vol. xx. pp. 661–668; Paul Monceaux, *Le Latin Vulgaire d'après les Dernières Publications*, in the *Revue des Deux Mondes* (July 15, 1891), pp. 429–448; Budinsky, *Die Ausbreitung der lateinischen Sprache* (Berlin, 1881); A. Koehler, *De Auctoris Belli Africani et Belli hispaniensis Latinitate* (Erlangen, 1877); Kraut, *Ueber das vulgäre Element in der Sprache des Sallustius* (Blaubeuren, 1881); Stinner, *De eo quo Cicero in Epistolis Usus est Sermone* (Oppeln, 1879); Cooper, *Word Formation in the Roman Sermo Plebeius* (Boston, 1895); and the list of authorities there cited. See also the list given by Schmalz in Müller's *Handbuch*, and many articles contained in the *Archiv für lateinische Lexicographie*, vols. i.–viii. (Leipzig, 1884–94). The following treatises are important for African Latin: Sittl, *Die lokalen Verschiedenheiten der lateinischen Sprache* (Erlangen, 1882); H. Kretschmann, *De Latinitate L. Apulei Madaurensis* (Königsberg, 1865); Wölfflin, *Ueber die Latinität des Afrikaners Cassius Felix*, in *Sittungsber. d. k. b. Akademie der Wissenschaften z.* Munchen, *Philos.-Histos. Cl.* (1880), pp. 381–432; three important articles in the eighth volume of the *Archiv f. Lat. Lex.:* Kübler, *Die lateinische Sprache auf afrikanischen Inschriften*, pp. 161–202; and Thielmann, *Die Lateinische Uebersetzung des Buches der Weisheit*, and *Die Lateinische Uebersetzung des Buches Sirach*, pp. 235–277, 501–561; Paul Monceaux, *Les Africains* (Paris, 1894); and Gaston Boissier, *L'Afrique Romaine* (Paris, 1895).

Sermȳla (Σερμύλη). A town in Macedonia on the peninsula Sithonia or its isthmus (Herod. vii. 122).

Serpentini Versus. See Echoici Versus.

Serra (πρίων). A saw. The ancient forms of the saw were identical with those found in our own time, as the accompanying representations show, taken from a Pompeian painting, Gruter, and an Egyptian source respectively. The blade of the saw was called *lamina*. St. Jerome (*In Is.* xxviii. 27) is thought to refer to the circular saw; and Pliny (*H. N.* xxxvi. 9) speaks of a saw for cutting

stone, but toothless, the place of teeth being supplied by emery or very fine sand. The word *serrarius* denotes a saw-maker, while *prista* is used of a person who saws.

Serrae.

Serrānus, Atilius. Serranus was originally an agnomen of C. Atilius Regulus, consul B.C. 257 (see REGULUS), but afterwards became the name of a distinct family of the Atilia gens. Most of the ancient writers derive the name from *serere*, and relate that Regulus received the surname of Serranus because he was engaged in sowing when the news was brought him of his elevation to the consulship (Verg. *Aen.* vi. 845). It appears, however, from coins that *Saranus* is the proper form of the name, and some modern writers think that it is derived from Saranum, a town of Umbria. (1) GAIUS, consul B.C. 106 with Q. Servilius Caepio, the year in which Cicero and Pompey were born. Although a *stultissimus homo*, according to Cicero, he was elected in preference to Q. Catulus. He was one of the senators who took up arms against Saturninus in 100. (2) SEXTIUS, surnamed GAVIĀNUS, because he originally belonged to the Gavia gens. He was quaestor in 63 in the consulship of Cicero, who treated him with distinguished favour; but in his tribunate of the plebs (57) he took an active part in opposing Cicero's recall from banishment. After Cicero's return to Rome he put his veto upon the decree of the Senate restoring to Cicero the site on which his house had stood, but found it advisable to withdraw his opposition (Cic. *Pro Sest.* 33–43; *Post Red.* 5; *Ad Att.* iv. 2).

Serrātus. A Roman denarius having a serrated edge, struck under the Republic (Tac. *Germ.* 5; cf. Mommsen, *Röm. Münzwesen*, p. 771).

Serta. A wreath or garland. See CORONA.

Sertorius, QUINTUS. One of the most extraordinary men in the later times of the Roman Republic. He was a native of Nursia, a Sabine village, and was born of obscure but respectable parents. He served under Marius in the war against the Teutones; and before the battle of Aquae Sextiae (Aix), in B.C. 102, he entered the camp of the Teutones in disguise as a spy, for which hazardous undertaking his intrepid character and some knowledge of the Keltic language well qualified him. He also served as *tribunus militum* in Spain under T. Didius (97). He was quaestor in 91, and had before this time lost an eye in battle. On the outbreak of the Civil War in 88 he declared himself against the party of the nobles, and commanded one of the four armies which besieged Rome under Marius and Cinna (App. *B. C.* i. 67). He was, however, opposed to the bloody massacre which ensued after Marius and Cinna entered Rome.

In 83 Sertorius was praetor, and either in this year or the following he went into Spain, whence he crossed over to Mauretania, and gained a victory over Paccianus, one of Sulla's generals. After this, at the request of the Lusitanians, he became their leader, and for some years successfully resisted all the power of Rome. He availed himself of the superstitious character of that people to strengthen his authority over them. A fawn was brought to him by one of the natives as a present, which soon became so tame as to accompany him in his walks and attend him on all occasions. After Sulla had become master of Italy, Sertorius was joined by many Romans, and among the rest by M. Perperna, with fifty-three cohorts. (See PERPERNA.) To give some show of form to his formidable power, Sertorius established a Senate of 300, into which no provincial was admitted. The continued want of success on the part of Metellus, who had been sent against Sertorius in 79, induced the Romans to send Pompey to his assistance, but with an independent command. Pompey arrived in Spain in 76 with a large force (30,000 infantry and 1000 cavalry), but was unable to gain any decisive advantages. For the next five years Sertorius kept both Metellus and Pompey at bay, and cut to pieces a large number of their forces. Sertorius was at length assassinated at a banquet in 72 by Perperna and some other Roman officers, who had long been jealous of his authority. See his life by Plutarch and the dissertation by Smits, *De Quinto Sertorio* (1867).

Servilia. (1) The daughter of Q. Servilius Caepio and the daughter of Livia, the sister of the celebrated M. Livius Drusus, tribune of the plebs in B.C. 91. Servilia was married twice: first to M. Iunius Brutus, by whom she became the mother of the murderer of Caesar, and secondly to D. Iunius Silanus, consul in 62. (2) Sister of the preceding, was the second wife of L. Lucullus, consul in 74.

Servilia Gens. One of the Alban houses removed to Rome by Tullius Hostilius. Its more important families bore the names of AHALA, CAEPIO, CASCA, GLAUCIA, RULLUS, VATIA.

Servilius Ahăla. See AHALA.

Servilius Caepio. See CAEPIO.

Servilius Casca. See CASCA.

Servilius Rullus. See RULLUS.

Servĭtus. See SERVUS.

Servitūtes. Where one person has a right over property of another, which he can assert by legal remedy against any one who interferes with its exercise, and not merely against the owner of the property, he is said to have a *ius in re aliena*, and his right belongs to those which are "real" or *in rem*. By the existence of such a right the legal position of the owner is diminished in value: his ownership, which otherwise would be unrestricted, is curtailed, not in duration, but in extension. The presumption of law was in favour of the freedom of property, and the burden of proving his right over it lay on the other party: hence, when a thing was sold as *optima maxima*, this was legally understood to mean that it was warranted free from any real rights in persons other than the owner (Dig. 50, 16, 90, and 169). Two classes of such

rights are known to Roman law: one recognized by the old Ius Civile, and termed *servitutes;* the other of praetorian origin, and known by specific names—viz. *Emphyteusis, Pignus,* and *Superficies.* See the articles under these heads. Servitutes are either personal or praedial. Of the first class are *habitatio* or the right of living in another person's house; and *operae servorum* or *animalium,* the right of using his slaves or animals. Among praedial servitutes are that *oneris ferendi,* the right to use a wall or edifice of his neighbour as a support for his own; *proiciendi,* the right to allow one's balcony to project over his neighbour's land; *cloacae immittendae,* the right of running a drain through a neighbour's premises, etc. The modern term for *servitutes* is "easements." See Schonemann, *Die Servituten* (1866); Molitor, *La Possession et les Servitutes en Droit Romain* (1851).

Servius Marius (or **Maurus**) **Honorātus.** A Roman grammarian, who lived towards the end of the fourth century A.D. He taught grammar and rhetoric at Rome, and composed, besides a commentary on the grammar of Donatus and some short treatises on grammar, a commentary on Vergil remarkable for its copious historical, mythological, and antiquarian notes, most of which are probably derived from the writings of much earlier scholars. It has not, however, reached us in its original form. Servius appears as one of the characters in the *Saturnalia* of Macrobius (q. v.). The commentary on Vergil is edited by Thilo and Hagen (Leipzig, 1878).

Servius Tullius. See TULLIUS.

Servus (*δοῦλος*). I. In GREECE, besides a class of serfs like the Penestae of Thessaly and the Helots of Sparta, who had come to this condition through being conquered in war, we find, even in Homeric times, actual slaves not differing greatly from freemen. They seem to have been possessed in large numbers only by princes and chieftains, who either obtained them as booty on expeditions (*δοριάλωτοι*), or bought them from such predatory adventurers as the Phœnicians (*Odyss.* xv. 483). In historic times the institution of slavery was very much developed, so that there is scarcely a State in which even the poorer citizens did not own a male or female slave to do the rough work considered unworthy of a free man (Aristoph. *Plut.* init.). In Attica, when the State was in its most flourishing condition, there were some 400,000 slaves, or about four times the number of the free citizens (Ctesicles *ap.* Athen. vi. p. 272 *c*). The Greeks justified slavery, much as did our antebellum teachers, by alleging that there were certain barbarians who had been intended by nature to be slaves. As a matter of fact, the slaves in Greece were for the most part barbarians by race. In exceptional cases, Greeks also were captured in war, and were thus reduced to permanent slavery; but, as a rule, they were exchanged or freed on the payment of a ransom. The countries of Asia Minor, Thrace, and the northern regions comprehended under the name of Scythia sent the greatest numbers to the slave-markets, of which the most important were at Delos, Chios, and Byzantium. Athens also had a slave-market, especially used by citizens who wished to expose undesirable slaves for sale. Most of the slaves in Attica were such as had been born from female slaves. The wealthy sometimes possessed several hundreds of them, of whom, naturally, only a part would be kept in the house. Some of the remainder worked on farms in the country, while others served on the merchantmen as rowers or sailors, others in the mines at Laurium, while others again, either singly or in numbers in a manufactory and under a superintendent, were engaged in some trade on their master's account. The owners also sometimes let out slaves to others, as in our Southern States before the war. Domestic slaves were employed in every conceivable kind of occupation in the house, and were also intrusted with the education of the boys, whom they had to accompany everywhere, especially to the school and to the palaestra; such slaves were called *παιδαγωγοί.* Indeed, as a rule, even the commonest Greek, if he could possibly manage it, never went out unescorted by a slave; while, if he was rich, a number of slaves followed him. At the same time, no Greek seems to have had the vast collection of slaves that many Romans had under the Empire. Fifty was regarded as a large number, though Nicias owned as many as 1000 or more (Xen. *De Vect.* 4). The chief difference, however, between the Greek and Roman view of slavery is that the Greeks regarded the slave as a labourer and an industrial necessity, while the Romans used him chiefly as a minister to their personal pleasures. See the remarks at the end of the present article, and cf. Athen. vi. p. 272 *e.*

Their treatment differed according to the character and the pecuniary position of the owner, and also depended upon their own good qualities and usefulness. In general, the Athenians were noted for showing more kindness to their slaves than did the rest of the Greeks. There were laws also that referred to them, and protected them against excessive caprice and harshness. But they had no legal rights; they could neither bring a charge nor appear as witnesses. It was only when they were put to the torture (*βασανίζειν*) that their evidence had any weight attached to it. But the master could not kill a slave unless the latter had been condemned in a law-court; otherwise he had to pay a penalty to some divinity. If cruelly treated, a slave could seek protection, usually in the temple of Theseus, and claim to be sold to another master. In case of maltreatment by a stranger, the master could bring a legal action, and obtain heavy damages. Slaves had no particular dress prescribed for them by law; but they were not allowed to let their hair grow long. They were not prohibited from entering temples and sanctuaries or from taking part in the public religious festivals; but they were excluded from the use of the gymnasia and from the assemblies of the people. Manumissions were not rare, especially such as were made by a clause in the owner's will, or if slaves bought their freedom with the savings made by permission of the master. Sometimes manumission was a reward for giving information about grave crimes, or for distinguished service in war; for slaves were not unfrequently employed in military service, especially in the fleet as rowers and sailors, or as marines. (See NAVIS.) (For the position of the liberated slaves, see LIBERTUS.) At Athens there was also a special class of public slaves (*δημόσιοι*). Chief among them were those called Scythae or archers, at first 300, then 600, and finally as many as 1200; the name Speusinii was also given them from a certain Speusinus, who is

said to have established this institution (Pollux, viii. 132, and the *Etymologicum Magnum*). They served as police, and their duties were at first confined to the market-place, but afterwards were extended to the Areopagus. They were further employed for military purposes, like the similar corps, also consisting of public slaves, of 200 mounted archers (*ἱπποτοξόται*). The lower servants of the State officials, such as criers, scribes, jail-keepers, and hangmen, were mostly (the last-mentioned always) public slaves, and so were the workmen at the mint. Their position was one of much greater freedom than that of the private slaves, and did not differ greatly from that of the *μέτοικοι*. See DEMOSTH.

II. The ROMANS, like the Greeks, possessed slaves from the earliest times; but their number was at first trifling, on account of the small households of the old Romans and their simple manner of life. But great estates gradually became frequent, and slaves were used by preference for agricultural work, because they were not subject to levy for military service. Luxury became more general, and a number of wants, previously unknown, were created by it; and in course of time the custom of employing slaves for industrial purposes was borrowed from the Greeks. All this caused a continual increase in the number of slaves, until in some cases they were collected in several thousands. Some of these were born in the house, and were called *vernae;* they were regarded as particularly faithful and trustworthy, and enjoyed certain liberties accordingly. The remainder were for the most part acquired among the spoils of war, or were introduced from other countries where slaves were kept. Those taken in war were sold by the quaestor either on the spot immediately or at the nearest market-place, or, according to the technical terms, either *sub hasta* ("under the lance") or *sub corona* ("under the wreath," which was placed on the head of captives in war to show that they were for sale). For this purpose slave-dealers (*mangones*), whose profitable trade was regarded with contempt, were always represented in the train of Roman armies. They also bought slaves in great numbers at the principal slave-marts, as at Rome and Delos. At Rome, the aediles superintended this kind of business, on which the government levied a tax for import and a further tax on the sale. The slave was placed on a platform (*catasta*), with his feet whitened with chalk or gypsum, if he had just come across the sea (Juv. i. 111), and with a label (*titulus*) round his neck, showing his home, age, abilities, and bodily defects, if any, the vendor being responsible for the correctness of these statements; if he would not bind himself in any such way, this was shown by placing a cap (*pilleus*) on the slave's head. (See PILLEUS.) Slaves distinguished for their beauty, their skill, or their literary or musical accomplishments, were not exhibited publicly, but in special places, and to such as were able to pay the prices for them, which frequently ran very high. Those born in the house were also sold by private agreement, without being exposed. There were slaves of every nationality, and on this depended in general the names by which they were called and the work which was assigned them. The *familia* (a designation including all the slaves, or *famuli*, belonging to the same master) was generally divided into that of the country (*familia rustica*) and that of the town (*familia urbana*).

The work done by the slaves was of the most varied character, and the great diversity of their occupations is partly explained by the fact that almost every kind of work required a special slave, and it was considered not consistent with good breeding, and a sign of poverty, if the same slave was intrusted with several different duties. Thus there were in the country special slaves for the various branches of agriculture, horticulture, and the tending of cattle, the cultivation of olives and vines, the keeping of bees and of poultry, and for the preserves and fishponds. These slaves were under the supervision of the *vilicus* (farm-bailiff) or *actor* (steward), who had to render the accounts to the master or his representative.

The number of town-slaves was not due to actual requirements, but depended upon the luxurious fashions which became more and more prevalent in the last two centuries of the Republic. In older times the house and everything belonging to it was in charge of the *aedituus* ("major domo," "steward"), who managed all household affairs, received and spent money, negotiated sales and purchases, and disposed of the stores. When the extension of the household made it necessary to keep a special person to control the expenditure, the steward's functions were limited to seeing that the house and furniture were properly cleaned and in a good state. Besides him there were subordinate servants for the various dwellings, the spare rooms for visitors, the shrine of the household gods, the images of the ancestors, the various kinds of furniture, the art collections, and the wardrobe; and there was also a porter (*ianitor* or *ostiarius*), who, according to an old custom, was chained like a dog (Suet. *De Rhet.* 3; Columel. 1 pr. § 10; Ovid, *Amores*, i. 6, 1).

The kitchen was in charge of a special slave, an even more expensive one than the *vilicus;* and under him were a host of assistants, wood-carriers, market-men, pastry-cooks, etc. The service at table also necessitated a numerous attendance of dressers, servers, carvers, fore-tasters, cup-bearers, table-clearers and others, who similarly were under a special foreman, the *tricliniarcha*, who saw to the general arrangements and to the lighting. The master and mistress of the house were served by special valets (*cubicularii*), who also had to announce visitors (*nomenclatores*), and pages and chambermaids and special servants for the bath and the toilet. It was considered of especial importance that, when the master or mistress of the house left it on foot or in a litter, the slaves following them should be numerous and richly attired. Some slaves went before their master (*anteambulones*), especially the *nomenclator*, who informed his master of the names of the persons they met; others followed (*pedisequi*); others, again, were told off for attending their master with torches and lanterns on leaving parties in the evening. The litter of each member of the family was carried by from six to eight *lecticarii*, particularly strong men, and by preference Cappadocians. For travelling across country there was always a large escort, consisting of crowds of equerries, outriders, grooms, etc. The most important position among the servants was occupied by those whom the master himself chose to assist him in his business or his recreations, as, for instance, those who attended to money matters and to the supervision of the slaves, secretaries, physicians, readers at

meals or during the bath or before going to sleep, literary men (*litterati*), librarians, and transcribers of books. For other kinds of recreation there were also slaves who had received a musical training, *pantomimi*, fools, and jesters. See NANUS.

The various classes of slaves had each its special foreman, with a substitute whom he either received from his master or bought with his savings (*peculium*). These formed the class of the *ordinarii*, who enjoyed the special confidence of their master; this class included such servants as looked after the food, clothing, and medical attendance of the slaves, the maintenance and watching of the various buildings, the accounts of the household (*cellarius*), and the expenses of the master (*dispensator*). Young slaves were trained for the various requirements of the household; according to their abilities, they were taught some trade or art, or had practice given them either in keeping accounts or in learned studies. Under the Empire, those who were destined to be pages received their education in special *paedagogia* or establishments, kept not only by the emperor, but also by private citizens. As in Greece, trained slaves were established in some trade by themselves, or let out on hire; such was the case even with slaves who were artists or men of learning. Even posts of independence, such as the administration of an estate in the country, or of a bank, or the command of a ship, were intrusted to slaves, who received a share in the profits, or paid interest on the capital invested, or a fixed sum of money when the capital was their own. For the slaves were allowed to acquire a private fortune (*peculium*) from what they saved on their allowances and from the regular profits of their service. The masters regarded this arrangement with favour, especially as it represented a kind of caution money in case any damage was done. See PECULIUM.

The Roman slave was, in the eyes of the law, a mere chattel (Varro even styles him "a speaking tool" [*instrumentum vocale*]), and hence absolutely without any rights and completely exposed to the caprice of his master. The latter could compel him to do the meanest and most shameful things, could torture or kill him, or cast him out when he was old or weakly; and as this treatment was legally permitted, it was carried out in practice when occasion offered. Especial cruelty was experienced by the country-slaves, who worked in chains in the greater part of Italy, and were kept in a guarded work-house (*ergastulum*) at night; some of them were branded, or had half of their heads shaven. It was therefore a severe punishment for a town-slave to be sent into the country.

When the slaves were less numerous and were restricted to the drudgery of farm life, and when the consul himself had but one or two personal attendants, their treatment was, as has been said, the treatment accorded to animals. "Let the slave sleep or work," says Cato in his terse book of rules, implying that his working hours must all be devoted to toil. "Speak to slaves in monosyllables," says another writer (Seneca). "Treat them like wild beasts and subdue them by lashing. You will have as many enemies as you have slaves." And throughout the whole period of Roman history, the mere labourers fared as might have been expected among a people who followed out these harsh measures. A slave's life was long a matter of no concern to the State. It belonged wholly to his master. The elder Cato used not infrequently to put one of his slaves to death in the presence of his fellows to cow them into absolute subservience. There was no feeling of humanity visible in the treatment accorded to them. Pollio, the friend of Augustus, used a slave to feed the eels in his artificial lake. Augustus himself crucified a slave for killing a favourite quail. For worse offences worse punishments were devised. Men were lashed to death, crushed between two millstones; had their hands, feet, nose, lips, and eyes cut out and were then flung upon the bare ground to die; or they were suspended by hooks of iron to be devoured by the birds of prey. If a slave killed his master, not only he but all his companions were tortured and put to death; yet the killing of masters was not infrequent. Pliny in one of his letters gives one instance (iii. 14): "Largius Macedo, a man of praetorian rank, has suffered a dreadful fate at the hands of his slaves; a harsh master he was, too. While he was taking a bath at his Formian villa his slaves of a sudden surrounded him. One seized him by the throat, another struck him in the face; another bruised his breast and stomach, and when they thought him dead flung him on the heated marble to see whether he still lived." So Tacitus (*Ann.* xiv. 42) describes the murder of the city praefect, Pedianus Secundus, by his slaves, on which occasion four hundred innocent slaves were put to death with the guilty. Often the slaves, driven to desperation by their masters, banded together in a frantic struggle for vengeance. On one occasion several hundred broke out into the city, and rushing through the streets slew without discrimination every one they met, until they were themselves cut to pieces by a detachment of the Guards.

It was not until the influence of Christianity began to be felt that the Roman conception of humanity became sufficiently enlarged to embrace the slave as well as the freeman. Gradually the way to emancipation was made more and more easy. Gradually, too, the law began to throw some safeguards around the person of the slave, forbidding excessive cruelty on the master's part. At last, under Justinian, any slave could gain his freedom by becoming a monk or "spiritual person" (*Nov.* v. 2, 1; cxxiii. 7, 35).

The usual mode of killing slaves was crucifixion (see CRUX), which was put down by the Christian emperors. If a slave dared to wreak vengeance on his master, every slave who was under the same roof at the time was put to death with him. This cruelty of treatment, which grew continually in the last centuries of the Republic, brought on repeated and terrible insurrections of the slaves. Under the Empire they received some legal protection; in its very beginning, the master's right to condemn his slaves to fight with wild beasts was taken away from him and transferred to a regular judge—the praefect of the city at Rome and the procurator in the provinces. These officials were also empowered by Antoninus Pius to receive the complaints of slaves about cruel treatment, and to sell the slaves to another master, in case their complaints were found to rest on truth. Hadrian deprived the owners of the right of killing and torturing slaves at their pleasure, or of selling them to keepers of gladiatorial schools or to procurers; and, finally, Constantine placed the intentional killing of a slave on a level with mur-

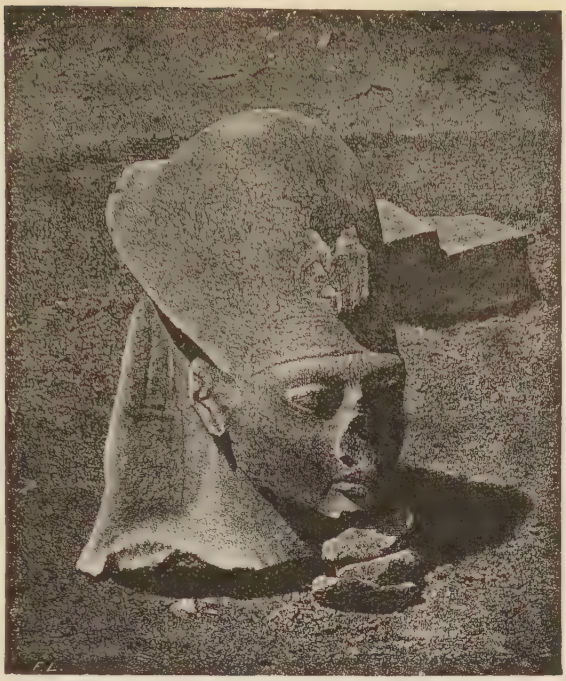
der. A kind of married relation between slaves, called *contubernium*, was permitted at an early time. Under the Empire, it became a rule to regard it as lasting and indissoluble, and even to celebrate the marriage of slaves by wedding festivities. Having no legal rights, the slave could not give evidence in a law court, and, as in Greece, only what he said when under torture was deemed worthy of credit. The Roman, like the Athenian, government had public slaves (*servi publici*), who, on the whole, had the same legal position as the private slaves. They lived in public buildings assigned to them by the censors, and received from the public chest a yearly sum to pay for their board (*cibaria*). They were partly employed as custodians of temples and public buildings (*aeditui*), partly as servants to the various priesthoods and to those magistrates who had duties relating to the police—namely, the censors and aediles who under Augustus had under their control a body of 600 *servi publici* for the prevention of fires (see VIGILES), the overseers of the water supply and of the prisons, and those who had to see capital offences carried out. The slaves of the latter included the hangman (*carnifex*), who was intrusted with the special duty of executing slaves, and who had to live outside the Esquiline Gate.

There was no distinctive dress for Roman slaves. It was once proposed in the Senate to give them a distinctive costume, but it was rejected since it was considered dangerous to show them how numerous they were (Sen. *De Clem.* i. 24). Male slaves were not allowed to wear the toga or bulla, nor females the stola; but otherwise they were dressed in nearly the same way as the poorer people, in tunics and cloaks of a dark colour (*pullati*) and slippers (*crepidae*), or in the country *sculponeae* or clogs (*vestis servilis*, Cic. *In Pis.* 38, 93).

The prices of ordinary slaves was low by reason of the great number of them on sale at Rome. The struggles of Rome with Pyrrhus, with Perseus, with Hannibal, with the Sicilians, with the Gauls, the Cimbri, and the Germans, all ending in the success of the Roman arms, turned the metropolis into a great slave-market whither the prisoners fresh from the field of battle, and representing every country, civilized and barbarian, poured in one continuous throng. Scipio Aemilianus is said to have sold nearly 60,000 Carthaginians into slavery. Marius made serfs of 140,000 Cimbri. Aemilius Paullus handed over 150,000 men, women, and children to the military quaestors who accompanied his army, and who acted as the fiscal agents of the government. Cicero received a sum of money equivalent to $500,000 from the sale of his prisoners of war. Gracchus is said to have enslaved so many Sardinians that the very name Sardus became a synonym for "slave." Popilius Laenas carried off 20,000 Statielli (Liguria) at once. Pompey and Caesar are roughly estimated to have sold at various times a million of human beings into slavery. The whole world was laid under contribution to supply the market for human chattels. "Long lines of chained prisoners from Germany, Gaul, and even Britain," says Duruy, "were led to Rome. Utica and Egypt furnished blacks; Numidia, swift runners; Alexandria, grammarians; Sidoné and Cyprus, those intelligent, docile, and corrupt Asiatics so highly prized as house servants; Greece, her handsome boys and girls; Epirus and Illyria, the most experienced shepherds; Germany, Gaul, and Thrace, the most savage gladiators; Cappadocia, the most patient labourers. Slave-dealers (*mangones*) accompanied every army, and the clash of arms had hardly ceased when the battle-field resounded with the sharp cries and sordid bustle of an auction-room."

How cheaply these newly-made slaves were rated is seen from the fact that Lucullus once sold a large number of prisoners at an average price of four drachmae—eighty cents—apiece. At Rome, the slave-market, as already stated, was under the supervision of the aediles; and the sales were usually at public auction, though slaves of great beauty or remarkable accomplishments were sometimes reserved for private sale, as we learn from Martial (ix. 60). The chief points of inquiry regarding an ordinary male slave were as to whether he was given to thievery, subject to epilepsy, of a suicidal tendency, and whether he had ever tried to escape. The slaves when on exhibition were often obliged to strip naked, and to jump, run, and move about to show their paces for the information of the intending purchasers. Medical experts were sometimes called in to give their opinion of the soundness of the slave.

In certain cases the law allowed a free person to be sold as a slave—e. g. those who attempted to evade public burdens by not having their names entered on the census (*incensi*), or who shirked military service, and the insolvent debtor under the old law of execution by *manus iniectio*. According to the old law, a thief caught in the act (*fur manifestus*) was adjudged (*addictus*) to the person whose property he had stolen. A free man over twenty years of age who collusively allowed himself to be sold as a slave in order to secretly share the purchase-money with the vendor was as early as the time of Mucius Scaevola refused his *proclamatio in libertatem* by the praetor, and so in effect adjudged a slave. By an enactment of Claudius also (Suet. *Claud.* 25), a freedman who had misconducted himself towards his patron might be again enslaved. Under the emperors it was established that a free man who was condemned to death, to penal servitude in the mines, or to fight with gladiators or wild beasts, became and died a slave.



The prices at which slaves sold at Rome varied, of course, very much with the time, the characteristics of the slave, and the requirements of the purchaser. In the time of Horace, an ordinary male slave cost about $90; somewhat later, $125. This was the price of a day labourer. More valuable were those who possessed some special accomplishment, who had a knowledge of medicine, or who were literary men.

Thus M. Scaurus bought a grammarian named Natius for 700,000 sesterces, or $28,000; boys sold for 100,000 sesterces ($4000) to 200,000 sesterces ($8000). A fool (*morio*) brought an average of 20,000 sesterces ($800) (Mart. viii. 13).

Good-looking girls were sold for immoral purposes for an average price of $1000; but if they were known to have already lost their virtue $25 was considered a fair price. Of all slaves, negroes and eunuchs were the most costly, the latter being largely sold for immoral purposes; so that Pliny records that Seianus, the minister of Tiberius, sold a eunuch named Paezon to Lutorius for the extraordinary sum of 50,000,000 sesterces, or $2,000,000. In later times some attempt was made to pass a sumptuary law regulating the prices of slaves.

Justinian fixed a regular tariff, eunuchs running from $150 to $350.

It is obvious that between the ordinary slave and his master there existed no ties of affection, and no feelings of gratitude that could lead to closer intimacy. This, however, was not true of the class of slaves who were sold as house-slaves, as personal attendants, as *paedagogi*, actors, teachers, and artists. These, coming often from the most polished communities of Greece, or often from the luxurious cities of Asia Minor, were infinitely the superiors of the Romans in intellectual training and accomplishments; and they could not fail to make themselves influential, and if not respected, at least felt. We can scarcely conceive of the ascendency which they attained at Rome. Everything was in their hands. They managed the estates, they kept the accounts, they arranged their masters' pleasures and kept them amused; they wrote their books, they painted their pictures, they controlled their fashions, they taught them music—and, more potent than all, they reared and trained their children. They swarmed in every household, and being keen-witted, intelligent, pliable, plausible, utterly shameless, and morally corrupt, they became a great plague spot in the heart of a community that had once been self-respecting, pure-minded, and devout. It is quite impossible to conceive of anything more demoralizing than such an influence, so widely exerted and so powerful for evil. It is not surprising to find a single century converting the Romans into a semi-Asiatic people living like Eastern voluptuaries, their houses glittering with gold and silver and jewels; their tables loaded with luxuries and crowded with sycophants; their halls swarming with human beings who won favour only by pandering to the most revolting vice and by stimulating jaded desire; their lives given over to gluttony and lust; their old ambition, their once strong intellects, their national pride, and their personal honour all flung away and turned to rottenness by the taint of that system which degrades and blights its victim by forcing him to be the unwilling instrument for the ruin of his fellow-men.

Sesostris or Ramses II. (Tanis.)

See Becker-Göll, *Gallus*, ii. 99–154; *Charikles*, iii. pp. 1–47; Lehmann, *De Publica Romanorum Servitute* (Leipzig, 1889); Wallon, *Histoire de l'Esclavage*, 3 vols. (2d ed. Paris, 1879); Gurowski, *Slavery in History* (New York, 1860); Lecky, *Hist. of European Morals*, i. 102 (note), 235, 262, 300–306 (Amer. ed. New York, 1884); Ingram, *Hist. of Slavery* (London, 1895); and the articles LIBERTUS; MANCIPIUM; MANUMISSIO; MEDIASTINUS.

Sesostris (Σέσωστρις). The name given by the Greeks to the great king of Egypt who is called in Manetho Ramses or Ramesses. Ramses (Egypt. Ra-messu Meri-Amen) is a name common to several kings of the eighteenth, nineteenth, and twentieth dynasties; but Sesostris may perhaps be identified with Ramses, the third king of the nineteenth dynasty, the son of Seti and the father of Menephthah II. (about B.C. 1333). Sesostris was a great conqueror. He is said to have subdued Ethiopia, the greater part of Asia, and the Thracians in Europe (Herod. ii. 102–111; Diod. i. 53–59). He returned to Egypt after an absence of nine years, and the countless captives whom he brought back with him were employed in the erection of numerous public works, such as those of which ruins still exist at Karnak, Luxor, Abu-Simbel, Memphis, and Thebes. Memorials of Ramses-Sesostris still exist throughout the whole of Egypt, from the mouth of the Nile to the south of Nubia, as also in the rock-tablets at Beyrut. An epic poem of one Pentaur, found on the monuments, celebrates his victories over the Kheta (i. e. Hittites). By some he has been identified with the Pharaoh of Exodus, but Lepsius thinks that the accounts of him confuse reminiscences of Sethos I. and Rameses II. See AEGYPTUS.

Sestertius (contracted from *semis tertius*—i. e. $2\frac{1}{2}$, expressed by the Roman symbol usually printed HS—i. e. II+S(*emis*), two units and a half). A coin, during the Republic, of silver; under the Empire, of copper, or more usually brass=$\frac{1}{4}$ *denarius*, originally $2\frac{1}{2}$ *asses* (whence the name); later, i. e. after B.C. 217, six *asses*. It was then worth $0.04. Under the early Empire it was worth about $0.05. After B.C. 209, when the Romans instituted a silver coinage, the copper *as* was suddenly reduced to 4 oz., and the *sestertius* ($2\frac{1}{2}\times 4$ oz.) became equivalent to one old *as* of 10 oz., instead of the original pound of 12 oz. It long continued to be used as the ordinary monetary unit. During the Republic and the first 300 years of the Empire amounts were reckoned in sesterces. Owing to the common use of *milia sestertiûm* (for *milia sestertiorum*), it became customary to treat *sestertium* as a neuter singular, and to omit *milia*. *Sestertium* thus denotes a sum of 1000 sesterces = (at $0.05 per sesterce) $50. A million sesterces ($50,000) was called originally *decies centena* (lit. "ten times one hundred thousand") *sestertium*, which was shortened to *decies sestertium*. 100,000 sesterces had thus

Sestertius of Nero in Brass.

become a customary unit for reckoning large sums of money. See NUMISMATICS, p. 1112.

Sestiānae Arae. The most westerly promontory of the northern coast of Hispania Tarraconensis, now Cape Villano. It had three altars dedicated to Augustus.

Sestīnum. Now Sestino; a town in Umbria on the Apennines, near the sources of the Pisaurus.

Sestius. See SEXTIUS.

Sestus (Σηστός). Now Ialova; a town in Thrace, situated at the narrowest part of the Hellespont, opposite Abydos in Asia, from which it was only seven stadia distant. It was founded by the Aeolians (Herod. vii. 33). It was celebrated in Grecian poetry on account of the loves of Leander and Hero (see LEANDER), and in history on account of the bridge of boats which Xerxes here built across the Hellespont. It was taken by the Romans in B.C. 190.

Set. An Egyptian god, identified by the Greeks with Typhon. See AEGYPTUS, p. 27; OSIRIS; TYPHON.

Setăbis. See SAETABIS.

Sethon (Σεθών). A priest of Hephaestus (Ptah), who made himself master of Egypt after the expulsion of Sabacon, king of the Ethiopians, and was succeeded by the Dodecarchia, or government of the twelve chiefs, which ended in the sole sovereignty of Psammetichus. Herodotus relates (ii. 141) that in Sethon's reign Sanacharibus, king of the Arabians and Assyrians, advanced against Egypt, at which Sethon was in great alarm, as he had insulted the warrior class, and deprived them of their lands, and they now refused to follow him to the war. But the god Hephaestus came to his assistance; for while the two armies were encamped near Pelusium, the field-mice in the night gnawed to pieces the bow-strings, the quivers, and the shield-handles of the Assyrians, who fled on the following day with great loss. The recollection of this miracle was perpetuated by a statue of the king in the temple of Hephaestus, holding a mouse in his hand, and saying, "Let every one look at me and be pious." This Sanacharibus is the Sennacherib of the Scriptures, and the destruction of the Assyrians at Pelusium is evidently only another version of the miraculous destruction of the Assyrians by the angel of the Lord, when they had advanced against Jerusalem in the reign of Hezekiah. According to the Jewish records, this event happened in B.C. 711.

Setia. Now Sezza or Sesse; an ancient town of Latium in the east of the Pomtine Marshes. It was celebrated for the excellent wine grown in its neighbourhood, which was reckoned in the time of Augustus the finest wine in Italy (Mart. x. 36; Juv. x. 27), and was called *vinum Setinum*. See VINUM.

Seven against Thebes, THE. Oedipus, king of Thebes, had pronounced a curse upon his sons Eteocles and Polynices that they should die at one another's hand. (See OEDIPUS.) In order to make the fulfilment of the curse impossible by separating himself from his brother, Polynices left Thebes while his father was still alive, and at Argos married Argea, the daughter of Adrastus (q. v.). On the death of his father he was recalled, and given by Eteocles, who was the elder of the two (Eurip. *Phoen.* 71), the choice between the kingdom and the treasures of Oedipus; but, on account of a quarrel that arose over the division, he departed a second time, and induced his father-in-law to undertake a war against his native city. According to another legend, the brothers deprived their father of the kingdom, and agreed to rule alternately, and to quit the city for a year at a time. Polynices, as the younger, first went into voluntary banishment; but when, after the expiration of a year, Eteocles denied him his right, and drove him out by violence, he fled to Argos, where Adrastus made him his son-in-law, and undertook to restore him with an armed force. Adrastus was the leader of the army; besides Polynices and Tydeus of Calydon, the other son-in-law of the king, there also took part in the expedition the king's brothers Hippomedon and Parthenopaeus (q. v.), Capaneus, a descendant of Proetus, and Amphiaraüs (q. v.), the latter against his will, and foreseeing his own death. The Atridae were invited to join in the expedition, but were withheld by evil omens from Zeus.

When the Seven reached Nemea on their march, a fresh warning befell them. Hypsipylé, the nurse of Opheltes, the son of King Lycurgus, laid her charge down on the grass in order to lead the thirsty warriors to a spring; during her absence the child was killed by a snake. They gave him solemn burial, and instituted the Nemean Games in his honour; but Amphiaraüs interpreted the occurrence as an omen of his own fate, and accordingly gave the boy the name of Archemorus (i. e. "leader to death"). When they arrived at the river Asopus in Boeotia, they sent Tydeus (q. v.) to Thebes in the hope of coming to terms. He was refused a hearing, and the Thebans laid an ambush for him on his return. The Seven now advanced to the walls of the city, and posted themselves with their troops one at each of its seven gates. Against them were posted seven chosen Thebans, among them Melanippus and Periclymenus. Menoeceus (q. v.) devoted himself to death to insure the victory for the Thebans. In the battle at the sanctuary of the Ismenian Apollo they were driven right back to their gates; the giant Capaneus had already climbed the wall by a scaling-ladder, and was presumptuously boasting that even the lightning of Zeus should not drive him back, when the flaming bolt of the god smote him down, and dashed him to atoms. The beautiful Parthenopaeus also fell, with his skull shattered by a rock that was hurled

at him. Adrastus desisted from the assault, and the armies, which had suffered severely, agreed that the originators of the quarrel, Eteocles and Polynices, should fight out their difference in single combat. Both brothers fell, and a fresh battle arose over their bodies. In this all of the assailants met their death, except Adrastus, who was saved by the speed of his black-maned charger. According to the older legends, his eloquence persuaded the Thebans to give the fallen due burial. When the bodies of the hostile brothers were placed on the pyre, the flames, which were meant to destroy them together, parted into two portions. According to the version of the story invented by the Attic tragedians, the Thebans refused to bury their foes, but at the prayer of Adrastus were compelled to do so by Theseus; according to another version, he conquered the Thebans and buried the dead bodies at Eleusis in Attica. For the burial of Polynices, see ANTIGONÉ; and also EPIGONI. The story forms the subject of one of the extant plays of Aeschylus. See AESCHYLUS.

Seven Sages, THE. Under this name were included in antiquity seven men living in the period from B.C. 620–550. They were distinguished for practical wisdom, and conducted the affairs of their country as rulers, lawgivers, and councillors, and were reputed to be the authors of certain short maxims in common use, which were variously assigned among them; the names also of the seven were differently given. Those usually mentioned are: CLEOBŪLUS, tyrant of Lindus in Rhodes ("Moderation is the chief good"); PERIANDER, tyrant of Corinth, 668–584 ("Forethought in all things"); PITTĂCUS of Mitylenē, born about 650, deliverer and *aesymnetes* of his native city ("Know thine opportunity"); BIAS of Prienē in Caria, about B.C. 570 ("Too many workers spoil the work"); THALES of Miletus, 639–536 ("To be surety brings ruin"); CHILON of Sparta ("Know thyself"); SOLON of Athens ("Nothing in excess," i. e. observe moderation).

Seven Sleepers of Ephĕsus, THE. Seven Christians of Ephesus who, according to the story related by Gregory of Tours (*Mirac. Lib.* ch. 92), fled to a cave at the time of the persecution under the emperor Decius in the third century, and there fell into a sleep that lasted for nearly two hundred years. Returning to the city, they experienced the surprise that Rip Van Winkle felt on his famous return, and at last discovered the truth regarding their sleep. Having had an interview with the emperor and convinced him of the life beyond the grave, they sank into a second sleep that is to last until the Resurrection. Their names as usually given are Maximianus, Malchus, Martinianus, Dionysius, Johannes, Serapion, and Constantius. Gregory states that the story is of Syrian origin. The Seven are commemorated by the Roman Catholic Church on June 27th. See Koch, *Die Siebenschläfer-Legende* (Leipzig, 1882).

Seven Wonders of the World, THE. Seven ancient buildings or works of art, distinguished either for size or splendour, viz.: (1) the Egyptian pyramids; (2) the hanging gardens of Semiramis at Babylon; (3) the temple of Artemis, at Ephesus; (4) the statue of Zeus by Phidias (q. v.), at Olympia; (5) the Mausoleum (q. v.) at Halicarnassus; (6) the Colossus of Rhodes (see COLOSSUS); and (7) the lighthouse on the island of Pharos, off Alexandria in Egypt. (See PHAROS.) These wonders were thus classified and celebrated by one of the Alexandrian scholars, Philo of Byzantium, in a work entitled Περὶ τῶν Ἑπτὰ Θεαμάτων, which is edited by Orelli (Leipzig, 1816).

Sevērus, A. CAECINA. See CAECINA.

Sevērus, ARCH OF. See ARCUS TRIUMPHALIS.

Sevērus, CASSIUS. A celebrated orator and satirical writer in the time of Augustus and Tiberius, was born about B.C. 50 at Longula, in Latium. He was a man of low origin and dissolute character, but was much feared for the severity of his attacks upon the Roman nobles. He must have commenced his career as a public slanderer very early, if he is the person against whom the sixth Epode of Horace is directed, as is supposed by many ancient and modern commentators. Towards the latter end of the reign of Augustus, Severus was banished by Augustus to the island of Crete on account of his libellous verses; but as he still continued to write libels, he was removed by Tiberius in A.D. 24 to the desert island of Seriphus, where he died in great poverty in the twenty-fifth year of his exile, A.D. 33.

Sevērus, CORNELIUS, the author of a poem entitled *Bellum Siculum*. He was contemporary with Ovid, by whom he is addressed in one of the Epistles written from Pontus.

Sevērus, FLAVIUS VALERIUS. A Roman emperor (A.D. 306–307). He was proclaimed Caesar by Galerius in 306, and was soon afterwards sent against Maxentius, who had assumed the imperial title at Rome. The expedition, however, was unsuccessful; and Severus, having surrendered at Ravenna, was taken as a prisoner to Rome, and compelled to put an end to his life. See MAXENTIUS.

Sevērus, LIBIUS. A Roman emperor (A.D. 461–465). He was a Lucanian by birth, and owed his accession to Ricimer, who placed him on the throne after the assassination of Majorian. During his reign the real government was in the hands of Ricimer. Severus died a natural death (Iornand. *De Rebus Goth.* 45).

Sevērus, LUCIUS SEPTIMIUS. A Roman emperor (A.D. 193–211), who was born 146, near Leptis in Africa. After holding various important military commands under M. Aurelius and Commodus, he was at length appointed commander-in-chief of the army in Pannonia and Illyria. By this army he was proclaimed emperor after the death of Pertinax (193). He forthwith marched upon Rome, where Iulianus had been made emperor by the Praetorian troops. Iulianus was put to death upon his arrival before the city. (See IULIANUS.) Severus then turned his arms against Pescennius Niger, who had been saluted emperor by the Eastern legions. The struggle was brought to a close by a decisive battle near Issus, in which Niger was defeated by Severus, and, having been shortly afterwards taken prisoner, was put to death by order of the latter (194). Severus then laid siege to Byzantium, which refused to submit to him even after the death of Niger, and which was not taken till 196. The city was treated with great severity by Severus. Its walls were levelled with the earth, its soldiers and magistrates put to death, and the town itself, deprived of all its political

privileges, made over to the Perinthians. During the continuance of this siege, Severus had crossed the Euphrates (195) and subdued the Mesopotamian Arabians. He returned to Italy in 196, and in the same year proceeded to Gaul to oppose Albinus, who had been proclaimed emperor by the troops in that country. Albinus was defeated and slain in a terrible battle fought near Lyons on the 19th of February, 197. Severus returned to Rome in the same year; but after remaining a short time in the capital, he set out for the East in order to repel the invasion of the Parthians, who were ravaging Mesopotamia. He crossed the Euphrates early in 198, and commenced a series of operations which were attended with brilliant results. Seleucia and Babylon were evacuated by the enemy, and Ctesiphon was taken and plundered after a short siege. After spending three years in the East, and visiting Arabia, Palestine, and Egypt, Severus returned to Rome in 202. For the next seven years he remained tranquilly at Rome, but in 208 he went to Britain with his sons Caracalla and Geta. Here he carried on war against the

L. Septimius Severus. (Bust in the Capitoline Museum.)

Caledonians, and erected the celebrated wall, which bore his name, from the Solway to the mouth of the Tyne. After remaining two years in Britain, he died at Eboracum (York) on the 4th of February, 211, in the sixty-fifth year of his age and the eighteenth of his reign. His life is written by Spartianus. See Duruy, *Septime-Sévère* (Paris, 1878); and Hassebrank, *Kaiser Septimius Severus*, 2 pts. (1890–91).

Sevērus, Marcus Aurelius Alexander, usually called **Alexander Sevērus**. A Roman emperor (A.D. 222–235), the son of Gessius Marcianus and Iulia Mamaea, and first cousin of Elagabalus. He was born at Arcé, in Phœnicia, in the temple of Alexander the Great, to which his parents had repaired for the celebration of a festival, on the 1st of October, A.D. 205. His original name appears to have been Alexianus Bassianus, the latter appellation having been derived from his maternal grandfather. Upon the elevation of Elagabalus, he accompanied his mother and the court to Rome, a report having been spread abroad that he also, as well as the emperor, was the son of Caracalla. In 221 he was adopted by Elagabalus and created Caesar. The names Alexianus and Bassianus were laid aside, and those of M. Aurelius Alexander substituted; M. Aurelius in virtue of his adoption; Alexander in consequence, as was asserted, of a direct revelation on the part of the Syrian god. On the death of Elagabalus, on the 11th of March, A.D. 222, Alexander ascended the throne, adding Severus to his other designations, in order to mark more explicitly the descent which he claimed from the father of Caracalla. After reigning in peace some years, during which he reformed many abuses in the State, he was involved in a war with Artaxerxes, king of Persia, who had lately founded the new Empire of the Sassanidae on the ruins of the Parthian monarchy. Alexander gained a great victory over Artaxerxes in 232; but he was unable to prosecute his advantage in consequence of intelligence having reached him of a great movement among the German tribes. He celebrated a triumph at Rome in 233, and in the following year (234) set out for Gaul, which the Germans were devastating; but before he had made any progress in the campaign, he was waylaid by a small band of mutinous soldiers, instigated, it is said, by Maximinus, and slain, along with his mother, in the early part of 235, in the thirtieth year of his age and the fourteenth of his reign. Alexander Severus was distinguished by justice, wisdom, and clemency in all public transactions, and by the simplicity and purity of his private life. His life is written by Lampridius. See Porrath, *Der Kaiser Alexander Severus* (1876).

Alexander Severus.

Sevērus, Sulpicius. A writer chiefly celebrated as an ecclesiastical historian. He was a native of Aquitania, and flourished towards the close of the fourth century under Arcadius and Honorius. He was descended from a noble family, and was originally an advocate; but he eventually became a presbyter of the church, and attached himself closely to St. Martin of Tours. The extant works of Severus are: (*a*) *Historia Sacra*, an epitome of sacred history, extending from the creation of the world to the consulship of Stilicho and Aurelianus, A.D. 400; (*b*) *Vita S. Martini Turonensis;* (*c*) *Tres Epistolae;* (*d*) *Dialogi duo*, containing a review of the dissensions which had arisen among ecclesiastics in the East regarding the works of Origen; (*e*) *Epistolae Sex.* The best edition of the complete works of Severus is by Hahn (Vienna, 1886).

Sewers. See Cloaca.

Sextans. A Roman copper coin weighing two ounces (*unciae*), and equal to the sixth part of the *as*. It bore the effigy of a caduceus and a strigil.

Sextans, actual size.

Sextarius. A Roman measure, both liquid and dry, = $\frac{1}{6}$ *congius* or $\frac{1}{4}$ *modius* or about an English pint (Columell. ii. 9). See Mensura.

Sextiae Aquae. See Aquae.

Sextia Gens. A plebeian gens at Rome, one of whose members, L. Sextius Sextinus Lateranus,

was the first plebeian to obtain the consulship (B.C. 366).

Sextius or **Sestius.** (1) PUBLIUS. A Roman who was quaestor in B.C. 63, and tribune of the plebs in 57. Like Milo, he kept a band of armed retainers to oppose P. Clodius and his partisans; and in the following year (56) he was accused of *vis* on account of his violent acts during his tribunate. He was defended by Cicero in an oration still extant, and was acquitted on the 14th of March, chiefly in consequence of the powerful influence of Pompey. On the breaking out of the Civil War in 49, Sextius first espoused Pompey's party, but he afterwards joined Caesar. See Cic. *Pro Sext.; Ad Att.* iii. 19, 20, 22; iv. 3, etc. (2) TITUS. One of Caesar's *legati* in Gaul, and afterwards the governor of the province of Numidia at the time of Caesar's death (B.C. 44). Here he waged war against Q. Cornificius, whom he defeated and slew in battle (Caes. *B. G.* vi. 1; App. *B. C.* iv. 53, 75).

Sextius Calvīnus. See CALVINUS.

Sextius Niger, QUINTUS. A Roman who lived during the last years of the Republic and under Augustus. He was the founder of a philosophical system, which aimed at the improvement of morals on the principles of the Stoics and Pythagoreans. Like his son, who bore the same name, he wrote in Greek. He is the author of a collection of Greek maxims of a monotheistic and ascetic character, a Christianized Latin translation of which, written in the second half of the fourth century by the presbyter Rufinus, is still extant.

Sextŭla. The smallest denomination found in the Roman monetary system. It was equal to one sixth of an ounce (*uncia*) (Varro, *L. L.* v. 171).

Sextus Empirĭcus. A physician who was a contemporary of Galen, and lived in the first half of the third century of the Christian era. Two of his works are extant — Πυρρώνιαι Ὑποτυπώσεις, dealing with the skeptical learning of Pyrrho (q. v.), in three books; and Πρὸς τοὺς Μαθηματικοὺς Ἀντιρρητικοί, in eleven books, against all positive philosophy. The first six books strive to show the falsity of the sciences of grammar, rhetoric, geometry, arithmetic, astrology, and music; the last five attack logic, physics, and ethics. Edited by Fabricius (Leipzig, 1718). See Haas, *Leben des Sextus Emp.* (1882); id. *Ueber die Schriften des Sextus Emp.* (1883); and the monographs by Jourdain (1858) and Pappenheim (1878).

Sextus Rufus (or **Rufius**) **Festus.** (1) The name prefixed to a work entitled *De Regionibus Urbis Romae.* (2) SEXTUS RUFUS is also the name prefixed to an abridgment of Roman history in twenty-eight short chapters, entitled *Breviarium de Victoriis et Provinciis Populi Romani*, and executed by command of the emperor Valens, to whom it is dedicated.

Shovel. See BATILLUM; PALA.

Sibae (Σίβαι) or **Sibi** (Σίβοι). An Indian people in the Punjab (Arrian, *Ind.* v.).

Sibĭna or **Sibўna** (σιβύνη). A boar-spear (Athen. ii. 5).

Sibyllae (in the sing., Lat. *Sibylla;* Gr. Σίβυλλα, from Doric σιο-βόλλα = θεοῦ βουλή, "the will of God"). The name given in antiquity to inspired prophetesses of some deity, in particular Apollo. They were usually regarded as maidens dwelling in lonely caves or by inspiring springs, who were possessed with a spirit of divination, and gave forth prophetic utterances while under the influence of enthusiastic frenzy. They were described sometimes as priestesses of Apollo, sometimes as his favourite wives or daughters. We have no certain information as to their number, names, country, or date. Though Plato (*Phaedr.* 294 B) knew of only one, others mention two, three, four (the Erythraean, the Samian, the Egyptian, and the Sardian), and even ten or twelve: the Babylonian, the Libyan, the (elder and younger) Delphian, the Cimmerian, the (elder and younger) Erythraean, the Samian, the Cumaean, the Hellespontine, the Phrygian, and the Tiburtine.

In the earliest times they are mentioned as dwelling in the neighbourhood of the Trojan Ida in Asia Minor, later at Erythrae in Ionia, in Samos, at Delphi, and at Cumae in Italy. The most famous was the Erythraean Sibyl, Herophilé, who is usually considered identical with the Cumaean, as she is represented as journeying by manifold wanderings from her home to Cumae. Here she is said to have lived for many generations in the crypts beneath the temple of Apollo, where she had even prophesied to Aeneas. In later times the designation of Sibyl was also given to the prophetic nymph Albunea near Tibur (Lactant. i. 6, 12).

The SIBYLLINE BOOKS, so often met with in Roman history, had their origin in a collection of oracular utterances in Greek hexameters, composed in the time of Solon and Cyrus at Gergis on Mount Ida, and ascribed to the Hellespontic Sibyl, buried in the temple of Apollo at Gergis. This collection was brought by way of Erythrae to Cumae, and finally, in the time of the last king, to Rome. According to the legend, the Cumaean Sibyl offered to Tarquinius Superbus nine books of prophecies; and as the king declined to purchase them, owing to the exorbitant price she demanded, she burned all but three of them, which the king purchased for the original price, and had them preserved in a vault beneath the Capitoline temple of Iupiter (Varro, *ap.* Lactant. *Inst. Div.* i. 6; Dionys. iv. 62; Isid. *Orig.* viii. 815). When they were destroyed in the burning of the Capitol in B.C. 83, the Senate sent envoys to make a collection of similar oracular sayings distributed over various places, in particular Ilium, Erythrae, and Samos. This new collection was deposited in the restored temple, together with similar sayings of native origin — e. g. those of the Sibyl at Tibur, of the brothers Marcius, and others. From the Capitol they were transferred by Augustus as pontifex, in B.C. 12, to the temple of Apollo on the Palatine, after they had been examined and copied; here they remained until about A.D. 405. They are said to have been burned by Stilicho. The use of these oracles was from the outset reserved for the State, and they were not consulted for the foretelling of future

events, but on the occasion of remarkable calamities, such as pestilence, earthquake, and as a means of expiating portents. It was only the rites of expiation prescribed by the Sibylline Books that were communicated to the public, and not the oracles themselves. As these books recognized the gods worshipped and the rites observed in the neighbourhood of Troy, they were the principal cause of the introduction of a series of foreign deities and religious rites into the Roman State worship, of the amalgamation of national deities with the corresponding deities of Greece, and a general modification of the Roman religion after the Greek type.

Tarquinius is said to have intrusted the care of the books to a special *collegium* of two men of patrician rank. After B.C. 367 their number was increased to ten, half patrician and half plebeian; and in the first century B.C., probably in the time of Sulla, five more were added. These officials were entitled respectively *duumviri*, *decemviri*, and *quindecimviri sacris faciundis*. They were usually ex-consuls or ex-praetors. They held office for life, and were exempt from all other public duties. They had the responsibility of keeping the books in safety and secrecy, of consulting them at the order of the Senate, of interpreting the utterances they found therein, and of causing the measures thus enjoined to be carried out; in particular they had the superintendence of the worship of Apollo, the Magna Mater, and Ceres, which had been introduced by the Sibylline Books. See Marquardt, iii. 358 foll.; and Bouché-Leclercq, *Hist. de la Divination*, ii. pp. 133 foll.

These Sibylline Books have no connection with a collection of SIBYLLINE ORACLES in twelve books, written in Greek hexameters, which have come down to us. The latter contain a medley of pretended prophecies by various authors and of very various dates, from the middle of the second century B.C. to the fifth century A.D. They were composed partly by Alexandrian Jews, partly by Christians, in the interests of their respective religions; and in part they refer to events of the later Empire. They are edited by Alexandre (Paris, 1841–56); Friedlieb (Leipzig, 1852); Rzach (Vienna, 1891); and Diels (Berlin, 1891). See Dechent in the *Zeitschrift für Kirchengeschichte* (1878); and an article in the *Edinburgh Review* for July, 1877.

Sibyllīni Libri. See SIBYLLAE.

Sica. A knife or dagger shaped like the tusk of a wild boar (Pliny, *H. N.* xviii. 1). It was the national weapon of the Thracians (Val. Max. iii. 2, 12), and was used by the gladiators known as *Thraeces* (Suet. *Calig.* 32). In Rome it was carried by the lower classes, criminals, ruffians, and bullies, and was regarded as fit for such persons only (Cic. *Cat.* ii. 10; Quint. *Decl.* 321).

Sica. (Column of Antoninus.)

Sicambri. See SUGAMBRI.

Sicāni, Sicĕli, Siceliōtae. See SICILIA.

Sicarius. (1) An assassin, ruffian. See SICA. (2) A gladiator of the class called *Thraeces* who were armed with the *sica* (Cic. *Rosc. Amer.* 3).

Sicca Veneria. A considerable city of North Africa, on the frontier of Numidia and Zeugitana, built on a hill near the river Bagradas (Sall. *Iug.* 56).

Sichaeus, also called Acerbas. See DIDO.

Sicilia (Σικελία). Sicily; a large island in the Mediterranean Sea, off the southern coast of Italy. It was anciently identified with the Thrinacia (Θρινακία) of Homer, and is styled TRINACRIA and TRINĀCRIS, names supposed to mean "three-cornered," whence the Romans likewise styled the island TRIQUETRA (cf. Lucret. i. 717). The names Sicilia and Sicania come from that of its early inhabitants—the SICĔLI or SICĀNI. It is separated from Italy by the narrow channel called FRETUM SICŬLUM or simply FRETUM (Πορθμός), also SCYLLAEUM FRETUM, now the Strait of Messina. The part of the Mediterranean lying to the east and south of the island was called MARÉ SICŬLUM. Sicily is in the shape of a triangle, the north and south sides of which are about 175 miles long exclusive of the windings of the coast; the eastern side has a length of 115 miles. The northwestern point was the Promontorium Lilybaeum; the northeastern point, Promontorium Pelorus, and the southeastern point, Promontorium Pachynus. Sicily was originally a part of Italy, and was torn from it by some great convulsion of nature. A mountain range (Nebrodi Montes) extends through it as a continuation of the Apennines. Of this range the most important offshoots are Mount Aetna on the east of the island, Mount Eryx (S. Giuliano) on the west, and the Heraei Montes (Monti Sori) in the south. A number of small rivers have their sources in the mountains, but most of them are dry, or nearly so, in the summer. The soil of Sicily was very fertile, and produced in antiquity an immense quantity of wheat, on which the population of Rome relied to a great extent for their subsistence. So celebrated was it even in early times on account of its corn that it was represented as sacred to Demeter, and as the favourite abode of this goddess. Hence it was in this island that her daughter Persephoné was carried away by Pluto. Besides corn, the island produced excellent wine, saffron, honey, almonds, and the other Southern fruits.

The earliest inhabitants of Sicily are said to have been the savage Cyclopes and Laestrygones; but these are fabulous beings, and the first inhabitants mentioned in history are the Sicani (Σικανοί) or Siculi (Σικελοί), who crossed over into the island from Italy. Some writers, indeed, regard the Sicani and Siculi as two distinct tribes, supposing the latter only to have migrated from Italy, and the former to have been the aboriginal inhabitants of the country; but there is no good reason for making any distinction between them. They appear to have been a Keltic people. According to Thucydides, their original settlement was on the river Sicanus in Iberia; but as Thucydides extends Iberia as far as the Rhône, it is probable that Sicanus was a river of Gaul, and it may have been the Sequana, as some modern writers suppose. The ancient writers relate that these Sicani, being hard pressed by the Ligyes (Ligures), crossed the Alps and settled in Latium; that, being driven out of this country by the Aborigines with the help of Pelasgians, they migrated to the south of the peninsula, where they lived for a considerable time along with the Oenotrians, but finally crossed over into Sicily, to which they gave their name. They soon spread over the greater part of the island, but in later times were found chiefly in the interior and in the northern part; some of the most impor-

tant towns belonging to them were Herbita, Agyrium, Adranum, and Enna. The next immigrants into the island were Cretans, who are said to have come to Sicily under their king, Minos, in pursuit of Daedalus, and to have settled on the southern coast in the neighbourhood of Agrigentum, where they founded Minoa (afterwards Heraclea Minoa). Then came the Elymaei, a small band of fugitive Trojans, who are said to have built Entella, Eryx, and Egesta. These Cretans and Elymaei, however, if indeed they ever visited Sicily, soon became incorporated with the Siculi. The Phœnicians likewise at an early period formed settlements, for the purposes of commerce, on all the coasts of Sicily, but more especially on the northern and north-western parts. They were subsequently obliged to retire from the greater part of their settlements before the increasing power of the Greeks, and to

Siceliote Coin. (Third century B.C.)

confine themselves to Motya, Solūs, and Panormus. But the most important of all the immigrants into Sicily were the Greeks. The first body of Greeks who landed in the island were Chalcidians from Euboea, and Megarians led by the Athenian Thucles. These Greek colonists built the town of Naxos, B.C. 735. They were soon followed by other Greeks, who founded a number of very flourishing cities, such as Syracuse in 734, Leontini and Catana in 730, Megara Hybla in 726, Gela in 690, Selinus in 626, Agrigentum in 579, etc. The Greeks soon became the ruling race in the island, and received the name of SICELIŌTAE (Σικελιῶται) to distinguish them from the earlier inhabitants.

At a later time the Carthaginians obtained a firm footing in Sicily. Their first attempt was made in 480; but they were defeated by Gelon of Syracuse, and obliged to retire with great loss. Their second invasion in 409 was more successful. They took Selinus in this year, and four years afterwards (405) the powerful city of Agrigentum. They now became the permanent masters of the western part of the island, and were engaged in frequent wars with Syracuse and the other Greek cities. (For the Athenian invasion of Sicily, see SYRACUSAE.) The struggle between the Carthaginians and Greeks continued, with a few interruptions, down to the First Punic War; at the close of which (241) the Carthaginians were obliged to evacuate the island, the western part of which now passed into the hands of the Romans, and was made a Roman province. The eastern part still continued under the rule of Hieron of Syracuse as an ally of Rome; but after the revolt of Syracuse in the Second Punic War, and the conquest of that city by Marcellus, the whole island was made a Roman province, and was administered by a praetor. Under the Roman dominion more attention was paid to agriculture than to commerce; and consequently the Greek cities on the coast gradually declined in prosperity and wealth. The inhabitants of the province received the *ius Latii* from Iulius Caesar; and Antony conferred upon them, in accordance, as it was said, with Caesar's will, the full Roman franchise. Augustus, after his conquest of Sextus Pompey, who had held the island for several years, founded colonies at Messana, Tauromenium, Catana, Syracuse, Thermae, and Panormus. On the downfall of the Roman Empire, Sicily formed part of the kingdom of the Ostrogoths; but it was taken from them by Belisarius in A.D. 536, and annexed to the Byzantine Empire. It continued a province of this Empire till 828, when it was conquered by the Saracens.

Literature and the arts were cultivated with great success in the Greek cities of Sicily, especially at the time of the first Hiero (q. v.) of Syracuse (B.C. 478–467), and of Dionysius the elder, the friend of Plato. Sicily was the birthplace of the philosophers Empedocles, Epicharmus, and Dicaearchus; of the mathematician Archimedes; of the physicians Herodicus and Acron; of the historians Diodorus, Antiochus, Philistus, and Timaeus; of the rhetorician Gorgias; and of the poets Stesichorus, Theocritus, and Moschus.

Good histories of ancient Sicily are those of Holm, 2 vols. (Leipzig, 1870–74); Lloyd (1872); Freeman, vols. i.–iii. (1891–92); id. a short history in the "Story of the Nations Series" (1892). On the earliest inhabitants of Sicily, see the monograph by Costanzi, *De Siciliae Gentibus Antiquissimis* (1893); and on the Greek colonies that of Frömter (1886), and of Brunet de Presle, *Les Établissements des Grecs en Sicile* (Paris, 1845). See also Hoffweiler, *Sicilien in Wort und Bild* (Leipzig, 1870), and the articles AGRIGENTUM; CARTHAGO; DIONYSIUS; GELON; LEONTINI; PUNIC WARS; SELINUS; SYRACUSAE. For a map of Sicily, see ITALIA.

Sicilian Expedition. See PELOPONNESIAN WAR; SYRACUSAE.

Sicilĭcus. A mark of the form ↄ, placed in Roman inscriptions over consonants to denote doubling, like the Arabic *tashdīd*. The character is of rare occurrence in existing inscriptions, being most frequently found in those of the early Augustan period (*C. I. L.* v. 1361; x. 3743). It is mentioned by the grammarians Marius Victorinus (p. 2456) and Isidorus (*Orig.* i. 26).

Sicĭlis. A spear-head (Pliny, *H. N.* vi. 15).

Sicĭma. See NEAPOLIS (5), p. 1084.

Sicinius. (1) L. SICINIUS BELLŪTUS, the leader of the plebeians in their secession to the Sacred Mount in B.C. 494. He was chosen one of the first tribunes. (2) L. SICINIUS DENTĀTUS, called by some writers the Roman Achilles, from his personal prowess. He was tribune of the plebs in 454. He was put to death by the decemvirs in 450, because he endeavoured to persuade the plebeians to secede to the Sacred Mount. The persons, nearly a hundred in number, sent to assassinate him fell upon him in a lonely spot, but he killed most of them before they succeeded in despatching him. Valerius Maximus (iii. 2, 24) enumerates the military honours won by Sicinius during the forty years of his service in the army. He had seen 120 battles, received 14 civic crowns, 3 mural crowns, 8 gold crowns, 180 gold chains (*torques*), 160 bracelets (*armillae*), 18 spears (*hastae purae*), 25 sets of horse-trappings, and bore the scars of 40 wounds on his breast.

Sicinnis. See SATYRIC DRAMA.

Sicinnium. A Greek dance. See SATYRIC DRAMA.

Sicĭnus (*Σίκινος*). Now Sikino; a small island in the Aegaean Sea, one of the Sporades, between Pholegandrus and Ios, with a town of the same name. It was originally called Oenoë (Apoll. Rh. i. 623).

Sicŏris. Now Segre; a river in Hispania Tarraconensis, which had its source in the territory of the Cerretani, and fell into the Iberus near Octogesa (Caes. *B. C.* i. 40, 48).

Sicŭli. See SICILIA.

Sicŭlum Fretum, Sicŭlum Maré. See SICILIA.

Sicŭlus Flaccus. See FLACCUS, SICULUS.

Sicyonia (*Σικυωνία*). A small district in the northeast of the Peloponnesus, whose area was probably somewhat less than one hundred square miles. It consisted of a plain near the sea with mountains in the interior. Its rivers, which ran in a northeasterly direction, were Sythas on the frontier of Achaia, Helisson, Selleïs, and Asopus in the interior, and Nemea on the frontier of the territory of Corinth. The land was fertile, and produced excellent oil. Its almonds and its fish were also much prized.

Its chief town was SICYON (*Σικυών*, "cucumber-town"), which was situated a little to the west of the river Asopus. The ancient city, which was situated in the plain, was destroyed by Demetrius Poliorcetes, and a new city, which bore for a short time the name of Demetrius, was built by him on the high ground close to the Acropolis. The harbour, which, according to some, was connected with the city by means of long walls, was well fortified, and formed a town of itself. Sicyon was one of the most ancient cities of Greece. It is said to have been originally called AEGIALĒA or AEGIĂLI (*Αἰγιάλεια, Αἰγιαλοί*), after an ancient king, Aegialeus; to have been subsequently named MECŌNÉ (*Μηκώνη*, "poppy-town"), and to have been finally called Sicyon from an Athenian of that name. Sicyon is represented by Homer as forming part of the empire of Agamemnon; but on the invasion of Peloponnesus it became subject to Phalces, the son of Temenus, and was henceforward a Dorian State. The ancient inhabitants, however, were formed into a fourth tribe called Aegialeis, which possessed equal rights with the three tribes of the Hylleis, Pamphyli, and Dymanatae, into which the Dorian conquerors were divided. (See DORIS.) Sicyon, on account of the small extent of its territory, never attained much political importance, and was generally dependent either on Argos or Sparta. At the time of the Second Messenian War it became subject to a succession of tyrants, who administered their power with moderation and justice for a hundred years. The first of these tyrants was Andreas, who began to rule B.C. 676. He was followed in succession by Myron, Aristonymus, and Clisthenes, on whose death, about 576, a republican form of government was established. Clisthenes had no male children, but only a daughter, Agaristé, who was married to the Athenian Megacles. In the Persian Wars the Sicyonians sent fifteen ships to the battle of Salamis, and three hundred hoplites to the battle of Plataea. In the interval between the Persian and the Peloponnesian Wars the Sicyonians were twice defeated and their country laid waste by the Athenians, first under Tolmides in 456, and again under Pericles in 454. In the Peloponnesian War they took part with the Spartans. From this time till the Macedonian supremacy their history requires no special mention; but in the middle of the third century Sicyon took an active part in public affairs in consequence of its being the native town of Aratus, who united it to the Achaean League in 251. Under the Romans it gradually declined; and in the time of Pausanias, in the second century of the Christian era, many of its public buildings were in ruins. These ruins have been of late carefully studied by the members of the American School at Athens, who have excavated the tiers of seats and supports of the stage of a theatre. The position of the Acropolis, the temple of the Dioscuri, and the Stadium can also still be traced. (See the reports of the American School in *Papers of the American School at Athens*, vol. v.

Sicyon was for a long time the chief seat of Grecian art. It gave its name to one of the great schools of painting, which was founded by Eupompus, and which produced Pamphilus and Apelles. It is also said to have been the earliest school of statuary in Greece, which was introduced into Sicyon by Dipoenus and Scyllis from Crete about 560; but its earliest native artist of celebrity was Canachus. Lysippus was also a native of Sicyon.

Sida, Sidé (*Σίδη*). (1) Now Eski Adalia; a city of Pamphylia, on the coast, a little west of the river Melas. It was an Aeolian colony from Cyme in Aeolis, and was a chief seat of the worship of Athené, who is represented on its coins holding a pomegranate (*σίδη*) as the emblem of the city. (2) The old name of Polemonium (q. v.).

Sidareus (*σιδάρεος*). A small iron coin current at Byzantium (Poll. ix. 78). No specimens are known to exist.

Sidēnus. See POLEMONIUM.

Sidicīni. An Ausonian people in the northwest of Campania and on the borders of Samnium, who, being hard pressed by the Samnites, united themselves to the Campanians (Livy, vii. 29). Their chief town was Teanum.

Sidon (*Σιδών*, Old Test. Zidon). Now Saida; a city of Phœnicia, long the most powerful of that country's towns. It stood in a plain about a mile from the Mediterranean Sea, and some twenty miles north of Tyre, and with a double harbour of considerable extent, now filled with sand. Until Tyre wrested from it the maritime supremacy, it was the greatest commercial city of the Phœnicians. When Xerxes invaded Greece, the people of Sidon furnished his expedition with the best ships in the whole fleet, so that the king of Sidon had the chief place in the council of the Persian king. The city was burned at the time of its revolt against Artaxerxes III. (B.C. 351), but was rebuilt, and later fell with the whole of Phœnicia under the control of the Romans. See PHŒNICÉ.

Sidonius Apollināris, GAIUS SOLLIUS MODESTUS. An orator born at Lugdunum (Lyons) about A.D. 431. He was raised to the senatorial dignity by the emperor Avitus, whose daughter he had married. After the downfall of Avitus he lived some time in retirement, but in 467 appeared again in Rome as ambassador from the Arverni to Anthemius. He gained the favour of that prince by

a panegyric; was made a patrician, and praefect of the city; and soon afterwards, though not a priest, bishop of Clermont in Auvergne. His extant works are some poems (*Carmina*) and nine books of letters (147 in number) in imitation of Pliny and Symmachus. These are edited by Lütjohann (Berlin, 1887).

Sidūs (Σιδοῦς). A fortified place in the territory of Corinth (Xen. *Hellen.* iv. 4, 13; iv. 5, 19).

Sidȳma (*τὰ Σίδυμα*). A town in Lycia, north of the mouth of the Xanthus. Remains of it still exist, with interesting inscriptions.

Siga (Σίγα). A considerable seaport town of Mauretania Caesariensis (Ptol. iv. 2, 2).

Sigēum. Now Yenisheri; the northwest promontory of the Troad, and the southern headland at the entrance of the Hellespont. It is here that Homer places the Grecian fleet and camp during the Trojan War. Near it was a seaport town of the same name (Herod. v. 95).

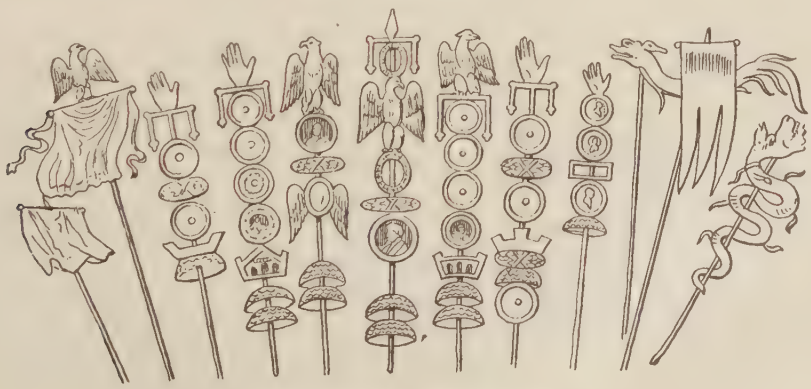
Sigillaria. See SATURNALIA.

Sigillum. (1) A small statue, figure, or image embossed in metal or cast in terra-cotta for architectural decoration (Ovid, *A. A.* i. 407; Cic. *Verr.* ii. 4, 22; Pliny, *H. N.* xxxvi. 59). (2) The impression made by a signet-ring (Cic. *Acad.* iv. 26). (3) A figure worked in embroidery (Ovid, *Met.* vi. 86).

Sigma. A couch made in a semicircular form for use at a round dining-table (*orbis*). Its name was given it from the old form of the Greek letter *sigma*, which was C (Mart. ix. 60).

Signa Militaria. See SIGNUM.

Signia. Now Segni. A town in Latium on the east side of the Volscian Mountains, founded by Tarquinius Priscus. It was celebrated for its temple of Iupiter Urius, for its astringent wine (Mart. xiii. 116), for its pears, and for a particular kind of tessellated pavement for the floors of houses, called *opus Signinum*. There still remains a gate of cyclopean structure, besides parts of the polygonal walls of the ancient city.



Signīnum Opus. A flooring made of tiles broken up into very small pieces, mixed with mortar, and then beaten down with a rammer (Pliny, *H. N.* xxxv. 46). See PAVIMENTUM; SIGNIA.

Signum (*σημεῖον*). The Roman name for a military standard, usually consisting of a badge (*insigne*) on a staff, carried by legions, maniples, and cohorts, as distinct from the *vexillum* (q. v.). The latter was a square flag fastened on a cross-bar carried by the cavalry and allied infantry detachments. The earliest Roman standard is said to have been a bundle of hay (*manipulus*) on a staff (Plut. *Rom.* 8). In the time of the manipular arrangement (see LEGIO; MANIPULUS), each maniple had its peculiar *insigne*, the eagle (the sign of the first *manipulus*), the wolf, the Minotaur, the horse, or the boar. After Marius had made the eagle (q. v.) the standard representing the signum of the whole legion, the forms of other animals were no longer employed. Instead of them the maniples had a spear with an outstretched hand upon the point. Afterwards the signa were also furnished with a *vexillum* and with various ornaments on the pole, especially round plates, often with representations of gods, emperors, and generals. The cohorts, probably as early as the time of Caesar, had particular signa; after Trajan they borrowed from the Parthians the *draco*. This was the image of a large dragon fixed upon a lance, with gaping jaws of silver, and with the rest of its body formed of coloured silk. When the wind blew down the open jaws, the body was inflated (Veget. *De Re Militari*, ii. 13; Ammian. Marcell. xvi. 10, 7). This last is to be seen on monuments among the standards of foreign nations, who also had a standard resembling a mediæval banner. On the march and in an attack with close columns, the signa were carried in the first line; in a pitched battle, behind the front rank. See Domazewski, *Die Fahnen im römischen Heere* (1885).

The Greeks carried no regular standard, but a scarlet flag (*φοινικίς*) was sometimes raised as a signal for joining battle both on land and sea (Polyaen. iii. 9, 27; Thucyd. i. 49). The Persians carried a golden eagle as a royal standard (Xen. *Anab.* i. 10, 12), and the Parthians had banners of silk. See VEXILLUM.

Silanion (Σιλανίων). An Athenian, a distinguished statuary in bronze, was a contemporary of Lysippus, and flourished B.C. 324. His statue of Sappho, which stood in the prytaneum at Syracuse in the time of Verres, is alluded to by Cicero in terms of the highest praise (Cic. *Verr.* iv. 57, 125).

Silărus. Now Silaro; a river in Lower Italy, forming the boundary between Lucania and Campania, which rises in the Apennines, and falls into the Sinus Paestanus a little to the north of Paestum.

Roman Standards. (Guhl and Koner.)

Sila Silva. Now Aspromonte; a large forest in Bruttium on the Apennines, extending south of Consentia to the Sicilian Strait.

Silēnus (Σειληνός). A sort of Satyr who in mythic legends accompanies the god Bacchus, and who is said to have brought up and instructed him. Like the other Satyrs, he is called a son of Hermes; but others make him a son of Pan by a nymph, or of Gaea. Being the constant companion of Bacchus, he is said, like the god, to have been born at Nysa. Moreover, he took part in the contest with the Giants, and slew Enceladus. He is described as a jovial old man, with a bald head, a blunt nose, fat and round like the wine bag that he always carried with him, and generally intoxicated. As he could not trust his own legs, he is generally represented riding on an ass or supported by other Satyrs (Ovid, *A. A.* i. 543). In every other respect he is described as resembling his brethren in their love of sleep, wine, and music. He is mentioned, along with Marsyas and Olympus, as the inventor of the flute, which he is often seen playing; and a special kind of dance was called after him "Silenus," while he himself is designated as the dancer. But it is a peculiar feature in his character that he was conceived also as an inspired prophet, who knew all the past and the most distant future, and as a sage who despised all the gifts of fortune. When he was drunk and asleep, he was in the power of mortals, who might compel him to prophesy and sing by surrounding him with chains of flowers. Silenus was probably at first a deity presiding over springs and running streams, and so the wine-skin with which he is frequently represented was doubtless originally a water-skin (Lucian, *Deor. Conc.* 4).

Silenus Astride of a Wine-skin. (Bronze found at Herculaneum.)

Silicernium. See Funus, p. 699.

Silĭqua (κεράτιον). The smallest Roman weight, the sixth part of a scruple (*scripulum*) or the $\frac{1}{144}$ part of an ounce. It was also the name of a small coin (*siliqua auri*), on which see Mommsen, *Röm. Münzwesen*, p. 791.

Silius Italĭcus, Gaius Catius (for the name, see *C. I. L.* vi. 1984). A Roman poet, born about A.D. 25. He acquired great reputation as an advocate, and was afterwards one of the centumviri. He was consul in 68, the year in which Nero perished; he was admitted to familiar intercourse with Vitellius, and was subsequently proconsul of Asia. In his seventy-fifth year, in consequence of the pain caused by an incurable disease, he starved himself to death in the house once occupied by Vergil (Pliny, *Epist.* iii. 7). The great work of Silius Italicus was a heroic poem in seventeen books, entitled *Punica*, which has descended to us entire, having been discovered by Poggio Bracciolini (q. v.) in 1416. The poem contains about 14,000 lines. Its opposing heroes are Scipio and Hannibal, and it deals with the Second Punic War in a spirit slavishly imitative of Vergil, to whom, by the way, he owed his estate at Naples. He also draws many ideas from the Homeric poems. The *editio princeps* appeared in 1471. Silius is edited by Ernesti (Leipzig, 1791); Ruperti, reprinted by Lemaire (Paris, 1823); and Bauer (Leipzig, 1890). See Heynacher, *Die Quellen des Silius*, 2 pts. (Ilfeld, 1874–77); Franke, *De Silii Punicorum Tropis* (Münster, 1889); Occioni, *Silio Italico e il suo Poema* (2d ed. Florence, 1871); and Groesst, *Quatenus Silius Italicus a Vergilio Pendere Videatur* (Halle, 1887). Silius is now regarded as also the author of the metrical abridgment of the *Iliad*, usually cited under the name of "Homerus Latinus" or "Pindarus Thebanus." See Pindarus, in the Appendix.

Silk. See Sericum.

Silli (σίλλοι). A peculiar kind of Greek lampoons in an epic form, such as Xenophanes of Colophon was the first to level against poets and philosophers. The principal representative of this class was Timon of Phlius. See Parodia; Timon.

Sillographers. See Parodia.

Silo (Σιλώ). The Old Test. Shiloh; a city of Palestine in the mountains of Ephraim.

Silo, Q. Pompaedius. The leader of the Marsi in the Social War. He fell in battle against Q. Metellus Pius (B.C. 88), and his death led to the end of the war (App. *B. C.* i. 40–53; Vell. Paterc. ii. 16).

Silsĭlis (Σιλσιλις). A fortified port in Upper Egypt on the west bank of the Nile.

Silŭres (Σίλυρες). A powerful people in Britain, inhabiting South Wales, who long offered a formidable resistance to the Romans, and afterwards to the Saxons (Tac. *Ann.* xii. 32). Caractacus (q. v.) was of this nation.

Silvae. See Statius.

Silvānus. A Latin divinity of the fields and forests, suggesting somewhat the early Italian conception of the agricultural Mars and also Faunus. He is likewise called the protector of the boundaries of fields (Hor. *Epod.* 2, 22). In connection with woods (*silvestris deus*), he especially presided over plantations, and delighted in trees growing wild, whence he is represented as carrying the trunk of a cypress. Silvanus is further described as the divinity protecting herds of cattle, promoting their fertility and driving away wolves. Later writers identified Silvanus with Pan, Faunus, Inuus, and Aegipan. In the Latin poets, as well as in works of art, he always appears as an old man, but cheerful and in love with Pomona. The sacrifices offered to him consisted of grapes, ears of corn, milk,

Silvanus. (Statue in Berlin Museum.)

meat, wine, and pigs. He was associated with the cypress (Serv. *ad* Verg. *Georg.* i. 20) and the pine, whence he is styled Silvanus Dendrophorus (*C. I. L.* vi. 241).

Silver. See ARGENTUM; NUMISMATICS.

Silver Shields, Bearers of. A corps of guards in the army of Alexander the Great. See ARGYRASPIDES.

Silvium. A town of the Peucetii in Apulia, on the borders of Lucania, twenty miles southeast of Venusia (Diod. xx. 80).

Silvius. The son of Ascanius. He is said to have been so called because he was born in a wood (*silva*). All the succeeding kings of Alba bore the cognomen Silvius. See Livy, i. 3.

Sima (*κῦμα*). A "sima" or "ogee." An architectural term denoting a moulding shaped like the nose of a goat (*simus* = "snub-nosed"), used for the uppermost part of a cornice (Vitruv. iii. 5, 12).

Sima.

Simmias (*Σιμμίας*). (1) Of Thebes, first the disciple of the Pythagorean philosopher Philolaüs, and afterwards the friend and disciple of Socrates, at whose death he was present. Simmias wrote twenty-three dialogues on philosophical subjects, all of which are lost. (2) Of Rhodes. A poet and grammarian of the Alexandrian School, who flourished about B.C. 300. The Greek Anthology contains six epigrams ascribed to Simmias, besides three short poems of that fantastic species called *griphi* or *carmina figurata*—that is, pieces in which the lines are so arranged as to make the whole poem resemble the form of some object; those of Simmias are entitled, from their forms, the *Wings* (*πτέρυγες*), the *Egg* (*ὠόν*), and the *Hatchet* (*πέλεκυς*).

Simoïs. A river near Troy. (See TROIAS.) As a mythological personage, the river-god Simoïs is the son of Oceanus and Tethys, and the father of Astyochus and Hieromnemé (Hes. *Theog.* 342).

Simon (*Σίμων*). (1) One of the disciples of Socrates, and by trade a leather-cutter. Socrates used to visit his shop and chat with him on various subjects, and these conversations were afterwards written down and published, making in all thirty-three dialogues. They are now wholly lost (Diog. Laërt. ii. 122). (2) An artist of Aegina, famous for his works in bronze. He flourished in the fifth century B.C.

Simonĭdes (*Σιμωνίδης*). (1) Of Amorgos, the second, both in time and in reputation, of the three principal iambic poets of the early period of Greek literature—namely, Archilochus, Simonides, and Hipponax. He was a native of Samos, whence he led a colony to the neighbouring island of Amorgos, where he founded three cities—Minoa, Aegialus, and Arcesiné—in the first of which he fixed his own abode. He flourished about B.C. 664. Simonides was most celebrated for his iambic poems, which were of two species, gnomic and satirical. The most important of his extant fragments is a satire upon women, in which he derives the various, though generally bad, qualities of women from the variety of their origin: thus, the uncleanly woman is formed from the swine; the cunning woman, from the fox; the talkative woman, from the dog, and so on. The best editions of the fragments of Simonides of Amorgos are by Welcker (Bonn, 1835) and Bergk (1878).

(2) Of Ceos, one of the most celebrated lyric poets of Greece. He was the perfecter of the Elegy and Epigram, and the rival of Lasus and Pindar in the Dithyramb and the Epinician Ode. He was born at Iulis, in Ceos, B.C. 556, and was the son of Leoprepes. He appears to have been brought up to music and poetry as a profession. From his native island he proceeded to Athens, probably on the invitation of Hipparchus, who attached him to his society by great rewards. After remaining at Athens some time, probably even after the expulsion of Hippias, he went to Thessaly, where he lived under the patronage of the Aleuads and Scopads. He afterwards returned to Athens, and soon had the noblest opportunity of employing his poetic powers in the celebration of the great events of the Persian Wars. In 489 he conquered Aeschylus in the contest for the prize which the Athenians offered for an elegy on those who fell at Marathon. Ten years later he composed the epigrams which were inscribed upon the tomb of the Spartans who fell at Thermopylae, as well as an encomium on the same heroes; and he also celebrated the battles of Artemisium and Salamis, and the great men who commanded in them (Pausan. iii. 8, 2; Thucyd. i. 132). He had completed his eightieth year, when his long poetical career at Athens was crowned by the victory which he gained with the dithyrambic chorus (477), being the fifty-sixth prize which he had carried off. Shortly after this he was invited to Syracuse by Hiero, at whose court he lived till his death in 467.

Simonides was a great favourite with Hiero, and was treated by the tyrant with the greatest munificence. He still continued, when at Syracuse, to employ his talents occasionally in the service of other Grecian States. Simonides is said to have been the inventor of the mnemonic art and of the long vowels and double letters in the Greek alphabet (Cic. *De Orat.* ii. 86, 352). He made literature a profession, and is said to have been the first who took money for his poems; and the reproach of avarice is too often brought against him by his contemporary and rival, Pindar, as well as by subsequent writers, to be altogether discredited. The chief characteristics of the poetry of Simonides were sweetness (whence his surname of *Melicertes*) and elaborate finish, combined with the truest poetic conception and perfect power of expression; though in originality and fervour he was far inferior, not only to the early lyric poets, such as Sappho and Alcaeus, but also to his contemporary Pindar. He was probably both the most prolific and the most universally popular of all the Grecian lyric poets. The general character of his dialect is the Epic, mingled with Doric and Aeolic forms. Editions of his fragments are those by Schneidewin (Brunswick, 1835); and Bergk, *Poët. Lyr. Graec.* (1878). On his language, see Schaumburg, *De Dialecto Simonidis* (1878); and Mucke, *De Dialecto Simonidis cum Pind. Comparata* (1879).

Simplicius. A Peripatetic philosopher of the sixth century after Christ, and a native of Cilicia. When Justinian in A.D. 529 closed the school of philosophy in which he taught at Athens, he and six other philosophers emigrated to the court of the Persian king Chosroës. When he made peace with Justinian in 533, and obtained from him leave for the philosophers to return unmolested, Simplicius went to Alexandria, where he died in 549. We still possess some excellent commentaries of his on several writings of Aristotle (*Categories*, *Physics*, *De Caelo*, *De Anima*), edited by Karsten (1865), and on the *Enchiridion* of Epictetus, edited by Enk (Vienna, 1866). His complete works are edited by Schweighäuser (Leipzig, 1800).

Simpŭlum and **Simpuvium.** A ladle-shaped vessel like a *cyathus*, but of more primitive form (Varro, *L. L. V.* 124). It was used both at table and in the sacrifices. It was made of earthenware (Pliny, *H. N.* xxxv. 158). See CYATHUS.

Simpulum and Malleus.

Sinae (Σῖναι) (a name probably derived from the Chinese district or kingdom of Tsin). The easternmost people of Asia. Ptolemy describes their country as bounded on the north by Serica, and on the south and west by India extra Gangem. It corresponded to the southern part of China and the eastern part of the Burmese peninsula.

Sinaï or **Sina** (Σινᾶ). Now Jebel-et-Tur. A cluster of dark, lofty, rocky mountains in the southern angle of the triangular peninsula enclosed between the two heads of the Red Sea, and bounded on the north by the deserts on the borders of Egypt and Palestine. The name, which signifies "a region of broken and cleft rocks," is used in a wider sense for the whole peninsula, which formed a part of Arabia Petraea, and was peopled, at the time of the Exodus, by the Amalekites and Midianites, and afterwards by the Nabathaean Arabs. Sinaï and Horeb in the Old Testament are both general names for the whole group, the former being used in the first four books of Moses, and the latter in Deuteronomy. The summit on which the Law was given was probably that on the north, or the one usually called Horeb. There are a good many Nabathaean inscriptions dating from the early centuries of our era carved on the rocks of Sinaï. See Hull, *Mount Seir, Sinai, and West Palestine* (London, 1885); and Euting, *Sinaitische Inschriften* (1892).

Sindi (Σινδοί). (1) A people of Asiatic Sarmatia, on the eastern coast of the Euxine, and at the foot of the Caucasus (Herod. iv. 28). They are also mentioned by the names of SINDONES and SINDIĀNI. (2) A people on the eastern coast of India extra Gangem (in Cochin China), also called SINDAE, and with a capital city, SINDA.

Sindiāna. See SINDI.

Sindĭcé. The land of the Sindi (q. v.).

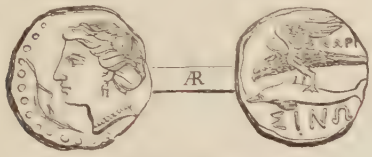
Sindon (σινδών). A fine linen or muslin made in India and Egypt, and used in Greece and Italy for summer clothing (Mart. ii. 6; Diog. Laërt. vi. 90).

Singăra (τὰ Σίγγαρα). Now Sinjar (?). A strongly fortified city and Roman colony in the interior of Mesopotamia, eighty-four Roman miles south of Nisibis. Here Constantius was defeated by Sapor (Dio Cass. xviii. 22; Ammian. Marc. xviii. 5).

Singidūnum. Now Belgrade; a town in Moesia Superior at the union of the Savus (Save) and the Danubius. It was strongly fortified and was the headquarters of a legion (Ptol. iii. 9, 3; Procop. *Aed.* iv. 6).

Singing. See MUSICA.

Singitĭcus Sinus. See SINGUS.



Singus (Σίγγος). A town in Macedonia on the eastern coast of the peninsula Sithonia, which gave its name to the Sinus Singiticus (Thucyd. v. 18).

Sinis (Σίνις) or **Sinnis** (Σίννις). Son of Polypemon, Pemon, or Poseidon, by Sylea, the daughter of Corinthus. He was a robber, who frequented the Isthmus of Corinth, and killed the travellers whom he captured by fastening them to the top of a fir-tree, which he bent, and then let spring up again. He himself was killed in this manner by Theseus. See Apollod. iii. 16, 2; Pausan. ii. 1, 3; and THESEUS.

Sinon (Σίνων). A Greek, who accompanied his countrymen to the Trojan War. When the Greeks had fabricated the famous wooden horse, Sinon went to Troy, at the instigation of Odysseus, with his hands bound behind his back, and by the most solemn protestations assured Priam that the Greeks were gone from Asia, and that they had been ordered to sacrifice one of their soldiers to render the wind favourable to their return; and that, because the lot had fallen upon him, he had fled away from their camp, not to be cruelly sacrificed. These false assertions were immediately credited by the Trojans, and Sinon advised Priam to bring into his city the wooden horse which the Greeks had left behind them, and to consecrate it to Athené. His advice was followed, and Sinon, in the night, to complete his perfidy, opened the side

of the horse, from which issued a number of armed Greeks, who surprised the Trojans and pillaged their city (Hom. *Od.* viii. 492; Verg. *Aen.* ii. 79, etc.; Pausan. x. 20). See TROJAN WAR.

Sinōpé (Σινώπη). Now Sinope, Sinoub; the most important of all the Greek colonies on the shores of the Euxine, stood on the northern coast of Asia Minor, on the western headland of the great bay of which the delta of the river Halys forms the eastern headland, and a little east of the northernmost promontory of Asia Minor. It appears in

Coin of Sinopé.

history as a very early colony of the Milesians. Having been destroyed in the invasion of Asia by the Cimmerians, it was restored by a new colony from Miletus in B.C. 632, and soon became the greatest commercial city on the Euxine. Its territory, called Sinopis, extended to the banks of the Halys. It was the birthplace and residence of Mithridates the Great, who enlarged and beautified it. Shortly before the murder of Iulius Caesar it was colonized by the name of Iulia Caesarea Felix Sinopé, and remained a flourishing city, though it never recovered its former importance. At the time of Constantine it had declined so much as to be ranked second to Amasia. It was the native city of the renowned cynic philosopher Diogenes, of the comic poet Diphilus, and of the historian Baton.

Sintĭca. A district in Macedonia, inhabited by the Thracian people Sinti, extended east of Crestonia and north of Bisaltia as far as the Strymon and the lake Prasias. Its chief town was Heraclea Sintica (Thuc. ii. 98).

Sinuessa. Now Rocca di Mandragone; the last city of Latium on the confines of Campania, to which it originally belonged, was situated on the sea-coast and on the Via Appia. It was colonized by the Romans, together with the neighbouring town of Minturnae, in B.C. 296. It possessed a good harbour, and was a place of considerable commercial importance. In its neighbourhood were celebrated warm baths, called Aquae Sinuessanae (Tac. *Ann.* xii. 66).

Sinum or **Sinus** (δῖνος). A bowl used for wine or milk. It was large and deep and round in shape (Varro, *L. L.* v. 123; Verg. *Ecl.* vii. 33).

Sinus (κόλπος). Literally any surface bent into a hollow or semicircular form. Hence (1) a loose fold in a garment, usually made so as to lie across the breast (hence *sinus*, also meaning the breast), and used as a pocket for carrying any small object, as a letter, a purse, etc. (Cic. *Verr.* i. 5, 57); (2) the bosom of a sail; (3) a bay or gulf on a coast; (4) a round vessel for wine or milk. See SINUM.

Sion. See HIEROSOLYMA.

Siparium. The smaller curtain on the Roman stage about half-way between the front and the back. It was drawn up between the scenes. See AULAEUM; THEATRUM.

Siphnus (Σίφνος). Now Siphno; an island in the Aegaean Sea, forming one of the Cyclades, southeast of Seriphus. It is of an oblong form, and about forty miles in circumference. Its original name was Meropé, and it was colonized by Ionians from Athens. In consequence of their gold and silver mines, of which the remains are still visible, the Siphnians attained great prosperity, and were regarded in the time of Herodotus as the wealthiest of the islanders. Siphnus was one of the few islands which refused tribute to Xerxes; and one of its ships fought on the side of the Greeks at Salamis. The moral character of the Siphnians stood low, and hence to act like a Siphnian (Σιφνιάζειν) became a term of reproach (Aristoph. *ap.* Suid. s. h. v.).

Sipho or **Sipo** (σίφων). (1) A siphon; a pipe through which the water is made to rise by its own pressure. The principle of the siphon was used for fountains and for drawing liquids from casks (Pliny, *H. N.* ii. 66; Pollux, vi. 2). The siphon is of great antiquity, having been used by the ancient Egyptians, as is seen by paintings on the monuments. (See illustration under AEGYPTUS, p. 26.) (2) The name was also applied to a sort of fire-engine constructed on the principle of the siphon, as elaborated by Ctesibius of Alexandria, and which is described and illustrated in the article CTESIBICA MACHINA. See also Pliny, *Epist.* x. 35; Isidor. *Orig.* xx. 6; Ulp. *Dig.* 32, 7, 12.

Siphonarii or **Siponarii.** "Squirts." The slang name given at Rome to such of the *vigiles* as acted in the capacity of firemen. See SIPHO; VIGILES.

Sipo. See SIPHO.

Sipontum or **Sipuntum.** Now Siponto, called by the Greeks SIPUS (Σιποῦς). An ancient town in Apulia, in the district of Daunia, on the southern slope of Mount Garganus, and on the coast. It is said to have been founded by Diomedes, and was of Greek origin. It was colonized by the Romans, under whom it became a place of some commercial importance (Livy, xxxiv. 25).

Sipylus (Σίπυλος). A mountain of Lydia in Asia Minor, a branch of the Tmolus (Hom. *Il.* xxiv. 16). Here were a number of rich mines (Pausan. vii. 24, 7).

Sirbōnis Lacus (Σιρβώνιδος Λίμνη). A large and deep lake on the coast of Lower Egypt, east of Mount Casius. Its circuit was 1000 stadia. It was strongly impregnated with asphalt.

Sirēnes (Σειρῆνες). The daughters of Phorcys, according to later legend of Acheloüs, and one of the Muses. In Homer there are two, in later writers, three, called Ligea, Leucosia, and Parthenopé, or Aglaophemé, Molpé, and Thelxiepea. Homer describes them as dwelling between Circé's isle and Scylla, on an island, where they sit in a flowery meadow, surrounded by the mouldering bones of men, and with their sweet song allure and infatuate those that sail by. Whoever listens to their song and draws near them never again beholds wife and child. They know everything that happens on earth. When Odysseus sailed past, he had stopped up the ears of his companions with wax, while he had made them bind him to the mast, that he might hear their song without danger (*Od.* xii. 41–54; 153–300). Orpheus protected the Argonauts from their spell by his own singing (Apollon. Rh. iv. 903). As they were

only to live till some one had sailed past unmoved by their song, they cast themselves into the sea, on account either of Odysseus or of Orpheus, and were changed to sunken rocks. When the adventures of Odysseus came to be localized on the Italian and Sicilian shore, the seat of the Sirens was transferred to the neighbourhood of Naples and Sorrento, to the three rocky and uninhabited islets called the SIRENŪSAE, the *Sirenum scopuli* of Vergil (*Aen.* v. 864; cf. Stat. *Silv.* ii. 2, 1), or to Capri, or to the Sicilian promontory of Pelorum. There they were said to have settled, after vainly searching the whole earth for the lost Persephoné, their former playmate in the meadows by the Acheloüs; and later legend also assigned this at the time when they in part assumed a winged shape. They were represented as great birds with the heads of women, or with the upper part of the body like that of a woman, with the legs of birds, and with or without wings. At a later period they were sometimes regarded as retaining their original character of fair and cruel tempters and deceivers. But they are more generally represented as singers of the dirge for the dead, and they were hence frequently placed as an ornament on tombs; or as symbols of the magic of beauty, eloquence, and song, on which account their sculptured forms were seen on the funeral monuments of fair women and girls, and of orators and poets—for instance, on those of Isocrates and Sophocles. The National Museum at Athens contains several examples of stone Sirens, not as reliefs, but as separate figures; and a funeral monument of this type may be noticed on a vase in the British Museum, where the Siren is standing on a pillar and playing the lyre. Cf. Eurip. *Hel.* 169; the *Anthologia Palatina*, vii. 710, 481; with Miss Harrison's *Myths of the Odyssey*, pp. 146–182, and *Mythology and Monuments of Athens*, pp. 582–5.

Sirenūsae. Called by Vergil (*Aen.* v. 864) SIRĒNUM SCOPŬLI. Three small uninhabited and rocky islands near the south side of the Promontory Misenum, off the coast of Campania, which were, according to tradition, the abode of the Sirens. See SIRENES.

Siris. (1) Now Sinno; a river in Lucania flowing into the Tarentine Gulf. (2) Now Torre di Senna, an ancient Greek town in Lucania at the mouth of the preceding river.

Sirius (Σείριος). The dog-star (Hes. *Op. et D.* 417). See CANICULOSI DIES.

Sirmio. Now Sirmione; a beautiful promontory on the southern shore of the Lacus Benacus (Lago di Garda), on which Catullus had an estate.

Sirmium. Now Mitrovitz; an important city in Pannonia Inferior, situated on the left bank of the Savus. It was founded by the Taurisci, and under the Romans became the capital of Pannonia, and the headquarters of all their operations in their wars against the Dacians and the neighbouring barbarians (Amm. Marc. xvii. 13; xix. 11).

Sirocco. See AUSTER.

Sisăpon. Now Almaden; a town in Hispania Baetica famous for its silver mines and cinnabar (Strabo, p. 142).

Siscia. Now Sissek, called SEGESTA by Appian. An important town in Pannonia Superior, situated upon an island formed by the rivers Savus, Colapis, and Odra, and on the road from Aemona to Sirmium (Dio Cass. xlix. 37).

Sisenna, L. CORNELIUS. A Roman annalist who was praetor in the year when Sulla died (B.C. 78), and probably obtained Sicily for his province in 77. From the local knowledge thus acquired he was enabled to render good service to Verres, whose cause he espoused. During the war against the pirates (67) he acted as the legate of Pompey, and, having been despatched to Crete in command of an army, died in that island at the age of about 52. His great work, entitled *Historiae*, extended to at least fourteen or nineteen books, which contained the history of his own time (Gell. xii. 15, 2). Cicero pronounces Sisenna superior as an historian to any of his predecessors (Brut. 64, 228). The fragments are given in Peter's *Hist. Reliq.* 297. In addition to his *Historiae*, Sisenna translated the Milesian tales of Aristides (printed by Bücheler in his small edition of Petronius [Berlin, 1882]), but is probably not the person of the same name who composed a commentary upon Plautus. See Schneider, *De Sisennae Historiae Reliquiis* (Jena, 1882).

Sistrum (σείστρον). A kind of rattle used in the mystical worship of Isis, and borrowed, at the same time with it, from the Egyptians. It consisted of a thin oval band of metal (bronze, silver,

Sistra.

or gold) fastened to a handle, and crossed by a number of little metal rods, bent at either end, and loosely inserted in the band. It was held in the hand and shaken (Tibull. i. 3, 24). The same word is sometimes applied to a child's rattle (Mart. xiv. 54; Pollux, ix. 127). See ISIS.

Sisygambis (Σισύγαμβις). The mother of Darius Codomannus, the last king of Persia, fell into the hands of Alexander after the battle of Issus, B.C. 333, together with the wife and daughter of Darius. Alexander treated these captives with the greatest generosity and kindness, and displayed towards Sisygambis, in particular, a reverence and delicacy of conduct which is one of the brighest ornaments of his character. After his death she put an end to her life by voluntary starvation (Plut. *Alex.* 21; Q. Curt. x. 5, 19).

Sisyphus (Σίσυφος). The son of Aeolus and Enareté, whence he is called AEOLĬDES. He was married to Meropé, a daughter of Atlas or a Pleiad, and became by her the father of Glaucus, Ornytion (or Porphyrion), Thersander, and Halmus. In later accounts he is also called a son of Autolycus, and

the father of Odysseus by Anticlea (see ANTICLEA); whence we find Odysseus sometimes called *Sisyphides* (Soph. *Philoct.* 417). He is said to have built the town of Ephyra, afterwards Corinth. As king of Corinth he promoted navigation and commerce, but he was fraudulent, avaricious, and deceitful. His wickedness during life was severely punished in the lower world, where he had to roll up hill a huge marble block, which as soon as it reached the top always rolled down again. The special reasons for this punishment are not the same in all authors: some relate that it was because he had betrayed the designs of the gods; others because he attacked travellers, and killed them with a huge block of stone; and others again because he had betrayed to Asopus that Zeus had carried off Aegina, the daughter of the latter. The more usual tradition related that Sisyphus requested his wife not to bury him, and that, when she complied with his request, Sisyphus in the lower world complained of this seeming neglect, and obtained from Pluto or Persephoné permission to return to the upper world to punish his wife. He then refused to return to the lower world, until Hermes carried him off by force; and this piece of treachery is said to have been the cause of his punishment (Theog. 703; Eustath. *ad* Hom. pp. 631, 1702).

Sităcé (Σιτάκη) or **Sittăcé** (Σιττάκη). A great and populous city of Babylonia, near but not on the Tigris, and eight parasangs within the Median Wall. Its probable site is marked by a ruin called the Tower of Nimrod. It gave the name of SITTACENÉ to the district on the lower course of the Tigris, east of Babylonia and northwest of Susiana.

Sitalces (Σιτάλκης). A king of the Thracian tribe of the Odrysians. He was the son of Teres, whom he succeeded on the throne. He increased his dominions by successful wars, so that they ultimately comprised the whole territory from Abdera to the mouths of the Danube, and from Byzantium to the sources of the Strymon (Thuc. ii. 29, 97). At the commencement of the Peloponnesian War he entered into an alliance with the Athenians, and in B.C. 429 he invaded Macedonia with a vast army, but was obliged to retire through failure of provisions, and was killed in B.C. 424 by the Triballi (Thuc. iv. 101).

Sitella. See SITULA.

Sithonia (Σιθωνία). The central one of the three peninsulas running out from Chalcidicé in Macedonia, between the Toronaic and Singitic gulfs. The Thracians were originally spread over the greater part of Macedonia; and the ancients derived the name of Sithonia from a Thracian king, Sithon. We also find mention of a Thracian people, Sithonii, on the shores of the Pontus Euxinus; and the poets frequently use *Sithonis* and *Sithonius* in the general sense of *Thracicus* (Herod. vii. 123).

Sitĭcen (τυμβαύλης). A musician who performed at funerals upon a kind of horn or trumpet (*tuba*). See Capito *ap.* Gell. xx. 2.

Sitĭfis (Σίτιφα). Now Setif; a town in Mauretania on the borders of Numidia. It was a colony under the Romans, and when Mauretania Caesariensis was divided, Sitifis became the capital of the eastern province which was called after it Mauretania Sitifensis (Ptol. iv. 2, 34).

Sitŏnes. A German tribe in Scandinavia, belonging to the race of the Suevi (Tac. *Germ.* 45).

Sitophylăces (σιτοφύλακες). At Athens, a board originally consisting of ten members, five in the city itself and five in the Piraeus, which superintended the trade in grain (σῖτος), and prevented prices becoming exorbitant. See Aristot. *Ath. Pol.* 51, and the article COMMERCE, p. 395.

Sitopōlae (σιτοπῶλαι). Middlemen at Athens who sold grain and who were carefully watched by the citizens as well as by the importers lest they should "corner the market" (συνωνεῖσθαι) and put up the price of cereals (συνιστάναι τὰς τιμάς), an offence legally punishable with death; nor was any bail allowed to them before trial. This law, however, was systematically evaded (Lys. *Or.* 22). See SITOPHYLACES.

Sitos (σῖτος). See SITOPHYLACES; SITOPOLAE.

Sittius or **Sitius**, PUBLIUS. A native of Nuceria in Campania, who was connected with Catiline, and went to Spain in B.C. 64, from which country he crossed over into Mauretania in the following year. He joined Caesar when the latter came to Africa, in 46, to prosecute the war against the Pompeian party. He was of great service to Caesar in this war, and at its conclusion was rewarded by him with the western part of Numidia, where he settled, distributing the land among his soldiers. After the death of Caesar, Arabio, the son of Masinissa, returned to Africa, and killed Sittius by stratagem (Sall. *Cat.* 21; *Bell. Afr.* 25, 93–96; App. *B. C.* iv. 54).

Sitŭla, dim. Sitella (ὑδρία). A bucket for drawing water from a well, or for carrying it (Plaut. *Amph.* ii. 2, 30). It was sometimes of pottery and sometimes of bronze (Marquardt, *Privatleben*, p. 656). The word is also applied to a voting-urn (Plaut. *Cas.* ii. 6, 11), and to an urn for drawing lots (Plaut. l. c.). See CISTA.

Skepticism. See PHILOSOPHIA; PYRRHO.

Skiff. See CYMBA; SCAPHA.

Skirmisher. See VELITES.

Slate. See TABULA.

Slave. See SERVUS.

Slaver. See SERVUS.

Slavi. A Sarmatian tribe dwelling between the Borysthenes (Dniester) and the Tanaïs (Don), and also called ANTES.

Sleep, GOD OF. See SOMNUS.

Sleeve. See MANICA.

Sling. See FUNDA.

Slipper. See CREPIDA; SOCCUS; SOLEA.

Slug. See GLANS.

Smaragdus Mons (Σμάραγδον ὄρος). Now Jebel Zaburah; a mountain of Upper Egypt, near the coast of the Red Sea, north of Berenicé. It obtained its name from its extensive mines for emeralds (*smaragdi*) (Pliny, *H. N.* xxxvii. 65).

Smerdis (Σμέρδις). The son of the Cyrus who was murdered by order of his brother Cambyses. (See CAMBYSES.) His real name was BARDES. The death of Smerdis was kept a profound secret; and accordingly, when the Persians became weary of the tyranny of Cambyses, one of the Magians, called by Herodotus Patizithes, who had been left by Cambyses in charge of his palace and treasures, availed himself of the likeness of his brother Gaumates to the deceased Smerdis to proclaim this brother as king, representing him as the younger son of Cyrus. Cambyses heard of the revolt in Syria, but he died of

an accidental wound in the thigh as he was mounting his horse to march against the usurper. The false Smerdis was acknowledged as king by the Persians, and reigned for seven months without opposition. The leading Persian nobles, however, were not quite free from suspicion; and this suspicion was increased by the king never inviting any of them to the palace, and never appearing in public. Among the nobles who entertained these suspicions was Otanes, whose daughter Phaedima had been one of the wives of Cambyses, and had been transferred to his successor. The new king had some years before been deprived of his ears by Cyrus for some offence; and Otanes persuaded his daughter to ascertain whether her master had really lost his ears. Phaedima found out that such was the fact, and communicated the decisive information to her father. Otanes thereupon formed a conspiracy, and, in conjunction with six other noble Persians, succeeded in forcing his way into the palace, where they slew the false Smerdis and his brother Patizithes in the eighth month of their reign, B.C. 521 (Herod. iii. 30, 61–79). The usurpation of the false Smerdis was an attempt on the part of the Medes, to whom the Magians belonged, to obtain the supremacy, of which they had been deprived by Cyrus. The assassination of Gaumates and the accession of Darius Hystaspis again gave the ascendency to the Persians; and the anniversary of the day on which the Magians were massacred was commemorated among the Persians by a festival, called Magophonia, on which no Magian was allowed to show himself in public. The real nature of the transaction is also shown by the revolt of the Medes after the accession of Darius. See Hutecker, *Ueber d. falschen Smerdis* (1885); and the article PERSIA.

Smilis (Σμῖλις). The son of Euclides, of Aegina, a sculptor of the legendary period in Greece, whose name appears to be derived from σμίλη, a knife for carving wood, and afterwards a sculptor's chisel. Smilis is the legendary head of the Aeginetan School of sculpture, just as Daedalus is the legendary head of the Attic and Cretan Schools (Pausan. vii. 4, 4).

Smintheus (Σμινθεύς). A surname of Apollo, which is derived by some from σμίνθος, "a mouse," and by others from the town of Sminthé in Troas. The mouse was regarded by the ancients as inspired by the vapours arising from the earth, and as the symbol of prophetic power. This festival, which was celebrated at Rhodes, was called SMINTHIA (τὰ Σμίνθια). On the origin and significance of the name, see A. Lang, *Custom and Myth*, pp. 103 foll. (2d ed. London, 1885).

Smiths. See FABER.

Smugglers. See PORTORIUM.

Smyrna (Σμύρνα) or **Myrrha**. The mother of Adonis by her own father, Cinyras. See ADONIS.

Smyrna (Σμύρνα), and in some manuscripts **Zmyrna**. Now Smyrna (Turkish, Izmir); an ancient city of Asia Minor, the only one of the great cities on the coast that still remains of importance as a commercial port. It lay on the river Meles at the eastern end of the Sinus Smyrnaeus, whose depth allowed the largest ships to anchor at the very walls of the city. From it stretched back the great valley of the Hermus, in which lay the rich city of Sardis (q. v.), of which Smyrna served as the principal seaport. It was probably Aeolian in its origin, founded by colonists from Cymé (Herod. i. 150; Pausan. vii. 5, 1), but became a possession of the Ionians of Colophon, and from that time was politically classed with the Ionian cities. As to the time when it became a member of the Panionic Confederacy, we have only a very untrustworthy account, which refers its admission to the reign of Attalus, king of Pergamum. Its early history is also very obscure. There is an account in Strabo (p. 646) that it was destroyed by the Lydian king Sadyattes, and that its inhabitants were compelled to live in scattered villages until after the Macedonian conquest, when the city was rebuilt, twenty stadia from its former site, by Antigonus; but this is inconsistent with Pindar's mention of Smyrna as a beautiful city (*Fr.* 155). Thus much is clear, however, that at some period the old city of Smyrna, which stood on the north-eastern side of the Hermaean Gulf, was abandoned, and that it was succeeded by a new city on the south-eastern side of the same gulf (the present site), which is said to have been built by Antigonus, and which was enlarged and beautified by Lysimachus. This new city stood partly on the sea-shore and partly on a hill called Mastusia. The streets were paved with stone, and crossed one another at right angles. The city soon became one of the greatest and most prosperous in the world. It was especially favoured by the Romans on account of the aid it rendered them in the Syrian and Mithridatic Wars. It was the seat of a *conventus iuridicus*. In the Civil Wars it was taken

Coin of Smyrna. (Second century B.C.)

and partly destroyed by Dolabella, but it soon recovered. It occupies a distinguished place in the early history of Christianity, as one of the only two among the Seven Churches of Asia which St. John addresses in the Apocalypse without any admixture of rebuke, and as the scene of the labours and martyrdom of Polycarp. In the years A.D. 178–180 a succession of earthquakes, to which the city has always been much exposed, reduced it almost to ruins; but it was restored by the emperor M. Antoninus. In the successive wars under the Eastern Empire it was frequently much injured, but always recovered; and, under the Turks, who took it in A.D. 1424, it has survived repeated attacks of earthquake, fire, and plague, and still remains the great commercial city of the Levant. There are but few ruins of the ancient city. In addition to her other sources of renown, Smyrna stood at the head of the seven cities which claimed the birth of Homer. The poet was worshipped as a hero in a magnificent building called the Homereum (Ὁμήρειον). Near the sea-shore there stood a magnificent temple of Cybelé, whose head decorated the coins of the city.

Smyrna Trachēa. An early name of Ephesus (q. v.).

Smyrnaeus Sinus (Σμυρναϊκὸς κόλπος). Now the Gulf of Izmir or Smyrna. The great gulf on the

western coast of Asia Minor, at the bottom of which Smyrna stands. See SMYRNA.

Soaemias. See SOEMIS.

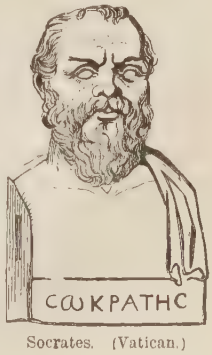
Soccus. A loose slipper, or light, low shoe, fitting either foot, which the Romans adopted from the Greeks, among whom it was worn by both sexes. It was the characteristic of comedy, as the *cothurnus* (q. v.) was of tragedy (Hor. *A. P.* 80). To wear the soccus off the stage was regarded as un-Roman (Pliny, *H. N.* xxxvii. 6).

Comic Actor with Socci. (De l'Aulnaye, *Salt. Theatr.* pl. iv.)

Social War. (1) In Greek history a name given to the war between Athens and her allies (B.C. 357–355), which was caused by the exactions imposed by the Athenian generals upon the allied States. Artaxerxes, the Persian king, threatened to support the allied forces with a fleet of three hundred ships, so that Athens was obliged to consent to a peace by which her most important allies became practically independent of her. It was this war that forced Athens to remain quiet while Philip of Macedon was initiating some of his far-reaching measures of aggrandizement.

(2) In Roman history a name given to the war between Rome and the eight Sabellian nations (B.C. 90–89)—the Marsi, Paeligni, Marrucini, and Vestiniani, with the Picentines, Samnites, Apulians, and Lucanians. The war is also known as the MARSIC WAR. After several defeats, the Romans under Pompeius Strabo and L. Porcius Cato defeated the allies, whose general was Papius Mutilus, and the war ended with the surrender of the Sabellian forces; but Rome by a Lex Plautia Papiria granted nearly everything that the allies had demanded, especially an easy access to the Roman franchise. In this war 300,000 men are said to have perished.

Coin of the Eight Sabellian Nations.



Socii. Among the Romans the socii, as distinguished in constitutional law from Roman subjects, were the allies who, while their independence was recognized, stood in a more or less dependent relation to the Roman State. Under the Republic, up to the time when the right of citizenship was conferred on all the free inhabitants of Italy (B.C. 89), the Latins, and the Italian communities on the same footing with them, enjoyed a privileged position among the other allies. In the military organization of the Roman Republic the contingents which they furnished were called *socii* in contradistinction to the legions and the non-Italian auxiliaries. (See EXERCITUS; and cf. LEGIO.) SOCII NAVALES are the crews, furnished by the allied towns, of the ships of war. See Mommsen, *Staatsrecht*, iii. pp. 645–718; and the article FOEDERATAE CIVITATES.

Socrătes (Σωκράτης). (1) An Athenian philosopher, whose teaching revolutionized the whole drift of subsequent philosophical speculation. He was born in the deme Alopecé, near Athens, B.C. 469. His father, Sophroniscus, was a sculptor, and his mother, Phaenareté, was a midwife. In his youth Socrates for a time followed his father's occupation, and a group of sculptured Graces, preserved in the Acropolis, was exhibited as his work down to the time of Pausanias; but there is reason to believe that this arose from a confusion of names. It is thought by some that the relief of draped Graces in the Museo Chiaramonte in Rome represents the Athenian group, in which case it must have belonged to an earlier period of art than the century in which Socrates lived.

The personal qualities of Socrates were marked, and such as would readily attract attention. He enjoyed vigorous health, and was so robust as to be capable of enduring fatigue and hardship to a degree that astonished all who knew him. He went barefooted at all seasons of the year; and this not merely at Athens, but when serving as a soldier in the much colder climate of Thrace; and he wore the same clothing in winter as in summer. His features were of remarkable ugliness; and his flat nose, thick lips, and bulging eyes led to his being compared to a satyr.

As to the particulars of his life, there is no connected account. It is known that he served as a heavy-armed soldier at Potidaea, Delium, and Amphipolis; but he seems not to have filled any public office until B.C. 406, when he was a member of the Senate of Five Hundred, and as such refused, in spite of all personal risk, to put an unconstitutional question to vote. He displayed the same moral courage in refusing to obey the order of the Thirty Tyrants for the arrest of Leon of Salamis.

From the period of his middle life, at any rate, he devoted his time wholly to the self-imposed task of teaching, giving up all other business, both public and private, and neglecting all means of acquiring a fortune. It was probably his remissness in this respect which was responsible for the ill-temper and fretfulness of his wife Xanthippé, whose name has passed into all modern tongues as the type of a shrew. Socrates never opened a school and never lectured publicly, nor did he receive any money for his teaching, but went about in the most public parts of the city, such as the market-place, the gymnasia, and the work-shops, seeking opportunities for awakening in the young and old alike moral consciousness and an impulse towards self-knowledge with respect to the end and value of human action. His object, however, was only to aid those with whom he talked in developing such germs of knowledge as were already present in them, and not to communicate to them dog-

Socrates. (Vatican.)

So-called Prison of Socrates at Athens.

matically any knowledge of his own. He was especially severe upon false pretences and intellectual conceit; and, consequently, to many persons he became exceedingly obnoxious, and was the object of much dislike and misrepresentation. This is probably the reason why Aristophanes, in *The Clouds*, selected Socrates as the type of men engaged in philosophical and rhetorical teaching; the more so, as his grotesque physiognomy admitted so well of being imitated in the mask which the actor wore. The audience at the theatre would more readily recognize the peculiar figure which they were accustomed to see every day in the market-place than if Prodicus or Protagoras, whom most of them did not know by sight, had been brought on the stage; nor was it of much importance either to them or to Aristophanes whether Socrates was represented as teaching what he did really teach, or something utterly different.

Attached to none of the prevailing parties, Socrates found in each of them his friends and his enemies. Hated and persecuted by Critias, Charicles, and others among the Thirty Tyrants, who had a special reference to him in the decree which they issued, forbidding the teaching of the art of oratory, he was impeached after their banishment and by their opponents. An orator named Lycon, and a poet (a friend of Thrasybulus) named Meletus, had united in the impeachment with the powerful demagogue Anytus, an embittered antagonist of the Sophists and their system, and one of the leaders of the band which, setting out from Phylé, forced their way into the Piraeus, and drove out the Thirty Tyrants. The judges also are described as persons who had been banished, and who had returned with Thrasybulus. The chief articles of impeachment were that Socrates was guilty of corrupting the youth and of despising the tutelary deities of the State, putting in their place other new divinities. At the same time it had been made a matter of accusation against him that Critias, the most ruthless of the Tyrants, had come forth from his school. Some expressions of his, in which he had found fault with the democratic mode of electing by lot, had also been brought up against him; and there can be little doubt that use was made of his friendly relations with Theramenes, one of the most influential of the Thirty, with Plato's uncle Charmides, who fell by the side of Critias in the struggle with the popular party, and with other aristocrats, in order to irritate against him the party which at that time was dominant. The substance of the speech which Socrates delivered in his defence is probably preserved by Plato in the discourse which goes under the name of the "Apology of Socrates." Being condemned by a majority of only six votes, he expresses the conviction that he deserved to be maintained at the public cost in the Prytaneum, and refuses to acquiesce in the adjudication of imprisonment or a large fine or banishment. He will assent to nothing more than a fine of sixty minae, on the security of Plato, Crito, and other friends. Condemned to death by the judges, who were incensed by this speech, by a majority of eighty votes, he departs from them with the protestation that he would rather die after such a defence than live after one in which he should have endeavoured to excite their pity. The sentence of death could not be carried into execution until after the return of the vessel which had been sent to Delos on the periodical Theoric mission. The thirty days which intervened between its return and the condemnation of Socrates were devoted by him in prison to poetic attempts (the first he had made in his life) and to his usual conversation with his friends. One of these conversations, on the duty of obedience to the laws, Plato has reported in the *Crito*, so called after the faithful follower of Socrates, who had endeavoured without success to persuade him to make his escape. In another, imitated or worked up by Plato in the *Phaedo*, Socrates immediately before he drank the cup of hemlock developed the grounds of his immovable conviction of the immortality of the soul. He died with composure and cheerfulness in his seventieth year, B.C. 399.

Three peculiarities distinguished Socrates: (*a*) His long life passed in contented poverty and in public dialectics, of which we have already spoken. (*b*) His persuasion of a special religious mission. He had been accustomed constantly to hear, even from his childhood, a divine voice—interfering, at moments when he was about to act, in the way of restraint, but never in the way of instigation. Such prohibitory warning was wont to come upon him very frequently, not merely on great but even on small occasions, intercepting what he was about to do or to say. Though later writers speak of this as the Daemon or Genius of Socrates, he himself did not personify it, but treated it merely as a "divine sign, a prophetic or supernatural voice." He was accustomed not only to obey it implicitly, but to speak of it publicly and familiarly to others, so that the fact was well known both to his friends and to his enemies. See a paper by H. Jackson in the

English *Journal of Philology*, vol. v., and Freymüller, *De Socratis Daemonio* (1864). (*c*) His great intellectual originality, both of subject and of method, and his power of stirring and forcing the germ of inquiry and ratiocination in others. He was the first who turned his thoughts and discussions distinctly to the subject of ethics, and was the first to proclaim that "the proper study of mankind is man." With the philosophers who preceded him, the subject of examination had been Nature, or the Cosmos as one undistinguishable whole, blending together cosmogony, astronomy, geometry, physics, metaphysics, etc. In discussing ethical subjects Socrates employed the dialectic method, and thus laid the foundation of formal logic, which was afterwards expanded by Plato and systematized by Aristotle.

The originality of Socrates is shown by the results he achieved. Out of his intellectual school sprang not merely Plato, himself a host, but all the other leaders of Grecian speculation for the next half century, and all those who continued the great line of speculative philosophy down to later times. Euclid and the Megaric School of philosophers—Aristippus and the Cyrenaic Antisthenes and Diogenes, the first of those called the Cynics—all emanated more or less directly from the stimulus imparted by Socrates, and so, for that matter, did the Stoics and Epicureans, though each followed a different vein of thought. Ethics continued to be what Socrates had first made them—a distinct branch of philosophy—alongside of which politics, rhetoric, logic, and other speculations relating to man and society gradually arranged themselves; all of them more popular, as well as more keenly controverted, than physics, which at that time presented comparatively little charm, and still less of attainable certainty. There can be no doubt that the individual influence of Socrates permanently enlarged the horizon, improved the method, and multiplied the ascendant minds, of the Grecian speculative world, in a manner never since paralleled. Subsequent philosophers had a more elaborate doctrine and a larger number of disciples who imbibed their ideas; but none of them applied the same stimulating method with the same efficacy, and none of them so struck out of other minds that fire which sets light to original thought.

See Zeller, *Socrates and the Socratic Schools*, Engl. trans. (1877); Alberti, *Sokrates* (1869); Bertram, *Der Sokrates d. Xenoph. und Aristoph.* (1865); Carran, *La Sophistique de Socrate* (1886); Guttmann, *Ueber den wissenschaftlichen Standpunkt des Sokrates* (1881). The best ancient sources are Xenophon's *Memorabilia* and *Symposium*, with Plato's *Crito*, *Symposium*, *Apologia*, and *Phaedo*. See PHILOSOPHIA.

(2) An ecclesiastical historian, born at Constantinople about A.D. 379. He was a pupil of Ammonius and Helladius, and followed the profession of an advocate in his native city, whence he is surnamed Scholasticus. The *Ecclesiastical History* (Ἐκκλησιαστικὴ Ἱστορία) of Socrates extends from the reign of Constantine the Great, 306, to that of the younger Theodosius, 439. He appears to have been a man of less bigotry than most of his contemporaries, and the very difficulty of determining from internal evidence some points of his religious belief may be considered as arguing his comparative liberality. His history is divided into seven books. His work is edited by Hussey (1853) and Bright, with an introduction (1878); and is translated into English in Schaff's Library of Nicene and Post-Nicene Fathers, 2d series, vol. ii. (New York, 1891).

Sodalĭtas. The word properly means an association or club, and was especially applied to the religious brotherhoods among the Romans. By order of the State, they attended to the cult of some particular object of worship by jointly celebrating certain sacrifices and feasts, especially on the anniversary of the foundation of that cult.

The members, called *sodales*, stood in a legally recognized position of mutual obligation, which did not allow any one of them to appear against another as a prosecutor in a criminal case, or to become *patronus* of the prosecutor of a *sodalis*, or to officiate as judge upon a *sodalis*. Such a brotherhood were the Sodales Augustales, appointed A.D. 14 by the Senate for the cult of the deified Augustus, a college of twenty-one, and afterwards of twenty-eight members of senatorial rank, which also took upon itself the cult of Claudius after his deification, and bore, after that, the official title Sodales Augustales Claudiales. Besides these, there were the Sodales Flaviales Titiales for the cult of Vespasian and Titus, the Hadrianales for that of Hadrian, Antoniniani for that of Antoninus Pius and of the successively deified emperors (cp. Collegium).

The secular clubs, *sodalitates* or *collegia sodalicia*, were, in the later Republican age, much turned to account for political objects, and their organization used for purposes of bribery. (See Cicero's speech *Pro Plancio*.)

Sodalitium and **Sodalicium.** See AMBITUS.

Sodŏma (*τὰ Σόδομα*). A very ancient city of Canaan, in the beautiful valley of Siddim, closely connected with Gomorrha, over which and the other three "cities of the plain" the king of Sodom seems to have had a sort of supremacy. In the book of Genesis we find these cities as subject, in the time of Abraham, to the king of Elam and his allies (an indication of the early supremacy in western Asia of the masters of the Tigris and Euphrates Valley), and their attempt to cast off the yoke was the occasion of the first war recorded in history (Gen. xiv).

Soēmis or **Soaemias, Iulia.** The daughter of Iulia Maesa, and mother of Elagabalus, became the chosen counsellor of her son, and encouraged and shared his follies and enormities. She took a seat in the Roman Senate, into which a woman then for the first time entered, and also established a sort of Senate of Women in which she presided and promulgated edicts for regulating all matters connected with the morals, etiquette, and dress of Roman ladies. She was slain by the Praetorians on the 11th of March, A.D. 222 (Lamprid. *Elagab.* 2; Dio Cass. lxxviii. 30, 38).

Sogdiāna (Σογδυανή: Persian, Sogd). Comprising parts of Turkestan and Bokhara. The northeast province of the ancient Persian Empire, separated on the south from Bactriana and Margiana by the upper course of the Oxus (Jihoun); on the east and north from Scythia by the Sogdii Comedarum and Oscii Mountains (Kara-Dagh, Alatan, and Ak Tagh) and by the upper course of the Iaxartes (Sihoun), and bounded on the northwest by

the great deserts east of the Sea of Aral. The natives of the country were of the Aryan race, resembling the Bactrians in their customs (Arrian, *Anab.* iii. 30; iv. 16, 18).

Sogdiānus (Σογδιανός). One of the illegitimate sons of Artaxerxes I. Longimanus. He acquired the throne on the death of his father (B.C. 425) by the murder of his legitimate brother Xerxes II. Sogdianus, however, was murdered in his turn, after a reign of seven months, by his brother Ochus. See PERSIA.

Sogdii Montes. See SOGDIANA.

Sol. The sun. See HELIOS.

Solarium (σκιάθηρον). A sundial (see GNOMON); also the flat roof of the Roman dwelling-house. See DOMUS, p. 546.

Soldurii (εὐχωλιμαῖοι). A Gallic word denoting the armed retainers of a military chief (Caes. *B. G.* iii. 22).

Solea. (1) A sandal, consisting of a sole bound by a strap across the instep (Festus, s. h. v.). (2) SOLEA SPARTEA, a shoe or boot of Spanish brown (*sparta*) used for protecting the diseased feet of cattle (Columell. vi. 12, 3). (3) SOLEA FERREA, a shoe for horses and mules made of metal (Sueton. *Nero*, 30; *Vesp.* 23), but bound on the hoof and not fastened with nails.

Soli or **Soloe** (Σόλοι). (1) A city on the coast of Cilicia, between the rivers Lamus and Cydnus, said to have been colonized by Argives and Lydians from Rhodes. Pompey restored the city, which had been destroyed by Tigranes, and peopled it with the survivors of the defeated bands of pirates; and from this time forth it was called POMPEIOPŌLIS. It was celebrated in literary history as the birthplace of the Stoic philosopher Chrysippus, of the comic poet Philemon, and of the astronomer and poet Aratus. Its name survives in the linguistic term "solecism" (*soloecismus*), which is said to have been first used because of the bad Greek spoken by the people of this city. (See Diog. Laërt. i. 2, 4; Strabo, p. 683; Suid. s. v. Σόλοι; Gell. i. 7, 3). (2) Now Aligora, in the valley of Solea, a considerable seaport town in the western part of the north coast of Cyprus. Here were temples of Isis and Aphrodité.

Solĭdus (νόμισμα). A Roman gold coin, introduced by the emperor Constantine about A.D. 312, which remained in use until the downfall of the Byzantine Empire; its weight was $\frac{1}{72}$ lb., its value about $3. The word is preserved in the modern Italian *soldo* and the French *sou*. See NUMISMATICS, page 1115.

Solīnus, GAIUS IULIUS. A Roman writer who composed, probably in the second half of the third century A.D., a collection of *Memorabilia* (*Collectanea Rerum Memorabilium*, better known by its later title, in the sixth century, *Polyhistor*). The most important portion (the geographical) is an abstract of a treatise on geography compiled from Pliny's *Natural History*. There is a critical edition by Mommsen (Berlin, 1864).

Solis Fons. See OASIS.

Solis Mons. See SOLOÏS.

Solitaurilia. See SUOVETAURILIA.

Solium (θρόνος). (1) Any high-backed chair with closed sides for arms (Serv. *ad* Verg. *Aen.* i. 506). (2) A chair of state, or throne, cushioned, and with the back covered with drapery (Verg. *Aen.* x. 116). (3) A seat at the bottom of a circular bath on which the bathers sat while washing (Suet. *Aug.* 82; Festus, s. h. v.).

Solium. (From the Vatican Vergil.)

Soloe. See SOLI.

Soloïs (Σολόεις). Now C. Cantin. A promontory running far out into the sea, in the southern part of the west coast of Mauretania. Upon it was a Phœnician temple to the god of the sea. The Romans called it SOLIS MONS.

Solōn (Σόλων). A celebrated Athenian legislator, born about B.C. 638. His father Execestides was a descendant of Codrus, and his mother was a cousin of the mother of Pisistratus. Execestides had seriously crippled his resources by a too prodigal expenditure; and Solon consequently found it either necessary or convenient in his youth to betake himself to the life of a foreign trader. It is likely enough that while necessity compelled him to seek a livelihood in some mode or other, his active and inquiring spirit led him to select that pursuit which would furnish the amplest means for its gratification. Solon early distinguished himself by his poetical abilities. His first effusions were in a somewhat light and amatory strain, which afterwards gave way to the more dignified and earnest purpose of inculcating profound reflections or sage advice. So widely indeed did his reputation spread that he was ranked as one of the famous Seven Sages (q. v.), and his name appears in all the lists of the seven. The occasion which first brought Solon prominently forward as an actor on the political stage was the contest between Athens and Megara respecting the possession of Salamis. The ill success of the attempts of the Athenians to make themselves masters of the island had led to the enactment of a law forbidding the writing or saying anything to urge the Athenians to renew the attempt. Soon after these events (about 595) Solon took a leading part in promoting hostilities on behalf of Delphi against Cirrha, and was the mover of the decree of the Amphictyons by which war was declared. It does not appear, however, what active part he took in the war. According to a common story, which, however, rests only on the authority of a late writer, Solon hastened the surrender of the town by causing the waters of the Plistus to be poisoned. It was about the time of the outbreak of this war that, in consequence of the distracted condition of Attica, which was rent by civil commotions, Solon was called upon by all parties to mediate between them, and alleviate the miseries that prevailed. He was chosen archon in 594, and under that legal title was invested with unlimited power for adopting such measures as the exigencies of the State demanded.

In fulfilment of the task intrusted to him, Solon addressed himself to the relief of the existing distress. This he effected with the greatest discretion and success by his celebrated "disburdening ordinance" (σεισάχθεια), a measure consisting of various distinct provisions, calculated to relieve the debtors with as little infringement as possible

on the claims of the wealthy creditors. He also changed the standard of the monetary system from the Phidonian to the Euboic, which was the one generally in use in the great centres of commerce, Chalcis and Eretria, so that Athenian trade might be simplified in its exchanges (Aristotle, *Ath. Pol.* 10). A limit was also set to the rate of interest and to the accumulation of land (Aristotle, *Ath. Pol.* 6). The success of the Seisachtheia procured for Solon such confidence and popularity that he was further charged with the task of entirely remodelling the constitution. As a preliminary step, he repealed all the laws of Draco (q. v.), except those relating to bloodshed. The principal features of the Solonian Constitution may be briefly summarized for the benefit of the reader. The State as he left it was a timocracy (*τιμοκρατία*), that is to say, a form of oligarchy (*ὀλιγαρχία*) in which the possession of a certain amount of property is requisite for admission to the ruling class. (See OLIGARCHIA.) Solon established a sort of timocratic scale, so that those who did not belong to the nobility received the rights of citizens in a proportion determined partly by their property and their corresponding services to the State. For this purpose he divided the population into four classes, founded on the possession of land. (1) Pentacosiomedimni (*Πεντακοσιομέδιμνοι*), who had at least 500 *medimni* (750 bushels) of corn or *metretae* of wine or oil as yearly income. (2) Hippeis (*Ἱππεῖς*, *Ἱππῆς*), or knights, with at least 300 *medimni*. (3) Zeugitae (*Ζευγῖται*) (possessors of a yoke of oxen), with at least 150 *medimni*. (4) Thetes (*Θῆτες*) (workers for wages), with less than 150 *medimni* of yearly income. Solon's legislation only granted to the first three of these four classes a vote in the election of responsible officers, and only to the first class the power of election to the highest offices; as, for instance, that of archon. The fourth class was excluded from all official positions, but possessed the right of voting in the general public assemblies which chose officials and passed laws. They had also the right of taking part in the trials by jury which Solon had instituted. The first three classes were bound to serve as hoplites; the cavalry was raised out of the first two, while the fourth class was only employed as light-armed troops or on the fleet, and apparently for pay. The others served without pay. The first three classes alone were subject to direct taxation. The holders of office in the State were also unpaid. Solon established as the chief consultative body the Council of the Four Hundred (see BOULÉ), in which only the first three classes took part, and as chief administrative body the Areopagus (q. v.), which was to be filled up by those who had been archons. A Council of 401 members is said to have been part of Draco's constitution (about B.C. 621), the members being selected by lot from the whole body of citizens. Solon reduced the Council to 400, one hundred from each of the four tribes; and extended in some particulars the powers already possessed by the Areopagus (Aristotle, *Ath. Pol.* 4, 8). Besides this, he promulgated a code of laws embracing the whole of public and private life, the salutary effects of which lasted long after the end of his constitution. He also rectified the calendar, and regulated the system of weights and measures. He forbade the exportation of Attic products, except olive oil. Among his other regulations were those giving to childless persons the power of disposing of their property by will, punishing idleness, inflicting *ἀτιμία* on those citizens who in the time of any sedition remained neutral, and giving great rewards to the victors in the Olympian and Isthmian Games.

The laws of Solon were inscribed on wooden cylinders (*ἄξονες*) and triangular tablets (*κύρβεις*), and set up in the Acropolis, and later in the Prytaneum. Solon himself spoke of them as being not the best laws conceivable, but the best that the Athenians could be induced to accept. His Constitution was, in fact, a compromise between democracy proper and oligarchy, and it gives to Solon a title to rank with the great constructive statesmen of all time.

The great lawgiver's later history must be regarded as more legendary than authentic. After completing his task of legislation he left Athens for ten years, after exacting from the people a promise that they would leave his laws unaltered for that space of time (Aristotle, *Ath. Pol.* 11; Herod. i. 29; Plut. *Sol.* 25). After visiting Egypt, he is said to have gone to Cyprus, where he was received by the king of the little town of Aepea. Solon persuaded the king, Philocyprus, to remove from the old site and build a new town on the plain. The new settlement was called Soli, in honour of the illustrious visitor (Herod. v. 113). He is further said to have visited Lydia; and his interview with Croesus was one of the most celebrated stories in antiquity. "Who is the happiest man you have ever seen?" asked the magnificent king, fishing for a compliment. "I can speak of no one as happy until I have seen how his life has ended," replied the philosopher, thus giving deep offence to the monarch (Herod. i. 32). See CROESUS.

During the absence of Solon the old dissensions were renewed, and shortly after his arrival at Athens the supreme power was seized by Pisistratus. The tyrant, after his usurpation, is said to have paid considerable court to Solon, and on various occasions to have solicited his advice, which Solon did not withhold. Solon probably died about 558, two years after the overthrow of the Constitution, at the age of eighty. There was a story current in antiquity that, by his own directions, his ashes were collected and scattered round the island of Salamis. Of the poems of Solon several fragments remain. They do not indicate any great degree of imaginative power, but their style is vigorous and simple; and those that were called forth by special emergencies appear to have been marked by no small degree of energy.

See the histories of Greece by Thirlwall, Grote, Curtius, Cox, and Abbot; and the editions of Aristotle's *Constitution of Athens* by Kenyon (1891), Kaibel and Wilamowitz-Moellendorf (1891), with the translation by Poste (1891). See also Jonas, *De Solone Atheniensi* (1884). The remains of Solon's poetry are collected by Bergk in his *Poetae Lyrici Graeci* (4th ed. 1878) and discussed by Mettauer in his *Solon als Dichter* (1884) and Laeger, *De Veterum Epicorum Studio in Solonis Reliquiis* (1885). His life was written by Plutarch.

Solonian Constitution. See SOLON.

Solūs (*Σολοῦς*), also called **Soluntum** by the Romans. An ancient town on the northern coast of Sicily, between Panormus and Thermae. It was first colonized by the Phœnicians (Thucyd. vi. 2).

Solŷma (*τὰ Σόλυμα*). (1) The mountain range which runs parallel to the east coast of Lycia, and is a southern continuation of Mount Climax. (2) Another name for HIEROSOLŸMA (q. v.).

Solymi. See LYCIA.

Somnium Scipiōnis. "Scipio's Dream"; the title given to a portion of the sixth book of Cicero's treatise *De Republica*. The greater part of the treatise itself is lost, but the episode of Scipio's dream is preserved in the commentary of Macrobius (*Commentariorum in Somnium Scipionis Libri Duo*). It tells how the younger Scipio while in Africa was visited by the spirit of the great Africanus, who revealed to him in part his future career, and taught him that there is in the life to come a reward reserved for those who serve their country loyally and well.

Somnus (*Ὕπνος*). The god of sleep; the son of Nyx (q. v.) and twin-brother of Thanatos or Mors (*Il.* xiv. 231; xvi. 672). With his brother, according to Hesiod, he dwelt in the eternal darkness of the farthest West (*Theog.* 759). Thence he swept over land and sea, bringing sleep to men and gods, since he had power over all alike, and could lull to sleep even Zeus himself. On the chest of Cypselus at Olympia, both brothers were depicted as boys sleeping in the arms of their mother, Death being painted in black and Sleep in white (Pausan. v. 18, 1). Sleep was represented in art in various forms and situations, and frequently with the wings of an eagle or a butterfly on his forehead, and a poppy-stalk and a horn, from which he dropped slumber upon those whom he lulled to rest. The earlier conception made Dreams the sisters of Sleep, but in later times the dream-god figures as his son. Hermes was also a god of sleep.

Sontius. Now the Isonzo; a river in Venetia, in the north of Italy, rising in the Carnic Alps, and falling into the Sinus Tergestinus, east of Aquileia.

Sopăter (*Σώπατρος*). (1) Of Paphos, a writer of parody and burlesque (*φλυαρογράφος*), who flourished from B.C. 323 to 283. (2) Of Apamea, a distinguished Sophist, the head for some time of the school of Plotinus. He was a disciple of Iamblichus, after whose death (before A.D. 330) he went to Constantinople. Here he enjoyed the favour and personal friendship of Constantine, who afterwards, however, put him to death (between A.D. 330 and 337) from the motive, as was alleged, of giving a proof of the sincerity of his own conversion to Christianity. There are several grammatical and rhetorical works extant under the name of Sopater, but the best critics ascribe these to a younger Sopater, mentioned below. (3) The younger Sophist, of Apamea, or of Alexandria, is supposed to have lived about two hundred years later than the former. Besides his extant works already alluded to, Photius has preserved an extract of a work, entitled the *Historical Selections* (*ἐκλογή*), which contained a vast variety of facts and figments, collected from a great number of authors. The remains of his rhetorical works are contained in Walz's *Rhetores Graeci*.

Sophēné (*Σωφηνή*). A district of Armenia Maior, lying between the ranges of Antitaurus and Masius; separated from Melitené, in Armenia Minor, by the Euphrates, from Mesopotamia by the Antitaurus, and from the eastern part of Armenia Maior by the river Nymphius. It fell to the Romans in the time of Pompey (cf. Tac. *Ann.* xiii. 7).

Sophistae (*σοφισταί*). Strictly a name given by the Greeks to all those who professed knowledge, or a particular knowledge or a particular art. Hence the Seven Sages are often thus called; but the name was especially applied to the educated men of ready speech, who, from about the year B.C. 450, used to travel through Greece from place to place, and impart what they knew for money. These were the University Extension lecturers of antiquity, and they have the merit of having popularized the interest in knowledge which had up to that time been confined within narrow circles, and especially of having contributed to the formation of eloquence; for they were the first to make style an object of study, and to institute serious investigations into the art of rhetorical expression. Their teaching was chiefly intended to give their pupils versatility in the use of speech, and thus to fit them for taking part in public life. As the subject of their discourses, they chose by preference questions of public interest to persons of general education. The expression, however, always remained the important thing, while positive knowledge fell more and more into the background. Some of them even started from the position that virtue and knowledge were only subjective notions. Protagoras of Abdera, who appeared about B.C. 445, is named as the first Sophist; after him the most important is Gorgias of Leontini; Prodicus of Ceos and Hippias of Elis are contemporaries of the other two. Wherever they appeared, especially in Athens, they were received with the greatest enthusiasm, and many flocked to hear them. Even such men as Pericles, Euripides, and Socrates sought their society; and Socrates owed to them much that was suggestive in his own pursuit of practical philosophy, though, on the other hand, he persistently attacked the principles underlying their public teaching. These principles became further exaggerated under their successors, who did not think they needed even knowledge of fact to talk as they pleased about everything. Accordingly the skill of the Sophists degenerated into mere technicalities and complete absence of reason, and became absolutely contemptible. (See Grote, *History of Greece*, ch. lxvii., and Sidgwick's essay in the (English) *Journal of Philology*, iv. 288.)

With the revival of Greek eloquence, from about the beginning of the second century A.D., the name of Sophist attained a new distinction. At that time the name was given to the professional orators, who appeared in public with great pomp and delivered declamations either prepared beforehand or improvised on the spot. Like the earlier Sophists, they went generally from place to place, and were overwhelmed with applause and with marks of distinction by their contemporaries, including even the Roman emperors. Dion Chrysostom, Herodes Atticus, Aristides, Lucian, and Philostratus the Elder belong to the flourishing period of this second school of Sophists, a period which extends over the whole of the second century. They appear afresh about the middle of the fourth century, devoting their philosophic culture to the zealous but unavailing defence of paganism. Among them was the emperor Julian and his contemporaries Libanius, Himerius, and Themistius.

Synesius may be considered as the last Sophist of importance. See A. W. Benn, *Greek Philosophers*, ch. ii. (London, 1883).

Sophŏcles (Σοφοκλῆς). (1) The second of the three great Greek tragedians, son of Sophilus or Sophillus, the wealthy owner of a manufactory of arms. He was born about B.C. 495 in the deme Colonus near Athens. He received a careful education in music, gymnastics, and dancing, and as a boy of fifteen was chosen to lead the paean sung by the chorus of boys after the victory of Salamis (Athen. p. 20). He afterwards showed his musical skill in public, when he represented the blind singer Thamyris in his drama of the same name, and played the cithara with such success that he was painted as Thamyris with the cithara in the Stoa Poicilé. Again, in the play called the *Nausicaa*, he won for himself general admiration in acting the part of the Phaeacian princess, by the dexterity and grace with which he struck the ball (Athen. p. 20 E). In all things his external appearance and demeanour were the reflex of a lofty mind. At his very first appearance as a tragic poet in 468, when twenty-seven years old, at the Great Dionysia, he gained a victory over Aeschylus, who was thirty years older, and from that time to extreme old age he kept the first place in tragedy. Unlike Aeschylus and Euripides, he never accepted the invitations of foreign princes. Though possessing no special inclination or fitness for political affairs, as his friend, the poet Ion of Chios, declares, he yet took his place in public life. Thus, in B.C. 440, he was one of the ten generals who, with Pericles, were in command of the fleet sent against Samos. Owing to his practical skill he was also employed in negotiations with the allies of Chios and Samos. During the Peloponnesian War he was again one of the generals, together with Nicias. In 435, as Hellenotamias, he was at the head of the management of the treasure of the allies, which was kept on the Acropolis; and, when the question arose in 413, of giving to the State an oligarchical constitution, he was on the commission of preliminary investigation (*C. I. A.* i. 237).

Sophocles. (Lateran Museum, Rome.)

The charm and refinement of his character seem to have won him many friends. Among them was the historian Herodotus, who much resembled him in taste and temperament. He was also deemed by the ancients a man specially beloved by the gods, especially by Asclepius, whose priest he probably was, and who was said to have granted him health and vigour of mind to extreme old age. By the Athenian Nicostraté he had a son, Iophon, who won some repute as a tragic poet, and by Theoris of Sicyon another son, Ariston, father of the Sophocles who gained fame for himself by tragedies of his own, and afterwards by the production of his grandfather's dramas. There was a story that a quarrel arose between Sophocles and his son Iophon, on account of his preference for this grandson, and that, when summoned by Iophon before the court as weak in mind and unable to manage his affairs, he obtained his own absolute acquittal by reading the *parodos* on his native place in the *Oedipus Coloneus*, just written, but not yet produced (Plutarch, *Moral.* p. 775 B). But this appears to be a legend founded on a misunderstood pleasantry of a comic poet. The tales of his death, which happened in B.C. 405, are also mythical. According to one account, he was choked by a grape; according to others, he died either when publicly reciting the *Antigoné*, or from excessive joy at some dramatic victory. The only fact unanimously attested by his contemporaries is, that his death was as dignified as his life. A singular story is connected even with his funeral. We are told that Dionysus, by repeated apparitions in dreams, prompted the general of the Spartans, who were then investing Athens, to grant a truce for the burial of the poet in the family grave outside the city. On his tomb stood a Siren as a symbol of the charm of poetry. After his death the Athenians worshipped him as a hero and offered an annual sacrifice in his memory. In later times, on the proposal of the orator Lycurgus, a bronze statue was erected to him, together with Aeschylus and Euripides, in the theatre; and of his dramas, as of theirs, an authorized and standard copy was made, in order to protect them against arbitrary alterations.

Sophocles was a very prolific poet. The number of his plays is given as between 123 and 130, of which above 100 are known to us by their titles and by fragments; but only seven have been preserved complete: the *Trachiniae* (so named from the chorus, and treating of the death of Heracles), the *Ajax*, the *Philoctetes*, the *Electra*, the *Oedipus Tyrannus*, the *Oedipus at Colonus*, and the *Antigoné*. The last-mentioned play was produced in the spring of 440; the *Philoctetes* in 410; the *Oedipus at Colonus* was not put on the stage until 401, after his death, by his grandson Sophocles. Besides tragedies, Sophocles composed paeans, elegies, epigrams, and a work in prose on the chorus. With his tragedies he gained the first prize more than twenty times, and still more often the second, but never the third. Even in his lifetime, and indeed through the whole of antiquity, he was held to be the most perfect of tragedians; one of the ancient writers calls him the "pupil of Homer."

If Aeschylus is the creator of Greek tragedy, it was Sophocles who brought it to perfection. He extended the dramatic action (1) by the introduction of a third actor, while in his last pieces he even added a fourth; and (2) by a due subordination of the chorus, to which, however, he gave a more artistic development, while he increased its numbers from twelve to fifteen persons. (See Reissenmayer, *De Choro Sophocleo* [1878]). He also perfected the costumes and decoration. Rejecting the plan of Aeschylus, by which one story was carried through three successive plays, he made every tragedy into a complete work of art, with a sepa-

rate and complete action, the motives for every detail being most skilfully devised. His art was especially shown in the way in which the action is developed from the character of the *dramatis personae*. Sophocles' great mastery of his art appears, above all, in the clearness with which he portrays his characters, which are developed with a scrupulous attention to details, and in which he does not content himself, like Aeschylus, with mere outlines, nor, as Euripides often did, with copies from common life. His heroes, too, are ideal figures, like those of Aeschylus (Aristot. *Poët.* 25). While they lack the superhuman loftiness of the earlier poet's creations, they have a certain ideal truth of their own. Sophocles succeeded in doing what was impossible for Aeschylus and Euripides with their peculiar temperaments, in expressing the nobility of the female character, in its gentleness as well as in its heroic courage. In contrast to Euripides, Sophocles, like Aeschylus, is profoundly religious; and the attitude which he adopts towards the popular religion is marked by an instinctive reverence. The grace peculiar to Sophocles' nature makes itself felt even in his language, the charm of which was universally praised by the ancients. With his noble simplicity he takes in this respect also a middle place between the weightiness and boldness of the language of Aeschylus and the smoothness and rhetorical embellishment which distinguish that of Euripides.

The seven existing plays of Sophocles are all found in the same Codex Laurentianus in Florence that contains the plays of Aeschylus. Cobet regards all the other extant MSS. of the plays as derived from this. Few of them have the whole seven. Of these, two (a Codex Parisinus of the thirteenth century and a Codex Venetus of the fourteenth) are the best. See Meifert, *De Sophoclis Codicibus* (1891).

The *editio princeps* of Sophocles appeared at Venice in 1502. The chief editions of the entire seven plays are those of Brunck, 4 vols. (1786–89); G. Herrmann (1830–41); Wunder (1847–1878); Dindorf (Leipzig, 1825); Schneidewin, rev. by Nauck (Berlin, 1877–82); and Wolff (Leipzig, 1858–65). Annotated English editions are those of Blaydes and Paley, 2 vols. (1859–80); L. Campbell, 2 vols. (1871–81); and Jebb, vols. i.–v. (Cambridge, 1884–95). There are editions of separate plays with English notes by various scholars, among them the *Oedipus Tyrannus* by Jebb (1884), and by White (1890); the *Oedipus Coloneus* by Paley (1881), the *Antigoné* by Paley (1881), and by D'Ooge (1890); of the *Philoctetes* by Graves (1893); of the *Electra* by Jebb (1870); of the *Ajax* by Jebb (1869); and of the *Trachiniae* by Pretor (1877).

There is a lexicon to Sophocles by Ellendt (2d ed. revised by Genthe, Berlin, 1867–72), with a supplementary *Index Commentationum* (1874). There is a good translation of Sophocles into English verse by Plumptre (1871), and one by Campbell (1873). For general criticism, etc., see Hense, *Studien zu Sophocles* (1880); Patin, *Études sur les Tragiques Grecs*, vol. ii. (last ed. 1877); Campbell, *Sophocles* (1879); id. *A Guide to Greek Tragedy* (1891); Schlegel's *Lectures;* Kennedy's *Studia Sophoclea* (1874); and Ribbeck, *Sophokles und Seine Tragödien* (1869). On his language, style, etc., see the following monographs: Altum, *Similitudines Homeri cum Sophoclis* (1855); Borschke, *Aeschylus und Sophocles* (1872); Lichtenstein, *Shakspeare and Sophocles* (1850); Fleischmann, *Kunst der Characteristik bei Sophokles* (1875); Harmsen, *De Collocatione Verborum apud Sophoclem* (1880); Hartz, *De Anacoluthis apud Sophoclem* (1856); Jacobi, *De Usu Alliterationis apud Sophoclem* (1872); Juris, *De Sophoclis Verbis Singularibus* (1876); Maenss, *Die Präpositionen bei Sophokles* (1883); Schindler, *De Sophocle Verborum Inventore* (1877); Struve, *De Dictione Sophoclis* (1854); Schlegel, *Die tragische Ironie bei Sophokles* (1869); Fittbogen, *De Sophoclis Sententiis Ethicis* (1842); and Koch, *De Proverbiis apud Sophoclem* (1892).

(2) Son of Ariston and grandson of the elder Sophocles, was also an Athenian tragic poet. The love of his grandfather towards him has been already mentioned. In B.C. 401 he had brought out the *Oedipus at Colonus* of his grandfather; but he did not begin to exhibit his own dramas till 396.

Sophonisba (Σοφόνισβα). The daughter of the Carthaginian general Hasdrubal, the son of Gisco. She had been betrothed by her father, at a very early age, to the Numidian prince Masinissa, but at a subsequent period Hasdrubal, being desirous to gain over Syphax, the rival ruler of Numidia, to the Carthaginian alliance, gave her in marriage to that prince. After the defeat of Syphax, and the capture of his capital city of Cirta by Masinissa, Sophonisba fell into the hands of the conqueror, upon whom her beauty exercised so powerful an influence that he determined to marry her himself. Their wedding was accordingly celebrated without delay; but Scipio (who was apprehensive lest she should exercise the same influence over Masinissa which she had previously done over Syphax) refused to ratify this arrangement, and, upbraiding Masinissa with his weakness, insisted on the immediate surrender of the princess. Unable to resist this command, the Numidian king spared her the humiliation of captivity by sending her a bowl of poison, which she drank without hesitation, and thus put an end to her own life (Livy, xxix. 23; xxx. 3–15; Polyb. xiv. 1, 7; Zonar. ix. 11–13). The story of Sophonisba is the subject of a drama in English by Thomson, produced in 1729.

Sophron (Σώφρων). A native of Syracuse. He was a writer in Greek of mimes, and an elder contemporary of Euripides (about B.C. 460–420). He composed in the Dorian dialect prose dialogues, partly serious, partly comic, which faithfully represented scenes of actual life, mostly in the lower classes, interspersed with numerous proverbs and colloquial forms of speech. In spite of their prose form, Sophron's mimes were regarded as poems by the ancients. In Athens they are said to have become known through Plato, who thought very highly of them, and made use of them for the dramatic form of his dialogues (Quint. i. 10, 17; Diog. Laërt. iii. 13). After his death it is said that they were found under his pillow, together with the comedies of Aristophanes. In the Alexandrian Age, Theocritus took them for a pattern in his idylls (especially in the *Adoniazusae*, *Idyl.* 15). The Greek grammarians also paid particular attention to them on account of the popular idioms they contained. The fragments preserved are so scanty that they give no notion of the contents and form of the pieces; in any case they cannot have been intended for public representation. Sophron's son, Xenarchus, who lived during the reign of Dionysius I., also wrote mimes. See MIMUS.

Sophroniscus. See SOCRATES.

Sophronistae. See GYMNASIUM.

Sopiānae. Now Fünfkirchen; a town in Pannonia Inferior, the birthplace of the emperor Maximinus (Amm. Marc. xxviii. 1).

Sora. (1) Now Sora; a town in Latium, on the right bank of the river Liris and north of Arpinum, with a strongly fortified citadel. (2) A town in Paphlagonia, now Zora.

Soracté. Now Monte di S. Oreste; a celebrated mountain in Etruria, in the territory of the Falisci, near the Tiber, about twenty-four miles from Rome, but the summit of which, frequently covered with snow, was clearly visible from the city (Hor. *Carm.* i. 9); whence some have assumed that the climate of Italy was more rigorous in classical times than now. The whole mountain was sacred to Apollo Soranus, and on its summit was a temple of this god.

Sorānus. A Sabine deity worshipped on Mount Soracté, and in later times identified with Apollo (Verg. *Aen.* vii. 785–790; Pliny, *H. N.* vii. 19).

Sorānus. A Greek physician from Ephesus, who lived in the first half of the second century A.D., under Trajan and Hadrian. His writings are now represented by a work of considerable extent on the diseases of women, and a surgical treatise on fractures. The writings of Caelius Aurelianus (q. v.) on acute and chronic diseases are translated from him. See Scheele, *De Sorano Medico* (1884).

Sorānus, Barea. A Roman of great integrity, consul suffectus in A.D. 52. He was accused of treason under Nero, and his daughter Servilia was charged with magic. Both were put to death, the chief witness against Soranus being his former teacher P. Egnatius Celer (Tac. *Ann.* xvi. 30; Juv. iii. 16).

Sortes (properly "lots"). Small tablets used for augury in different parts of Italy, especially in the temple of Fortuna at Praeneste (Cicero, *De Div.* ii. 41, 86). They were of oak or bronze, with some saying engraved upon them, and were shuffled and drawn by a boy. Seventeen such sayings (four in the original bronze, and the rest copies) are still preserved (*C. I. L.* i. pp. 268–270). They are known as the Sortes Praenestīnae, but they appear to have really belonged to the oracle of Geryon at Patavium (Padua). Sortes conviviāles were sealed tablets sold at entertainments. When opened they entitled the holder to a prize of greater or less value (Sueton. *Aug.* 75; Lamprid. *Elagab.* 22).

The name *sortes* was given (1) to passages of some book used to foretell events, the method being to open the book at random, for which purpose Christians used the Bible; or (2) to lines of poetry, especially of Vergil, written on leaves, and drawn at haphazard. Sortes Vergiliānae are mentioned in Spartianus (*Hadrian* 2), and alluded to by Lampridius (*Alex. Severus* 14). This use of Vergil continued to modern times. An historic instance of it is found in the life of Charles I. of England, who experimented once in the Bodleian Library at Oxford, and opened at the passage of the *Aeneid* (iv. 615–620) where Dido's imprecations against Aeneas foretold rebellion, defeat, and death. The story is told by Wellwood. See Oracula.

Sortes Sangallenses. Fragments of a book of oracles found in a MS. at St. Gallen in Switzerland. Edited by Winnefeld (Bonn, 1887).

Sosibius (Σωσίβιος). A Lacedaemonian grammarian who flourished at Alexandria under Ptolemy II. (Athen. p. 493).

Sosigĕnes (Σωσιγένης). The Peripatetic philosopher, was the astronomer employed by Iulius Caesar to superintend the correction of the calendar (B.C. 46). See Calendarium.

Sosiphănes (Σωσιφάνης). Of Syracuse; a Greek tragedian of the Alexandrian Pleiad, who lived about B.C. 300. Of his plays only a few lines have been preserved (Suidas, s. v.). See Pleias.

Sositheus (Σωσίθεος). A native of Alexandria in the Troad; a Greek tragedian, one of the Alexandrian Pleiad. He lived in the first half of the third century B.C. in Athens and in Alexandria in Egypt. In an epigram of the Greek Anthology (vii. 707) he is celebrated as the restorer of the satyric drama. We still possess an interesting fragment of his satyric plays, the *Daphnis* (twenty-one lines in Nauck's *Tragicorum Gr. Fragm.* 822, ed. 1889).

Sosius. (1) Gaius, a Roman quaestor B.C. 66, and praetor in 49. He was afterwards one of Antony's principal lieutenants in the East, and in 37 placed Herod upon the throne of Jerusalem. (2) The name of two brothers (Sosii), booksellers at Rome in the time of Horace (*Epist.* i. 20, 2; *A. P.* 345).

Sospĭta, that is, "the saving goddess." A surname of Iuno at Lanuvium and at Rome, in both of which places she had a temple. See Iuno.

Sosthĕnes (Σωσθένης). A Macedonian soldier who defeated the Gauls at the time of their invasion of Greece in B.C. 280 (Just. xxiv. 5, 6). See Gallia.

Sostrătus (Σώστρατος). The son of Dexiphanes, of Cnidus. He was one of the great architects who flourished during and after the life of Alexander the Great. He built for Ptolemy I. of Egypt the great Pharos or light-house at Alexandria, which was one of the Seven Wonders of the World, and also erected at Cnidus a portico supporting a terrace (Pliny, *H. N.* xxxvi. 83).

Sosus (Σῶσος). A celebrated artist in mosaic, who was working apparently at the time of the Attalidae in Pergamon. It was there that he executed his famous work, "The Unswept House" (*ἀσάρωτος οἶκος*), so called because remnants of food, and all that is usually swept away, were represented as strewn about in the most careless way upon the floor. "Much to be admired in this work" (says Pliny, *H. N.* xxxvi. 184) "is a dove drinking, and darkening the water by the shadow of its head; while other doves are sunning and pluming themselves on the rim of the vessel." This is copied in the mosaic (found in Hadrian's Villa at Tivoli), now in the Capitoline Museum at Rome. See illustration under Musivum Opus, p. 1065; and Pictura.

Sotadēan Verse. See Sotades.

Sotădes (Σωτάδης). A Greek poet from Maroneia in Thrace, who lived at Alexandria under Ptolemy Philadelphus about B.C. 276. He is said to have been drowned in the sea in a leaden chest for some sarcastic remark about the marriage of the king with his own sister Arsinoë. He composed in Ionic dialect and in a peculiar metre named after him (*Sotadeus* or *Sotadicus versus*, Σωτάδεια ἄσματα) poems called *κίναιδοι* or *φλύακες*, malicious satires partly on indelicate subjects, which were intended for recitation accompanied by a mimic dance, and also travesties of mythological subjects, such as the

Iliad of Homer. He found numerous imitators (Athen. p. 620; Plut. *Op. Moral.* p. 11).

Soter (Σωτήρ, i. e. "the saviour"; Lat. SERVATOR or SOSPES). A title, occurs as the surname of several divinities, especially of Zeus. It was also a surname of Ptolemaeus I., king of Egypt, as well as of several of the other later Greek kings. See PTOLEMAEUS.

Sotion (Σωτίων). (1) An Alexandrian philosopher of the third century B.C., who wrote a work called Διαδοχαί on the different teachers of the schools of philosophy (Diog. Laërt. v. 86). (2) The teacher of the Roman philosopher Seneca (Sen. *Epist.* 108).

Sottiātes or **Sotiātes**. A powerful and warlike people in Gallia Aquitanica, on the frontiers of Gallia Narbonensis, who were subdued by P. Crassus, Caesar's legate (Caes. *B. G.* iii. 120).

Sozoměnus (Σωζόμενος), usually called SOZOMEN in English, was a Greek ecclesiastical historian of the fifth century. He was probably a native of Bethelia or Bethel, a village near Gaza in Palestine. His parents were Christians. He practised as an advocate at Constantinople, whence he is styled *Scholasticus;* and he was still engaged in his profession when he wrote his history. This ecclesiastical history, which is extant, is in nine books, and is dedicated to the emperor Theodosius II. It commences with the reign of Constantine, and comes down a little later than the death of Honorius, A.D. 423. The work is incomplete, and breaks off in the middle of a chapter. The author, we know, had proposed to bring it down to 439, the year in which the history of Socrates ends. See SOCRATES (2).

Sparta (Σπάρτη, Dor. Σπάρτα), also called **Lacedaemon** (Λακεδαίμων). The capital of Laconica and the chief city of the Peloponnesus, was situated on the right bank of the Eurotas (Iri), about twenty miles from the sea. It stood on a plain which contained within it several rising grounds and hills. It was bounded on the east by the Eurotas, on the northwest by the small river Oenus (Kelesina), and on the southeast by the small river Tisia (Magula), both of which streams fell into the Eurotas. The plain in which Sparta stood was shut in on the east by Mount Menelaïeum, and on the west by Mount Taÿgetus; whence the city is called by Homer "the hollow Lacedaemon." It was of a circular form, about six miles in circumference, and consisted of several distinct quarters, which were originally separate villages, and which were never united into one regular town. Its site is occupied by the modern villages of Magula and Psykhiko; and the principal modern town in the neighbourhood is Mistra, which lies about two miles to the west on Mount Taÿgetus.

During the flourishing times of Greek independence, Sparta was never surrounded by walls, since the bravery of its citizens, and the difficulty of access to it, were supposed to render such defences needless. It was first fortified by the tyrant Nabis; but it did not possess regular walls until the time of the Romans. Sparta, unlike most Greek cities, had no proper Acropolis, but this name was given to one of the steepest hills of the town, on the summit of which stood the Temple of Athené Poliuchus, or Chalcioecus.

Five distinct quarters of the city are mentioned: (1) PITĂNÉ (Πιτάνη), which appears to have been the most important part of the city, and in which was situated the Agora, containing the council-house of the Senate, and the offices of the public magistrates. It was also surrounded by various temples and other public buildings. Of these, the most splendid was the Persian Stoa or portico, originally built of the spoils taken in the Persian War, and enlarged and adorned at later times. A part of the Agora was called the Chorus or dancing-place, in which the Spartan youths performed dances in honour of Apollo. (2) LIMNAE (Λίμναι), a suburb of the city, on the banks of the Eurotas, northeast of Pitané, was originally a hollow spot covered with water. (3) MESOA or MESSOA (Μεσόα, Μεσσόα), also by the side of the Eurotas, southeast of the preceding, containing the Dromus and the Platanistas, which was a spot nearly surrounded with water, and so called from the plane-trees growing there. (4) CYNOSŪRA (Κυνόσουρα), in the southwest of the city, and south of Pitané. (5) AEGĪDAE (Αἰγεῖδαι), in the northwest of the city, and west of Pitané.

The two principal streets of Sparta ran from the Agora to the extreme end of the city: these were, (1) Aphetae or Aphetais (Ἀφέται, Ἀφεταῖς sc. ὁδός), extending in a southeasterly direction, past the temple of Dictynna and the tombs of the Eurypontidae; and (2) Skias (Σκιάς), running nearly parallel to the preceding one, but farther to the east, and which derived its name from an ancient place of assembly, of a circular form, called Skias. The most important remains of ancient Sparta are the ruins of the theatre, which was near the Agora. On the topography of Sparta see a paper by N. E. Crosby in the *American Journal of Archaeology* for 1893 (pp. 335 foll.); and Stein, *Topographie des alten Sparta* (1890).

Sparta is said to have been founded by Lacedaemon, a son of Zeus and Taÿgeté, who married Sparta, the daughter of Eurotas, and called the city after the name of his wife. His son Amyclas is said to have been the founder of Amyclae, which was for a long time a more important town than Sparta itself. In the mythical period, Argos was the chief city in Peloponnesus, and Sparta is represented as subject to it. Here reigned Menelaüs, the younger brother of Agamemnon; and by the marriage of Orestes, the son of Agamemnon, with Hermioné, the daughter of Menelaüs, the two kingdoms of Argos and Sparta became united. The Dorian conquest of the Peloponnesus, which, according to tradition, took place thirty years after the Trojan War, made Sparta the capital of the country. Laconica fell to the share of the two sons of Aristodemus, Eurysthenes and Procles, who took up their residence at Sparta, and ruled over the kingdom conjointly. The old inhabitants of the country maintained themselves at Amyclae, which was not conquered for a long time. After the complete subjugation of the country we find three distinct classes in the population: the Dorian conquerors, who resided in the capital, and who were called Spartiatae or Spartans (see SPARTIATAE); the Perioeci or old Achaean inhabitants, who became tributary to the Spartans, and possessed no political rights; and the Helots, who were also a portion of the old Achaean inhabitants, but were reduced to a state of slavery. (See HELOTAE.) From various causes the Spartans became distracted by intestine quarrels, till at length Lycurgus, who belonged to the royal family, was

The Dromos at Sparta. (Restoration by Hoffmann.)

selected by all parties to give a new constitution to the State. The date of Lycurgus is uncertain; but it is impossible to place it later than B.C. 825.

The constitution of Lycurgus laid the foundation of Sparta's greatness; yet this constitution, traditionally ascribed to Lycurgus, is not to be regarded as wholly due to him. It represents the union of three distinct principles: the monarchical principle was represented by the kings, the aristocracy by the Senate, and the democratical element by the assembly of the people, and subsequently by their representatives, the ephors. The kings had originally to perform the common functions of the kings of the Heroic Age. They were high-priests, judges, and leaders in war; but in all of these departments they were in course of time superseded more or less. As judges they retained only a particular branch of jurisdiction, that referring to the succession of property. As military commanders they were to some extent restricted and watched by commissioners sent by the Senate; the functions of high-priest were curtailed least, perhaps because least obnoxious. In compensation for the loss of power, the kings enjoyed great honours, both during their life and after their death. The Senate (*γερουσία*) consisted of thirty members, one from each *obé* (*ὠβά*), all elected except the two kings, who were *ex officio* members, and represented each his own *obé*. In their functions they replaced the old council of the nobles as a sort of privy council to the kings, but their power was greater, since the votes of the kings were of no greater weight than those of other senators; they had the right of originating and discussing all measures before they could be submitted to the decision of the popular assembly; they had, in conjunction (later) with the ephors, to watch over the due observance of the laws and institutions; and they were judges in all criminal cases, without being bound by any written code. For all this they were not responsible, holding their office for life.

But with all these powers the elders formed no real aristocracy. They were not chosen either for property qualification or for noble birth. The Senate was open to the poorest citizen, who during sixty years had been obedient to the laws and zealous in the performance of his duties. The mass of the people—that is, the Spartans of pure Doric descent (see SPARTIATAE)—formed the sovereign power of the State. The popular assembly consisted of every Spartan of thirty years of age, and of unblemished character; only those were excluded who had not the means of contributing their portion to the *syssitia* (q. v.). They met at stated times to decide on all important questions brought before them, after a previous discussion in the Senate. They had no right of amendment, but only that of simple approval or rejection, which was given in the rudest form possible, by shouting. The popular assembly, however, had neither frequent nor very important occasions for directly exerting their sovereign power. Their chief activity consisted in delegating it; hence arose the importance of the ephors, who were the representatives of the popular element of the constitution. The five ephors answer in many points to the Roman tribunes of the people. Their appointment is included by Herodotus among the institutions of Lycurgus, but it is probable that Aristotle is right in dating these later, from the reign of Theopompus. (See EPHORI.) Their appointment was perhaps a concession to the people, at first as overseers of the markets and as magistrates who might check illegal oppression by kings or great men. Subsequently they absorbed most of the power in the State. To Lycurgus was ascribed also a prohibition to use written laws, or to have any coinage but iron: but these traditions must refer to later customs, since there were neither

coins nor written laws in Greece as early as Lycurgus.

With reference to their subjects, the few Spartans formed a most decided aristocracy. On the conquest of Peloponnesus by the Dorians, part of the ancient inhabitants of the country, under name of the Perioeci (Περίοικοι), were allowed indeed to retain their personal liberty, but lost all civil rights, and were obliged to pay to the State a rent for the land that was left them. But a great part of the old inhabitants were reduced to a state of perfect slavery, different from that of the slaves of Athens and Rome, and more similar to the villanage of the feudal ages. These were called Helots (εἵλωτες). They were allotted, with patches of land, to individual members of the ruling class. They tilled the land, and paid a fixed rent to their masters, not, as Perioeci, to the State. The Spartans formed, as it were, an army of invaders in an enemy's country; their city was a camp, and every man a soldier. At Sparta the citizen only existed for the State; he had no interest but the State's, and no property but what belonged to the State. It was a fundamental principle of the constitution that all citizens were entitled to the enjoyment of an equal portion of the common property. This was done in order to secure to the commonwealth a large number of citizens and soldiers free from labour for their sustenance, and able to devote their whole time to warlike exercises, in order thus to keep up the ascendency of Sparta over her Perioeci and Helots. (See HELOTAE.) The Spartans were to be warriors, and nothing but warriors. Therefore, not only all mechanical labour was thought to degrade them; not only was husbandry despised and neglected, and commerce prevented, or at least impeded, by prohibitive laws and by the use of iron money; but also the nobler arts and sciences were so effectually stifled that Sparta is a blank in the history of the arts and literature of Greece. The State took care of a Spartan from his cradle to his grave, and superintended his education in the minutest points; and this was not confined to his youth, but extended throughout his whole life. The *syssitia*, or, as they were called at Sparta, *phiditia*, the common meals, may be regarded as an educational institution; for at these meals subjects of general interest were discussed and political questions debated. The youths and boys used to eat separately from the men, in their own divisions. See Jannet, *Les Institutions Sociales et le Droit Civil à Sparte* (2d ed. Paris, 1880).

Sparta gradually extended her sway over the greater part of the Peloponnesus. In B.C. 743 the Spartans attacked Messenia, and after a war of twenty years subdued this country, 723. In 685 the Messenians again took up arms, but at the end of seventeen years were again completely subdued; and their country from this time forward became an integral portion of Laconia. (See MESSENIA.) After the close of the Second Messenian War the Spartans continued their conquests in Peloponnesus. They defeated the Tegeans, and wrested the district of Thyreae from the Argives. At the time of the Persian invasion they were confessedly the first people in Greece, and to them was granted by unanimous consent the chief command in the war. But after the final defeat of the Persians the haughtiness of Pausanias disgusted most of the Greek States, particularly the Ionians, and led them to transfer the supremacy to Athens (477). From this time the power of Athens steadily increased, and Sparta possessed little influence outside of the Peloponnesus. The Spartans, however, made several attempts to check the rising greatness of Athens, and their jealousy of the latter led at length to the Peloponnesian War (431). (See PELOPONNESIAN WAR.) This war ended in the overthrow of Athens, and the restoration of the supremacy of Sparta over the rest of Greece (404). But the Spartans did not retain this supremacy more than thirty years. Their decisive defeat by the Thebans under Epaminondas at the battle of Leuctra (371) gave the Spartan power a shock from which it never recovered; and the restoration of the Messenians to their country two years afterwards completed the humiliation of Sparta. Thrice was the Spartan territory invaded by the Thebans, and the Spartan women saw for the first time the watch-fires of an enemy's camp. The Spartans now finally lost their supremacy over Greece, but no other Greek state succeeded to their power; and about thirty years afterwards the greater part of Greece was obliged to yield to Philip of Macedon. The Spartans, however, kept aloof from the Macedonian conqueror, and refused to take part in the Asiatic expedition of his son, Alexander the Great.

Under this later Macedonian king the power of Sparta declined still further. The simple institutions of Lycurgus were abandoned, and little by little luxury crept into the State. The number of citizens diminished, and the landed property became vested in a few families. Agis endeavoured to restore the ancient institutions of Lycurgus, but he perished in the attempt (240). Cleomenes III., who began to reign 236, was more successful. He succeeded in putting the ephors to death, and overthrowing the existing government (225); and he then made a redistribution of the landed property, and augmented the number of the Spartan citizens by admitting some of the Perioeci to this honour. His reforms infused new blood into the State, and for a short time he carried on war with success against the Achaeans. But Aratus, the general of the Achaeans, called in the assistance of Antigonus Doson, the king of Macedonia, who defeated Cleomenes at the decisive battle of Sellasia (221), and followed up his success by the capture of Sparta. Sparta now sank into insignificance, and was ruled by a succession of native tyrants, till at length it was compelled to abolish its peculiar institutions, and to join the Achaean League (q. v.). Shortly afterwards it fell, with the rest of Greece, under the Roman power.

See Müller, *The History and Antiquities of the Doric Race*, Eng. trans. 2 vols. (Oxford, 1830); Cox, *The Greeks and the Persians*, (New York, 1876); Jowett's translation of Thucydides (on the Peloponnesian War), with introduction, notes, and analysis, 2 vols. (New York, 1881); and the standard histories of Greece.

Spartăcus. The name of several kings of the Cimmerian Bosporus. (1) Succeeded the dynasty of the Archeanactidae in B.C. 438, and reigned until 431. He was succeeded by his son Seleucus. (2) Began to reign in B.C. 427, and reigned twenty years. He was succeeded in 407 by his son Satyrus. (3) Succeeded his father, Leucon, in B.C. 353, and died, leaving his kingdom to his son Parysades in 348. (4) Son of Eumelus, began to reign in B.C. 304, and reigned twenty years.

Spartăcus. A famous fighter, by birth a Thracian, and successively a shepherd, a soldier, and a chief of banditti. On one of his predatory expeditions he was taken prisoner, and sold to a trainer of gladiators. In B.C. 73 he was a member of the gladiatorial company of Lentulus, and was detained in his school at Capua, in readiness for the games at Rome. He persuaded his fellow-prisoners to make an attempt to gain their freedom. About seventy of them broke out of the training-school of Lentulus, and took refuge in the crater of Vesuvius. Spartacus was chosen leader, and was soon joined by a number of runaway slaves. These were blockaded by C. Claudius Pulcher at the head of three thousand men, but Spartacus attacked the besiegers and put them to flight. His numbers rapidly increased, and for two years (B.C. 73–71) he defeated one Roman army after another, and laid waste Italy, from the foot of the Alps to the southernmost corner of the peninsula. After both the consuls of the year 72 had been defeated by Spartacus, M. Licinius Crassus, the praetor, was appointed to the command of the war. Crassus carried on the contest with vigour and success; and, after gaining several advantages over the enemy, at length defeated them on the River Silarus in a decisive battle, in which Spartacus was slain. The character of Spartacus has been maligned by the Roman writers. Cicero compares the vilest of his contemporaries to him: Horace speaks of him (*Carm.* iii. 14, 19) as a common robber; none recognize his greatness, but the terror of his name survived to a late period of the Empire. Accident made Spartacus a shepherd, a freebooter, and a gladiator; nature formed him a hero. The excesses of his followers he could not always repress, and his efforts to restrain them often cost him his popularity. But he was in himself not less mild and just than he was able and valiant.

Spartea. See SOLEA (2).

Sparti (*σπαρτοί*, "the men sown"). The men in full armour who sprang up from the teeth of the dragon of Ares when sown by Cadmus. On their birth they immediately fought with one another, till only five remained. The survivors helped Cadmus to found Thebes, and were the ancestors of the Theban nobility. See CADMUS; THEBAE.

Spartiānus, Aelius. One of the *Scriptores Historiae Augustae*, lived in the time of Diocletian and Constantine, and wrote the biographies of several emperors. See AUGUSTAE HISTORIAE SCRIPTORES.

Spartiātae (*σπαρτιάται*). In Sparta the ruling class of those who had the full rights of citizens, as distinguished from the subject Perioeci (see PERIOECI) and Helots (see HELOTAE). They were the descendants of the Dorians, who had formerly conquered the land under the leadership of Aristodemus. As to the manner in which they were divided, see PHYLÉ. Their number is said never to have exceeded 10,000, and, as they were utterly opposed to the admission of foreign elements, it was constantly decreasing. At the time of the Persian Wars it still amounted to 8000, about B.C. 320 to little more than 1000.

They were called *ὅμοιοι* (men sharing equal rights), with reference to the equality established among them by the legislation of Lycurgus, (*a*) in their education, which was exclusively directed towards fitting them for service in war; (*b*) in their way of living, especially in the meals which they had in common (see SYSSITIA); (*c*) in their property; (*d*) and in their political rights.

To every family of Spartiatae an equal portion of land was assigned by Lycurgus, with a number of Helots who had settled upon it, who had to cultivate the property and deliver the produce to its possessor. The Spartiatae themselves were not allowed to engage in a handicraft, or in trade, or in agriculture; their whole life had to be devoted to the service of the State, and therefore they had their abode in Sparta itself. The allotted land and the Helots were accounted State property, and the possessors had no kind of right to dispose of them. Families which were dying out were preserved by adopting sons of families related to them, and similarly heiresses were married to men without inheritance of their own. If a family consisted of several male members, then the eldest was considered as head of the family, and had to support his brothers. The original equality of property came to an end, partly through the extinction of many families and the transference of their lot of ground, partly by the silent abrogation of the old law, which did not allow the Spartiatae to possess silver or gold, but chiefly after the law of Epitadeus, by which the free disposal of land was allowed, if not by sale, at least by gift during lifetime and by will. But the principle of aristocratic equality long continued in form; and only those who did not fulfil the conditions attached to the equality of rights, or who did not obey the injunctions of Lycurgus as to the education of the young, and as to the life of adult citizens, or who did not contribute to the common meals, suffered a diminution of their political rights. This involved exclusion from the government and administration of the State, as well as from the right of electing or being elected to office; but the punishment affected the individual only, and not his children, nor his position in personal law. See SPARTA.

Sparum. A spear used by the peasants as a weapon (Verg. *Aen.* xi. 682) and for hunting.

Specŭla. See article in the Appendix.

Speculātor. A scout or spy, of whom a special division was attached to each legion in the Roman army (Tac. *Hist.* i. 25). Under the Empire the *speculatores* were a body-guard or corps of adjutants attached to the person of the emperor (Tac. *Hist.* ii. 73; Sueton. *Calig.* 44).

Specŭlum (*ἔνοπτρον*, *κάτοπτρον*). For mirrors the ancients used round or oval, also square, plates of polished metal, generally of copper, mixed with tin, zinc, and other materials, and often silvered and gilded. In later times they were also made of massive silver, the finest being the work of Praxiteles in B.C. 328. They were often provided with a decorated handle and ornamented on the back with engravings, mostly of mythological objects. To keep them bright, a sponge with powdered pumice-stone was usually fastened to them (Plato, *Tim.*

Roman Mirror. (Caylus, *Recueil d'Antiq.* v. pl. 62.)

72 C). The best metallic mirrors were produced at Brundisium.

Glass mirrors were probably known in antiquity, consisting of a glass plate covered with a thin leaf of metal at the back (Pliny, *H. N.* xxxvi. 26). As thus prepared, however, they were not so good as the others, the modern backing of tinfoil and quicksilver being yet unknown.

The Etruscan mirrors are in some respects remarkably fine, the finest of all being represented below. Besides these hand-mirrors, there were also in the time of the emperors mirrors as high as a man (Sen. *Q. N.* i. 17; cf. Quintil. xi. 3, 68), which were either permanently fixed in the wall or (as in Vitruv. ix. 8, 2) let up and down like a sash.

Back of Etruscan Mirror. (Berlin Museum.)

Greek mirrors were unknown to archaeologists until 1867, when the first specimen was discovered at Corinth. In design they are even more beautiful than those of Etruria. They are of two kinds: (*a*) disc mirrors, like the Etruscan mirrors, and generally round, consisting of a single disc with a polished convex front, to reflect the face, and a concave back, ornamented with figures traced with the engraver's burin. This variety had a handle in the form of a statuette resting on a pedestal. (*b*) Another variety ("box-mirrors"), especially frequent in Greece, consists of two metallic discs, one enclosed within the other, and sometimes held together by a hinge. The cover was externally ornamented with figures in low-relief, and was internally polished and silvered to reflect the face. The second disc, forming the body of the case, was decorated internally with figures engraved with a sharp point. In the British Museum is a mirror from Corinth, representing Pan playing at the game of "Five Stones" with a Nymph attended by Eros. There is no mention of mirrors in Homer; and the oldest Greek mirrors now extant do not antedate the sixth century B.C. See Blümner, *Technologie*, iv. pp. 192, 194, 265 foll., 403; E. Gerhard, *Etruskische Spiegel* (Berlin, 1843); and De Witte, *Les Miroirs chez les Anciens* (Brussels, 1873).

Speos Artemĭdos. See Peos Artemidos.

Sperchēus (Σπερχειός). Now Elladha; a river in the south of Thessaly, which rises in Mount Tymphrestus, runs in an easterly direction through the territory of the Aenianes and through the district Malis, and falls into the innermost corner of the Sinus Maliacus. As a river-god, Spercheus is a son of Oceanus and Gaea, and the father of Menesthius by Polydora, the daughter of Peleus (*Il.* xvi. 174; xxiii. 142; Pausan. i. 37, 2).

Spes. The Roman personification of hope, especially of hope for a good harvest, and (in later times) for the blessing of children. There were several temples to Spes in Rome, the oldest dating from B.C. 354 (Livy, xxiv. 47). She was represented as a youthful figure, moving along lightly in a long robe, which was raised a little in her left hand, while her right bore a bud, either closed or just about to open, denoting especially her tutelage of gardens. In the course of time she came to be usually considered as a goddess of the future, invoked at births and marriages, and on similar occasions. On the legend of the Greek goddess of Hope (Ἐλπίς), see Pandora.

Speusippus (Σπεύσιππος). An Athenian philosopher, son of Eurymedon and Potoné, a sister of Plato. He accompanied his uncle, Plato, on his third journey to Syracuse, where he displayed considerable ability and prudence. He succeeded Plato as president of the Academy, but was at the head of the School for only eight years (B.C. 347–339). He wrote several works, all of which are lost, in which he developed the doctrines of his great master.

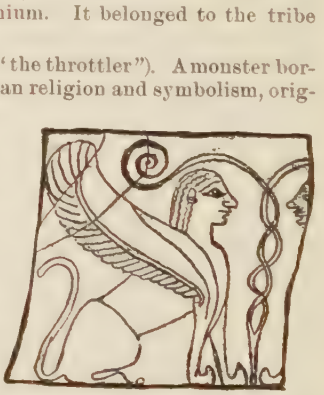
Sphacteria. See Pylos.

Sphaera (*σφαῖρα*). A ball. See Pila.

Sphaeria (Σφαιρία). Now Poros; an island off the coast of Troezen, in Argolis, and between it and the island of Calauria (Pausan. ii. 33, 1).

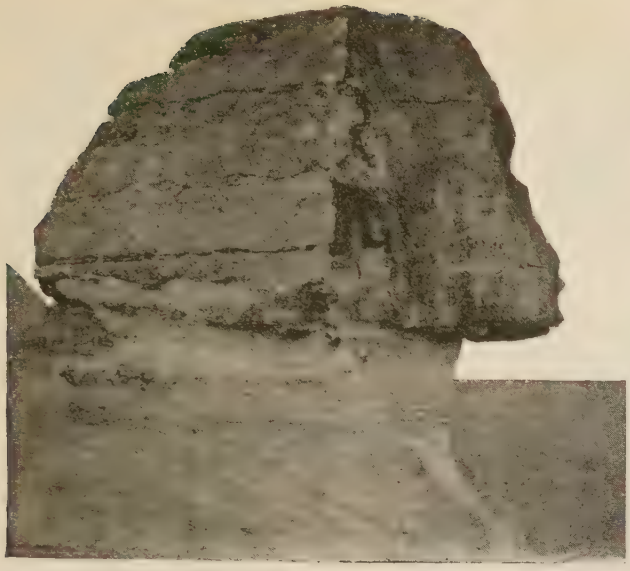
Sphaeristerium (*σφαιριστήριον*). A court for the game of ball in the gymnasia and thermae. Σφαιριστική was the name of the art of playing at ball. See Pila.

Sphaeromachia (*σφαιρομαχία*). See Pila.



Sphaerus (Σφαῖρος). A Stoic philosopher, who studied first under Zeno of Citium, and afterwards under Cleanthes. He lived at Alexandria during the reigns of the first two Ptolemies. He also taught at Lacedaemon, and was believed to have had considerable influence in moulding the character of Cleomenes. He was in repute among the Stoics for the accuracy of his definitions. He was the author of several works, all of which are lost.

Sphendălé (Σφενδάλη). A deme of Attica belonging to the tribe Hippothoöntis. It was on the frontier of Boeotia.



Sphendŏné (*σφενδόνη*). A fastening for the hair of the Greek women. See Coma, p. 388.

Sphettus (Σφηττός). A deme of Attica near the silver-mines of Sunium. It belonged to the tribe Acamantis.

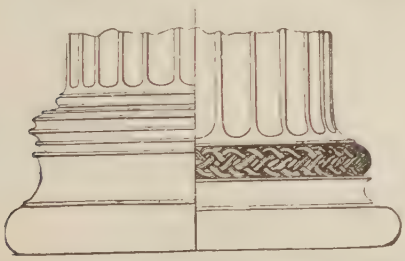
Sphinx (Σφίγξ, "the throttler"). A monster borrowed from Egyptian religion and symbolism, originally represented with the body of a winged lion and the breast and head of a human being, and subsequently in still more wonderful forms, as a man or woman with the breast, feet, and claws of a lion, the tail of a serpent, and the wings of a bird; or as a lion in front and a human being behind, with vulture's claws and eagle's wings. The Egyptian sphinxes are oftener male rather than female, and the Great Sphinx was intended to represent the god Hor-em-

Winged Sphinx of Greek Art. (From a fragment of pottery found at Daphnae. Drawing by Petrie.)

The Great Egyptian Sphinx. (From a photograph by Flinders Petrie.)

khu or Horus. It is older than the Fourth Dynasty, which began about B.C. 3700.

According to Hesiod, Sphinx was the daughter of the Chimaera and Orthrus; according to others, of Echidna and Typhon. Heré (or, according to others, Ares or Dionysus), in anger at the crimes of Laïus, sent her to Thebes from Ethiopia. She took up her abode on a rock near the city and gave every passer-by the well-known riddle, "What walks on four legs in the morning, on two at noon, and on three in the evening?" She flung from the rock all who could not answer it. When Oedipus explained the riddle rightly, as referring to man in the successive stages of infancy, the prime of life, and old age, she flung herself down from the rock. See OEDIPUS.



Spike. See CLAVUS.

Spina. (1) Now Spinazzino; a town in Gallia Cispadana, in the territory of the Lingones, on the most southerly of the mouths of the Padus (Po), which was called after it Ostium Spinéticum. (2) Now Spino; a town in Gallia Transpadana, on the river Addua.

Spinning. See TELA.

Spinther (*σφιγκτήρ*). A coil bracelet worn by women on the left arm (Festus, s.h.v.). It was made of gold (Plaut. *Men.* iii. 3, 7).

Spira (*σπεῖρα*), dim. SPIRŪLA. (1) The base of a column, a member not existing in the Doric order, but always present in the Ionic and Corinthian. A special kind of base was called the Attic (*Ἀττικουργές*), it being really a variety of the Ionic. (2) A kind of cracker or cake made in a spiral form, like a sort of cruller (Cato, *R. R.* 77).

Spirae of Two Columns. (Left-hand figure from the Temple of Panops [Ionic] on the Ilissus; right-hand figure from the Temple of Athenê Polias at Athens.)

Spit. See VERU.

Spithămé (*σπιθαμή*). A span; in Greek measurement, three quarters of a foot.

Splenium (*σπλήνιον*). A sort of court-plaster made of white linen or leather, and worn in patches on the face to conceal any defect or scar; and perhaps, as in modern times, to heighten the fairness of the complexion (Mart. ii. 29, 10; viii. 33).

Spoils of War. See SPOLIA.

Spolātum. See SALONA.

Spoletium or **Spolētum.** Now Spoleto; a town in Umbria, on the Via Flaminia, colonized by the Romans B.C. 242. It suffered severely in the wars between Marius and Sulla.

Spolia. The Roman term for the arms taken from an enemy defeated in single combat, and also for those portions of the captured armour which were promised by the general to soldiers who distinguished themselves. The word is not greatly different in meaning from *exuviae*, while *praeda* covers all kinds of booty, and *manubiae* is properly the part that falls to the commanding general. They were hung up in a temple, with a dedicatory inscription (Verg. *Aen.* iii. 288), or in the vestibule of the house, where they remained, even if the house passed into other hands. SPOLIA OPĪMA were the arms taken from the hostile general by a Roman leader commanding under his own auspices, and were consecrated to Iupiter Feretrius on the Capitol. This is said to have been first done by Romulus, who is the traditional founder of the sanctuary of Feretrius (Livy, i. 10). They were legitimately won on only two subsequent occasions by Aulus Cornelius Cossus from the king of Veii, and by M. Claudius Marcellus from the king of the Gaesatae (Plut. *Marc.* 8).

Sponda (*ἐνήλατον*). Any one of the four bars of the frame of a bedstead (*lectus*) to which the

Lectus, showing Spondae. (Rich.)

cords supporting the mattress were affixed (Petron. *Sat.* 97).

Sponsa, Sponsus, and **Sponsalia.** See MATRIMONIUM.

Spoons. See COCLEAR.

Sporădes (*Σποράδες*). A group of scattered islands in the Aegaean Sea, off the island of Crete and the western coast of Asia Minor, so called in opposition to the Cyclades, which lay in a circle around Delos. See Tozer, *Islands of the Aegean* (1890).

Sport. See LUDI; VENATIONES.

Sporta (*σπυρίς*). A basket, plaited, and with a small flat bottom. See SPORTULA.

Sporta. (Naples Museum.)

Sportella (*σπυρίδιον*), dim. of *sporta*. A small basket in which cakes and other dainties were passed at table (Suet. *Domit.* 4).

Sportŭla, dim. of *sporta*, "a basket." Originally the portion of food given in a basket by the Roman patron to his clients who paid a ceremonial call (*salutatio*) in the morning. This was the equivalent of the invitation to a regular dinner (*cena recta*), which, under the Republic, the clients used from time to time to receive. Later, instead of giving food, a sum of money was substituted, generally a hundred *quadrantes* (about a dollar). Hence the word *sportula* ultimately came to mean this dole of money. For a lively picture of the scene at one of these distributions, see Juv. iii. 294 foll., with Mayor's note; cf. also the articles CLIENTES; SALUTATIO.

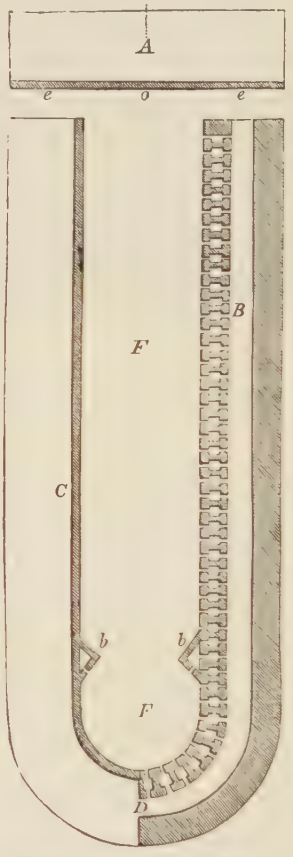
Spuma. A sort of pomade used by the Germans and Gauls, and imported into Rome. It was made of goat's tallow and beech-wood ashes, and was supposed to give a brownish tinge to the hair (Mart. xiv. 26; viii. 33, 20). See SAPO.

Spur. See CALCAR.

Spurinna VESTRITIUS. The haruspex who on the day of Caesar's assassination warned him to beware of the Ides of March (Sueton. *Iul.* 81). See CAESAR.

Spurīnus, Q. PETILLIUS. A Roman who was Praetor Urbanus in B.C. 181, in which year the books of King Numa Pompilius are said to have been discovered upon the estate of one L. Petillius. Spurinus obtained possession of the books, and upon his representation to the Senate that they ought not to be read and preserved, the Senate ordered them to be burned. (See NUMA.) Spurinus was consul in B.C. 176, and fell in battle against the Ligurians.

Spy. See SPECULATOR.



Squib. See LIBELLUS.

Stabiae. Now Castellamare di Stabia; an ancient town in Campania, between Pompeii and Surrentum, which was destroyed by Sulla in the Social War, but which continued to exist down to the great eruption of Vesuvius in A.D. 79, when it was overwhelmed along with Pompeii and Herculaneum. It was at Stabiae that the elder Pliny perished. See POMPEII.

Stable. See STABULUM.

Stabŭlum (*σταθμός*). (1) A halting-place or posting-station. (2) A stable for horses, whence *stabularius* is a livery-stable keeper (Apul. *Met.* i. p. 13). (3) A pen for sheep or goats. (4) An aviary. (5) A stock-pond for fish (Columell. viii. 17, 7). See PISCINA. (6) =*πανδοκεῖον*. A low inn (Petron. 6). See CAUPONA.

Stadium (*στάδιον*). The course for foot-races among the Greeks; the usual length of it was 600 Greek feet (625 Roman feet or 606 ft. 9 in. English), a measure which Heracles, according to the myth, had appointed for the course at Olympia (see OLYMPIA). Subsequently this became the standard unit for measuring distances; and when doubled formed the *δίαυλος*, when quadrupled the *ἱππικόν*, and when multiplied by 6, 7, 8, 12, 20, or 24, the *δόλιχος*. On both of the longer sides of the course were natural or artificial elevations with terraced seats for the spectators. At one end there was generally a semicircular space especially intended for wrestling, and this was the place for the umpires. Near this was the pillar which marked the goal. The starting-point was also sometimes indicated by a pillar at the other end, which was originally straight, and in later times curved like the end near the goal. For the different kind of races, see CIRCUS; HIPPODROMUS.

Stadium at Ephesus. (Krause.)

(A, boundary wall; B C, the sides; F F, the area; *b b*, pieces of masonry; *e e*, the entrances; from *o* to *p* is the length of an Olympic stadium.)

Staff. See BACULUM; SCEPTRUM; SCIPIO.

Stage. See THEATRUM.

Stagīrus (*Στάγειρος*), subsequently **Stagīra** (*τὰ Στάγειρα*). Now Stavro; a town of Macedonia, in Chalcidicé, on the Strymonic Gulf, and a little north of the isthmus which unites the promontory of Athos to Chalcidicé. It was a colony of Andros, was founded B.C. 656, and was originally called Orthagoria. It is celebrated as the birthplace of Aristotle, who in English literature is often spoken of as "the Stagirite."

Stair. See GRADUS; SCALAE.

Stalagmium. An ear-ring with one or more drops (*σταλάγματα*) of gold, beads, or precious stones (Festus, s. h. v.). See INAURIS.

Stall. See STABULUM.

Stamen (*στήμων*). A spun thread. See TELA.

Standards, MILITARY. See LABARUM; SIGNUM; VEXILLUM.

Stannum. See METALLUM.

Stasīnus (Στασῖνος). Of Cyprus; an epic poet, to whom some of the ancient writers attributed the poem of the Epic Cycle, entitled *Cypria*, and embracing the period antecedent to the *Iliad*. See CYCLICI POETAE; HOMERUS.

Stata Mater. An Italian goddess who gave protection in cases of fires and conflagrations (see VULCANUS; Cicero, *De Leg.* ii. 28; *C. I. L.* vi. 763–766); she is sometimes identified with Vesta.

Stater (*στατήρ*, from *ἵστημι*, lit. "a standard" coin). (1) The principal gold coin of Greece. The Attic stater of gold, a gold piece of two gold *drachmae* = twenty silver *drachmae* = $3.25 in intrinsic value of silver. To the same standard of currency belonged the Macedonian gold stater first struck by Philip II. and Alexander the Great. (2) The silver stater is a term applied in later times to the Athenian tetradrachm, of four silver *drachmae* (= $0.60 in intrinsic value). See NUMISMATICS.

Macedonian Stater. (British Museum.)

Statēra. A steelyard, an instrument of later invention than the balance (*libra*). Its parts were the yard (*scapus*), divided into fractional parts by points (*puncta*), and suspended by a hook or chain (*ansa*). The sliding weight was called *aequipondium*. See Vitruv. x. 3, 4; and LANCULA; LIBRA.

Statielli, Statiellātes, or Statiellenses. A small tribe in Liguria, south of the Padus (Po), whose chief town was Statiellae Aquae (Acqui) on the road from Genua to Placentia.

Statilia Messalīna. See MESSALINA.

Statilius Taurus. See TAURUS.

Stationery. See CHARTA; PALAEOGRAPHY; PAPYRUS; WRITING AND WRITING MATERIALS.

Statiōnes. See CASTRA.

Statīra (Στάτειρα). (1) The wife of Artaxerxes II., king of Persia. She was poisoned by Parysatis, the mother of the king. (2) The sister and wife of Darius III., celebrated as the most beautiful woman of her time. She was taken prisoner by Alexander, together with her mother-in-law Sisygambis, and her daughters, after the battle of Issus, B.C. 333. They were all treated with the utmost respect by the conqueror; but Statira died shortly before the battle of Arbela, B.C. 331. (3) Also called Barsiné, elder daughter of Darius III. See BARSINÉ.

Statius Murcus. See MURCUS.

Statius, P. Papinius. A Roman poet born at Neapolis about A.D. 61. He was the son of a distinguished grammarian, and accompanied his father to Rome, where the latter acted as the preceptor of Domitian, who held him in high honour. Under the skilful tuition of his father, the young Statius speedily rose to fame, and became peculiarly renowned for the brilliancy of his extemporaneous effusions, so that he gained the prize three times in the Alban contests; but having, after a long career of popularity, been vanquished in the quinquennial games, he retired to Neapolis, the place of his nativity, along with his wife Claudia, whose virtues he frequently commemorates. He died about A.D. 96. His chief work is the *Thebaïs*, an heroic poem, in twelve books, on the expedition of the Seven against Thebes. On the composition of this poem Statius spent twelve years. There is also extant a collection of his miscellaneous poems (thirty-two in number, mostly in hexameters) in five books, under the title of *Silvae;* and an unfinished poem called the *Achilleïs*. Statius may justly claim the praise of standing in the foremost rank among the heroic poets of the Silver Age; and in the Middle Ages he was much read (cf. Dante, *Purg.* xxi.). The *editio princeps* of the epics appeared in 1470; that of the *Silvae* in 1472. The best editions of the *Thebaïs* are those of Kohlmann (1844) and O. Müller (bks. i.–vi., 1870); of the *Achilleïs* by Kohlmann (Leipzig, 1884); of the *Silvae* by Markland (1728), Hand (Leipzig, 1817), and Bährens (Leipzig, 1876).

Statonia. A town in Etruria, and a Roman praefectura, on the river Albinia, and on the Lacus Statoniensis.

Stator. A public official who attended the Roman magistrates in the provinces. They seem to have been employed chiefly as messengers (Cic. *Ad Fam.* ii. 17; x. 21).

Stator (from *stare*). A Roman surname of Iupiter, describing him as staying the Romans in their flight from an enemy, and generally as preserving the existing order of things.

Statua (*ἀνδριάς*). A statue of a man, as distinguished from *signum*, the statue of a deity (Plaut. *Bacch.* iv. 3, 1; Cic. *In Pis.* 38).

Statuaria Ars; Sculptūra. The origin of painting as an art in Greece is connected with definite historical personages; but that of sculpture is lost in the mists of legend. Its authentic history does not begin until about the year B.C. 600. It was regarded as an art imparted to men by the gods; for such is the thought expressed in the assertion that the earliest statues fell from heaven. Some early application of taste and skill to plastic art may be indicated in the mythical stories respecting the Idaei Dactyli (q. v.) and the Telchines of Rhodes (Ovid, *Met.* vii. 365), who were reported to have worked in iron and bronze. (See TELCHINES.) The first artist spoken of by name, Daedalus (q. v.), who is mentioned as early as Homer, is merely a personification of the most ancient variety of art, that which was employed solely in the construction of wooden images of the gods. (See DAEDALA; DOKANA.) This is clearly proved by his name (= *δαίδαλος*, "the cunning artificer"). To him were attributed a series of inventions certainly separated far from each other in respect of time and place, and embracing important steps in the development of wood-carving and in the representation of the human form. Thus he is said to have invented the saw, the axe, the plummet, the gimlet, and glue (Pliny, *H. N.* vii. 198), to have been the first to open the eyes in the statues of the gods, to separate the legs, and to give freer motion to the arms, which before had hung close to the body (Diod. iv. 76). After him the early school of sculptors at Athens, his reputed native

city, is sometimes called the school of Daedalus (Pausan. v. 25, 13). During a long residence in Crete he is said to have instructed the Cretans in the art of making wooden images (*ξόανα*) of the gods (ib. viii. 53, 8).

The invention of modelling figures in clay, from which sculpture in bronze originated, is assigned to the Sicyonian potter Butades at Corinth (Pliny, *H. N.* xxxv. 151). The art of working in metals must have been known early in Greece, as appears from the Homeric poems (e. g. *Il.* xviii. 468–608). An important step in this direction was due to Glaucus of Chios, who, in the seventh century B.C., invented the soldering of iron (*σιδήρου κόλλησις*, Herod. i. 25; Pausan. x. 16, 1) and the softening and hardening of metal by fire and water (Plut. *De Def. Or.* 47). The discovery of bronze-founding is attributed to Rhoecus and Theodorus of Samos about 580 (Pausan. viii. 14, 8). The high antiquity of Greek sculpture in stone may be inferred from a work of the very earliest period of Greek civilization—the powerful relief of two upright lions over the gate of the castle at Mycenae. See MYCENAE, p. 1068.

Archaic Relief from Sparta. (Reber.)

Sculpture in marble, as well as in gold and ivory, was much advanced by two famous pupils of Daedalus, Dipoenus and Scyllis of Crete, who were working in Argos and Sicyon about B.C. 550 (Pliny, *H. N.* xxxvi. 9, 14; Pausan. ii. 15, 22), and founded an influential school of art in the Peloponnesus, which included Hegylus and Theocles, Dontas and Doryclidas, Clearchus of Rhegium, Tectaeus and Angelion. Among their works are recorded not only statues of gods, but also of heroes, often united in large groups. Some conception of the artistic productions of this period may be formed from scattered monuments still extant, originating in different parts of the Greek world: e. g. the rude and more primitive metopes of Selinus in Sicily; the statues of Apollo from the island of Thera and from Tenea, near Corinth; and the reliefs on the Harpy Monument (q. v.) from the acropolis of Xanthus in Lycia. These works, in spite of their archaic stiffness, show an effort after individual and natural expression, though the position of the foot in striding, with the sole completely touching the ground, and the unemotional and stony smile on the mask-like face, are common to all. Even after Greek sculpture had mastered the representation of the human body, not only at rest, but also in the most violent movement, it still continued unable to overcome the lifeless rigidity of facial expression. This is seen in the Trojan battle-scenes (about B.C. 480) on the Aeginetan pediments. Here the figures are represented in every variety of position in the fight, and depicted, not indeed with any ideality, but with perfect mastery, even to the smallest detail; whereas the faces are entirely destitute of any expression appropriate to their situation. The athletic forms in which the Aeginetan heroes are represented indicate another important extension of the sphere of artistic representation. From about B.C. 544 it had become usual to erect statues of the victors in the athletic contests, Olympia especially abounding in these (Pausan. vi. 18, 7); the statues there mentioned are of wood. By this innovation the art was freed from the narrow limits to which it had been confined by the traditions of religion, and led on to a truer imitation of nature. In this department the school of Aegina was specially active, attaining its highest perfection in the bronze statuary of Glaucias, Callon, and, above all, Onatas (B.C. 500–460).

Metope Relief from the Acropolis at Selinus. (Athenê, Perseus, Medusa, Pegasus.)

Sculpture in bronze flourished simultaneously in the Peloponnesus at Sicyon under Canachus (for a supposed copy of his Apollo, see CANACHUS) and his brother, Aristocles, the founder of a school which lasted long after, and at Argos under Ageladas, the teacher of Phidias, Myron, and Polyclitus. The transition to the period of the finest art is represented by Calamis of Athens, Pythagoras of Rhegium, and especially Myron, another Athenian, in whom the art attained the highest truth to nature, with perfect freedom in the representation of the human body, and was thus prepared for the development of ideal forms.

This last step was taken at Athens, in the time of Pericles, by Phidias. In his creations, particularly in his statues of the gods, whether in bronze or in ivory and gold, he succeeded in combining perfect beauty of form with the most profound ideality, fixing forever the ideal type for Zeus and Athené, the two deities who were pre-eminently characterized by intellectual dignity. See Waldstein, *The Art of Pheidias* (1880); and the articles ATHENÉ; PARTHENON; PHIDIAS; ZEUS.

Of the pupils of Phidias the two who worked most nearly in the same spirit were Agoracritus and Alcamenes, the author of the sculpture of the western pediment of the Temple of Zeus at Olympia, part of which still remains. The perfection of Attic art at this time can be realized when we consider that, with all their beauty of execution, the extant marble sculptures of the Parthenon, Theseum, Erechtheum, and the Temple of Niké Apteros must be regarded as mere productions of the ordinary workshop when compared with the lost masterpieces of Phidias. The school of Phidias had rivals in the naturalistic school which followed Myron, including his son, Lycius, and Cresilas of Cydonia. Independent of both schools stood Paeonius of Mendé, whose Niké, as well as part of his sculptures on the eastern pediment of the Temple of Zeus at Olympia, is still extant (see OLYMPIA), and Callimachus, the

Central Figures of the West Gable, Aegina.

Copy of the Athené Parthenos. (Marble statuette at Athens.)

so-called inventor of the Corinthian order of architecture (Vitruv. iv. 1, 10) and of the application of the auger to working in marble (Pausan. i. 26, 6). Another school of sculpture in opposition to that of Athens was founded at Argos by Phidias's younger contemporary, Polyclitus, whose colossal gold and ivory statue of the Argive Heré directly challenged comparison with the works of Phidias in its materials, its ideality, and its artistic form, and established the ideal type of that goddess. He mainly devoted himself, however, to work in bronze, the department in which Argos had long been pre-eminent; and made it his aim to exhibit the perfection of beauty in the youthful form. He also established a *κανών* or scheme of the normal proportions of the body. Of his pupils the chief was Naucydes of Argos. See POLYCLITUS.

As in the first period of Greek sculpture, represented by Myron, Phidias, and Polyclitus, the schools of Athens and Argos held the first rank beyond dispute, so it was also in the second period, which embraces the fourth century down to the death of Alexander the Great. Athens, moreover, during this period remained true to the traditions of Phidias, and still occupied itself mainly with the ideal forms of gods and heroes, though in a spirit essentially altered. The more powerful emotions, the more deeply stirred passions of the period after the Peloponnesian War, were not without their influence on art. The sculptors of the time abandoned the representation of the dignified divinities of the earlier school, and turned to the forms of those deities whose nature gave room for softer or more emotional expression, especially Aphrodité and Dionysus and the circle of gods and dæmons who surrounded them. The highest aim of their art was to portray the profound pathos of the soul, to give expression to the play of the emotions. With this is connected the preference of this school for marble over bronze, as more suited for rendering the softer and finer shades of form or expression. The art of executing work in gold and ivory was almost lost, the resources of the States no longer sufficing, as a rule, for this purpose. The most eminent of the New Attic School were Scopas of Paros and Praxiteles of Athens. Scopas, also famous as an architect, was a master of the most elevated pathos. Praxiteles was no less masterly in regard to the softer graces in female or youthful forms, and in the representation of sweet moods of dreamy reverie. In his statues of Aphrodité at Cnidus and Eros at Thespiae he established ideal types for those divinities. The Hermes with the infant Dionysus, found at Olympia, remains as a memorial of his art. Of the productions of this school (in which the names of Bryaeus, Leochares, and Timotheus, who was joined with Scopas in his work on the Mausoleum at Halicarnassus, ought also to be mentioned) an opinion may be formed from the spirited reliefs on the Choragic Monument of Lysicrates (q. v.) at Athens. We have also extant, in a copy, the Niobid group (see NIOBÉ), concerning the original of which it was much disputed, even in ancient times, whether the author were Scopas or Praxiteles (Pliny, *H. N.* xxxvi. 28). In contrast to the ideal aims of Attic art, the Sicyonian School still remained true to its early naturalistic tendencies and to the art of sculpture in bronze, of which Argos had so long been the home. At the head of the school stood one of the most influential and prolific artists of antiquity, Lysippus of Sicyon. His efforts were directed to represent beauty and powerful development in the human body. Hence Heracles, as the impersonation of human physical strength, was portrayed by him oftener, and with more success, than any other deity, and his type fully established. Lysippus was most prolific as a portrait sculptor, a branch of art which had been much advanced in the invention by his brother Lysistratus of the method of taking plaster casts of the features (Pliny, *H. N.* xxxv. 153).

After Alexander the Great the practice of the art, which had thus developed to perfect mastery of technique, began to deteriorate with the general decay of the countries of Greece proper, and to give place to the flourishing artistic schools of Asia Minor and the neighbouring islands. The characteristic of this period is the rise of a method of treatment which strives after effect. Instead of the simplicity of earlier times we get a certain deliberate calculation of a theatrical type, a tendency to make the exhibition of technical skill an end in itself. The most productive school was that of Rhodes, at the head of which stood a pupil of Lysippus, Chares of Lindus, who designed the famous Colossus of Rhodes, the largest statue of ancient times. Two well-known extant works in marble proceeded from this school, the group of Laocoön (q. v.) and his sons, by Agesander, Athenodorus, and Polydorus, found at Rome in 1506, now one of the chief treasures of the Vatican Museum, and the Farnese Bull at Naples. This last group, by

Apollonius and Tauriscus of Tralles, represents the revenge of Zethus and Amphion on Dircé (see illustration, p. 86), and is the largest extant antique work which consists of a single block of marble. Both these are admirable in skill and technique, embodying with the greatest vividness the wild passions of a moment of horror; but the theatrical effect and the exhibition of technical skill are unduly exaggerated. To the Rhodian School is conjecturally assigned the fine group representing Menelaüs bearing the body of Patroclus, several imperfect copies of which are still extant. It is sometimes, however, regarded as one of the later products of the same school as the group of Niobé, and assigned to the early part of the third century B.C.

Hermes of Praxiteles. (From the Heraeum at Olympia.)

The second in rank of the schools of this period was that at Pergamum, where the sculptors Isogonus, Phyromachus, Stratonicus, and Antigonus celebrated in a series of bronze statues the victories of the kings Eumenes I. (263–241) and Attalus I. (241–197) over the Gauls. There are still extant, at Venice, Rome, and Naples, single figures from a magnificent offering of Attalus, which stood on the Acropolis at Athens, and consisted of groups of figures illustrating the conflict between the gods and the Giants, the battle of the Athenians and Amazons, the fight at Marathon, and the destruction of the Gauls by Attalus. Other masterpieces of the school are the work popularly called the "Dying Gladiator," now identified as a Gallic warrior, who has just stabbed himself after a defeat, and the group in the Villa Ludovisi, called "Pætus and Arria," which really represents a Gaul killing his wife and himself. But the most brilliant proof of their powers is furnished by the reliefs of the battle of the Giants from the acropolis at Pergamum.

Ancient Sculptor Modelling a Bust. (From a gem.)

This work, brought to light by Humann in 1878, and now at Berlin, is among the most important artistic products of antiquity. (See PERGAMENE SCULPTURES.) To this period may also be referred with certainty the original of the celebrated Belvedere Apollo, which probably had reference to the rescue of the Temple of Delphi from the Gallic army in B.C. 280, which was supposed to be the work of the god (see illustration, p. 99).

To Greek art in Egypt belong the types of Isis and Harpocrates, and the fine reclining figure of the river-god Nilus, with sixteen boys playing round him (see illustration, p. 1098).

The artistic activity of the kingdom of the Seleucidae in Syria is represented by Eutychides, a pupil of Lysippus, and his famous "Tyché," a work in bronze representing the presiding destiny of the city of Antioch on the Orontes (Pausan. vi. 2, 6).

After the subjugation of Greece by the Romans in the middle of the second century, Rome became the headquarters of Greek artists, whose work, though without novelty in invention, had many excellences, especially in perfect mastery of technique. Of the artists of the first century B.C. and the early imperial times the following are worthy of mention: Apollonius of Athens (Belvedere torso of Hercules at Rome), Glycon (Farnese Hercules at Naples [see illustration, p. 793]), and Cleomenes (the "Venus de' Medici" at Florence [see p. 367]), though the works of all these are more or less free reproductions of the creations of earlier masters; also Agasias of Ephesus, sculptor of the so-called "Borghese Gladiator" (really an athlete) in the Louvre at Paris, a very fine work in the spirit of the Pergamene School. (See illustration, p. 734.)

In the same period Pasiteles, an Italian Greek of great versatility, attempted a regeneration of art on the basis of careful study of nature and of earlier productions. This movement in favour of an academic eclecticism was continued by Pasiteles' pupil, Stephanus, who has left us a youthful figure (in the Villa Albani), and Stephanus's pupil, Menelaüs, the artist of the fine group called "Orestes and Electra." There was a revival of Greek art in the first half of the second century A.D. under Hadrian, when a new ideal type of youthful beauty was created in the numerous representations of the imperial favourite Antinoüs.

The artistic work of the Romans before the introduction of Greek culture was under Etruscan influence. The art of that people was chiefly displayed in pottery and the closely connected craft

Antinous. (Bust in the British Museum.)

of bronze-founding, which they developed with great technical skill and for which they had a special predilection. They not only filled their towns with quantities of bronze statues, Volsinii alone containing about 2000 at the time of its conquest by the Romans in B.C. 265 (Pliny, *H. N.* xxxiv. 34), but provided Rome also for a long time with works of the kind. Judging from the extant monuments, such as the "Mars of Todi" in the Vatican, the "Boy with a Goose under his Arm" at Leyden, and the "Robed Statue of Aulus Metellus" at Florence, the character of their art seems wanting in freedom of treatment and in genuine inspiration. After the conquest of Greece, Greek art took the place of Etruscan at Rome; and, thanks to the continually increasing love of magnificence among the Romans, which was not content with the adornment of public buildings and squares, but sought artistic decoration for private dwellings, a great activity in art was developed, whereof numberless extant works give evidence. Besides the Greek influence, to which we owe many copies of the masterpieces of Greek art gradually accumulated in Rome, a peculiarly Roman art arose. This was especially active in portrait sculpture.

Portrait statues were divided, according as they were in civil or military costume, into *togatae* and *loricatae* or *thoracatae* (*lorica* = *θώραξ*, a coat of mail). To these were added in later times the so-called *Achilleae*, idealized in costume and pose (Pliny, *H. N.* xxxiv. 8, 118). It was customary to depict emperors in the form of Iupiter or other gods, and their wives with the attributes of Iuno or Venus. Of the innumerable monuments of this description special mention is due to the statue of Augustus in the Vatican (see illustration, p. 170); the marble equestrian statues of Balbus and his son at Naples, found at Herculaneum; the bronze equestrian statue of M. Aurelius on the square of the Capitol at Rome; the seated statues of Agrippina the Elder in the Capitoline Museum, and the younger Agrippina at Naples.

Hand in hand with portrait sculpture went the art of historical reliefs. In accordance with the realistic spirit of Rome, as opposed to the Greek custom of idealizing persons and events, this department strove to secure the greatest possible accuracy and truth. The most important works of the kind are the reliefs on the Arch of Titus; those on the Arch of Constantine, taken from the Arch of Trajan (see ARCUS TRIUMPHALIS); and those on the columns of Trajan and M. Aurelius.

Marble Equestrian Statue of the Younger Balbus. (Naples Museum.)

(See illustration under ARCHITECTURA.) Roman historical sculpture is seen already on its decline in the reliefs of the Arch of Septimius Severus (A.D. 203), and the decline is complete in those of the Arch of Constantine. A subordinate branch of relief sculpture was employed on the *sarcophagi* common from the second century A.D. The subjects of these reliefs are rarely taken from events in the man's actual life; they are most usually scenes from legends of Greek gods or heroes, often after compositions of an earlier period, and accordingly showing a Greek character in their treatment.

White marble was the material chiefly employed in statuary: in the earlier times of Greek art, the local kinds, in Attica particularly the Pentelic, which is "fine in grain and of a pure white." From the fourth century on that of Paros was preferred. This is a very beautiful marble, though of a strongly crystalline grain; it is slightly translucent. It was used in Roman times in preference to the similar marble of Luna (Carrara), a "marble of many qualities, from the purest white and a fine sparkling grain, like loaf-sugar, to the coarser sorts disfigured with bluish-gray streaks." It was sometimes used for columns in Rome. The marble of Hymettus "appears to have been the first foreign marble introduced into Rome. It resembles the inferior kind of Luna marble, being rather coarse in grain and frequently stained with gray striations." Coloured marble first became popular under the emperors—e. g. black for Egyptian subjects (statues of Isis), red for Dionysus, Satyrs, and others in his train. To the same period belongs the use of striped and spotted kinds of marble, coloured alabaster, porphyry, and granite. Different colours of stone were also combined—e. g. the drapery of black marble or porphyry.

A noteworthy peculiarity of ancient sculpture, as also of architecture, is the habit of embellishing all kinds of marble work by the application of colours (Polychromy), which is known from references in ancient writers. Plato (*Rep.* 420 C) speaks of "painting statues." Plutarch (*De Gloria Athen.* 348 F) mentions "dyers" of statues side by side with gilders and encaustic painters. Lastly, Pliny (*H. N.* xxxv. 133) states that Praxiteles owned he was much indebted to the *circumlitio*, or touching-up, of his works by the painter Nicias. It is also attested by traces still present on many works. Thus the statues at Pompeii, especially those of late date, are in many cases coloured, especially certain parts of the drapery. A painting found at Pompeii introduces us into the studio of a female artist engaged in embellishing with paint a terminal statue of Hermes. The original sketch in colours lies on the ground, and she is pausing to examine her work, which is also watched with interest by two bystanders. Wood and pottery were always painted. Even sculptures intended for the adornment of buildings—e. g. metopes and friezes—not only had painted backgrounds (generally blue or red), but were themselves richly adorned with colouring. It is also held that originally even the bare parts of stone figures were painted; afterwards a coating of wax was thought enough (Vitruv. vii. 9). In particular statues, many artists coloured only the characteristic parts, fringes of garments, sandals, armour, weapons, snoods or head wrappings, and of the parts of the body, the lips, eyes, hair, beard, and nipples. Probably the cheeks, too, received a light reddish tinge; but all was done with discretion. The colours chiefly used were red, blue, and yellow, or gilding. The employment of different materials for the extremities and for the drapery also produced the effect of colouring. Similarly metal-

Relief from Column of Trajan.

sculpture secured variety of colour by the application of gold, silver, and copper to the bronze. The sparkle of the eyes was often represented by inlaid precious stones or enamel. Particular parts in marble statues, such as attributes, weapons, implements, were also made of metal. There are examples of this in the pediments of Aegina and in the frieze of the Parthenon. Under the Empire metal was sometimes used for the drapery. Thus the Braschi Antinoüs in the Vatican was formerly draped in bronze. On ancient stone-cutting, see GEMMA; on terra-cottas, see FICTILÉ; on working in metal, see CAELATURA.

London, 1890); Loewy, *Inschriften griechischen Bildhauer* (Leipzig, 1885); Detlefsen, *De Arte Romana Antiquissima* (Glückst. 1888); St. Lami, *Dictionnaire des Sculpteurs de l'Antiquité* (Paris, 1884); Treu, *Sollen Wir unsre Statuen bemalen?* (Berlin, 1884); Böckel, *Die Polychromie in d. Antiken Sculptur* (1882); and Gardner, *Handbook of Greek Sculpture* (New York, 1896).

The technical part of sculpture is described in Blümner's *Technologie und Terminologie der Gewerbe und Künste bei Griechen und Römern*, 4 vols. (Leipzig, 1875–87). Beautiful reproductions of ancient

plastic works are given in Furtwängler's *Masterpieces of Greek Sculpture* (N. Y. 1895); and in Brunn's *Denkmäler griechischer und römischer Sculptur*, published in parts. For the ancient sources of our information regarding Greek sculpture, etc., see Overbeck's *Schriftquellen zur Geschichte der bildenden Künste* (Leipzig, 1868); and H. S. Jones, *Ancient Writers on Greek Sculpture* (London, 1895).

Statute. See LEX.

Steam-Engine. See HERO.

Steel. See CHALYBES; METALLUM.

Stega (*στέγη*). Properly a Greek word signifying the deck of a ship, which the Romans called *constratum navis* (Plaut. *Bacch.* ii. 3, 44).

Stelé (*στήλη*). An upright tablet or slab of stone. At Athens such tablets were set up in a public place, especially on the Acropolis. Laws, decrees, treaties, etc., as well as sentences of punishment against defaulters were engraved upon them, and thus made publicly known. The use of stelae for funeral monuments was common in all Greek countries. In earlier times they are narrow and thin slabs of stone, slightly tapering towards the top, which is crowned either with *anthemia* (decorations of flowers and leaves), or with a small triangular pediment ornamented with rosettes. The shorter but broader stelé, crowned with a pediment, is later than the other kind. Many such stelae resemble small shrines or chapels. Besides the inscription referring to the dead, they often bear representations of them in relief, as in the famous monument to Dexileos, B.C. 390, near the Dipylum at Athens. From the stelae, many important Greek inscriptions have been recovered, on which see EPIGRAPHY.

Stelé. (Street of the Dead, Athens.)

Stelé from the Acropolis of Mycenae. (Reber.)

Stemma (*στέμμα*). (1) Properly a garland or wreath bound with fillets of wool and worn as a chaplet. (See CORONA; INFULA.) (2) A long scroll decorated with garlands and bearing a list of the family names. It was hung upon the ancestral busts that stood in their cases or niches (*aediculae*) in the *atrium* of the Roman house. (See IMAGINES.) Whence (3) a pedigree or family tree (Juv. viii. 1).

Stenography. See NOTAE.

Stentor (*Στέντωρ*). A herald of the Greeks in the Trojan War, whose voice was as loud as that of fifty other men together, so that his name has become proverbial for any loud-voiced person (*Il.* v. 783; Juv. xiii. 112).

Stentŏris Lacus. See HEBRUS.

Stenyclārus (*Στενύκληρος*). A town in the north of Messenia, which was the residence of the Dorian kings of the country (Herod. ix. 64).

Step. See GRADUS.

Stephănos (*στέφανος*). (1) A garland. (See

CORONA). (2) A metal band for the forehead, like a diadem. See COMA.

Stephănus, the Latinized form of ESTIENNE, in English sometimes absurdly called STEPHENS. The name of a celebrated family of printers, publishers, and classical scholars (descended from a noble Provençal family), found settled at Paris towards 1500 in the person of HENRY, who is supposed to have been born about 1470, and died in 1520. In Paris Henry carried on the business of printer and bookseller for upwards of twenty years. In 1526 ROBERT, his second son, born 1503, is found in possession of the business. Every year of Robert's life is marked by the issue from his printing-press of several volumes, many of them masterpieces of art, and all of them surpassing anything of the kind previously seen in France. He was at once printer, publisher, commentator, and author. In 1532 he published a Latin dictionary (*Thesaurus Linguae Latinae*) which for two centuries remained the standard work. He also published editions of several classical authors and numerous Latin grammars. His Bible of 1545, and his Greek Testament of 1549, each drew down upon him a religious prosecution; and though the prosecutions failed legally, they were disastrous to his private fortune. Having first sent his family to Geneva, he followed them there in 1549. Robert, his second son, shortly afterwards returned to Paris, where he resumed his father's business.

The second HENRY, born at Paris in 1528, succeeded his father, Robert, on his death in 1559. Though Henry possessed the same literary industry and ability as his father, he was unfortunately deficient in his father's practical turn of mind. Devoted to his art and to his calling, he seems to have been utterly wanting in worldly prudence. In two years we find that he had revised and published more than 4000 pages of Greek text, including some twenty *editiones principes;* while at the same time he was writing his *Apologia pro Herodoto* (1566)—a work of formidable length and learning. Rendered nervous and irritable by an overworked brain, and by pecuniary difficulties, travelling, originally undertaken from literary curiosity, grew into a necessity of his life, and he visited England, the Netherlands, and Italy, examining classical manuscripts and making the acquaintance of distinguished scholars. In 1572 appeared his great Greek lexicon (*Thesaurus Linguae Graecae*), in five folio volumes, on which he spent nearly his whole fortune (last reprint by Didot, 9 vols. [Paris, 1831–65]). In 1578 he visited Paris, where for several years he became a hanger-on of the court of Henry III., who bestowed upon him a pension, which the state of the royal exchequer rendered merely nominal. Quitting Paris, he wandered in poverty over Europe, his own family often ignorant of where he was to be found. He died at Lyons in 1598. Great as a publisher and commentator, Henry Estienne does not seem to have possessed much power as an original thinker, but his mastery of Greek seems to have been almost complete, and as a critic of the French language he is still esteemed in France. The traditions of the family were kept up by PAUL (1566–1627) and ANTOINE (1592–1674). See Feugère, *Caractères et Portraits Littéraires du XVI. Siècle* (Paris, 1864); also article in *Quarterly Review* (London, April, 1865); Bernard, *Les Estiennes* (Paris, 1856); Renouard, *L'Imprimerie des Étiennes* (Paris, 1843); and the paper in Pattison's *Essays* (Oxford, 1889).

Stephănus (*Στέφανος*). (1) An Athenian comic poet of the New Comedy, probably the son of Antiphanes, some of whose plays he is said to have exhibited. (2) Of Byzantium, the author of the geographical lexicon entitled *Ethnica* (*Ἐθνικά*), of which unfortunately we only possess an epitome. Stephanus was a grammarian at Constantinople, and lived after the time of Arcadius and Honorius, and before that of Justinian II. His work was reduced to an epitome by a certain Hermolaüs, who dedicated his abridgment to the emperor Justinian II. According to the title, the chief object of the work was to specify the gentile names derived from the several names of places and countries in the ancient world. But, while this is done in every article, the amount of information given went far beyond this. Nearly every article in the epitome contains a reference to some ancient writer, as an authority for the name of the place; but in the original, as we see from the extant fragments, there were considerable quotations from the ancient authors, besides a number of very interesting particulars, topographical, historical, mythological, and others. Thus the work was not merely what it professed to be, a lexicon of a special branch of technical grammar, but a valuable dictionary of geography. How great would have been its value to us, if it had come down to us unmutilated, may be seen by any one who compares the extant fragments of the original with the corresponding articles in the epitome. These fragments, however, are unfortunately very scanty. The best editions of the epitome of Stephanus are by Dindorf, 4 vols. (Leipzig, 1825); Westermann (Leipzig, 1839); and Meineke (Berlin, 1849). See Geffcken, *De Stephano Byzantio* (1886).

Sterculius, Stercutius, or **Sterquilīnus.** A Roman deity presiding over the manuring of fields. (See INDIGITAMENTA). He is by some identified with Picumnus (Serv. *ad* Verg. *Aen.* ix. 4; Isidor. *Orig.* iv. 11).

Stern of a Ship. See PUPPIS.

Sterŏpé (*Στερόπη*). One of the Pleiads, wife of Oenomaüs and daughter of Hippodamia. See PLEIAS.

Sterŏpes. See CYCLOPES.

Stesichŏrus (*Στησίχορος*). A celebrated Greek poet of Himera in Sicily, contemporary with Sappho, Alcaeus, Pittacus, and Phalaris. He is said to have been born B.C. 632, to have flourished about 608, and to have died in 552 at the age of eighty. Of the events of his life we have only a few obscure accounts. As with other great poets, his birth is fabled to have been attended by an omen; a nightingale sat upon the babe's lips, and sang a sweet strain. He is said to have been carefully educated at Catana, and afterwards to have enjoyed the friendship of Phalaris, the tyrant of Agrigentum. Many writers relate the fable of his being miraculously struck with blindness after writing an attack upon Helen, and recovering his sight when he had composed a Palinodia or recantation. He is said to have been buried at Catana by a gate of the city, which was called after him the Stesichorean Gate. Stesichorus was one of the nine chiefs of lyric poetry recognized by the ancients. He stands, with Alcman, at the head of one branch of the lyric art, the choral poetry of the Dorians. He was the first to break the monotony of the strophe and antistrophe by the in-

troduction of the epode, and his metres were much more varied, and the structure of his strophes more elaborate, than those of Alcman. His odes contained all the essential elements of the perfect choral poetry of Pindar and the tragedians. The subjects of his poems were chiefly heroic; and he transferred the subjects of the old epic poetry to the lyric form, dropping, of course, the continuous narrative, and dwelling on isolated adventures of his heroes. He also composed poems on other subjects, and fables, among the latter the well-known one of the horse, the stag, and the man (Arist. *Rhet.* ii. 20). His extant remains may be classified under the following heads: (1) mythical poems; (2) hymns, encomia, epithalamia, paeans; (3) erotic poems, and scolia; (4) a pastoral poem, entitled *Daphnis;* (5) fables; (6) elegies. The dialect of Stesichorus was Dorian, with an intermixture of the epic. The best editions of his fragments are those by Kleine (Berlin, 1828), and by Bergk in his *Poetae Lyrici Graeci* (4th ed. 1878). On the dialect, see Holsten, *De Stesichori Dialecto* (1884); and Mucke, *De Dialecto Stesichori cum Pindar. Comparata* (1879).

Stesimbrŏtus (Στησίμβροτος), of Thasos, a rhapsodist and historian in the time of Cimon and Pericles, who is mentioned with praise by Plato and Xenophon (Plato, *Ion*, p. 550; Xen. *Mem.* iv. 2, 10). He wrote a work on Homer, the character of which is not known. See Heuer, *De Stesimbroto Thasio* (1863).

Steward. See Dispensator; Procurator; Vilicus.

Stheneboea (Σθενέβοια), called **Antēa** by many writers, was a daughter of the Lycian king Iobates, and the wife of Proetus. See Bellerophontes.

Sthenĕlus (Σθένελος). (1) The son of Perseus and Andromeda, king of Mycenae, and husband of Nicippe, by whom he became the father of Alcinoë, Medusa, and Eurystheus. (2) The son of Androgeos, and grandson of Minos. He accompanied Heracles from Paros on his expedition against the Amazons, and, together with his brother Alcaeus, he was appointed by Heracles ruler of Thasos. (3) The son of Actor, likewise a companion of Heracles in his expedition against the Amazons. (4) The son of Capaneus and Evadné, was one of the Epigoni, by whom Thebes was taken, and commanded the Argives under Diomedes in the Trojan War, being the faithful friend and companion of Diomedes. (5) The father of Cycnus, who was metamorphosed into a swan. Hence we find the swan called by Ovid *Stheneleïa volucris* and *Stheneleïa proles.* (6) A tragic poet, contemporary with Aristophanes, who attacked him in the *Wasps.*

Stheno. See Gorgones.

Stibadium. A circular dining-couch adapted to a round table (*orbis*). The same as the *sigma* (q. v.). (See Mart. xiv. 87.)

Stigma (στίγμα). Literally a mark made by puncturing (from στίζω). In general a brand or mark pricked or stamped upon an object, as on the forehead of a slave (Petron. 103). For theft the letter F (*fur*) was the usual brand, but sometimes the whole word was branded on, or even a sentence descriptive of the offence (Petron. l. c.). The name was also given to a mark pricked into the arm of conscripts for the army (Veget. *Mil.* i. 8; ii. 5) after they had been received and passed, the object being identification. The same thing was done to labourers employed in the State's factories (Imp. Zeno, *Cod.* xlii. 10).

Stigma. An old character of the Greek alphabet. See Alphabet.

Stilĭcho. The son of a Vandal leader, who became one of the most distinguished generals of Theodosius I., on whose death (A.D. 395) he became the real ruler of the West under the emperor Honorius. It was he who defeated Alaric at the battle of Pollentia (403) and thus saved the Western Empire from the Visigoths. In 405 he won a great victory over Radagaisus, who had led a host of barbarians into Italy. His importance as a soldier is seen in the fact that only three months after his death, Alaric and his hosts were thundering at the gates of Rome. He was put to death at Ravenna in 408 (Zosim. bks. iv., v.).

Stillicidium. One of the Servitutes (q. v.).

Stilo, Lucius Aelius Praeconīnus. A celebrated Roman grammarian, one of the teachers of Varro and Cicero. He was one of the aristocratic party, and accompanied Q. Metellus Numidius into exile in B.C. 100. He was the author of commentaries on the *Axamenta* or songs of the Salian priests (see Salii), on the Twelve Tables, and of a work called *De Proloquiis.* To him has also by some been ascribed the pseudo-Ciceronian treatise *Ad Herennium.* From his eminence as a grammarian he was styled *philologus.* See Philologia.

Stilpo (Στίλπων). A celebrated philosopher, who was a native of Megara, and taught philosophy in his native town. He is said to have surpassed his contemporaries in inventive power and dialectic art, and to have inspired almost all Greece with a devotion to the ethical Megarian philosophy, dwelling especially upon the conception of virtue and its consideration (Diog. Laërt. ii. 113–118; Sen. *Epist.* 9).

Stilts. See Grallae.

Stilus and (incorrectly) **Stylus** (γραφίς, γραφεῖον). (1) An iron, bronze, bone, or ivory instrument, the shape and size of a modern pencil, used by the ancients for writing upon wax tablets. One end was made sharp for this purpose, while the other was blunt and round for obliterating what had been written. Hence *vertere stilum* means "to erase" and "to correct." Another name for the stilus was *graphium,* and the case in which it was carried was called *graphiarium.* See illustration under Graphium. (2) A sharp stake or spike placed in pitfalls in front of an intrenchment to embarrass the approach of an enemy. See Murex.

Stimŭla. The Latin name of Semelé, according to the pronunciation of the Romans; but probably also a native deity, one of the Indigetes, presiding over the incitements to love and passion (August. *De Civ. Dei*, iv. 11).

Stimŭlus (κέντρον). A goad or prick used in driving cattle, etc. It consisted of a stick with a sharp iron point in one end (Columell. ii. 2, 26).

Stipendiarii. See Stipendium.

Stipendium (from *stips* and *pendo*). The pay of a Roman soldier. Originally each tribe had to contribute the necessary means to provide for its con-

tingent. It was only at the beginning of the war against Veii in B.C. 404 that payment of a sum by the State was introduced. This was given to the soldiers, either before or after the campaign, as compensation for the cost of their living during its continuance. When this had gradually become a regular payment, it grew customary, in making it, to deduct everything which the State had provided for the army in the way of clothing, arms, and food; but under the Empire maintenance was given free. In the time of Polybius the pay of legionaries was 120 *denarii* ($20); of centurions twice, and of knights three times that amount. Caesar increased it to 225 *denarii* ($37.50) for a legionary, Domitian to 300 ($50). The praetorians received under Tiberius 720 *denarii* ($120). See EXERCITUS; PRAETORIANI.

Stipendium is also the name of the fixed normal tax imposed on conquered provinces, which might consist of money, or produce, or both (see PROVINCIA). During the Republic, when a country was conquered, this was usually fixed according to the amount of the existing taxes, and the country divided into fiscal districts, and the officials of the chief places in each compelled to pay in the portion which fell to them. Under Augustus the taxes were for the first time fixed upon the basis of a measurement of the ground occupied, and of a computation of property (*census*). The stipendium was either a ground-tax (*tributum soli*) or a personal tax (*tributum capitis*), which was partly a poll-tax, partly a property-tax, partly a tax on the trade carried on by the individual. In exceptional cases special taxes were also imposed. Those bound to pay the *stipendium* were called *stipendiarii*.

See Mommsen, *Staatsverwaltung*, v. pp. 90 foll.; Dureau de la Malle, *Économie Politique des Romains*, i. pp. 134 foll.; and Mommsen, *Die römische Tribus*, pp. 131 foll.

Stipes (*στύπος*). A round stake driven into the ground as a landmark (Ovid, *Fast.* ii. 642), or as a convenient place for hanging things upon, as the helmets of soldiers, etc., in camp (Suet. *Nero*, 29). The word was also used as a term of reproach, like our "blockhead."

Stiva (*ἐχέτλη*). The handle of a plough. See ARATRUM.

Stoa (*στοά*). The Greek term for a colonnade, such as those built outside or inside temples, around dwelling-houses, gymnasia, and market-places. They were also set up separately as ornaments of the streets and open places. The simplest form is that of a roofed colonnade, with a wall on one side, which was often decorated with paintings. Thus in the market-place at Athens the *στοὰ ποικίλη* (Painted Colonnade) was decorated with Polygnotus's representations of the destruction of Troy, the fight of the Athenians with the Amazons, and the battles of Marathon and Oenoe. The *στοὰ βασίλειος*, also in the market-place, in which the Archon Basileus sat as judge, was probably divided longitudinally into three parts by two rows of columns, and was the pattern for the Roman *basilica* (q. v.). Zeno of Citium taught in the *στοὰ ποικίλη*, and his adherents accordingly obtained the name of Stoics. See STOICI.

Among the Romans similar colonnades attached to other buildings, or built out in the open, were called *porticus*. They were named from the neighbouring edifices (e.g. *porticus Concordiae*, close to the Temple of Concord); from their builders (e.g. *porticus Pompeia*); also from the pictures set up in them (e.g. *porticus Argonautarum*); and from the business chiefly carried on in them, as *porticus Argentaria*, the hall of the money-changers. These halls were the chief places for public intercourse among the ancients. See PORTICUS.

Stobaeus, Ioannes (*Ἰωάννης ὁ Στοβαῖος*). A Greek writer of uncertain date (probably about A.D. 500), who derived his surname apparently from being a native of Stobi in Macedonia. Of his personal history we know nothing. Stobaeus was a man of extensive reading, in the course of which he noted down the most interesting passages; and to him we are indebted for a large proportion of the fragments that remain of the lost works of the early Greek poets and prose-writers to the number of 500. His work, which was a sort of anthology, was originally a single one, but in course of time was divided into two, each having two subdivisions—*Eclogae Physicae et Ethicae*, which is edited by Gaisford (1850) and Meineke (1860–64); and the *Anthologion* or *Florilegium*, edited by Gaisford (1822–25), Meineke (1856–57), and Wachsmuth and Hense, 3 vols. (Berlin, 1884–94).

Stobi (*Στόβοι*). A town of Macedonia, and the most important place in the district Paeonia, was probably situated on the river Erigon, north of Thessalonica, and northeast of Heraclea. It was made a Roman colony and a municipium, and under the later emperors was the capital of the province Macedonia II. or Salutaris.

Stockade. See VALLUM.

Stocking. See FASCIAE.

Stoechădes Insulae (*Στοιχάδες Νῆσοι*). Now Îles d'Hyères. A group of five small islands in the Mediterranean, off the coast of Gallia Narbonensis, and east of Massilia.

Stoeni. A Ligurian people, in the Maritime Alps, conquered by Q. Marcius Rex in B.C. 118.

Stoïci (*Στοικοί*). The adherents of a school of philosophy (Stoicism) founded by Zeno of Citium about A.D. 310. They derived their name from the Painted Stoa (*στοὰ ποικίλη*) in Athens, in which Zeno lectured. The Stoic teaching was one of stern morality, the principle being "a life in accordance with nature and controlled by virtue." It was an ascetic system, teaching perfect indifference (*ἀπάθεια*) to everything external, for nothing external could be either good or evil. Hence to the Stoics both pain and pleasure, poverty and riches, sickness and health, were supposed to be equally unimportant (see STOA). For further details, see Zeller, *Stoics, Epicureans, and Skeptics* (London, 1869); Ravisson, *Essai sur le Stoicisme* (Paris, 1852); Capes, *Stoicism* (London, 1880); and the articles PHILOSOPHIA; ZENO.

Stola. The outer garment worn by Roman matrons above the *tunica intima* or chemise (Petron. 81). It was longer than the body, slit open at the top on either side and fastened together by clasps, while below it was provided with a border (*instita*) woven

Stola. (From a painting in the Thermae of Titus.)

LIBRARY

on to it, and was gathered up below the breast by a girdle so as to form broad falling folds (*rugae*). It had either no sleeves or half-sleeves, according as the under-tunic had or had not half-sleeves. For the garb of women unmarried or in disgrace, see TOGA. Under the Empire the stola fell gradually out of use. After the fourth century A.D. there appears in its stead the *dalmatica* (q.v.), worn by men and women, which was a kind of tunic with sleeves. In Greek, the corresponding term *στολή* is used as a general word for any kind of robe, whether for men or for women.

Stool. See SCABELLUM.

Stores. See TABERNA.

Storia and **Storea.** A mat made of rushes, used for a covering (Caes. *B. C.* ii. 9).

Stove. See CAMINUS; FOCUS.

Strabo. A cognomen in many Roman *gentes*, signifying a person who squinted, and accordingly classed with the name Paetus (q.v.), though the latter word did not indicate such a complete distortion of vision as Strabo.

Strabo (*Στράβων*). A celebrated geographer, a native of Amasia in Pontus. The date of his birth is unknown, but may perhaps be placed about B.C. 63. He lived during the whole of the reign of Augustus, and during the early part, at least, of the reign of Tiberius. He is supposed to have died after A.D. 21. He received a careful education. He studied grammar under Aristodemus at Nysa in Caria, and philosophy under Xenarchus of Seleucia in Cilicia and Boethus of Sidon. He lived some years at Rome, and also travelled much in various countries. We learn from his own work that he was with his friend Ælius Gallus in Egypt in B.C. 24. He wrote an historical work (*Ἱστορικὰ Ὑπομνήματα*) in forty-three books, which is lost. It began where the history of Polybius ended, and was probably continued to the battle of Actium. He also wrote the work on Geography (*Γεωγραφικά*), in seventeen books, which has come down to us entire, with the exception of the seventh, of which we have only a meagre epitome.

Strabo's work, according to his own expression, was not intended for the use of all persons. It was designed for all who had had a good education, and particularly for those who were engaged in the higher departments of administration. Consistently with this view, his plan does not comprehend minute description, except when the place or the object is of great interest or importance; nor is his description limited to the physical characteristics of each country; it comprehends the important political events of which each country has been the theatre, a notice of the chief cities and the great men who made them illustrious; in short, whatever was most characteristic and interesting in every country. His work forms a striking contrast with the geography of Ptolemy, and the dry list of names, occasionally relieved by something added to them, in the geographical portion of the *Historia Naturalis* of Pliny. It is, in short, a book intended for reading, and it may be read; a kind of historical geography. Strabo's language is generally clear, except in very technical passages and in those where the text has been corrupted; it is appropriate to the matter, simple, and without affectation. The first two books of Strabo are an introduction to his Geography, and contain his views on the form and magnitude of the earth, and other subjects connected with mathematical geography. In the third book he begins his description: he devotes eight books to Europe, six to Asia, and the seventeenth and last to Egypt and Libya.

The *editio princeps* appeared at Venice in 1516. The best editions of Strabo are by Casaubon (Geneva, 1587), reprinted by Falconer (Oxford, 1807); by Koray (Paris, 1815); by Kramer, 3 vols. (Berlin, 1844–52); by Müller and Dübner (1853–56); and by Meineke (1866–77). There is a fine translation into French in 5 vols. made by command of Napoleon I. (Paris, 1805–19), with valuable notes. An English version is that of Hamilton and Falconer, 3 vols. (1854–57). Tozer's English edition of selections from Strabo (Oxford, 1893) has an excellent introduction. See also Bunbury's *History of Ancient Geography*, ii. pp. 209 foll., and Dubois, *Examen de la Géographie de Strabo* (Paris, 1891).

Strabo, Fannius. (1) GAIUS, consul B.C. 161 with M. Valerius Messala. In their consulship the rhetoricians were expelled from Rome. (2) GAIUS, son of the preceding, consul 122. He owed his election to the consulship chiefly to the influence of C. Gracchus, who was anxious to prevent his enemy Opimius from obtaining the office. But in his consulship Fannius supported the aristocracy, and took an active part in opposing the measures of Gracchus. He spoke against the proposal of Gracchus, who wished to give the Roman franchise to the Latins, in a speech which was regarded as a masterpiece in the time of Cicero. (3) GAIUS, son-in-law of Laelius, and frequently confounded with the preceding. He served in Africa, under Scipio Africanus, in B.C. 146, and in Spain under Fabius Maximus in 142. He is introduced by Cicero as one of the speakers both in his work *De Republica* and in his treatise *De Amicitia*. He owed his celebrity in literature to his History, which was written in Latin, and of which Brutus made an abridgment.

Strabo, SEIUS. See SEIANUS.

Stragŭlum (*στρῶμα*). A general term for a covering; but usually a blanket or coverlet for a bed (Cic. *Tusc.* v. 21). The word also means the horse-blanket or saddle-cloth on a horse or pack-animal (Mart. xiv. 86).

Stratēgus (*στρατηγός*). A general; an office and title most common in the democratic States of Greece, such as Athens, Tarentum, Syracuse, Argos, and Thurii. When the tyrants of the Ionic cities in Asia Minor were deposed by Aristagoras, he established *στρατηγοί* in their places as chief magistrates. At Athens they were instituted by Clisthenes when he remodelled the constitution (see CLISTHENES), and they assumed the duties previously discharged by the king or the Archon Polemarchus. They were ten in number, and were chosen by the vote (*χειροτονία*) of the people, one from each tribe. Before entering on their duties they passed an examination (*δοκιμασία*) as to their character; and no one was eligible for the office unless he had legitimate children and landed property in Attica. They had command of military expeditions and in general the direction of all that related to the conduct of wars, including the equipment of the forces. In levying the troops they were aided by the taxiarchs. (See TAXIARCHI.) They even collected the taxes levied for

warlike purposes and managed the funds set apart for such objects. In lawsuits arising from these questions the strategi presided. They appointed each year the persons who were to serve as trierarchs (see TRIERARCHIA); and in cases of emergency they could summon special assemblies of the whole people. In the field it was usual for only three of them to be sent out at one time, but at Marathon all ten of them held command in turn. With them was associated the Archon Polemarchus (see ARCHON), and in the council of war his vote was equal to that of any of the strategi.

The name στρατηγός was also given to the chief of the Achaean League (see ACHAEAN LEAGUE), and to those of the Aetolian League (see AETOLICUM FOEDUS).

See Gilbert, *Greek Constitutional Antiquities*, pp. 230 foll., Eng. trans. (1895); a paper by Droysen in *Hermes*, vol. ix. (1875); K. F. Hermann, *Lehrbuch der griechischen Antiquitäten*, i. §§ 123, 129, 148, 152, 166; and the article EXERCITUS, p. 649.

Stratŏcles (Στρατοκλῆς). An Athenian orator, and a friend of the orator Lycurgus. He was a virulent opponent of Demosthenes, whom he charged with having accepted bribes from Harpalus. Stratocles especially distinguished himself by his extravagant flattery of Demetrius.

Straton (Στράτων). The son of Arcesilaüs of Lampsacus. He was a distinguished Peripatetic philosopher, and the tutor of Ptolemy Philadelphus. He succeeded Theophrastus as head of the school in B.C. 288, and, after presiding over it eighteen years, was succeeded by Lycon. He devoted himself especially to the study of natural science, whence he obtained the appellation of *Physicus* (Diog. Laërt. v. 58).

Stratonicé (Στρατονίκη). The daughter of Demetrius Poliorcetes and Phila, the daughter of Antipater. In B.C. 300, at which time she could not have been more than seventeen years of age, she was married to Seleucus, king of Syria. Notwithstanding the disparity of their ages, she lived in harmony with the old king for some years, when it was discovered that her stepson Antiochus was deeply enamoured of her, and Seleucus, in order to save the life of his son, which was endangered by the violence of his passion, gave up Stratonicé in marriage to the young prince (Plut. *Demetr.* 31, 32, 38).

Stratonicēa (Στρατονίκεια). Now Eski-Hisar; one of the chief inland cities of Caria, built by Antiochus I. Soter, who fortified it strongly, and named it in honour of his wife Stratonicé. It stood east of Mylasa and south of Alabanda, near the river Marsyas, a southern tributary of the Maeander. Under the Romans it was a free city.

Stratōnis Turris. See CAESAREA.

Strator (ἀναβολεύς). An equerry who attended the consul or praetor in time of war, and under the Empire was attached to the person of the emperor. The office is the historical original of the position of Master of Horse in modern courts (Ulp. *Dig.* i. 16, 4).

Stratus (Στράτος). Now Lepenu or Lepanon, the chief town in Acarnania, ten stadia west of the Acheloüs. Its territory was called STRATĬCÉ.

Streets. See PLATEA; VIA.

Strenae. Gifts which it was customary for the Romans to make at the new year with accompanying good wishes. The word is connected with the name of a Sabine tutelary goddess, Strenia, who corresponds to the Roman Salus, and from whose precinct beside the Via Sacra at Rome consecrated branches were carried up to the Capitoline at the new year. The strenae consisted of branches of bay and of palm, sweetmeats made of honey, and figs or dates, as a good omen that the year might bring only joy and happiness (Ovid, *Fasti*, i. 185–190). The fruits were gilded (Martial, viii. 33, 11) as they are now in Germany; and the word, as well as the custom, survives in the French *étrennes*. Pieces of money, especially the ancient *as*, with the image of Ianus, who was especially honoured on this day, were also sent as presents, as well as small lamps of terra-cotta or bronze stamped with a motto and with minute representations of the usual gifts. Clients in particular were in the habit of complimenting their patrons with such presents; and, during and after the time of Augustus, the emperors benefited considerably by this custom, which lasted till the fifth century, although abolished several times by special edict (Sueton. *Aug.* 57 and 91; *Calig.* 42). It was discouraged by the Christian Fathers as being connected with the worship of a heathen goddess.

Striga (στρίγλα). A witch; a sorceress. The word is derived from *strix* (στρίξ), "a screech-owl," a creature believed by the ancients to suck the blood of young children (Plaut. *Pseud.* iii. 2, 31; Pliny, *H. N.* xi. 39, 95). There are many passages in classical literature that show the belief in witches to have been widespread. The most famous of ancient witch-stories are those in Petronius 63, where night-hags carry off a young boy and leave a manikin in his place; and in the *Metamorphoses* of Apuleius (bk. i. ad init.), where is an extremely gruesome tale, of considerable length, put into the mouth of a commercial traveller whose friend Socrates had been bled to death by witches. Horace (*Sat.* i. 8) relates the incantations of a number of sorceresses who dig up the bones of the dead in the cemetery on the Esquiline, and recall by their weird rites the famous scene in *Macbeth*. In the Fifth Epode is a still longer and very dramatic picture of witches burying a boy alive, so as to use his heart and liver in the preparation of magic potions. Cf. also Tibullus, i. 5; Ovid, *Fast.* vi. 133 foll.; and Fest. p. 314 Müll. The word VENEFĬCA (γυνὴ φαρμακίς) is also used of a witch; SAGA (q. v.) means a fortune-teller, not necessarily malignant.

Strigil. A flesh-scraper. See BALNEAE, pp. 193, 194.

Stringed Instruments. See CITHARA; LYRA; SAMBUCA.

Stroma. See STRAGULUM.

Stromăta. See CLEMENS ALEXANDRINUS.

Strombichĭdes (Στρομβιχίδης). An Athenian admiral in the Peloponnesian War (Thucyd. viii. 15, 30–40, 60–79).

Strongўle. See NAXOS.

Strongylion (Στρογγυλίων). A distinguished Greek statuary who flourished during the last thirty or forty years of the fifth century B.C. and was famous for his statues of horses and oxen (Pausan. ix. 30, 1).

Strophădes (Στροφάδες) **Insŭlae**, formerly called PLOTAE. Now Strofadia and Strivali. Two isl-

ands in the Ionian Sea, off the coast of Messenia and south of Zacynthus. The Harpies were pursued to these islands by the sons of Boreas; and it was from the circumstance of the latter *returning* from these islands after the pursuit that mythology derived the name (*στρέφω*, "to turn").

Strophium (*ταινία, ταινίδιον, ἀπόδεσμος*). (1) A wreath of flowers (Verg. *Copa*, 31). (See CORONA.) (2) (*στρόφιον*). A sash or scarf worn across the breast by women. See FASCIAE.

Strophius (*Στρόφιος*). A king of Phocis, son of Crissus and Antiphatia, and husband of Cydragora, Anaxibia, or Astyochia, by whom he became the father of Astydamia and Pylades. See ORESTES.

Structor (*τραπεζοποιός*). A servant whose duty it was to arrange the dishes of each course upon the tray (*ferculum*) and place them in proper order. He sometimes carved, though that was properly the function of the *scissor* (Mart. x. 48; Lamprid. *Elag.* 27). See CENA; TRICLINIUM.

Struppus (*τροπός*). (1) A leathern thong used in fastening the oar to its thowl (Vitruv. x. 3, 6). (2) The strap through which the poles (*asseres*) of a litter (*lectica*) were passed. See LECTICA.

Strymon (*Στρυμών*). Now Struma, called by the Turks Karasu; an important river in Macedonia, forming the boundary between that country and Thrace down to the time of Philip. It rose in Mount Scomius, flowed first south and then southeast, passed through the lake Prasias, and, immediately south of Amphipolis, fell into a bay of the Aegaean Sea, called after it STRYMONĬCUS SINUS.

Stuprum. See ADULTERIUM.

Stylobăta (*στυλοβάτης*). A stylobate or pedestal on which a column or row of columns rests to give them an additional elevation (Vitruv. iv. 3. 3).

Stylus. See STILUS.

Stymphalĭdes. See STYMPHALUS.

Stymphălis. See STYMPHALUS.

Stymphălus (*Στύμφαλος*). A town in the northeast of Arcadia, the territory of which was bounded on the north by Achaia, on the east by Sicyonia and Phliasia, on the south by the territory of Mantinea, and on the west by that of Orchomenus and Pheneus. The town itself was situated on a mountain of the same name, and on the north side of Lake STYMPHĂLIS (Zaraka), on which dwelt, according to tradition, the celebrated birds, called STYMPHALĬDES, destroyed by Heracles. See HERACLES.

Styra (*Τὰ Στύρα*). Now Stura; a town in Euboea on the southwest coast, not far from Carystus, and nearly opposite Marathon in Attica.

Styx (*Στύξ*). A name connected with the verb *στυγέω*, to hate or abhor, and applied to the principal river in the nether world, around which it flows seven times. (*Il.* ii. 755; Verg. *Aen.* vi. 439.) Styx is described as a daughter of Oceanus and Tethys. As a nymph she dwelt at the entrance of Hades, in a lofty grotto which was supported by silver columns. As a river, Styx is described as a branch of Oceanus, flowing from its tenth source; and the river Cocytus again is a branch of the Styx. By Pallas, Styx became the mother of Zelus, Niké, Bia, and Cratos. She was the first of all the immortals who took her children to Zeus, to assist him against the Titans; and, in return for this, her children were allowed forever to live with Zeus, and Styx herself became the divinity by whom the most solemn oaths were sworn. When one of the gods had to take an oath by Styx, Iris brought a cup full of water from the Styx, and the god, while taking the oath, poured out the water.

Suada. The Roman personification of persuasion, the Greek Pitho (*Πειθώ*), also called by the diminutive name SUADĒLA.

Suasoriae. See SENECA (1).

Suavillum or **Savillum**. A sweet cake made with honey, flour, eggs, and cheese (Cato, *R. R.* 84).

Subgrundarium or **Suggrundarium**. A place for the burial of children who died before cutting their teeth; for such children were not cremated. See Fulgent. s. h. v.; and cf. Pliny, *H. N.* vii. 15.

Sublaqueum. Now Subiaco, a small town of the Aequi in Latium, on the Anio, near its source.

Sublicius Pons. See PONS.

Subligacŭlum (*περίζωμα*). The linen bandage worn by the Roman gymnasts while performing their exercises. It was passed round the waist and between the legs. It was originally a loin-cloth and one of the most primitive articles of attire; and afterwards had different forms corresponding with our belt, apron, and drawers respectively. It was also called *campestre* (Hor. *Epist.* i. 11, 15).

Subscriptio. In the later days of the Roman Empire the Roman grammarians devoted themselves largely to editing the Latin classics, as the Alexandrian grammarians edited the great classical works of Greek literature. In the fourth and fifth centuries many men of eminence were numbered among these editors, who attached their names to their work. A signature of this sort is called *subscriptio*, and subsequent copyists carefully repeated the names at the head of the works which they copied side by side with those of subsequent revisers. Among the *subscriptiones* are found those of men like Symmachus (q. v.), Asterius (consul 494 A.D.), Mavortius (consul 527 A.D.), and many other important personages. These attestations are collected and discussed by Jahn in a monograph that is published in the *Abh. der sächs. Gesellschaft d. Wissensch.* for 1851.

Subsellium. A bench upon legs and without any back (Varro, *L. L.* v. 128).

Subsignāni. Soldiers who under the Empire had special privileges, and fought under a special standard instead of forming part of the legion. They are probably to be identified with the *vexillarii* (q. v.).

Subucŭla. A shirt; worn next to the skin, and made of wool (Sueton. *Aug.* 82). It had long sleeves and was probably worn by both sexes.

Subūra and **Suburra**. The Bowery of ancient Rome, comprehending the valley between the Esquiline, Quirinal, and Viminal, densely populated and rather disreputable in its character. Martial speaks of its noise (*clamosa Subura*, xii. 18, 2), and both Persius (v. 32) and Martial (xi. 78, 11) mention it as the resort of prostitutes. See ROMA.

Sucro. (1) Now Xucar; a river in Hispania Tarraconensis, rising in a southern branch of Mount Idubeda in the territory of the Celtiberi, and falling south of Valentia into a gulf of the Mediterranean called after it Sinus Sucronensis (Gulf of Valencia). (2) Now Cullera; a town of the Edetani in Hispania Tarraconensis, on the preceding river, and between the Iberus and Carthago Nova.

Sucŭlae. See HYADES.

Sudarium (*καψιδρώτιον*). A handkerchief for wiping away the perspiration from the face (Quint. vi. 3. 60). See MUCINUM.

Sudatorium. See BALNEAE.

Suēbi. See SUEVI.

Suessa Aurunca. Now Sessa; a town of the Aurunci in Latium, east of the Via Appia, between Minturnae and Teanum, on the western slope of Mount Massĭcus. It was the birthplace of the poet Lucilius, hence called by Juvenal (i. 20) *alumnus Auruncae.*

Suessa Pometia, also called **Pometia** simply. An ancient and important town of the Volsci in Latium, south of Forum Appii, taken by Tarquinius Priscus. It was one of the twenty-three cities situated in the plain afterwards covered by the Pomptine Marshes, which are said indeed to have derived their name from this town.

Suessetāni. A people in Hispania Tarraconensis, mentioned in connection with the Edetani.

Suessiōnes or **Suessōnes.** A powerful people in Gallia Belgica, who were reckoned the bravest of all the Belgic Gauls after the Bellovaci, and who could bring 50,000 men into the field in Caesar's time. The Suessiones dwelt in an extensive and fertile country east of the Bellovaci, south of the Veromandui, and west of the Remi. They possessed twelve towns, of which the capital was Noviodunum, subsequently Augusta Suessonum or Suessones (Soissons) (Caes. *B. G.* ii. 3, 12; vii. 75).

Suessŭla. Now Torre di Sessola; a town in Samnium, on the southern slope of Mount Tifata.

Suetonius Paulīnus. See PAULINUS.

Suetonius Tranquillus, GAIUS. A Roman historian and scholar, who was born about the beginning of the reign of Vespasian, and practised as an advocate at Rome in the reign of Trajan. He lived on intimate terms with the younger Pliny, several of whose letters are addressed to him. At the request of Pliny, Trajan granted to Suetonius the *ius trium liberorum;* for, though he was married, he had not three children, which number was necessary to relieve him from various legal disabilities. Suetonius was afterwards appointed private secretary (*magister epistolarum*) to Hadrian, but was deprived of this office by the emperor, along with Septicius Clarus, the praefect of the Praetorians, on the ground of his offensive familiarity with Sabina, the emperor's wife. His chief work is his lives of the first twelve emperors of Rome (*Vitae Duodecim Caesarum*) from Iulius to Domitian. Suetonius does not follow the chronological order in his *Lives,* but groups together his facts according to their nature. His language is very brief and precise, sometimes obscure, without any affectation of ornament; and his works abound in scandalous anecdotes. The existing treatise *De Illustribus Grammaticis et de Claris Rhetoribus* is perhaps only part of a larger work, the *Pratum,* which seems to have been a sort of encyclopaedia, as many fragments show, dealing with a great number of subjects. (See Schanz, *Röm. Litt.* iii. 42–54.) The only other productions of Suetonius still extant are a few lives of Roman authors.

The standard text of Suetonius is that of Roth (Leipzig, 1886), and of the fragments that of Reifferscheid (2d ed. Leipzig, 1890). A good annotated edition (Latin notes) is that of Baumgarten-Crusius and Hase in the Lemaire collection, 2 vols. (Paris, 1828). The first two books (Iulius and Augustus) are edited with an introduction and English notes by H. T. Peck (2d ed. New York, 1893). The *Lives* and the remains of the *Viri Illustres* are translated by Thomson and Forester (London, 1881). See Regent, *De Suetonii Vita et Scriptis* (Breslau, 1856); Thimm, *De Usu atque Elocutione C. Suetonii Tranquil.* (Königsberg, 1867); and Bagge, *De Elocutione Suetonii* (Upsala, 1875).

Suēvi and **Suēbi.** One of the greatest and most powerful peoples of Germany; or, more properly speaking, the collective name of a great number of German tribes, who were grouped together on account of their migratory mode of life, and spoken of in opposition to the more settled tribes, who went under the general name of Ingaevones. The Suevi are described by all the ancient writers as occupying the greater half of all Germany; but the accounts vary respecting the part of the country which they inhabited. The name survives in the modern Suabia (Schwaben). See Lehmann, *Das Volk d. Sueben* (1883); and article GERMANIA.

Sufes and **Suffes** (Phœn. *shōfēth,* "a judge"), pl. SUFFĒTES. The name of the higher magistrates among the Carthaginians. See CARTHAGO, p. 285.

Suffectus. A word applied to a Roman magistrate elected in place of one who vacated office before the end of the year for which he was elected. The substitute continued in office for the rest of the year. See CONSUL.

Sufflāmen (*ἐποχεύς*). A drag-chain used as a brake upon a wheel (Juv. viii. 148), and employed to relieve the pressure upon the horses when going down hill.

Suffragia Sex. The six patrician centuries of Roman *equites* in the kingly period. See EQUITES.

Suffragium. A vote. At Athens the popular vote in the assemblies was taken by a show of hands (*χειροτονία*) or by ballot (*ψῆφος*). For the Roman usages in voting, see COMITIA; and LEGES TABELLARIAE.

Sugambri, Sygambri, Sigambri, Sycambri, or **Sicambri.** One of the most powerful peoples of Germany at an early time, belonging to the Istaevones, and dwelling originally north of the Ubii on the Rhine, whence they spread towards the north as far as the Lippe. They were conquered by Tiberius in the reign of Augustus. Shortly afterwards they disappear from history, and are not mentioned again till the time of Ptolemy, who places them much farther north, close to the Bructeri and the Langobardi, somewhere between the Vecht and the Yssel. At a still later period we find them forming an important part of the confederacy known under the name of Franci.

Suggestus. A Latin word denoting any elevated place made by heaping up materials (*suggero*): (1) the platform from which orators addressed the people at the Comitia; (2) the place from which a general harangued his troops (see CONTIO); and (3) the seat (also called *cubiculum*) from which the emperor beheld the public games.

Suggrundarium. See SUBGRUNDARIUM.

Suĭdas (*Σουΐδας*). A Greek lexicographer, of whose personality nothing is known, but who lived about A.D. 970, and compiled, from the lexi-

cographical, grammatical, and explanatory works of his predecessors, a lexicon which contains explanations of words, and accounts, mainly biographical, of earlier writers. The work is put together in alphabetical order hastily, and without skill or discrimination. It is also marred by numerous mistakes. Nevertheless, it is very valuable, owing to the wealth of information on literary history contained in it, much of this not being found elsewhere. The first edition appeared at Milan in 1499. The best editions are those of Küster, 3 vols. (1705); Gaisford, 3 vols. (Oxford, 1834); Bernhardy, 2 vols. (Halle, 1834); and Bekker (Berlin, 1854). See LEXICON.

Suiŏnes. The general name of all the German tribes inhabiting Scandinavia (Tac. *Germ.* 44). See SCANDIA.

Sulla, CORNELIUS. The name of a patrician family; in many very old-fashioned texts incorrectly written **Sylla**. This family was originally called Rufinus (see RUFINUS), and the first member of it who obtained the name of Sulla was P. Cornelius Sulla, mentioned below (No. 1). The origin of the name is uncertain.

(1) PUBLIUS, great-grandfather of the dictator Sulla, and grandson of P. Cornelius Rufinus, who was twice consul in the Samnite Wars. His father is not mentioned. He was Flamen Dialis, and likewise Praetor Urbanus and Praetor Peregrinus in B.C. 212, when he presided over the first celebration of the Ludi Apollinares.

(2) LUCIUS, surnamed FELIX, the dictator, was born in B.C. 138. Although his father left him only a small property, his means were sufficient to secure for him a good education. He studied Greek and Roman literature with diligence and success, and appears early to have imbibed that love for literature and art by which he was distinguished throughout life. At the same time he prosecuted pleasure with equal ardour, and his youth as well as his manhood was disgraced by the most sensual vices. Still his love of pleasure did not absorb all his time, nor did it emasculate his mind; for no Roman during the latter days of the Republic, with the exception of Iulius Caesar, had a clearer judgment, a keener discrimination of character, or a firmer will. The slender property of Sulla was increased by the liberality of his step-mother and of a courtesan named Nicopolis, both of whom left him all their fortune. His means, though still scanty for a Roman noble, now enabled him to aspire to the honours of the State. He was quaestor in 107, when he served under Marius in Africa. Hitherto he had only been known for his profligacy; but he displayed both zeal and ability in the discharge of his duties, and soon gained the approbation of his commander and the affections of the soldiers. It was to Sulla that Iugurtha was delivered by Bocchus; and the quaestor thus shared with the consul the glory of bringing this war to a conclusion. Sulla himself was so proud of his share in the success that he had a seal ring engraved, representing the surrender of Iugurtha, which he continued to wear till the day of his death. Sulla continued to serve under Marius with great distinction in the campaigns against the Cimbri and Teutones; but Marius becoming jealous of the rising fame of his officer, Sulla left Marius in 102, and took a command under the colleague of Marius, Q. Catulus, who intrusted the chief management of the war to Sulla. Sulla now returned to Rome, where he appears to have lived quietly for some years. He was praetor in 93, and in the following year (92) was sent as propraetor into Cilicia, with special orders from the Senate to restore Ariobarzanes to his kingdom of Cappadocia, from which he had been expelled by Mithridates. Sulla met with complete success. He defeated Gordius, the general of Mithridates, in Cappadocia, and placed Ariobarzanes on the throne.

The enmity between Marius and Sulla now assumed a more deadly form. Sulla's ability and increasing reputation had already led the aristocratic party to look up to him as one of their leaders; and thus political animosity was added to private hatred. In addition to this, Marius and Sulla were both anxious to obtain the command of the impending war against Mithridates; and the success which attended Sulla's recent operations in the East had increased his popularity, and pointed him out as the most suitable person for this important command. About this time Bocchus erected in the Capitol gilded figures, representing the surrender of Iugurtha to Sulla, at which Marius was so enraged that he could scarcely be prevented from removing them by force. The exasperation of both parties became so violent that they nearly had recourse to arms against each other; but the breaking out of the Social War hushed all private quarrels for the time. Marius and Sulla both took an active part in the war against the common foe. But Marius was now advanced in years; and he had the deep mortification of finding that his achievements were thrown into the shade by the superior energy of his rival. Sulla gained some brilliant victories over the enemy, and took Bovianum, the chief town of the Samnites. He was elected consul for 88, and received from the Senate the command of the Mithridatic War. The events which followed—his expulsion from Rome by Marius, his return to the city at the head of his legions, and the proscription of Marius and his leading adherents—are related in the article MARIUS.

Sulla remained at Rome till the end of the year, and set out for Greece at the beginning of 87, in order to carry on the war against Mithridates. He landed at Dyrrhachium, and forthwith marched against Athens, which had become the headquarters of the Mithridatic cause in Greece. After a long and obstinate siege, Athens was taken by storm on the first of March in 86, and was given up to rapine and plunder. Sulla then marched against Archelaüs, the general of Mithridates, whom he defeated in the neighbourhood of Chaeronea in Boeotia; and in the following year he again gained a decisive victory over the same general near Orchomenus. But while Sulla was carrying on the war with such success in Greece, his enemies had obtained the upper hand in Italy. The consul Cinna, who had been driven out of Rome by his colleague Octavius soon after Sulla's departure from Italy, had entered it again with Marius at the close of the year. Both Cinna and Marius were appointed consuls 86, and all the regulations of Sulla were swept away. Sulla, however, would not return to Italy till he had brought the war against Mithridates to a conclusion. After driving the generals of Mithridates out of Greece, Sulla crossed the Hellespont, and early in

84 concluded a peace with the king of Pontus. He now turned his arms against Fimbria, who had been appointed by the Marian party as his successor in the command. But the troops of Fimbria deserted their general, who put an end to his own life.

Sulla now prepared to return to Italy. After leaving his legate, L. Licinius Murena, in command of the province of Asia, with two legions, he set sail with his own army to Athens. While preparing for his deadly struggle in Italy, he did not lose his interest in literature. He carried with him from Athens to Rome the valuable library of Apellicon of Teos, which contained most of the works of Aristotle and Theophrastus. (See APELLICON.) He landed at Brundisium in the spring of 83. The Marian party far outnumbered him in troops, and had every prospect of victory. By bribery and promises, however, Sulla gained over a large number of the Marian soldiers, and he persuaded many of the Italian towns to espouse his cause. In the field his efforts were crowned with equal success; and he was ably supported by several of the Roman nobles, who espoused his cause in different parts of Italy. Of these one of the most distinguished was the young Cn. Pompey, who was at the time only twenty-three years of age. (See POMPEIUS, No. 10.) In the following year (82) the struggle was brought to a close by the decisive battle gained by Sulla over the Samnites and Lucanians under Pontius Telesinus before the Colline Gate of Rome. This victory was followed by the surrender of Praeneste and the death of the younger Marius, who had taken refuge in this town.

Sulla. (Bust in the Capitoline Museum.)

Sulla was now master of Rome and Italy; and he resolved to take the most ample vengeance upon his enemies, and to extirpate the popular party. One of his first acts was to draw up a list of his enemies who were to be put to death, called a *proscriptio*. It was the first instance of the kind in Roman history. All persons in this list were outlaws who might be killed by any one with impunity, even by slaves; their property was confiscated to the State, and was to be sold by public auction; their children and grandchildren lost their votes in the Comitia, and were excluded from all public offices. Further, all who killed a proscribed person received two talents as a reward, and whoever sheltered such a person was punished with death. Terror now reigned not only at Rome, but throughout Italy. Fresh lists of the proscribed constantly appeared. No one was safe; for Sulla gratified his friends by placing in the fatal lists their personal enemies, or persons whose property was coveted by his adherents. The confiscated property, it is true, belonged to the State, and had to be sold by public auction; but the friends and dependants of Sulla purchased it at a nominal price, as no one dared to bid against them. The number of persons who perished by the proscriptions is stated differently, but it appears to have amounted to many thousands. At the commencement of these horrors Sulla had been appointed dictator for as long a time as he judged it to be necessary. This was towards the close of 81. Sulla's chief object in being invested with the dictatorship was to carry into execution, in a legal manner, the great changes which he meditated in the constitution and the administration of justice. He had no intention of abolishing the Republic; and, consequently, he caused consuls to be elected for the following year, and was elected to the office himself in 80, while he continued to hold the dictatorship. The general object of Sulla's reforms was to restore, as far as possible, the ancient Roman constitution, and to give back to the Senate and the aristocracy the power which they had lost. Thus he deprived the tribunes of the plebs of all real power, and abolished altogether the legislative and judicial functions of the Comitia Tributa. At the beginning of 81 he celebrated a splendid triumph on account of his victory over Mithridates. In a speech which he delivered to the people at the close of the ceremony, he claimed for himself the surname of *Felix*, as he attributed his success in life to the favour of the gods. In order to strengthen his power, Sulla established military colonies throughout Italy. The inhabitants of the Italian towns which had fought against Sulla were deprived of the full Roman franchise, and were only allowed to retain the *commercium*: their land was confiscated and given to the soldiers who had fought under him. Twenty-three legions, or, according to another statement, forty-seven legions, received grants of land in various parts of Italy. A great number of these colonies was settled in Etruria, the population of which was thus almost entirely changed. These colonies had the strongest interest in upholding the institutions of Sulla, since any attempt to invalidate the latter would have endangered their newly acquired possessions. Sulla likewise created at Rome a kind of body-guard for his protection by giving the citizenship to a great number of slaves who had belonged to persons proscribed by him. The slaves thus rewarded are said to have been as many as ten thousand, and were called Cornelii after him as their patron.

After holding the dictatorship till the beginning of 79, Sulla resigned this office, to the surprise of all classes. He retired to his estate at Puteoli, and there, surrounded by the beauties of nature and art, he passed the remainder of his life in those literary and sensual enjoyments in which he had always taken so much pleasure. His dissolute mode of life hastened his death, but the immediate cause was the rupture of a blood-vessel; though some time before he had been suffering from the disgusting disease which is known in modern times by the name of *morbus pediculo-*

sus, or phthiriasis. He died in 78, in the sixtieth year of his age. He was honoured with a public funeral, and a monument was erected to him in the Campus Martius, the inscription on which had been composed by himself. It stated that none of his friends ever did him a kindness, and none of his enemies a wrong, without being fully repaid. Sulla was married five times: (*a*) To Ilia or Iulia, who bore him a daughter, married to Q. Pompeius Rufus, the son of Sulla's colleague in the consulship in 88; (*b*) to Aelia; (*c*) to Caelia; (*d*) to Caecilia Metella, who bore him a son, who died before Sulla, and likewise twins, a son and a daughter; (*e*) to Valeria, who bore him a daughter after his death.

Sulla wrote a history of his own life and times, called *Memorabilia* (Ὑπομνήματα). It was dedicated to L. Lucullus, and extended to twenty-two books, the last of which was finished by Sulla a few days before his death. He also wrote Fabulae Atellanae, and the Greek Anthology contains a short epigram which is ascribed to him. See Gerlach, *Marius und Sulla* (1856); and Beesly, *The Gracchi, Marius, and Sulla* (New York, 1878).

(3) FAUSTUS, son of the dictator by his fourth wife, Caecilia Metella, and a twin brother of Fausta, was born not long before B.C. 88, the year in which his father obtained the first consulship. He and his sister received the names of Faustus and Fausta respectively on account of the good fortune of their father. At the death of his father in 78 Faustus and his sister were left under the guardianship of L. Lucullus. Faustus accompanied Pompey into Asia, and was the first who mounted the walls of the Temple of Jerusalem in 63. In 60 he exhibited the gladiatorial games which his father, in his last will, had enjoined upon him. In 54 he was quaestor. In 52 he received from the Senate the commission to rebuild the Curia Hostilia, which had been burned down in the tumults following the murder of Clodius, and which was henceforward called the Curia Cornelia, in honour of Faustus and his father. He married Pompey's daughter, and sided with his father-in-law in the Civil War. He was present at the battle of Pharsalia, and subsequently joined the leaders of his party in Africa. After the battle of Thapsus in 46 he attempted to escape into Mauretania, but was taken prisoner by P. Sittius, and carried to Caesar. Upon his arrival in Caesar's camp he was murdered by the soldiers in a tumult. Faustus seems to have resembled his father only in his extravagance, for we know from Cicero that he was overwhelmed with debt at the breaking out of the Civil War.

(4) PUBLIUS, nephew of the dictator, elected consul along with P. Autronius Paetus for the year B.C. 65; but neither he nor his colleague entered upon the office, as they were accused of bribery by L. Torquatus the younger, and were condemned. It was currently believed that Sulla was privy to both of Catiline's conspiracies, and he was accordingly charged with this crime by his former accuser, L. Torquatus, and by C. Cornelius. He was defended by Hortensius and Cicero, and the speech of the latter on his behalf is still extant. He was acquitted; but, independent of the testimony of Sallust (*Cat.* 17), his guilt may almost be inferred from the embarrassment of his advocate. In the Civil War, Sulla espoused Caesar's cause. He served under him as legate in Greece, and commanded with Caesar himself the right wing at the battle of Pharsalia (48). He died in 45.

(5) SERVIUS, brother of the preceding, took part in both of Catiline's conspiracies. His guilt was so evident that no one was willing to defend him; but we do not read that he was put to death along with the other conspirators (Sall. *Cat.* 17, 47).

Sulmo. (1) Now Sulmona; a town of the Peligni in the country of the Sabines, celebrated as the birthplace of Ovid. (2) Now Sermoneta; an ancient town of the Volsci in Latium, on the Ufens.

Sulphur Matches. See IGNIARIA.

Sulpicia. A Roman poetess who flourished towards the close of the first century A.D. She is celebrated for sundry amatory effusions, addressed to her husband Calenus. There is extant a satirical poem, in seventy hexameters, on the edict of Domitian by which philosophers were banished from Rome and from Italy, which is ascribed to Sulpicia by many modern critics, but is undoubtedly of very late origin, and perhaps is merely the elaboration of a school theme. It was found in the monastery at Bobbio in Italy in 1493. See Ellis in the (English) *Journal of Philology*, v. 265; id. in the *Academy*, i. 87; and Bährens, *De Sulpicia Quae Vocatur Satira* (Jena, 1873). It is generally appended to the editions of Juvenal and Persius.

Sulpicia Gens. One of the most ancient Roman gentes, producing a succession of distinguished men, from the foundation of the Republic to the imperial period. The chief families of the Sulpicii during the republican period bore the names of CAMERĪNUS, GALBA, GALLUS, RUFUS, and SAVERRIO.

Sulpicius Apollināris. A contemporary of A. Gellius, and a learned grammarian. There are two poems in the Latin Anthology purporting to be written by Sulpicius of Carthage, whom some identify with the above-named Sulpicius Apollinaris. One of these poems consists of seventy-two lines, giving the argument of the twelve books of Vergil's *Aeneid*, six lines being devoted to each book. Sulpicius also wrote the metrical arguments prefixed to the plays of Plautus (?) and Terence. (See PERIOCHA.) His arguments to the *Aeneid* are printed in the *Poët. Lat. Min.* of Bährens, iv. 169. See Beck, *De Sulpicio Apollinari* (Groningen, 1884).

Sulpicius Galba. See GALBA.

Sulpicius Rufus. (1) PUBLIUS, one of the most distinguished orators of his time, born B.C. 124. He commenced public life as a supporter of the aristocratic party, and acquired great influence in the State by his splendid talents, while he was still young. In 93 he was quaestor, and in 89 he served as legate of the consul Cn. Pompeius Strabo in the Marsic War. In 88, he was elected to the tribunate; but he deserted the aristocratic party, and joined Marius. The causes of this sudden change are not expressly stated; but we are told that he was overwhelmed with debt; and there can be little doubt that he was bought by Marius. When Sulla marched upon Rome at the head of his army, Marius and Sulpicius took to flight. Marius succeeded in making his escape to Africa, but Sulpicius was discovered in a villa, and put to death. (2) PUBLIUS, probably son or grandson of the last, was one of Caesar's legates in Gaul and in

the Civil War. He was praetor in B.C. 48. Cicero addresses him in 45 as imperator. It appears that he was at that time in Illyricum, along with Vatinius. (3) SERVIUS, with the surname LEMONIA, indicating the tribe to which he belonged, was a contemporary and friend of Cicero, and of about the same age. He first devoted himself to oratory, and he studied this art with Cicero in his youth. He afterwards studied law; and he became one of the best jurists as well as most eloquent orators of his age. He was quaestor of the district of Ostia in B.C. 74; curule aedile, 69; praetor, 65; and consul 51 with M. Claudius Marcellus. He appears to have espoused Caesar's side in the Civil War, and was appointed by Caesar proconsul of Achaia (46 or 45). He died in 43 in the camp of M. Antony, having been sent by the Senate on a mission to Antony, who was besieging Dec. Brutus in Mutina. Sulpicius wrote a great number of legal works. He is often cited by the jurists whose writings are excerpted in the Digest; but there is no excerpt directly from him in the Digest. He had numerous pupils, the most distinguished of whom were A. Ofilius and Alfenus Varus. There are extant in the collection of Cicero's Epistles (*Ad Fam.* iv.) two letters from Sulpicius to Cicero, one of which is the well-known letter of consolation on the death of Tullia, the daughter of the orator. The same book contains several letters from Cicero to Sulpicius. He is also said to have written some erotic poetry. Sulpicius left a son Servius, who is frequently mentioned in Caesar's correspondence.

Sulpurāta (sc. *ramenta*). See IGNIARIA.

Sumen. The udder of a sow, which was regarded as a great dainty by Roman *gourmets*, especially when taken from an animal that had just littered and before the teats had been sucked (Pliny, *H. N.* xi. 84; Mart. xiii. 44).

Summānus. An ancient Etruscan deity of the nocturnal heavens, to whom was ascribed thunder by night, as that by day was ascribed to Iupiter. He had a chapel on the Capitol, and his image in terra-cotta stood on the pediment of the great temple. Besides this, he had a temple near the Circus Maximus, where on the 20th of June an annual sacrifice was offered to him. His true significance became in later times so obscure that his name was falsely explained as meaning the highest of the Manes (*summus Manium*) and equivalent to Dis pater, or the Greek Pluto (Varro, *L. L.* v. 74; Cic. *De Div.* i. 10; Pliny, *H. N.* xxix. 57).

Sumptuariae Leges. Laws intended to limit and control the expenditure of the individual citizen.

The sumptuary legislation of GREECE was contained for the most part in the codes of the great lawgivers. A *rhetra* of Lycurgus is said to have forbidden the Spartans to have their houses made by any more elaborate implements than the axe and the saw; simplicity of food and clothing was enjoined on the male members of the population; iron money was originally the only coinage in use (Plut. *Apophth. Lac. Lys.* 3), and private possession of gold and silver was forbidden even after these metals were employed for public purposes (Plut. *Lys.* 17). By the laws of Zaleucus of Locri, we are told, the citizens of that State were forbidden to drink undiluted wine, except on the order of a physician, under pain of death (Athen. p. 429); while simplicity of dress and a limitation of the number of personal attendants were also enjoined. The Solonian legislation at Athens contained enactments against expensive feminine apparel and ornaments, particularly those given in the dowry (*φερνή*) of a bride, and against expensive funerals; there were also laws in force at Athens which limited the number of guests at entertainments (Athen. p. 245). Funeral regulations similar to those of Solon, we are told by Plutarch, existed in his native town of Chaeronea (Plut. *Sol.* 21).

ROMAN sumptuary legislation was progressive; it did not originate until a comparatively late period in the history of the State, and each law aimed at eradicating some definite and growing evil. The inefficiency of these laws and the extreme difficulty of enforcing them are amply attested (Tac. *Ann.* ii. 55; Gell. ii. 24, 3; Tertull. *Apol.* 6), but, even when recognized, were not sufficient to check further attempts in this direction. The fact that most of these laws dealt with the same subject—namely, the expenses of the table—and enjoined very similar restrictions, shows how quickly each of them must have sunk into desuetude.

The earliest sumptuary regulations were those contained in the Twelve Tables limiting the expenses of funerals (Cic. *De Leg.* ii. 23). They were possibly copied from the similar regulations of Solon.

The LEX OPPIA, passed in B.C. 215, provided that no woman should possess more than half an ounce of gold, or wear a dress of different colours, or ride in a carriage in the city or within a mile of it except during public religious ceremonies. This law, which was dictated by the necessities of the Second Punic War, was repealed twenty years later, in B.C. 195 (Livy, xxxiv. 1–8).

The LEX ORCHIA, passed three years after Cato's censorship, and therefore in B.C. 181, was the first law that restricted the expenses of the table. It prescribed a limit to the number of guests that might be invited to entertainments. Cato is said to have opposed its introduction.

Next followed the LEX FANNIA, whose date is fixed by Pliny (*H. N.* x. 71) as B.C. 161. It grew out of a *senatusconsultum*, which enjoined that the *principes civitatis* should swear before the consuls that they would not exceed a certain limit of expense in the banquets given at the Ludi Megalenses. Afterwards a consular law was promulgated, which went further than the Lex Orchia, in that it prescribed the nature and value of the eatables which were allowed to be consumed. It permitted the expenditure of 100 *asses* on the Ludi Romani, the Ludi Plebeii, and the Saturnalia, and of thirty on some other festival occasions; but on all other days of the year it allowed only ten *asses* to be spent. It further forbade the serving of any fowl but a single hen, and that not fattened. One of its clauses was of a protective character, since it enjoined that only native wines should be consumed (Gell. ii. 24; Macrob. iii. 17; Plin. *H. N.* x. § 71; Tertull. *Apol.* vi.).

The LEX DIDIA was passed eighteen years later, in B.C. 143. It was practically a re-enactment of the Lex Fannia.

The LEX LICINIA, of uncertain date, marks the next attempt at sumptuary legislation. It allowed 100 *asses* to be spent on the table on certain days, 200 on marriage feasts, and on certain other festivals (such as the Kalends, Nones, and Nundinae)

thirty *asses*; it fixed a limit to the amount of meat and fish that was to be consumed on ordinary days, and encouraged the consumption of garden-produce.

The general neglect of the preceding laws caused the LEGES CORNELIAE of the dictator Sulla to be passed in B.C. 81, restricting the expenses on sepulchral monuments, and regulating the cost of funerals, which he himself violated on the death of his wife Metella (Plut. *Sulla*, 35). Another law restricted the luxury of the table, allowing thirty sesterces to be spent on the Kalends, Ides, Nones, the *dies ludorum*, and certain *feriae*, and three on all other days.

A LEX AEMILIA, which probably belongs to B.C. 78, did not fix a fresh limit to expenses, but laid down regulations as to the kinds and quantities of food.

The LEX ANTIA, which was subsequent to the last-named law but cannot be dated precisely, besides limiting the expenditure on banquets, also limited the class of persons with whom a magistrate might dine out during his time of office.

Next came the LEGES IULIAE. The dictator Caesar enforced the former sumptuary laws respecting entertainments, which had fallen into disuse (Dio Cass. xliii. 25). They were not attended to during his absence, but during his presence in Rome the enforcement of them was rigorous; guards were placed round the market to seize forbidden luxuries, and sometimes dishes were taken from the tables of private individuals (Suet. *Iul.* 43). He also passed a law prohibiting the use of litters, of purple garments, and of pearls, except in the case of persons of a certain rank or age, or on certain days (Suet. l. c.).

The emperor Augustus, in B.C. 22, passed laws regulating the expenses to be incurred on ordinary and festal days (Suet. *Aug.* 34). On the former an expenditure of 200 sesterces was permitted, on the latter an expenditure of 300, and on marriage festivals of 1000 sesterces; an edict of Augustus or Tiberius allowed expenses on various festivals to range from 300 to 2000 sesterces, the increase in the permitted expenditure being allowed in the hope that this concession would secure obedience to the law.

Tiberius, in spite of his distrust of the efficacy of sumptuary legislation (Tac. *Ann.* iii. 53, 54), was forced into making regulations to check the inordinate expenses on banquets (Suet. *Tib.* 34). To his reign also belongs a *senatusconsultum* prohibiting the use of gold plate except in sacred rites, and preventing men from wearing silk. Further sumptuary regulations checking the expenditure on food were made by Nero; among later emperors Antoninus Pius and Marcus Aurelius regulated the expenses of gladiatorial shows; and the emperor Tacitus again prohibited men from wearing silk, and forbade the wearing of gold-embroidered garments. It was during the later Republic and the early Empire that luxury especially flourished, although the studied simplicity of the courts of Augustus and Tiberius must have had some influence in restraining it. After Galba, began a new era of moderation, an effect which Tacitus traces to the decline of private fortunes, to the dangers attending the display of wealth, to the introduction of *novi homines* into the Senate and into the best society of Rome, but principally to the influence of Vespasian, a prince *antiquo cultu victuque* (Tac. *Ann.* iii. 55). Other emperors whose simplicity of life exercised an influence on the society of their times were Alexander Severus and Aurelian.

See Platner, *De Legibus Sumptuariis Romanis* (Leipzig, 1752); and Baudrillart, *Histoire du Luxe Privé et Public*, 4 vols. (Paris, 1878–80).

Sun-god. See HELIOS.

Sunium (Σούνιον). Now C. Colonni; a celebrated promontory forming the southern extremity of Attica, with a town of the same name upon it. Here was a splendid temple of Athenê, elevated 300 feet above the sea, the columns of which are still extant, and have given the modern name to the promontory.

Suovetaurilia. A Roman sacrifice, consisting of a boar (*sus*), a ram (*ovis*), and a bullock (*taurus*), which was offered in nearly all cases of lustration.

Suovetaurilia. (Bartoli.)

For female deities the female animal, and on certain occasions young animals, were selected. See LUSTRATIO; LUSTRUM; SACRIFICIUM.

Superbus, TARQUINIUS. See TARQUINIUS.

Superstitio (δεισιδαιμονία). A word used by the ancients in a somewhat different sense from that in which we employ it, inasmuch as it denoted an excessive, unreasonable fear (*timor inanis*) of the gods as opposed to a proper and becoming reverence (*religio*). See Cicero, *N. D.* i. 42, 117, with Mayor's note; and the paper by Dr. Ernest Riess in the *Transactions of the American Philological Assoc.* (1895). For the ancient beliefs regarding sorcery, ghosts, etc., see AMULETUM; ASTROLOGIA; DAEMON; FASCINUM; LAMIA; UMBRA; VERSIPELLIS; and the article OCULUS MALUS in the Appendix.

Supĕrum Maré. See HADRIATICUM MARÉ.

Suppărum. An Oscan word (in Greek σίφαρος) denoting a small topsail of a vessel (Lucan, v. 428).

Supper. See CENA.

Supplicatio. The Roman fast day, or day of humiliation, celebrated originally in times of great distress, after the Sibylline Books had been duly consulted. The whole population, both of the towns and surrounding country, free-born and emancipated, men, women, and children, took part in the solemnity. The whole ceremony had a

Greek rather than a Roman colour. From the Temple of Apollo, priests and laymen, crowned with wreaths of bay, marched in procession to the sound of singing and the notes of the lyre, visiting all the holy places, especially those where *lectisternia* were held. According to the rite introduced from the Oriental Greeks of Asia Minor, the Romans touched with their faces the threshold of the sanctuaries, prostrated themselves before the statues of the gods, clasping their knees and kissing their hands and feet. While the prayers were being said, incense and wine were offered, the prayers being rehearsed by the members of the *collegium* intrusted with the care of the Sibylline Books (see SIBYLLAE), and the performance of the holy rites prescribed by them. On such days the temples ordinarily closed to the public, or only accessible under certain restrictions, were, so far as practicable, thrown open to all. The thanksgivings decreed by the Senate after great victories were celebrated in a similar manner. These originally lasted only one day, but in the course of time were lengthened (e. g. for Pompey's victory over Mithridates, one of ten days; for Caesar's conquest of the Belgae, one of fifteen days; and for his defeat of Vercingetorix, one of twenty days), until, at the end of the Republic, they sometimes extended over forty or fifty days, and were often united with a public feasting of the people.

Supplicium. See CRUX; ECULEUS; TORMENTUM (2).

Suppositicii. Gladiators substituted in place of those who had been defeated or killed (Mart. v. 24).

Sura (Σοῦρα). (1) Now Surie; a town of Syria, in the district Chalybonitis, on the Euphrates, a little west of Thapsacus. (2) Now Sour; a branch of the Mosella, above Treves (Auson. *Mosell.* 354).

Sura, Lentŭlus. See LENTULUS (1).

Sura, L. Licinius. An intimate friend of Trajan, and three times consul, in A.D. 98, 102, and 107. On the death of Sura, Trajan honoured him with a public funeral, and erected baths to perpetuate his memory. Two of Pliny's letters are addressed to him (Dio Cass. lxviii. 9, 15; Pliny, *Epist.* iv. 30; vii. 27).

Surēnas. The general of the Parthians, who defeated Crassus in B.C. 54. The word is probably not a proper name, but a title like "Vizier." See CRASSUS.

Surgeons and Surgery. See CHIRURGIA; MEDICINA; MEDICUS.

Surnames. See NOMEN.

Surrentum. Now Sorrento; an ancient town of Campania, opposite Capreae, and situated on the promontory (Prom. Minervae) separating the Sinus Paestanus from the Sinus Puteolanus. It was subsequently a Roman colony; and on the hills (Surrentini Colles) in its neighbourhood was grown one of the best wines in Italy, which was strongly recommended to convalescents, on account of its thinness and wholesomeness.

Susa (*τὰ Σοῦσα*; Old Test. Shushan; Pers. Shus). The winter residence of the Persian kings. It stood in the district Cissia of the province Susiana, on the eastern bank of the river Choaspes. Its name in old Persian signifies "Lily," and that flower is said to abound in the plain in which the city stood. Susa was of a quadrangular form, 120 (or, according to others, 200) stadia in circuit, and without fortifications; but it had a strongly fortified citadel, containing the palace and treasury of the Persian kings. The Greek name of this citadel, Memnonicé or Memnonium, is perhaps a corruption of the Aramaic *Maaninon*, "a fortress;" and this easy confusion of terms gave rise to the fable that the city was founded by Tithonus, the father of Memnon. An historical tradition ascribes its erection to Darius, the son of Hystaspes, but it existed already in the time of Daniel (Dan. viii. 2). There is, however, a difficulty as to the identification of the Shushan of Daniel with the Susa of the Greeks. The climate of Susa was very hot, and hence the choice of it for the winter palace. It was here that Alexander and his generals celebrated their marriage with the Persian princesses in B.C. 325, but the city declined after Babylon became the capital of Alexander and his successors. In B.C. 315 it was taken by Antiochus, who found in it a vast amount of treasure. The site of Susa is now marked by extensive mounds, on which are found fragments of bricks and broken pottery, with cuneiform inscriptions. The ruins of the ancient city cover a space of nearly three square miles, and they have been carefully explored by Loftus, Churchill, Dieulafoy, and others. The principal remains that still exist are four vast platforms like those at Persepolis (q. v.), with traces of a gigantic colonnade with a frontage of over 340 feet and a depth of 240 feet. The palace of Darius Hystaspis has also been excavated, and from it many artistic treasures taken to the Louvre. See Jane Dieulafoy, *La Perse, la Chaldée, et la Susiane* (Paris, 1887); id. *À Suse* (Paris, 1888); Marcel Dieulafoy, *L'Acropole de Suse* (Paris, 1890–92).

Susarion (Σουσαρίων). A Greek to whom the origin of the Attic Comedy is ascribed. He was a native of Megara, whence he removed into Attica to the village of Icaria, a place celebrated as a seat of the worship of Dionysus. The Megaric Comedy appears to have flourished, in its full development, about B.C. 600 and onwards, and it was introduced by Susarion into Attica between 580–564. See COMOEDIA.

Susiāna (Σουσιανή) or **Susis** (Σουσίς) (nearly corresponding to Khuzistan). One of the chief provinces of the ancient Persian Empire, lay between Babylonia and Persis, and between Mount Parachoatras and the head of the Persian Gulf. In this last direction its coast extended from the junction of the Euphrates with the Tigris to about the mouth of the river Oroatis (Tab). It was divided from Persis on the southeast and east by a mountainous tract, inhabited by independent tribes, who made even the kings of Persia pay them for a safe passage. On the north it was separated from Great Media by Mount Charbanus; on the west from Assyria by an imaginary line drawn south from near the Median pass in Mount Zagros to the Tigris; and from Babylonia by the Tigris itself. See the works cited under SUSA.

Sutĭlis Corōna. See CORONA.

Sutor (*ῥάπτης*). A cobbler. The ancient cobbler sewed leather with an awl (*subula*) and a bristle (*seta*). His shop was called *sutrina* (*σκυτεῖον*). See Pliny, *H. N.* x. 60.

Sutrium. Now Sutri; an ancient town of Etruria on the east side of the Saltus Ciminius, and on

the road from Vulsinii to Rome, made a Roman colony in B.C. 383.

Swaddling-clothes. See FASCIAE.

Swing. See AEORA; OSCILLATIO.

Sybăris (Σύβαρις). (1) Now Coscile or Sibari; a river in Lucania, flowing by the city of the same name, and falling into the Crathis. (2) A celebrated Greek town in Lucania, situated between the rivers Sybaris and Crathis, at a short distance from the Tarentine Gulf, and near the confines of Bruttium. It was founded B.C. 720 by Achaeans and Troezenians, and soon attained an extraordinary degree of prosperity and wealth. Its inhabitants became so notorious for their love of luxury and pleasure that their name was employed to indicate any voluptuary. At the time of their highest prosperity their city was fifty stadia, or upwards of six miles, in circumference, and they exercised dominion over twenty-five towns, so that we are told they were able to bring into the field 300,000 men, a number, however, which appears incredible. But their prosperity was of short duration. The Achaeans having expelled the Troezenian part of the population, the latter took refuge at the neighbouring city of Croton, the inhabitants of which espoused their cause. In the war which ensued between the two States, the Sybarites were completely conquered by the Crotoniates, who followed up their victory by the capture of Sybaris, which they destroyed by turning the waters of the river Crathis against the town (B.C. 510) (Herod. v. 44; Diod. xii. 9; Athen. p. 521). The greater number of the surviving Sybarites took refuge in other Greek cities in Italy; but a few remained near their ancient town, and their descendants formed part of the town of Thurii founded in B.C. 443 near Sybaris. See THURII.

Sybŏta (τὰ Σύβοτα). Now Syvota; a number of small islands off the coast of Epirus, and opposite the promontory Leucimné in Corcyra, with a harbor of the same name on the mainland.

Sychaeus. See DIDO; SICHAEUS.

Sychar, Sychem. See NEAPOLIS.

Sycophantes (συκοφάντης). A word which originally signified, according to the popular derivation, one who brought into notice cases of the prohibited export of figs from Attica. The term was afterwards applied to a professional informer and accuser. There were many such persons who carried on a lucrative business in Athens at the time of the decay of the democracy, in spite of the fact that the authors of false accusations were punished most severely. In later times the word denoted a person whose character combined the traits of a busybody, scandalmonger, sharper, and buffoon, and in this sense it is used in the Latin plays of Plautus. See Büchsenschütz, *Besitz und Erwerb*, pp. 568 foll.

Syēné (Συήνη). Now Assouan; a city of Upper Egypt on the east bank of the Nile, just below the First Cataract. It was an important point in the astronomy and geography of the ancients, as it lay just under the tropic of Cancer, and was therefore chosen as the place through which they drew their chief parallel of latitude.

Syennĕsis (Συέννεσις). A common name of the kings of Cilicia. Of these the most important are: (1) A king of Cilicia, who joined with Labynetus (Nebuchadnezzar) in mediating between Cyaxares and Alyattes, the kings respectively of Media and Lydia, probably in B.C. 610. (2) Contemporary with Darius Hystaspis, to whom he was tributary. His daughter was married to Pixodorus. (3) Contemporary with Artaxerxes II. (Mnemon), ruled over Cilicia when the younger Cyrus marched through his country in his expedition against his brother Artaxerxes (Xen. *Anab.* i. 2, 21).

Sygambri. See SUGAMBRI.

Sylae (σῦλαι). The Greek equivalent of the modern "letters of marque and reprisal." When a Greek State had been insulted or injured by citizens of some other State, yet was unable or unwilling formally to declare war, it often gave a sort of license or commission to individuals to make reprisals upon the property and citizens of the offending nation. This was called σύλας or σῦλα διδόναι.

Sylla. See SULLA.

Syllogeis (συλλογεῖς). Also συλλογεῖς τοῦ δήμου, "the people's collectors"; special commissioners at Athens who made out a list of the property of the oligarchs prior to its confiscation.

Sylvānus. See SILVANUS.

Sylvius. See SILVIUS.

Symaethus (Σύμαιθος). Now Giaretta; a river on the east coast of Sicily and at the foot of Mount Aetna, forming the boundary between Leontini and Catana.

Symbŏla (συμβολή). The Greek term for a treaty between two States, determining the procedure in the event of lawsuits taking place between their respective subjects. A common provision of these contracts was that a party who lost his cause, when tried by the laws of the foreign State, could appeal to those of his own; and similarly the party who had been worsted in his own State was allowed to appeal to the law in his opponent's State. Such treaties were made chiefly to facilitate commercial communications between different States.

Symbolaeon (συμβόλαιον), **Synallagma** (συνάλλαγμα) and **Synthēkē** (συνθήκη). Words all denoting a contract, but with different ideas attached to each. The first denotes bargains between private persons; the second denotes any matter arranged between two individuals, whether it is a contract or not; the third means a solemn and important engagement, such as treaties and agreements between kings and States.

Symé (Σύμη). A small island off the southwest coast of Caria, lay in the mouth of the Sinus Doirdis to the west of the promontory of Cynossema.

Symmăchus, Q. AURELIUS. A distinguished scholar, statesman, and orator in the latter half of the fourth century of the Christian era, remarkable for his zeal in upholding the ancient pagan religion of Rome. He was educated in Gaul, and was proconsul of Africa in 373; and in 391 Theodosius raised him to the consulship. He died about 402. Of his works there are still extant ten books of epistles, three panegyrics on Valentinian I. and Gratian, a number of *relationes* or official reports of Symmachus as *praefectus urbi* to the emperor (A.D. 384–385), and fragments of six senatorial orations. These last were discovered in a palimpsest, part of which was in the Vatican Library and

part at Milan (1815–1825). The complete works of Symmachus are edited by Seeck (Berlin, 1884). See the *Étude* by Morin (Paris, 1847).

Symmoria (*συμμορία*). A copartnership, or company. (1) A term used at Athens to denote a company formed to raise the property tax instituted in the year B.C. 428, to defray war expenses. (See EISPHORA.) Each of the ten *phylae* appointed 120 of its wealthier citizens, and these were divided into two symmoriae of sixty members each, so that the number of members in the twenty symmoriae amounted to 1200 (called *συμμορίται*). Out of each of the twenty symmoriae, fifteen of the wealthier citizens were chosen, making 300 in all, whose duty it was to pay the taxes in advance on behalf of the rest. This sum had to be refunded to them by the rest in conjunction with the poorer taxable citizens, who were likewise apportioned off to various symmoriae, but without becoming actual members of them, and were drawn upon by the real *symmoritae* to an extent proportional to their means. (2) After 358, this method was applied to the duty of equipping the war vessels, known as the *trierarchia*. (See LITURGIA.) Each of the twenty symmoriae had a certain number of ships assigned to it; the real *symmoritae* (not including the poorer citizens) divided the expense among themselves, and a varying number (at the most sixteen) of the richest had to raise the money advanced for a ship. To manage its affairs, each symmoria had its superintendents, curators, and assessors. The magisterial control was in both cases in the hands of the *strategi*, being connected with the military supplies. Though, by arrangement, the raising of taxes and fitting out of the ships were accelerated, yet it was open to abuse if the *symmoritae* unduly burdened the poor by an unjust distribution. In the disputes which thus arose, the decision rested with the *strategi*. If any one thought that another ought to have been taxed instead of himself, he could avail himself of *antidosis* (q. v.). Even the *metoeci*, who (like the citizens) had to pay war taxes, were divided into symmoriae. Aristotle (*Athen. Pol.* 61) describes one of the *strategi* as individually responsible for superintending the symmoriae for building triremes. See Thumser, *De Civium Atheniensium Muneribus* (Vienna, 1880).

Symphonia (*συμφωνία*). A species of musical entertainment at Greek and Roman banquets, but of a character not clearly defined in the existing passages in which the word occurs. In most cases the expressions used apply equally well to either vocal or instrumental music, and in no case is it possible to accept the reference as applicable to only one of them to the necessary exclusion of the other. An individual member of the band or chorus who rendered the music was called *symphoniacus* (Cic. *Pro Mil.* 21, 55) and *choraules* (Mart. ix. 77). Cf. Gell. xix. 3; Livy, xxxix. 6; and Marquardt, *Privatleben*, 181.

Symphoniăci. Musicians who played or sang together, usually for the entertainment of a company at dinner (Cic. *Pro Mil.* 21). See SYMPHONIA.

Symposium (*συμπόσιον*). A Greek term for a drinking-party. The symposium must be distinguished from the *deipnon* (*δεῖπνον*); for though drinking almost always followed a dinner-party yet the former was regarded as entirely distinct from the latter, was regulated by different customs, and frequently received the addition of many guests who were not present at the dinner. For the Greeks did not usually drink at their dinner, and it was not till the conclusion of the meal that wine was introduced. Symposia were very frequent at Athens. Their enjoyment was heightened by agreeable conversation, by the introduction of music and dancing, and by games and amusements of various kinds; sometimes, too, philosophical subjects were discussed at them. The *Symposia* of Plato and Xenophon give us a lively idea of such entertainments at Athens. The name itself shows that the enjoyment of drinking was the main object of the symposia: wine from the juice of the grape (*οἶνος ἀμπέλινος*) was the only drink partaken of by the Greeks, with the exception of water. The wine was almost invariably mixed with water, and to drink it unmixed (*ἄκρατον*) was considered a characteristic of barbarians. The mixture was made in a large vessel called the *crater* (q. v.), from which it was conveyed into the drinking-cups. The guests at a symposium reclined on couches, and were crowned with garlands of flowers. A master of the revels (*ἄρχων τῆς πόσεως*, *συμποσίαρχος*, or *βασιλεύς*) was usually chosen to conduct the symposium, whose commands the whole company had to obey, and who regulated the whole order of the entertainment and proposed the amusements. The same practice prevailed among the Romans, and their symposiarch was called *magister*, or *rex convivii*, or *arbiter bibendi*. The choice was generally determined by the throwing of *astragali* or *tali*. (See TALUS.) The proportion in which the wine and water were mixed was fixed by him, and also how much each of the company was to drink, for it was not usually left to the option of each person present to drink as much or as little as he pleased. The cups were always carried around from right to left (*ἐπὶ δεξιά*), and the same order was observed in the conversation and in everything that took place in the entertainment. The company frequently drank to the health of one another (*προπίνειν*, *propinare*), and each did it especially to the

Symposium. (From the painting by Alma-Tadema.)

one to whom he handed the same cup. Respecting the games and amusements by which the symposia were enlivened, it is unnecessary to say much here, as most of them are described in separate articles in this work. Enigmas or riddles (*αἰνίγματα* or *γρῖφοι*) were among the most usual and favourite modes of diversion. Each of the company proposed one in turn to his right-hand neighbour; if he solved it, he was rewarded with a crown, a garland, a cake, or something of a similar kind, and sometimes with a kiss; if he failed, he had to drink a cup of unmixed wine, or of wine mixed with salt water, at one draught. The *cottabos* was also another favourite game at symposia, and was played at in various ways. (See COTTABOS.) Representations of symposia are very common on ancient vases. Two guests usually reclined on each couch (*κλίνη*), as is explained under CENA; TRICLINIUM; but sometimes there were five persons on one couch. A drinking-party among the Romans was sometimes called *convivium*, but the word *comissatio* (cognate with *κωμάζω*) more nearly corresponds to the Greek symposium. The Romans, however, usually drank during their dinner (*cena*), which they frequently prolonged during many hours, in the later times of the Republic and under the Empire. Their customs connected with drinking differed little from those of the Greeks, and have been incidentally noticed above.

See Becker-Göll, *Charikles*, ii. 335 foll.; Mahaffy, *Social Life in Greece*, ch. xi.; Becker-Göll, *Gallus*, i. 203–211; Marquardt, *Privatleben der Römer*, pp. 331–340; Valpy, *History of Toasting* (1881); Mew and Astion, *The Drinks of the World* (1892); and the articles CALDA; CERVESIA; PSYCTER; VINUM.

Syndĭcus (*σύνδικος*). A term meaning literally an advocate, but used in Athens to describe various magistrates. Thus the name is applied (1) to the five men who were appointed to defend, before the *nomothetae*, any law which it was proposed to abrogate (Dem. *Adv. Lept.* 501, Timocr. 707); (2) to men chosen to speak for the people in cases where the *δῆμος* was the complainant (Dem. *Adv. Lept.* 503, Hermann, *Lehrb. griech. Staatsalt.* 133); (3) to orators appointed to plead the cause of Athens before courts or councils abroad (Dem. *De Cor.* 271); (4) after the overthrow of the Thirty Tyrants, special officers called *σύνδικοι* were appointed to deal with cases involving confiscated property (Lys. *De Bon. Aristoph.* 32; Harpocr. s. v.).

Synĕdri (*σύνεδροι*). A general name given by the Greeks to the members of any council or deliberative body (*συνέδριον*), as the congress of the Greeks at Salamis and the court of the Areopagus. *Synedrion* also denotes the council-room in which the synedri regularly met.

Synegŏrus (*συνήγορος*). Literally "an advocate," but applied to Athenian officers of various functions. Litigants were theoretically required to conduct their cases in person, but the practice early arose of employing a friend, or later a hired expert, to act as *συνήγορος*. Such an advocate, after a short speech by his principal, would assume the leading part in the trial. An example of this is the defence of Ctesiphon by Demosthenes, against the accusation of Aeschines, though in this case Demosthenes was himself indirectly involved. The terms *συνήγορος* and *σύνδικος* seem to have been used indiscriminately in many cases. Thus the officers referred to under SYNDICUS (1, 2, 3) were known also as *συνήγοροι*. The term was also applied to magistrates chosen by lot to assist the *λογισταί* in the scrutiny of the accounts of a retiring magistrate (Arist. *Pol. Ath.* 54; Schol. Aristoph. *Vesp.* 689).

Synesius (*Συνέσιος*). A native of Cyrené. He was one of the most remarkable of the literary men of the fifth century. He was born A.D. 378, of a distinguished family, and studied at Alexandria under Hypatia and other celebrated instructors. So rapid was the progress he made, that, at the age of nineteen years, he was chosen by the inhabitants of Cyrené to present to the Emperor Arcadius a golden crown which had been voted him. The oration which he delivered on this occasion, and which is still preserved, has been much admired. At this period he was still a pagan; subsequently, however, he was persuaded by Theophilus, Bishop of Alexandria, to embrace Christianity. He was for a long time, however, very unsettled in his theological notions, and it was this very uncertainty which induced him for a considerable time to withstand the solicitations of Theophilus and not accept a bishopric. He yielded, however, in A.D. 410, and, separating from a wife for whom he cherished a deep affection, he was consecrated bishop of Ptolemaïs in Cyrenaïca. He died about 430. The works of Synesius are rather philosophical and literary than theological. They are written with elegance. When the subject admits, his diction is elevated, and sometimes even sublime. He possesses the art of rendering abstract subjects agreeable, by intermingling with them mythological and historical or else poetical passages. His letters, which are 154 in number, afford varied, amusing, and instructive reading. His hymns, in iambics of four or five feet, present a singular mixture of poetic images, Christian truths, and Platonic reveries, for it was to the school of Plato that he always continued to be more or less attached. The most complete edition of his works is that of Petau or Petavius (Paris, 1612; reprinted 1631–40), with additions by Morel. See Volkmann, *Synesius von Cyrene* (Berlin, 1869).

Syngrăphé (*συγγραφή*). A written contract as distinguished from *συνθήκη* and *συμβόλαιον*, which may be verbal, and from *ὁμολογία*, which is regularly verbal in its nature. At Athens all important contracts were made in writing (e. g. leases, loans, and agreements involving specific conditions), and the tablet containing them (*βιβλίον*, *γραμματεῖον*, or if double, *δίπτυχον*) was deposited with a third person mutually agreed upon as its custodian.

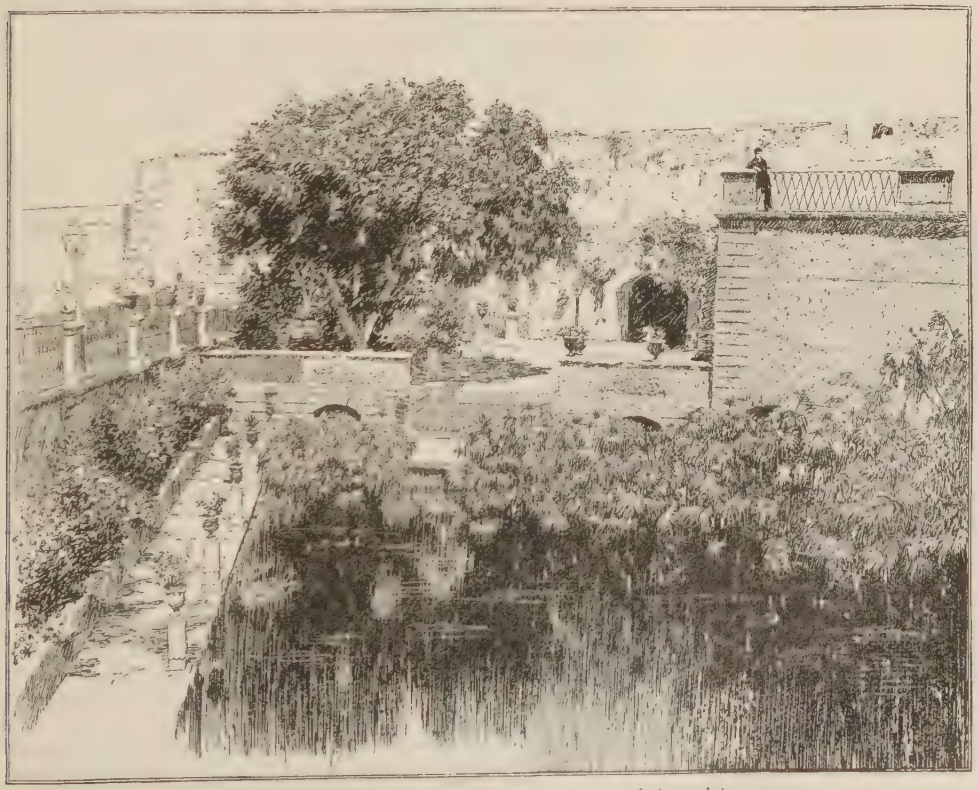
Synnăda (*τὰ Σύνναδα*), also **Synnas**. A city in the north of Phrygia Salutaris, at first inconsiderable, but afterwards a place of much importance, and from the time of Constantine the capital of Phrygia Salutaris.

Synoecia (*τὰ συνοίκια*) or **Synoecesia** (*τὰ συνοικέσια*). The eve of the Athenian festival of the Panathenaea (q. v.).

Synoecia (*συνοικία*). The Greek name for a lodging-house which held several families, and therefore corresponding to the Latin *insula*. See DOMUS.

Syntax. See GRAMMATICA.

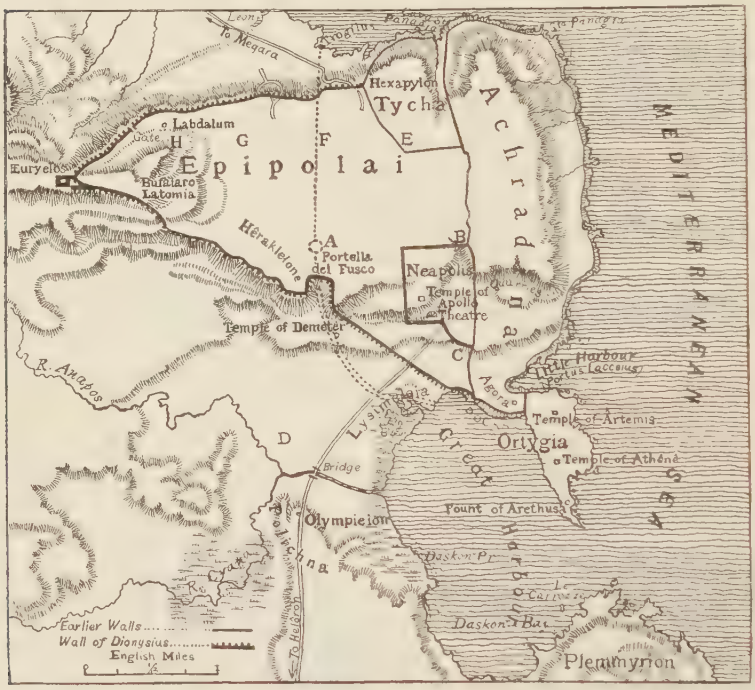
Syntaxis (*σύνταξις*). The tribute paid by the allies of Athens into the treasury of the League was



originally called φόρος (see DELOS). But after the downfall of the Athenian supremacy, and the establishment of the second confederacy in B.C. 378–7, the old name was dropped, as it had grown hateful to the allies with the general unpopularity of the rule of Athens, and the new assessment was known as σύνταξις (Harpocr. s. v. 169; Dem. *De Cor.* 305; *De Pace*, 60). See TELOS.

Synthĕsis. The Romans found the toga an inconvenient garment to wear while reclining at meals, and as the tunic alone was not considered suitable, they devised the *synthesis*, or *vestis cenatoria*, for use at such times. We know nothing of its form or appearance, except that it was a short and easy garment, of various colors, and was changed often during a feast by men of fashion (Mart. v. 79, 2). The same garment was usually worn at the Saturnalia (Mart. xiv. 11). The word is also applied to a collection of similar articles of dress of any kind, as a *synthesis tunicarum* (Mart. iv. 46). See CENA.

Syphax (Σύφαξ). A king of the Massaesylians, the westernmost tribe of the Numidians. His history is related in the life of his contemporary and rival, MASINISSA. Syphax was taken prisoner by Masinissa, B.C. 203, and was sent by Scipio, under the charge of Laelius, to Rome, where he died shortly after.



Syrăco. See SYRACUSAE.

Syracūsae (Συράκουσαι or Συράκοσσαι, Ion. Συρήκουσαι, also Συρακοῦσαι, Συρακούση). Now Siracusa in Italian; Syracuse in English: the wealthiest and most populous town in Sicily. It was situated on the south part of the east coast, 400 stadia north of the promontory Plemmyrium, and ten stadia northeast of the mouth of the river Anapus, near the lake or marsh called Syraco (Συρακώ), from which it derived its name. It was founded B.C. 734, one year after the foundation of Naxos, by a colony of Corinthians and other Dorians, led by Archias the Corinthian. The town was originally confined to the island Ortygia lying immediately off the coast; but it afterwards spread over the neighbouring mainland, and at the time of its greatest extension under the elder Dionysius it consisted of five distinct towns, each surrounded by separate walls. Some writers indeed describe Syracuse as consisting of four towns, but this simply arises from the fact that Epipolae was frequently not reckoned a portion of the city. These five towns were: (1) ORTYGIA (Ὀρτυγία), frequently called simply the ISLAND (Νᾶσος or Νῆσος), an island of an oblong shape, about two miles in circumference, lying between the Great Harbour on the west and the Little Harbour on the east. It was, as has been already remarked, the portion of the city first built, and it contained the citadel or Acropolis, surrounded by double walls, which Timoleon caused to be destroyed. In this island also was the celebrated fountain of Arethusa. It was originally separated from the mainland by a narrow channel, which was subsequently filled up by a causeway; but this causeway must at a still later time have been swept away, since we find in the Roman period that the island was connected with the mainland by means of a bridge. (2) ACHRADĪNA (Ἀχραδίνη) occupied originally the high ground of the peninsula north of Ortygia, and was surrounded on the north and east by the sea. The lower ground between Achradina and Ortygia was at first not included in the fortifications of either, but was

Fountain of Arethusa at Syracuse. (From a photograph.)

employed partly for religious processions and partly for the burial of the dead. At the time of the siege of Syracuse by the Athenians in the Peloponnesian War (415), the city consisted only of the two parts already mentioned, Ortygia forming the inner and Achradina the outer city, but separated, as explained above, by the low ground between the two. (3) TYCHÉ (Τύχη), named after the temple of Tyché or Fortune, and situated northwest of Achradina, in the direction of the port called Trogilus. At the time of the Athenian siege of Syracuse it was only an unfortified suburb, but it afterwards became the most populous part of the city. In this quarter stood the Gymnasium. (4) NEAPŎLIS (Νέα πόλις), nearly southwest of Achradina, was also, at the time of the Athenian siege of Syracuse, merely a suburb, and called TEMENĪTES, from having within it the statue and consecrated ground of Apollo Temenites. Neapolis contained the chief

Plan of Ancient Syracuse. (After Freeman.)

theatre of Syracuse, which was the largest in all Sicily, and many temples. (5) EPIPŎLAE (αἱ Ἐπιπολαί), a space of ground rising above the three quarters of Achradina, Tyché, and Neapolis, which gradually diminished in breadth as it rose higher, until it ended in a small conical mound. This rising ground was surrounded with strong walls by the elder Dionysius, and was thus included in Syracuse, which now became one of the most strongly fortified cities of the ancient world. The highest point of Epipolae was called Euryēlus (Εὐρύηλος), on which stood the fort Labdalum (Λάβδαλον). After Epipolae had been added to the city, the circumference of Syracuse was one hundred and eighty stadia, or upward of twenty-two English miles; and the entire population of the city is supposed to have amounted to five hundred thousand souls at the time of its greatest prosperity.

Syracuse had two harbours. The Great Harbour, still called Porto Maggiore, is a splendid bay about five miles in circumference, formed by the island Ortygia and the promontory Plemmyrium. The Small Harbour, also called Laccius (Λάκκιος), lying between Ortygia and Achradina, was capacious enough to receive a large fleet of ships of war. There were several stone quarries (*lautumiae*) in Syracuse, which are frequently mentioned by ancient writers, and in which the unfortunate Athenian prisoners were confined. These quarries were partly in Achradina, on the descent from the higher ground to the lower level towards Ortygia, and partly in Neapolis, under the southern cliff of Epipolae. From these was taken the stone of which the city was built (Thucyd. vii. 86). The so-called "Ear of Dionysius," in which the tyrant was supposed to overhear the conversation of his captives, is probably an invention of a mediæval writer. The city was supplied with water from an aqueduct, which was constructed by Gelon and improved by Hieron. It was brought through Epipolae and Neapolis to Achradina and Ortygia. The modern city of Syracuse is confined to the island. The remaining quarters of the ancient city are now uninhabited, and their position marked only by a few ruins. Of these the most important are the remains of the great theatre, and of an amphitheatre of the Roman period. See THEATRUM.

The government of Syracuse was originally an aristocracy; and the political power was in the hands of the landed proprietors, called Geomori or Gamori. In course of time the people, having increased in numbers and wealth, expelled the Geomori and established a democracy. But this form of government did not last long. Gelon espoused the cause of the aristocratic party, and proceeded to restore them by force of arms; but on his approach the people opened the gates to him, and he was acknowledged without opposition tyrant or sovereign of Syracuse, B.C. 485. Under his rule and that of his brother Hieron, Syracuse was raised to an unexampled degree of wealth and prosperity. Hieron died in 467, and was succeeded by his brother Thrasybulus; but the rapacity and cruelty of the latter soon provoked a revolt among his subjects, which led to his deposition and the establishment of a democratic form of government. The next most important event in the history of Syracuse was the siege of the city by the Athenians, which ended in the total destruction of the great Athenian armament in 413. This affair, known in history as the Sicilian Expedition, was the turning-

point in the Peloponnesian War (q. v.). The expedition set out from Athens in B.C. 415 under Alcibiades (q. v.), Nicias (q. v.), and Lamachus, and at first won a number of successes, so that Nicias, in 414, had seized Epipolae and begun the complete investment of Syracuse. The arrival of Gylippus, the Spartan general, turned the tide. The Syracusans defeated the Athenians, annihilated the invading army, and took Nicias and his later colleague Demosthenes prisoners. See GYLIPPUS.

The democracy continued to exist in Syracuse till B.C. 406, when the elder Dionysius made himself tyrant of the city. After a long and prosperous reign, he was succeeded in 367 by his son, the younger Dionysius, who was finally expelled by Timoleon in 343. A republican form of government was again established; but it did not last long; and in 317 Syracuse fell under the sway of Agathocles. This tyrant died in 289; and the city being distracted by factions, the Syracusans voluntarily conferred the supreme power upon Hieron II., with the title of king, in 270. Hieron cultivated friendly relations with the Romans; but on his death in 216, at the advanced age of ninety-two, his grandson Hieronymus, who succeeded him, espoused the side of the Carthaginians. A Roman army under Marcellus was sent against Syracuse; and after a siege of two years, during which Archimedes assisted his fellow-citizens by the construction of various engines of war (see ARCHIMEDES), the city was taken by Marcellus in 212. From this time Syracuse became a town of the Roman province of Sicily. See Lupus, *Die Stadt Syrakus im Alterthum* (Strassburg, 1887), and the works cited under SICILIA.

Syracusānus Portus (Συρακόσιος λίμην). Now Porto Vecchio; a harbour on the eastern coast of Corsica, where the Syracusans had probably established a factory for their trade: according to Diodorus, it was the best harbour in the island.

Syria (ἡ Συρία, in Aramaean Surja; now Soristan, Arab. Esh-Sham, i. e. "the land on the left," Syria), a country of western Asia, lying along the eastern end of the Mediterranean Sea, between Asia Minor and Egypt. In a wider sense the word was used for the whole tract of country bounded by the Tigris on the east, the mountains of Armenia and Cilicia on the north, the Mediterranean on the west, and the Arabian Desert on the south; the whole of which was peopled by the Aramaean branch of the great Semitic (or Syro-Arabian) race, and is included in the Old Testament under the name of Aram. The people were of the same races, and those of the north of the Taurus in Cappadocia and Pontus are called White Syrians (Λευκόσυροι), in contradistinction to the people of darker complexion in Syria Proper, who are sometimes even called Black Syrians (Σύροι μέλανες). Even when the name of Syria is used in its ordinary narrower sense, it is often confounded with Assyria, which only differs from Syria by having the definite article prefixed. Again, in the narrower sense of the name, Syria still includes two districts which are often considered as not belonging to it, namely, PHOENICÉ and PALAESTĪNA, and a third which is likewise often considered separate, namely, COELESYRIA; but this last is generally reckoned a part of Syria. In this narrower sense, then, Syria was bounded on the west (beginning from the south) by Mount Hermon, at the southern end of Antilibanus, which separated it from Palestine, by the range of Libanus, dividing it from Phoenicé, by the Mediterranean, and by Mount Amanus, which divided it from Cilicia; on the north (where it bordered on Cappadocia) by the main chain of Mount Taurus, and striking the Euphrates just below Iuliopolis, and considerably above Samosata; hence the Euphrates forms the eastern boundary. The western part of the country was intersected by a series of mountains, running south from the Taurus, under the names of Amanus, Pieria, Casius, Bargylus, and Libanus and Antilibanus; and the northern part, between the Amanus and the Euphrates, was also mountainous. The chief river of Syria was the Orontes, and the smaller rivers Chalus and Chrysorrhoas were also of importance. The valleys among the mountains were fertile, especially in the northern part; even the east, which is now merged in the great desert of Arabia, appears to have had more numerous and more extensive spaces capable of cultivation, and supported great cities, the ruins of which now stand in the midst of sandy wastes.

In the earliest historical period Syria contained a number of independent kingdoms, of which Damascus was the most powerful. These were subdued by David, but became again independent at the end of Solomon's reign; from which time we find the kings of Damascus sometimes at war with the kings of Israel, and sometimes in alliance with them against the kings of Judah, till the reign of Tiglath-Pileser, king of Assyria, who, having been invited by Ahaz, king of Judah, to assist him against the united forces of Rezin, king of Syria, and Pekah, king of Israel, took Damascus, and probably conquered all Syria, about B.C. 740. Having been a part successively of the Assyrian, Babylonian, Persian, and Macedonian Empires, it fell, after the battle of Ipsus (B.C. 301), to the share of Seleucus Nicator, and formed a part of the great kingdom of the Seleucidae, whose history is given

Typical Syrian of Egyptian Art. (Photograph by Flinders Petrie.)

in the articles ANTIOCHUS; DEMETRIUS; SELEUCUS. In this partition, however, Coelesyria and Palestine went, not to Syria, but to Egypt, and the possession of those provinces became the great source of contention between the Ptolemies and the Seleucids. By the irruptions of the Parthians on the east, and the unsuccessful war of Antiochus the Great with the Romans on the west, the Greek-Syrian kingdom was reduced to the limits of Syria itself, and became weaker and weaker, until it was overthrown by Tigranes, king of Armenia, B.C. 79. Soon afterwards, when the Romans had conquered Tigranes as well as Mithridates, Syria was quietly added by Pompey to the empire of the Republic, and was constituted a province B.C. 54; but its northern district, COMMAGĒNÉ, was not included in this arrangement. As the eastern province of the Roman Empire, and with its great desert frontier, Syria was constantly exposed to the irruptions of the Parthians, and, after them, of the Persians; but it long remained one of the most flourishing of the provinces. The attempt of Zenobia to make it the seat of empire is noticed under ZENOBIA. While the Roman emperors defended this precious possession against the attacks of the Persian kings with various success, a new danger arose, as early as the fourth century, from the Arabians of the Desert, who began to be known under the name of Saracens; and, when the rise of Mohammed had given to the Arabs that great religious impulse which revolutionized the Eastern world, Syria was the first great conquest that they made from the Eastern Empire, A.D. 632–638. In the time immediately succeeding the Macedonian conquest, Syria was regarded as consisting of two parts — the north, including the whole country down to the beginning of the Lebanon range, and the south, consisting of Coelesyria in its more extended sense. The former, which was called Syria Proper, or Upper Syria (*ἡ ἄνω Συρία*, Syria Superior), was divided into four districts or tetrarchies, which were named after their respective capitals, Seleucis, Antiochené, Laodicené, and Apamené.

The Roman province of SYRIA, as originally constituted by Pompey in B.C. 64, was by no means a single homogeneous region. Owing to the different nationalities and interests which Syria properly so called comprised, it was at first parcelled out between the Roman jurisdiction and a number of independent territories which were allowed to remain within it. Under the Roman proconsul of Syria were at first Upper Syria (with the chief towns Antioch, Seleucia, Apamea, Laodicea, Cyrrhus, Hieropolis, and Beroea), and the land of Phoenicia, including Tripolis, Byblus, Tyre, and Sidon; but Iudea was left for a time nominally independent, except for a short time when Gabinius broke it up into five districts. Caesar made Iudea a client State under its own princes, and it did not become a Roman province (of the second rank, under a procurator) until A.D. 6. Similarly Commagené was left under its own princes until A.D. 17, and again from 38 till 72, when it was finally joined to the province of Syria; Chalcis retained its own princes till 92, when Domitian added it to the province; Abilené till 49; Arethusa and Emesa till 78; Damascus was not included in the province of Syria till 106. The province of Syria under the Empire was governed by an imperial legate residing at Antioch: it was eventually divided into ten districts, named (mostly after their capital cities) Commagené, Cyrrhesticé, Pieria, Seleucis, Chalcidicé, Chalybonitis, Palmyrené, Apamené, Cassiotis, and Laodicené; but the last is sometimes included under Cassiotis. (See the several articles.) From A.D. 66 Iudea or Syria Palaestina was recognized as a separate province, and at the end of the second century Syria was divided into two provinces, Syria Magna or Coelesyria, and Syria Phoenicé. Constantine the Great separated the two northern districts — namely, Commagené and Cyrrhesticé — and erected them into a distinct province, called EUPHRATENSIS or EUPHRATESIA; and the rest of Syria was afterwards divided by Theodosius II. into the two provinces of SYRIA PRIMA, including the sea-coast and the country north of Antioch, and having that city for its capital; and SYRIA SECUNDA, the district along the Orontes, with Apamea for its capital; while the eastern districts were now a part of Persia.

Syria Dea (*ἡ Συρίη Θεός*). A deity of generation and fecundity worshipped in Syrian Hierapolis under the name *Ἀτάργατις*, whom the later Greeks and the Romans simply called "the Syrian goddess." From the time of the sovereignty of the Seleucidae, when the ancient paganism was highly honoured in Hierapolis, the worship of this goddess spread among the Greeks, and from them found its way to Rome, where she had a temple in the days of the Empire, and to other parts of Italy, and still farther west. The old idea of her attributes had so widened in the course of time that she shared those of Iuno, Venus, Rhea, Cybelé, Minerva, Diana, the Parcae, and other goddesses. She is represented on Roman monuments, seated on a throne between two lions. Her priests were generally eunuchs. They were in the habit of making excursions into Greece and Italy to extend the worship of the goddess by means of ecstatic dances and prophecies, and to collect pious alms for her sanctuary. See Apul. *Met.* viii. 24; Lucian, *De Dea Syria;* and the *C. I. L.* vi. 115, 116.

Syriae Portae (*αἱ Συρίαι Πύλαι*). Now the Pass of Beilan; a most important pass between Cilicia and Syria, lying between the shore of the Gulf of Issus on the west and Mount Amanus on the east.

Syriānus (*Συριανός*). A Greek philosopher of the Neo-Platonic School. He was a native of Alexandria, and studied at Athens under Plutarchus, whom he succeeded as head of the Neo-Platonic School in the early part of the fifth century A.D. The most distinguished of his disciples was Proclus, who regarded him with the greatest veneration, and gave directions that at his death he should be buried in the same tomb with Syrianus. Syrianus wrote several works, some of which are extant. Of these the most valuable are the commentaries on the *Metaphysics* of Aristotle.

Syrinx (*σύριγξ*). A Pan's pipe, called by the Romans *harundo* or *fistula*.

Syrinx (*Σύριγξ*). A powerful city of Hyrcania, the capital of that province under the Greek kings of Syria.

Syrinx (*Σύριγξ*). An Arcadian nymph, who, being pursued by Pan, fled into the river Ladon, and at her own prayer was metamorphosed into a reed, of which Pan then made his flute. See PAN.

Syrma (*σύρμα*). A long robe worn by tragic actors on the stage (Juv. viii. 229).

Syros (*Σῦρος*) or **Syrus**. Now Syra; an island

in the Aegaean Sea, and one of the Cyclades, lying between Rhenea and Cythnus.

Syrtes. See SYRTIS.

Syrtĭca Regio (ἡ Συρτική). Now the western part of Tripoli; the special name of that part of the northern coast of Africa which lay between the two Syrtes, from the river Triton, at the bottom of the Syrtis Minor, on the west, to the Philaenorum Arae, at the bottom of the Syrtis Maior, on the east. It was for the most part a very narrow strip of sand, interspersed with salt marshes, between the sea and a range of mountains forming the edge of the Great Desert (Sahara), with only here and there a few spots capable of cultivation, especially about the river Cinyps. It was peopled by Libyan tribes. Under the Romans it formed a part of the province of Africa. It was often called TRIPOLITĀNA, from its three chief cities, Abrotonum, Oea, and Leptis Magna; and this became its usual name under the Later Empire, and has been handed down to our own time in the modern name of the regency of Tripoli.

Syrtis (Σύρτις) and **Syrtes.** The two great gulfs in the eastern half of the northern coast of Africa. The name is derived by the ancients from *σύρω*, "to draw" or "to suck," but is possibly cognate with the Arabic *sert*, "a desert," a term at present applied to the whole coast as bordering upon the Great Desert. Both gulfs were proverbially dangerous, the Greater Syrtis from its sandbanks and quicksands, and its unbroken exposure to the north winds, the Less from its shelving rocky shores, its exposure to the northeast winds, and the consequent variableness of the tides in it. (1) **Syrtis Maior** (ἡ μεγάλη Σύρτις, Gulf of Sidra), the easternmost of the two, a wide and deep gulf on the shores of Tripolitana and Cyrenaïca, exactly opposite to the Ionic Sea. The Great Desert comes down close to its shores, forming a sandy coast, called by the ancients SYRTĬCA REGIO. The terror of being driven on shore in it is referred to in the narrative of St. Paul's voyage to Italy (Acts, xxvii. 17, "fearing lest they should fall into the Syrtis"); and the dangers of a march through the loose sand on its shores, sometimes of a burning heat, and sometimes saturated with sea-water, were scarcely less formidable. (2) **Syrtis Minor** (ἡ μικρὰ Σύρτις, Gulf of Khabs) lies in the southwestern angle of the great bend formed by the northern coast of Africa as it drops down to the south from the neighbourhood of Carthage, and then bears again to the east; in other words, in the angle between the eastern coast of Zeugitana and Byzacena (Tunis) and the northern coast of Tripolitana (Tripoli). In its mouth, near the northern extremity, lie the islands of Cercina and Cercinitis. In Herodotus, the word Syrtis occurs in a few passages, without any distinction between the Greater and the Less. It seems most probable that he means to denote by this term the Greater Syrtis, and that he included the Less in the lake Tritonis.

Syrus, PUBLILIUS. See PUBLILIUS SYRUS.

Syssitia (*τὰ συσσίτια*). The meals taken in public and in common among the Dorians in Sparta and Crete, and confined to men and youths only. In Sparta all the Spartiatae, or citizens over twenty years of age, were obliged to attend these meals, which were there called *φειδίτια*. No one was allowed to absent himself except for some satisfactory reason. The table was provided for by fixed monthly contributions of barley, wine, cheese, figs, and money to buy meat; the State only paid for the maintenance of the two kings, each of whom received a double portion. The places where the syssitia were held were called tents, and the guests were divided into messes of about fifteen members, vacancies in which were filled up by ballot, unanimous consent being necessary for election. The principal dish at the syssitia was a black broth (*μέλας ζωμός*) with pork, served with mixed wine. The tables were superintended by a woman of free birth, who had several men to assist her. She gave the best fare to those present who were most eminent in the service of the State. See Hoeck, *Kreta*, iii. 120–139; Bielchowsky, *De Spartanorum Syssitiis* (Breslau, 1869); and Gilbert, *Gk. Const. Ant.* p. 67 (1895).

Systȳlus (*σύστυλος*). Close-columned. A word denoting an intercolumniation of only two diameters apart (Vitruv. iii. 2). See TEMPLUM.

Sythas (Σύθας). A river on the frontiers of Achaia and Sicyonia.

T

T, as a symbol.

IN GREEK.—T = *τῆς, τῶν*, etc. *Τίτος, Τιβέριος*. As a numeral = 19 (old system). *τ′* = 300, *͵τ* = 300,000.

IN LATIN.—T = tabula, te, tergum, terra, tesserarius, tiro, Titus, tribunus, tumulus, teruncius ($\frac{1}{72}$ of a sestertius).

T·B·Q = tu bene quiescas.

T·C = titulum curavit.

T·F·C(R) = testamento faciendum (fieri) curavit (rogavit).

T·K = tabularium castrense.

T·L·H·F·C = testamento legavit; heres faciundum curavit.

T·O·B·Q = tibi ossa bene quiescant.

T·P = tanta pecunia, tribunicia potestate.

T·P·I(M) = testamentum (titulo) poni iussit (posuit memoriae).

T·R·P·D·S·T·T·L = te rogo praeteriens dicas sit tibi terra levis.

T·S·T·L(T·T·L·S) = terra sit tibi levis (tibi terra levis sit).

T·V·F = ture vino fecerunt.

Tabella. A tablet used as a ballot in voting either at the elections of the Comitia or in the courts of justice. See COMITIA; IUDEX; JUDICIAL PROCEDURE; TABELLARIAE LEGES.

Tabellariae Leges. Laws by which, for the purpose of weakening the power of the Optimates, the practice of voting by secret ballot was introduced at Rome. There were four of these laws: (1) the LEX GABINIA (B.C. 139), prescribing the use of the ballot in the election of magistrates; (2) the LEX CASSIA (B.C. 137), prescribing the ballot in the *iudicium populi* except in cases of treason (*perduellio*); (3) the LEX PAPIRIA (B.C. 131), introducing the ballot in voting on the enactment and repeal of laws; and (4) the LEX CAELIA (B.C. 107), extending the use of the ballot to questions even of *perduellio*. All these laws are mentioned by Cicero (*De Leg.* iii. 16, 35). See COMITIA.

Tabellarius. A letter-carrier or courier, employed by private persons to carry letters and messages (Cic. *Ad Fam.* xii. 12; xiv. 22). Ship

captains often carried foreign letters and the tabellarii of the provincial governors and of the *publicani* (q. v.); also, as a favour, they often served private individuals (Cic. *Ad Att.* v. 15; id. 19). See also CURSUS PUBLICUS; EPISTOLA.

Tabellio. A sort of notary in the Imperial Age employed in drawing up legal documents. They had stands in the market-places (Capitol. *Macrin.* 4). See SCRIBAE.

Taberna (*σκηναί, γέρρα*). (1) A shop. It was so named because in Rome the shops consisted for the most part of boarded stalls projecting from the houses or raised under the colonnades which surrounded the market-places. Subsequently, however, as wealth and commerce increased, the ground-story of the rows of houses, and even palaces, in a street were appropriated for shops and let out to separate tradesmen, as in many of the great mansions in Continental towns. In the majority of cases the shop had no communication with the rest of the house, the tenant merely occupying it for the purpose of his business and dwelling himself elsewhere; but some few houses of a respectable class have been discovered at Pompeii in which the shop has an entrance from its back into the habitable parts of the mansion, and these are reasonably believed to have been in the occupancy of the persons who dwelt on the premises, and who

Shop-fronts at Pompeii. (Restoration.)

fronts at Pompeii. Various signs on the fronts of shops denoted the especial business carried on. Thus a wooden goat indicated a milk-dealer's; an amphora, a wine-shop; a snake (the symbol of Aesculapius), an apothecary's; a row of hams, an eating-house, etc. (See DOMUS, pp. 548, 549.) (2) A tavern. See CAUPONA.

Sign from Baker's Shop. (Pompeii.)

Tabernacŭlum, Tentorium (*κλισίη, σκηνή*). (1) A tent. The first of these words was originally a hut made of boards (*tabulae*). Tents were regularly made of skins stretched on wooden supports, like our canvas tents; whence the name *tentorium*. In summer the soldiers slept in tents (*sub pellibus durare*, Livy, v. 2), but in winter they were lodged either in towns or, if in camp, in huts of stone or turf. To give them only tents in winter was regarded as very severe (Tac. *Ann.* xiii. 35). The *κλισίαι* of Homer were not really tents at all, but only wooden or walled huts. See Buchholz, *Hom. Realien*, ii. 340. (2) See AUGURES; DIVINATIO; TEMPLUM.

Roman Shop. (Pompeian painting.)

Tabernae. See TRES TABERNAE.

Tables, THE TWELVE. See TWELVE TABLES.

Tablīnum. A room in a Roman dwelling-house. See DOMUS, p. 545.

Tabŭla Bantīna. A bronze tablet found near Bantia, on the borders of Lucania and Apulia, in 1793, and now in the Naples Museum. It contains on one side thirty-three lines in Oscan, more or less complete, and on the other an inscription in Latin. The Oscan portion relates to the local affairs of Bantia (as to fines, oaths, penalties, etc.), and the Latin portion gives part of a local law. It is the most important source in existence for knowledge of the Oscan language. The Latin text will be found in Allen's *Early Latin* (Boston, 1880); the Oscan is printed in Mommsen's *Oskische Studien* (Berlin, 1845) and in Zvetaieff's *Sylloge Inscriptionum Oscarum* (St. Petersburg, 1878). See also the article OSCI.

Tabŭla Cebētis. See CEBES.

are, in consequence, supposed to have been wealthy tradesmen. The general appearance of a Roman shop, as uniformly exhibited by the numerous examples remaining at Pompeii, resembled those of our butchers and fish-dealers, being entirely open in front with the exception of a low wall forming the counter, and were closed by wooden shutters at night. They are mostly comprised in a single room, without any other convenience; though in some instances a small back parlour and other appurtenances are added. The annexed illustration represents an elevation restored of six shop-

Tabŭla Iliăca. A marble slab covered with figures in low-relief and inscriptions, ten inches high and eleven and a half inches wide, now in the Capitoline Museum at Rome. It was found in 1683 near the site of the ancient Bovillae, and gives scenes from the *Ἰλίου Πέρσις* of Stesichorus, the *Iliad* of Homer, the *Aethiopis* of Arctinus of Miletus, and the *Little Iliad* (*Ἰλιὰς Μικρά*) of Lesches of Pyrrha. Jahn supposes it to have been intended for use in schools, but it was more probably an ornamental panel forming part of a receptacle for books. It is reproduced in its actual state

and also in a restoration in Schreiber's *Atlas of Classical Antiquities* (Engl. edition by Anderson), plates xcii. A and xciii., with a full description (London, 1895).

Tabŭla Lusoria (*πίναξ*). A board for playing games. See DUODECIM SCRIPTA; LATRUNCULI.

Tabŭla Peutingeriāna. See ITINERARIA.

Tabŭlae or **Pugillāres** (*πίνακες, δέλτοι, πινάκια*). Tablets for writing. See WRITING AND WRITING MATERIALS.

Tabŭlae Duodĕcim. See TWELVE TABLES.

Tabŭlae Iguvīnae and **Eugubīnae.** See UMBRIA.

Tabŭlae Publĭcae. See TABULARIUM.

Tabularii. Notaries or accountants either public or private (see SCRIBA; TABELLIO). Public tabularii had the custody of public documents (Cod. Theod. viii. 2).

Tabularium. The place in Rome where the public archives (*tabulae publicae*) were preserved. These archives comprised the rogations, the *senatus consulta* and *plebiscita*, financial records, public contracts, censorial registers (*tabulae censoriae*), the records of the courts, registers of vital statistics, jury lists, and election returns. These were kept in different places, as in the Temple of Saturn, the Aerarium, and the Temple of Ceres. The officers charged with the care of public documents were the quaestors, the plebeian aediles, the tribunes, the praetors, and (under Tiberius) special *curatores tabulariorum publici* (Dio Cass. lxxvi. 16). See Mommsen, *Röm. Staatsrecht*, ii. 557–560. At Athens the public archives were kept in the Metroum (*μητρῷον*).

Taburnus. Now Taburno; a mountain belonging half to Campania and half to Samnium. It shut in the Caudine Pass on its southern side.

Tacăpē (*Τακάπη*). Now Khabs or Gabes; a city of North Africa, in the Regio Syrtica, at the innermost angle of the Syrtis Minor, to which the modern town gives its name.

Tacfarinas. A Numidian, and Roman auxiliary, who deserted, and became the leader of the Musulamii, a people bordering on Mauretania. He was at length defeated and slain in battle by Dolabella, A.D. 24 (Tac. *Ann.* ii. 52; iii. 73; iv. 24).

Tachompso (*Ταχομψώ*), also **Tacompsos** and **Metacompso** (*Μετακομψώ*). A city in the Dodecaschoenus—that is, the part of Aethiopia immediately above Egypt.

Tachos (*Ταχώς*). A king of Egypt who succeeded Acoris, and maintained the independence of his country for a short time during the latter end of the reign of Artaxerxes II. (B.C. 364–361). He was, however, overthrown by Nectanabis, who succeeded him as king of Egypt (Diod. xv. 92; Nep. *Chabr.* 2).

Tacĭtus. (1) PUBLIUS CORNELIUS. (The praenomen, Publius, is given in the best MS. [Med. I.]; and in an inscription.) One of the greatest of the Roman writers of history. The time and place of his birth are unknown. He was a little older than the younger Pliny, who was born A.D. 61. His father was probably Cornelius Tacitus, a Roman *eques*, who is mentioned as a procurator in Gallia Belgica, and who died in 79 (Pliny, *Epist.* vii. 76). Tacitus was first promoted by the emperor Vespasian, and he received other favours from both Titus and Domitian (*Hist.* i. 1). The most probable account is that Tacitus was appointed *tribunus militum laticlavius* by Vespasian, quaestor by Titus, and praetor by Domitian. In 78 he married the daughter of the famous general, C. Iulius Agricola, to whom he had been betrothed in the preceding year, while Agricola was consul. In the reign of Domitian, and in 88, Tacitus was praetor, and he assisted as one of the quindecimviri at the Ludi Saeculares which were celebrated in that year (*Ann.* xi. 11). Agricola died at Rome in 93, but neither Tacitus nor the daughter of Agricola was then with him. It is not known where Tacitus was during the last illness of Agricola. In the reign of Nerva, 97, Tacitus was appointed consul suffectus, in the place of T. Virginius Rufus, who had died in that year, and whose funeral oration he delivered. We know that Tacitus had attained oratorical distinction when the younger Pliny was commencing his career. He and Tacitus were appointed in the reign of Nerva (99) to conduct the prosecution of Marius, proconsul of Africa. Tacitus and Pliny were most intimate friends. In the collection of the letters of Pliny there are eleven letters addressed to Tacitus. The time of the death of Tacitus is unknown, but he appears to have survived Trajan, who died 117. Nothing is recorded of any children of his, though the Emperor Tacitus claimed a descent from the historian, and ordered his works to be placed in all public libraries. The following are the extant works of Tacitus: (*a*) *Vita Agricolae*, the life of Agricola, which was written after the death of Domitian (96), as we may probably conclude from the introduction, which was certainly written after Trajan's accession. This life is justly admired as a specimen of biography. It is a monument to the memory of a noble man and an able commander and administrator, by an affectionate son-in-law, who has portrayed, in his peculiar manner and with many masterly touches, the virtues of one of the most illustrious of the Romans. (*b*) *Historiae*, which were written after the death of Nerva (98) and before the *Annales*. They comprehended the period from the second consulship of Galba (68) to the death of Domitian (96), and the author designed to add the reigns of Nerva and Trajan. The first four books alone are extant in a complete form, and they comprehend only the events of about one year. The fifth book is imperfect, and goes no further than the commencement of the siege of Jerusalem by Titus, and the war of Civilis in Germany. It is not known how many books of the *Historiae* there were, but it must have been a large work if it was all written on the same scale as the first five books. (*c*) *Annales*, which commence with the death of Augustus (14), hence *ab excessu divi Augusti*, and comprise the period to the death of Nero (68)—a space of fifty-four years. The greater part of the fifth book is lost, and also the seventh, eighth, ninth, tenth, the beginning of the eleventh, and the end of the sixteenth, which is the last book. These lost parts comprised the whole of Caligula's reign, the first five years of Claudius, and the last two of Nero. (*d*) *De Moribus et Populis Germaniae*, usually called the *Germania*, a treatise describing the Germanic nations. It is of little value as a geographical description; the first few chapters contain as much of the geography of Germany as Tacitus knew. The main subject is the description of the political institutions, the religion, and the habits of the

various tribes included under the name Germani. The value of the information contained in this treatise has often been discussed, and its credibility attacked; but we may estimate its true character by observing the precision of the writer as to those Germans who were best known to the Romans from being near the Rhine. That the hearsay accounts of more remote tribes must partake of the defects of all such evidence is obvious; and we cannot easily tell whether Tacitus embellished that which he had heard obscurely told. But to consider the Germany as a fiction, or as a purely political tract, is one of those absurdities which need only be recorded, not refuted. (*e*) *Dialogus de Oratoribus.* If this dialogue is the work of Tacitus, and it probably is, it must be his earliest work, for it was written in the sixth year of Vespasian. The style is more easy than that of the *Annales*—more diffuse, less condensed; but there is an obvious difference between the style of the *Dialogus* and the *Historiae*—nothing so striking as to make us contend for a different authorship. Besides this, it is nothing unusual for works of the same author, which are written at different times, to vary greatly in style, especially if they treat of different matters. The oldest MSS. also attribute the *Dialogus* to Tacitus. (See Gudeman's introduction to his edition of the work.) The treatise is an essay, in the form of a dialogue, giving an account of the decay of oratory under the Empire.

The *Annales* of Tacitus, the work of a mature age, contain the chief events of the period which they embrace, arranged under their several years. There seems no peculiar propriety in giving the name of *Annales* to this work, simply because the events are arranged in the order of time. In the *Annales* of Tacitus, the Princeps or Emperor is the centre about which events are grouped. Yet the most important public events, both in Italy and the provinces, are not omitted, though everything is treated as subordinate to the exhibition of imperial power. The *Historiae*, which were written before the *Annales*, are in a more diffuse style, and the treatment of the extant part is different from that of the *Annales*. Tacitus wrote the *Historiae* as a contemporary; the *Annales* as not a contemporary. They are two distinct works, not parts of one, which is clearly shown by the very different proportions of the two works: the first four books of the *Historiae* comprise about a year, and the first four books of the *Annales* comprise fourteen years.

The moral dignity of Tacitus is impressed upon his works; the consciousness of a love of truth, of the integrity of his purpose. His great power is in the knowledge of the human mind, his insight into the motives of human conduct; and he found materials for its exercise in the history of the emperors, and particularly Tiberius, whose strange career and enigmatical personality fascinated him. The *Annales* are filled with dramatic scenes and striking catastrophes. He laboured to produce effect by the exhibition of great personages on the stage; but as to the mass of the people we learn little from Tacitus. The style of Tacitus is peculiar, though it bears some resemblance to Sallust. In the *Annales* it is concise, vigorous, and pregnant with meaning; laboured, but elaborated with art, and stripped of every superfluity. A single word sometimes gives effect to a sentence; and if the meaning of the word is missed, the sense of the writer is not reached. Such a work is probably the result of many transcriptions by the author. Tacitus is generally brief and rapid in his sketches; but he is sometimes almost too minute when he comes to work out a dramatic scene; and he displays all the conscious rhetoric of his age. The condensed style of Tacitus sometimes makes him obscure, but it is a kind of obscurity that is dispelled by careful reading. Yet a man must read carefully and often, in order to understand him; and it cannot be supposed that Tacitus was ever a popular writer. He is often intensely epigrammatic, and exhibits the qualities of style that are found in the typical writers of the Silver Age. Many of his pregnant phrases have passed into the world's anthology of quotations, such as *Omne ignotum pro magnifico* and *Solitudinem faciunt, pacem appellant.* In his view of the condition of Roman society he is thoroughly pessimistic, and by contemplating only one section of it he is led into an unconscious exaggeration which the reader should correct by the reading of the contemporary and friend of Tacitus, Pliny the Younger, whose more pleasing picture of the time is a wholesome check upon any too sweeping condemnation of the imperial period of Rome's social history.

The manuscripts of Tacitus are few and unsatisfactory. For the first six books of the *Annales* only one source exists—the Codex Mediceus (I.) of the ninth century, and found about 1520. From this bks. vii.–ix. are lost, as are *Historiae* v.–xiv. For what remains of these, a second Codex Mediceus (II.) of the eleventh or twelfth century is the only authority. The *Germania* and *Dialogus* are found in two manuscripts—one at Leyden (Codex Leidensis [Perizonianus]), and the other in the Vatican. The *Agricola* is found in two transcriptions of an earlier MS. Both of these are in the Vatican. On the codices of Tacitus, see the introduction to the edition of the *Dialogus* by Michaelis (1868), and Gudeman (1894), and in Ritter's edition (1864).

Editions of the complete works of Tacitus are the *editio princeps* by Puteolanus (Milan, c. 1476); Lipsius (Antwerp, 1574); Gronovius (Amsterdam, 1672); Bekker, with variorum notes, 2 vols. (Leipzig, 1831); Ritter (last ed. Bonn, 1864); Döderlein, 2 vols. (Halle, 1841–47); Orelli, 2 vols. (Zürich, 1846, variously revised and republished, 1859, 1877); and texts by Halm (1884); and Müller (Prague, 1885).

Separate editions with English notes are those of the *Annales* by Furneaux, 2 vols. (Oxford, 1891–92); Allen (Boston, 1890); of the *Historiae* by Simcox (London, 1876), Godley (London, 1887–90), and Spooner (London, 1891); of the *Agricola* and *Germania* by Frost (London, 1861), Church and Brodribb (London, 1889), by Haverfield (announced), and by Hopkins (New York and Boston, 1893); of the *Dialogus* by Peterson (Oxford, 1893), and especially by Gudeman (New York and Boston, 1894), a most exhaustive and elaborate work, with extremely valuable prolegomena; also a compact and convenient edition by Bennett (New York and Boston, 1894). There are English translations of Tacitus by Gordon (London, 1728–31), Murphy (London, 1793), and by Church and Brodribb (London, 1876–77). There is a fine lexicon to Tacitus by Gerber and Greef, still appearing in parts. An older lexicon (complete) is that of Boetticher (1832).

On Tacitus, see Urlichs, *De Taciti Vita* (Würzburg, 1879); J. Müller, *Philos. und relig. Anschau-*

ungen des Tacitus (Feldkirch, 1874); and Schiller, *Geschichte d. röm. Kaiserzeit*, i. 586 (Gotha, 1883). On his diction, etc., see Dräger, *Ueber Syntax und Stil des Tacitus* (3d ed. Leipzig, 1882); Wolff, *Die Sprache des Tacitus* (Frankfurt, 1879); Gericke, *De Abundanti Dicendi Genere Tacitino* (Berlin, 1882), and the numerous monographs cited in Teuffel-Schwabe-Warr, ii. § 333, 16. See also the short studies by Donne (1873) and Church and Brodribb (1881).

(2) M. CLAUDIUS. A Roman emperor, who ruled from the 25th September, A.D. 275, until April, A.D. 276. He was elected by the Senate after the death of Aurelian, the army having requested the Senate to nominate a successor to the imperial throne. Tacitus was at the time seventy years of age, and was with difficulty persuaded to accept the purple. The high character which he had borne before his elevation to the throne he amply sustained during his brief reign. He endeavoured to repress the luxury and licentiousness of the age by various sumptuary laws, and he himself set an example to all around by the abstemiousness, simplicity, and frugality of his own habits. The only military achievement of this reign was the defeat and expulsion from Asia Minor of a party of Goths who had carried their devastation across the peninsula to the confines of Cilicia. He died either at Tarsus or at Tyana, about the 9th of April, 276. His life is given in the *Historia Augusta*.

Taeda (*δαΐς, δᾶς*, dim. *δᾳδίον*). A torch of fir-wood. See CANDELA; FAX; FUNALÉ; LUCERNA.

Taenărum (*Ταίναρον*). Now Cape Matapan; a promontory in Laconia, forming the southerly point of the Peloponnesus, on which stood a celebrated temple of Poseidon, possessing an inviolable asylum. A little to the north of the temple and the harbour of Achilleus was a town also called TAENĂRUM or TAENĂRUS, and at a later time CAENEPŎLIS. On the promontory was a cave, through which Heracles is said to have dragged Cerberus to the upper world. Here also was a statue of Arion seated on a dolphin, since he is said to have landed at this spot after his miraculous preservation by a dolphin (Herod. i. 23; Thuc. i. 128, 133; Pausan. iii. 25, 4). In the time of the Romans there were celebrated marble quarries on the promontory.

Taenia (*ταινία*). See INFULA; STROPHIUM; VITTA.

Tagasté. Now Tagilt; a city of Numidia, the birthplace of St. Augustine.

Tages. The son of a Genius Iovialis, and grandson of Iupiter, said to be a boy with the wisdom of an old man, who, at Tarquinii, in Etruria, suddenly rose out of a freshly ploughed field. He taught the chiefs (*lucumones*) of the twelve Etruscan tribes, who were summoned by the ploughman Tarchon, how to interpret the sacrifices, together with the lore of thunder and lightning and other kinds of divination which in later times were practised by the *haruspices*. Having done this, he disappeared again as suddenly as he had appeared. The lore of Tages was at first transmitted orally from generation to generation in the chief families, but was afterwards handed down in a comprehensive literature (Cicero, *De Div.* ii. 50, 51; Ovid, *Met.* xv. 558 foll.; Lucan, i. 637).

Tagus (*ταγός*). In general the commander of a district, but more especially the chief magistrate of Thessaly, or of any Thessalian town.

Tagus (Spanish Tajo, Portuguese Tejo, English Tagus). One of the chief rivers in Spain, rising in the land of the Celtiberians, between the mountains Orospeda and Idubeda, and, after flowing in a westerly direction, falling into the Atlantic. At its mouth stood Olisipo (Lisbon) (Pliny, *H. N.* iv. 115).

Talaria (*πτερόεντα πέδιλα*). Sandals with small wings attached. They usually appear on statues of Hermes, as in the annexed illustration.

Talarium. (Naples Museum.)

Talassio, Talassius, Thalassius. A primitive Sabine deity invoked in the priestly books (*indigitamenta*) as the god of marriage. Varro regarded the noun as derived from *τάλαρος*, a wool-basket, as symbolizing the household work most typical of the Roman matron (Plut. *Quaest. Rom.* 31). See MATRIMONIUM, p. 1016.

Talaüs (*Τάλαος*). The son of Bias and Pero, and king of Argos. He was married to Lysimaché (Eurynomé, or Lysianassa), and was father of Adrastus, Parthenopaeus, Pronax, Mecisteus, Aristomachus, and Eriphylé. The patronymic *Talaïonides* is given to his sons Adrastus and Mecisteus (*Il.* ii. 566).

Talentum (*τάλαντον*; literally "a balance," and "the thing weighed"). The Greek term for (1) the heaviest unit of weight; (2) the designation of a sum of money consisting of a number of coins originally equal to it in legal weight and value. It was divided into 60 *minae* or 6000 *drachmae*. Among the different talents in use in Greece the most widely spread was the Attic, of which $\frac{1}{6000}$ part (*drachma*) weighed 57½ lbs. The intrinsic value of the metal contained in this sum of money was about $1180. The Aeginetan talent was worth about $1515. See MENSURA; NUMISMATICS.

Talna, IUVENTIUS. See THALNA.

Talos (*Τάλως*). (1) (See PERDIX.) (2) A brazen man, the work of Hephaestus, and given by Zeus to Minos, king of Crete, to watch that island, which he did by walking about it three times every day. When strangers approached he heated himself red hot and then embraced them, or, according to another version, threw showers of stones upon them. He had one vein in his body through which his blood ran and was stopped by a nail or plug in his foot. This plug Medea drew out by magic, and he bled to death (Apollod. i. 9, 26; Ap. Rh. iv. 1638; Schol. *ad* Plat. *Rep.* 425).

Talthybius (*Ταλθύβιος*). The herald of Agamemnon at Troy. He was worshipped as a hero at Sparta and Argos, where sacrifices also were offered to him.

Talus (*ἀστράγαλος*). A die used in gambling. The name of a bone in the hind-leg of cloven-footed animals which articulates with the tibia and helps to form the ankle-joint. In the language of anatomists it is still called *astragalus;* the English name is sometimes "huckle-bone," but more commonly "knuckle-bone." The astragali of sheep and goats, from their peculiar squareness and

smoothness, have been used as playthings from the earliest times, and have often been found in Greek and Roman tombs, both natural and imitated in ivory, bronze, glass, and agate (Propert. iii. 24, 13; Mart. xiv. 14). They were used to play with, principally by women and children (Plu. *Alcib.* 2), occasionally by old men (Cic. *de Sen.* 16, § 58).

Girl Playing with Tali. (Herculanean painting.)

To play at this game was sometimes called *πεντελιθίζειν*, because five bones or other objects of a similar kind were employed (Hermipp. *Fr.* 33 M.); and this number is retained among ourselves. This game was entirely one of skill; and in ancient no less than in modern times it consisted not merely in catching the five bones on the back of the hand, as shown in the woodcut, but in a great variety of exercises requiring quickness, agility, and accuracy of sight.

The name was also given to dice (cf. our slang term "the bones") for playing games of chance (see ALEA). The length was greater than the breadth, so that they had four long sides and two pointed ends, one of them called *κεραία*, the other without a name. Of the four long sides, which alone were marked, two were broader, the others narrower. One of the broad sides was convex (*πρηνής* or *πρανής*, the other concave (*ὕπτια*); while of the narrow sides one was flat and called *χῖον*, the other indented. This was called *κῶον*, and, as the rarest was also the luckiest throw, marked 6: the *χῖον* was marked 1, the broader sides 3 and 4, so that the numbers 2 and 5 were wanting. From the difference of their shapes they did not absolutely require to be marked, and sometimes the pips were dispensed with. It was the under side of the die, not the upper, that counted, as must be inferred from the fact of the narrowest side giving the highest throw (Marquardt, *Privatl.* 828).

Roman Dice-box. (Rich.)

The Greek and Latin names of the numbers were as follows:—1. *Μονάς, εἷς, κύων, Χῖος*: *Unio, Volturius, canis;* 3. *Τριάς*: *Ternio;* 4. *Τετράς*: *Quaternio;* 6. *Ἑξάς, ἑξίτης, Κῶος*: *Senio.*

A the bone is broader in one direction than in the other, it was said to fall upright or prone (*ὀρθὸς ἢ πρηνής, rectus aut pronus*), according as it rested on a narrow or a broad side.

Two persons played together at this game, using four bones, which they threw up into the air, or emptied out of a dice-box (*φιμός, fritillus*). The numbers on the four sides of the four bones admitted of thirty-five different combinations. The lowest throw of all was four aces. But the value of a throw (*βόλος, iactus*) was not in all cases the sum of the four numbers turned up. The highest in value was that called *Venus, or iactus Venereus*, in which the numbers cast up were all different (Mart. xiv. 14), the sum of them being only fourteen. It was by obtaining this throw that the master of revels (*arbiter bibendi*) was chosen at the drinking-bouts. See Becq de Fouquières, *Les Jeux des Anciens*, 325 foll., and the article SYMPOSIUM. Cf. also TESSERA.

Tamassus (*Ταμασσός*) or **Tamăsus** (*Τάμασος*), probably the same as the Homeric **Temĕsé**. A town in the middle of Cyprus, northwest of Olympus, and twenty-nine miles southeast of Soloë (Ptol. v. 14, 6).

Tambrax (*Τάμβραξ*). A large city of Hyrcania (Polyb. x. 31).

Tamĕsis or **Tamĕsa**. Now the Thames; a river in Britain, on which stood Londinium, flowing into the sea on the eastern coast. Caesar crossed the Thames at the distance of eighty-six Roman miles from the sea, probably at Cowey Stakes, near Oatlands and the confluence of the Wey (Caes. *B. G.* v. 11; Tac. *Ann.* xiv. 32).

Tamias (*ταμίας*). In general, a person in charge of money, stock, or property, as a butler, steward, housekeeper, or treasurer. In the latter sense it was a title borne by several officials in Athens. (1) The most important of these was the treasurer (*ἐπιμελητής*) of the revenue, elected by show of hands every four years. He received from the *ἀποδέκται* or general collectors all the money which was to be disbursed for public expenses, and he paid away into the treasuries of the several authorities what was necessary for purposes of administration in their respective departments. He also provided the funds voted by the people for extraordinary purposes. (2) The same name was also borne by the ten treasurers of the goddess Athené, who had the care of the treasure of the goddess which was kept in the inner chamber of the Parthenon, besides the State treasure which (according to the ordinary account) was kept in the same place. They were elected annually by lot, one from each of the *phylae*. (3) Similarly, we have a board of ten regularly constituted treasurers to the rest of the gods. Their duty was to manage the sacred treasures, which in earlier times were kept in the separate temples, but in B.C. 418 were transferred to the Parthenon. (4) Under the title of *ταμίας τῶν στρατιωτικῶν*, we read of a financial officer of the war department. He was probably appointed after the Peloponnesian War in place of the Hellenotamiae (q. v.). Besides his duties in connection with the war department, he had a share in the management of the Panathenaic festival (Aristot. *Pol. Ath.* 49).

Tamna (*Ταμνά*) or **Thomna**. A mercantile city of Arabia Felix, where caravans dealt in spices and other Arabian products (Pliny, *H. N.* xvi. 153).

Tamos (*Ταμώς*). A native of Memphis in Egypt. He was lieutenant-governor of Ionia under Tissaphernes, and afterwards attached himself to the service of the younger Cyrus. When Cyrus died, he sailed to Egypt with a number of ships and a great treasure, and sought refuge with King Psammetichus, who treacherously put him to death in order to get possession of the ships and money (Xen. *Anab.* i. 2, 21; id. *Hellen.* iii. 1, 1; Diod. xiv. 19, 35).

Tamȳnae (*Ταμύναι*). Now Aliveri; a city of Euboia with a temple of Apollo said to have been built by Admetus. Here the Athenians under Phocion gained a great victory over Callias of Chalcis in B.C. 354 (Plut. *Phoc.* 12).

Tanāger. Now the Negro or Tanagro; a river of Lucania, rising in the Apennines, which, after flowing in a northeasterly direction, loses itself under the earth near Polla for a space of about two miles, and finally falls into the Silarus near Forum Popilii.

Tanagra (*Τάναγρα*). Now Grimadha or Grimala; a celebrated town of Boeotia, situated on a steep ascent on the left bank of the Asopus, thirteen stadia from Oropus, and 200 stadia from Plataeae, in the district Tanagraea, which was also called Poemandris. Tanagra was supposed to be the same town as the Homeric Graea. Being near the frontiers of Attica, it was frequently exposed to the attacks of the Athenians; and near it the Athenians sustained a celebrated defeat, B.C. 457. Here was a temple to Dionysus, and minor temples erected to Themis, Aphroditē, Hermes Criophorus, and Hermes Promachus. Recent excavations at Tanagra have discovered the line of the walls, the site of many of the towers, and of the theatre. In 1873 the Necropolis was explored and yielded many terra-cotta statuettes and "figurines." See Kekulé, *Griechische Thonfiguren aus Tanagra* (Stuttgart, 1877); Murray's *Greek Archaeol.* (London, 1890); and the article TERRA-COTTAS.

Tanaïs (*Τάναϊς*). (1) Now the Don, i.e. "water"; a great river, which rises in the north of Sarmatia Europaea (about the centre of Russia), and flows to the southeast till it comes near the Volga, when it turns to the southwest, and falls into the northeast angle of the Palus Maeotis (Sea of Azof). It was usually considered the boundary between Europe and Asia. (2) A city of Sarmatia Asiatica, on the north side of the southern mouth of the Tanaïs, at a little distance from the sea.

Tanăquil. See TARQUINIUS.

Tanărus. Now the Tanaro; a river of Liguria emptying into the Po near Forum Fulvii (Valenza).

Tanētum. Now Taneto; a town of the Boii, in Gallia Cispadana, between Mutina and Parma.

Tanis (*Τάνις*; Egypt. Ta-an; O. T. Zoan). A very ancient city of Lower Egypt, in the eastern part of the Delta, on the right bank of the arm of the Nile, which was called after it the Tanitic, and on the southwest side of the great lake between this and the Pelusiac branch of the Nile, which was also called, after the city, Tanis (Lake of Menzaleh). It was one of the capitals of Lower Egypt under the Hyksos kings (B.C. 2100), and the chief city of the Tanites Nomos. In 1883–84 its ruins were explored by Flinders Petrie, whose monograph (1885) gives an account of his discoveries. See also Edwards, *Pharaohs, Fellahs, and Explorers* (New York, 1892), which is lavishly supplied with illustrations from photographs taken by Mr. Petrie.

Shrine of Rameses II. at Tanis. (Photograph by Flinders Petrie.)

Tantălus (*Τάνταλος*). (1) The son of Zeus and Pluto. His wife is called by some Euryanassa, by others Taÿgeté or Dioné, and by others Clytia or Eupryto. He was the father of Pelops, Broteas, and Niobé. All traditions agree in stating that he was a wealthy king, but while some call him king of Lydia, others describe him as king of Argos or Corinth. Tantalus is particularly celebrated in ancient story for the terrible punishment inflicted upon him after his death in the lower world, the causes of which are differently stated by the ancient writers. According to the common account Zeus invited him to his table, and communicated his divine counsels to him. Tantalus divulged the secrets thus intrusted to him; and he was punished in the lower world by being afflicted with a raging thirst, and at the same time placed in the midst of a lake, the waters of which always receded from him as soon as he attempted to drink them. Over his head, moreover, hung branches of fruit, which receded in like manner when he stretched out his hand to reach them. (Ovid. *Met.* iv. 457; Hor. *Sat.* i. 1, 68; Hygin. *Fab.* 82). Another account says that there was suspended over his head a huge rock, ever threatening to crush him (Pind. *Olymp.* i. 56). Another tradition relates that, wishing to test the gods, he cut his son Pelops in pieces, boiled them and set them before the gods at a repast. (See PELOPS.) A third account states that Tantalus stole nectar and ambrosia from the table of the gods and gave them to his friends (Pind. *Olymp.* i. 60); and a fourth relates the following story: Rhea caused the infant Zeus and his nurse to be guarded in Crete by a golden dog, whom Zeus afterwards appointed guardian of his temple in Crete. Pandareus stole this dog, and, carrying him to Mount Sipylus in Lydia, gave him to Tantalus to take care of. But when Pandareus demanded the dog back, Tantalus took an oath that he had never received it. Zeus thereupon changed Pandareus into a stone, and threw Tantalus down from Mount Sipylus. Others, again, relate that Hermes demanded the dog of Tantalus, and that the perjury was committed before Hermes. Zeus buried Tantalus under Mount Sipylus as a punishment; and there his tomb was shown in later times. The punishment of Tantalus was proverbial in ancient times, and from it the English language has borrowed

the verb "to tantalize," that is, to hold out hopes or prospects which cannot be realized. The patronymic Tantalides is frequently given to the descendants of Tantalus. Hence we find not only his son Pelops, but also Atreus, Thyestes, Agamemnon, Menelaüs, and Orestes called by this name. (2) Son of Thyestes, who was killed by Atreus. Others call him a son of Broteas. He was married to Clytaemnestra before Agamemnon, and is said by some to have been killed by Agamemnon. (3) Son of Amphion and Niobé.

Taŏchi (Τάοχοι). A people of Pontus, on the borders of Armenia (Xen. *Anab.* iv. 4, 18).

Tapētē (*τάπης, τάπις*). Tapestry; a carpet. Tapestry was known to the Greeks as early as Homer's time, being used for coverlets and pillows, and was also spread, in later ages, upon thrones, chairs, couches, etc. Carpets were made especially at Babylon, Tyre, Sardes, Carthage, and Alexandria. The most expensive kinds (*μαλλωτοί*) were like our baize or drugget, and had sometimes a nap on both sides (*ἀμφίταποι*) or on only one side (*ἑτερόμαλλοι*). They were beautifully dyed and often worked in figures of hunting scenes, etc. The Roman *toral* (q. v.) was a sort of tapestry.

Taphiae Insŭlae. A number of small islands in the Ionian Sea, lying between the coasts of Leucadia and Acarnania. They were also called the islands of the Teleboae, and their inhabitants were in like manner named Taphii (Τάφιοι) or Teleboae (Τηλεβόαι). The largest of these islands is called Taphus by Homer, but Taphiūs (Ταφιοῦς) or Taphiūsa (Ταφιοῦσα) by later writers.

Taphus. See Taphiae.

Tappŭla Lex. A sort of drinking formulary drawn up as a burlesque of legal forms, written by a Roman humourist named Valerius Valentinus (Fest. 363; Val. Max. viii. 1, 8). A similar pot-house formula was found at Vercelli in 1882 on a bronze tablet (a fragment only). It is given in fac-simile in the *Bull. Arch.* for 1882 (186). Cf. Mommsen in the *Arch. Zeit.* xl. 176. Still another *lex convivialis* will be found printed in Bücheler's edition of Petronius, p. 239 (Berlin, 1882).

Taprobănē (Ταπροβάνη). Now Ceylon; a great island of the Indian Ocean, opposite to the southern extremity of India intra Gangem. The Gauls got their first knowledge of it from the explorations of Megasthenes and Onesicritus in the time of Alexander the Great. In the time of the emperor Claudius an embassy from Rome actually visited it (Ptol. vi. 10, 2; Curt. vi. 4, 24; Pliny, *H. N.* vi. 81).

Taras. See Tarentum.

Taraxippus (Ταράξιππος). A demon who caused horses to shy. See Hippodromus, p. 825.

Tarbelli. One of the most important people in Gallia Aquitanica between the ocean and the Pyrenees. Their chief town was Aquae Tarbellicae or Augustae (Dacqs) on the Aturus (Adour).

Tarchon. The son of Tyrrhenus, who is said to have built the town of Tarquinii. (See Tarquinii.) Vergil represents him as coming to the assistance of Aeneas against Turnus (*Aen.* iii. 506).

Tarentīni Ludi. See Ludi Saeculares, p. 974.

Tarentīnus Sinus (Ταρεντῖνος κόλπος). Now the Gulf of Tarentum; a great gulf in the south of Italy, between Bruttium, Lucania, and Calabria, beginning west near the Promontorium Lacinium and ending east near the Promontorium Iapygium, and named after the town of Tarentum.

Tarentum (Τάρας). Now Taranto; a Greek city on the western coast of Calabria in Italy with an excellent harbour, which formed a part of the Sinus Tarentinus. The surrounding country was both fertile and picturesque. Tarentum was traditionally said to have been built by the Iapygians, mingled with colonists from Crete, and to have derived its name from Taras, a son of Poseidon (Pausan. x. 10, 6). Its importance dates from the year B.C. 708, when it was captured by a body of Lacedaemonians under Phalanthus (see the article Partheniae), after which it became a flourishing place, holding a sort of suzerainty over the rest of the cities of Magna Graecia. Its commerce was extensive; it had a powerful fleet; and could bring into the field an army of 30,000 infantry and 3000 cavalry, including the forces of its allies; its own troops numbered 22,000 men.

Coin of Tarentum (third century B.C.).

Its government was different at different periods of its history. At the time of Darius Hystaspis it was ruled by kings; but later it became a democracy. Its later law-code was the work of Archytas, who flourished about B.C. 400. As its wealth increased, its people became luxurious and effeminate; and being attacked by the neighbouring Lucanians, it appealed to Sparta for help. In answer to this appeal Archidamus, son of Agesilaüs, came to their assistance in B.C. 338; and he fell in battle fighting on their behalf. The next prince whom they invited to succour them was Alexander, king of Epirus, and uncle to Alexander the Great. At first he met with considerable success, but was eventually defeated and slain by the Bruttii in 326 near Pandosia on the banks of the Acheron. Shortly afterwards the Tarentines had to encounter a still more formidable enemy. Having attacked some Roman ships, and then grossly insulted the Roman ambassadors who had been sent to demand reparation, war was declared against the city by the powerful Republic. The Tarentines were saved for a time by Pyrrhus, king of Epirus (see Pyrrhus), who came to their help in 281; but two years after the defeat of this monarch and his withdrawal from Italy, the city was taken by the Romans (272). In the Second Punic War Tarentum revolted from Rome to Hannibal (212); but it was retaken by the Romans in 207, and was treated by them with great severity. From this time Tarentum declined in prosperity and wealth. It was subsequently made a Roman colony, and it still continued to be a place of considerable importance in the time of Augustus (Tac. *Ann.* i. 10). Its inhabitants retained their love of luxury and ease; and it is described by Horace as *molle Tarentum* and *imbelle Tarentum*. Even after the downfall of the Western Empire the Greek language was still spoken at Tarentum; and it was long one of the chief strongholds of the Byzantine Empire in the south of Italy.

The town of Tarentum consisted of two parts, viz.: a peninsula or island at the entrance of the harbour, and a town on the mainland, which was connected with the island by means of a bridge. On the northwest corner of the island, close to the entrance of the harbour, was the citadel: the principal part of the town was situated southwest of the isthmus. The modern town is confined to the island or peninsula on which the citadel stood. The neighbourhood of Tarentum produced the best wool in all Italy, and was also celebrated for its excellent wine, figs, pears, and other fruits. Its purple dye was also much valued in antiquity. On the history of the place, see the works by Döhle (1877) and De Vincentis (1878 foll.); and on the topography, that by Gagliardo (Taranto, 1886).

Tarichēa (Ταρίχεια). Now El-Kereh; a town of Galilee at the southern end of the Lake of Tiberias.

Tariff. See PENTECOSTÉ; PORTORIUM.

Tarné (Τάρνη). A city of Lydia, on Mount Tmolus, mentioned by Homer (*Il.* v. 44).

Tarpa, Sp. Maecius. A Roman of literary taste, who selected the plays given at the celebration of Pompey's games in B.C. 55; and who afterwards was made censor over the public readings of the poets in the Collegium Poetarum under Augustus (Cic. *Ad Fam.* vii. 1; Hor. *A. P.* 287).

Tarpēia. Daughter of Sp. Tarpeius, the governor of the Roman citadel on the Saturnian Hill, afterwards called the Capitoline. She was tempted by the gold on the Sabine bracelets and collars to open a gate of the fortress to T. Tatius and his Sabines. As they entered, they threw upon her their shields, and thus crushed her to death. She was buried on the hill, and her memory was preserved by the name of the Tarpeian Rock, which was given to a part of the Capitoline (Livy, i. 11). A legend still exists at Rome to the effect that Tarpeia still sits in the heart of the hill covered with gold and jewels, and bound by a spell.

Tarpeian Rock. A rock on the Capitoline Hill in Rome, from which in early times State criminals were hurled. See ROMA; TARPEIA.

Tarquinia. See TARQUINIUS.

Tarquinii (Etrusc. *Turchina*). Now Corneto; a city of Etruria, situated on the river Marta. It was one of the twelve cities of the Etruscan League (see ETRURIA, p. 625), and was said to have been founded by one Tarchon, the brother of Tyrrhenus, who led the Lydian colony from Asia to Italy (Strabo, p. 219; Serv. *ad* Verg. *Aen.* x. 179, 198). Near this place the seer Tages (q. v.) first appeared. After Tarquinius Superbus was driven from Rome the people of Tarquinii gave him aid against the Romans, but were defeated by them (Livy, ii. 6; Dionys. v. 14). Some very interesting Etruscan paintings exist in the numerous caves on the hill at Corneto, which was the cemetery of the ancient city.

Tarquinius (Etrusc. *Tarcho*). The name of a family in early Roman tradition to which the fifth and seventh kings of Rome belonged. The legend of the Tarquins ran as follows: Demaratus, their ancestor, belonged to the noble family of the Bacchiadae at Corinth, and fled from his native city when the power of his order was overthrown by Cypselus. He settled at Tarquinii in Etruria, where he had mercantile connections. He married an Etruscan wife, by whom he had two sons, Lucumo and Aruns. The latter died in the lifetime of his father, leaving his wife pregnant; but as Demaratus was ignorant of this circumstance, he bequeathed all his property to Lucumo, and died himself shortly afterwards. But, although Lucumo was thus one of the most wealthy persons at Tarquinii, and had married Tanaquil, who belonged to a family of the highest rank, he was excluded, as a stranger, from all power and influence in the State. Discontented with this inferior position, and urged on by his wife, he resolved to leave Tarquinii and remove to Rome. He accordingly set out for Rome, riding in a chariot with his wife, and accompanied by a large train of followers. When they had reached the Janiculum, an eagle seized his cap, and after carrying it away to a great height placed it again upon his head. Tanaquil, who was skilled in the Etruscan science of augury, bade her husband hope for the highest honour from this omen. Her predictions were soon verified. The stranger was received with welcome, and he and his followers were admitted to the rights of Roman citizens. He took the name of L. TARQUINIUS, to which Livy adds PRISCUS. His wealth, his courage, and his wisdom gained him the love both of Ancus Marcius and of the people. The former appointed him guardian of his children; and, when he died, the Senate and the people unanimously elected Tarquinius to the vacant throne. The reign of Tarquinius was distinguished by great exploits in war and by great works in peace. He defeated the Latins and Sabines; and the latter people ceded to him the town of Collatia, where he placed a garrison under the command of Egerius, the son of his deceased brother Aruns, who took the surname of Collatinus. Some traditions relate that Tarquinius defeated the Etruscans also. Among the important works which Tarquinius executed in peace, the most celebrated are the vast sewers by which the lower parts of the city were drained, and which still remain, with not a stone displaced, to bear witness to his power and wealth. He is also said in some traditions to have laid out the Circus Maximus in the valley which had been redeemed from water by the sewers, and also to have instituted the Great or Roman Games, which were henceforth performed in the Circus. The Forum, with its porticoes and rows of shops, was also his work, and he likewise began to surround the city with a stone wall, a work which was finished by his successor, Servius Tullius. The building of the Capitoline Temple is, moreover, attributed to the elder Tarquinius, though most traditions ascribe this work to his son, and only the vow to the father. Tarquinius also made some changes in the constitution of the State. He added one hundred new members to the Senate, who were called *patres minorum gentium*, to distinguish them from the old senators, who were now called *patres maiorum gentium*. He wished to add to the three centuries of equites established by Romulus three new centuries, and to call them after himself and two of his friends. His plan was opposed by the augur Attus Navius, who gave a convincing proof that the gods were opposed to his purpose. (See NAVIUS.) Accordingly, he gave up his design of establishing new centuries, but to each of the for-

Tomb of the Tarquins.

mer centuries he associated another under the same name, so that henceforth there were the first and second Ramnes, Tities, and Luceres. He increased the number of Vestal Virgins from four to six. Tarquinius was murdered, after a reign of thirty-eight years, at the instigation of the sons of Ancus Marcius. But the latter did not secure the reward of their crime, for Servius Tullius, with the assistance of Tanaquil, succeeded to the vacant throne (Livy, i. 34–41). Tarquinius left two sons and two daughters. His two sons, L. Tarquinius and Aruns, were subsequently married to the two daughters of Servius Tullius. One of his daughters was married to Servius Tullius, and the other to M. Brutus, by whom she became the mother of the celebrated L. Brutus, the first consul at Rome. Servius Tullius, whose life is given under TULLIUS, was murdered, after a reign of forty-four years, by his son-in-law, L. Tarquinius, who ascended the vacant throne.

L. TARQUINIUS SUPERBUS commenced his reign without any of the forms of election. One of the first acts of his reign was to abolish the rights which had been conferred upon the plebeians by Servius; and at the same time all the senators and patricians whom he mistrusted or whose wealth he coveted were put to death or driven into exile. He surrounded himself by a body-guard, by means of which he was enabled to do what he liked. His cruelty and tyranny obtained for him the surname of *Superbus*. But although a tyrant at home, he raised Rome to great influence and power among the surrounding nations. He gave his daughter in marriage to Octavius Mamilius of Tusculum, the most powerful of the Latin chiefs; and under his sway Rome became the head of the Latin Confederacy. He defeated the Volscians, and took the wealthy town of Suessa Pometia, with the spoils of which he commenced the erection of the Capitol which his father had vowed. In the vaults of this temple he deposited the Sibylline Books, which the king purchased from a Sibyl or prophetess. She had offered to sell him nine books for 300 pieces of gold. The king refused the offer with scorn. Therefore she went away and burned three, and then demanded the same price for the six. The king still refused. She again went away and burned three more, and still demanded the same price for the remaining three. The king now purchased the three books, and the Sibyl disappeared. (See SIBYLLA.) He next engaged in war with Gabii, one of the Latin cities, which refused to enter into the league. Unable to take the city by force of arms, Tarquinius had recourse to stratagem. His son, Sextus, pretending to be ill-treated by his father, and covered with the bloody marks of stripes, fled to Gabii. The infatuated inhabitants intrusted him with the command of their troops; whereupon he sent a messenger to his father to inquire how he should deliver the city into his hands. The king, who was walking in his garden when the messenger arrived, made no reply, but kept striking off the heads of the tallest poppies with his stick. Sextus took the hint. He put to death or banished all the leading men of the place, and then had no difficulty in compelling it to submit to his father.

In the midst of his prosperity, Tarquinius fell through a shameful outrage committed by one of his sons. Tarquinius and his sons were engaged in besieging Ardea, a city of the Rutulians. Here, as the king's sons, and their cousin, Tarquinius Collatinus, the son of Egerius, were feasting together, a dispute arose about the virtue of their wives. As nothing was doing in the field, they mounted their horses to visit their homes by surprise. They first went to Rome, where they surprised the king's daughters at a splendid banquet. They then hastened to Collatia, and there, though it was late in the night, they found Lucretia, the wife of Collatinus, spinning amid her handmaids. The beauty and virtue of Lucretia had fired the evil passions of Sextus. A few days afterwards he returned to Collatia, where he was hospitably received by Lucretia as her husband's kinsman. In the dead of night he entered the chamber with a drawn sword: by threatening to lay a slave with his throat cut beside her, whom he would pretend to have killed in order to avenge her husband's honour, he forced her to yield to his wishes. As soon as Sextus had departed, Lucretia sent for her husband and father. Collatinus came, accompanied by L. Brutus; Lucretius, with P. Valerius, who afterwards gained the surname of Publicola. They found her in an agony of sorrow. She told them what had happened, enjoined them to avenge her dishonour, and then stabbed herself to death. They all swore to avenge her. Brutus threw off his assumed stupidity, and placed himself at their head. They carried the corpse to Rome. Brutus, who was *tribunus celerum*, summoned the people, and related the deed of shame. All classes were inflamed with the same indignation. A decree was passed deposing the king, and banishing him and his family from the city. The army, encamped before Ardea, likewise renounced their allegiance to the tyrant. Tarquinius, with his two sons, Titus and Aruns, took refuge at Caeré in Etruria. Sextus repaired to Gabii, his own principality, where he was shortly after murdered by the friends of those whom he had put to death. Tarquinius reigned twenty-four years. He was banished B.C. 510. The people of Tarquinii and Veii espoused the cause of the exiled tyrant, and marched against Rome. The two consuls advanced to meet them. A bloody battle was fought, in which Brutus and Aruns, the son of Tarquinius, slew each other. Tarquinius next repaired to Lars Porsena, the powerful king of Clusium,

who marched against Rome at the head of a vast army. The history of this expedition is related under PORSENA. After Porsena quitted Rome, Tarquinius took refuge with his son-in-law, Mamilius Octavius of Tusculum. Under the guidance of the latter, the Latin States espoused the cause of the exiled king, and declared war against Rome. The contest was decided by the celebrated battle of Lake Regillus, in which the Romans gained the victory by the help of Castor and Pollux. Tarquinius himself was wounded, but escaped with his life; his son Sextus is said to have fallen in this battle, though, according to another tradition, as we have already seen, he was slain by the inhabitants of Gabii. Tarquinius Superbus had now no other State to whom he could apply for assistance. He had already survived all his family; and he now fled to Aristobulus at Cumae, where he died a wretched and remorseful old man (Livy, ii. 121).

Such is the story of the Tarquins according to the ancient writers; but this story must not be received as a real history. It is the attempt to assign a definite origin to certain Roman institutions, to some features in the military organization, and to some ancient public works in the city, of which the history had been obscured by lapse of time. There can be no real doubt that it indicates as the time when these things were carried out a period during which a family of Etruscan origin held the chief power at Rome; and there is at least much probability (though this is denied by some writers of great authority) that this rule was imposed upon Rome by the dominant power of the Etruscans. See Mommsen, *History of Rome* (Amer. ed.), i. pp. 174, 321 foll., 590; Ihne, *Early Rome* (New York, 1878).

Tarracīna. Now Terracina, more anciently called **Anxur**, an ancient town of Latium, situated fifty-eight miles southeast of Rome, on the Via Appia and upon the coast, with a strongly fortified citadel upon a high hill, on which stood the Temple of Iupiter Anxurus. Remains of the ancient citadel are still visible.

Tarracina.

Tarrăco. Now Tarragona; an ancient town on the eastern coast of Spain, situated on a rock 760 feet high, between the river Iberus and the Pyrenees, on the river Tulcis. It was founded by the Massilians, and was made the headquarters of the two brothers P. and Cn. Scipio in their campaigns against the Carthaginians in the Second Punic War. It subsequently became a populous and flourishing town; and Augustus, who wintered here (B.C. 26) after his Cantabrian campaign, made it the capital of one of the three Spanish provinces (Hispania Tarraconensis), and also a Roman colony. See HISPANIA.

Tarrutēnus Paternus. See PATERNUS.

Tarsius (*Τάρσιος*). Now the Tarza or Karadere; a river of Mysia, rising in Mount Temnus, and flowing northeast, through the Miletopolites Lacus, into the Macestus.

Tarsus, Tarsos (*Ταρσός*). Now Terso; the chief city of Cilicia, standing near the centre of Cilicia Campestris, on the river Cydnus, about twelve miles above its mouth. All that can be determined with certainty as to its origin seems to be that it was a very ancient city of the Syrians, who were the earliest known inhabitants of this part of Asia Minor, and that it received Greek settlers at an early period. At the time of the Macedonian invasion it was held by the Persian troops, who were about to burn it, when they were prevented by Alexander's arrival. After playing an important part as a military post in the wars of the successors of Alexander, and under the Syrian kings, it became, by the peace between the Romans and Antiochus the Great, the frontier city of the Syrian kingdom on the northwest, and still flourishes, having a population estimated at 100,000. As the power of the Seleucidae declined it suffered much from the oppression of its governors, and from the wars between the members of the royal family. At the time of the Mithridatic War, it suffered, on the one hand, from Tigranes, who overran Cilicia, and, on the other, from the pirates, who had their strongholds in the mountains of Cilicia Aspera, and made frequent incursions into the level country. From both these enemies it was rescued by Pompey, who made it the capital of the new Roman province of Cilicia, B.C. 66. Under Augustus, the city obtained immunity from taxes, through the influence of the emperor's tutor, the Stoic Athenodorus, who was a native of the place. It enjoyed the favour and was called by the names of several of the later emperors. It was the scene of important events in the wars with the Persians, the Arabs, and the Turks, and also in the Crusades. Tarsus was the birthplace of many distinguished men, among them the Apostle Paul.

Tartărus (*Τάρταρος*). Son of Aether and Gaea, and by his mother Gaea the father of the Gigantes, Typhoeus, and Echidna. In the *Iliad*, Tartarus is a place beneath the earth, as far below Hades as Heaven is above the earth, and closed by iron gates. Later poets use the name as synonymous with Hades. See HADES.

Tartessus (*Ταρτησσός*). An ancient town in Spain, and one of the chief settlements of the Phœnicians, probably the same as the Tarshish of Scripture. The whole country west of Gibraltar was called TARTESSIS.

Taruscon or **Tarascon**. Now Tarascon. A town of the Salyes in Gaul, on the eastern bank of the Rhône, north of Arelaté (Arles) and east of Nemausus (Nîmes).

Tarvisium. Now Treviso; a town of Venetia in the north of Italy, on the river Silis, which became the seat of a bishopric, and a place of importance in the Middle Ages.

Task. See PENSUM.

Tatius, ACHILLES. See ACHILLES, p. 11.

Tatius, TITUS. A king of the Sabines. See ROMULUS.

Tatta (*Τάττα*). Now Tuz-Göl; a great salt lake in the centre of Asia Minor.

Tauchīra or **Teuchīra** (*Ταύχειρα, Τεύχειρα*). A colony of Cyrené, on the northwestern coast of Cyrenaïca, in Northern Africa. Under the Ptolemies it was called ARSINOË. It was a chief seat of the worship of Cybelé, who had here a great temple and an annual festival (Herod. iv. 171; Procop. *De Aed.* vi. 3).

Taulantii (*Ταυλάντιοι*). A people of Illyria, in the neighbourhood of Epidamnus (Thuc. i. 24).

Taunus. Now Taunus; a range of mountains in Germany, at no great distance from the confluence of the Moenus (Main) and the Rhine.

Taurasia. (1) See TAURINI. (2) A city of Samnium on the river Calor.

Taurentum and **Tauroïs**. A fortress belonging to Massilia, and near the latter city.

Tauri (*Ταῦροι*). A wild and savage people in European Sarmatia, who sacrificed all strangers to a goddess whom the Greeks identified with Artemis. The Tauri dwelt in the peninsula which was called after them Chersonesus Taurica (Crimea). See IPHIGENIA.

Taurii Ludi. See LUDI, p. 975.

Taurīni. A people of Liguria dwelling on the upper course of the Po, at the foot of the Alps. Their chief town was Taurasia, afterwards colonized by Augustus, and called Augusta Taurinorum (Turin).

Taurisci. A Keltic people in Noricum, and probably the old Keltic name of the entire population of the country.

Tauriscus (*Ταυρισκός*). A Greek artist of Tralles, belonging to the school of Rhodes. He and his fellow-countryman Apollonius were the sculptors of the celebrated group of Dircé, known as "the Farnese Bull," which is shown in the illustration under DIRCÉ.

Taurobolium. A rite celebrated at Rome after the Syrian cults began to be in vogue. (See Gibbon, *Decline and Fall*, ii. 265.) The ceremony was a sort of baptism in blood, and is described as follows by Prudentius (*Peristeph.* x. 1011–1050): The persons who were to be consecrated to regeneration, wearing the *mitra* with a golden circlet and the *cinctus Gabinus*, were placed beneath a platform upon which a bull or ram decked with garlands and having gilded horns was slain: the blood flowing through the chinks in the platform streamed over those beneath, each of whom was supposed to return home *taurobolio in aeternum renatus* (*C. I. L.* vi. 510). Cf. AEGOBOLIUM.

Tauroïs. A colony of the people of Massilia (Marseilles).

Tauromenium (*Ταυρομένιον*). Now Taormina; a city on the eastern coast of Sicily, situated on Mount Taurus, from which it derived its name.

Coin of Tauromenium.

and founded B.C. 358 by Andromachus with the remains of the inhabitants of Naxos. For the remains of the great stone theatre at this place, see THEATRUM.

Tauroscȳthae. See SCYTHOTAURI.

Taurus (from the Aramaean *Tur*, "a high mountain"). Now Taurus, Ala-Dagh, and other special names. A great mountain-chain of Asia. In its widest extent, the name was applied, by the later geographers, to the whole of the great chain which runs through Asia from west to east; but in its usual signification it denotes the mountain-chain in the south of Asia Minor, which begins at the Sacrum or Chelidonium Promontory at the southeast angle of Lycia, surrounds the Gulf of Pamphylia, passing through the middle of Pisidia; then along the southern frontier of Lycaonia and Cappadocia, which it divides from Cilicia and Commagené; thence, after being broken through by the Euphrates, it proceeds almost due east through the south of Armenia, forming the water-shed between the sources of the Tigris on the south and the streams which feed the upper Euphrates and the Araxes on the north; thus it continues as far as the southern margin of the lake Arsissa, where it ceases to bear the name of Taurus, and is continued in the chain which, under the names of Niphates, Zagros, etc., forms the northeast margin of the Tigris and Euphrates valley. Of this main range the branches Antitaurus and Amanus are important chains.

Taurus, STATILIUS. A distinguished general of Octavianus (Augustus) commanding his land forces at the battle of Actium (B.C. 31). Two years later he routed the Cantabri, Astures, and Vaccaei in Spain. He was consul in B.C. 26, and *praefectus urbi* in 16, during the absence of Augustus from Rome. An amphitheatre of stone was built by him in the year 30. (See App. *B. C.* v. 97–118; Tac. *Ann.* vi. 11; Dio Cass. xlix. 14; li. 20; liv. 19.)

Tavern. See CAUPONA.

Tavium (*Ταούιον*). The capital of the Trocmi, in Galatia, stood on the eastern side of the river Halys, but at some distance from the river, and formed the centre of meeting for roads leading to all parts of Asia Minor.

Tax. See EISPHORA; PORTORIUM; TELOS; TRIBUTUM; VECTIGALIA.

Taxiarchi (*ταξίαρχοι*). The Greek term for the commanders of *τάξεις*, which contained a variable number of men. In Athens the ten commanders

of the ten τάξεις were so called. They were elected annually by show of hands, one for each tribe. They also had to look after the levying and distribution of recruits, and they were thus concerned in the drawing up of the register of those citizens who were liable to serve. On the Macedonian τάξις, see PHALANX.

Taxĭla (τὰ Τάξιλα) or **Taxiăla** (Ταξίαλα). An important city of India intra Gangem, stood in a large and fertile plain between the Indus and the Hydaspes, and was the capital of the Indian king Taxiles.

Taxĭles (Ταξίλης). (1) An Indian prince or king, who reigned over the tract between the Indus and the Hydaspes at the period of the expedition of Alexander, B.C. 327. His real name was Mophis or Omphis, and the Greeks appear to have called him Taxiles or Taxilas, from the name of his capital city of Taxila. (2) A general in the service of Mithridates the Great (Plut. *Sulla*, 15).

Taxis (τάξις). The principal division of the hoplites in the Athenian army, each of the ten tribes (φυλή) forming a τάξις. Among the other Greeks the word denotes a smaller division of troops. See PHALANX.

Taÿgĕté (Ταϋγέτη). The daughter of Atlas and Pleioné, one of the Pleiades, from whom Mount Taÿgetus in Laconia is said to have derived its name. By Zeus she became the mother of Lacedaemon and of Eurotas (Pausan. iii. 1, 2).

Taÿgĕtus (Ταΰγετος) or **Taygĕtum** (Ταΰγετον) or **Taygĕta** (τὰ Ταΰγετα). A lofty range of mountains, of a wild and savage character, separating Laconia and Messenia, and extending from the frontiers of Arcadia down to the Promontorium Taenarum.

Teānum. (1) APŬLUM (now Ponte Rotto). A town of Apulia, on the river Frento and the confines of the Frentani, eighteen miles from Larinum. (2) SIDICĪNUM (now Teano), an important town of Campania, and the capital of the Sidicini, situated on the northern slope of Mount Massicus and on the Via Praenestina, six miles west of Cales.

Teărus (Τέαρος). Now Teara, Deara, or Dere; a brook in Thrace, the waters of which were useful in curing cutaneous diseases (Herod. iv. 90).

Teāté. Now Chieti; the capital of the Marrucini, situated on a steep hill on the river Aternus, and on the road from Aternum to Corfinium.

Tecmessa (Τέκμησσα). The daughter of the Phrygian king Teleutas, whose territory was ravaged by the Greeks during a predatory excursion from Troy. Tecmessa was taken prisoner, and was given to Aiax, the son of Telamon, by whom she had a son, Eurysaces.

Tectaeus (Τεκταῖος) and **Angelion** (Ἀγγελίων). Two early Greek sculptors before B.C. 550. They were the instructors of Callon of Aegina. A statue of Apollo at Delos was their work (Pausan. ii. 32, 5; ix. 35, 3).

Tectosăges. (1) In Gallia. See VOLCAE. (2) In Asia Minor. See GALATIA.

Tegea (Τεγέα). (1) Now Piali; an important city of Arcadia, the capital of the district TEGEĀTIS, which was bounded on the east by Argolis and Laconica, on the south by Laconia, on the west by Maenalia, and on the north by the territory of Mantinea. It was one of the most ancient towns of Arcadia, and is said to have been founded by Tegeates, the son of Lycaon. The Tegeatae sent 3000 men to the battle of Plataea, in which they were distinguished for their bravery (Herod. ix. 26). They remained faithful to Sparta in the Peloponnesian War; but after the battle of Leuctra they joined the rest of the Arcadians in establishing their independence. During the wars of the Achaean League, Tegea was taken both by Cleomenes, king of Sparta, and Antigonus Doson, king of Macedonia, and the ally of the Achaeans. (2) A town in Crete, said to have been founded by Agamemnon (Vell. Paterc. i. 1).

Tegillum. A coarse hood or cowl worn by Roman fishermen, peasants, etc., in wet weather (Plaut. *Rud.* ii. 7, 18).

Tegŭla (κέραμος, κεραμίς). A tile of baked clay. The name is applied as a generic term to (*a*) *testae* or wall-tiles; (*b*) *tubi, tegulae mammatae*, flue-tiles; and (*c*) tiles for roofing. In early Rome shingles (*scandulae*) were generally used for covering houses, but from the third century on tiles replaced them (Pliny, *H. N.* xvi. 36). Tiles were originally flat, but afterwards were made with a rustic flange on each side, as shown below. See more fully under FICTILE.

Ancient Tiles.

(1) Section of tiles from Pompeii. (2) Ornamental fronts of tiles. (3) Frontons of tiled roofs.

Teichopoei (τειχοποιοί). Public officials at Athens whose duty it was to build and keep in repair the public walls. They were probably ten in number, elected for the term of a year (Aeschin. *c. Ctes.* 14, 17, 24).

Tela (ἱστός), a loom. Although weaving was among the Greeks and Romans a distinct trade, carried on by a separate class of persons (ὑφάνται, *textores*, and *textrices, linteones*), yet every considerable domestic establishment, especially in the country, contained a loom (Cato, *R. R.* 10, 14) together with the whole apparatus necessary for the working of wool (ταλασία, ταλασιουργία, *lanificium*). (See CALATHUS.) These occupations were all supposed to be carried on under the protection of Athenê or Minerva, specially denominated Ergané (Ἐργάνη). When the farm or the palace was sufficiently large to admit of it, a portion of it called the *histon* (ἱστῶν) (Varro, *R. R.* i. 2) or *textrinum* was devoted to this purpose. The work was there principally carried on by female slaves (ἔριθοι, *quasillariae*), under the superintendence of the mistress of the house (Theocr. xv. 80). Everything woven consists of two essential parts, the warp and the woof, called in Latin *stamen* and *subtegmen, subtemen*, or *trama*; in Greek στημών and κροκή. The warp was called *stamen* in Latin (from *stare*) on account of its erect posture in the loom. The corresponding Greek term στημών, and likewise ἱστός, have

evidently the same derivation. For the same reason, the very first operation in weaving was to set up the loom (*ἱστὸν στήσασθαι*); and the web or cloth, before it was cut down or "descended" from the loom, was called *pendens* or *pendula tela*, because it hung from the transverse beam, or *iugum*. These particulars are all clearly exhibited in the picture of Circé's loom given in the annexed illustration. We observe there, at about the middle of the apparatus, a transverse rod passing through the warp. A straight cane was well adapted to be so used, and its application is clearly expressed by Ovid in the words *stamen secernit harundo*. In plain weaving it was inserted between the threads of the warp so as to divide them into two portions, the threads on one side of the rod alternating with those on the other side throughout the whole breadth of the warp. In a very ancient form of the loom there was a roller underneath the *iugum*, turned by a handle, and on which the web was wound as the work advanced. The threads of the warp, besides being separated by a transverse rod or plank, were divided into thirty or forty parcels, to each of which a stone was suspended for the purpose of keeping the warp in a perpendicular position, and allowing the necessary play to the strokes of the *spatha*. While the comparatively coarse, strong, and much-twisted thread designed for the warp was thus arranged in parallel lines, the woof remained upon the spindle (*fusus*), forming a spool, bobbin, or pen (*πήνη*). This was either conveyed through the warp without any additional contrivance, or it was made to revolve in a shuttle (*radius*). This was made of box-wood, brought from the shores of the Euxine, and was pointed at its extremities that it might easily force its way through the warp. All that is effected by the shuttle is the conveyance of the woof across the warp. To keep every thread of the woof in its proper place it is necessary that the threads of the warp should be decussated. This was done by the leashes, called in Latin *licia*, in Greek *μίτοι*. By a leash we are to understand a thread having at one end a loop, through which a thread of the warp was passed, the other end being fastened to a straight rod called *liciatorium*, and in Greek *κανών*. The warp, having been divided by the *harundo*, as already mentioned, into two sets of threads, all those of the same set were passed through the loops of the corresponding set of leashes, and all these leashes were fastened at their other end to the same wooden rod. At least one set of leashes was necessary to decussate the warp, even in the plainest and simplest weaving. The number of sets was increased according to the complexity of the pattern, which was called *bilix* or *trilix* (*δίμιτος, τρίμιτος* or *πολύμιτος*) according as the number was two, three, or more. The process of annexing the leashes to the warp was called *ordiri telam*, also *licia telae addere*, or *adnectere*. It occupied two women at the same time, one of whom took in regular succession each separate thread of the warp and handed it over to the other (*παραφέρειν, παραδίδοναι, προσφωρεῖσθαι*); the other, as she received each thread, passed it through the loop in proper order; an act which is now called "entering," in Greek *διάζεσθαι*. Supposing the warp to have been thus adjusted, and the pen or the shuttle to have been carried through it, it was then decussated by drawing forwards the proper rod so as to carry one set of the threads of the warp across the rest, after which the woof was shot back again, and by the continual repetition of this process the warp and woof were interlaced. Two staves were occasionally used to fix the rods in such a position as was most convenient to assist the weaver in drawing her woof across her warp. After the woof had been conveyed by the shuttle through the warp, it was driven sometimes downwards, as is represented in the woodcut, but more commonly upwards. Two different instruments were used in this part of the process. The simplest, and probably the most ancient, was in the form of a large wooden sword (*spatha, σπάθη*). The *spatha* was, however, in a great degree superseded by the comb (*pecten, κεκρίς*), the teeth of which were inserted between the threads of the warp, and thus made by a forcible impulse to drive the threads of the woof close together.

Ancient Loom. (Vatican Vergil.)

The lyre, the favorite musical instrument of the Greeks, was only known to the Romans as a foreign invention. Hence they appear to have described its parts by a comparison with the loom, with which they were familiar. The terms *iugum* and *stamina* were transferred by an obvious resemblance from the latter to the former object; and although they adopted into their own language the Greek word *plectrum* (*πλῆκτρον*) they used the Latin *pecten* to denote the same thing, not because the instrument used in striking the lyre was at all like a comb in shape and appearance, but because it was held in the right hand and inserted between the stamina of the lyre, as the comb was between the stamina of the loom. See Blümner, *Technologie*, i. pp. 120–157; Marquardt, *Privatleben der Römer*, 519–527; and a paper by Ahrens in *Philologus*, xxxv. pp. 385 foll.

Telămon. Now Telamone; a town and harbour of Etruria, a few miles south of the river Umbro, said to have been founded by Telamon on his return from the Argonautic expedition (Diod. iv. 56). Here the Romans defeated the Greeks in B.C. 225 (Polyb. i. 27–31).

Telămon (*Τελαμών*). The son of Aeacus and Endeïs, and brother of Peleus. Having assisted Peleus in slaying their half-brother Phocus (see PELEUS), Telamon was expelled from Aegina, and came to Salamis. Here he was first married to Glaucé, daughter of Cychreus, king of the island, on whose death Telamon became king of Salamis. He afterwards married Periboea or Eriboea, daughter of Alcathoüs, by whom he became the father of Aiax, who is hence frequently called *Telamoniades* and *Telamonius heros*. Telamon himself was one of the Calydonian hunters and one of the Argonauts. He was also a warm friend of Heracles, whom he joined in his expedition against Laomedon of Troy, which city he was the first to enter, and also against the Amazons (Pind. *Nem.* iii. 65). Heracles, in return, gave to him Theanira or Hesioné, a daughter of Laomedon, by whom he became the father of Teucer and Trambelus.

Telamōnes. See ATLANTES.

Telchīnes (*Τελχῖνες*). A family or a tribe said to have been descended from Thalassa or Poseidon, whence Eustathius gives them fins instead of feet (*ad* Hom. p. 771). They are represented in three

different aspects: (1) As cultivators of the soil and ministers of the gods, in which capacity they came from Crete to Cyprus, and from thence to Rhodes, where they founded Camirus, Ialysus, and Lindus. Rhodes, which was named after them Telchinis, was abandoned by them because they foresaw that the island would be inundated. Poseidon was intrusted to them by Rhea, and they brought him up in conjunction with Caphira, a daughter of Oceanus. Rhea, Apollo, and Zeus, however, are also described as hostile to the Telchines. Apollo is said to have assumed the shape of a wolf, and to have thus destroyed the Telchines, and Zeus to have overwhelmed them by an inundation (Ovid, *Met.* vii. 367). (2) As sorcerers and envious daemons, their very eyes and aspect are said to have been destructive. They had it in their power to bring on hail, rain, and snow, and to assume any form they pleased; they, further, mixed Stygian water with sulphur, in order thereby to destroy animals and plants. (3) As artists they are said to have invented useful arts and institutions, and to have made images of the gods. They worked in brass and iron, and made the sickle of Cronos and the trident of Poseidon (Diod. v. 55; Pausan. ix. 19, 1; Strabo, pp. 472, 653; Tzetz. *Chil.* vii. 124). They seem in general to suggest the gnomes of the Northern mythology and the genii of Oriental folklore. They may be compared also with the Idaei Dactyli. See DACTYLI.

Teleboae. See TAPHIAE.

Teleclides (Τηλεκλείδης). A Greek poet of the Old Comedy, a violent opponent of Pericles and supporter of Nicias (Plut. *Per.* 3, 16; *Nic.* 4). He is said to have written only six pieces, of which a few fragments are still extant, printed in Meineke's collection.

Telegŏnus (Τηλέγονος). The son of Odysseus and Circé. At his mother's command he set out to find his father. Landing on the coast of Ithaca, he began to plunder the fields, and Odysseus came out armed against him. Telegonus did not recognize his father, and mortally wounded him with the spine of a sting-ray which Circé had given him to serve as the barb of his lance. When he learned that the wounded man was his father, he took the body home with him, accompanied by Telemachus and Penelopé, and subsequently married the latter. He was supposed to be the founder of Tusculum (Hor. *Carm.* iii. 29, 8) and Praenesté, near Rome (Plut. *Parall. Min.* 41; Propert. ii. 32, 4). The legend of Telegonus was the theme of the *Telegonea* by the Cyclic poet Eugammon of Cyrené. The strange manner in which Odysseus met his death is also mentioned in Oppian (*Halieut.* ii. 497). Roman tradition ascribed to Telegonus a daughter Mamilia, the legendary ancestor of the Mamilii.

Telemăchus (Τηλέμαχος). The son of Odysseus and Penelopé. He was still an infant when the Trojan War began, and when his father had been absent from home nearly twenty years, Telemachus went to Pylos and Sparta to gather information concerning him. He was hospitably received by Nestor, who sent his own son to conduct Telemachus to Sparta. Menelaüs also received him kindly, and communicated to him the prophecy of Proteus concerning Odysseus. From Sparta Telemachus returned home; and on his arrival there he found his father, whom he assisted in slaying the suitors. (See ODYSSEUS.) According to some accounts, Telemachus became the father of Perseptolis either by Polycasté, the daughter of Nestor, or by Nausicaa, the daughter of Alcinoüs (Eustath. *ad* Hom. p. 1796; Dict. Cret. vi. 6). Others relate that he was induced by Athené to marry Circé, and became by her the father of Latinus (see CIRCÉ); or that he married Cassiphoné, a daughter of Circé, but in a quarrel with his mother-in-law slew her, for which he was in his turn killed by Cassiphoné (Tzetz. *ad* Lyc. 808). The story of Telemachus was taken as a basis for a famous romance by the great French Archbishop Fénelon, entitled *Télémaque*, which Louis XIV. regarded as a satire on his court, but which was long popular in France as a school-book.

Telĕmus. The son of Eurymus, and celebrated as a soothsayer (*Odyss.* ix. 509).

Telĕphus (Τήλεφος). The son of Heracles and Augé, the daughter of King Aleus of Tegea, and priestess of Athené. As soon as he was born he was exposed by his grandfather, who was angry because his daughter had broken the vows of her office. In some accounts she was set adrift, like Danaë, with her child and cast on the Mysian coast. In other versions of the story Telephus was reared by a hind (ἔλαφος), and educated by King Corythus in Arcadia. On reaching manhood, he consulted the Delphic Oracle to learn his parentage, and was ordered to go to King Teuthras in Mysia (Apollod. iii. 9, 1; Diod. iv. 33; Hyg. *Fab.* 100). He there found his mother, and succeeded Teuthras on the throne of Mysia. He married Laodicé or Astyoché, a daughter of Priam; and he attempted to prevent the Greeks from landing on the coast of Mysia. Dionysus, however, caused him to stumble over a vine, whereupon he was wounded by Achilles (Pind. *Ol.* ix. 112; *Isth.* v. 52; viii. 109; Pausan. x. 28; Dict. Cret. ii. 3). Being informed by an oracle that the wound could only be cured by "the wounder," Telephus repaired to the Grecian camp; and as the Greeks had likewise learned from an oracle that without the aid of Telephus they could not reach Troy, Achilles cured Telephus by means of the rust of the spear by which he had been wounded (Dict. Cret. ii. 10; Hor. *Epod.* xvii. 8; Ov. *Met.* xii. 112; *Rem. Am.* 47). Telephus, in return, pointed out to the Greeks the road which they ought to take. According to one story, Telephus, in order to induce the Greeks to help him, went to Argos, and snatching Orestes from his cradle threatened to kill him unless Agamemnon would persuade Achilles to heal the wound.

Telesia. Now Telese; a town in Samnium, on the road from Allifae to Beneventum.

Telesilla (Τελέσιλλα). A celebrated Argive lyric poetess and heroine, who flourished about B.C. 510. She led a band of her countrywomen in the war with the Spartans and took part in their victory, so that her statue was erected in the Temple of Aphrodité at Argos (Pausan. ii. 20, 7). Some fragments of her verse are printed in Bergk's *Poet. Lyr. Graeci* (1878). See Neue, *De Telesillae Reliquiis* (1843).

Telesīnus, PONTIUS. See PONTIUS.

Telĕtae (τελέται). See MYSTERIA.

Tellēnae. A town in Latium, between the later Via Ostiensis and the Via Appia.

Tellus. See GAEA.

Telo Martius. Now Toulon; a port-town of Gallia Narbonensis on the Mediterranean. It was of little account until the later Empire.

Telōnes, Telōnae (τελῶναι, from τέλος, "a tax"). Among the Athenians, the name telonae was given to the farmers of the taxes and imposts, which were not collected by State officers, but were sold at certain times by auction to the highest bidder. Smaller taxes were taken up by single persons who collected the money themselves. For larger taxes demanding a large capital, companies were often formed, represented by one person called the τελωνάρχης, who concluded the contract with the State. Sureties had also to be produced on this occasion. Such companies employed subordinate officers to collect the taxes. The payments were made by the farmers at certain periods at the senate-house, or βουλευτήριον, and one payment was usually made in advance when the contract was made. In default of payment, the farmer became ἄτιμος, and in certain circumstances might be imprisoned. If the debt was not paid by the expiration of the ninth *prytaneia*, it was doubled, and the property of the debtor and his sureties confiscated. The ἀτιμία descended to the children until the debt was paid. On the other hand, the farmer was protected by the State against fraud by severe laws. He was also exempt from military service, so that he might not be hindered in performing his duties. For the similar institution among the Romans, see PUBLICANI.

Telos (Τῆλος). A small island of the Carpathian Sea, one of the Sporades.

Telos (τέλος). A tax. The taxes imposed by the Athenians and collected at home were either ordinary or extraordinary. The former constituted a regular or permanent source of income; the latter were only raised in time of war or other emergency. The ordinary taxes were held mostly upon property, and upon citizens indirectly, in the shape of toll or customs; though the resident aliens paid a poll-tax (called μετοίκιον) for the liberty of residing at Athens under the protection of the State. There was a duty of two per cent. (πεντηκοστή) levied upon all exports and imports. An excise was paid on all sales in the market (called ἐπωνία), though it is not known what the amount was. Slave-owners paid a duty of three oboli for every slave they kept; and slaves who had been emancipated paid the same. This was for a long time a very productive tax before the fortification of Decelea by the Lacedaemonians. The justice fees (πρυτανεῖα, παράστασις) were a lucrative tax in time of peace. The extraordinary taxes were the property-tax, and the compulsory services called "liturgies" (λειτουργίαι). Some of these last were regular, and recurred annually; the most important, the *trierarchia*, was a war-service, and performed as occasion required. As these services were all performed, wholly or partly, at the expense of the individual, they may be regarded as a species of tax. (See EISPHORA; **LITURGIA**; TRIERARCHIA.) The tribute (φόρος) paid by the allied States to the Athenians formed, in the flourishing period of the Republic, a regular and most important source of revenue. In Olymp. 91–2, the Athenians substituted for the tribute a duty of five per cent. (εἰκοστή) on all commodities exported or imported by the subject States, thinking to raise by this means a larger income than by direct taxation. This was terminated by the issue of the Peloponnesian War, though the tribute was afterwards revived, on more equitable principles, under the name of σύνταξις. Other sources of revenue were derived by the Athenians from their mines (μέταλλα), and public lands, fines, and confiscations. The public demesne lands, whether pasture or arable, houses or other buildings, were usually let by auction to private persons. The conditions of the lease were engraved on stone. The rent was payable by prytaneias. These various sources of revenue produced, according to Aristophanes, an annual income of two thousand talents in the most flourishing period of Athenian hegemony. Though τέλος may signify any payment in the nature of a tax or duty, it is more commonly used of the ordinary taxes, as customs, etc. Ἰσοτέλεια signifies the right of being taxed on the same footing and having other privileges the same as citizens—a right sometimes granted to resident aliens; ἀτέλεια signifies an exemption from taxes, or other duties and services—an honour very rarely granted by the Athenians. As to the farming of taxes, see TELONES. See also Gilbert, *Greek Constitutional Antiquities*, pp. 351 foll., Eng. trans. (1895).

Telphussa. See THELPUSA.

Temenĭdae. See TEMENUS.

Temenītes. See SYRACUSAE.

Temĕnus (Τήμενος). The son of Aristomachus. He was one of the Heraclidae who invaded the Peloponnesus. (See HERACLIDAE.) After the conquest of the peninsula, he received Argos as his share. His descendants, the Temenidae, being expelled from Argos, are said to have founded the kingdom of Macedonia, whence the kings of Macedonia called themselves Temenidae (Herod. viii. 138; Thucyd. ii. 99).

Temĕsa or Tempsa. Now Torre del Piano del Casale; a town in Bruttium on the Sinus Terinaeus, was one of the most ancient Ausonian towns in the south of Italy; famous for its copper mines (Ov. *Met.* xv. 707; Stat. *Silv.* i. 1, 42).

Temnus. (1) (τὸ Τήμνον ὄρος). Now Demirdji-Dagh; a mountain of Mysia, extending eastward from Ida to the borders of Phrygia, and dividing Mysia into two parts. It contains the sources of the Macestus, Mysius, Caïcus, and Evenus (Strabo, p. 616). (2) Now Kayajik; a city of Aeolis, in the northwest of Lydia, thirty miles south of Cymé. It was nearly destroyed by an earthquake in the reign of Tiberius, and is not noticed by Pliny. Under the Byzantine Empire it was called ARCHANGĒLUS (Strabo, p. 621; Xen. *Hell.* iv. 8, 5; Herod. i. 149; Pol. v. 77; Tac. *Ann.* ii. 47).

Tempé (Τέμπη, contr. of Τέμπεα). A beautiful and romantic valley in the north of Thessaly, between Mounts Olympus and Ossa, through which the Peneus escapes into the sea. The scenery of this glen is frequently praised by poets; and it was also celebrated as one of the favourite haunts of Apollo, who had transplanted his laurel from this spot to Delphi. The whole valley is rather less than five miles in length, and opens gradually to the east into a wide plain. Tempé is also of great importance in history, as it is the only pass through which an army can invade Thessaly from the north. In some parts the rocks on each side of the Peneus approach so close to each other as only to leave room between them for the stream,

and the road is cut out of the rock in the narrowest point. Tempé is the only channel through which the waters of the Thessalian plain descend into the sea; and it was the common opinion in antiquity that these waters had once covered the country with a vast lake, till an outlet was formed for them by some great convulsion in nature which rent the rocks of Tempé asunder (Herod. vii. 129; Strabo, p. 430; Caesar, *B. C.* iii. 34; Catull. lxiv. 285; Ovid, *Met.* i. 568; Verg. *Georg.* ii. 469; Hor. *Od.* iii. 1, 24). So celebrated was the scenery of Tempé that its name was given to any beautiful valley. Cicero so calls a valley in the land of the Sabines near Reaté, through which the river Velinus flowed (Cic. *Ad Att.* iv. 15); and there was a Tempé in Sicily, through which the river Helorus flowed, hence called by Ovid *Tempe Heloria* (*Fast.* iv. 477).

Templum (the Greek τέμενος). Originally a space marked out with the *lituus* (q. v.) by the augur (see AUGURES) according to a certain fixed procedure when he pitched his tent (*tabernaculum capere*). It was then regarded as separate from any other land (*locus liberatus et effatus*). Its ground-plan was a square or rectangle, having its four sides turned to the different points of the compass; its front, however, according to strict Roman custom, faced towards the west, so that any one entering the temple had his face turned towards the east. It was not until later that the front was frequently made to face the east. The building erected on this space, and corresponding to it in plan, did not become a *fanum*, or sanctuary of the gods, until it had been consecrated by the *pontifices*. See DEDICATIO.

As, however, there were *fana* which were not templa—e. g., all circular buildings—so there were templa which were not *fana*. Of this sort were the places where public affairs were transacted, such as the Rostra in the Forum, the places where the Comitia met or the Senate assembled, and even the city of Rome itself. The sanctuaries of the gods were designed as templa if they were intended to serve for meetings of the Senate, and if the form of worship prescribed for such sanctuaries were appropriate to the definition of a templum. For the word as used to designate a building, see the next article.

Templum (ναός, Att. νεώς: ἱερόν). A temple, the word containing the root of the Greek τέμενος. (See the preceding article.) In ancient times temples were regarded as the dwelling-places and treasuries of the gods to whom they were dedicated. They might contain an image or not, but the latter case was exceptional. As they were not houses of worship intended for the devotion of a great multitude, they were usually of very limited extent. There were, however, temples of considerable size, among which was that of Artemis in Ephesus (see EPHESUS), 438 feet long by 226 broad; that of Heré in Samos; that begun by Pisistratus and finished by Hadrian, and dedicated to Zeus Olympius in Athens (see ATHENAE; OLYMPIEUM); and the temple of Zeus at Agrigentum, which was never wholly completed. All of these were nearly as large as the first mentioned. Only temples like that at Eleusis, in which the celebration of the Mysteries took place, were intended to accommodate a larger number of people. (See MYSTERIA.) The great sacrifices and banquets shared by all the people were celebrated in the court of the temple (περίβολος), which included the altars for sacrifice, and was itself surrounded by a wall with only one place of entrance. It was a feature common to all temples that they were not built directly on the surface of the ground, but were raised on a substructure which was mounted by means of an uneven number of steps, so that people were able as a good omen to put their right foot on the first and last step (Vitruv. iii. 4, 8; cf. Petron. 30).

The usual shape of GREEK temples was an oblong about twice as long as wide, at the front and back of which was a pediment or gable-roof (ἀετός, ἀέτωμα, *fastigium*). Round temples with dome-shaped roofs were the exception. The principal part of the temple was the chamber containing the image of the god. This stood upon a pedestal which was often placed in a small niche (*aedicula*) and usually stood facing the east, opposite folding-doors which always opened outwards. Before the image stood an altar used for bloodless sacrifices. This chamber, called in Greek ναός, and in Latin *cella*, generally received its light through the open door alone, but sometimes there was also an opening in the roof. There were also temples designated *hypaethral* (from ὕπαιθρος, "in the open air"); in these there was no roof to the middle chamber of the *cella*, which was separated from the lateral portions by one or more rows of pillars on each side.

Generally each temple belonged to only one god; but sometimes a temple was regarded as the dwelling-place of several deities, either those who were worshipped in groups, as the Muses, or those who were supposed to stand in close alliance or other relationship to each other, such as the twins Apollo and Artemis, and Apollo, as leader of the Muses, together with the Muses themselves. Frequently only one god had an image and altar in the chief *cella*, while others were worshipped in adjoining chapels. Lastly, there were double temples, with two *cellae* built in opposite directions. Many temples had, besides the *cella*, a kind of Holy of Holies (ἄδυτον, μέγαρον) which was entered only by the priests, and by them only at certain times, and which was sometimes under the ground. Usually an open porch or vestibule (πρόναος), with pillars in front, stood before the *cella*, and in it were exposed the dedicatory offerings. There was often also an inner chamber behind the image (ὀπισθόδομος) which served for various purposes, the valuables and money belonging to the temple being often kept there. It was surrounded by a wall, and the door was well secured by locks.

The various kinds of temples are usually distinguished according to the number and arrangement of the pillars. Thus:

(1) A temple *in antis* (ἐν παράστασι) is one in which the *pronaos* (sometimes also the *opisthodomos*) was formed by the prolongation of the side walls of the temple (παραστάδες, *antae*) and by two columns placed between the terminal pilasters of the *antae* (q.v.).

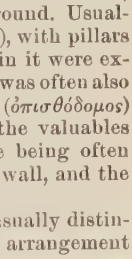


Fig 1.

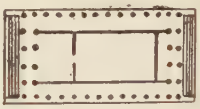
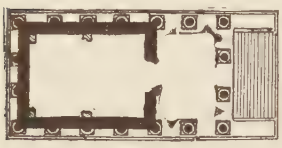


(2) *Prostylos* (πρόστυλος), with the columns in front (fig. 1), is an epithet descriptive of a temple, the front of whose *pronaos* was formed in all its breadth by a row of columns quite separate from the walls, and with the columns at the extremities standing in front of the *antae*.

(3) *Amphiprostylos* (ἀμφιπρόστυ-



λος) describes a temple (fig. 2) with the columns arranged at the back as well as in the front.

(4) *Peripteros* (περίπτερος) describes a temple (fig. 3) surrounded on all sides by a colonnade supporting the architrave. This is the type most frequently employed by the Greeks.

Fig. 2.

Fig. 3.

(5) *Pseudoperipteros* (ψευδοπερίπτερος, "falsely *peripteros*") is an epithet of a temple in which the architrave appears to be carried by pilasters or by "engaged" columns in the walls of the *cella*. This form is seldom used by the Greeks, but often by the Romans.

Fig. 4.

(6) *Dipteros* (δίπτερος) describes a temple (fig. 5) surrounded by two ranges of columns.

(7) *Pseudodipteros* (ψευδοδίπτερος, "falsely *dipteros*," fig. 6). A temple surrounded with only a single range of columns, but at such a distance that they correspond in position to the exterior range of the dipteral temple.

Fig. 5.

Fig. 6.

According to the number of columns in front, which must always be an even number, since the entrance was in the middle, it is usual to distinguish temples as *tetra-*, *hexa-*, *octa-*, *deca-*, or *dodecastylos* (with four, six, eight, ten, or twelve columns). The number of columns along each side was usually one more than twice the number along the front, but this was not the invariable rule. (For the architrave and for the columns of the different orders, see ARCHITECTURA; COLUMNA.) The frieze resting on the architrave, and (in the Doric order) the metopes (*μέτοπαι*) in particular (q. v.), as well as the two pediments (*τύμπανα*), were decorated with sculptures, and these sculptures, as well as the walls of the temple, often had more life-like and more varied appearance given to them by appropriate colouring. The coping of the roof, as well as the angles of the pediment, was ornamented by *ἀκροτήρια*, which consisted of statues, vases, or *ἀνθέμια*, groups of flowers and leaves.

In the plan of their temples the ROMANS originally followed the Etruscans. The ground-plan of the Etruscan temple was nearly a square, the ratio of the depth to frontage being as six to five. Half of the space was taken up by the *cella* and the rest by the columns. The architrave was of wood, and without any special frieze. The great temple with three *cellae* on the Roman Capitol was built in the Etruscan style, the middle and largest *cella* being sacred to Iupiter, and the smaller ones on either side to Minerva and Iuno. Under Greek influence the different forms of the Greek temple began to be imitated at Rome, the most prevalent type being that described as *prostylôs*, which lent itself most easily to the requirements of a templum in the strict sense of the term. An important alteration in the Greek form of temple was brought about by the introduction of vaulted arches or groined ceilings, which were seldom used by the Greeks, and never on a large scale, but were brought to great perfection by the Romans. They took the form of a cylindrical vaulting in the case of a quadrangular *cella* and a dome in the case of the round temples, which were frequent with the Romans. The two principal forms of the latter are (1) the *monopteros*, which consisted of a single circle of columns standing on a platform mounted by steps and supporting the columns which bore a dome on a circular architrave. (2) The *peripteros*, with the same arrangement of columns, but with a circular *cella* in the middle which was covered by a dome rising from the surrounding colonnade. In a third variety, of which we have an example in the Pantheon (q. v.), the circular body of the building is not surrounded by columns externally, but only provided on one side with an advanced portico.

The following are the principal Greek temples of which some remains still exist:

A. DORIC.

Syracuse, island of Ortygia, Temple of Artemis, hexastyle, very archaic, scanty remains. Seventh century B.C., or even earlier.

Selinus, Sicily, three temples on the Acropolis, all hexastyle, with nineteen, fourteen, and thirteen columns respectively on the flanks, of local limestone, very early in style. Seventh century.

Syracuse, Ortygia, Temple of Athené, hexastyle, now built into the cathedral. Late seventh century.

Selinus, great Temple of Zeus in the Agora, octastyle, with seventeen columns on the flanks: never finished. Seventh century.

Corinth, hexastyle, with fifteen columns on the flanks; only seven columns now remain. Late seventh century.

Segesta, Sicily, hexastyle, the peristyle perfect, but the *cella* wholly gone, probably unfinished. Sixth century.

Agrigentum, Sicily, the great Temple of Zeus, heptastyle, with fourteen columns on the flanks, pseudoperipteral, slight remains. Sixth century.

Aegina, hexastyle, with twelve columns on the flanks; very perfect. Sixth century.

Paestum (Lucania), the so-called Temple of Poseidon, hexastyle, with fourteen columns on the flanks; very perfect. Sixth century. See illustration under PAESTUM.

Delphi, Temple of the Pythian Apollo, hexastyle, peripteral; designed by Spintharus of Corinth soon after the burning of the previous temple (the fourth on that site) in the year B.C. 548. Second half of the sixth century.

Agrigentum, Sicily, three hexastyle temples, two of them very perfect. Late sixth or early fifth century.

Selinus, the middle temple on the Agora. About B.C. 500.

Assos, Asia Minor, hexastyle, with sculpture on the architrave, very rude in style, scanty remains. About B.C. 480.

Temple at Agrigentum. (From a photograph.)

Athens, so-called Temple of Theseus, hexastyle, with thirteen columns on the flanks, very perfect. About B.C. 465. See illustration on p. 151.

Olympia, Temple of Zeus, built by Libon of Elis, hexastyle, with thirteen columns on the flanks; slight remains standing. B.C. 469–457.

Olympia, the Heraeum, a mixture of many dates, mostly destroyed, hexastyle, with sixteen columns on the flanks.

Athens, the Parthenon, octastyle, with seventeen columns on the flanks, still fairly perfect, built by Ictinus. B.C. 450–438. See PARTHENON.

Selinus, hexastyle temple in the Agora. Middle of fifth century.

Sunium, Attica, hexastyle, a few columns only remaining. Middle of fifth century.

Bassae, Temple of Apollo Epicurius, hexastyle, with fifteen columns on the flanks, built by Ictinus, still fairly perfect. About B.C. 440.

Rhamnus, Attica, Temple of Nemesis, hexastyle, peripteral; and Temple of Themis, cella with portico *in antis*, and walls of polygonal masonry, a late survival of this early method of building. Middle of the fifth century.

View of the Athenian Acropolis and Parthenon from the Rear.

Eleusis, the Hall of the Mysteries, with a dodecastyle portico, which is a later addition. About B.C. 440–220.

Tegea, Temple of Athené Alea, built by Scopas, hexastyle, with thirteen columns on the flanks; date soon after B.C. 393.

Paestum, enneastyle temple, and a small hexastyle temple, probably built by native Lucanian architects in the fourth century B.C.

B. Ionic.

Athens, the temple of Niké Apteros and the Erechtheum on the Acropolis.

Temple of Niké Apteros. (Athens.)

Olympia, the circular Philippeum with eighteen Ionic columns outside, and, inside the cella, engaged columns of the Corinthian order: similar in plan to the **Roman Temple of** Vesta. See Roma, p. 1381.

In Asia Minor.

Sardis, Temple of Cybelé, octastyle, with columns sixty feet high, of which only three remain, date about B.C. 500.

Xanthus in Lycia, Heroon of unknown dedication, a small tetrastyle, peripteral building on a lofty *podium*. Its sculpture is now in the British Museum. The date is doubtful, but it is probably not earlier than about B.C. 400.

The Troad, Temple of Apollo Smintheus, octastyle, pseudo-dipteral, with very close (pycnostyle) intercolumniation. Most of the existing building seems to date from a period probably about B.C. 400 to 350.

Samos, Temple of Heré, decastyle, dipteral. The existing temple is of the fourth century B.C. An earlier temple on the same site was built in the seventh century B.C. by Rhoecus of Samos.

Magnesia ad Maeandrum, Temple of Artemis Leucophryne, hexastyle, pseudo-dipteral, built by Hermogenes about B.C. 350.

Teos, Temple of Dionysus, hexastyle, also built by Hermogenes about B.C. 350.

Priené, Temple of Athené Polias, hexastyle, very similar to the temple at Teos; it was built in the second half of the fourth century B.C. and was dedicated by Alexander the Great.

Branchidae near Miletus, Temple of Apollo Didymaeus; decastyle, dipteral. This and the temple at Samos were the only two Greek decastyle temples.

Ephesus, Temple of Artemis (Artemision), octastyle, dipteral, built during the reign of Alexander the Great, B.C. 356–323. In many respects the most celebrated and magnificent temple of all Greece. See Ephesus.

The following are the principal temples at Rome of which some remains still exist:

The Temple of Vesta, at the south of the Forum. Part of the very early tufa foundations and some fallen fragments of columns and entablatures remain. See Roma, p. 1381.

The Pantheon, the most perfectly preserved of all. See Pantheon.

The Temple of Castor, at the south angle of the Forum. A fine octastyle, peripteral building of the Corinthian order. Built in the reign of Augustus on the site of an older structure.

The Temple of Divus Iulius, near that of Castor, built by Augustus. Very scanty remains exist.

The Temple of Concord, near the Tabularium of the Capitol. Rebuilt by Augustus. Little but the *podium* remains.

The Temple of Vespasian, near that of Concord. A prostyle, hexastyle building of the Corinthian order. Built by Titus and Domitian. Three marble columns remain.

The Temple of Faustina, at the eastern angle of the Forum. A prostyle, hexastyle building of the Corinthian order, built by Antoninus Pius in memory of his wife Faustina. Except for the

back wall of the *cella*, the temple is still fairly well preserved.

The Temple of Mars Ultor, in the Forum of Augustus, built by him to commemorate the vengeance inflicted on the murderers of Iulius Caesar. A good part of it still exists.

Temple of Roma Aeterna and Venus Felix, built by Hadrian and Antoninus Pius. It was a deca-

Ruins of the Temple of Roma and Venus.

style dipteral temple of the Corinthian order, and remains of its concrete *podium* exist to-day on the north side of the Via Sacra.

There are well-preserved ruins of Roman temples at Ancyra in Galatia and elsewhere in Asia Minor, in Northern Africa, at Nîmes in France (see NEMAUSUS), and in England.

See Nissen, *Das Templum* (Berlin, 1869); Michaelis, *Der Parthenon* (1875); Fergusson, *History of Architecture*, 4 vols. (London and New York, 1865–1876; new ed. 1891); Falkener, *Ephesus and the Temple of Diana* (London, 1862); Fergusson, *The Parthenon* (on the lighting of temples) (London, 1883); Norton, *The Temple of Zeus at Olympia* (Philadelphia, 1877); and the article ARCHITECTURA.

Ten Attic Orators. The ten orators included in the Alexandrian Canon. (See CANON ALEXANDRINUS.) They were Antiphon, Andocides, Lysias, Isocrates, Isaeus, Aeschines, Lycurgus, Demosthenes, Hyperides, and Dinarchus. See Quintil. x. 1, 76; Sears, *History of Oratory*, pp. 51 foll. (Boston, 1896); and Blass, *Attische Beredsamkeit*.

Tenctĕri or **Tenchtĕri.** A people of Germany dwelling on the Rhine between the Ruhr and the Sieg, south of the Usipetes, in conjunction with whom their name usually occurs (Caes. *B. G.* iv. 1, 4–16; Tac. *Germ.* 32).

Tenĕdos or **Tenĕdus** (*Τένεδος*). A small island of the Aegaean Sea, off the coast of Troas, of an importance very disproportionate to its size, on account of its position near the mouth of the Hellespont, from which it is about twelve miles distant. It appears in the legend of the Trojan War as the station to which the Greeks withdrew their fleet, in order to induce the Trojans to think that they had departed, and to receive the wooden horse (Verg. *Aen.* ii. 21). In the Persian War it was used by Xerxes as a naval station (Herod. vi. 31). It afterwards became a tributary ally of Athens, and adhered to her during the whole of the Peloponnesian War, and down to the peace of Antalcidas, by which it was surrendered to the Persians. At the Macedonian conquest the Tenedians regained their liberty. The women of the island were noted for their beauty (Athen. p. 609).

Tenes or **Tennes** (*Τήννης*). Son of Cycnus and Proclea, and brother of Hemithea. Cycnus was king of Colonae in Troas. His second wife was Philonomé, who fell in love with her step-son; but as he repulsed her advances she accused him to his father, who put both his son and daughter into a chest and threw them into the sea. But the chest was driven on the coast of the island of Leucophrys, of which the inhabitants elected Tenes king, and which he called Tenedos, after his own name (Pausan. x. 14, 2; Diod. v. 83).

Tennis. See PĪLA

Tenos (*Τῆνος*). Now Tino; a small island in the Aegaean Sea, southeast of Andros and north of Delos. Here was a celebrated temple of Poseidon (Herod. viii. 82).

Tensa and **Thensa.** The chariot used for processions, or for the gods at the Circensian Games at Rome (Cic. *Verr.* ii. 7, 72). The thensa was highly ornamented and drawn usually by horses. The chief senators in their official robes escorted it with the *pueri patrimi* (see PATRIMI), all laying hold of the bridles and traces or perhaps thongs attached to the vehicle. When the thensa was used for carrying the statues of the emperors it was sometimes drawn by elephants, as is seen from an existing medal of Nero.

Tent. See CONTUBERNALES; PAPILIO; PRAETORIUM; TENTORIUM.

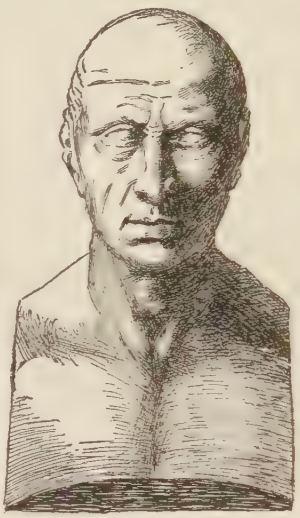
Tentorium (*σκηνή*). A tent stretched upon cords and distinguished from *tabernaculum*, which was formed on a framework of wood. But the distinction is not strictly observed (Hirt. *B. G.* viii. 5; Suet. *Tib.* 18; Verg. *Aen.* i. 472).

Tentўra (*τὰ Τέντυρα*). Now Denderah; a city of Upper Egypt, on the western bank of the Nile, between Abydos and Coptos, with celebrated temples of Hathor (the Egyptian Aphrodité), Isis, and Typhon (Ptol. iv. 5, 6). There are still magnificent remains of the temples of Hathor and of Isis: in the latter was found the celebrated Zodiac, which is now preserved at Paris.

Teos (*Τέως*). Now Sighajik; one of the Ionian cities on the coast of Asia Minor, renowned as the birthplace of the lyric poet Anacreon. It stood at the end of the bay, between the promontories of Coryceum and Myonnesus. Here was a celebrated temple of Dionysus and a theatre, of which remains still exist.

Tepidarium. See BALNEAE, p. 192.

Terĕbra. (1) (*τρύπανον*). Any instrument used for boring holes in wood, stone, or metal. Of these there were several varieties — e. g., the *terebra antiqua*, a drill-borer; *terebra gallica*, a large gim-



let, etc. See Blümner, *Technologie*, ii. pp. 223–226. (2) A military engine for boring into the walls of a besieged town. See ARIES.

Terentia. (1) The first wife of M. Cicero, the orator, to whom she bore two children, a son (Marcus) and a daughter (Tullia). She was a woman of sound sense and great resolution; and her firmness of character was of no small service to her weak and vacillating husband in some important periods of his life. During the Civil War, however, Cicero was offended with her extravagance (*Ad Att.* xi. 16, 24; Plut. *Cic.* 41), and divorced her in B.C. 46. (See PUBLILIA.) Terentia is said to have attained the age of 103. (2) Also called TERENTILLA, the wife of Maecenas, and said to have been one of the mistresses of Augustus. See Suet. *Aug.* 69, with Peck's note; and the article MAECENAS.

Terentiānus Maurus. A Roman writer on metres who probably lived in the second century A.D. A poem of his, entitled *De Litteris, Syllabis, Pedibus, Metris*, is extant. It shows considerable skill in handling the various metres, and regards all metres as based originally upon the hexameter and the iambic trimeter. It is in three parts or books, and is printed in Keil's *Grammatici Latini*, vi. 313; and separately by Santen and Van Lennep, with a commentary (Utrecht, 1828), Lachmann (Berlin, 1836), and Gaisford (Oxford, 1855).

Terentīni Ludi. See LUDI, p. 975.

Terentius Afer, PUBLIUS, usually called in English TERENCE. Our principal source of information regarding the life of P. Terentius Afer is an extract from Suetonius's work *De Viris Illustribus*, preserved by Donatus in the introduction to his commentary on Terence (see Suet. p. 291, Roth). Some of the statements contained in this life are confirmed by later writers, and light is thrown on the literary and personal relations of the poet by the prologues to the different plays. From these sources, chiefly, the facts of his life, so far as they are known, have been gleaned, and are in brief as follows: Terence was a native of Carthage (though his cognomen, Afer, suggests that he was of African [Libyan], not Phœnician, parentage). He came to Rome as a slave, where he became the property of the senator Terentius Lucanus, who, impressed by the natural gifts of the young African, had him educated, and afterwards gave him his freedom. How he came to Rome is uncertain. The suggestion that he was a captive taken in war is discredited by the fact that he lived within the period beginning with the close of the Second Punic War (B.C. 201), and ending with the commencement of the Third (B.C. 149)—a fact noted by Fenestella (Suet. p. 292, Roth). It is possible, however, that he was purchased by Lucanus from a slave-dealer who either caught him or bought him in Africa (see Teuffel-Schwabe, *Rom. Lit.* § 102, 3). According to the custom of the day he took the *nomen* of his former master; but his *praenomen* may have been received from another patron, who, it has been thought, was Scipio Africanus the Younger. He is described as of medium stature, graceful in person, and of dark complexion (Suet. p. 294, Roth). His personal attractions and the fact of his African birth won for him the esteem and confidence of Scipio Aemilianus, through whom and the comic poet Caecilius he became intimate with Gaius Laelius, Furius Philus, and other members of the younger circle of literary men at Rome—men who loved Greek literature for its own sake and lent the weight of their influence against the sentiment, prevalent at Rome since the days of Cato, that the pursuit of Greek culture and learning tended to luxury and the corruption of morals. Sulpicius Gallus, Quintus Fabius Labeo, and Marcus Popilius, men of consular rank, and distinguished for their literary attainments, were also among his friends and admirers.

P. Terentius Afer.

A pretty but apocryphal story is told by Suetonius (p. 292, Roth) in reference to his first play, the *Andria*, or "Maid of Andros." On presenting it to the aediles for acceptance he was bidden by them to take it for judgment to Caecilius, then an old man. Terence entered the presence of Caecilius when the latter was at dinner, and being in mean attire was not received with very marked demonstrations of respect. Accordingly he proceeded to read his play, seated on a *subsellium* or stool placed at the foot of the festal couch, but had not gone far with his recitation when he was invited by the literary veteran to "recline" with him at table. The reading continued until the play was finished, when Caecilius again expressed his approval and delight. As Caecilius died in 168, and the *Andria* was first exhibited in 166, this story is regarded by some critics as doubtful; but the substance of it is given in the Eusebian Chronicle, and it may easily have happened that the *Andria* was ready for representation two years before its actual appearance on the stage. Now it was more particularly to please such men as Caecilius and Scipio, and others already named, who favoured a strict adherence to Greek models, that Terence wrote his comedies, and it would have been natural that before publishing his compositions he should read them in the presence of his noble friends and avail himself of their observations and suggestions. Such a practice would account in part for the genuine Roman character of Terence's style and language. But that his plays were actually written for him by Scipio and Laelius—a charge brought against him by his rivals—is not fully sustained by anything that we know. The charge was asserted by one Luscius Lanuvinus, who is referred to in Terence's prologues as *malivolus vetus poeta*. This "malignant old poet" was at the head of the opposite party, which contended vigorously for a close imitation of the earlier Latin comedians, and resented the innovations of what may be called the Greek school. His enmity, however, was largely ignored by Terence, who refused either to confirm or deny the charge of plagiarism (see Prol. to *Adel.* 15 foll.). This ret-

icence has had the effect of lending an air of probability to the charge. It was no doubt owing, however, to a disinclination openly to avow that which might give offence to men whose good will he could not afford to lose; or else to an unwillingness to make public denial of what he considered to be unworthy of serious notice. Another sin laid at the door of our poet by his enemies was the practice of *contaminatio*. "Contamination" was the process of combining parts of two or more plays in one. It afforded opportunity to work up a more elaborate plot, and to introduce greater variety of incident and character, than a strict adherence to a single original would have done; but the practice was a dangerous one, as it often led to accidental contradictions and inconsistencies in the plot. Terence readily admits the charge, and defends it in his prologues.

After producing six comedies, between B.C. 166 and 160, Terence went to Greece, in order, we are told, to escape suspicion of plagiarism, or, as is more credible, to study Greek life and institutions, with the object of representing them more accurately on the Roman stage (see Suet. pp. 293–294, Roth). The best manuscripts state that he set out in his twenty-fifth year; inferior manuscripts say in his thirty-fifth. If the former are to be relied on, Terence must have been born in B.C. 185, which was also the year of Scipio's birth. This would make Terence only nineteen years old in B.C. 166, the year in which his first play was brought out. Now it is highly improbable that a composition so finished in style, and so true in its delineation of human character, as the *Andria* should have been the work of so youthful a writer. It is extremely natural, on the other hand, that his well-known intimacy with Scipio should have led to the supposition that the two men were contemporaries, and Suetonius quotes Cornelius Nepos as affirming that Terence, Scipio, and Laelius were of the same age (Suet. p. 292, Roth). On the contrary, Fenestella (an antiquarian of the Augustan period) is also cited by Suetonius as contending that the poet was older than his two friends. Everything considered, we are inclined to place the year of Terence's birth considerably earlier than B.C. 185, and it is not unlikely that the number XXXV, already alluded to as possibly representing his age at the time of the journey to Greece, gives the real clue to the situation, in spite of the fact that it occurs only in interpolated manuscripts. Terence never returned to Italy, but died abroad in B.C. 159. Accounts vary as to the place and manner of his death. Quintus Cosconius is authority for the statement that he perished at sea on his way back from Greece, and that his translations of one hundred and eight of Menander's comedies perished with him. This is in part confirmed by Vulcatius, whose lines on the death of Terence are given by Suetonius. Another account relates that he died at Stymphalus in Arcadia (or at Leucadia) from an illness induced by grief at the loss of his baggage and MSS., which he had sent on before him to the ship in which he was to sail for Italy. He died possessed, says Suetonius, of twenty *iugera* of cultivated land on the Appian Way, and his daughter subsequently was married to a Roman knight; but according to Porcius, whom also our biographer cites, he had not even a hired house whither a slave might report the news of his master's death; of so little profit to him had been his intimacy with Furius, Laelius, and Scipio.

The six comedies written and exhibited at Rome by Terence have been transmitted to us. The following enumeration gives them in the supposed order of their composition according to the Codex Bembinus:

I. The *Andria*, or Maid of Andros, based on the Ἀνδρία and Περινθία of Menander; first exhibited at the Ludi Megalenses, in B.C. 166.

II. The *Eunuchus*, based on the Εὐνοῦχος and Κόλαξ of Menander; first performed at the Ludi Megalenses, in B.C. 161.

III. The *Heauton Timorumenos*, or Self-tormentor, based on the Ἑαυτὸν Τιμορούμενος of Menander; first performed at the Ludi Megalenses, in B.C. 163.

IV. The *Phormio* (name of the parasite in the play), based on the Ἐπιδικαζόμενος of Apollodorus; first performed at the Ludi Romani, in B.C. 161.

V. The *Hecyra*, or Mother-in-law, based on the Ἑκυρά of Apollodorus, and (possibly) the Ἐπιτρέποντες of Menander; first brought out at the Ludi Megalenses, in B.C. 165.

VI. The *Adelphoe*, or Brothers, taken from the Ἀδελφοί of Menander, with one scene added from the Συναποθνήσκοντες of Diphilus; first performed at the funeral games of Aemilius Paulus, in B.C. 160.

The first performance of the *Hecyra* was interrupted by the greater attractions of a rope-dancer, as we learn from the prologues to the play (1. 4 and 2. 26). A second attempt at exhibition was made, but without success, at the funeral games of Lucius Aemilius Paulus—the occasion on which the *Adelphoe* was presented; but it was not until it had been brought before the public for the third time—at the Ludi Romani of the same year—that the *Hecyra* met with the desired recognition. (See Dziatzko, *Rhein. Mus.* 20, 576; 21, 72; Ritschl, *Op.* ii. 237; Teuffel, 110, 5, 3.)

The external history, so to speak, of the several plays was given in the *didascaliae* (διδασκαλίαι). These were prefatory notices inserted in the MSS., probably by Roman grammarians of the Augustan age, and when complete were indicative of the following particulars: (1) The name of the play and of the Latin poet; (2) the name of the public games or festival at which the play was first brought out; (3) the names of the managers or directors of the games; (4) the name of the chief actor and director of the troop or *grex;* (5) the name of the musical composer; (6) the species of flute employed; (7) the title of the Greek original, and the name of its author; (8) the number indicating the place of the play in the order of composition of the works of the poet; (9) the names of the consuls for the year in which the play was first exhibited. In examining the *didascaliae* of Terence we notice particularly that the principal actor and director of the troop for all the plays is Lucius Ambivius Turpio; that the composer of the flute-music is in every instance Flaccus, the slave of Claudius, and that two Greek poets only, Menander and Apollodorus, have been selected by Terence for imitation—if we except the small part played by Diphilus in contributing to the *Adelphoe*.

It is evident that Terence selected as his models the most refined of the writers of the New Comedy of Athens. A comparison of the plays with the fragments of the Greek comic poets (ed. Meineke) sustains this view; and his efforts at refinement

of speech and manners, together with his fondness in general for things Greek, are especially noticeable in reference to certain peculiarities of treatment. Of all the titles of his plays not one is a purely Latin name; and the same may be said of his *dramatis personae*—of those at least who speak on the stage. His allusions to Roman customs and institutions are rare as compared with those in Plautus; and his personages, whether rich or poor, slaves or free, speak much alike, their style being that in vogue in the cultivated circles at Athens. Where Plautus uses the language of the street Terence continues to employ that of the *salon* and the drawing-room. Exaggerated puns and plays on words, newly made forms and forced expressions, coarse humour and obscene talk—which abounded in the plays of Plautus and rendered them highly acceptable to the Roman populace, whom Plautus wrote to please—these found slight favour with Terence, whose most appreciative audience, as has been already remarked, was of a different stamp. All six comedies are remarkable for their smoothness and moderate tone, as well as for the art with which the plot is unfolded, through the natural sequence of incidents and play of motives. Striking effects, sharp contrasts and incongruities, extravagance of speech and even creative fancy, which characterize the writings of the elder poet, are almost wholly absent. Terence did not aim at originality. His purpose was to present a true picture of Greek life and manners in the purest Latin at his command; and although the attempt was made with a loss to himself of the popularity enjoyed by Plautus, yet if the judgment of succeeding generations is a fair criterion he must be credited with having fully attained his object. The language which he received from Plautus he improved and rendered more artistic by shaping it carefully to the graceful rhythm and diction of the Greek dramatists, notably Menander. This is his great gift to Roman literature—a gift not wholly appreciated until the cultivation of letters, and in particular the study of Terence, had become fashionable in the time of Cicero.

Yet Terence had the faults of his qualities, and his defects are noticed by the literary critics of the century succeeding his own. He is called by Caesar a Menander cut-in-two (*O dimidiate Menander*, Suet. p. 294, Roth), since he reflects the refinement and finish of the Greek poet, but lacks his force and comic vigour; and Cicero in similar fashion credits him with having given Menander to the Romans, but in subdued tones (*sedatis vocibus*, Suet. p. 294, Roth). And in accordance with these criticisms we find the manners, habits, and customs of men correctly portrayed in his comedies, but their passions and desires suppressed and moderated. There is much ἦθος, but little πάθος. The lyrical element is much thrust into the background, and the whole metrical structure of the drama is less complex than in the comedies of Plautus. In short, while Plautus wrote always for the people, Terence never failed to keep in view the circle of noblemen and *literati*, whose encouragement and patronage were his mainstay, and whose culture and learning and breadth of view afforded him a standard and a guide.

While the comedies of Terence were occasionally exhibited after his death (see Dziatzko, *Ueber die Terenz. Didaskalien* in the *Rh. Mus.* xx. 570; xxi. 64), they became also a special subject for study with the learned. Suetonius's Life has transmitted to us the names of not a few historians, biographers, and antiquarians, who busied themselves with his writings. Such were Fenestella, Cornelius Nepos, Porcius Licinus, Volcacius Sedigitus, Varro, Santra, Q. Cosconius, Cicero, and Caesar. In the so-called *Auctorium Aeli Donati* also are the names of the critic Maecius (Tarpa) and the poet Vallegius or Vagellius. The first is reported as saying that there were two poets bearing the name of Terence, the other being a native of Fregellae and distinguished as Terentius Libo. The second is of interest to us as repeating the charge that Terence merely "brought out the plays of Scipio." Cicero quotes Terence in his letters and orations (cf. *Ad Fam.* i. 9, 19; Phil. ii. 6, 15), and Horace in his Satires and Epistles exhibits decided traces of the comic poet's influence and happy expression. This influence was not confined, however, to literature, but extended to the thought and speech of everyday life. Many of Terence's sayings became proverbs, and the oft-quoted verse *homo sum; humani nihil a me alienum puto* (*Heaut.* i. 1, 77) voices a spirit of tolerance and sympathy with human nature which was foreign to the old Roman austerity of character, and may be set down as the lesson taught the Romans by the comedy of Menander.

In later times also the writings of Terence have been pointed to as models of good style and poetic finish. Petrarch speaks of both him and Plautus in terms of unlimited eulogy. The great Latin writers of the Renaissance, such as Erasmus and Melanchthon, made a careful study of his works; and in modern literature the French especially have been his ardent admirers and most frequent imitators. He is described by Montaigne (in the words of Horace) as *liquidus puroque simillimus amni*, and the same writer adds, "he does so possess the soul with his graces that we forget those of his fable" (*Essays of Montaigne*, trans. by Ch. Cotton, chap. lxvii.). He is praised by Fénelon above Molière, while Sainte-Beuve accords him unstinted eulogy in his *Nouveaux Lundis;* and M. Joubert says of Terence: "Le miel attique est sur ses lèvres; on croirait aisément qu'il naquit sur le mont Hymette." (See *Histoire de la Littérature Latine*, by E. Neqrette; and Sellar, *Roman Poets of the Republic*, p. 220.) Michael Baron's *L'Andrienne* is a reflection of the *Andria;* Bruey's *Le Muet* and La Fontaine's *L'Eunuque* are based on the *Eunuchus*, and Molière's *Le Mariage Forcé* and *Les Fourberies de Scapin* remind us of the *Phormio*. Baron's *L'École des Pères*, and Fagan's *La Pupille* are more than suggested by the *Adelphoe*, which has also contributed largely to the *École des Maris* of Molière. In England the *Andria* has been imitated in Steele's *Conscious Lovers*, the *Adelphoe* in Garrick's *Guardian*, and the *Eunuchus* in Sir Charles Sedley's *Bellamira;* and the *Adelphoe* has furnished the leading characters in Cumberland's *Choleric Man*, and Shadwell's *Squire of Alsatia*. Indeed, dramatic literature in general owes much to Terence, and his influence upon the literary style of later ages has been both marked and extensive.

The farther the language of Terence became removed through time from the speech of everyday life the greater became the demand for exegetical commentaries on the text. Among the names of early commentators is that of M. Valerius Probus of Berytus, who is known to have revised and an-

notated editions of Lucretius, Vergil, Horace, Persius, and Terence in the first century of the Christian era. The commentary of Aelius Donatus, who taught at Rome about the middle of the fourth century A.D., relates to all the plays except the *Heauton Timorumenos*, and consists in reality of his own work united with that of an elder contemporary named Euanthius. That part which related to the *Heauton Timorumenos* has been lost, but its place is indifferently supplied by J. Calphurnius, who wrote in the fifteenth century. The commentary of Eugraphius, who is believed to have lived in the sixth century A.D., is of less value to us than that of Donatus. Its main purpose was to lay down for school children the laws of rhetoric as they applied to the study of Terence. The grammarians Servius (who wrote at Rome in the fourth century A.D.) and Priscianus (who wrote in Latin at Constantinople in the latter part of the fifth or the beginning of the sixth century) furnish important information. Other commentators were Aemilius Asper, Helenius Acro, and perhaps Arruntius Celsus the grammarian. Under the head of commentary should fall also the *periochae* of Sulpicius Apollinaris of the second century A.D., one of which is prefixed to each play and consists of twelve verses—each verse being an iambic senarius. The *periochae* contain brief summaries of the plots, and, like the *didascaliae* and the *praefationes* of Donatus (or Euanthius) connected with them, are of value in determining the meaning of the text.

To our list of early commentaries should be added the scholia of the Codex Bembinus. These are accessible in the special articles of Umpfenbach in *Hermes*, ii., and Studemund in *Neue Jahrb.* 97. The scholia of the other manuscripts were thought by Umpfenbach to be unworthy of particular study, but their importance has been demonstrated by Frid. Schlee, whose edition of the "*Scholia Terentiana* existing in MSS. other than the Bembine" was published at Leipzig in 1893. See an analysis of the same by S. G. Ashmore in the *Class. Rev.* vol. viii. No. 8.

The manuscripts of Terence have been separated into three classes. The Codex Bembinus (A) constitutes in itself Class I. The remaining codices have been divided by Umpfenbach into two groups, according to their supposed merit. To the first group, or Class II., belong the Victorianus (D), the Decurtatus (G), and Fragmentum Vindobonense (V). This is the D family. The second group, or Class III., contains the Parisinus (P), Vaticanus (C), Basilicanus (B), Ambrosianus (F), and Riccardianus (E). These are known as the P family. These nine codices are all that were considered by Umpfenbach to be worthy of collation. The most ancient of them is the Bembinus, so called from its owner, Cardinal Pietro Bembo, who lived from A.D. 1470 to 1547. It is also the most trustworthy, because it is the only MS. certainly free from the arbitrary alterations of the unknown grammarian Calliopius, who made an effort to settle the text of Terence in the fourth or fifth century A.D. The MSS. of Class III. contain marginal paintings or miniatures illustrating the scenes in the different plays. Those of the Codex Vaticanus are especially notable (see Frid. Leo, *Rh. Mus.* xxviii. 335). Twenty-six of them, comprising the complete set for the *Phormio*, have been reproduced in this country from photographs taken in the Vatican library expressly for the Classical Department of Harvard University, and with the permission of the Cardinal Librarian and the Pope. They are said never before (1893) to have been accurately reproduced. The illustrations in the Codex Parisinus are also very fine, and for this reason the MS. is kept on exhibition in the *Salle d'Exposition des Imprimés et des Manuscrits* in the Bibliothèque Nationale at Paris. A description of it is given by Umpfenbach in his preface. As to which of the two groups, Class II. or Class III., is the more authoritative, there is much dispute. For a discussion of the question see Ashmore's review of Schlee's work on the scholia, cited above, and an article by Professor E. M. Pease in the *Transactions of the American Philological Association* for 1887, vol. xviii. (See also Ashmore's edition of the *Adelphoe*, pp. li. and lii., Macmillan & Co.) On the whole, it is most probable that the Parisinus (P) and Vaticanus (C) have suffered less from errors creeping into the individual MSS. than the Victorianus (D) and the Decurtatus (G), and that more changes have been made in the archetype of the D family than in the archetype of the P family.

For references to special monographs and articles on the Terentian MSS. see Teuffel-Schwabe, *Rom. Lit.* § 109, 2.

Among modern editors of Terence, Gabriel Faernus (Florence, 1565) is well known for his careful examination of the Bembine Codex, and Guyet (Strassburg, 1657) for his scholarship and readiness to condemn as spurious difficult passages in the text. Richard Bentley is famous for the excellence of his critical commentary, and for the attention he gave to the metres. His editions (London, 1726; Amsterdam, 1727) mark an era in Terentian criticism. Bentley's English manuscripts of Terence are discussed by Umpfenbach (*Phil.* xxxii. 442), and by Minton Warren (*Amer. Jour. of Philol.* iii. 59). For more than a century after Bentley no edition of Terence appeared which could be mentioned as presenting a decided improvement of the text. That by E. St. John Parry (London, 1857) is lacking in critical discernment. That of Fleckeisen (Leipzig, 1857) presents a text which is in advance of that of Parry, for Fleckeisen made good use of a collation of the Bembine Codex by Petrus Victorius, now in the Royal Library at Munich. The critical value of Wagner's edition (London, 1869) is somewhat impaired by carelessness; but the text contains some improvements upon that of Fleckeisen. The edition of Umpfenbach (Berlin, 1870) was far in advance of all that had gone before it, and is based almost exclusively on the text of the Codex Bembinus. But the latest and most trustworthy text of the six plays is that of Dziatzko (Leipzig, 1884). In this the editor makes full recognition of the labours of Umpfenbach, and attaches due importance to the readings of the Bembine manuscript. Separate annotated editions of the *Phormio* (1874, revised 1884) and the *Adelphoe* (1881) have been published by the same scholar; and A. Spengel has edited the *Adelphoe* and *Andria* (Berlin, 1879 and 1888 respectively) with considerable critical acumen. Other (collective) editions are the *editio princeps* (Strassburg, 1470), and those of Muretus (Venice, 1555), F. Lindenbrog (c. Donati et Eugraphii Comm., Paris, 1602; Frankfort, 1623), Pareus (Neap. 1619), Boecler (Strassburg, 1657), Westerhovius (Haag. 1732; reprint by G. Stallbaum, Leipzig, 1830), Lemaire (Paris, 1827), Klotz

(c. Schol. Donati et Eugraphii, Leipzig, 1838). The editions of Westerhovius and Stallbaum contain also the commentaries of Donatus and Calphurnius.

See Hayley, *The Metres of Terence* (New York and Boston, 1895); and for references to works on Terentian metres, see Bond and Walpole's ed. of the *Phormio*, p. xxx., and Ashmore's *Adelphoe*, p. lvi., besides Teuffel-Schwabe, § 111, 7.

Terentius Varro. See VARRO.

Terentum or **Tarentum** (from *terere*, "to bore"). A volcanic cleft in the Campus Martius which gives the name to the Ludi Tarentini, then passing afterwards into the Ludi Saeculares. See LUDI, p. 974.

Teres (Τήρης). King of the Odrysae and father of Sitalces. He was the founder of the great Odrysian monarchy (Herod. iv. 80; vii. 137; Thuc. ii. 29). See ODRYSAE; SITALCES.

Tereus (Τηρεύς). A son of Ares and king of the Thracians in Daulis. He afterwards reigned in Phocis (Thuc. ii. 29). Pandion, king of Attica, who had two daughters, Philomela and Procné, called in the assistance of Tereus against some enemy, and gave him his daughter Procné in marriage. Tereus became by her the father of Itys, and then concealed her in the country, that he might dishonour her sister Philomela, whom he deceived by saying that Procné was dead. At the same time he deprived Philomela of her tongue. (For a different version of the story, cf. Ovid, *Met.* vi. 565.) Philomela, however, soon learned the truth, and made it known to her sister by a few words which she wove into a peplus. Procné thereupon killed her own son Itys, and served up the flesh of the child in a dish before Tereus. She then fled with her sister. Tereus pursued them with an axe, and when the sisters were overtaken they prayed to the gods to change them into birds. Procné, accordingly, became a nightingale, Philomela a swallow, and Tereus a hoopoe (Apollod. iii. 14, 8; Tzetz. *Chil.* vii. 142, 459; Ovid, *Met.* vi. 424–675; Serv. *ad Ecl.* vi. 78). According to some, Procné became a swallow, Philomela a nightingale, and Tereus a hawk (Hyg. *Fab.* 45). It is clear that this story is a development of the older myth about Aedon (q. v.), daughter of Pandareus (*Od.* xix. 58), and that the plaintive song of the nightingale had much to do with its origin.

Tergesté. Now Trieste; a town of Istria, on a bay in the northeast of the Adriatic Gulf, called after it Tergestinus Sinus. It was made a Roman colony by Vespasian (Pliny, *H. N.* iii. 127). For its use in a proverbial saying, see THEVESTÉ.

Tergĭnum. A thong used in flogging slaves (Plaut. *Pseud.* i. 2, 22).

Tergiversatio. The Roman term for the dereliction of duty involved in a legal prosecution being dropped by the prosecutor. Under Nero this offence was punished by fines and disgrace (*infamia*).

Teridātes. See TIRIDATES.

Terīna. Now S. Eufemia; a town on the west coast of Bruttium, from which the Sinus Terinaeus derived its name (Pliny, *H. N.* iii. 72).

Teriŏlis or **Teriŏla Castra.** A fortress in Rhaetia, which has given its name to the country of the Tyrol.

Termessus (Τερμησσός). A city of Pisidia, high up on the Taurus in the pass through which the river Catarrhactes flowed, and regarded as so impregnable that even Alexander the Great made no attempt to take it (Polyb. xxii. 18).

Terminalia. See TERMINUS.

Termĭnus. The Roman god of boundaries and frontiers, under whose special protection were the stones (*termini*) which marked territorial limits. The regulations respecting these stones and the religious customs and institutions connected with them went back to the time of Numa Pompilius. At the setting of such a stone all those living near the boundary assembled, and in their presence the hole prepared for the reception of the stone was watered with the blood of a sacrificial animal; incense, field-produce, honey, and wine were sprinkled over it, and a victim sacrificed. The stone, anointed and decked with garlands and ribbons, was then placed upon the smouldering bones and pressed into the earth. Whoever pulled up the stone was cursed, together with his draught-cattle, and any one might kill him with impunity and without being defiled by his blood. In later times the punishment of fines was instituted instead.

The festival of the TERMINALIA was celebrated in Rome and in the country on the 23d of February (Dionys. ii. 74). The neighbours on either side of any boundary gathered round the landmark, with their wives, children, and servants, and crowned it, each on his own side, with garlands, and offered cakes and bloodless sacrifices. In later times, however, a lamb or sucking-pig was sometimes slain, and the stone sprinkled with the blood. Lastly, the whole neighbourhood joined in a general feast. A lamb was also sacrificed in the grove of Terminus, which was six Roman miles from Rome, near the ancient border of the town of Laurentum (Ovid, *Fasti*, ii. 639; Hor. *Epod.* ii. 59). On the Capitol there was a stone dedicated to Terminus, which had originally stood in the open air, but when the Temple of Iupiter was founded by the last king, Tarquinius Superbus, it was enclosed within the building, as the augurs would not allow it to be removed (Livy, i. 55; Varro, *L. L.* v. 74).

Terpander (Τέρπανδρος). The father of Greek music, and through it of lyric poetry. He was a native of Antissa in Lesbos, and flourished between B.C. 700 and 650 (Plut. *De Mus.* 30, p. 1141). He established the first musical school or system that existed in Greece, and added three strings to the lyre, which before his time had only four. The few remains of his verse are printed by Bergk in his lyrical collections. See MUSICA.

Terpsichŏré (Τερψιχόρα). One of the nine Muses, who presided over the choral song and dancing. See MUSAE.

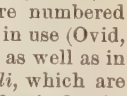
Terra. See GAEA.

Terracīna. See TARRACINA.

Terra-cottas (*ἀγάλματα ὀπτῆς γῆς, signa fictilia*). Apart from its use for vases, the Greeks first employed terra-cotta for the roofs and cornices of temples (see ANTEFIXA; ECTYPUS), an innovation ascribed to the Corinthian Butades of uncertain date; and the Etruscans and the Romans made the same use of it. These decorations consist of masks or reliefs. Later, statuary was made of the same material. Thus the statue of Iupiter, which one of the Tarquins set in the Capitol, was of terra-cotta (Pliny, *H. N.* xxxv. 157), and in the front pediment of the same temple was a *quadriga*

Figurine from Tanagra. (Drawn by Gudin.)

of terra-cotta. The greater part of the ancient terra-cottas now remaining consist of "figurines" or statuettes representing domestic deities, and also a great variety of models in various colours—white, green, and brown. Great quantities of these have been found in tombs and elsewhere, as at Tanagra, Pompeii, Camirus, Gela, Athens, and Corinth. See Rohden, *Terracotten von Pompeii* (1880); Henzy, *Catalogues des Figures en Terre-Cuite du Louvre* (1883); Kekulé, *Griech. Terracotten aus Tanagra* (1878); Martha, *Catalogues des Figurines des Musées d'Athènes* (1880); and the article FICTILE.



Tertullĭānus, Q. SEPTIMIUS FLORENS, usually called TERTULLIAN, the most ancient of the Latin Christian Fathers now extant. Notwithstanding the celebrity which he has always enjoyed, our knowledge of his personal history is extremely limited, and is derived almost exclusively from a succinct notice by St. Jerome. From this we learn that Tertullian was a native of Carthage, the son of a proconsular centurion (a sort of aide-de-camp to provincial governors); that he wrote chiefly during the reigns of Septimius Severus and of Caracalla; that he became a presbyter, and remained orthodox until he had reached the term of middle life, when, in consequence of the envy and ill-treatment which he experienced on the part of the Roman clergy, he went over to the sect of the Montanists (see MONTANUS), and wrote several books in defence of these heretics; that he lived to a great age, and was the author of many works. His birth may be placed about A.D. 160, and his death about 240. The most interesting of his numerous works is his *Apologeticum*, or defence of Christianity. It was written at Carthage, probably about A.D. 200. Other treatises of his that are of especial value as throwing light on the history of his times and upon questions of antiquities are the *Ad Nationes*, the *De Idololatria*, the *De Spectaculis*, and the *Adversus Iudaeos*.

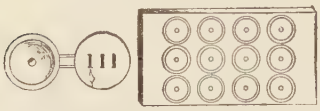
Tertullian is an interesting figure—a Puritan of the early Church—stern, uncompromising, and filled with a passionate religious fervour which makes some of his declamatory passages read like the exhortations of a Mucklewrath or a Macbriar. His Latinity is also worthy of careful study, as being a good specimen of the literary African, strongly tinged with an Hebraic colouring. It is he who first coined the Latin ecclesiastical terminology to which St. Augustine gave currency a little later. He quotes the Bible freely from a current translation into Latin now lost, and known as the *Itala*. See HIERONYMUS; ITALA; SERMO PLEBEIUS.

The best complete edition of his works is that of Oehler in 3 vols. (Leipzig, 1853–55); but a more critical edition is now in course of publication in the *Corpus Scriptorum Ecclesiast. Lat.* (pt. i. Vienna, 1890). See Harnack, *Dogmengeschichte*, 2d ed. in 3 vols. (Freiburg, 1888–90). The contents of the separate treatises are summarized by Fuller in Smith and Wace's *Dictionary of Christian Biography*, vol. iv. (London, 1887). There is an edition with English notes of the *De Spectaculis*, *De Idololatria*, and *De Corona Militis* by Currey (Cambridge, 1883). For an English translation of Tertullian, see Clark's *Ante-Nicene Christian Library*.

Teruncius, sc. *nummus*. A silver coin (Varro, *L. L.* v. 174), or perhaps only a convenient designation for a sum equal to one-fourth of the Roman *as*, and hence the same as the copper *quadrans*. See AS; QUADRANS.

Tessĕra. A square or cube; a die; a token. (1) For the tessera used in making pavements, see PAVIMENTUM. (2) As dice the tesserae were used in gambling. (See ALEA.) These were of the same form, and were commonly made of ivory, bone, or some close-grained wood. They were numbered on all the six sides like the dice now in use (Ovid, *Trist.* ii. 473 foll.); and in this respect as well as in their form they differed from the *tali*, which are often distinguished from tesserae by classical writers (See TALUS.) Whilst four *tali* were used in playing, only three tesserae were anciently employed. Hence arose the proverb, ἢ τρὶς ἕξ, ἢ τρεῖς κύβοι, i. e. "either three sixes or three aces," meaning all or none (Plat. *Legg.* xii. 968 E). Three sixes are mentioned as the highest throw in the *Agamemnon* of Aeschylus (33). The die used for gambling was called *tessera lusoria*.

Tessera Lusoria. (From Herculaneum.)



(3) *Tessera hospitalis* (σύμβολον). A token of mutual hospitality and friendship; consisting of a small die, which was given by a host to his guest at the time of departure, when it was broken into two parts, each party retaining one-half, in order that if either of them or their descendants should again meet, they might

Tessera Hospitalis.

recognize each other, and renew or repay their ancient family obligations (Plaut. *Poen.* v. 2, 86–93).

(4) *Tessera frumentaria* and *nummaria.* A voucher or ticket given upon certain occasions by the magistrates to the poor, in exchange for which they received the quantities of bread, corn, wine, and oil, or sums of money inscribed upon it (Suet. *Nero*, 11; *Aug.* 40, 41); or sometimes scattered in a bounty (*congiarium*) amongst the crowd by the emperors, or wealthy personages, for the purpose of courting popular favour (Suet. *Dom.* 4). See FRUMENTARIAE LEGES.

Tesserae Frumentariae. (Rich.)

(5) *Tessera theatralis.* A ticket of admission to the theatre, or other place of public amusement (Mart. viii. 78), distributed by the *duumvir* and entitling the holder to a place at the representation. On it were inscribed the number of the seat, the division and row in which it was situate, and in some cases the title of the play performed. See THEATRUM.

(6) *Tessera militaris* (*σύνθημα*). A billet or wooden tablet (Polyb. vi. 34) with the watchword inscribed upon it, which was given out by the officers to their soldiers, in order that they might have a test for distinguishing friends from foes; it was also employed as a means by which the orders of the commander were distributed through the different divisions of an army (Livy, vii. 35; xxvii. 46; Veg. *Mil.* ii. 7; Verg. *Aen.* vii. 637).

Tesseracontēres. A ship with forty banks of oars. See NAVIS.

Testa, C. TREBATIUS. A Roman jurist, and a contemporary and friend of Cicero. Trebatius enjoyed considerable reputation under Augustus as a lawyer. Horace addressed to him the First Satire of the Second Book; and Cicero's *Topica* is dedicated to him.

Testamentum. A will. In order to be able to make a valid Roman will, the testator had to have the *testamentifactio*, a term expressing the legal capacity to make a valid will. The *testamentifactio* was the privilege only of Roman citizens who were *patresfamilias*. The following persons consequently had not the *testamentifactio:* those who were in the *potestas* or *manus* of another, or in *mancipii causa*, as sons and daughters, wives *in manu*, and slaves; Latini Iuniani and Dediticii; Peregrini who could not dispose of their property according to the form of a Roman will; and an *impubes* or minor could not dispose of his property by will even with the consent of his tutor. When a male was fourteen years of age, he obtained the *testamentifactio*, and a female obtained the power, subject to certain restraints, on the completion of her twelfth year: deaf and dumb persons and lunatics (*muti, surdi, furiosi*, and *prodigi*) had not the *testamentifactio.* In order to constitute a valid will, it was necessary that an heir (*heres*) should be instituted, which might be done in such terms as follows: *Titius heres esto; Titium heredem esse iubeo.* Originally there were two modes of making wills; either at the Comitia Calata, which were appointed twice a year for that purpose, or *in procinctu*—that is, when a man was going to battle. A third mode of making wills was introduced which was effected *per aes et libram*, whence the name of *testamentum per aes et libram.* If a man had neither made his will at the Comitia Calata nor *in procinctu*, and was in imminent danger of death, he would mancipate (*mancipio dabat*) his *familia*—that is, his patrimonium—to a friend, and would tell him what he wished to be given to each person after his death. There seems to have been no rule of law that a testament must be written. The heir might either be made by oral declaration (*nuncupatio*) or by writing. Written wills, however, were the common form among the Romans, at least in the later republican and in the imperial periods. They were written on tablets of wood or wax, whence the word *cera* is often used as equivalent to *tabella;* and the expressions *prima, secunda cera* are equivalent to *prima, secunda pagina.* The will must have been in some way so marked as to be recognized, and the practice of the witnesses (*testes*) sealing and signing the will at last became common. It was necessary for the witnesses both to seal (*signare*)—that is, to make a mark with a ring (*anulus*) or something else on the wax—and to add their names (*adscribere*). Wills were to be tied with a triple thread (*linum*) on the upper part of the margin, which was to be perforated at the middle part, and the wax was to be put over the thread and sealed. Tablets which were produced in any other way had no validity. A man might make several copies of his will, which was often done for the sake of caution. When sealed, it was deposited with some friend, or in a temple, or with the Vestal Virgins; and after the testator's death it was opened (*resignare*) in due form. The witnesses or the major part were present, and after they had acknowledged their seals, the thread (*linum*) was broken and the will was opened and read, and a copy was made; the original was then sealed with the public seal and placed in the *archium*, whence a fresh copy might be had, if the first copy should ever be lost. See Gaius, *Das Erbrecht;* and the articles HERES; LEGATUM.

Testamentum Porcelli. "The last will of a little pig." The title of a *jeu d'esprit* in Latin written before the fourth century A.D. and found in a MS. of the ninth century. It purports to be the will of a young pig who is about to be killed by the cook and who formally bequeathes the parts of his body to his friends and relatives. The document is attested in due form by seven pigs. It is evidently intended for children, for it has the real nursery ring, though some have supposed it to be written as a burlesque of legal forms. St. Jerome (*Comment. in Is.* xii. init.) says that it was repeated by boys at school exhibitions as an amusing bit of fun. It is edited with Latin notes by Moritz Haupt in his *Opuscula* (ii. 178 foll.), and with English notes by H. T. Peck in Peck and Arrowsmith's *Roman Life in Latin Prose and Verse* (New York, 1894). Bücheler prints the text in his smaller edition of Petronius (Berlin, 1882).

Testis. A witness. See DIKÉ; IUSIURANDUM; JUDICIAL PROCEDURE; MARTYRIA.

Testūdo (*χελώνη*). Literally "a tortoise (shell)". (1) The general designation for different kinds of sheds for the protection of soldiers engaged in a siege. (2) The name testudo was also applied to the covering made by a close body of soldiers, who placed their shields over their heads to secure themselves against the darts of the enemy. The shields fitted so closely together as to present one

Testudo made of Shields. (Antonine Column.)

unbroken surface without any interstices between them, and were also so firm that men could walk upon them, and even horses and chariots be driven over them. A testudo was formed (*testudinem facere*) either in battle to ward off the arrows and other missiles of the enemy, or, which was more frequently the case, to form a protection to the soldiers when they advanced to the walls or gates of a town for the purpose of attacking them. Sometimes the shields were disposed in such a way as to make the testudo slope. The soldiers in the first line stood upright, those in the second stooped a little, and each line successively was a little lower than the preceding down to the last, where the soldiers rested on one knee. Such a disposition of the shields was called *fastigata testudo*, on account of their sloping like the roof of a building. The advantages of this plan were obvious: the stones and missiles thrown upon the shields rolled off them like water from a roof; besides which, other soldiers frequently advanced upon them to attack the enemy upon the walls. The Romans were accustomed to form this kind of testudo, as an exercise, in the games of the Circus (Livy, xliv. 9).

Tethys (*Τηθύς*). The daughter of Uranus and Gaea, and wife of Oceanus, by whom she became the mother of the Oceanides and of the numerous river-gods (Hes. *Theog.* 136, 337).

Tetrachordon (*τετράχορδον*). A word meaning literally "four-stringed," and hence "having four notes." A scale comprising two tones and a half, which formed the old Greek musical system. The word does not mean any special instrument of music. Vitruvius applies the term to a water-organ (*hydraulus*) when it had only four barrels (x. 8, 2). See HYDRAULUS.

Tetradrachmon (*τετράδραχμων*). A Greek silver coin equivalent to four *drachmae*. See NUMISMATICS, p. 1114.

Tetralogia (*τετραλογία*). A Greek term given to the group of four plays which the poets produced in rivalry with each other at the dramatic contests held at the feast of Dionysus. After the introduction of the Satyric Drama (q. v.), this, or a drama of a comparatively cheerful character (such as the *Alcestis* of Euripides), formed the fourth piece of three tragedies or of a trilogy. By a tetralogy is more particularly meant such a group of four dramas as had belonged to the same cycle of myths, and had thus formed a connected whole. Of such a kind were the tetralogies of Aeschylus. It is doubtful, however, whether he found this type of connected tetralogy already in use or was the first to introduce it. Sophocles abolished the connection between the several pieces, and Euripides followed his example. A complete tetralogy is not extant, although a trilogy exists in the *Oresteia* of Aeschylus, consisting of the tragedies *Agamemnon*, *Choëphorae*, and *Eumenides;* the satyric play appended to it was the *Proteus*. See DRAMA; TRILOGIA.

Tetrarches (*τετράρχης*). Properly the ruler of one of the four parts of a district divided into four governments. Also the title of any petty prince, such as the rulers in those provinces of Asia which were allowed by Rome to retain a certain independence (Marquardt, *Staatsverw.* i. 401).

Tetrastylus. See TEMPLUM.

Tetrĭca. A mountain on the frontiers of Picenum and the land of the Sabines, belonging to the great chain of the Apennines (Varro, *R. R.* ii. 1, 5).

Tetrĭcus, C. PESUVIUS. One of the Thirty Tyrants, and the last of the pretenders who ruled Gaul during its separation from the Empire under Gallienus and his successor, A.D. 267–274. He was defeated by Aurelian at the battle of Châlons (274), and was treated by his conqueror with so much consideration as to give rise to the report that he had himself connived at the result (Eutrop. ix. 9; Trebell. Poll. *Tr. Tyr.* 23).

Tettarakonta (*οἱ τετταράκοντα*). "The Forty." Certain officers chosen by lot, who made regular circuits through the demes of Attica, whence they are called *δικασταὶ κατὰ δήμους*, to decide all cases of *αἰκία* and *τὰ περὶ τῶν βιαίων;* and also all other private causes where the matter in dispute was not above the value of ten drachmae. Their number was originally thirty, but was increased to forty after the expulsion of the Thirty Tyrants and the restoration of the democracy by Thrasybulus, in consequence, it is said, of the hatred of the Athenians to the number of thirty (Pollux, viii. 100). See Schömann, *Ant. Jur. Publ.* p. 267; and *Att. Process*, pp. 88–93 (ed. Lipsius).

Teucer (*Τεῦκρος*). (1) The son of the river-god Scamander by the nymph Idaea. He was the first king of Troy, whence the Trojans are sometimes called *Teucri*. (2) Son of Telamon and Hesioné, was a step-brother of Aiax, and the best archer among the Greeks at Troy. He founded the town of Salamis in Cyprus, and married Eunê, the daughter of Cyprus, by whom he became the father of Asteria. See AIAX; SALAMIS.

Teucri. See MYSIA; TEUCER; TROIA.

Teumessus (*Τευμησσός*). A mountain in Boeotia, near Hypatus, and close to Thebes, on the road from the latter place to Chalcis (Pausan. ix. 9, 1).

Teuta (*Τεῦτα*). The wife of Agron, king of the Illyrians. She assumed the sovereign power on the death of her husband, B.C. 231. In consequence of the injuries inflicted by the piratical expeditions of her subjects upon the Italian merchants, the Romans sent two ambassadors to demand satisfaction, but she not only refused to comply with their demands, but caused the younger of the two brothers to be assassinated on his way home. War was now declared against her by the Romans. The

greater part of her territory was soon conquered, and she was obliged to sue for peace, which was granted to her (B.C. 228), on condition of her giving up the greater part of her dominions (Polyb. ii. 9–12).

Teuthrania. See MYSIA.

Teuthras (Τεύθρας). A mountain in the Mysian district of Teuthrania, a southwestern branch of Temnus.

Teuthras (Τεύθρας). An ancient king of Mysia. He was succeeded in the kingdom of Mysia by Telephus. (See TELEPHUS.) The fifty daughters of Teuthras, given as a reward to Heracles, are called by Ovid *Teuthrantia turba.*

Teutoburgiensis Saltus. A range of hills in Germany, extending from Osnabrück to Paderborn (the Teutoburger Wald or Lippische Wald). It is celebrated on account of the defeat and destruction there of Varus and three Roman legions by the Germans under Arminius, A.D. 9. See ARMINIUS; GERMANIA; VARUS.

Teutŏnes or **Teutŏni.** A powerful people in Germany, who invaded Gaul and the Roman dominions along with the Cimbri, at the latter end of the second century B.C. The name Teutones is not a collective name of the whole people of Germany, as some writers have supposed, but only of one particular tribe, who probably dwelt on the coast of the Baltic, near the Cimbri. See CIMBRI; GERMANIA.

Textile Fabrics. See TELA.

Textor, fem. **Textrix** (*ὑφάντης, ὑφάντρια*). A weaver. (See TELA.) The weavers at Rome were proverbial for their bad language, like the London fishwives, so that Petronius (ch. 32) uses *textorum dicta* in the sense of our "Billingsgate."

Textual Criticism. The criticism of a classical author with a view to establish a sound and defensible text is of two kinds, each of which supplements and aids the other. The first is DIPLOMATIC CRITICISM, which has to do with the age, authenticity, and value of the existing manuscripts (*diplomata*); and the second is VERBAL or GRAMMATICAL CRITICISM, which alters the text in order to make it conform to good sense or to the laws of the language, or to the critic's conception of what the author meant to say. The former is based upon Palaeography; the second in part upon the science of Philology and in part upon æsthetic principles. Wolff and Boeckh classified the former as "Superior" criticism, and the latter as "Inferior," but this terminology is not generally accepted. The best text-critic is he who can bring to bear upon his task a minute palaeographical knowledge and at the same time linguistic training and a sound literary sense.

Textual criticism in Greece originated in the necessity that was felt of a unification and collation of the various versions of the Homeric poems. Homer was to the Greeks much more than a poet; he was long regarded as a great teacher of practical and also of ethical wisdom, and he was read and studied in the schools in much the same spirit as a Christian would study the Bible, or a Mohammedan the Korân. Owing to the fact that the Homeric poems were largely transmitted orally and to the additional fact that the rhapsodists who recited them in public frequently altered the text to suit the special occasion or their own notion of an effective arrangement, there were many versions current even in very early times. It has been inferred that Solon took some steps toward the establishing of an Homeric canon (Plato, *Hipparch.* 228 B; Diog. Laërt. i. 57), and Pisistratus and his son Hipparchus are said to have intrusted a recension of the text to a commission of four scholars who were to edit and unify the poems. (See Flach, *Pisistratos und seine litterarische Thätigkeit* [Tübingen, 1885], and the article HOMERUS.) This recension is thought to have formed the basis of the famous "City Editions" (q. v.) which in turn were worked over by the Alexandrian scholars. Other special texts were made by Theagenes of Rhegium, Stesimbrotus of Thasos (c. 450 B.C.), and by Aristotle, who prepared a version for the use of his pupil Alexander the Great, usually called *ἡ ἐκ νάρθηκος* from the case in which it was kept (Plut. *Alex.* 8; cf. Cope's introduction to Aristotle's *Rhetoric*). Demetrius Phalereus also edited the *Iliad* and the *Odyssey*, while the Sophists spent considerable time in the critical study of Homer. (See Friedel, *De Sophistarum Studiis Homericis* [Halle, 1873]). At about this time criticism was also applied to the texts of other great writers—to those of Aeschylus, Sophocles, and Euripides—of whom an authentic text was promulgated by the orator and statesman Lycurgus, about B.C. 350, which was the only one allowed to be used by the actors. (See Korn, *De Aeschyli, Sophoclis, Euripidis Fabularum Exemplari Lycurgo Auctore Confecto* [Bonn, 1863].) Commentaries were also written on special points by the Stoics and by the Cynics.

A more definite and scientific criticism was that undertaken by the philological section of the School at Alexandria (see ALEXANDRIAN SCHOOL), and in connection with the great Alexandrian Library (see BIBLIOTHECA), for which great quantities of manuscripts were purchased by King Ptolemy at the advice of Demetrius Phalereus. All of the early heads of the School worked at text-recension. Zenodotus of Ephesus (B.C. 325–260) published a collection of Homeric glosses (see GLOSSA), and about B.C. 274 put forth a *διόρθωσις* or recension of both the *Iliad* and the *Odyssey*, also called the *ἔκδοσις Ὁμήρου*. In this, four kinds of corrections appear: (*a*) Elimination or the omission of lines known to be spurious; (*b*) Query or the indication of doubtful lines; (*c*) Transposition or a change in the order of the lines; and (*d*) Emendation or the substitution of new readings for the old. See Düntzer, *De Zenodoti Studiis Homericis* (Göttingen, 1848).

The existing texts were classified and characterized in the *Πίνακες* of Callimachus, the first great bibliographical work ever written; and Eratosthenes of Cyrené (c. 276–196 B.C.) wrote a critical treatise on the poets of the Old Comedy. He was succeeded by Aristophanes of Byzantium (c. 257–180 B.C.), perhaps the greatest philologist of antiquity. His criticism was partly diplomatic and partly verbal; and was guided always by the *sentiment critique.* He did much for both text-criticism and for language-study in general. To him is ascribed the invention of diacritical marks and symbols (*σημεῖα κριτικά*), all of great palaeographic importance. Ten of these are known as the *δέκα προσῳδίαι*: (*a*) the rough breathing (*πνεῦμα δασύ*); (*b*) the smooth breathing (*πνεῦμα ψιλόν*); (*c*) the grave accent (*βαρεῖα*); (*d*) the acute accent (*ὀξεῖα*); (*e*) the circumflex accent (*τόνος ὀξυβαρεῖα* or *περι-*

σπωμένη); (*f* and *g*) the long and short marks (χρόνοι); (*h*) the διαστολή or comma (*virgule*); (*i*) the hyphen (ὑφέν); (*j*) the apostrophe (ἀπόστροφος). The Greek marks of punctuation are also ascribed to Aristophanes. His critical work included an edition of Homer (a second διόρθωσις), and also editions of Hesiod (the *Theogony*), Alcaeus, Anacreon, Pindar, Euripides, Aristophanes, and perhaps Simonides and Menander. The famous Alexandrian Canon was in part his work. See CANON ALEXANDRINUS.

His great pupil Aristarchus of Samothrace (c. 217–143 B.C.) did much for the study of formal grammar (see GRAMMATICA), and also edited Archilochus, Alcaeus, Hesiod, Pindar, Aeschylus, Sophocles, Aristophanes, and especially the Homeric poems, of which he put forth two separate recensions, writing συγγράμματα or special monographs, besides the ἐκδόσεις (texts) and ὑπομνήματα (commentaries). Aristarchus approached his task in a skeptical spirit, and employed five processes: (*a*) διόρθωσις or arrangement of the text; (*b*) ἀνάγνωσις or determination of accents; (*c*) τέχνη, determination of forms and questions of syntax; (*d*) ἐξήγησις or explanation of words, allusions, etc.; and (*e*) κρίσις, the determination of all questions respecting authenticity or integrity of the text, and the final judgment of the author as a whole. Aristarchus used a number of critical symbols in his work. Among them were the ὀβελός or spit (—) to mark a spurious line; the διπλῆ (⊢) to call attention to some special point; the dotted διπλῆ (⋖) to denote a variant from the reading of Zenodotus; and the ἀστέρισκος (⁎) to denote a "formulaic" line. Of the 15,600 lines of the *Iliad* and *Odyssey*, Aristarchus "athetized," i. e. struck out as spurious, 1160. See Gardthausen, *Palaeographie*, pp. 288 foll. (Leipzig, 1879); and on Aristarchus in general Lehrs, *De Aristarchi Studiis Homericis* (Königsberg, 1833; 2d ed. 1882); Ludwich, *Aristarch's homer. Textkritik* (1884–85); and Jebb, *Homer* (Glasgow, 1887). Cf. also Mahaffy's *Gk. Lit.* i. pp. 35–39 (New York, 1880).

The later Alexandrians did also much careful work in the recension of texts, and so did the rival School of Pergamus, headed by Crates of Mallos, the "Anomalist" (see CRATES; PHILOLOGIA), who flourished in B.C. 168. (See Wagener, *De Aula Attalica* [1836].) Didymus Chalcenteros (B.C. 65–A.D. 10) is the last of the important Greek text critics. See DIDYMUS.

From the Greeks the Romans received the principles of textual criticism, and early began to apply these principles to the study of Latin works. Lucius Aelius Stilo investigated the text of the *Carmina Saliaria;* M. Antonius Griphus wrote commentaries on the *Annales* of Ennius. Cicero is said to have prepared an edition of Lucretius. (See LUCRETIUS.) To Varro we owe the establishment of a Plautine Canon. (See PLAUTUS; VARRO.) The greatest of the Roman text-critics was M. Valerius Probus Berytus (c. 80 A.D.), who edited, with critical signs, Vergil, Horace, Lucretius, and Terence, and wrote a treatise on the σημεῖα κριτικά. (See Suet. *Reliq.* p. 138, Reifferscheid; and the introduction to Conington's Vergil, i. pp. lxv. foll.) Glossography also flourished greatly among the Romans. See GLOSSA; SCHOLIA; SUBSCRIPTIO.

In the first period of the Renaissance in Italy the study of texts revived during the corruption of existing manuscripts. (See RENAISSANCE.) Among these early critics are Laurentius Valla (q. v.) and Politianus (q. v.). The critical acumen of scholars was much sharpened by the immense number of forged texts that began to appear. A single forger, Annius of Viterbo, alone put forth seventeen volumes of spurious works ascribed by him to the classical writers. (See Wachler in Ersch and Gruber's *Encyclopädie.*) Gradually a scientific basis for textual criticism was established, the great names in this process being those belonging to the so-called French or Polyhistorical School, the Scaligers, Lambinus, Salmasius, and Casaubon; and to the Anglo-Dutch or Critical School, Gronovius, Burmann, Hemsterhuys, and especially Richard Bentley. In more recent times, the important names are those of A. I. Bekker, Boeckh, Lachmann, Ritschl, Madvig, Cobet, Porson, Munro, Wilamowitz-Moellendorf, and Vahlen. See especially the articles BENTLEY; LACHMANN; SCALIGER.

Text-critics are generally to be classified according to the relative importance which they give to the subjective element in their criticism. Bentley, who is the father of the subjective method, in his later work largely disregarded the evidence of manuscripts in his determination of the proper lections, depending largely upon his own instinctive feeling as to what an author must have said. He has expressed this principle in a formal phrase —*Nobis et ratio et res ipsa centum codicibus potiores sunt*—and in following this out he did much that was rash and indefensible as well as much that is brilliant and convincing. The *reductio ad absurdum* of this subjective method will be found in Bentley's edition of Milton's *Paradise Lost*, in which he rewrote whole passages, because of reasons based on his own conception of what Milton must in reality have said. See Jebb's *Bentley* (New York, 1882).

The school that represents the antithesis of the Bentleian principle is that of which the Jesuit scholars of France stand as a type. These held to what they called *la tradition classique*, and studied to avoid any radical changes in a text whatever, going so far as to force an explanation of passages that evidently violate the laws of the ancient languages, history, and good sense. The Bentleians rewrite everything; the other school explains everything; and each set must be regarded as often equally unreasonable.

For an explanation of the methods and principles of modern text-criticism, the reader is referred to Cobet, *De Arte Interpretandi* (Leyden, 1847); Madvig, *Adversaria Critica*, especially vol. i. (1870); Tournier, *Exercices Critiques de l'École des Hautes Études* (Paris, 1875); and the Prolegomena to Lachmann's Lucretius (1850, last ed. 1866); Munro's Lucretius (last ed. 1886); Ellis's Catullus (last ed. 1889); and for a simple and interesting statement of more obvious matters, Gow's *Companion to School Classics*, pp. 47–66 (London and New York, 1888).

Thabor, Tabor, or **Atabyrium** (Ἀταβύριον). Now an isolated mountain at the eastern end of the plain of Esdraelon in Galilee.

Thabrăca (Θάβρακα) or **Tabrăca** (Τάβρακα). A city of Numidia at the mouth of the river Tusca (Ptol. vi. 3, 5).

Thaïs (Θαΐς). A celebrated Athenian courtesan, who accompanied Alexander the Great on his expedition into Asia. After the death of Alexander,

Thaïs attached herself to Ptolemy Lagi, by whom she became the mother of two sons, Leontiscus and Lagus, and of a daughter, Irené. She is said to have urged Alexander on to firing the palace of Darius during a revel—a story which suggested the most striking lines of Dryden's *Ode on St. Cecilia's Day*. The tradition is probably false (Athen. p. 576; Diod. xvii. 72; Plut. *Alex.* 38; Q. Curt. v. 7, 3).

Thala (Θάλα). A great city of Numidia, mentioned by Sallust and other writers, and probably identical with TELEPTÉ or THELEPTÉ, a city in the south of Numidia, seventy-one Roman miles northwest of Capsa.

Thalamēgus (*θαλάμηγος*). A sort of barge used by the kings and princes of Egypt for their trips on the Nile. Cleopatra's famous barge was a thalamegus (Suet. *Iul.* 52). The craft was fitted up with much luxury, and was named from the fact that it had cabins (*thalami*) for a numerous company. The pure Latin name is *navis cubiculata* (Sen. *De Ben.* vii. 70).

Thalămus (*θάλαμος*). The Greek term for a commodious room in a house, and especially the nuptial chamber. See DOMUS.

Thalassius, Talassius, or **Talassio.** See MATRIMONIUM, p. 1016; TALASSIO.

Thales (Θαλῆς). An Ionian, the founder of Greek philosophy. He was a contemporary of Solon and Croesus, and one of the Seven Sages, and was born at Miletus about B.C. 636, and died about 546, at the age of ninety, though the exact dates of his birth and death are not known. He is said to have predicted the eclipse of the sun which happened in the reign of the Lydian king Alyattes; to have diverted the course of the Halys in the time of Croesus; and later, in order to unite the Ionians when threatened by the Persians, to have instituted a federal council in Teos. Aristotle preserves a story of his knowledge of meteorology which was turned to a practical use (Polyb. i. 11, p. 1259). In the lists of the Seven Sages his name seems to have stood at the head, and he displayed his wisdom both by political sagacity and by prudence in acquiring wealth. In mathematics we find attributed to him only proofs of propositions which belong to the first elements of geometry, and which could not possibly have enabled him to calculate the eclipses of the sun and the course of the heavenly bodies. He may, however, have obtained a knowledge of the higher branches of mathematics from Egypt, which country he is said to have visited. In the annals of Greek philosophy he was probably the first who looked for a physical origin of the world instead of resting upon mythology. Thales maintained that water is the origin (*ἀρχή*) of things, meaning thereby that it is water out of which everything arises and into which everything resolves itself, and that the earth floated upon the water. Thales left no works behind him (Herod. i. 74, 170; Diog. Laërt. i. 25; Aristot. *Metaph.* i. 3, p. 983). See IONIAN SCHOOL OF PHILOSOPHY; PHILOSOPHIA.

Thalēs (Θαλῆς) or **Thalētas** (Θαλήτας). A celebrated musician and lyric poet. He was a native of Gortyna in Crete, and probably flourished shortly after Terpander (Pausan. i. 14, 4; Plut. *De Mus.* 9, p. 1135).

Thalīa (Θαλία and Θαλεία). (1) One of the nine Muses, and, at least in later times, the Muse of Comedy. (See MUSAE.) (2) One of the Nereïdes. (3) One of the Charites or Graces.

Thallo. See HORAE.

Thallophŏri (*θαλλοφόροι*). See PANATHENAEA.

Thamўris (Θάμυρις) or **Thamўras.** An ancient Thracian bard, son of Philammon and the nymph Argiopé. In his presumption he challenged the Muses to a trial of skill, and, being overcome in the contest, was deprived by them of his sight and of the power of singing. He was represented with a broken lyre in his hand (Pausan. iv. 33, 4; ix. 30, 2; x. 7, 2).

Thanătos (Θάνατος). The Greek god of death identified by the Romans with Mors. Homer describes him as the brother of Sleep, and Hesiod calls him the son of Night (Hes. *Theog.* 211, 756) and says that he dwells in the lower world. In the best period of Greek art, both Death and Sleep were represented as youths either asleep or with inverted torches (Verg. *Aen.* vi. 224). See SOMNUS.

Thapsăcus (Θάψακος). Old Test. Thipsach. An Aramean word, signified "a ford"; now Dibsi. A city of Syria, in the province of Chalybonitis, on the left bank of the Euphrates, 2000 stadia south of Zeugma, and fifteen parasangs from the mouth of the river Chaboras, the Araxes of Xenophon.

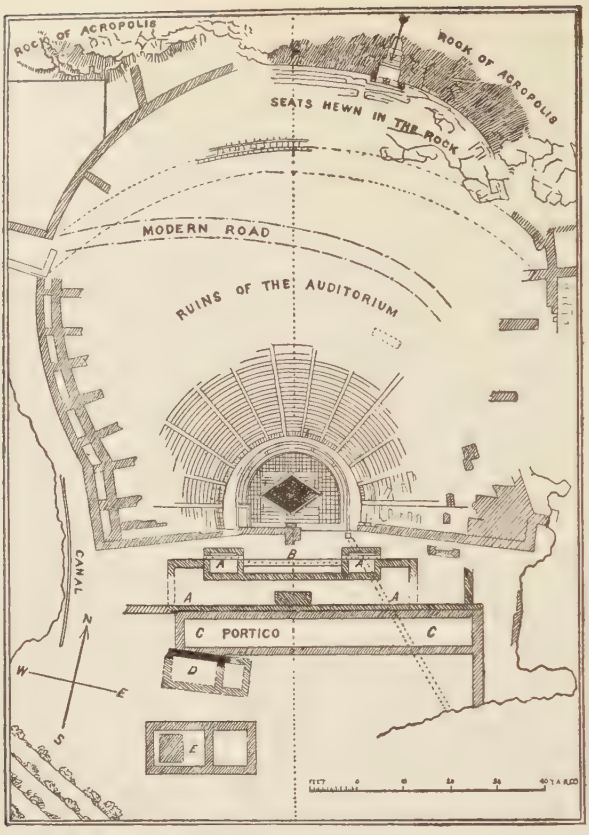
Thapsus (Θάψος). (1) A city on the eastern coast of Sicily, on a peninsula of the same name (Isola degli Magnisi). (2) A city on the eastern coast of Byzacena, in Africa Propria. Here Caesar finally defeated the army of Pompey and ended the Civil War. See CAESAR; POMPEIUS.

Thargelia (*θαργήλια*). The principal feast of Apollo in Athens, held on the seventh day of the month Thargelion (May–June), the birthday of the god. Originally it was connected with the ripening of the field-produce. A procession was formed, and the first-fruits of the year were offered to Apollo, together with Artemis and the Horae. It was at the same time an expiatory feast, at which a peculiar propitiatory sacrifice was offered, which was to purify the State from all guilt, and avert the wrath of the god, lest he should exercise his avenging and destroying power in burning up the harvest with parching heat, and in visiting the people with pestilence. Two persons, condemned to death, a man and a woman, as representatives of the male and female population, were led about with a garland of figs round their necks to the sound of flutes and singing, and scourged with seaweed and with the branches of a fig-tree. They were then sacrificed at a certain spot on the seashore, their bodies burned, and the ashes cast into the sea. In later times they seem to have been contented with throwing the victims (*φαρμακοί*) from a height into the sea, catching them as they fell, and banishing them from the country. Besides these sacrifices, festal processions and choral contests between men and boys took place. At the same time the great feast of Apollo was probably held at Delos, to which the Athenians sent a sacred embassy in the ancient ship in which Theseus is said to have sailed to Crete, and which was always kept in repair. See Preller, *Griechische Mythologie*, i. 209; and A. Mommsen, *Heortologie*, 50, 53, 414–425.

Thargelion (Θαργηλιών). The eleventh month in the Attic calendar, corresponding roughly to our May–June. See CALENDARIUM.

Thasos (*Θάσος*) or **Thasus**. Now Thaso or Tasso. An island in the north of the Aegaean Sea, off the coast of Thrace, and opposite the mouth of the river Nestus. It was at a very early period taken possession of by the Phœnicians, on account of its valuable gold-mines. According to tradition the Phœnicians were led by Thasus, son of Poseidon or Agenor, who came from the East in search of Europa, and from whom the island derived its name. Thasos was afterwards colonized by the Parians, B.C. 708, and among the colonists was the poet Archilochus. The Thracians once possessed a considerable territory on the coast of Thrace, and were one of the richest and most powerful peoples in the north of the Aegaean. They were subdued by the Persians under Mardonius, and subsequently became part of the Athenian maritime empire. They revolted, however, from Athens in B.C. 465, and, after sustaining a siege of three years, were subdued by Cimon in 463. They again revolted from Athens in 411, and called in the Spartans; but the island was again restored to the Athenians by Thrasybulus in 407. Some remains of the ancient town still exist, among them the Agora and a triumphal arch. See Hasselbach, *De Insula Thaso* (1838).

Thaumas (*Θαύμας*). The son of Pontus and Gé, and, by the Oceanid Electra, the father of Iris and the Harpies (Hes. *Theog.* 237). Hence Iris is called *Thaumantias*, *Thaumantis*, and *Thaumantea virgo*. See Iris.



Theaetētus (*Θεαίτητος*). An Athenian, the son of Euphronius of Sunium, introduced as one of the speakers in Plato's *Theaetetus* and *Sophistes*, in which he is spoken of as a noble youth, ardent in the pursuit of knowledge, and especially in the study of geometry.

Theagĕnes (*Θεαγένης*). (1) A tyrant of Megara, who obtained his power about B.C. 630, having espoused the part of the commonalty against the nobles. He was driven out before his death. He gave his daughter in marriage to Cylon (q. v.). (2) A Thasian, the son of Timosthenes, renowned for his extraordinary strength and swiftness. He gained numerous victories at the Olympian, Pythian, Nemean, and Isthmian Games, and is said to have won 1400 crowns. He lived about B.C. 480 (Pausan. vi. 6, 5; id. 11, 2).

Theāno (*Θεανώ*). (1) The daughter of Cisseus, wife of Antenor, and priestess of Athené at Ilium. (2) A celebrated female philosopher of the Pythagorean School, appears to have been the wife of Pythagoras, and the mother by him of Telauges, Mnesarchus, Myia, and Arignoté; but the accounts respecting her were various (Diog. Laërt. viii. 42; Suidas, s. h. v.). Letters ascribed to her, but not genuine, exist, and are edited by Hercher (1873).

Theātrum (*θέατρον*). The architectural form of the Greek theatre was developed from the circular dancing-place, the *ὀρχήστρα*, used by the Bacchic dancers. At first there was no Chorus distinct from the general body of worshippers, all of whom were free to join in the dance. As soon, however, as a regular Chorus was instituted, it became necessary to reserve a circular space of ground for it. A ring of stones sufficed to mark off this circle. The altar of Dionysus was placed at its centre. The spectators stood around it and watched the dance. So long as the dramatic element was limited to a dialogue between the Chorus and one actor, that person could stand on a raised place in the middle of the Chorus and address himself to various points of the circle in turn; but when Aeschylus added a second actor, it became necessary that the actors should play towards some one side. It was then no longer possible that the spectators should form a complete circle, but they were now arranged in a semicircle, or something like it, though the whole circle of the dancing-place was still, as of old, kept clear for the Chorus. The actors stood facing the spectators, not within the circle of the dancing-place, but on the farther side of it. Behind them was the tent or booth (*σκηνή*) in which they dressed. It was an easy improvement to conceal this tent from the spectators by a modern screen which could represent the front of a house or anything else that suited the requirements of the play. This screen was the *proscaenium* (*προσκήνιον*), i. e. that which masked the *σκηνή*. The term was retained in the later history of the theatre, though its primitive sense was lost. The *proscaenium* was the background visible to the spectators, whether it was a temporary screen or a permanent wall. Then *σκηνή* came to denote that part of the theatre which belonged to the actors, as distinguished from *ὀρχήστρα*, the place of the Chorus. Aristotle (*Poet.* 24) uses the phrase *ἐπὶ σκηνῆς* where we should say "on the stage."

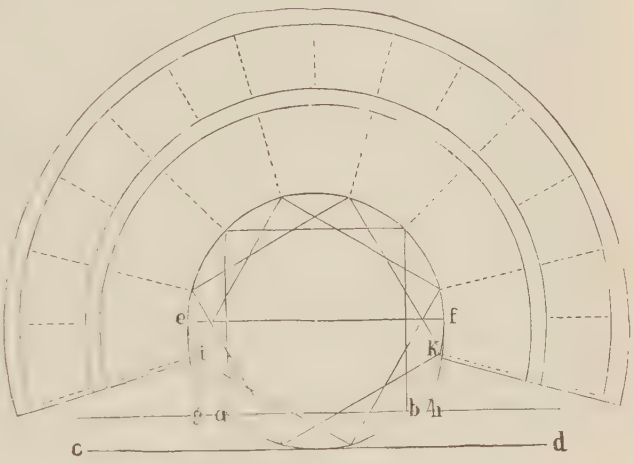
The oldest theatre of which we have any knowledge is the Dionysiac Theatre at Athens. It has generally been supposed that a permanent stone theatre existed in the *Λήναιον*, or precinct of Dionysus, from the early years of the fifth century B.C., a belief resting on a passage in Suidas (s. v. *Πρατίνας*). But the history of the Dionysiac Theatre has been placed in a new light by the recent researches of the German Archaeological Institute at Athens. Its excavations, begun in 1886, have yielded the following results: (1) In the fifth century B.C., and down to about B.C. 330, the precinct contained no permanent building for scenic purposes, but there was near it a circular *ὀρχήστρα*, about seventy-eight feet in diameter, of which traces have been found under the buildings erected by Lycurgus. This *ὀρχήστρα* was then the only permanent provision for drama. All scenery, therefore, was temporary, and the spectators sat on wooden benches. (2) The first permanent building for the drama in the *Λήναιον* was that completed by Lycurgus, about B.C. 330. It consisted of a stone wall with two small wings, like towers, projecting from it on right and left (A, A); the length of the wall between them was about sixty-five feet seven inches. The temporary decorations (of wood, with linen hangings) were erected in front of this wall, and supported by the wings. Behind the wall was an oblong room, extending somewhat beyond the wings, and serving for the use of the actors. A portico (C, C), opening on the precinct of Dionysus, ran along the south side of it. The new orchestra was to the north of this building. Dr. Dörpfeld supposes that it formed, like the older one, a complete circle, and that there was no raised stage; the actors stood on the same level with the Chorus. Rows of stone seats for the spectators were now constructed. After the time of Lycurgus no change, except of detail, took place in the auditorium. (3) At some later date, which cannot be fixed, a permanent stone proscenium (B), adorned with columns, and about ten or twelve feet high, was built in front of the wall with projecting wings

Dionysiac Theatre at Athens.

which Lycurgus had erected. As the wings no longer served a practical purpose (in supporting the temporary scenery), they were annexed to the new proscenium, a part being cut off the front of each, so as to bring them more nearly into line with it. (4) An architrave-inscription found in the theatre shows that it was modified and embellished in the reign of "Claudius," by whom Nero seems to be meant. It was probably at this time that the orchestra received its present pavement of Pentelic and Hymettus marble. To this period also is referred the erection of a raised stage, supported in front by a sculptured wall. (5) The latest recorded changes in the Dionysiac Theatre are associated with the name of a certain Phaedrus, and took place probably in the third century (*C. I. A.* iii. 239). To these belong the existing front wall of the stage, adorned with sculpture of an earlier period; also the balustrade which now separates the auditorium from the orchestra, and the partial covering of the orchestra-canal with marble flags.

It is maintained by Dr. Dörpfeld that, not only in the Dionysiac Theatre, but in all theatres of the Greek type, the actors stood on the same level with the Chorus; a stage raised above the orchestra was a Roman invention; and where such a stage occurs in a theatre of Greek origin, it is a later addition, made under Roman influence. The Roman raised stage, he thinks, was developed, when a Chorus was no longer used, by depressing the level of the circular orchestra in that part of it—the part farthest from the actors—where the Chorus formerly stood. This startling theory is based chiefly on the nature of the proscenium as it appears in the remains of some Greek theatres. The theatre of Epidaurus, built about the middle of the fourth century B.C., is the best-preserved example of the Greek type; excavations were made in it by the Greek Archaeological Society in 1883.

The orchestra forms a complete circle, defined by a ring of flat stones. Beyond this circle, on the side farthest from the audience, are remains of a wall, about twelve feet high, adorned with Ionic half-columns, and flanked by slightly projecting wings; there was one door in it, at the middle point. This wall must have been either the background of the scene, or the front of a raised stage. It is argued that it must have been the background, because (*a*) twelve feet would be too great a height for a stage; (*b*) the width of the stage — about eight feet — would have been too small; (*c*) there is no trace of steps leading from the top of the wall to the orchestra. A similar wall occurs in the theatre at Oropus, and is identified as the proscenium by an inscription which it bears. The theatre in the Piraeus affords another example.



On the other hand, several considerations tell in favour of the received view, that Greek actors, at every period, had a raised stage. (1) The statement of the architect Vitruvius, who wrote about A.D. 20, is decisive, so far as the Roman period is concerned. He states that the Greek theatre had a raised stage, about ten or twelve feet high, but narrower than the Roman; the Greeks, he says, called it λογεῖον. Vitruvius uses the word *proscaenium* to describe this stage; and the same use of the term occurs in other writers, both Roman and Greek. Dr. Dörpfeld is therefore reduced to assuming that Vitruvius has made a mistake—confusing the background of the scene in a Greek theatre with the front of a raised stage. But it is absurd to suppose that Vitruvius should have made such a blunder about the Greek theatres of his

Marble Sculptures on Front Wall of Stage, Dionysiac Theatre.

own day; and that, having accurately described a raised stage which did not exist, he should also have invented a name for it, λογεῖον. (2) The theatre at Megalopolis in Arcadia has lately been excavated by members of the British School at Athens (see the report of the School for 1890). The date of this theatre may be placed in the second half of the fourth century B.C. Here there is a raised stage, of which the height was originally about six feet, and the width about eighteen feet. A flight of steps, extending from end to end of it, led down to the orchestra. That it was a stage, and not a background, is proved (*a*) by these steps, (*b*) by the fact that access was given to it by three doors in the wall behind it. There is no reason to doubt that this stage is of the same date as the auditorium. A later Roman stage has been found in front of it. By this example, then, the existence of a raised stage in a Greek theatre of the fourth century B.C. is placed beyond doubt. (3) With regard to the fifth century B.C., it was not to be expected that any remains of a raised stage should be found; temporary wooden structures would leave no trace. The Greek plays do not supply any literary evidence which can be deemed conclusive. There are some passages which indicate that the place where the actors stood was accessible to the Chorus (e.g. Soph. *Oed. Col.* 836 foll.); as would be the case if we supposed a stage with steps leading up to it, as at Megalopolis. Among the passages which seem to imply a raised stage, we may notice Aristoph. *Vesp.* 1514, where Philocleon says, ἀτὰρ καταβατέον γ' ἐπ' αὐτούς. This may, indeed, be rendered, "I must *enter the lists* against them"; but it also implies some change of position, more marked than such as would consist in moving merely from one spot in the orchestra to another, and would be most naturally explained by a descent into the orchestra from the stage. Some vases of Lower Italy, referable to the period B.C. 300–100, depict scenes from the Old Attic Comedy acted on a raised λογεῖον (cf. Baumeister, *Denkmäler*, pp. 1750 foll.). Plato (*Symp.* p. 194 A) speaks of the tragic poet Agathon as ἀναβαίνοντος ἐπὶ ὀκρίβαντα μετὰ τῶν ὑποκριτῶν. This shows that the idea of placing actors on a raised platform was familiar to Athenians of the fifth century B.C. Even in the days before Thespis, when one member of the Chorus held a dialogue with the rest, he was mounted, we are told, on a kind of table (ἐλεός). A recent writer suggests that the source of this story may have been a Comedy in which the beginnings of Tragedy were burlesqued (Hiller, *Rhein. Museum*, xxxix. p. 329). If this were so, it would only show that some sort of raised stage was conceived as necessary for even the most primitive form of drama. Lastly, there is a strong *a priori* objection to the theory that actors and Chorus stood on the same level. The Chorus was usually drawn up in ranks facing the actors. With his *cothurnus* and mask, a tragic actor would still not overtop the Chorus by more than a head. Hence, a view of the actors would have almost been wholly denied to spectators whose seats were in the middle part of the lowest row. But those were the seats assigned to the most distinguished persons. This argument cannot be met by saying, as Dr. Dörpfeld does, that the Chorus was "usually" divided into ἡμιχόρια (leaving the actors visible between the two groups). Such an arrangement was not usual, but very exceptional. It may be allowed that, when the stage came to be as high as twelve feet, permanent means of communication between stage and orchestra cannot have existed, though temporary wooden steps might be employed at need. But before stages of that height came into use, such communication had ceased to be requisite, since the Chorus had no longer an active part in drama.

Vitruvius gives the ground-plan of a Greek theatre as follows: describe a circle for the orchestra, and in it inscribe three squares. One side of one of these squares will represent the front line of the stage (a b). A parallel tangent to the circle will be the back wall of the stage (c d). The stage (*pulpitum*, λογεῖον) must be not less than ten or more than twelve feet high. Next, parallel with a b, draw a diameter of the circle, e f. It will be seen in the diagram that at e and f the semicircle is so continued as to make a horseshoe, ending at g h. The curves which thus continue it are segments of circles described from e and f as respective centres, with e f as radius. This is known as "the construction from three centres," viz., e, f,

Greek Theatre, after Vitruvius.

and the centre of the orchestra. The auditorium is shut in by lines which bisect the right angles at i and k. The space between g h and c d is a raised stage.

The fourth century B.C. was the period at which stone theatres became usual in Greece. We may now proceed to consider their characteristics more in detail.

The Orchestra.—It has been seen that, even in the matured theatre, the "dancing-place" was still a complete circle, as in the old days of the Cyclic Choruses. Its central point was sometimes marked, either by a small pit (as at the Piraeus), or by a stone (as at Epidaurus). Such marks probably indicate the spot on which the altar of Dionysus was to be placed. The word θυμέλη, "a place of sacrifice," means in classical poetry either "a shrine," or, more specifically, "an altar." The

most probable conclusion is that the θυμέλη was the altar of Dionysus, in the centre of the orchestra. Another view is that the name θυμέλη was transferred from the altar to a platform in the orchestra on which the altar was placed, and that this platform was the station of the Chorus—connected by steps with the lower level of the orchestra (κονίστρα) and with the higher level of the stage (λογεῖον). It is true that the use of θυμέλη to denote a kind of stage was current in later times, when *thymelici*, "music-hall artists," were distinguished from actors proper (Isidore, *Orig.* xviii. 47). But this use arose under Roman influences, and cannot be assumed for the Greece of the fifth or fourth century B.C. A channel, to carry off rain-water, often surrounded the orchestra, being bridged by stones at the points from which the stairways led up to the seats.

The Auditorium.—In default of a special term like *cavea*, this is sometimes called θέατρον: though that word, when it does not mean the whole building, more often denotes the spectators, as we speak of "the house." In the older Greek theatres the public entered by the side-passages (πάροδοι) between the proscenium and the orchestra—the same which the Chorus used. Sometimes, indeed, we find an alternative mode of access, viz. by a path traversing high ground, and leading directly to one of the upper tiers: this was the case at Athens, but it was exceptional. A crowd entering by the πάροδοι would find the pressure greatest at the mouths of the semicircular passage between the orchestra and the lowest row of seats—before the spectators had distributed themselves to the several parts of the house. This fact helps to explain a peculiarity of construction. The lowest row of seats is not, as a rule, completely concentric with the orchestra, but is usually so contrived as to leave a wider space at the points just mentioned. A further advantage of this arrangement was that it afforded a better view to those who sat at each end of the semicircle.

Flights of steps ascending from the orchestra to the highest tier of seats divided the auditorium into wedge-like segments. The Greek word for such a segment was κερκίς, which properly meant "radius"; the Latin term was *cuneus*. A further division into upper and lower zones was effected by passages called διαζώματα, "girdles" (*praecinctiones*), which ran completely round the semicircle. The word διάζωμα can denote, not only the passage itself, but the zone which it marks off (*C. I. G.* 4283). Above the highest tier, another open passage ran round the house. The term ἴκρια properly denoted the wooden benches on which, in the earlier times, the spectators sat. When stone seats were introduced (cir. B.C. 330), such seats were founded, where it was possible, on the natural rock of the slope. At Athens, as at Megalopolis, artificial substructions were required in several parts, and this must almost everywhere have been the case, more or less. The material used for the seats varied much. Sometimes it is marble, as at Iassus in Caria and Perga in Pamphylia; at Athens and in the Piraeus, it is a white limestone, finely wrought; while the smaller provincial theatres were often content with coarser stone and workmanship. The tiers of seats were called βάθρα or ἀναβαθμοί. At Athens the space allotted to one person was indicated merely by a line engraved on the stone: it is described as ἕδρα, τόπος, χώρα, χωρίον, or simply θέα.

The privilege of free seats (προεδρία) in the theatre was given chiefly to four classes of persons: (1) certain priests and priestesses, among whom the priest of Dionysus was foremost; (2) certain magistrates; (3) foreigners who were honoured in an official character, as πρέσβεις or θεωροί: (4) citizens or foreigners who were honoured in their personal capacity, as benefactors of the State. For such persons special seats were provided, like armchairs, called θρόνοι or καθέδραι. At Athens these chairs, made of Pentelic marble, occupy the whole of the lowest row, while others are placed in different parts of the house, though in no case higher up than the twenty-fourth row; those assigned to priests or officials bear their titles. At Epidaurus several rows of seats with backs and arms were assigned to those who enjoyed προεδρία.

The acoustic properties of a Greek theatre would be naturally good, since the actors had a high wall behind them and a rising slope in front. Vitruvius, indeed, says that artificial aid was sought from "brazen vessels," "which the Greeks call ἠχεῖα," so placed in the auditorium as to reverberate the voices of the actors. He even speaks of these "resonators" as being nicely adapted to the required musical pitch (ii. 1, 9). The theatre at Aizani in Cilicia has a series of niches above the διάζωμα: and similar niches exist elsewhere. According to one view, these niches held the ἠχεῖα, while another connects them merely with the substructions of seats.

The outer wall enclosing the auditorium ordinarily followed the curve of the semicircle, unless the nature of the ground caused some deviation. At Athens the auditorium was partly bounded on the north by the steep rock of the Acropolis, while the rest of its boundary was formed by strong walls of conglomerate. Where the external appearance of these walls became important, viz., in the south and southwestern portions, they were cased with finely wrought limestone. Examples occur in which the walls enclosing the auditorium were rectangular, as at Cnidus, and in the smaller theatre at Pompeii. The walls flanking the seats at each end of the semicircle were either carried in a single sloping line from the topmost tier to the orchestra, or built in a series of steps corresponding with the tiers. In the best Greek period such walls were not exactly parallel with the line of the proscenium, but started inwards a little, towards the centre of the orchestra. This was the case at Athens and Epidaurus.

Scenic Decoration.—The testimonies on this subject are of two classes. (1) Notices in writers chiefly belonging to the Roman age, especially lexicographers and scholiasts. Among these the most important is the grammarian Iulius Pollux (flour. A.D. 170), in his *Onomasticon*, book iv. §§ 128–132. As has lately been shown by Rohde, the source principally used by Pollux was a work by Iuba, a writer of the later Alexandrian Age, entitled Θεατρικὴ Ἱστορία, in at least seventeen books; while Iuba, in his turn, had sources going back to Aristophanes of Byzantium (B.C. 200), but not further. The besetting fault of Pollux, in abridging from this ample material, seems to have been an omission to distinguish between the normal and the occasional resources of the stage. (2) The second kind of evidence is that derived from the Greek dramatic texts themselves. This source, scanty as it is, is the principal one on which we have to

rely in regard to the practice of the fifth and fourth centuries B.C. Not long ago it was the custom to treat the notices in Pollux and the other late authorities as if they could be applied without reserve to the great age of Athenian Tragedy and Comedy, but a more critical study has shown the need of greater caution in this respect.

In the extant plays of Aeschylus, Sophocles, Euripides, and Aristophanes, the action most often takes place in front of a house with a "practicable" door; sometimes in front of a temple, a cottage, a tent, a cave, or a rock. Painted linen hangings, erected on a wooden frame, would have sufficed for such a background. Aristotle, in sketching the growth of Tragedy, says that Aeschylus added the second actor, and made the dialogue predominate over the choral part, while Sophocles introduced the third actor and the use

Remains of Greek Theatre at Tauromenium. (From a photograph.)

of scene-painting (*σκηνογραφία*). Now, this last fact must have stood out clearly in Athenian tradition, which Aristotle had every means of knowing, when he thus coupled it with the other novelty as an invention distinctive of Sophocles. It is usually assumed, even by recent writers, that Aristotle is here irreconcilable with Vitruvius, who ascribes the introduction of scene-painting to Aeschylus. Such an assumption is not, we think, necessary. The words of Vitruvius (vii. *praef.* 11) are: "primum Agatharchus Athenis, *Aeschylo docente tragoediam*, scaenam fecit et de ea commentarium reliquit"; and he then goes on to say how the stimulus given by Agatharchus led Democritus and Anaxagoras to develop principles of perspective. The phrase "while Aeschylus was exhibiting tragedy" merely describes Aeschylus as contemporary with the innovation. Sophocles first exhibited in B.C. 468, twelve years before the death of Aeschylus. Aristotle and Vitruvius are reconciled if we suppose that Sophocles introduced *σκηνογραφία* in the early days of his career; a fact which will also help us to understand why that improvement was peculiarly associated with his name. Even before Agatharchus had made a beginning of artistic *σκηνογραφία*, some ruder kind of drawing may have been used. Thus in the *Persae* of Aeschylus (B.C. 472) the palace was probably indicated. In the *Ion* of Euripides (cir. B.C. 421), where the scene is laid at Delphi, the Chorus of Athenian maidens point with admiration to the sculptures which adorn the front of the temple.

With regard to "massive" decoration, as distinguished from a painted background, the objects required by the texts are simple, such as altars, statues of gods or heroes, rocks, and seats. But the texts further prove that certain mechanical appliances were available at need. (1) The *ἐκκύκλημα* was a small movable stage on wheels, which could be rolled forward through the door in the proscenium. There was room on it for three or four persons, and it was low enough to allow of an actor stepping off it with ease. The most frequent use of the *ἐκκύκλημα* was when the corpse of a person slain within the house was to be shown to the audience—sometimes with the murderer standing beside it. The moment at which the *ἐκκύκλημα* was pushed forward is often, though not always, marked in the text by a reference to the opening of the door. But this was not the only case in which the appliance was used: it could also be employed for any tableau in the interior of a house. Thus in Aesch.

Eumen. the Pythia speaks the prologue in front of the temple, and then the *ἐκκύκλημα* is used to show Orestes at the omphalos within. Similarly in Soph. *Aiax*, when Tecmessa opens the tent, this machine serves to display Aiax prostrate amidst the slaughtered cattle. As appears from some passages, the *ἐκκύκλημα* could be pushed far enough forward to admit of an actor entering, or making his exit, at the door behind it. It should be noted that the use of the *ἐκκύκλημα* is not merely an inference from later writers and from hints in Tragedy, but is proved by the two parodies in Aristophanes, where Euripides and Agathon are wheeled out, and are thence once more withdrawn from view (*Ach.* 408 foll., *ἐκκυκλήθητ' . . . ἐκκυκλήσομαι*: *Thesm.* 265, *ἐσκυκλησάτω*). The exact nature of the *ἐξώστρα* is uncertain, but it was evidently akin to the *ἐκκύκλημα*, differing from it, possibly, only in the mode of propulsion. (2) Machinery for showing persons in the air was required by the appearances of the gods, and in some other cases — as when Medea is seen above the palace in the chariot given to her by the Sun (Eur. *Med.* 1319), or when Trygaeus soars aloft on his beetle (Aristoph. *Pax*, 80). Two different contrivances seem to have been used: both were, of course, concealed by the proscenium. One was an apparatus worked by a wheel (*τροχός*) and ropes (*αἰῶραι*), and called *αἰώρημα*, which was used when the person was to be seen gradually rising into the air, or descending from above. The other device was a sort of platform, projecting from the wings at the back of the proscenium, close to its upper edge. This was the so-called *θεολογεῖον*, used when the apparition of a god or hero was to be sudden. The *κρεμάθρα* in which Socrates is suspended (Aristoph. *Nub.* 218) is a burlesque of the tragic appliances. (3) Akin to the *θεολογεῖον* must have been the contrivance used when a person is to appear on the roof of a palace (as the watcher in Aesch. *Ag.*; Antigoné and the paedagogus in Eur. *Phoen.* etc.). A wooden platform, high up behind the proscenium, would have sufficed: according to Pollux, it was called a *διστεγία*.

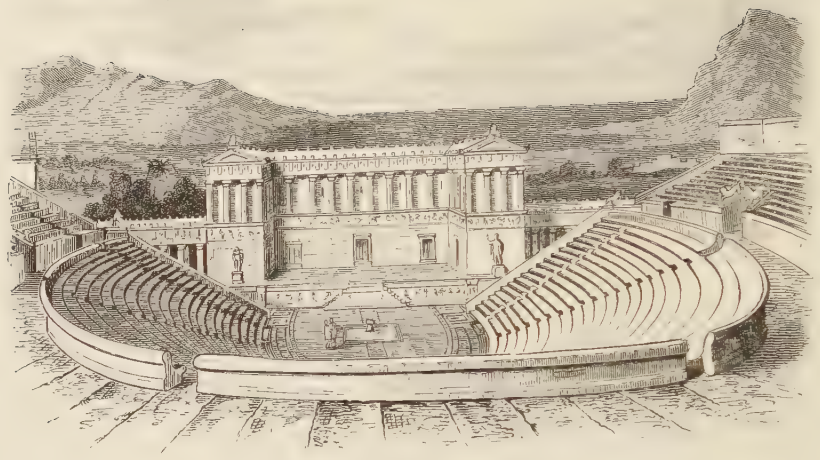
These seem to be the only forms of decoration or mechanism which can certainly be inferred from the texts of the tragedians and of Aristophanes. They are all compatible with a temporary wooden structure and with a comparatively simple phase of scenic art. When, in the course of the fourth century B.C., permanent stone theatres became usual in Greek lands, the general character of scenic decoration was perhaps not at first affected thereby. Behind the proscenium there was now a permanent wall, forming the front of the building assigned to the actors. But the proscenium itself probably continued, for a time, to be temporary—a wooden structure, with painted hangings.

It may have been at this period that *περίακτοι* were first introduced. These were triangular wooden prisms, revolving on a pivot (whence the name), with scenery painted on each of their three faces. One *περίακτος* was placed at the left wing and another at the right. They took the place of modern side-scenes, and also served to indicate changes of scene, according to a regular conventional method. The *περίακτος* on the spectator's right hand represented the locality in which the action was taking place. The *περίακτος* on his left hand represented a region outside of that locality. If, for instance, the scene of the play was laid at Delphi, the right-hand *περίακτος* would illustrate that place, while the other might represent the road leading to Athens. The same rule governed entrances and exits: a Delphian would come on from the right, a stranger from the left. If the scene was to be changed from one spot near Delphi to another in the same vicinity, the left-hand *περίακτος* would be turned so as to present a new face, but the right-hand one would be left unaltered. If the scene was shifted from Delphi to Athens, both *περίακτοι* would be turned.

There are only two Greek plays in which it is necessary to assume a change of scene. In the *Eumenides* the action is transferred from Delphi to Athens; in the *Aiax*, from the front of the hero's tent to a lonely place on the sea-shore. It is probable that in the first of these examples the change was merely symbolized by substituting the *βρέτας* of Athené for a statue of Apollo, while the building painted on the background was identified, first with the Delphian temple, and then with the Erechtheum. In the second example, if the background was a landscape, nothing was required but to remove the hangings which represented the tent. The use of *περίακτοι* in the fifth century B.C. cannot be proved from the dramatic literature. On the other hand, they would have been found peculiarly convenient when the old wooden proscenia, with painted hangings, were replaced by stone proscenia adorned with sculpture. There is no evidence that, in addition to revolving scenery, the Greek theatre had scenes which could be shifted on grooves; though the Roman stage, as Servius tells us, had both (*ad* Verg. *Georg.* iii. 24).

ENTRANCES FOR THE ACTORS. — Pollux speaks of three doors in the proscenium, the central one being called *θύρα βασίλειος*, because the chief persons of the play used it. Vitruvius confirms this statement. Ruins of the Hellenistic or Roman Age show sometimes three doors, sometimes five. In the latter case, the two extreme doors may have opened, not on the stage, but on spaces at either side of it (*παρασκήνια*), used by actors waiting for their turns, or by officials. In the theatre at Megalopolis (fourth century B.C.) there were three entrances to the stage. Only one entrance is traceable in the remains at Epidaurus, Zea, and Oropus respectively. It is on a level with the orchestra; hence those who disbelieve in a raised stage regard it as the entrance for the actors. But it may have passed beneath a raised stage, serving to give the employés of the theatre a direct access to the orchestra. How many doors there may have been in the painted hangings of the old wooden proscenia, we cannot tell. The fifth-century texts show that, besides the door or doors in the proscenium, there were also entrances for the actors from the sides, right and left.

Pollux says that when ghosts appeared on the scene they came up either by *ἀναπιέσματα* (our "trap-doors") or by the *χαρώνιοι κλίμακες*. It has generally been supposed that these *κλίμακες* led from the orchestra to the stage. This is the case at Megalopolis. Another theory is that they connected the stage with a passage beneath it, invisible to the spectators.



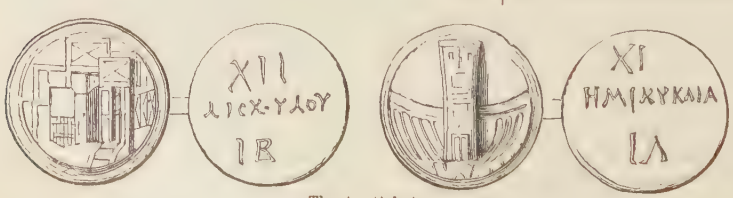
No curtain was used in the Greek theatre. When a play opened with a group in position (such as the suppliants in the *Oed. Tyr.*), the actors must have simply walked on to the scene and assumed that position. When one play followed another

and the background had to be changed, that change took place before the eyes of the spectators. In such matters we cannot judge the feelings of Athenians assembled at the Dionysia by the requirements of modern playgoers.

THE ADMINISTRATION OF THE THEATRE. — A Greek theatre was the property of the State, and the performances in it were acts of public worship under State control. At Athens, in the fifth and and fourth centuries B.C., drama accompanied two Dionysiac festivals—the Lenaea, in January, and the Great Dionysia, in March. At each festival both Tragedy and Comedy were produced; but the Lenaea were peculiarly associated with Comedy, and the Great Dionysia with Tragedy. The cost of the performances at each festival was defrayed from three sources: (1) The theatre was let by the State to a lessee, who received the money paid for admission, and in return undertook certain charges. One of these, as appears from an extant document (*C. I. A.* ii. 573), was the maintenance of the building in good repair. Hence the classical name for the lessee, *ἀρχιτέκτων*. He was also bound to provide a certain number of free seats (as for the persons entitled to *προεδρία*); but for these he was probably reimbursed by the treasury. The provision of scenery and of costume for the actors (excepting the *choreutae*) appears also to have devolved upon the lessee. He was certainly charged with the custody of the scenery and of all the theatrical dresses and properties. He also paid the cashiers, the persons who showed spectators to their places, and all other employés of the theatre. (2) The second source of contribution was the *choregia*. For each festival the Archon Eponymus appointed as many *choregi* as there were competing poets; at the Great Dionysia the number was usually three for Tragedy and three for Comedy. The *choregi* were chosen from men nominated by the ten Attic tribes in rotation. The duty of the *choregus* was to furnish one Chorus of fifteen persons for Tragedy, or of twenty-four for Comedy. He provided a suitable place for their training (*χορηγεῖον*), and maintained them till the festival was over. If the poet did not train them himself, the *choregus* had to find a *χοροδιδάσκαλος*. He had also to supply the flute-player (*αὐλητής*) who preceded the Chorus on entering or quitting the orchestra and played the occasional music. He purchased the costumes, masks, etc., for the Chorus. But his task was not finished when the Chorus was trained and equipped. He had also to supply any mute persons (*κωφὰ πρόσωπα*) that might be required for the piece. (3) The third contributor was the State. When a poet had applied to the archon for a Chorus and his application had been granted, the archon next assigned to him three actors, who were paid by the State. It did not rest with the poet to decide which of these three should be *πρωταγωνιστής*, etc.: he received them from the State already classified according to merit, as actors of first, second, and third parts. This classification rested ultimately on special *ἀγῶνες* in which actors were directly tried against each other, and which were distinct from the performances at the festivals. If a poet ever required a fourth actor (probably a very rare case), he could only go to the *choregus*, who might make an "extra grant" (*παραχορήγημα*). The State also paid the marshals (*ῥαβδοῦχοι*) who kept order in the theatre, and who were stationed in the orchestra. Lastly, a certain *honorarium*, distinct from the festival-prizes, was paid by the Treasury to each of the competing poets, according to the order in which they were placed by the judges.

The character of the dramatic contests as solemnities conducted by the State was strongly marked in the forms of procedure. A few days before the Great Dionysia, the ceremony called the *προάγων* ("prelude") was held in the old Odeion near the Enneacrunos. The competing poets, with their respective *choregi*, were then formally presented to the public; the actors and choruses were also present, in festal, but not in scenic, attire; and the titles of the plays to be produced at the approaching festival were officially announced. When the first day of the Great Dionysia arrived, the dramatic contests were preceded by the transaction of some public business in the theatre. It was then that crowns of honour were awarded for public services, and that the orphans of Athenians slain in war were presented to the citizens. In due course a public herald summoned the first on the list of competing poets. He entered the orchestra, attended by the *choregus* and Chorus, and poured a libation at the *thymelé* to Dionysus. His procession then withdrew; the orchestra was once more empty, and the play began. One prize for Tragedy and one for Comedy were awarded by ten judges, taken by lot from a large number of persons whom the Senate (with the *choregi*) had chosen from the tribes. At the close of the contests, five judges (taken from the ten by a second ballot) announced the awards. The successful poets were then crowned, before the audience, by the archon. Shortly after the festival, a public meeting, for business connected with it, was held in the theatre.

THE AUDIENCE.—According to a recent estimate, the Dionysiac Theatre was once capable of seating about 27,500 persons. It must be remembered that all the upper tiers have been destroyed, and that the ancient capacity was enormously greater than it would appear from the seats which still exist. Plato was using round numbers when he spoke of "more than 30,000 Greeks" as present in the Dionysiac Theatre at the tragic contests (*Symp.* 175 E), but it is quite conceivable that the number was sometimes nearer to 30,000 than to 20,000. The vast theatre at Megalopolis could hold, according to one modern computation, no fewer than 44,000 persons. Such numbers become intelligible when we consider that the Greek drama was essentially a popular festival, in which the entire civic body was invited to take part. Even young boys were present both at Comedy and at Tragedy. Women were certainly present at Tragedy; and a fragment of Alexis shows that, in the fourth century B.C., they were admitted to the performances of Comedy also. This, however, was the Middle Comedy—very different, in some respects, from the Old Comedy of Aristophanes. It would be a natural inference from the seclusion in which Athenian women lived that they were not admitted to the Old Comedy. But against this *a priori* argument may be set another—viz., that, at the Dionysia, Tragedy and Comedy were merely different sides of one *ἀγών*: those who could participate in one were entitled to share in the other. A line drawn on grounds of decorum would dissever elements which, in the Dionysiac idea, were inseparable. There is no conclusive literary evidence. At Ath-



Theatre at Segesta. (Restoration.)

ens the *μέτοικοι* were admitted to the theatre. Foreigners were also admitted, whether officials or private persons.

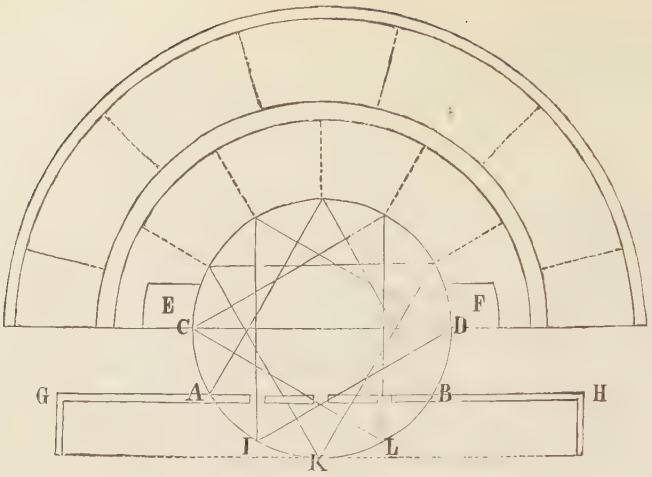
In the earliest days of Athenian drama, admission was doubtless free of charge; payment may have been introduced after the expulsion of the Pisistratidae, when the city began to find the cost too heavy. In the fifth and fourth centuries B.C. the price of admission for one day was two obols, or not quite $0.08. Pericles introduced the system by which the State paid two obols to each citizen for each day of the Dionysiac festivals, in order that he might attend the theatre. This *θεωρικόν* was partly defrayed from the tribute of the allies, and probably began about B.C. 454. It was distributed by the demarchs in the several demes; and, though it was first devised in the interests of the poor, the only condition of obtaining it seems to have been enrollment on the register of the deme. The number of persons receiving the *θεωρικόν* in B.C. 431 has been computed at 18,000. All seats were of the same class, except those reserved for persons who had the right of *προεδρία*, and who paid nothing. (Cf. Dem. *De Cor.* § 28.) The places of payment were probably in the *πάροδοι* leading to the orchestra. Specimens of ordinary Greek theatre-tickets are extant. These are small leaden coins, bearing on one side some emblem of the theatre, such as a Dionysus with a tripod, or an actor's mask; and on the obverse, the name of an Attic tribe, or a numeral. Many examples have been published by Benndorf (*Zeitschr. f. d. österr. Gymn.* xxvi.). Another kind of theatre-ticket also occurs. This is a small round mark of bone or ivory, bearing on one side some artistic device (such as the head of a deity), and on the other a number (never higher than 15), in both Greek and Roman figures. These were tickets, of the Imperial Age, for persons who had *προεδρία*. The numbers probably indicate divisions of the house. How far such division was carried is uncertain. The members of the Senate sat together in a definite part of the Dionysiac Theatre (*τὸ βουλευτικόν*). For youths between the ages of eighteen and twenty-one, a space was similarly reserved (*τὸ ἐφηβικόν*).

The performances began in the morning, and lasted till evening; but it is attested by the comic poet Pherecrates—who gained his first prize in B.C. 438—that the spectators had usually taken the morning meal (*ἄριστον*) before they came (Athen. x. 464 e). In the next century, however, we hear of performances beginning at daybreak (Aesch. *in Ctes.* § 76). The older Athenian custom was for all the spectators to wear wreaths (as at a sacrifice); but this had perhaps gone out before B.C. 350. As the whole day was spent in the theatre, the visitors brought light refreshments (*τραγήματα*) with them. *Choregi* sometimes courted popularity by a distribution of cakes and wine: and Aristophanes has pilloried those rival poets who employed slaves to throw nuts about the house. An Athenian audience was closely attentive—detecting the slightest fault of speech—and highly demonstrative. Loud clapping of hands and shouts of applause expressed their delight; disapproval found vent in stamping with the feet, hissing, and hooting (*κλώζειν*). Never, probably, has the ordeal for an actor been more se-

Theatre-tickets.

vere than it was at Athens. Persons of note who entered the house were recognized with frank favour, or the reverse. Indeed, the whole demeanour of Athenians at the Dionysia appears to have been marked by a certain sense of domestic ease, as if all the holiday-makers were members of one family.

From the latter part of the fourth century B.C. onwards, it became usual to produce drama, not merely at the Dionysia, but on any occasion of special rejoicing; a result partly due to the personal taste of Alexander the Great for theatrical shows of every kind. Hence the theatres gradually lost that sacred character which had been theirs so long as they were set apart for the worship of Dionysus. A further consequence was that they began to be used for various entertainments which had nothing to do with drama, such as the exhibitions of conjurers or acrobats, and, in the Roman age, gladiatorial shows, or combats with wild beasts. Even in the fifth century B.C., indeed, cock-fighting had been held on one day of the year in the Dionysiac Theatre.



Mention has been made of the meetings for public business held in the Dionysiac Theatre just before and after the Great Dionysia. In the latter part of the fifth century we hear of the citizens convening the ecclesia in the theatre at Munychia, and in the Dionysiac Theatre itself, when the Pnyx was not available (Thuc. viii. 93 foll.). By B.C. 250 it had become usual to hold ordinary meetings of the ecclesia in the Dionysiac Theatre; though the elections of magistrates (*ἀρχαιρεσίαι*) continued to be held on the Pnyx. From the fifth century B.C. the theatre had been the regular place for the bestowal of public honours, such as crowns. In later times a theatre was often also the scene of an exemplary punishment (Plut. *Timol.* 34). As statues of Themistocles and Miltiades stood in the Dionysiac Theatre, so, at every period of Greek antiquity, such places were adorned with monuments of statesmen and soldiers, no less than of poets, musicians, and actors. This was in accord with the true idea of the Greek theatre, which was not merely the home of an art, but also a centre of civic reunion.

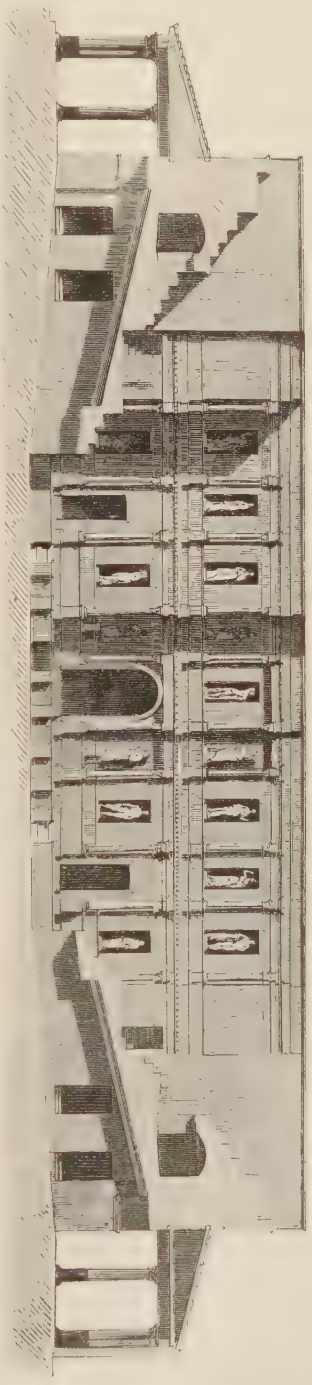
Rome possessed no theatre of stone till B.C. 55. Just a century earlier such an edifice had been in progress, when P. Cornelius Scipio Nasica procured a decree of the Senate for its destruction (Livy, *Epit.* 48). The spirit of the Roman veto on permanent theatres was one which refused to regard the drama except as a passing frivolity. Wooden theatres were erected, and pulled down when the occasion was over. But before the middle of the first century B.C. these temporary structures had already begun to show a high elaboration. The building put up by the aedile M. Aemilius Scaurus in B.C. 58 contained 80,000 seats; the proscenium was adorned with pillars of marble and statues of bronze; and the whole work seems to have possessed every element of grandeur except permanence. The old interdict had already lost its meaning; and three years later Pompeius was allowed to erect, near the Campus Martius, the first theatre of stone. The model is said to have been the theatre of Mitylené, and the number of seats 40,000. The theatre of Marcellus, built by Augustus, and named after his nephew, was also of stone, and could hold 20,500 persons. A third such building, with a capacity of 11,510, was completed in B.C. 13 by L. Cornelius Balbus. These are the *trina theatra* of Suetonius (*Aug.* 45). Meanwhile many provincial towns in Italy and elsewhere had long possessed stone theatres, built or altered under Roman influence.

Remains of Greek Theatre at Syracuse.

The Roman type of theatre is simply the Greek type modified in certain particulars. The ground-

Roman Theatre, after Vitruvius

plan is thus described by Vitruvius: In a circle of the same diameter which the orchestra is to have, inscribe three equilateral triangles. Take one side of any triangle, and let this be the back wall of the stage, *scaenae frons* (A B). A diameter of the circle, drawn parallel with A B, will represent the line dividing the stage from the orchestra (C D). The seats for the spectators are arranged round the orchestra in semicircles concentric with it. The five points above the line C D, where the angles touch the circumference, are the points from which five flights of steps lead up to the seats, dividing them into six *cunei*. Above the first zone, or semicircular passage (*praecinctio*), the seats are divided into twelve *cunei* by eleven stairways. Just above the points C and D, access is given to the orchestra by two vaulted passages which pass under the upper rows of seats (E, F). The platform of the stage is prolonged right and left, so that its total length (G H) is equal to twice the diameter of the orchestra. In the back wall of the stage there are to be three doors, the positions of which are marked by the points I, K, L. Thus the distinctive features of the Roman theatre are these two: (1) The orchestra is not, as in the Greek theatre, a circle (or the greater part of it), but only a semicircle. The diameter of the orchestra is now the front line of a raised stage. Consequently the auditorium, also, forms only a half-circle. The primary cause of this change was that the old Dionysiac Chorus had disappeared; the orchestra, therefore, had no longer a dramatic use. (2) In the Greek theatre the auditorium and the scene-buildings were not architecturally linked. The *πάροδοι* were open passages between them. In the Roman theatre the side-walls of the scene-building were carried forward till they met the side-walls of the auditorium. By this organic union of the two main parts the whole theatre was made a single compact building.



These two main differences explain the other points in which the Roman theatre varied from its Greek original. Thus: (*a*) Having closed the openings afforded by the *πάροδοι*, the Romans needed some other access to their semicircular orchestra. Here the arch served them. By cutting off a few seats in the lower rows at the angles right and left of the stage, they obtained height enough for vaulted passages, which ran under the auditorium into the orchestra. (*b*) The solid unity of the Roman theatres lent itself to the Roman taste for decoration of a monumental character. The permanent Greek proscenia, though usually adorned with columns, had been simple. But the richest embellishments of architecture and sculpture were lavished on the Roman proscenia, in which two or more stories were usually distinguished by carefully harmonized modes of treatment. (*c*) A similar magnificence was shown in the external façades. Greek theatres had usually been erected

Small Theatre at Pompeii. (Overbeck.)

on natural slopes. A Roman theatre was more often built on level ground. The auditorium rested on massive substructions, of which the walls were connected by arches. From the open spaces thus afforded, numerous wide staircases ascended, beneath the auditorium, to the several rows of seats. Corridors, opening on these staircases, ran along the inner side of the semicircular wall which enclosed the auditorium. The exterior of this wall was adorned with columns, having arcades between them, and rising in three or more successive stories, divided by architrave and cornice. Thus while the architectural significance of a Greek theatre depended wholly on the interior, a Roman theatre had also the external aspect of a stately public building.

With regard to the internal arrangements of the Roman theatre, the following points claim notice. (1) The raised stage (*pulpitum*, λογεῖον) is in some instances on a level with the lowest row of seats behind the orchestra. Sometimes, again, the stage is rather higher, but the (originally) lowest row of seats has been abolished, leaving the stage still level with those seats which are actually lowest. In a third class of examples, the stage is higher than the lowest row of seats—as it is at Orange in France. The Roman stage in the Dionysiac Theatre at Athens is of this class. (2) Awnings were spread over the theatre to protect the spectators from sun or rain. These were usually called *vela*: the term *velaria* occurs only in Juv. iv. 122. Pliny, who describes them as *carbasina vela* (of linen), says that they were introduced by Q. Catulus, in B.C. 78 (xix. 23). They were supported by masts (*mali*), fixed to the outer walls of the theatre by massive rings or sockets, which can still be seen at Orange and Pompeii. Between the masts were cross-beams (*trabes*), for greater convenience in unfurling the *vela*. Such awnings were of various colours, as yellow, red, dark-blue (Lucr. iv. 75 foll.). (3) Until the play began, the stage was concealed by a curtain, which was then lowered. The place into which it sank, just inside of the front line of the stage, can be seen in the larger theatre at Pompeii. At the end of the piece the curtain was drawn up. Hence, where we say "the curtain rises," the Romans said *aulaeum mittitur* or *subducitur*; "the curtain is up," *aulaeum premitur*; "the curtain falls," *aulaeum tollitur*. The word *siparium* (from the base of σίφαρος, topsail, *supparum*) meant a folding screen. Apuleius (A.D. 150) describes a kind of ballet as beginning "when the curtain had been lowered, and the screens folded up" (*sipariis complicitis* [*Met.* 10, p. 232]). If these screens were within the curtain, the reason for using them along with it may have been to heighten the effect of a tableau by disclosing it gradually. In the later parts of the piece, they may have served to conceal scene-shifting. Another use is also possible. Theatres of the Macedonian and Roman period sometimes had two stages, the higher being used by the regular actors, the lower by mimes or dancers; and the latter may have been concealed by the *siparium*, as the other by the *aulaeum*. The word *siparium* is regularly associated with comedy or mimes (Seneca, *De Tranq. An.* 11, § 8; Juv. viii. 186). (4) Assignment of seats. The orchestra was reserved for senators. As a special mark of distinction, foreigners (usually ambassadors) were occasionally admitted to it (see Tac. *Ann.* xiii. 54). The rest of the auditorium was called *cavea*. The Lex Roscia, proposed by the tribune L. Roscius Otho in B.C. 67, provided that the fourteen rows of seats in the *cavea* nearest to the orchestra should be reserved for the *equites*—excluding any who should have become bankrupt

Restoration of the Scena Stabilis at Herculaneum. (Overbeck.)

(Cic. *Phil.* ii. § 44). Owing to the large number of *equites* who had been ruined by the Civil Wars, Augustus decreed that the privilege given by the Lex Roscia should be enjoyed by any *eques* who

had at any time possessed, or whose father had possessed, the amount of the *equester census*—viz., 400,000 sesterces (Suet. *Aug.* 40). This is probably the Lex Iulia Theatralis meant by Pliny (*H. N.* xxxiii. § 8). Augustus further assigned special portions of the *cavea* to (*a*) women; (*b*) *praetextati* —i. e. boys who had not yet assumed the toga virilis, and their paedagogi; (*c*) soldiers; (*d*) married men belonging to the plebs. This was a premium on marriage, like others provided in the Lex Iulia et Papia Poppaea. In some provincial theatres the town-councillors (*decuriones*) had seats of honour (*bisellia*) on the rows next the orchestra. Corresponding to the "royal box" in a European theatre was the *tribunal*, immediately over the stage on the spectator's left. This was occupied by the emperor, or by the president of the performance. A corresponding *tribunal* on the left side was assigned to the Vestals, among whom the empress sat. Thus, from the Augustan Age onwards, the contrast between a Greek and a Roman theatre was extended to the arrangements for the audience. Instead of the simple Greek distinction between those who had or had not προεδρία, the Roman auditorium exhibited an elaborate classification by sex, age, profession, and rank.

The Odeum.—The term ᾠδεῖον, denoting a species of theatre appropriated to musical performances, occurs first in a fragment of the comic poet Cratinus (cir. B.C. 450), with reference to the Odeum of Pericles, but it may have been in use from a much earlier time. The oldest recorded example is the Σκιάς at Sparta, which is said to have been round, and to have been named from the resemblance of its top to a sunshade (σκιάς or σκιάδειον: *Etym. Magn.*). Athens possessed three ᾠδεῖα: (1) that near the fountain Enneacrunus by the Ilissus, conjecturally referred to Pisistratus or Solon; (2) the Odeum of Pericles, a little to the northeast of the Dionysiac Theatre; (3) the Odeum built by Herodes Atticus in memory of his wife, on the south slope of the Acropolis. This was built later than A.D. 161. Considerable remains of it still exist. The Odeum may best be regarded as the supplement to the Greek theatre.

Thebae (Θῆβαι), in the poets sometimes **Thebé** (Θήβη; Dor. Θήβα), later **Diospŏlis Magna** (Διόσπολις Μεγάλη, i. e. "Great City of Zeus"), in Egyptian Tuabu, in Scripture No or No Ammon. The capital of Thebaïs, or Upper Egypt, and, for a long time, of the whole country. It was reputed the oldest city of the world. It stood in about the centre of the Thebaïd, on both banks of the Nile, above Coptos, and in the Nomos Coptites. It is said to have been founded under the first dynasty by Menes; but this is unsupported by any evidence. Others ascribed its foundation to Osiris, who named it after his mother, and others to Busiris. It appears to have been at the height of its splendour, as the capital of Egypt, and as a chief seat of worship of Ammon, about B.C. 1330 under the Nineteenth Dynasty. The fame of its grandeur had reached the Greeks as early as the time of Homer, who describes it, with poetical exaggeration, as having a hundred gates, from each of which it could send out 200 war chariots fully armed (*Il.* ix. 381). Homer's epithet of "Hundred-Gated" (ἑκατόμπυλοι) is repeatedly applied to the city by later writers. Its real extent was calculated by the Greek writers at 140 stadia (fourteen geographical miles) in circuit; and in Strabo's time, when the long transference of the seat of power to Lower Egypt had caused it to decline greatly, it still had a circuit of eighty stadia (Diod. i. 50; xv. 45; Strabo, pp. 805, 815). That these computations are not exaggerated is proved by the existing ruins, which extend from side to side of the valley of the Nile, here about six miles wide; while the rocks which bound the valley are perforated with tombs. These ruins, which are perhaps the most magnificent in the world, enclose within their site the four modern villages of Karnak, Luxor (El Uksur), Medînet Habou, and Kurna—the two former on the eastern and the two latter on the western side of the river. They consist of temples, colossi, sphinxes, and obelisks, and, on the western side, of tombs, many of which are cut in the rock and adorned with paintings, which are still as fresh as if just finished. These ruins are remarkable alike for their great antiquity and for the purity of their style. It is most probable that the great buildings were all erected before the Persian invasion, when Thebes was taken by Cambyses, who secured treasure to the amount of some $10,000,000, and burned the wooden habitations, after which time it never regained the rank of a capital city; and thus its architectural monuments escaped that Greek influence which is so marked in the edifices of Lower Egypt. Among its chief buildings, the ancient writers mention the Memnonium, with the two colossi in front of it, the temple of Ammon, in which one of the three chief colleges of priests was established, and the tombs of the kings. See Memnon.

To describe the ruins in detail, and to discuss their identification, would far exceed the possible limits of this article. Suffice it to mention among the monuments on the western (Libyan) side the three temples of Seti I., Rameses II., and Rameses III. Near the second is the fallen colossus of Rameses II., the largest statue in Egypt. (See Rameses.) Beyond is the terraced temple of Queen Hatasu of the Eighteenth Dynasty, near which a remarkable series of mummies and papyri were found by Brugsch in 1881. At Medînet Habou is a great temple of Rameses III., with interesting sculptures describing his victories over the Philistines, and also a calendar. Northwest of this are the cemeteries of the sacred apes and the Valley of the Tombs of the Queens (seventeen sepulchres). On the eastern bank at Luxor is the beautiful temple of Amenoph III., with an obelisk whose fellow now stands in the Place de la Concorde at Paris. At Karnak is a splendid group of temples built under the Twelfth Dynasty. The finest portion of this maze of architectural magnificence is the Great Hall, 170 by 329 feet, with twelve imposing columns 62 feet in height and 12 feet in diameter,

Terraced Temple of Queen Hatasu. (Restoration by Brune.)

and 122 minor columns, and two obelisks, of which one is the tallest in Egypt, being 108 feet in height. On the walls are fine sculptures depicting the battles of Seti I. and Rameses II. against the Hittites, Arabs, Syrians, and Armenians. In one of the porticos is recorded the expedition of Shishak I. against Jerusalem in B.C. 971.

In classical times Thebes was a great showplace, and was visited by both Greek and Roman tourists, among the latter being the emperor Hadrian.

Thebae. (1) Θῆβαι, in poetry **Thebé** (Θήβη, Dor. Θήβα). Now Thion; the chief city in Boeotia. It was situated in a plain southeast of Lake Helicé and northeast of Plataeae. Its acropolis, which was an oval eminence of no great height, was called Cadmea (Καδμεία), because it was said to have been founded by Cadmus, the leader of a Phœnician colony. On each side of this acropolis is a small valley, running up from the Theban plain into the low ridge of hills by which it is separated from that of Plataeae. Of these valleys, the one to the west is watered by the Dircé, and the one to the east by the Ismenus, both of which, however, are insignificant little streams, though so celebrated in ancient story. The greater part of the city stood in these valleys, and was built some time after the acropolis. It is said that the fortifications of the city were constructed by Amphion and his brother Zethus; and that, when Amphion played his lyre, the stones moved of their own accord and formed the wall. The territory of Thebes was called THEBAĪS (Θηβαΐς), and extended eastward as far as the Euboean Sea. No city is more celebrated in the mythical ages of Greece than Thebes. It was here that the use of letters was first introduced from Phœnicia into western Europe. It was the reputed birthplace of the two great divinities, Dionysus and Heracles. It was also the native city of the great seer Tiresias, as well as of the great musician Amphion. It was the scene of the tragic fate of Oedipus, and of one of the most celebrated wars in the mythical annals of Greece. Polynices, who had been expelled from Thebes by his brother Eteocles, induced six other heroes to espouse his cause, and marched against the city; but they were all defeated and slain by the Thebans, with the exception of Adrastus, Polynices, and Eteocles falling by each other's hands. This is usually called the war of the Seven against Thebes. A few years afterwards the Epigoni, or descendants of the seven heroes, marched against Thebes to avenge their fathers' death; they took the city and razed it to the ground. Thebes is not mentioned by Homer in the catalogue of the Greek cities which fought against Troy, as it was probably supposed not yet to have recovered from its devastation by the Epigoni. (See SEVEN AGAINST THEBES.) It appears, however, at the earliest historical period as a large and flourishing city; and it is represented as possessing seven gates (ἑπτάπυλος), the number assigned to it in the ancient legends. Its government, after the abolition of monarchy, was an aristocracy, or rather an oligarchy, which continued to be the prevailing form of government for a long time, although occasionally exchanged for that of a democracy. Towards the end of the Peloponnesian War, however, the oligarchy finally disappears; and Thebes appears under a democratical form of government from this time, till it became with the rest of Greece subject to the Romans.

The Thebans were from an early period inveterate enemies of their neighbours, the Athenians. Their hatred of the latter people was probably one

Coin of the Boeotian Thebes.

of the reasons which induced them to desert the cause of Grecian liberty in the great struggle against the Persian power. In the Peloponnesian War the Thebans naturally espoused the Spartan side, and contributed not a little to the downfall of Athens. But, in common with the other Greek States, they soon became disgusted with the Spartan supremacy, and joined the confederacy formed against Sparta in B.C. 394. The peace of Antalcidas in 387 put an end to hostilities in Greece; but the treacherous seizure of the Cadmea by the Lacedaemonian general Phoebidas in 382, and its recovery by the Theban exiles in 379, led to a war between Thebes and Sparta, in which the former not only recovered its independence, but forever destroyed the Lacedaemonian supremacy. This was the most glorious period in the Theban annals; and the decisive defeat of the Spartans at the battle of Leuctra in 371 made Thebes the first power in Greece. Her greatness, however, was mainly due to the preëminent abilities of her citizens, Epaminondas and Pelopidas; and with the

death of the former at the battle of Mantinea in 362, she lost the supremacy which she had so recently gained. Soon afterwards Philip of Macedon began to exercise a paramount influence over the greater part of Greece. The Thebans were induced, by the eloquence of Demosthenes, to forget their old animosities against the Athenians, and to join the latter in protecting the liberties of Greece; but their united forces were defeated by Philip, at the battle of Chaeronea, in 338. Soon after the death of Philip and the accession of Alexander, the Thebans made a last attempt to recover their liberty, but were cruelly punished by the young king. The city was taken by Alexander in 336, and was entirely destroyed, with the exception of the temples, and the house of the poet Pindar; 6000 inhabitants were slain, and 30,000 sold as slaves. In 316 the city was rebuilt by Cassander, with the assistance of the Athenians. In 290 it was taken by Demetrius Poliorcetes, and again suffered greatly. Dicaearchus, who flourished about this time, has left us an interesting account of the city. He describes it as about seventy stadia (nearly nine miles) in circumference, in form nearly circular, and in appearance somewhat gloomy. He says that it is plentifully provided with water, and contains better gardens than any other city in Greece; that it is most agreeable in summer, on account of its plentiful supply of cool and fresh water, and its large gardens; but that in winter it is very unpleasant, being destitute of fuel, exposed to floods and cold winds, and frequently visited by heavy falls of snow. He further represents the people as proud and insolent, and always ready to settle disputes by fighting, rather than by the ordinary course of justice. It is supposed that the population of the city at this time may have been between 50,000 and 60,000 souls. See Sankey, *Spartan and Theban Supremacies* (1877).

After the Macedonian period Thebes rapidly declined in importance; and it received its last blow from Sulla, who gave half of its territory to the Delphians. Strabo describes it as only a village in his time; and Pausanias, who visited it in the second century of the Christian era, says that the Cadmea alone was then inhabited. The modern town is also confined to this spot, and the surrounding country is covered with a confused heap of ruins. See E. Fabricius, *Theben* (Heidelberg, 1891); and the articles EPAMINONDAS; PELOPIDAS.

(2) Called PHTHIOTĬCAE (*αἱ Φθιώτιδες*), an important city of Thessaly in the district Phthiotis, at a short distance from the coast, and with a good harbour (Polyb. v. 99). (3) A town in Lucania, rarely mentioned.

Thebaïs. (1) See AEGYPTUS. (2) See THEBAE.

Thebaïs. See STATIUS.

Thebānus, PINDĂRUS. See article in the Appendix.

Thebé (*Θήβη Ὑποπλακίη*). A city of Mysia, on the wooded slope of Mount Placus, destroyed by Achilles. It was said to have been the birthplace of Andromaché and Chryseïs (*Il.* i. 366; vi. 397).

Thebes, SEVEN AGAINST. See SEVEN AGAINST THEBES.

Thelepté. See THALA.

Thelpūsa (*Θέλπουσα*) and **Telphussa** (*Τέλφουσα*). Now Vanena; a town in Arcadia on the river Ladon. It was a famous seat of the worship of Demeter-Erinnys, Persephoné, and Dionysus (Pausan. viii. 25, 2).

Themis (*Θέμις*). The daughter of Uranus and Gé. She was married to Zeus, by whom she became the mother of the Horae, Eunomia, Diké (Astraea), Irené, and of the Moerae. In the Homeric poems, Themis is the personification of the order of things established by law, custom, and equity, whence she is described as reigning in the assemblies of men, and as convening, by the command of Zeus, the assembly of the gods. She dwells in Olympus, and is on friendly terms with Hera. She is also described as a prophetic divinity, and is said to have been in possession of the Delphic Oracle as the successor of Gé, and predecessor of Apollo. Nymphs, believed to be daughters of Zeus and Themis, lived in a cave on the river Eridanus, and the Hesperides also are called daughters of Zeus and Themis. On coins she often bears a resemblance to the figure of Athené, and holds a cornucopia and a pair of scales.

Themiscȳra (*Θεμίσκυρα*). A plain on the coast of Pontus, extending east of the river Iris, beyond the Thermodon, celebrated from very ancient times as the country of the Amazons (Herod. iv. 86).

Themĭson (*Θεμίσων*). A Greek physician, the founder of the school of the Methodici.

Themistius (*Θεμίστιος*). A Greek rhetorician of Paphlagonia, who lived in the second half of the fourth century A.D., as teacher of philosophy and oratory at Constantinople. He was much honoured by his contemporaries for his noble disposition and his learning and eloquence, which gained for him the name of EUPHRĂDES, or eloquent speaker. He was honoured with various marks of distinction of the emperors. Constantius made him a senator; Julian described him as the first philosopher of his age; Theodosius selected him as tutor to his son Arcadius, and in 384 nominated him to the prefecture. He died about 388.

Thirty-four of his speeches (*πολιτικοὶ λόγοι*) have been preserved, one of them in a Latin translation only. They are partly philosophical and political, but principally eulogistic orations, either in compliment to or in memory of various emperors, composed in a clear, pleasant style, and valuable for the information they contain respecting contemporary history. Besides these, we possess four paraphrases by him of parts of Aristotle. The orations are edited by Dindorf (Leipzig, 1832).

Themisto (*Θεμιστώ*). The third wife of Athamas (q.v.), who married her under the impression that his wife Ino was dead. When he heard, however, that Ino was living as a votary of Dionysus, in the ravines of Parnassus, he secretly sent for her. Themisto, on hearing this, determined, in revenge, to kill Ino's children, and ordered a slave, who had lately come to the house, to dress her children in white and Ino's in black, so that she might be able to distinguish them in the night. But the slave, who was Ino herself, suspecting the evil intention, exchanged the clothes. Themisto, in consequence, killed her own children, and, on becoming aware of her mistake, slew herself also.

Themistŏcles (*Θεμιστοκλῆς*). A celebrated Athenian, the son of Neocles and Abrotonon, a Thracian woman, and born about B.C. 514. In his youth he had an impetuous character, and displayed great intellectual power combined with a

lofty ambition and a desire for political distinction. He began his career by setting himself in opposition to those who had most power, among whom Aristides was the chief. The fame which Miltiades acquired by his generalship at Marathon made a deep impression on Themistocles; and he said that the trophy of Miltiades would not let him sleep. His rival Aristides was ostracized in B.C. 483, to which event Themistocles contributed; and from this time he was the political leader in Athens. In 481 he was Archon Eponymus. It was about this time that he persuaded the Athenians to employ the produce of the silver mines of Laurium in building ships, instead of distributing it among the Athenian citizens. His great object was to draw the Athenians to the sea, as he was convinced that it was only by their fleet that Athens could repel the Persians and obtain the supremacy in Greece. Upon the invasion of Greece by Xerxes, Themistocles was appointed to the command of the Athenian fleet; and to his energy, prudence, foresight, and courage the Greeks mainly owed their salvation from the Persian dominion.

Themistocles.

Upon the approach of Xerxes, the Athenians, on the advice of Themistocles, deserted their city, and removed their women, children, and infirm persons to Salamis, Aegina, and Troezen; but as soon as the Persians took possession of Athens, the Peloponnesians were anxious to retire to the Corinthian isthmus. Themistocles used all his influence in inducing the Greeks to remain and fight with the Persians at Salamis, and with the greatest difficulty persuaded the Spartan commander Eurybiades to stay at Salamis. But as soon as the fleet of Xerxes made its appearance, the Peloponnesians were again anxious to sail away; and when Themistocles saw that he should be unable to persuade them to remain, he sent a faithful slave to the Persian commanders, informing them that the Greeks intended to make their escape, and that the Persians had now the opportunity of accomplishing a noble enterprise, if they would only cut off the retreat of the Greeks. The Persians believed what they were told, and in the night their fleet occupied the whole of the channel between Salamis and the mainland. The Greeks were thus compelled to fight; and the result was the great and glorious victory, in which the greater part of the fleet of Xerxes was destroyed. This victory, which was due to Themistocles, established his reputation among the Greeks. On his visiting Sparta, he was received with extraordinary honours by the Spartans, who gave Eurybiades the palm of bravery and Themistocles the palm of wisdom and skill (Herod. viii. 124). The Athenians now began to restore their ruined city, and Themistocles urged them to rebuild the walls and make them stronger than before. The Spartans sent an embassy to Athens to dissuade them from fortifying their city, for which it is hard to assign any motive except national jealousy. Themistocles, who was at that time προστάτης τοῦ δήμου (i. e. one of the leaders of the popular party), went on an embassy to Sparta, where he amused the Spartans with lies, till the walls were far enough advanced to be in a state of defence. It was upon his advice also that the Athenians fortified the port of Piraeus. The influence of Themistocles does not appear to have survived the expulsion of the Persians from Greece and the fortification of the ports. He was probably justly accused of enriching himself by unfair means, for he had no scruples about the way of accomplishing an end. A story is told that, after the retreat of the fleet of Xerxes, when the Greek fleet was wintering at Pagasae, Themistocles told the Athenians in the public assembly that he had a scheme to propose which was beneficial to the State, but could not be divulged. Aristides was named to receive the secret, and to report upon it. His report was that nothing could be more profitable than the scheme of Themistocles, but nothing more unjust: the Athenians were guided by the report of Aristides. It is difficult, if not impossible, to reconcile the statement in Arist. *Ath. Pol.* 25, that Themistocles intrigued for the overthow of the Areopagus, with the date of his exile from Athens. The attack upon the Areopagus was in 463; but in 471, in consequence of the political strife between Themistocles and Aristides, the former was ostracized from Athens, and retired to Argos.

After the discovery of the treasonable correspondence of Pausanias with the Persian king, the Lacedaemonians sent to Athens to accuse Themistocles of being privy to the design of Pausanias. Thereupon the Athenians sent off persons with the Lacedaemonians with instructions to arrest Themistocles (466). Themistocles, hearing of what was designed against him, first fled from Argos to Corcyra, and then to Epirus, where he took refuge in the house of Admetus, king of the Molossi, who happened to be from home. Admetus was no friend to Themistocles, but his wife told the fugitive that he would be protected if he would take their child in his arms and sit on the hearth. The king soon came in, and, respecting his suppliant attitude, raised him up, and refused to surrender him to the Lacedaemonian and Athenian agents. Themistocles finally reached the coast of Asia in safety. Xerxes was now dead (465), and Artaxerxes was on the throne (Thucyd. i. 235; Plut. *Them.* 23; Nep. *Them.* 4). Themistocles went up to visit the king at his royal residence; and on his arrival he sent the king a letter, in which he promised to do the king a good service, and prayed that he might be allowed to wait a year and then to explain personally what brought him there. In a year he made himself master of the Persian language and the Persian usages, and, being presented to the king, he obtained the greatest influence over him, and such as no Greek ever before enjoyed—partly owing to his high reputation and the hopes that he gave to the king of subjecting the Greeks to the Persians. The king gave him a handsome allowance, after the Persian fashion; Magnesia supplied him with bread nominally, but paid him annually

fifty talents. Lampsacus supplied wine, and Myus the other provisions. Before he could accomplish anything he died; some say that he poisoned himself, finding that he could not perform his promise to the king. A monument was erected to his memory in the Agora of Magnesia, which place was within his government. It is said that his bones were secretly taken to Attica by his relations, and privately interred there.

Themistocles undoubtedly possessed great talents as a statesman, great political sagacity, a ready wit, and excellent judgment; but he was not an honest man, and, like many other clever men with little morality, he ended his career unhappily and ingloriously. Twenty-one letters attributed to Themistocles are spurious.

See Wolff, *De Vita Themistoclis* (1871); and Wecklein, *Ueber Themistokles*, etc. (1892).

Themistogĕnes (Θεμιστογένης). A native of Syracuse, supposed (on inadequate grounds) to be the author of the *Anabasis*, which has come down to us under the name of Xenophon (q. v.).

Theoclymĕnus (Θεοκλύμενος). Son of the soothsayer Polyphides, grandson of Melampus. When a fugitive from Argos, for a murder which he had committed, he met with Telemachus in Pylus, who succoured him and brought him to Ithaca. By means of his inherited gift of prophecy, he here made known to Penelopé the presence of Odysseus in the island, and warned the suitors of their fate.

Theocrĭtus (Θεόκριτος). The most famous of the Greek bucolic poets was a native of Syracuse, the son of Praxagoras and Philinna. He visited Alexandria towards the end of the reign of Ptolemy Soter, where he received the instruction of Philetas and Asclepiades, and began to distinguish himself as a poet. Other accounts make him a native of Cos, which would bring him more directly into connection with Philetas (Suidas, s. v. Θεόκριτος). His first efforts obtained for him the patronage of Ptolemy Philadelphus, who was associated in the kingdom with his father, Ptolemy Soter, in B.C. 285, and in whose praise, therefore, the poet wrote the fourteenth, fifteenth, and seventeenth Idyls. At Alexandria he became acquainted with the poet Aratus, to whom he addressed his sixth Idyl. Theocritus afterwards returned to Syracuse, and lived there under Hiero II. It appears from the sixteenth Idyl that Theocritus was dissatisfied, both with the want of liberality on the part of Hiero in rewarding him for his poems, and with the political state of his native country. It may therefore be supposed that he devoted the latter part of his life almost entirely to the contemplation of those scenes of nature and of country life on his representations of which his fame chiefly rests.

Theocritus was the creator of bucolic poetry in Greek, and, through imitators, such as Vergil, in Roman literature. (See VERGILIUS.) The bucolic *Idyls* of Theocritus are of a dramatic and mimetic character. They are *pictures* of the ordinary life of the common people of Sicily; whence their name εἴδη, εἰδύλλια. The pastoral poems and romances of later times are a totally different sort of composition from the bucolics of Theocritus, who knows nothing of the affected sentiment which has been ascribed to the imaginary shepherds of a fictitious Arcadia. He merely exhibits simple and faithful pictures of the common life of the Sicilian people, in a thoroughly objective, although truly poetical, spirit. Dramatic simplicity and truth are impressed upon the scenes exhibited in his poems, into the colouring of which he has thrown much of the natural comedy which is always seen in the common life of a free people. In his dramatic dialogue he is influenced by the mimes of Sophron (q. v.), as may be seen especially in the fifteenth Idyl (*Adoniazusae*). The poems of Theocritus of this class may be compared with those of Herondas, who belonged, like Theocritus, to the literary school of Philetas of Cos. In genius, however, Theocritus was greatly the superior. The collection which has come down to us under the name of Theocritus consists of thirty poems, called by the general title of *Idyls*, a fragment of a few lines from a poem entitled *Berenicé*, and twenty-two epigrams in the Greek Anthology. But these Idyls are not all bucolic, and were not all written by Theocritus. Those of which the genuineness is the most doubtful are the twelfth, twenty-third, twenty-sixth, twenty-seventh, and twenty-ninth; and Idyls xiii., xvi., xvii., xxii., xxiv., and xxvi. are in Epic style, and have more of Epic dialect, especially Idyl xvi. It is likely that these poems on Epic subjects were written early in the poet's life, and, as court poems, had some of the artificial and imitative character of the Alexandrians. In general the dialect of Theocritus is Doric, but two of the Idyls (xxviii. and xxix.) are in the Aeolic.

There are numerous manuscripts of Theocritus, especially in the Laurentian Library at Florence, in the Vatican, and at Paris; but none antedate the thirteenth century. Theocritus is edited by Valckenaer (1810); Wüstemann (Gotha, 1830); Meineke (1856); Fritzsche (Leipzig, 1869); Paley (London, 1863); Wordsworth (1877), and Kynaston (1873). There are translations into English verse by Chapman (1866) and Calverley (1869); and into English prose by Lang (1889), the last with an introduction. See Knapp, *Theokrit und die Idyllen-Dichtung* (1882); Bachelin, *Interprétation Littéraire et Philologique de la Première Idylle de Théocrite* (Paris, 1886); and Fritzsche, *Zu Theokrit und Virgil* (1860). There is a lexicon to Theocritus by Rumpel (1879).

Theodectes (Θεοδέκτης). Of Phaselis, in Lycia, a Greek rhetorician and tragic poet. He carried off the prize eight times, and in B.C. 351 his tragedy of *Mausolus* was victorious in the tragic contest instituted by Queen Artemisia in honour of her deceased husband Mausolus. In the rhetorical contest, held at the same time, he was defeated by Theopompus. Only unimportant fragments of his fifty tragedies are extant.

Theodōra (Θεοδώρα). The wife of the emperor Justinian I. Procopius, in his scandalous chronicle of the Byzantine court, describes her as the daughter of one Acacius, a showman, and as having been by turns an actress, a dancer, and a harlot of extraordinary shamelessness. She was at first Justinian's mistress, and in A.D. 527 became his wife, the emperor having secured the repeal of a law which forbade the marriage of a member of the Senate with an actress. From the time of her wedding, however, she lived a life of exemplary purity, and was to her husband a wise and trusty counsellor, and one whose courage saved the throne at the time of the riots that took place in 532. She was especially famous for her charity towards unfortu-

nate women. She died at the age of forty in 548. The disgusting stories contained in the Ἀνέκδοτα of Procopius (q. v.) and repeated by Gibbon and Dahn are discredited by the fact that neither Evagrius nor Zonaras mentions them, and also by the self-confessed mendacity of Procopius himself. See Débedour, *L'Impératrice Théodora* (Paris, 1885); Dahn, *Prokopius* (Berlin, 1865); a paper by Mallet in the *English Historical Review*, vol. ii. (1887); and the article Iustinianus. The story of Theodora is made the basis of a well-known drama by Victorien Sardou (1884).

Theodoricus or **Theoderīcus**. (1) King of the Visigoths from A.D. 418 to 451. He was the successor of Wallia, but appears to have been the son of the great Alaric. He fell fighting on the side of Aëtius and the Romans at the great battle of Châlons, in which Attila was defeated, 451. (2) A king of the Visigoths A.D. 452–466, second son of Theodoric I. He succeeded to the throne by the murder of his brother Thorismond. He ruled over the greater part of Gaul and Spain. He was assassinated in 466 by his brother Euric, who succeeded him on the throne. Theodoric II. was a patron of letters and learned men. The poet Sidonius Apollinaris resided for some time at his court. (3) Surnamed The Great, king of the Ostrogoths, succeeding his father Theodemir in 475. He was at first an ally of Zeno, the emperor of Constantinople, but was afterwards involved in hostilities with the emperor. In order to get rid of Theodoric, Zeno gave him permission to invade Italy, and expel the usurper Odoacer from the country. Theodoric entered Italy in 489, and, after defeating Odoacer in three great battles, laid siege to Ravenna, in which Odoacer took refuge. After a siege of three years Odoacer capitulated on condition that he and Theodoric should rule jointly over Italy; but Odoacer was soon afterwards murdered by his more fortunate rival (493). Theodoric thus became master of Italy, which he ruled for thirty-three years, till his death in 526. His long reign was prosperous and beneficent, and under his sway Italy recovered from the ravages to which it had been exposed for so many years. Theodoric was also a patron of literature: and among his ministers were Cassiodorus and Boëthius, the two last writers who can claim a place in the literature of ancient Rome. But prosperous as had been the reign of Theodoric, his last days were darkened by disputes with the Catholics, and by the condemnation and execution of Boëthius and Symmachus, whom he accused of a conspiracy to overthrow the Gothic dominion in Italy. His death is said to have been hastened by remorse. It his related that one evening, when a large fish was served on the table, he fancied that he beheld the head of Symmachus, and was so terrified that he took to his bed, and died three days afterwards. Theodoric was buried at Ravenna, and a monument was erected to his memory by his daughter Amalasuntha. His ashes were deposited in a porphyry vase, which is still to be seen at Ravenna. See Hodgkin, *Theodoric the Goth* (1891).

Theodōrus (Θεόδωρος). (1) Of Byzantium, a rhetorician, and a contemporary of Plato. (2) A philosopher of the Cyrenaic School, usually designated by ancient writers "the Atheist." He resided for some time at Athens; and being banished thence, went to Alexandria, where he entered the service of Ptolemy, son of Lagus. (3) An eminent rhetorician of the age of Augustus, was a native of Gadara. He settled at Rhodes, where Tiberius, afterwards emperor, during his retirement (B.C. 6–A.D. 2) to that island, was one of his hearers (Sueton. *Tib.* 57). He also taught at Rome. Theodorus was the founder of a school of rhetoricians called "Theodorei." (4) Of Samos, son of Rhoecus. In conjunction with his father, he erected the labyrinth of Lemnos (Pliny, *H. N.* xxxvi. 90), and advised the laying down of a layer of charcoal as part of the foundation of the Temple of Artemis at Ephesus (Diog. Laërt. ii. 103). He is said to have lived for a long time in Egypt, where he and his brother Telecles learned the Egyptian canon of proportion for the human figure. He was considered by the Greeks as one of the inventors of the art of casting in bronze (Pausan. viii. 14, 8). He wrote a work on the Temple of Heré at Samos, which was begun by his father (Vitruv. vii. pref. 12). (5) Son of Telecles, and nephew of the preceding. He flourished in the time of Croesus and Polycrates, whose ring he made (Herod. i. 51; iii. 41).

Theodosiānus Codex. See Codex Theodosianus; Theodosius.

Theodosius (Θεοδόσιος). (1) Surnamed The Great, Roman emperor of the East, A.D. 378–395. He was the son of the general Theodosius who restored Britain to the Empire, and was beheaded at Carthage in the reign of Valens (A.D. 376). The future emperor was born in Spain about A.D. 346. He received a good education; and he learned the art of war under his own father, whom he accompanied in his British campaigns. During his father's lifetime he was raised to the rank of Duke (*dux*) of Moesia, where he defeated the Sarmatians (374) and saved the province. On the death of his father he retired before court intrigues to his native country. He acquired a considerable military reputation in the lifetime of his father; and after the death of Valens, who fell in battle against the Goths, he was proclaimed emperor of the East by Gratian, who felt himself unable to sustain the burden of the Empire. The Roman Empire in the East was then in a critical position; for the Romans were disheartened by the bloody defeat which they had sustained, and the Goths were insolent in their victory. Theodosius, however, showed himself equal to the difficult position in which he was placed; he gained two signal victories over the Goths, and concluded a peace with the barbarians in 382.

In the following year (383) Maximus assumed the imperial purple in Britain, and invaded Gaul with a powerful army. In the war which followed Gratian was slain; and Theodosius, who did not consider it prudent to enter into a contest with Maximus, acknowledged the latter emperor of the countries of Spain, Gaul, and Britain, but he secured to Valentinian, the brother of Gratian, Italy, Africa, and western Illyricum. But when Maximus expelled Valentinian from Italy in 387, Theodosius espoused the cause of the latter, and marched into the West at the head of a powerful army. After defeating Maximus in Pannonia, Theodosius pursued him across the Alps to Aquileia. Here Maximus was surrendered by his own soldiers to Theodosius and was put to death. Theodosius spent the winter at Milan, and in the following year (389) he entered Rome in triumph, accom-

panied by Valentinian and his own son Honorius. Two events in the life of Theodosius about this time may be mentioned as evidence of his uncertain character and his savage temper. In 387 a riot took place at Antioch, in which the statues of the emperor, of his father, and of his wife were thrown down; but these idle demonstrations were quickly suppressed by an armed force. When Theodosius heard of these riots, he degraded Antioch from the rank of a city, stripped it of its possessions and privileges, and reduced it to the condition of a village dependent on Laodicea. But in consequence of the intercession of Antioch and the Senate of Constantinople, he pardoned the city, and all who had taken part in the riot. The other event is an eternal brand of infamy on the name of Theodosius. In 390, while the emperor was at Milan, a serious riot broke out at Thessalonica, in which the imperial officer and several of his troops were murdered. Theodosius resolved to take the most signal vengeance upon the whole city. An army of barbarians was sent to Thessalonica; the people were invited to the games of the Circus; and as soon as the place was full, the soldiers received the signal for massacre. For three hours the spectators were indiscriminately exposed to the fury of the soldiers, and 7000 of them, or, as some accounts say, more than twice that number, paid the penalty of the insurrection. St. Ambrose, Archbishop of Milan, represented to Theodosius his crime in a letter, and told him that penitence alone could efface his guilt. Accordingly, when the emperor proceeded to perform his devotions in the usual manner in the great church of Milan, the archbishop stopped him at the door, and demanded an acknowledgment of his guilt. The conscience-struck Theodosius humbled himself before the church, which has recorded his penance as one of its greatest victories. He laid aside the insignia of imperial power; in the posture of a suppliant in the church of Milan he asked pardon for his great sin before all the congregation; and, after eight months, the emperor was restored to communion with the Church.

Theodosius spent three years in Italy, during which he established Valentinian II. on the throne of the West. He returned to Constantinople towards the latter end of 391. Valentinian was slain in 392 by Arbogastes, who raised Eugenius to the Empire of the West. This involved Theodosius in a new war; but it ended in the defeat and death both of Eugenius and Arbogastes in 394. Theodosius died at Milan, four months after the defeat of Eugenius, on the 17th of January, 395. His two sons, Arcadius and Honorius, had already been elevated to the rank of Augusti, and it was arranged that the Empire should be divided between them, Arcadius having the East, and Honorius the West. Theodosius was a firm Catholic, and a fierce opponent and persecutor of the Arians and all heretics. It was in his reign also that the formal destruction of paganism took place; and we still possess a large number of the laws of Theodosius, prohibiting the exercise of the pagan religion, and forbidding the heathen worship under severe penalties, in some cases extending to death. (2) A Roman emperor of the East, A.D. 408–450. He was born in 401, and was only seven years of age at the death of his father Arcadius, whom he succeeded. Theodosius was a weak ruler; and his sister Pulcheria, who became his guardian in 414, possessed the virtual government of the Empire during the remainder of his long reign. The principal external events in the reign of Theodosius were the war with the Persians, which only lasted a short time (421–422), and was terminated by a peace for a hundred years; and the war with the Huns, who repeatedly defeated the armies of the emperor, and compelled him at length to conclude a disgraceful peace with them in 447 or 448. Theodosius died in 450, and was succeeded by his sister Pulcheria, who prudently took for her colleague in the Empire the senator Marcian, and made him her husband. Theodosius had been married in 421 to the accomplished Athenaïs, the daughter of the sophist Leontius, who received at her baptism the name of Eudocia. Their daughter Eudoxia was married to Valentinian III., the emperor of the West. In the reign of Theodosius, and that of Valentinian III., was made the compilation called the Codex Theodosianus. It was published in A.D. 438. It consists of sixteen books, which are divided into titles, with appropriate rubricae or headings; and the constitutions belonging to each title are arranged under it in chronological order. The first five books comprise the greater part of the constitution which relates to *ius privatum;* the sixth, seventh, and eighth books contain the law that relates to the constitution and administration; the ninth book treats of criminal law; the tenth and eleventh treat of the public revenue and some matters relating to procedure; the twelfth, thirteenth, fourteenth, and fifteenth books treat of the constitution and the administration of towns and other corporations; and the sixteenth contains the law relating to ecclesiastical matters.

LITERARY.—(1) Of Bithynia, a mathematician, mentioned by Strabo and by Vitruvius, the latter of whom speaks of him as the inventor of a universal sun-dial. (2) Of Tripolis, a mathematician and astronomer of some distinction, who appears to have flourished later than the reign of Trajan. He wrote several works, of which the three following are extant, and have been published: (*a*) Σφαιρικά, a treatise on the properties of the sphere, and of the circles described on its surface; (*b*) Περὶ Ἡμερῶν καὶ Νυκτῶν; and (*c*) Περὶ Οἰκήσεων.

Theodŏta (Θεοδότη). An Athenian courtesan, and one of the most celebrated persons of that class in Greece. She is introduced as a speaker in Xenophon's *Memorabilia* (iii. 11). She at last attached herself to Alcibiades, and, after his murder, she performed his funeral rites (Athen. pp. 220, 574). See ALCIBIADES.

Theognis (Θέογνις). Of Megara, an ancient elegiac and gnomic poet, said to have flourished B.C. 548 or 544. He may have been born about 570, and would therefore have been eighty at the commencement of the Persian Wars, 490, at which time we know from his own writings that he was alive. Theognis belonged to the oligarchical party in his native city, and in its fates he shared. He was a noble by birth, and all his sympathies were with the nobles. They are, in his poems, the ἀγαθοί and ἐσθλοί, and the commons the κακοί and δειλοί, terms which, in fact, at that period, were regularly used in this political signification, and not in their later ethical meaning. He was banished with the leaders of the oligarchical party, having previously been deprived of all his property; and most of his poems were composed while

he was an exile. Most of his political verses are addressed to a certain Cyrnus, the son of Polypas. The other fragments of his poetry are of a social, most of them of a festive, character. They place us in the midst of a circle of friends who formed a kind of convivial society; all the members of this society belonged to the class whom the poet calls "the good." The collection of gnomic poetry which has come down to us under the name of Theognis contains, however, many additions from later poets. The genuine fragments of Theognis, with some passages which are poetical in thought, have much that helps us to understand his times.

The best editions are by Welcker (1826); Bekker (Leipzig, 1815 and 1827); Orelli (Zürich, 1840); Bergk (1878); Ziegler (2d ed. 1880); and Sitzler (1880). See Frere's *Theognis Restitutus* (Malta, 1842); Müller, *De Scriptis Theognidis* (1877); Sitzler, *Studien zum Elegiker Theognis* (1885); and Sittl, *Geschichte der griechischen Literatur*, i. pp. 261 foll.

Theogonia (*θεογονία*). A theogony, or genealogical account of the gods. The earliest of these is said to have been written by Musaeus (q. v.); but the most famous is that of Hesiod, which is still extant. See Hesiodus.

Theon (*Θέων*). (1) Of Samos. A Greek painter who flourished in the second half of the fourth century B.C. His pictures were celebrated for their powerful effect on the imagination, which caused those who looked at them to forget that they were only counterfeits of reality. The picture of a young hoplite charging the enemy was especially celebrated for this effect of illusion (Aelian, *V. H.* ii. 44).

(2) Of Smyrna. A Platonist living in the first half of the second century A.D. He was the author of a work of great value in connection with ancient Greek arithmetic: on the principles of mathematics, music, and astronomy required for the study of Plato. It is edited by Hiller (Leipzig, 1878).

(3) Of Alexandria. One of the last students at the Alexandrian Museum, born about A.D. 365. He is the author of a commentary on Euclid and on the astronomical tables of Ptolemaeus. He was the father of the celebrated Hypatia (q. v.). His works are edited by Halma (Paris, 1822).

(4) Aelius. A rhetorician of Alexandria, who wrote, in the fifth century A.D., a book on rhetoric, to which were appended exercises on style, called *Προγυμνάσματα*, deserving of commendation both for their conciseness and lucidity of exposition, and for their criticisms on the style of the Attic orators. Edited by Finckh (Stuttgart, 1834).

Theonoë (*Θεονόη*). Daughter of Proetus and Psammathe, also called Idothea. See Idothea.

Theophănes (*Θεοφάνης*). (1) Cn. Pompēius, of Mitylené in Lesbos. A learned Greek, who was one of the most intimate friends of Pompey, and wrote the history of his campaigns (Caes. *B. G.* iii. 18). (2) A Byzantine historian, who flourished most probably in the latter part of the sixth century of our era. He wrote, in ten books, the history of the Eastern Empire during the Persian war under Justin II., from A.D. 567 to 581. The work itself is lost, but some extracts from it are preserved by Photius. (3) Also a Byzantine historian, lived during the second half of the eighth century A.D. and the early part of the ninth. In consequence of his supporting the cause of image-worship, he was banished by Leo the Armenian to the island of Samothrace, where he died, in 818. Theophanes wrote a *Chronicon*, which is still extant, beginning at the accession of Diocletian, in 277, and coming down to 811. It consists, like the *Chronica* of Eusebius and of Syncellus, of two parts, a history arranged according to years, and a chronological table, of which the former is very superior to the latter. It is edited by De Boor (Leipzig, 1883).

Theophania (*θεοφάνια*). A Delphic festival celebrated in February on the alleged birthday of Apollo (Plut. *Quaest. Graec.* 9). In the Christian Greek writers, the name is used of Christmas Day.

Theophrastus (*Θεόφραστος*). The Greek philosopher. He was a native of Eresus in Lesbos, and studied philosophy at Athens, first under Plato and afterwards under Aristotle. He became the favourite pupil of Aristotle, who named Theophrastus his successor in the presidency of the Lyceum, and in his will bequeathed to him his library and the originals of his own writings. Theophrastus was a worthy successor of his great master, and nobly sustained the character of the school. He is said to have had two thousand disciples, and among them such men as the comic poet Menander. He was highly esteemed by the kings Philippus, Cassander, and Ptolemy, and was not the less the object of the regard of the Athenian people, as was decisively shown when he was impeached of impiety; for he was not only acquitted, but his accuser would have fallen a victim to his calumny had not Theophrastus generously interfered to save him. He died in B.C. 287, having presided over the Academy about thirty-five years. His age is variously stated. According to some accounts he lived 85 years, according to others 107 years. He is said to have closed his life with the complaint respecting the short duration of human existence, that it ended just when the insight into its problems was beginning. He wrote a great number of works, the great object of which was the development of the Aristotelian philosophy. His *Ἠθικοὶ Χαρακτῆρες*, in thirty chapters; his work on plants (*Περὶ Φυτῶν Ἱστορίας*), in ten books; his account of the causes of plants (*Περὶ Φυτῶν Αἰτιῶν*); and his treatise on stones (*Περὶ Λίθων*), are extant. These are edited together by Wimmer (Breslau, 1842–62). A separate edition of the *Characteres* is that of Jebb (London, 1870).

Theophylactus (*Θεοφυλάκτος*), surnamed **Simocatta**. A Byzantine historian, who lived at Constantinople, where he held some public offices under Heraclius, about A.D. 610–629. His chief work is a history of the reign of the emperor Maurice, in eight books, from the death of Tiberius II. and the accession of Maurice, in 582, down to the murder of Maurice and his children by Phocas in 602. (Edited by Bekker [Bonn, 1834].) There is also extant another work of Theophylactus, entitled *Quaestiones Physicae*, edited by Boissonade (Paris, 1835); and De Boor (1886). He was likewise the author of a collection of fictitious letters divided as *Morales* (twenty-eight), *Rusticae* (twenty-eight), and *Amatoriae* (twenty-eight).

Theopompus (*Θεόπομπος*). (1) A Greek poet of the Old Comedy, a younger contemporary of Aristophanes; he is known to have been engaged in composition as late as B.C. 370. Only fragments remain of his twenty-four dramas, which prepared

the way for the transition to the Middle Comedy. See COMOEDIA.

(2) A Greek historian, born at Chios about B.C. 378. He left home, probably about 361, with his father, who was banished by the democratic party on account of his predilection for the Spartans, and, having been trained in oratory by Isocrates, spoke with great success in all the larger towns of Greece. He distinguished himself so greatly in the rhetorical contest instituted (351) by Queen Artemisia, wife of Mausolus, in honour of her deceased husband, that he obtained a brilliant victory over all competitors. He afterwards travelled, with the object of acquiring material for his historical works. The favour shown him by Alexander the Great induced him to return to Chios at the age of forty-five; but on the death of his patron he found himself again obliged to flee from his opponents, whose hatred he had incurred by his vehement adoption of the sentiments of the aristocracy. He took refuge with Ptolemy I., at Alexandria, about 305. Here he did not, however, meet with a favourable reception, and was compelled to withdraw, as his life was in danger. Of his subsequent career nothing is known.

Besides numerous orations (principally panegyrics) he composed two large histories, founded on the most careful and minute research: (*a*) *Hellenica* (Ἑλληνικαὶ Ἱστορίαι), in twelve books, a continuation of Thucydides, covering the period from 411–394; and (*b*) *Philippica* (Φιλιππικά), in fifty-eight books, treating of the life and times of Philip of Macedon. Of these works only fragments remain. The charge of malignity, which was brought against him by the ancients, seems to have originated in the reckless manner in which, on the testimony of Dionysius of Halicarnassus (*Ep. ad Cn. Pompeium*), he exposed the pettiness and baseness of the politics of those times, especially those of the Macedonian party. There seems to be better foundation for the charge brought against him of being too fond of digressions; for when, in later times, the digressions in the *Philippica* were omitted, the work was thereby reduced to sixteen books. Theopompus was the first Greek writer to make any definite mention of Rome, speaking of its capture by the Gauls (Pliny, *H. N.* iii. 57). His fragments are edited by C. and Th. Müller in the *Frag. Hist. Graec.* (Paris, 1841). See Stern, *Diodor und Theopompos* (1891).

(3) A king of Sparta who is said to have established the ephoralty (Pausan. iii. 7, 5).

Theōri (*θεωροί*). Persons sent by the Greek States on any special mission (*θεωρία*) associated with religion, such as the offering of sacrifice or the consultation of an oracle. Among some of the Doric States, such as the Messenians, Mantineans, and Troezenians, there were special officers called Theori, who consulted the oracles and interpreted their responses.

Theoria (*θεωρία*). See THEORI.

Theorĭcon (*τὸ θεωρικόν*, sc. *χρῆμα*, "theatre-money"). Money devoted by the State to the public shows and festivals, or given to the people as legacies. A distribution of two obols (about $0.08) a head, granted from the time of Pericles to the poorer Athenian citizens, from the common war-chest (see HELLENOTAMIAE), enabled them to attend the representations at the theatre, two obols being the entrance fee levied by the lessees of the theatre. By degrees this grant was distributed to citizens who laid claim to it in the case of other entertainments, such as festivals and sacrifices. For the contests and games at the Panathenaea, Dionysia, Eleusinia, Thargelia, money was set apart by the State, while some of the expense was borne by individuals. (See LITURGIA.) The public treasury also defrayed a portion of the cost of the Olympian, Pythian, Nemean, and Isthmian Games. It was abolished towards the end of the Poloponnesian War, but again introduced after the restoration of the democracy; and a special fund, to which, by a decree of the people, the whole surplus of the revenue was to be devoted, was set apart for this purpose, with a special treasurer, who had even for a time the management of the finances of the State. Demosthenes first succeeded, shortly before the battle of Chaeronea (B.C. 338), in putting an end to this system, which so severely taxed the resources of the State in time of war. See Fickelscherer, *De Theoricis Atheniensium Pecuniis* (Leipzig, 1877).

Theōris (*θεωρίς*). A trireme kept for sacred embassies. Three of these were kept at Athens. (Schömann, *Antiq.* Eng. trans. p. 441.) See THEORI.

Theoxenia (*θεοξένια*, also *θεοδαίσια*, "entertainments given to the gods"). A festival celebrated in many parts of Greece in honour, not only of the principal local divinity, but of many others who were considered as his guests. Such was the feast held at Delphi in honour of Apollo in the month hence called Theoxenius (August). Of the manner of its celebration nothing is known. Distinguished men, such as Pindar and his descendants, were also invited to the sacrificial feast. Elsewhere other gods appeared as hosts at the feast, as the Dioscuri, the patrons of hospitality, in Paros and Agrigentum. From these god-feasts the Romans probably derived the custom of their *lectisternia*. See LECTISTERNIUM.

Thera (*Θήρα*). Now Santorin; an island in the Aegaean Sea, and the chief of the Sporades, distant from Crete 700 stadia, and 25 Roman miles south of the Island of Ios. See Voswinckel, *De Theraeorum Insulis* (1856).

Theramĕnes (*Θηραμένης*). An Athenian, son of Hagnon. He was a leading member of the oligarchical government of the Four Hundred at Athens, in B.C. 411. Subsequently, however, he not only took a prominent part in the deposition of the Four Hundred, but came forward as the accuser of Antiphon and Archeptolemus, who had been his intimate friends, but whose death he was now the mean and cowardly instrument in procuring. After the capture of Athens by Lysander, Theramenes was chosen one of the Thirty Tyrants (404). But as from policy he endeavoured to check the tyrannical proceedings of his colleagues, Critias accused him before the council as a traitor, and procured his condemnation by violence. When he had drunk the hemlock, he dashed out the last drop from the cup, exclaiming, "This to the health of the handsome Critias!" (Xen. *Hell.* ii. 3, 2; Diod. xiv. 5). See Pöhlig, *Der Athener Theramenes* (Leipzig, 1877); and Wilamowitz, *Aristoteles und Athen.*

Therapeutics. See MEDICINA; MEDICUS.

Therapnae (*Θεράπναι*). (1) A town in Laconia, on the left bank of the Eurotas and a little above

Sparta, celebrated in mythology as the birthplace of Castor and Pollux. Menelaüs and Helen were said to be buried here (Pausan. iii. 19, 9). (2) A town in Boeotia.

Theras (*Θήρας*). A Spartan who colonized and gave name to the island of Thera (q. v.).

Therasia (*Θηρασία*). A small island west of Thera.

Therĭcles (*Θηρικλῆς*). A Corinthian potter, whose works obtained such celebrity that they became known throughout Greece by the name of *Θηρίκλεια* (sc. *ποτήρια*) or *κύλικες Θηρικλεῖαι* (or *-οι*), and these names were applied not only to cups of earthenware, but also to those of wood, glass, gold, and silver (Athen. pp. 470–472; Pliny, *H. N.* xvi. 205).

Therītas ("the savage one"). A name given at Sparta to Ares (q. v.).

Therma (*Θέρμη*). A town in Macedonia, afterwards called Thessalonica (see THESSALONICA), situated at the northeastern extremity of a great gulf of the Aegaean Sea, called THERMAĬCUS or THERMAEUS SINUS from the town at its head. This gulf was also called Macedonicus Sinus; its modern name is the Gulf of Salonica.

Thermae (*θέρμαι*, literally "hot-springs"). The name given by the Romans to the public buildings, founded in and after the time of Agrippa, which combined, with warm baths, the arrangements of a Greek gymnasium. These included open and covered colonnades for conversation, instruction, and different exercises, especially the game of ball. The most extensive and splendid establishments of the sort were to be found in Rome, and are still to be seen, though, for the greater part, in ruins. Of the existing remains the most important are those of the Thermae of Caracalla. These accommodated some 1600 bathers

Remains of the Thermae of Caracalla. (From a photograph.)

at once, but were inferior in size to the Thermae of Diocletian on the Quirinal Hill, which were built for the use of 3200 bathers. Of these there are extensive remains, including part of a theatre. The Thermae of Diocletian were dedicated in A.D. 350. See BALNEAE.

Thermae (*Θέρμαι*). A town in Sicily, built by the inhabitants of Himera after the destruction of the latter city by the Carthaginians. See HIMERA.

Thermaĭcus Sinus. See THERMA.

Thermōdon (*Θερμώδων*). Now Thermeh; a river of Pontus, in the district of Themiscyra, the reputed country of the Amazons, rises in a mountain called Amazonius Mountain, near Phanaroea, and falls into the sea about thirty miles east of the mouth of the Iris. At its mouth was the city of Themiscyra; and there is still, on the west side of the mouth of the Thermeh, a place of the same name, Thermeh.

Thermopolium (*θερμοπώλιον*). A shop where hot drink (*calda*) was sold. (Plaut. *Trin.* iv. 3, 6.) See CALDA; VINUM.

Thermopўlae (*Θερμοπύλαι*), or simply **Pylae** (*Πύλαι*). "The Hot Gates," or "The Gates." A celebrated pass leading from Thessaly into Locris. It lay between Mount Oeta and an inaccessible morass, forming the edge of the Malic Gulf. At one end of the pass, close to Anthela, the mountain approaches so close to the morass as to leave room for only a single carriage between; this narrow entrance formed the western gate of Thermopylae. About a mile to the east the mountain again approached close to the sea, near the Locrian town of Alpeni, thus forming the eastern gate of Thermopylae. The space between these two gates was wider and more open, and was distinguished by its abundant flow of hot springs, which were sacred to Heracles: hence the name of the place. Thermopylae was the only pass by which an enemy could penetrate from northern into southern Greece; whence its great importance in Grecian history. It is especially celebrated on account of the heroic defence of Leonidas and the 300 Spartans against the mighty host of Xerxes in B.C. 480; and they only fell through the Persians having discovered a path over the mountains, and thus being enabled to attack the Greeks in the rear. This mountain path commenced from the neighbourhood of Trachis, ascended the gorge of the river Asopus and the hill called Anopaea, then crossed the crest of Oeta, and descended in the rear of Thermopylae near the town of Alpeni (Herod. vii. 207–228; Pausan. iv. 35, 9; x. 19–22). See Schliemann, *Untersuch. d. Thermopylen* (1883); and the article XERXES.

Thermum (*Θέρμον*) or **Therma** (*τὸ Θέρμα*). A town of the Aetolians near Stratus, with warm mineral springs, and regarded for some time as the capital of the country.

Theron (*Θήρων*). A tyrant of Agrigentum, in Sicily, who reigned from about B.C. 488 till his death in 472. He shared with Gelon in the great victory gained over the Carthaginians in 480. See Diod. xi. 20–25, 48, 53; Herod. vii. 165; and the article GELO.

Thersander (*Θέρσανδρος*). The son of Polynices and Argia, and one of the Epigoni (q. v.). He went with Agamemnon to Troy, and was slain in that expedition by Telephus (Herod. iv. 147; Verg. *Aen.* ii. 261).

Thersītes (*Θερσίτης*). The son of Agrius. He was the most deformed man and impudent talker among the Greeks at Troy (*Il.* ii. 212). According to the later poets he was killed by Achilles, because he had ridiculed him for lament-

ing the death of Penthesilea, queen of the Amazons (Tzetz. *ad* Lycophr. 999; Quint. Smyrn. i. 800).

Thesaurus (*θησαυρός*). The Greek term for a room in which all kinds of objects, provisions, jewels, etc., were stored; hence a treasury or treasure-house. In ordinary life the underground storechambers, circular vaulted rooms with an opening above, similar to our cellars, were thus named. The same name was given to treasure-houses which each State maintained within the precincts of Panhellenic sanctuaries, as repositories for their offerings to the gods. Such were those at Olympia and Delphi. The subterranean tombs, shaped like beehives, and of a construction dating from remote Greek antiquity, which have been found in various places, have been wrongly described as "treasure-houses." The most celebrated of these are the so-called thesaurus of Atreus at Mycenae (see CYCLOPES; MYCENAE), and that of Minyas at Orchomenus (see TROPHONIUS). The latter is only partly, the former wholly, preserved. The ground-plan of these structures is circular, and consists of one enclosed room with a domed roof, constructed of horizontal layers of massive stone blocks, projecting one over the other. This circular chamber was used probably for service in honour of the dead. The actual resting-place of the body was a square room adjoining. The large room at Mycenae is fifty feet in diameter, and about the same in height. It consists of thirteen courses, the uppermost of which was only a single stone. It was decorated with hundreds of bronze plates, the holes for the nails being still visible.

Theseia (*Θήσεια*). A festival in honour of Theseus (q. v.), lasting for several days at Athens in the month Pyanepsion. See A. Mommsen, *Heortologie*, pp. 269–287.

Thēseus (*Θησεύς*). The great national hero of Attic legend. He was the son of Aegeus, king of Athens, and of Aethra, the daughter of Pittheus, king of Troezen. This, however, was the Attic tradition, which aimed at making Theseus a prince of Athenian descent. The older legend of Troezen itself made Theseus the son of Poseidon (Pausan. i. 17, 3; Diod. iv. 59; Plut. *Thes.* 6; Eur. *Hipp.* 887). Plutarch in his *Theseus* has gathered into a connected story various legends, some of Athenian origin, some from other countries: (1) his journey from Troezen to Athens, an Attic glorification of their hero; (2) the Cretan story of the Minotaur adapted to the Attic legends; (3) his later adventures, some of which are of Spartan origin. But the story may be related consecutively as Plutarch has given it.

Theseus was brought up at Troezen, and when he reached maturity he took, by his mother's directions, the sword and sandals, the tokens which had been left by Aegeus, and proceeded to Athens. Eager to emulate Heracles, he went by land, displaying his prowess by destroying the robbers and monsters that infested the country. Periphetes, Sinis, Phaea the Crommyonian sow, Sciron, Cercyon, and Procrustes fell before him. At Athens he was immediately recognized by Medea, who laid a plot for poisoning him at a banquet to which he was invited. By means of the sword which he carried, Theseus was recognized by Aegeus, acknowledged as his son, and declared his successor. The sons of Pallas, thus disappointed in their hopes of succeeding to the throne, attempted to secure the succession by violence, and declared war, but, being betrayed by the herald Leos, were destroyed. The capture of the Marathonian bull, which had long laid waste the surrounding country, was the next exploit of Theseus. After this Theseus went of his own accord as one of the seven youths whom the Athenians were obliged to send every year, with seven maidens, to Crete, to be devoured by the Minotaur. When they arrived at Crete, Ariadné, the daughter of Minos, became enamoured of Theseus, and provided him with a sword with which he slew the Minotaur, and a clue of thread by which he found his way out of the labyrinth. Having effected his object, Theseus sailed away, carrying off Ariadné. There were various legends about Ariadné; but according to the general account Theseus abandoned her in the island of Naxos on his way home. (See ARIADNÉ.) He was generally believed to have had by her two sons, Oenopion and Staphylus; yet this does not agree with the account in the *Odyssey*, which represents her as dying before her wedding with Theseus was brought about, and apparently after her union with Dionysus (*Od.* xi. 320). As the vessel in which Theseus sailed approached Attica, he neglected to hoist the white sail which was to have been the signal of the success of the expedition; whereupon Aegeus, thinking that his son had perished, threw himself into the sea. (See AEGEUS.) Theseus thus became king of Athens. Other adventures followed, again repeating those of Heracles. Theseus is said to have assailed the Amazons before they had recovered from the attack of Heracles, and to have carried off their queen Antiopé. The Amazons in their turn invaded Attica, and penetrated into Athens itself; and the final battle in which Theseus overcame them was fought in the very midst of the city. (See AMAZONES.) By Antiopé Theseus was said to have had a son named Hippolytus or Demophoön, and after her death to have married Phaedra. (See HIPPOLYTUS; PHAEDRA.)

Theseus figures in almost all the great heroic expeditions. He was one of the Argonauts (the anachronism of the attempt of Medea to poison him does not seem to have been noticed); he joined in the Calydonian hunt, and aided Adrastus in recovering the bodies of those slain before Thebes. He contracted a close friendship with Pirithoüs, and aided him and the Lapithae against the Centaurs. With the assistance of Pirithoüs he carried off Helen from Sparta while she was quite a girl, and placed her at Aphidnae, under the care of Aethra. In return he assisted Pirithoüs in his attempt to carry off Persephoné from the lower world. Pirithoüs perished in the enterprise, and Theseus was kept in hard durance until he was delivered by Heracles. Meantime Castor and Pollux invaded Attica, and carried off Helen and Aethra, Academus having informed the brothers where they were to be found. (See ACADEMUS.) Menestheus also endeavoured to incite the people against Theseus, who on his return found himself unable to re-establish his authority, and retired to Scyros, where he met with a treacherous death at the hands of Lycomedes. The departed hero was believed to have appeared to aid the Athenians at the battle of Marathon. In 469 the bones of Theseus were discovered by Cimon in Scyros, and brought to Athens, where they were deposited in a temple (the Theseum) erected in honour of the

hero. A considerable part of this temple still remains, forming one of the most interesting monuments of Athens. A festival in honour of Theseus was celebrated on the eighth day of each month, especially in Pyanepsion. See p. 151.

There can be no doubt that Theseus is a purely legendary personage. Nevertheless, in later times the Athenians came to regard him as the author of a very important political revolution in Attica. Before his time Attica had been broken up into twelve petty independent States or townships, acknowledging no head, and connected only by a federal union. Theseus abolished the separate governments, and erected Athens into the capital of a single commonwealth. The festival of the Panathenaea (q. v.) was instituted to commemorate this important revolution. Theseus is said to have established a constitutional government, retaining in his own hands only certain definite powers and functions. He is further said to have distributed the Athenian citizens into the three classes of Eupatridae, Geomori, and Demiurgi. It would be a vain task to attempt to decide whether there is any historical basis for the legends about Theseus, and still more so to endeavour to separate the historical from the legendary in what has been preserved. The Theseus of the Athenians was a hero who fought the Amazons, and slew the Minotaur, and carried off Helen. A personage who should be nothing more than a wise king, consolidating the Athenian commonwealth, however possible his existence might be, would have no historical reality. The connection of Theseus with Poseidon, the national deity of the Ionic tribes, his coming from the Ionic town Troezen, forcing his way through the Isthmus into Attica, and establishing the Isthmia as an Ionic Panegyris, rather suggest that Theseus is, at least in part, the mythological representative of an Ionian immigration into Attica, which, adding perhaps to the strength and importance of Ionian settlers already in the country, might easily have led to that political aggregation of the disjointed elements of the State which is assigned to Theseus.

Thesmophoria (*θεσμοφόρια*). A festival to Demeter, as the founder of agriculture and of the civic rite of marriage, celebrated in many parts of Greece, but especially at Athens. It was held at Athens from the ninth to the thirteenth of the month Pyanepsion (the beginning of November), and only by married women of genuine Attic birth and of blameless reputation. Two of the wealthiest and most distinguished women were chosen out of every district to preside over the festivals; their duty was to perform the sacred functions in the name of the others, and to prepare the festal meal for the women of their own district. Even the priestess, who had the chief conduct of the whole festival, had to be a married woman. On the Stenia, the first day of the feast (*Στήνια*), the women went in procession, amid wanton jests and gibes, to the deme of Halimus, on the promontory of Colias, where nightly celebrations were held in the Temple of Demeter and her daughter Coré. After their return (*ἄνοδος*) in the early morning of the third day, a festival lasting for three days was held in Athens. No sacrifices were offered on the last day but one, which was spent amid fasting and mourning. On the last day, on which Demeter was invoked under the name of Calligeneia, "goddess of fair children," a feast (*ζημία*) was held amid mimic dances and games, which probably referred to the mythical stories of the goddess and her daughter. See Preller, *Demeter und Persephoné*, pp. 335–365; A. Mommsen, *Heortologie*, pp. 287–302.

Thesmothĕtae (*θεσμοθέται*). The six junior archons at Athens, on whom devolved, specially, the administration of certain branches of the law. For further details see ARCHON.

Thespĭae (*Θεσπειαί* and *Θεσπιαί*), or **Thespĭa** (*Θεσπεία*, *Θεσπία*). Now Eremo or Rimokastro; an ancient town in Boeotia on the southeastern slope of Mount Helicon, at no great distance from the Crissaean Gulf. It was burned to the ground by the Persians, but subsequently rebuilt. At Thespiae was preserved the celebrated marble statue of Eros by Praxiteles, who had given it to Phryné, by whom it was presented to her native town. (See PRAXITELES.) From the vicinity of Thespiae to Mount Helicon the Muses are called Thespiades, and Helicon itself is named the *Thespia rupes*. (Varro, *L. L.* vii. 2.)

Thespis (*Θέσπις*). The father of Greek Tragedy. He was a contemporary of Pisistratus, and a native of Icarus, one of the demes in Attica, where the worship of Dionysus had long prevailed. The alteration made by Thespis, which gave to the old Tragedy a new and dramatic character, was very simple but very important. Before his time the leader of the Chorus had recited the adventures of Dionysus and had been answered by the Chorus. Thespis introduced an actor (*ὑποκριτής*, or "answerer") to reply to the leader of the Chorus. It is clear that, though the performance still remained, as far as can be gathered, chiefly lyrical, and the dialogue was of comparatively small account, yet a decided step towards the drama had been made. Some modern scholars have credited Horace's statement that Thespis went about in a wagon as a strolling player (*A. P.* 276). It is suggested that the expressions for the freedom of jesting at the festival of the Lenaea (*τὰ ἐξ ἁμαξῶν*, *ἐξ ἁμάξης ὑβρίζειν*) may have given rise to the story. See TRAGOEDIA.

Thespius (*Θέσπιος*). Son of Erechtheus, who, according to some, founded the town of Thespiae in Boeotia (Pausan. ix. 26, 4). His descendants are called *Thespiadae*.

Thesprōti (*Θεσπρωτοί*). A people of Epirus, inhabiting the district called after them THESPROTIA or THESPRŌTIS (*Θεσπρωτία*), which extended along the coast from the Ambracian Gulf northwards as far as the river Thyamis, and inland as far as the territory of the Molossi. The Thesproti were the most ancient inhabitants of Epirus, and are said to have derived their name from Thesprotus, the son of Lycaon. They were Pelasgians, and in their country was the oracle of Dodona, the great centre of the Pelasgic worship. (See DODONA; ORACULA; PELASGI.) From Thesprotia issued the Thessalians, who took possession of the country afterwards called Thessaly.

Thessalia (*Θεσσαλία*). The largest division of Greece. It was bounded on the north by the Cambunian Mountains, which separated it from Macedonia; on the west by Mount Pindus, which separated it from Epirus; on the east by the Aegaean Sea; and on the south by the Maliac Gulf and Mount Oeta, which separated it from Locris, Phocis, and Aetolia. Thessaly proper is a vast plain,

shut in on every side by mountain barriers, broken only at the northeastern corner by the valley and defile of Tempé, which separates Ossa from Olympus. This plain is drained by the river Peneus and its affluents, and is said to have been originally a vast lake, the waters of which were afterwards carried off through the vale of Tempé by some sudden convulsion which rent the rocks of this valley asunder. In addition to the plain already described, there were two other districts included under the general name of Thessaly: one called Magnesia, being a long, narrow strip of country extending along the coast of the Aegaean Sea from Tempé to the Pagasaean Gulf, and bounded on the west by Mounts Ossa and Olympus; and the other being a long, narrow vale at the extreme south of the country, lying between Mounts Othrys and Oeta, and drained by the river Spercheus. Thessaly proper was divided in very early times into four districts or tetrarchies — a division which we still find existing in the Peloponnesian War. These districts were: (*a*) HESTIAEŌTIS (Ἑστιαιῶτις), the northwestern part of Thessaly, bounded on the north by Macedonia, on the west by Epirus, on the east by Pelasgiotis, and on the south by Thessaliotis; the Peneus may be said in general to have formed its southern limit. (*b*) PELASGIŌTIS (Πελασγιῶτις), the eastern part of the Thessalian plain, bounded on the north by Macedonia, on the west by Hestiaeotis, on the east by Magnesia, and on the south by the Sinus Pagasaeus and Phthiotis. (*c*) THESSALIŌTIS (Θεσσαλιῶτις), the southwestern part of the Thessalian plain, bounded on the north by Hestiaeotis, on the west by Epirus, on the east by Pelasgiotis, and on the south by Dolopia and Phthiotis. (*d*) PHTHIŌTIS (Φθιῶτις), the southeast of Thessaly, bounded on the north by Thessaliotis, on the west by Dolopia, on the south by the Sinus Maliacus, and on the east by the Pagasaean Gulf. It is in this district that Homer places Phthia and Hellas proper, and the dominions of Achilles. Besides these there were four other districts, viz.: (*e*) MAGNESIA. (See MAGNESIA.) (*f*) DOLOPIA (Δολοπία), a small district bounded on the east by Phthiotis, on the north by Thessaliotis, on the west by Athamania, and on the south by Oetaea. The Dolopes were an ancient people, for they are not only mentioned by Homer as fighting before Troy, but they also sent deputies to the Amphictyonic assembly. (*g*) OETAEA (Οἰταία), a district in the upper valley of the Spercheus, lying between Mounts Othrys and Oeta, and bounded on the north by Dolopia, on the south by Phocis, and on the east by Malis. (*h*) MALIS. (See MALIS.)

Thessalian Coin.

The Thessalians were a Thesprotian tribe, and, under the guidance of leaders who are said to have been descendants of Heracles, invaded the western part of the country, afterwards called Thessaliotis, whence they subsequently spread over the other parts of the country. For some time after the conquest, Thessaly was governed by kings of the race of Heracles; but the kingly power seems to have been abolished in early times, and the government in the separate cities became oligarchical, the power being chiefly in the hands of a few great families descended from the ancient kings. Of these, two of the most powerful were the Aleuadae and the Scopadae, the former of whom ruled at Larissa, and the latter at Cranon (or Crannon). At an early period the Thessalians were united into a confederate body. Each of the four districts into which the country was divided probably regulated its affairs by some kind of provincial council; and in case of war a chief magistrate was elected, under the name of Tagus (Ταγός), whose commands were obeyed by all the four districts. This confederacy, however, was not of much practical benefit to the Thessalian people, and appears to have been only used by the Thessalian nobles as a means of cementing and maintaining their power. The Thessalians never became of much importance in Grecian history. In B.C. 344 Philip completely subjected Thessaly to Macedonia, by placing at the head of the four divisions of the country governors devoted to his interests. The victory of T. Flamininus at Cynoscephalae, in 197, again gave the Thessalians a semblance of independence under the protection of the Romans.

Thessalonica (Θεσσαλονίκη). Now Saloniki; more anciently THERMA (Θέρμη). An ancient city in Macedonia, situated at the northeastern extremity of the Sinus Thermaïcus. Under the name of Therma it was not a place of much importance. It was taken and occupied by the Athenians a short time before the commencement of the Peloponnesian War (B.C. 432), but was soon after restored by them to Perdiccas. It was made an important city by Cassander, who collected in this place the inhabitants of several adjacent towns (about B.C. 315), and who gave it the name of Thessalonica in honour of his wife, the daughter of Philip and sister of Alexander the Great. From this time it became a large and flourishing city. It was visited by the Apostle Paul about A.D. 53, and about two years afterwards he addressed from Corinth two epistles to his converts in the city.

Thessălus (Θεσσαλός). (1) A Greek physician, son of Hippocrates. He passed some of his time at the court of Archelaüs, king of Macedonia, who reigned B.C. 413–399. He was one of the founders of the sect of the Dogmatici, and is several times highly praised by Galen, who calls him the most eminent of the sons of Hippocrates. He was supposed by some of the ancient writers to be the author of several of the works that form part of the Hippocratic Collection, which he might have compiled from notes left by his father. (2) Also a Greek physician, a native of Tralles in Lydia, and one of the founders of the medical sect of the Methodici. He lived at Rome in the reign of the emperor Nero, A.D. 54–68, to whom he addressed one of his works; and he died and was buried, and his tomb was to be seen in Pliny's time, on the Via Appia. He considered himself superior to all his predecessors. He is frequently mentioned by Galen, but always in terms of contempt and ridicule. None of his works are extant.

Thestius (Θέστιος). The son of Ares and Demonicé or Androdicé, or, according to others, a son

of Agenor and grandson of Pleuron, the king of Aetolia. He was the father of Iphiclus, Enippus, Plexippus, Eurypylus, Leda, Althaea, and Hypermnestra. The patronymic THESTIĂDES is given to his grandson Meleager, as well as to his sons; and the female patronymic THESTIAS to his daughter Althaea, the mother of Meleager.

Thestor (*Θέστωρ*). The son of Idmon and Laothoë, and father of Calchas, Theoclymenus, Leucippé, and Theonoë. The patronymic THESTORĬDES is frequently given to his son Calchas.

Thetes (*Θῆτες*). The lowest of the four property-classes instituted by Solon. See EISPHORA; SOLON.

Thetis (*Θέτις*). A daughter of Nereus and Doris. She was the wife of Peleus, by whom she became the mother of Achilles (*Il.* i. 538, xviii. 35; Hes. *Theog.* 244). As a goddess of the sea she dwelt, like her sisters the Nereids, below the waves with her father, Nereus. She there received Dionysus on his flight from Lycurgus, and the god, in his gratitude, presented her with a golden urn (*Il.* vi. 135; *Od.* xxiv. 75). When Hephaestus was thrown down from heaven, he was likewise received by Thetis. She had been brought up by Heré, and when she reached the age of maturity, Zeus and Heré gave her, against her will, in marriage to Peleus. Such was the Homeric story (*Il.* xviii. 85, 432); but later accounts add that Poseidon and Zeus himself first sued for her hand; but when Themis declared that the son of Thetis would be stronger than his father, both gods desisted from their suit, and desired her marriage with a mortal (Pind. *Isthm.* viii. 58). Chiron informed his friend Peleus how he might gain possession of her, even if she should metamorphose herself: for Thetis, like Proteus, had the power of assuming any form she pleased; and she had recourse to this means of escaping from Peleus, who, instructed by Chiron, held the goddess fast till she again assumed her proper form, and promised to marry him (Pind. *Nem.* iii. 60). This story, which appears first in Pindar, was a favourite subject in vase-painting of an early date. The wedding of Peleus was honoured with the presence of all the gods, with the exception of Eris or Discord, who was not invited, and who avenged herself by throwing among the assembled gods the apple which was the source of so much misery. (See PARIS.) For the action of Thetis in the story of her son, see ACHILLES.

Thevesté (*Θεουέστη*). Now Tebessa. A city of North Africa on the frontier of Numidia. A fine triumphal arch and the ruins of the ancient walls still exist. See Boissier, *L'Afrique Romaine* (1895). The Romans had a phrase *De Tebeste* (*Theveste*) *usque ad Tergeste*, like the Scripture "From Dan to Beersheba" (*Test. Porcell.*).

Thia (*Θεία*). A daughter of Uranus and Gê, one of the female Titans, became by Hyperion the mother of Helios, Eos (Aurora), and Selené (Luna) —that is, she was regarded as the deity from whom all light proceeded (Hes. *Theog.* 135, 171).

Thiăsus (*θίασος*). The Greek designation of a society which had selected some god for its patron, and held sacrifices, festal processions, and banquets at stated times in his honour. Frequently the members of such societies, which took their name either from their divine patron or else from the days of festal celebration, pursued other common ends, sometimes of business, sometimes of social life. The name *thiasus* was especially applied to the festivals in honour of Dionysus, and, in the representations of poetry and art, to the mythical retinue of the god, which consisted of Sileni, Satyrs, Nymphs, and Maenads.

Thinis. See THIS.

Thirlwall, CONNOP. An English scholar and historian, born at Stepney in 1797. He was educated at Charterhouse and Cambridge, where he took honours, and later studied law. In 1828 he began the publication of an English version of Niebuhr's *History of Rome*, and was one of the editors of the *Philological Museum* (1831–33). In 1835 he undertook a *History of Greece*, which was finished in eight volumes in 1847, and re-issued, with extensive revision, in 1847–52. In 1840 he was made Bishop of St. David's. He died July 27, 1875. His *History* has been called a Tory history of Greece, as Grote's has been styled a Whig history; and Thirlwall's sympathies are everywhere with aristocracy as against democracy; but his learning, sagacity, and candour are worthy of high commendation, and he is superior to Grote as a writer of English. A paper by Thirlwall, "On the Irony of Sophocles," which appeared in the *Philological Museum*, is a valuable contribution to Sophoclean study. See an article in the *Edinburgh Review* for April, 1876.

Thirty Tyrants. (1) The name usually given to the committee of thirty aristocrats who at the close of the Peloponnesian War (B.C. 404), and under the protection of the victorious Spartans, undertook the administration of the Athenian government. The chiefs of this body were Critias (q.v.) and Theramenes (q.v.). They secured a new Senate, put to death their chief political opponents, and installed a Spartan garrison in the Acropolis. A reign of terror ensued which led to a reaction; and presently a body of exiled citizens headed by Thrasybulus (q.v.) marched upon Athens, defeated the troops of the Thirty, and slew Critias. After some delay the Spartan government recognized the *status quo* and thus permitted the resumption of a democratic government (B.C. 403). See PELOPONNESIAN WAR.

(2) A name used to designate the crowd of usurpers who, in the reign of the Roman emperor Gallienus (253–268 A.D.), attempted to secure the imperial power. The name is hardly accurate, as there were in reality only some nineteen or twenty of those petty revolutionists. See GALLIENUS.

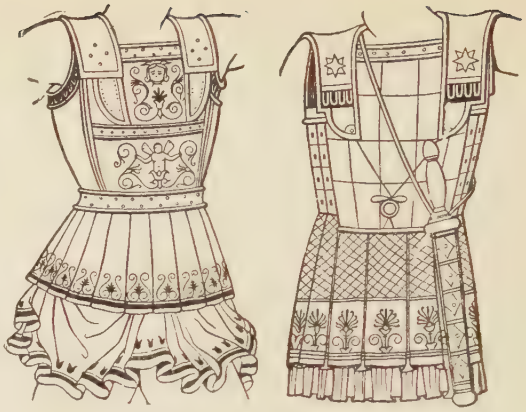
This (*Θίς*). A great city of Upper Egypt, capital of the Thinites Nomos, and the seat of the first two dynasties (B.C. 4400–4000). It is also called THINIS.

Thisbé (*Θίσβη*), afterwards **Thisbae** (*Θίσβαι*). Now Kakosia. A town of Boeotia, on the borders of Phocis, and between Mount Helicon and the Corinthian Gulf.

Thisbé (*Θίσβη*). A beautiful Babylonian maiden, beloved by Pyramus. The lovers, living in adjoining houses, often secretly conversed with each other through an opening in the wall, as their parents would not sanction their marriage. Once they agreed upon a rendezvous at the tomb of Ninus. Thisbé arrived first, and, while she was waiting for Pyramus, she perceived a lioness, which had just torn to pieces an ox, and took to flight. While running she lost her garment, which the

lioness smeared with blood. In the meantime Pyramus arrived, and finding her garment covered with blood, he imagined that she had been murdered, and made away with himself under a mulberry-tree, the fruit of which henceforth was as red as blood. Thisbé, who afterwards found the body of her lover, likewise killed herself (Ovid, *Met.* iv. 55–465). The story is burlesqued by Shakespeare in a well-known episode in *A Midsummer-Night's Dream.*

Thoas (Θόας). (1) The son of Andraemon and Gorgé. He was king of Calydon and Pleuron, in Aetolia, and sailed with forty ships against Troy. (2) Son of Dionysus and Ariadné, king of Lemnos, and married to Myrina, by whom he became the father of Hypsipylé and Sicinus. When the Lemnian women killed all the men in the island, Hypsipylé saved and concealed her father, Thoas. The patronymic THOANTIAS is given to Hypsipylé, as the daughter of Thoas. (See HYPSIPYLÉ.) (3) Son of Borysthenes and king of Tauris, into whose dominions Iphigenia was carried by Artemis when she was to have been sacrificed. See IPHIGENIA.



Tholus (*θόλος*). A round structure, probably the earliest form of human habitation, and preserved by the Greeks in their houses and cities. Later this word is used of any circular building.

Thomas Magister. A rhetorician and grammarian, about A.D. 1310. He was a native of Thessalonica, and lived at the court of the emperor Andronicus Palaeologus I., where he held the offices of marshal (*magister officiorum*) and keeper of the archives (*chartophylax*); but he afterwards retired to a monastery, where he assumed the name of THEODŪLUS, and devoted himself to the study of the ancient Greek authors. His chief work, which has come down to us, is a lexicon of Attic words (Κατὰ Ἀλφάβητον Ὀνομάτων Ἀττικῶν Ἐκλογαί), compiled from the works of the elder grammarians, such as Phrynichus, Ammonius, Herodian, and Moeris. It is edited by Ritschl (Halle, 1831).

Thong. See LORICA.

Thorax (*θώραξ*). The Greek term for a cuirass, either of metal (usually bronze) or of leather. The metal cuirass consisted of two separate pieces, one covering the chest and stomach, and the other the back, attached to one another by means of clasps or buckles. They terminated with a curved edge just above the hip, and at this part were often covered with a leathern belt (*ζωστήρ*), fastened with buckles, to bind both pieces more firmly together. Another belt (*μίτρα*), lined with leather, was worn under the armour and above the chiton. This was fitted with a plate of metal growing broader towards the middle and serving to protect the belly. In later times the front plate of the cuirass was extended downwards, so as to cover the belly as far as the navel. As an additional protection to the belly and the upper part of the legs, there was on the inner side of the lower edge of the cuirass a series of short strips of leather or felt, covered with plates of metal, often in several layers. They resembled a kilt, and were called *πτέρυγες* ("feathers"). Smaller strips of the same kind were worn under the arms to protect the armpits.

The leather cuirass (*σπολάς*) was a kind of shirt reaching over the navel and hips, and fringed with flexible strips along its lower edge. It was open either in front or on one side (usually the left), and was there fastened together by means of clasps or buckles. It was also provided with an upright piece protecting the neck, and with two shoulder-straps. It was frequently covered, either completely, or only under the arms, with metal, especially in the form of scales.

Thoraces. (From Greek vases.)

Linen cuirasses are also mentioned, even in ancient times. These were probably either thickly quilted or strongly woven corselets.

The Romans applied the name to a bust in marble or bronze (Vitruv. *Compend.* 2). See LORICA.

Thorĭcus (Θόρικος). Now Theriko; one of the twelve ancient towns in Attica, and subsequently a demus belonging to the tribe Acamantis, was situated on the southeastern coast, a little above Sunium. Important ruins, especially those of an ancient theatre, still remain here.

Thoth. An Egyptian god identified by the Greeks with Hermes as presiding over human speech, letters, music, and astronomy, and as the inventor of the arts and sciences.

The God Thoth.

Thracia (Θρᾴκη, Ion. Θρῄκη). In earlier times the name of the vast space of country bounded on the north by the Danube, on the south by the Propontis and the Aegaean, on the east by the Pontus Euxinus, and on the west by the river Strymon and the easternmost of the Illyrian tribes. It was divided into two parts by Mount Haemus (the Balkan), running from west to east, and separating the plain of the lower Danube from the rivers which fall into the Aegaean. Its plains are drained by the Hebrus, the largest river in Thrace. At a later time the name Thrace was applied to a more limited extent of country. The district between the Strymon and the Nestus was added to Macedonia by Philip, and was usually called MACEDONIA ADIECTA. Under Augustus the part of the country north of the Haemus was made a separate Roman province under the name of Moesia (see MOESIA); but the district between the Strymon and the Nestus had been previously restored to Thrace by the Romans. The Roman province of Thrace

was accordingly bounded on the west by the river Nestus; on the north by Mount Haemus, which divided it from Moesia; on the east by the Euxine, and on the south by the Propontis and Aegean.

Thrace, in its widest extent, was peopled in the times of Herodotus and Thucydides by a vast number of different tribes; but their customs and characters were marked by great uniformity. Herodotus says that, next to the Indians, the Thracians were the most numerous of all races, and if united under one head would have been irresistible. He describes them as a savage, cruel, and rapacious people, delighting in blood, but brave and warlike. According to his account, which is confirmed by other writers, the Thracian chiefs sold their children for exportation to the foreign merchant; they purchased their wives from their parents; they punctured or tattooed their bodies and those of the women belonging to them, as a sign of noble birth; they despised agriculture, and considered it most honourable to live by war and robbery. Deep drinking prevailed among them extensively (Hor. *Carm.* i. 27). They worshipped deities whom the Greeks assimilated to Ares, Dionysus, and Artemis: the great sanctuary and oracle of their god Dionysus was in one of the loftiest summits of Mount Rhodopé. The tribes on the southern coast attained to some degree of civilization, owing to the numerous Greek colonies which were founded in their vicinity; but the tribes in the interior seem to have retained their savage habits, with little mitigation, down to the time of the Roman Empire. In earlier times, however, some of the Thracian tribes must have been distinguished by a higher degree of civilization than prevailed among them at a later period. The earliest Greek poets, Orpheus, Linus, Musaeus, and others, are all represented as coming from Thrace. Eumolpus, likewise, who founded the Eleusinian Mysteries at Attica, is said to have been a Thracian, and to have fought against Erectheus, king of Athens. We also find mention of the Thracians in other parts of southern Greece: thus they are said to have once dwelt both in Phocis and Boeotia. They were also spread over a part of Asia: the Thynians and Bithynians, and perhaps also the Mysians, were members of the great Thracian race. Even Xenophon speaks of Thrace in Asia, which extended along the Asiatic side of the Bosporus, as far as Heraclea.

The principal Greek colonies along the coast, beginning at the Strymon and going eastwards, were Amphipolis, at the mouth of the Strymon; Abdera, a little to the west of the Nestus; Dicaea or Dicaepolis, a settlement of Maronea; Maronea itself, colonized by the Chians; Strymé, a colony of the Thasians; Mesembria, founded by the Samothracians; and Aenos, a Lesbian colony at the mouth of the Hebrus. The Thracian Chersonesus was probably colonized by the Greeks at an early period, but it did not contain any important Greek settlement till the migration of the first Miltiades to the country, during the reign of Pisistratus at Athens. On the Propontis the two chief Greek settlements were those of Perinthus and Selymbria; and on the Thracian Bosporus was the important town of Byzantium. There were only a few Greek settlements on the southwestern coast of the Euxine; the most important were those of Apollonia, Odessus, Callatis, Tomi, renowned as the place of Ovid's banishment, and Istria, near the southern mouth of the Danube.

The Thracians are said to have been conquered by Sesostris, king of Egypt, and subsequently to have been subdued by the Teucrians and Mysians; but the first really historical fact respecting them is their subjugation by Megabazus, the general of Darius. After the Persians had been driven out of Europe by the Greeks, the Thracians recovered their independence; and at the beginning of the Peloponnesian War, almost all the Thracian tribes were united under the dominion of Sitalces, king of the Odrysae, whose kingdom extended from Abdera to the Euxine and the mouth of the Danube. In the third year of the Peloponnesian War (B.C. 429), Sitalces, who had entered into an alliance with the Athenians, invaded Macedonia with a vast army of 150,000 men, but was compelled by the failure of provisions to return home, after remaining in Macedonia thirty days. Sitalces fell in battle against the Triballi in 424, and was succeeded by his nephew Seuthes, who during a long reign raised his kingdom to a height of power and prosperity which it had never previously attained, so that his regular revenues amounted to the annual sum of 400 talents, in addition to contributions of gold and silver in the form of presents, to a nearly equal amount. After the death of Seuthes, which appears to have happened a little before the close of the Peloponnesian War, we find his powerful kingdom split up into different parts; and when Xenophon, with the remains of the 10,000 Greeks, arrived on the opposite coast of Asia, another Seuthes applied to him for assistance to reinstate him in his dominions. Philip, the father of Alexander the Great, reduced the greater part of Thrace; and after the death of Alexander the country fell to the share of Lysimachus. It subsequently formed a part of the Macedonian dominions, but it continued to be governed by its native princes, and was only nominally subject to the Macedonian monarchs. Even under the Romans Thrace was for a long time governed by its own chiefs; and we do not know at what period it was made into a Roman province.

See Eben, *Die alten Thraker* (1877); and Kalopothakes, *De Thracia Provincia Romana* (1893).

Thrasea, P. PAETUS. A distinguished Roman senator and Stoic philosopher in the reign of Nero. He was a native of Patavium, and was probably born soon after the death of Augustus. He made the younger Cato his model, of whose life he wrote an account. He married Arria, the daughter of the heroic Arria who showed her husband, Caecina, how to die; and his wife was worthy of her mother and her husband. At a later period he gave his own daughter in marriage to Helvidius Priscus, who trod closely in the footsteps of his father-in-law. After incurring the hatred of Nero by the independence of his character and the freedom with which he expressed his opinions, he was condemned to death by the Senate by command of the emperor, A.D. 66. See Hoitsema, *De P. Thrasea Paeto* (1852).

Thrasybūlus (Θρασύβουλος). A celebrated Athenian, son of Lycus. He was zealously attached to the Athenian democracy, and took an active part in overthrowing the oligarchical government of the 400 in B.C. 403. See THIRTY TYRANTS.

Thrasyllus or **Thrasȳlus** (Θράσυλλος, Θράσυλος).

(1) An Athenian who actively assisted Thrasybulus in opposing the oligarchical revolution in B.C. 411, and, like him, was appointed as one of the generals at Samos. (See THRASYBULUS.) He was one of the commanders at the battle of Arginusae, and was among the six generals who returned to Athens and were put to death, 406. (See ARGINUSAE.) (2) An astrologer of Rhodes, with whom Tiberius became acquainted during his residence in that island, and whom he ever after held in the highest honour. In the scenes between him and the emperor, as described by Tacitus, Suetonius, and Dio, Thrasyllus is the prototype for Scott (in *Quentin Durward*) of Martius Galeotti, the astrologer of Louis XI. He confirmed the faith of Tiberius in his skill by casting his own horoscope as well as that of his master, and saying that he himself had reached a great crisis of danger, having suspected, as was the truth, that Tiberius was on the point of having him thrown over a precipice. This proof of prophetic power saved his life. He died in A.D. 36, the year before Tiberius, and is said to have saved the lives of many persons whom Tiberius would otherwise have put to death, by falsely predicting for this very purpose that the emperor would live a certain period longer than his intended victims. The son of this Thrasyllus succeeded to his father's skill, and he is said to have predicted the empire to Nero (Tac. *Ann.* vi. 20–22; Suet. *Aug.* 98; *Tib.* 14, 62; *Cal.* 19; Dio Cass. lv. 11; lvii. 15; lviii. 27).

Thrasymăchus (*Θρασύμαχος*). A native of Chalcedon, was a Sophist, and one of the earliest cultivators of the art of rhetoric. He was a contemporary of Gorgias. He is one of the speakers in Plato's *Republic*.

Thrasymēnus. See TRASIMENUS.

Thrax, also **Thraex** and **Threx**. See GLADIATORES, p. 734.

Thread. See TELA.

Threnos (*θρῆνος*). The Greek term for a dirge sung by a chorus to the accompaniment of flutes, either at the burial or at the funeral feast. See FUNUS; MUSICA.

Thrinacia (*Θρινακία*). A mythical island on which the herds of the Sun-god (Helios) grazed (*Od.* xi. 107; xii. 127; xix. 275), afterwards identified with Sicily (Trinacria). See HELIOS; SICILIA.

Thronium (*Θρόνιον*). Now Pikraki; the chief town of the Locri Epicnemidii, on the river Boagrius, at a short distance from the sea, with a harbour upon the coast.

Thronus (*θρόνος*). A throne; a Greek word equivalent to the Latin *solium* (q. v.). The general form of the throne was that of a chair (*καθέδρα*), but it was larger and more highly ornamented. Being high, it was always accompanied by a footstool (*ὑποπόδιον, θρόνιον, subsellium*). See illustration above.

Thucydĭdes (*Θουκυδίδης*). (1) An Athenian statesman, of the deme Alopecé, son of Melesias. After the death of Cimon in B.C. 449, Thucydides became the leader of the aristocratic party, which he concentrated and more thoroughly organized in opposition to Pericles. He left two sons, Melesias and Stephanus; and a son of the former of these, named Thucydides after his grandfather, was a pupil of Socrates. (2) The great Athenian historian, the

Heré Enthroned. (Vase in Naples Museum.)

son of Olorus or Orolus and Hegesipylé. He is said to have been connected with the family of Cimon; and we know that Miltiades, the conqueror of Marathon, married Hegesipylé, the daughter of a Thracian king called Olorus, by whom she became the mother of Cimon; and it has been conjectured with much probability that the mother of Thucydides was a granddaughter of Miltiades and Hegesipylé. According to a statement of Pamphila, Thucydides was forty years of age at the commencement of the Peloponnesian War (B.C. 431), and accordingly he was born in 471. There is a story in Lucian of Herodotus having read his History at the Olympic Games to the assembled Greeks; and Suidas adds that Thucydides, then a boy, was present, and shed tears of emulation—a presage of his own future historical distinction. But this celebrated story ought probably to be rejected as a fable. Thucydides is said to have been instructed in oratory by Antiphon, and in philosophy by Anaxagoras; but whether these statements are to be received cannot be determined. It is certain, however, that, being an Athenian of a good family, and living in a city which was the centre of Greek civilization, he must have had the best possible education; that he was a man of great ability and cultivated understanding his work clearly shows. He informs us that he possessed gold-mines in that part of Thrace which is opposite to the island of Thasos, and that he was a person of the greatest influence among those in that part of Thrace. This property, according to some accounts, he had from his ancestors; according to other accounts, he married a rich woman of Scaptesyle, and received it as a portion with her. Thucydides left a son called Timotheus; and a daughter also is mentioned, who is said by some to have written the eighth book of the History of Thucydides. Thucydides (ii. 48) was one of those who suffered from the great plague of Athens, and one of the few who recovered. We have no trustworthy evidence of Thucydides having distinguished himself as an orator, though it is not unlikely that he did, for his oratorical talent is shown by the speeches that he has inserted in his history. He was, however, employed in a military capacity, and he was in command of an Athenian squadron of seven ships, at Thasus, B.C. 424, when Eucles, who commanded in Amphipolis, sent for his assistance against Brasidas, who was before that town with an army. Brasidas, fearing the arrival of a superior force,

offered favourable terms to Amphipolis, which were readily accepted, for there were few Athenians in the place, and the rest did not wish to make resistance. Thucydides arrived at Eion, at the mouth of the Strymon, on the evening of the same day on which Amphipolis surrendered; and though he was too late to save Amphipolis, he prevented Eion from falling into the hands of the enemy. In consequence of this failure, Thucydides became an exile, probably to avoid a severer punishment; for Cleon, who was at this time in great favour with the Athenians, appears to have excited popular suspicion against him. There are various untrustworthy accounts as to his places of residence during his exile; but we may conclude that he could not safely reside in any place which was under Athenian dominion, and as he kept his eye on the events of the war, he must have lived in those parts which belonged to the Spartan alliance. His own words certainly imply that, during his exile, he spent much of his time either in the Peloponnesus, or in places which were under Peloponnesian influence (v. 26); and his work was the result of his own experience and observations. His minute description of Syracuse and the neighbourhood leads to the probable conclusion that he was personally acquainted with the localities; and if he visited Sicily, it is probable that he also saw some parts of southern Italy. Thucydides says that he lived twenty years in exile (v. 26), and as his exile commenced in the beginning of 423, he may have returned to Athens in the beginning of 403, about the time when Thrasybulus liberated Athens. Thucydides is said to have been assassinated at Athens soon after his return; but other accounts place his death in Thrace. There is a general agreement, however, among the ancient authorities that he came to a violent end. His death cannot be placed later than 401.

The time when he composed his work has been a matter of dispute. He informs us himself that he was busy in collecting materials all through the war from the beginning to the end (i. 22), and of course he would register them as he got them. Plutarch says that he wrote the work in Thrace; but the work in the shape in which we have it was certainly not finished until after the close of the war, and he was probably engaged upon it at the time of his death. A question has been raised as to the authorship of the eighth and last book of Thucydides, which breaks off in the middle of the twenty-first year of the war (411). It differs from all the other books in containing no speeches, and it has also been supposed to be inferior to the rest as a piece of composition. Accordingly, several ancient critics supposed that the eighth book was not by Thucydides: some attributed it to his daughter, and some to Xenophon or Theopompus, because both of them continued the history. The words with which Xenophon's *Hellenica* commence (*μετὰ δὲ ταῦτα*) may chiefly have led to the supposition that he was the author, for his work is made to appear as a continuation of that of Thucydides. But this argument is in itself of little weight; and, besides, both the style of the eighth book is different from that of Xenophon, and the manner of treating the subject, for the division of the year into summers and winters, which Thucydides has observed in his first seven books, is continued in the eighth, but is not observed by Xenophon. The rhetorical style of Theopompus, which was the characteristic of his writing, renders it also improbable that he was the author of the eighth book. It seems the simplest supposition to consider Thucydides himself as the author of this book, since he names himself as the author twice (viii. 6, 60); though it is probable that he had not the opportunity of revising it with the same care as the first seven books. It is stated by an ancient writer that Xenophon made the work of Thucydides known, which may be true, as he wrote the first two books of his *Hellenica*, or the part which now ends with the second book, for the purpose of completing the history. The work of Thucydides, from the commencement of the second book, is chronologically divided into winters and summers, and each summer and winter make a year (ii. 1). His summer comprises the time from the vernal to

Thucydides. (Norfolk.)

the autumnal equinox, and the winter comprises the period from the autumnal to the vernal equinox. The division into books and chapters was probably made by the Alexandrian critics. The history of the Peloponnesian War opens the second book of Thucydides, and the first is introductory to the history.

He begins his first book by observing that the Peloponnesian War was the most important event in Grecian history, which he shows by a rapid review of the history of the Greeks from the earliest period to the commencement of the war (i. 1–21). After his introductory chapters he proceeds to explain the alleged grounds and causes of the war: the real causes were, he says, the Spartan jealousy of the Athenian power. His narrative is interrupted (chs. 89–118), after he has come to the time when the Lacedaemonians resolved on war, by a digression on the rise and progress of the power of Athens; a period which had been either omit-

ted by other writers, or treated imperfectly, and with little regard to chronology, as by Hellanicus in his Attic history (ch. 97). He resumes his narrative (ch. 119) with the negotiations that preceded the war; but this leads to another digression of some length on the treason of Pausanias (chs. 128–134), and the exile of Themistocles (chs. 135–138). He concludes the book with the speech of Pericles, who advised the Athenians to refuse the demands of the Peloponnesians; and his subject, as already observed, begins with the second book.

A history which treats of so many events, which took place at remote spots, could only be written, in the time of Thucydides, by a man who took great pains to ascertain facts by personal inquiry. In modern times facts are made known by printing as soon as they occur; and the printed records of the time, such as newspapers, are often the only evidence of many facts which become history. When we know the careless way in which facts are now reported and recorded by incompetent persons, often upon very indifferent hearsay testimony, and compare with such records the pains that Thucydides took to ascertain the chief events of a war with which he was contemporary, in which he took a share as a commander, the opportunities which his means allowed, his great abilities, and serious, earnest character, it is a fair conclusion that we have as exact a history of a long eventful period by Thucydides as we have of any period in modern times.

The work of Thucydides shows the most scrupulous care and diligence in ascertaining facts; his strict attention to chronology, and the importance that he attaches to it, are additional proof of his historical accuracy. His narrative is brief and concise to a degree which makes the thought, or the crowd of thoughts, concentrated in a short and involved sentence often hard to understand; it generally contains bare facts expressed in the fewest possible words, but this stern and apparently passionless brevity is able to produce a pathos unsurpassed by any prose-writer. This is seen most notably in his account of the Athenian catastrophe at Syracuse. Few can read it (and there are other passages almost as moving in the history) without agreeing with the opinion of Macaulay, that nothing finer has been written in prose. But it is still more important to notice that Thucydides is the founder of philosophical history. He first showed that a great historian should not merely narrate events accurately, should not even content himself with a critical examination of his authorities, but should also try to trace the causes of events, and their consequences, their teaching in politics, and the light which they throw upon character. Many of his speeches are political essays, or materials for them; they are not mere imaginations of his own for rhetorical effect; they contain in many cases the general sense of what was actually delivered as nearly as he could ascertain, and in many instances he had good opportunities of knowing what was said, for he heard some speeches delivered (i. 22); but they are employed to show the motives and sentiments of the speakers and of their partisans or countrymen.

The number of existing manuscripts of Thucydides is about fifty, the oldest being the Codex Laurentianus (Florence) of the tenth century. Among the best are the Codex Cassellanus (Cassel), dated 1252, the Codex Augustanus (formerly at Augsburg, now in Munich), the Codex Cantabrigiensis (Cambridge), the Codex Palatinus (Heidelberg) of the eleventh century, and a Codex Vaticanus of somewhat later date. A manuscript (Codex Italus) collated by Bekker at Paris in 1812 is now lost.

The standard editions of Thucydides are those of Bekker, 4 vols. (1821); Poppo, 11 vols. (1821–40); the same abridged and revised by Stahl; Goeller, 2 vols. (1836); Didot, 3 vols. (1868); Arnold, 3 vols. (last ed. 1874); Bloomfield, 2 vols. (1842–43); Krüger, 2 vols. (1846–47); Steup (1893 foll.); Böhme-Widmann (5th ed. 1882). There are a number of excellent editions of parts of the history, of which may be mentioned those of Shilleto, bks. i. and ii.; Marchant, bk. ii.; Smith, bk. iii.; Graves, bks. iv. and v.; Fowler, bk. v.; Rutherford, bk. iv.; Lamberton, bks. vi. and vii.; Holden, bk. vii.; Smith, bk. vii.; Goodheart, bk. viii. See Forbes, *The Life and Method of Thucydides* (1895). There is an analysis of the history by Wheeler (1880).

There is a lexicon to Thucydides by Bétant, 2 vols. (1843–47), and a complete index by Von Essen (1887). There are translations into English by Bloomfield, 2 vols. (1843–47); Dale (1848); Crawley (1874); and especially by Jowett, with an introduction, 2 vols. (1881). The speeches contained in the history are translated by Wilkins (3d ed. 1881); on which see also Jebb in Abbott's *Hellenica* (1880).

Thulé (Θούλη). An island in the northern part of the German Ocean, regarded by the ancients as the most northerly point in the whole earth, and by some supposed to have been Iceland; by others, one of the Shetland group. It is first noticed by Pythius, the Greek navigator of Massilia (Marseilles), who says that it was six days' sail from Britain. (See PYTHIUS.) In literature it was accepted as the most northerly part of the earth (Verg. *Georg.* i. 30), whence the phrase "ultima Thulé."

Thurii (Θούριοι), more rarely **Thurium** (Θούριον). Now Terra Nuova; a Greek city in Lucania, founded B.C. 443, near the site of the ancient Sybaris, which had been destroyed more than sixty years before. (See SYBARIS.) It was built by the remains of the population of Sybaris, assisted by

Coin of Thurii. (Fourth century B.C.)

colonists from all parts of Greece, but especially from Athens. Among these colonists were the historian Herodotus and the orator Lysias. The new city, from which the remains of the Sybarites were soon expelled, rapidly attained great power and prosperity, and became one of the most important Greek towns in the south of Italy. See Pappritz, *Thurii* (1890).

Thyădes. See THYIA.

Thyămis (Θύαμις). Now Kalama; a river in Epirus, forming the boundary between Thesprotia and the district of Cestryna.

Thyestes (*Θυέστης*). The son of Pelops and Hippodamia, was the brother of Atreus and the father of Aegisthus. See ATREUS and AEGISTHUS.

Thyia (*Θυία*). A daughter of Castalius or Cephisseus, became by Apollo the mother of Delphus. She is said to have been the first to have sacrificed to Dionysus, and to have celebrated orgies in his honour. From her the Attic women, who went yearly to Mount Parnassus to celebrate the Dionysiac orgies with the Delphian Thyiades, received themselves the name of THYIĂDES or THYĂDES. This word, however, comes from *θύω*, and properly signifies the raging or frantic women. See MAENAS.

Thymbra (*Θύμβρη*). (1) A city of the Troad, north of Ilium Vetus, with a celebrated temple of Apollo, who derived from this place the epithet Thymbraeus. (2) A wooded district in Phrygia, no doubt connected with THYMBRIUM.

Thymbrium (*Θύμβριον*). A small town of Phrygia, ten parasangs west of Tyriaeum, with the so-called fountain of Midas (Xen. *Anab.* i. 2).

Thymbrius (*Θύμβριος*). Now Thimbrek; a river of the Troad, falling into the Scamander.

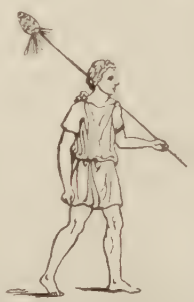
Thyměle (*θυμέλη*). The altar of Dionysus which stood in the centre of the orchestra in the Greek theatre. (See THEATRUM.) There was no thymelé in the Roman theatre, as the orchestra there was given up to the audience.

Thymělé. A celebrated *mima* or female actress in the reign of Domitian, with whom she was a great favourite (Juv. i. 35; viii. 197).

Thymelĭci (*θυμελικοί*). The chorus in the Greek theatre, so called from the dance around the thymelé (q. v.). The word is opposed in meaning to *σκηνικοί*, the regular actors who performed on the stage (Vitruv. v. 7, 2).

Thymoetes (*Θυμοίτης*). One of the elders of Troy, whose son was killed by the order of Priam, because a soothsayer had predicted that Troy would be destroyed by a boy born on the day on which this child was born. See PARIS.

Thyni (*Θυνοί*). A Thracian people, whose original abodes were near Salmydessus, but who afterwards passed over into Bithynia (q. v.).



Thynia (*Θυνία*). (1) The land of the Thyni in Thrace. (2) Another name for Bithynia.

Thyōné (*Θυώνη*). The name of Semelé, under which Dionysus brought her from Hades, and introduced her among the immortals. Hence Dionysus is also called THYONEUS. See SEMELE.

Thyrea (*Θυρέα*). The chief town in Cynuria, the district on the borders of Laconia and Argolis, was situated upon a height on the bay of the sea called after it SINUS THYREĀTES. The territory of Thyrea was called THYREĀTIS.

Thyrsĭger. One who carries the *thyrsus* (q.v.). An epithet applied to Bacchus.

Thyrsus (*θύρσος*). A staff (originally a spear) carried by Dionysus and his attendants, and wreathed with ivy and vine-leaves, terminating at the top in a pine-cone.

Bacchic Worshipper carrying a Thyrsus. (Pompeian painting.)

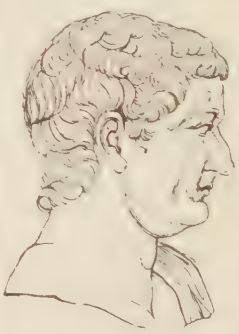
Thyssagĕtae (*Θυσσαγέται*). A people of Sarmatia Asiatica, on the eastern shores of the Palus Maeotis (Sea of Azov) (Herod. iv. 122).

Tiāra (*τιάρα*) and **Tiāras** (*τιάρας*). A tiara; really a sort of cap or fez worn by the Persians, Armenians, Parthians, and other Asiatics. See MITRA.

Royal Tiara of an Armenian King. (Caylus, from a gem.)

Tibarēni (*Τιβαρηνοί*) or **Tibări** (*Τίβαροι*). A quiet agricultural people on the northern coast of Pontus, east of the river Iris.

Tiberias (*Τιβεριάς*). (1) A city of Galilee, on the southwestern shore of the Lake of Tiberias, and built by Herod Antipas in honour of the emperor Tiberius. (2) Or GENNESĂRET, also the Sea of Galilee, in the Old Test. Chinnereth, now Bahr Tubariyeh, the second of the three lakes in Palestine formed by the course of the Jordan. (See IORDANES.) Its length is eleven or twelve geographical miles, and its breadth from five to six. It lies deep among fertile hills, has very clear and sweet water, and is full of excellent fish.



Tiberīnus. One of the mythical kings of Alba, son of Capetus, and father of Agrippa, is said to have been drowned in crossing the river Albula, which was hence called Tiberis. The name is thus that of the personified Tiber who was solemnly invoked by the Romans (Cic. *N. D.* iii. 20, 52). He had a shrine on the Insula Tiberina.

Tiběris also **Tibris**, **Tybris**, **Thybris**, **Amnis Tiberīnus** or simply **Tiberīnus**. Now the Tiber or Tevere; the chief river in Central Italy, on which stands the city of Rome. It is said to have been originally called ALBŬLA, and to have received the name of TIBĔRIS in consequence of Tiberinus, king of Alba, having been drowned in it. It has been supposed that Albula was the Latin and Tiberis the Etruscan name of the river. The Tiber rises in the Apennines, near Tifernum, and flows in a southwesterly direction, separating Etruria from Umbria, the land of the Sabines, and Latium. After flowing about 110 miles it receives the Nar (Nera), and from its confluence with this river its regular navigation begins. Three miles above Rome, at the distance of nearly seventy miles from the Nar, it receives the Anio (Teverone), and from this point becomes a river of considerable importance. Within the walls of Rome, the Tiber is about 300 feet wide and from twelve to eighteen

feet deep. After heavy rains the river in ancient times, as at the present day, frequently overflowed its banks, and did considerable mischief to the lower parts of the city (Liv. xxiv. 9, xxx. 38, xxxv. 9, 21, xxxviii. 28; Dio Cass. xxxix. 61, liii. 20). To guard against these dangers Augustus instituted the *Curatores Alvei Tiberis* (Suet. *Aug.* 37). At Rome the maritime navigation of the river begins; and at eighteen miles from the city, and about four miles from the coast, it divides into two arms, forming an island, which was sacred to Venus and called Insula Sacra (Isola Sagra). The left branch of the river runs into the sea by Ostia, which was the ancient harbour of Rome; but in consequence of the accumulation of sand at the mouth of the left branch, the right branch was widened by Trajan, and was made the regular harbour of the city under the name of Portus Romanus, Portus Augusti, or simply Portus. (See OSTIA.) The whole length of the Tiber, with its windings, is about 200 miles. The waters of the river are muddy and yellowish, whence it is frequently called by the Roman poets *flavus Tiberis*. The poets also give it the epithets of *Tyrrhenus*, because it flowed past Etruria during the whole of its course, and of *Lydius*, because the Etruscans are said to have been of Lydian origin. See ETRURIA.

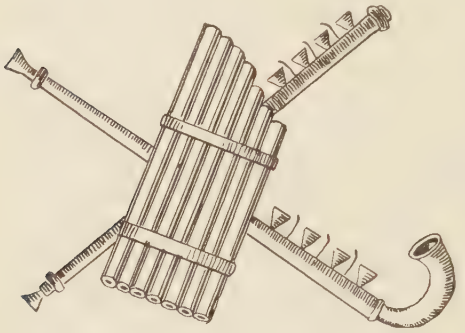
Tiberius. (1) An emperor of Rome from A. D. 14 to 37. His full name was TIBERIUS CLAUDIUS NERO CAESAR. He was the son of T. Claudius Nero and of Livia, and was born on the 16th of November, B.C. 42, before his mother married Augustus. Tiberius was tall and strongly made, and his health was good. His face was handsome, and his eyes large. He was carefully educated, and became well acquainted with Greek and Latin literature, his master in rhetoric being Theodorus of Gadara. Though not without military courage, as his life shows, he had a great timidity of character, and was of a jealous and suspicious temper; and these qualities rendered him cruel after he had acquired power. There can be little doubt that his morose reserve and his dissimulation had been increased, if not created, by his relations to Augustus. As emperor the difficulties of his position, and the influence of Livia and still more of Sejanus, increased his tendency to jealousy and suspicion of all who seemed rivals or dangerous from their popularity. The system of espionage and delation (see DELATORES) once begun could only increase with each act of tyranny and cruelty, till his rule became a veritable reign of terror. Yet in reading his history, especially the tales of his monstrous and incredible licentiousness, it must be recollected that Tacitus and Suetonius both wrote with a strong bias against him and his rule, and were ready to accept as true the worst scandals which were handed down. If Velleius was prejudiced in the other direction, it is at least right to adopt some part of his less unfavourable portrait and to imagine that the old age of Tiberius was not so absolutely contradictory of his youth as it is sometimes made to appear. The cruelty of his rule applied only to Rome. The testimony of Iosephus and Philo shows that his provincial government was just and lenient.

In B.C. 11, Augustus compelled Tiberius, much against his will, to divorce his wife, Vipsania Agrippina, and to marry Iulia, the widow of Agrippa, and daughter of the emperor, with whom Tiberius, however, did not long live in harmony. Tiberius was thus brought into still closer contact with the imperial family; but as Gaius and Lucius Caesar, the grandsons of Augustus, were still living, the prospect of Tiberius succeeding to the imperial power seemed very remote. He was employed on various military services. In 20, he was sent by Augustus to restore Tigranes to the throne of Armenia. It was during this campaign that Horace addressed one of his epistles to Iulius Florus (i. 12), who was serving under Tiberius. In 15, Drusus and his brother Tiberius were engaged in warfare with the Raeti, and the exploits of the two brothers were sung by Horace (*Carm.* iv. 4, 14). In 13, Tiberius was consul with P. Quintilius Varus. In 11, while his brother Drusus was fighting against the Germans, Tiberius conducted the war against the Dalmatians and against the Pannonians. Drusus died in 9, owing to a fall from his horse. On the news of the accident, Tiberius was sent by Augustus to Drusus, whom he found just alive. Tiberius returned to the war in Germany, and crossed the Rhine. In 7 he was consul a second time. In 6 he obtained the *tribunicia potestas* for five years, but during this year he retired with the emperor's permission to Rhodes, where he spent the next seven years. Tacitus says that his chief reason for leaving Rome was to get away from his wife, who treated him with contempt, and whose licentious life was no secret to her husband; probably, too, he was unwilling to stay at Rome when the grandsons of Augustus were attaining years of maturity, for there was mutual jealousy between them and Tiberius. He returned to Rome A.D. 2. He was relieved from one trouble during his absence, for his wife Iulia had been banished to the island of Pandataria (B.C. 2), and he never saw her again. (See IULIA.) After the deaths of L. Caesar (A.D. 2) and C. Caesar (A.D. 4), Augustus adopted Tiberius, with the view of leaving to him the imperial power; and at the same time he required Tiberius to adopt Germanicus, the son of his brother Drusus, though Tiberius had a son Drusus by his wife Vipsania. From the year of his adoption to the death of Augustus, Tiberius was in command of the Roman armies, though he visited Rome several times. He was sent into Germany A.D. 4. He reduced all Illyricum to subjection A.D. 9; and in A.D. 12 he had the honour of a triumph at Rome for his German and Dalmatian victories.

Tiberius. (Vatican.)

On the death of Augustus at Nola, on the 19th of August, A.D. 14, Tiberius, who was on his way to Illyricum, was immediately summoned home by his mother, Livia. He assumed the imperial power without any opposition, affecting all the while a great reluctance. He began his reign by putting to death Postumus Agrippa, the surviving grandson of Augustus, and he alleged that it was done pursuant to the command of the late emperor. When he felt himself sure in his place, he began to strengthen the principate. He took from

the popular assembly the election of the magistrates, and transferred it to the Senate. The news of the death of Augustus roused a mutiny among the legions in Pannonia, which was quelled by Drusus, the son of Tiberius. The armies on the Rhine under Germanicus showed a disposition to reject Tiberius, and if Germanicus had been inclined to try the fortune of a campaign, he might have had the assistance of the German armies against his uncle. But Germanicus restored discipline to the army by his firmness, and maintained his fidelity to the new emperor. The first year of his reign was marked by the death of Iulia, whom Augustus had removed from Pandataria to Rhegium. The death of Germanicus in the East, in A.D. 19, relieved Tiberius from all fear of a rival claimant to the throne; and it was believed by many that Germanicus had been poisoned by order of Tiberius. (See GERMANICUS.) From this time Tiberius began to indulge with less restraint in his love of tyranny, and many distinguished senators were soon put to death on the charge of treason against the emperor (*laesa maiestas*). Notwithstanding his suspicious nature, Tiberius gave his complete confidence to Seianus, who for many years possessed the real government of the State. This ambitious man aimed at the imperial power. In 23, Drusus, the son of Tiberius, was poisoned by the contrivance of Seianus. Three years afterwards (26) Tiberius left Rome, and withdrew into Campania. He never returned to the city. He left on the pretext of dedicating temples in Campania, but the real cause was probably his dislike to Rome, where he knew that he was unpopular; and Seianus was only too anxious to encourage any feeling which would keep the emperor at a distance from the city. That Tiberius went because he wished to hide his licentiousness in this place of retirement may be set down as a silly invention, for Rome was not a place where licentiousness was hated. He took up his residence (27) in the island of Capreae, at a short distance from the Campanian coast. The death of Livia (29), the emperor's mother, released Tiberius from one cause of anxiety. He had long been tired of her, because she wished to exercise authority, and one object in leaving Rome was to be out of her way. Livia's death gave Seianus and Tiberius free scope, for Tiberius never entirely released himself from a kind of subjection to his mother, and Seianus did not venture to attempt the overthrow of Livia's influence. The destruction of Agrippina and her children was now the chief purpose of Seianus; but he finally got from Tiberius (31) the reward that was his just desert, an ignominious death. (See SEIANUS.) The death of Seianus was followed by the execution of his friends; and for the remainder of the reign of Tiberius, Rome continued to be the scene of tragic occurrences. Tiberius died on the 16th of March, 37, at the villa of Lucullus, in Misenum. He was seventy-eight years of age, and had reigned twenty-two years. He was succeeded by Gaius (Caligula), the son of Germanicus, but, according to Tacitus, he had himself appointed no successor (Tac. *Ann.* vi. 46), though he had appointed Gaius the heir of his private property (Suet. *Tib.* 76) in conjunction with Tiberius Gemellus, whom Gaius afterwards put to death. On the other hand, Iosephus has a story of Tiberius committing the Empire to Gaius (*Ant.* xviii. 6, 9). Tiberius did not die a natural death. It was known that his end was rapidly approaching, and having had a fainting-fit, he was supposed to be dead. Thereupon Gaius came forth and was saluted as emperor; but he was alarmed by the intelligence that Tiberius had recovered and called for something to eat. Gaius was so frightened that he did not know what to do; but Macro, the prefect of the Praetorians, with more presence of mind, gave orders that a quantity of clothes should be thrown on Tiberius, and that he should be left alone (Tac. *Ann.* v. 50; Dio Cass. lviii. 28). Suetonius mentions a suspicion that Tiberius was poisoned at the last by Gaius (Suet. *Tib.* 73; *Cal.* 12). Tiberius wrote a brief commentary of his own life, the only book that the emperor Domitian studied (Suet. *Tib.* 67; *Dom.* 20), and also Greek poems, and a lyric poem on the death of L. Caesar (Suet. *Tib.* 70). Tiberius, both as a ruler and as a man, has not lacked defenders in modern times, among them Dean Merivale in his *Romans under the Empire* (1865); Beesly, *Catiline, Clodius, and Tiberius* (1878); and Baring-Gould, *The Tragedy of the Caesars*, vol. i. (1892). For the adverse view see Boissier, *L'Opposition sous les Césars* (1875). For the general history of his reign see Pasch, *Zur Kritik der Geschichte des Kaisers Tiberius* (Altenburg, 1866); Stahr, *Tiberius* (Berlin, 1873); H. Schiller, *Geschichte der römischen Kaiserzeit* (Gotha, 1883); and Freytag, *Tiberius und Tacitus* (Berlin, 1870). See also the essay prefixed to Furneaux's *Annales*, vol. i. (1884).



(2) TIBERIUS GEMELLUS, son of Drusus junior (DRUSUS, No. 5), twin with another son, who died early. He was therefore grandson of Tiberius and regarded as a dangerous rival by Caligula, who put him to death soon after his accession (Suet. *Tib.* 54; *Cal.* 14, 23). It is said that Tiberius doubted his legitimacy. This and his youth may have been reasons against his being named successor to the Empire (Suet. *Tib.* 62; Tac. *Ann.* vi. 46).

(3) A philosopher and sophist, of unknown time, the author of numerous works on grammar and rhetoric. One of his works, on the figures in the orations of Demosthenes (Περὶ τῶν παρὰ Δημοσθένει Σχημάτων), is still extant. It is edited by Spengel (1856).

Tibia (*αὐλός*). A pipe, the commonest musical instrument of the Greeks and Romans. It was very frequently a hollow cane, perforated with holes in the proper places. In other instances it was made of some kind of wood, especially box, and was bored with a gimlet. When a single pipe was used by itself, the performer upon it, as well as the instrument, was called *monaulos*. Among the varieties of the single pipe the most remarkable were the bagpipe, the performer upon which was called *utricularius* or *ἀσκαύλης*: and the *αὐλὸς πλάγιος* or *πλαγίαυλος*, which, as its name implies, had a mouth-piece inserted into it at right angles. Pan was the reputed inventor of this kind of tibia as well as of the *fistula* or *syrinx*. (See SYRINX.) But among the Greeks and Romans it was much more usual to play on two pipes at the same time. Hence a performance (*tibicinium*) on this instrument, even when executed by a single person, was called *canere* or *cantare tibiis*. This act is exhibited in very numerous works of ancient art, and often in such a way as to make it manifest that the two pipes were perfectly distinct, and not connected, as some have supposed, by a common mouth-piece. The mouth-pieces of the two pipes

often passed through a *capistrum*. See CAPISTRUM.

Three different kinds of pipes were originally used to produce music in the Dorian, Phrygian, and Lydian modes. It appears, also, that to produce the Phrygian mode the pipe had only two holes (*τρυπήματα*) above and that it terminated in a horn bending upwards. It thus approached to

Tibiae and Syrinx.

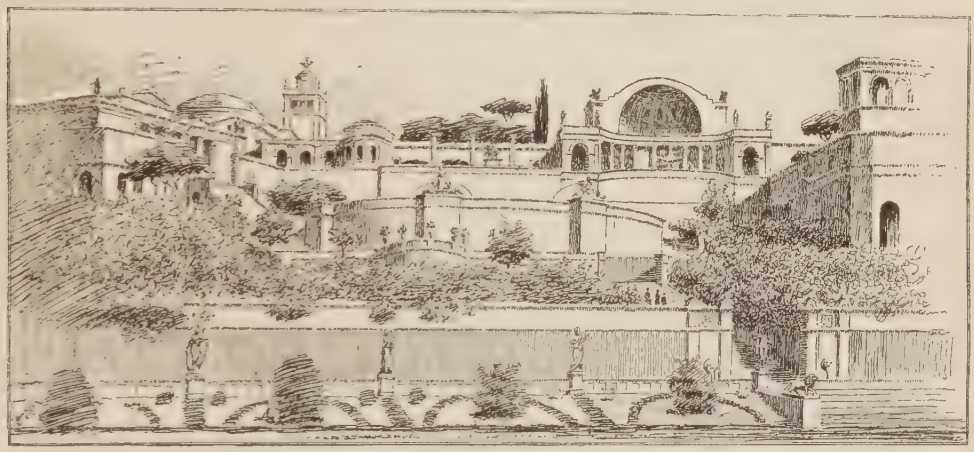
the nature of a trumpet, and produced slow, grave, and solemn tunes. The Lydian mode was much quicker, and more varied and animating. Horace mentions "Lydian pipes" as a proper accompaniment when he is celebrating the praise of ancient heroes. The Lydians themselves used this instrument in leading their troops to battle; and the pipes employed for the purpose are distinguished by Herodotus as "male and female"—i. e. probably bass and treble—corresponding to the ordinary sexual difference in the human voice. The corresponding Latin terms are *tibia dextra* and *sinistra:* the respective instruments are supposed to have been so called because the former was more properly held in the right hand and the latter in the left. The *tibia dextra* was used to lead or commence a piece of music, and the *sinistra* followed it as an accompaniment. The comedies of Terence having been accompanied by the pipe, the following notices are prefixed to explain the kind of music appropriate to each: *tibiis paribus*, i. e. with pipes in the same mode; *tibiis imparibus*, pipes in different modes; *tibiis duabus dextris*, two pipes of low pitch; *tibiis paribus dextris et sinistris*, pipes in the same mode, and of both low and high pitch. The use of the pipe among the Greeks and Romans was three-fold—viz. at sacrifices (*tibiae sacrificae*), entertainments (*ludicrae*), and funerals. (See FUNUS.) The pipe was not confined anciently to the male sex, but *αὐλητρίδες*, or female *tibicines*, were very common. See Gevaert, *Histoire et Théorie de la Musique dans l'Antiquité*, ii. pp. 270 foll. and 647 foll. (Ghent, 1881).

Tibiālē (*περικνημίς*). A sort of legging or gaiter encircling the shin (*tibia*) from the knee to the ankle, serving the purpose of modern stockings and drawers. It was worn by persons in delicate health, such as the emperor Augustus (Suet. *Aug.* 82), and by soldiers and huntsmen. Cf. FASCIA.

Tibiale. (Roman bas-relief.)

Tibīcen (*αὐλητής*). A flute-player. See TIBIA.

Tibiscus or **Tibissus**, probably the same as the **Parthiscus** or **Parthissus**. Now the Theiss. A river of Dacia, forming the western boundary of that country.



Tibullus, ALBIUS, a Roman elegiac poet of equestrian family. The date of his birth is uncertain, but he died young, soon after Vergil. His birth is therefore placed by conjecture B.C. 54, and his death B.C. 19. Of his youth and education absolutely nothing is known. The estate belonging to the equestrian ancestors of Tibullus was at Pedum, between Tibur and Praenesté. This property, like that of the other great poets of the day, Vergil and Horace, had been either entirely or partially confiscated during the Civil Wars; yet Tibullus retained or recovered part of it, perhaps through Messalla, and spent there the better portion of his short, but peaceful and happy, life (Tib. i. 1, 19; cf. Hor. *Ep.* i. 4, 7). When his friend and patron, Messalla, was going to his prefecture in Asia, B.C. 30, Tibullus, after first refusing, eventually agreed to accompany him, but fell ill on the way at Corcyra and returned thence to Rome (Tib. i. 1; i. 3). Afterwards, in 28, he went to Aquitania with Messalla, who had been sent by Augustus to suppress a formidable insurrection which had broken out in this province. Part of the glory of the Aquitanian campaign, which Tibullus celebrates in language of unwonted loftiness, redounds, according to the poet, to his own fame. He was present at the battle of Atax (Aude in Languedoc), which quelled the Aquitanian rebellion (Tib. i. 7). So ceased the active life of Tibullus; his remaining history is the chronicle of his poetry and of the loves which inspired it. The first object of his attachment is celebrated under the poetic name of Delia: according to Apuleius (*Apol.* 10) her real name was Plania. To Delia are addressed the first six elegies of the first book. The poet's attachment to Delia had begun before he left Rome for Aquitania. But Delia seems to have been faithless during his absence from Rome. On his return from Corcyra he found her ill, and attended her with affectionate solicitude (*Eleg.* i. 5), and hoped to induce her to retire with him into the country. But first a richer lover appears to have supplanted him with the inconstant Delia, and afterwards there appears a husband in his way. The second book of elegies is chiefly devoted to a new mistress named Nemesis (cf. Ovid, *Am.* iii. 9, 32; Mart. viii. 73, 7). It is probable, though not certain, that this Nemesis is the same as the Glycera mentioned only by Horace (*Carm.* i. 33, 2), who reproves him for dwelling so long in his plaintive elegies on the "pitiless Glycera."

The poetry of his contemporaries shows Tibullus to have been a gentle and singularly amiable man. To Horace especially he was an object of warm attachment. Besides the ode which alludes to his passion for Glycera (Hor. *Carm.* i. 33), the epistle to Tibullus gives the most full and pleasing view of his poetical retreat, and of his character; it is written by a kindred spirit. Horace does homage to that perfect purity of taste which distinguishes the poetry of Tibullus, and he takes pride in the candid but favourable judgment of his own Satires. The time of Tibullus he supposes to be shared between the finishing his exquisite small poems, which were to surpass even those of Cassius of Parma, up to that time the models of this kind of composition, and the enjoyment of the country. Tibullus possessed, according to his friend's notions, all the blessings of life—a competent fort-

une, favour with the great, fame, health; and he seemed to know how to enjoy all those blessings.

The first two books alone of the elegies under the name of Tibullus are of undoubted authenticity. The third is the work of another, a very inferior poet, whether Lygdamus be a real or fictitious name. This poet was much younger than Tibullus, for he was born in the year of the battle of Mutina, 43. It is probable that he was a less gifted member of Messalla's literary circle: this connection with the patron of Tibullus might account for his elegies being confused with the genuine poems of Tibullus. The hexameter poem on Messalla, which opens the fourth book, is so inferior that, although a successful elegiac poet may have failed when he attempted epic verse, it cannot readily be ascribed to a writer of the exquisite taste of Tibullus. If it is his, it must be regarded as an early poem written in an imitative manner, when he was under the full influence of the Alexandrian School. The smaller elegies of the fourth book have all the inimitable grace and simplicity of Tibullus. With the exception of the thirteenth (of which some lines are hardly surpassed by Tibullus himself) these poems relate to the love of a certain Sulpicia, a woman of noble birth, for Cerinthus, the real or fictitious name of a beautiful youth. Nor is there any improbability in supposing that Tibullus may have written elegies in the name or by the desire of Sulpicia. If Sulpicia was herself the poetess, she approached nearer to Tibullus than any other writer of elegies. The first book of elegies alone seems to have been published during the author's life, probably soon after the triumph of Messalla (27). The second book probably did not appear till after the death of Tibullus. With it may have been published the elegies of his imitator, perhaps his friend and associate in the society of Messalla, Lygdamus (if that be a real name), i. e. the third book and likewise the fourth, made up of poems belonging, as it were, to this intimate society of Messalla; the *Panegyricus Messallae* by some unnamed author, which, feeble as it is, seems to be of that age; the poems in the name of Sulpicia, with the concluding one, the thirteenth, a fragment of Tibullus himself. There are editions of Tibullus by Lachmann (Berlin, 1829); Dissen, 2 vols. (Göttingen, 1835); Bährens (Leipzig, 1878); Hiller, with a good index (Leipzig, 1885); selections by Ramsay. There is an English verse translation by Cranstoun, with notes (London, 1872). See Sellar's *Roman Poets of the Republic* for a good literary estimate of the poet.

Tibur. Now Tivoli; one of the most ancient towns of Latium, sixteen miles northeast of Rome, situated on the slope of a hill (hence called by Horace *supinum Tibur*), on the left bank of the Anio, which here forms a magnificent waterfall. It became subject to Rome with the other Latin cities on the final subjugation of Latium in B.C. 338. Under the Romans Tibur continued to be a large and flourishing town, since the salubrity and beautiful scenery of the place led many of the most distinguished Roman nobles to build here magnificent villas. Of these the most splendid was the villa of the emperor Hadrian, in the extensive remains of which many valuable specimens of ancient art have been discovered. Here also the celebrated Zenobia lived after adorning the triumph of her conqueror, Aurelian. Horace likewise had a country-house in the neighbourhood of Tibur, which he preferred to all his other residences. See Meyer, *Tibur* (1883).

Villa of Hadrian at Tibur. (Restoration by Bühlmann.)

Ticīnum. Now Pavia; a town of the Laevi, or, according to others, of the Insubres, in Gallia Cisalpina, on the left bank of the Ticinus. The Lombards called it Papia, whence its modern name.

Ticīnus. Now the Tessino; an important river in Gallia Cisalpina. It rises in Mons Adula, and after flowing through Lacus Verbanus (Lago Maggiore), falls into the Padus (Po) near Ticinum. It was upon the bank of this river that Hannibal gained his first victory over the Romans by the defeat of P. Scipio, B.C. 218.

Ticket. See TESSERA.

Tifāta. A mountain in Campania, east of Capua, where Sulla defeated the proconsul Norbanus (Vell. Pat. ii. 25).

Tifernum. (1) TIBERĪNUM. Now Città di Castello; a town of Umbria, near the sources of the river Tiber, whence its surname, and upon the confines of Etruria. (2) METAURENSE. Now S. Angelo in Vado; a town in Umbria, east of the pre-

ceding, on the river Metaurus. (3) A town in Samnium, on the river Tifernus.

Tifernus. Now the Biferno; a river of Samnium, rising in the Apennines, and flowing through the country of the Frentani into the Adriatic.

Tigellīnus, Sophonius. Son of a native of Agrigentum, the minister of Nero's worst passions, and of all his favourites the most obnoxious to the Roman people. On the accession of Otho, Tigellinus was compelled to put an end to his own life (Tac. *Ann.* bk. xv.; *Hist.* i. 72).

Tigellius Hermogĕnes. See Hermogenes.

Tight-rope Dancing. See Funambulus.

Tignarius, sc. *faber.* A carpenter and builder, or, more specifically, a roofer; one who puts together the beams (*tigna*) of a roof (Cic. *Brut.* 73).

Tigrānes (Τιγράνης). The name of several kings of Armenia. (1) Reigned B.C. 96–56 or 55. In 83 he made himself master of the whole Syrian monarchy, from the Euphrates to the sea. In 69, having refused to deliver up his son-in-law, Mithridates, to the Romans, Lucullus invaded Armenia, defeated the mighty host which Tigranes led against him, and followed up his victory by the capture of Tigranocerta. Subsequently Tigranes recovered his dominions; but on the approach of Pompey, in 66, he hastened to make overtures of submission, and laid his tiara at his feet, together with a sum of 6000 talents. Pompey left him in possession of Armenia proper, with the title of king. Tigranes died in 56 or 55. (2) Son of Artavasdes, and grandson of the preceding.

Tigranes.

Tigranocerta (τὰ Τιγρανόκερτα). The later capital of Armenia, built by Tigranes on a height by the river Nicephorius, in the valley between Mount Masius and Niphates.

Tigris (ὁ Τίγρις). A great river of western Asia, rises from several sources on the south side of that part of the Tauris chain called Niphates, in Armenia, and flows southeast, first through the narrow valley between Mount Masius and the prolongation of Mount Niphates, and then through the great plain which is bounded on the east by the last-named chain, till it falls into the head of the Persian Gulf, after receiving the Euphrates from the west.

Tigurīni. A tribe of the Helvetii, who joined the Cimbri in invading the country of the Allobroges in Gaul, where they defeated the consul L. Cassius Longinus, B.C. 107. They formed in the time of Caesar the most important of the four cantons (*pagi*) into which the Helvetii were divided. See Helvetii.

Tile. See Fictilé; Imbrex; Tegula.

Tilphusium (Τιλφούσιον). A town in Boeotia, situated upon a mountain of the same name south of Lake Copaïs, and between Coronea and Haliartus. It derived its name from the fountain Tilphusa, which was sacred to Apollo, and where Tiresias is said to have been buried (Pausan. ix. 33, 1).

Timaeus. (1) The historian, was the son of Andromachus, tyrant of Tauromenium in Sicily, and was born about B.C. 352. He was banished from Sicily by Agathocles, and passed his exile at Athens, where he had lived 50 years when he wrote the 34th book of his history. He probably died about 256. The great work of Timaeus was a history of Sicily from the earliest times to 264. The fragments are edited by C. and Th. Müller (Paris, 1841). Timaeus is said to have been the first to record events by Olympiads. (See Olympias.) (2) Of Locri, in Italy, a Pythagorean philosopher, is said to have been a teacher of Plato. He gives his name to a dialogue of Plato, in which is given the account of the mythical island Atlantis, lying in the Western Ocean, and supposed by many in modern times to have been suggested by vague stories of the American continent.

Timagĕnes. A rhetorician and an historian, who was a native of Alexandria, from which place he was carried as a prisoner to Rome, where he opened a school of rhetoric, and taught with great success. (Suid. s. h. v.)

Timanthes (Τιμάνθης). A celebrated Greek painter at Sicyon, contemporary with Zeuxis and Parrhasius, about B.C. 400. The masterpiece of Timanthes was his celebrated picture of the sacrifice of Iphigenia, in which Agamemnon was painted with his face hidden in his mantle (Pliny, *H. N.* xxxv. 73). See the illustration under Iphigenia.

Timāvus. A small river in the north of Italy, forming the boundary between Istria and Venetia, and falling into the Sinus Tergestinus in the Adriatic, between Tergesté and Aquileia. It is now the Timavo.

Time, Measurement of. See Calendarium; Horologium.

Timēma (*τίμημα*, "valuation," "assessment"). (1) The value at which an Athenian citizen's property was rated for taxation. (See Eisphora; Solon.) (2) In legal language, a fine. See Judicial Procedure.

Time-pieces. See Horologium.

Timocratia (*τιμοκρατία*, "government according to property-tax or valuation of property"). The name given among the Greeks to that form of government in which, while the citizens were equal in other respects, their share in the government was regulated by a certain gradation corresponding to the amount of their property. Thus those whose property entailed the greater expenditure in public services possessed proportionately greater privileges. The constitution established at Athens by Solon was founded on this principle. See Oligarchia; Solon.

Timocreon (Τιμοκρέων). A lyric poet of Rhodes, celebrated for the bitter and pugnacious spirit of his works, and especially for his attacks on Themistocles and Simonides (Athen. pp. 415, 416; Plut. *Them.* 21).

Timoleon (Τιμολέων). The son of Timodemus or Timaenetus and Demaristé. He belonged to one of the noblest families at Corinth. His early life was stained by a dreadful deed of blood. We are told that so ardent was his love of liberty that when his brother Timophanes endeavoured to make himself tyrant of their native city, Timoleon murdered him rather than allow him to destroy the liberty of the State. At the request of the Greek cities of Sicily, the Corinthians despatched Timoleon with a small force in B.C. 344 to repel

the Carthaginians from that island. He obtained possession of Syracuse, and then proceeded to expel the tyrants from the other Greek cities of Sicily, but was interrupted in this undertaking by a formidable invasion of the Carthaginians, who landed at Lilybaeum, in 339, with an immense army, under the command of Hasdrubal and Hamilcar, consisting of 70,000 foot and 10,000 horse. Timoleon could only induce 12,000 men to march with him against the Carthaginians; but with this small force he gained a brilliant victory over the Carthaginians on the river Crimissus (339). The Carthaginians were glad to conclude a treaty with Timoleon in 338, by which the river Halycus was fixed as the boundary of the Carthaginian and Greek dominions in Sicily. Subsequently he expelled almost all the tyrants from the Greek cities in Sicily, and established democracies instead. Timoleon, however, was in reality the ruler of Sicily, for all the States consulted him on every matter of importance; and the wisdom of his rule is attested by the flourishing condition of the island for several years even after his death. He died in 337. His life was written by Plutarch.

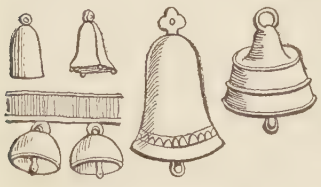
Timomăchus (Τιμόμαχος). A distinguished Byzantine painter who lived in the time of Iulius Caesar. The latter purchased two of his pictures, the *Aiax* and *Medea*, for the immense sum of eighty Attic talents (nearly $90,000), and dedicated them in the Temple of Venus Genetrix (Pliny, *H. N.* vii. 126, xxxv. 136). It is held by many critics that Timomachus belonged to the Alexandrine Period of Greek art, and that Pliny was mistaken in supposing that the pictures which Caesar bought were painted in Caesar's time.

Timon (Τίμων). (1) The son of Timarchus of Phlius, a philosopher of the sect of the Skeptics, who flourished in the reign of Ptolemy Philadelphus, about B.C. 279 and onwards. He first studied philosophy at Megara, under Stilpo, and then returned home and married. He next went to Elis with his wife, and heard Pyrrho, whose tenets he adopted. Driven from Elis by straitened circumstances, he spent some time on the Hellespont and the Propontis, and taught at Chalcedon as a sophist with such success that he realized a fortune. He then removed to Athens, where he passed the remainder of his life, with the exception of a short residence at Thebes. He died at the age of almost ninety.

Timon appears to have been endowed by nature with a powerful and active mind, and with that quick perception of the follies of men which betrays its possessor into a spirit of universal distrust both of men and truths, so as to make him a skeptic in philosophy and a satirist in everything. His agnosticism (to use a modern term) is shown by his saying that man need only know three things—viz. what is the nature of things, how we are related to them, and what we can gain from them; but as our knowledge of things must always be subjective and unreal, we can only live in a state of suspended judgment. He wrote numerous works both in prose and poetry. The most celebrated of his poems were the satiric compositions called *silli* (σίλλοι), a word of somewhat doubtful etymology, but which undoubtedly describes metrical compositions of a character at once ludicrous and sarcastic. The invention of this species of poetry is ascribed to Xenophanes of Colophon. (See XENOPHANES.) The *Silli* of Timon were in three books, in the first of which he spoke in his own person, and the other two are in the form of a dialogue between the author and Xenophanes of Colophon, in which Timon proposed questions, to which Xenophanes replied at length. The subject was a sarcastic account of the tenets of all philosophers, living and dead—an unbounded field for skepticism and satire. They were in hexameter verse, and from the way in which they are mentioned by the ancient writers, as well as from the few fragments of them which have come down to us, it is evident that they were very admirable productions of their kind (Diog. Laërt. ix. 12, 109–115; Euseb. *Praep. Ev.* xiv. p. 761). The fragments of his poems are collected by Wölke, *De Graecorum Syllis* (Warsaw, 1820), and by Paul in his *Dissertatio de Sillis* (Berlin, 1821). See PARODIA.

(2) The Misanthrope (ὁ μισάνθρωπος), lived in the time of the Peloponnesian War. He was an Athenian, of the demus of Colyttus, and his father's name was Echecratides. In consequence of the ingratitude he experienced and the disappointments he suffered from his early friends and companions, he secluded himself entirely from the world, admitting no one to his society except Alcibiades, in whose reckless and variable disposition he probably found pleasure in tracing and studying an image of the world he had abandoned; and at last he is said to have died in consequence of refusing to suffer a surgeon to come to him and set a broken limb. One of Lucian's pieces bears his name (Aristoph. *Av.* 1548; *Lys.* 809; Plut. *Ant.* 70; Lucian, *Timon;* Suid. s. h. v.). See Binder, *Ueber Timon den Misanthropen* (1856). His name is embalmed in English literature in Shakspeare's play *Timon of Athens.*

Timotheus (Τιμόθεος). (1) A celebrated musician and poet of the later Athenian dithyramb. He was a native of Miletus, and the son of Thersander. He was born B.C. 446, and died in 357, in the ninetieth year of his age. He was at first unfortunate in his professional efforts. Even the Athenians, fond as they were of novelty, were offended at the bold innovations of Timotheus, and hissed his performance. On this occasion it is said that Euripides encouraged Timotheus by the prediction that he would soon have the theatres at his feet. This prediction appears to have been accomplished in the vast popularity which Timotheus afterwards enjoyed. He delighted in the most artificial and intricate forms of musical expression, and he used instrumental music, without a vocal accompaniment, to a greater extent than any previous composer. Perhaps the most important of his innovations, as the means of introducing all the others, was his addition to the number of the strings of the *cithara*, which he seems to have increased to eleven. (2) The son of Conon, the famous general. He was himself a distinguished Athenian soldier. He was first appointed to a public command in B.C. 378; and from this time his name frequently occurs as one of the Athenian generals down to 356. In this year he was associated with Iphicrates, Menestheus, and Chares in the command of the Athenian fleet. In consequence of his failure to relieve Samos he was arraigned in 354, and condemned to the crushing fine of 100 talents (more than $100,000). Being unable to pay the fine, he withdrew to Chalcis in Euboea, where he died shortly after. The Athenians



subsequently remitted nine-tenths of the penalty, and allowed his son Conon to expend the remainder on the repair of the walls, which the famous Conon had restored. (His life is written by Nepos; see Diod. xv. 81, xvi. 7, 21; and the article IPHICRATES). (3) Son of Clearchus, the tyrant of Heraclea on the Euxine, whom he succeeded in the sovereignty, B.C. 353 (Diod. xvi. 36). There is extant a letter addressed to him by Isocrates. (4) A sculptor, whose country is not mentioned, but who belonged to the later Attic school of the time of Scopas and Praxiteles. He was one of the artists who executed the basreliefs which adorned the frieze of the Mausoleum. He is also mentioned as the author of a statue of Asclepius at Troezen and one of Artemis which was at Rome (Pausan. ii. 32, 3; Pliny, *H. N.* xxxvi. 32).

Tinder. See IGNIARIA.

Tingis (Τίγγις). Now Tangier; a city of Mauretania, on the southern coast of the Fretum Gaditanum (Strait of Gibraltar), and a place of very great antiquity. It was made by Augustus a free city, and by Claudius a colony, and the capital of Mauretania Tingitana.

Tinia. A small river in Umbria, rising near Spoletium, and falling into the Tiber.

Tintinnabŭlum (κώδων). A bell. Ancient bells were in shape and use much like those of modern times. Thus we find mention of a door-bell in Suetonius (*Aug.* 91), of bells for summoning servants in Seneca (*De Ira*, iii. 35), of a bell announcing a sacrifice, like our church bells, in Plautus (*Pseud.* i. 3, 98), and of bells for animals' necks, like our sheep-bells, in Sidonius (*Epist.* ii. 2). The word *campana* is used of a bell in late Latin, whence the Ital. *campanile*.

Ancient Bells.

Tiresias (Τειρεσίας). A Theban, was one of the most renowned soothsayers in all antiquity. He was blind from his seventh year, but lived to a very old age. The occasion of his blindness and of his prophetic power is variously related. In the war of the Seven against Thebes he declared that Thebes should be victorious if Menoeceus would sacrifice himself; and during the war of the Epigoni, when the Thebans had been defeated, he advised them to commence negotiations of peace, and to avail themselves of the opportunity that would thus be afforded them to take to flight. He himself fled with them (or, according to others, he was carried to Delphi as a captive), but on his way he drank from the well of Tilphusa, and died. Even in the lower world Tiresias was believed to retain the powers of perception, while the souls of other mortals were mere shades, and there also he continued to use his golden staff. The blind seer Tiresias acts so prominent a part in the mythical history of Greece that there is scarcely any event with which he is not connected in some way or other; and this introduction of the seer in so many occurrences, separated by long intervals of time, was facilitated by the belief in his long life. (See especially OEDIPUS.) Tiresias is the subject of a fine poem by Lord Tennyson (1885).

Tiribazus (Τιρίβαζος). A satrap of Armenia in 401, who dogged the retreat of the Ten Thousand Greeks, but without success (Xen. *Anab.* iv. 4, vii. 8; Diod. xiv. 27). He succeeded Tithraustes as satrap of Western Asia, and favoured the views of Antalcidas. In 386 he commanded the expedition against Evagoras. Some time afterwards he conspired against Artaxerxes II., and was put to death (Plut. *Artax.* 29).

Tiridātes or **Teridātes** (Τηριδάτης). (1) The second king of Parthia. (See ARSACES II.) (2) King of Armenia, and brother of Vologeses I. (Arsaces XXIII.), king of Parthia. He was made king of Armenia by his brother, but was driven out of the kingdom by Corbulo, the Roman general, and finally received the Armenian crown from Nero at Rome in A.D. 63.

Tiro. A recruit. See TIROCINIUM.

Tiro, M. TULLIUS. The freedman of Cicero, to whom he was an object of tender affection. He appears to have been a man of very amiable disposition and highly cultivated intellect. He was not only the amanuensis of the orator, and his assistant in literary labour, but was himself an author of no mean reputation, and notices of several works from his pen have been preserved by ancient writers. After the death of Cicero, Tiro purchased a farm in the neighbourhood of Puteoli, where he lived until he reached his one hundredth year. It is usually believed that Tiro was the inventor of the art of shorthand writing (*notae Tironianae*). (See NOTAE.) He also did much to preserve, arrange, and publish the literary work of his patron, especially his voluminous personal correspondence; and he was the author of a life and vindication of the great orator (Tac. *Dial.* 17; Gell. iv. 10, xv. 16). See Mitzschke, *Tullius Tiro* (Berlin, 1875).

Tirocinium ("a recruit's term of service"; from *tiro*, a "recruit"). The Roman term for the interval between the assumption of the *toga virilis* (in the sixteenth or seventeenth year) which marked the beginning of independence and of liability to compulsory military service, and the entrance on a military career or official activity in general. Under the Republic this time was fixed at a year. It was looked upon as the last stage of education, and in this a youth qualified himself either in the army for service in war or in the Forum for a political life.

In the latter instance the young man was handed over to the care of a man of proved experience in public affairs, whom he attended in the Forum and in the law-courts. In the former case he followed in the train (*cohors*) of a general, where, without performing the service of a common soldier, he fitted himself for the position of an officer.

Tiryns (Τίρυνς). A prehistoric citadel in the Argolic plain, about two and one-half miles north of Nauplia, and one mile from the sea. It occupies the summit of a low hill, about 980 feet long by 330 feet wide, and, in the southern half, 59 feet high above the surrounding plain, or 72 feet above sea level. Here, during a period probably not earlier than the fifteenth century B.C., nor later than the eleventh, was the stronghold of a powerful line of chieftains. Like Mycenae, Tiryns seems to have early fallen under the power of Argos, and in B.C. 468 it was annihilated by Argos, or at least reduced to absolute insignificance. Thorough excavations were carried on in the southern portion

of the citadel by Dr. Schliemann and Dr. Dörpfeld in 1884 and 1885. The walls of fortification were cleared, and within them the remains of an extensive palace were revealed. The lower (northern) portion of the citadel remains unexcavated.

The citadel-wall of Tiryns is the classic example of "Cyclopian" masonry of the most primitive type. It is built of huge, irregular blocks of lime-

Citadel of Tiryns.

stone, many of them eight to ten feet long, three feet thick, and three feet high. These blocks were not fitted to one another, but the interstices were filled with clay and with small stones. In places there is a distinct approach toward an arrangement in horizontal courses. The thickness of the wall at the bottom varies from 16 feet to 28 feet, except in two places, where it is greatly increased in order to receive a system of store-chambers. The height of the existing remains is in places upward of 25 feet. The original height can only be guessed; it has been estimated at 50 feet, on the average, measured outside. The citadel had one, and only one, great entrance. This was on the east side. A broad ramp, so placed that the unshielded side of an attacking force would be exposed to the missiles of the defenders above, led to an opening, without gates, in the wall. What defence existed within this opening to the north is not known. To the south the passage was barred by a strong gate, whose threshold and related posts are still in their places. On the opposite (western) side of the citadel was a postern gate, from which ascended a narrow, winding stairway to the back of the palace; there were also two small gate apertures in the northern part of the citadel. On the east side, at the south end, was a gallery in the wall which furnished the means of communication with a series of rectangular store-chambers. The method of roofing by pushing the successive courses of stones farther and farther inward till they meet, should be noted (compare the "Treasury of Atreus" at Mycenae). This system of chambers with communicating gallery is repeated in the south wall, and there are here remains of the stairway by which access was obtained from the summit of the citadel.

The palace was contemporaneous with the fortification just described. Its walls, not needing especial strength, were built, in their lower portions, of moderate-sized stones laid in clay mixed with straw, with occasional beams of wood laid lengthwise. In many places the upper portions, beginning about three feet from the ground, consisted of unbaked bricks; in two places the bricks begin from the ground. These walls were protected by a plaster consisting of an undercoat of clay and an outer coat of pure lime. The latter was decorated with paintings, of which many fragmentary specimens have been found. Another sort of wall-decoration was found in the vestibule of a hall, extending across the western wall at the bottom. This was an alabaster frieze, sculptured with an elaborate pattern of palmettes, rosettes, etc., and studded with pieces of blue glass, supposed to be the *κύανος* of Homer. The floors throughout the palace were made of pure lime or of lime mixed with small pebbles. Thresholds were of wood or stone. Columns and antae were of wood. It is not certain whether there was a second story over any part of the building. The ground-plan was as follows: Through a large propylaeum, one passed into an irregular open court, and thence through a second and smaller propylaeum into a rectangular open court (*αὐλή*) having a floor of lime and pebbles and enclosed on three sides by colonnades. North of this came what was obviously the most important part of the house, consisting of a vestibule, an antechamber, and a rectangular roofed hall (*μέγαρον*). In the centre of this hall was a circular hearth, and around the hearth stood four wooden columns supporting the ceiling. As for the outlying rooms, most of them cannot be precisely designated. One, however, a square chamber approached by a passageway starting from the west side of the antechamber of the men's hall, was certainly a bathroom. Its floor was one gigantic stone, estimated to weigh over twenty tons. A fragment of a terra-cotta bath-tub was found here.

The palace of Tiryns corresponds in many important respects with the type of house or palace

Arch at Tiryns.

presupposed in the Homeric poems (see DOMUS). There are, however, some differences, of which the most important concerns the communication between the men's and the women's apartments. This, in the Homeric house, was direct and easy; at Tiryns it was long and circuitous. This and the other differences may be due to difference of locality and date. It must not be forgotten that the fortifications and palace of Tiryns are pre-Homeric. See Schliemann, *Tiryns* (London, 1886); Gardner, *New Chapters in Greek History* (London, 1892).

Tisamĕnus (*Τισαμενός*). (1) A son of Orestes and Hermioné. He was king of Argos, but was deprived of his kingdom when the Heraclidae in-

vaded the Peloponnesus. He was slain in a battle against them, and his tomb was afterwards shown at Helicé, from which place his remains were subsequently removed to Sparta by command of an oracle (Paus. ii. 18, 5; vii. 1, 3; Apollod. ii. 8, 2). (2) An Elean soothsayer, of the family of the Clytiadae. He was assured by the Delphic Oracle that he would be successful in five great conflicts. Supposing this to be a promise of distinction as an athlete, he devoted himself to gymnastic exercises; but the Spartans, understanding the oracle to refer, not to gymnastic, but to military victories, made great offers to Tisamenus to induce him to take with their kings the joint command of their armies. This he refused to do on any terms short of receiving the full franchise of their city, which the Spartans eventually granted. He was present with the Spartans at the battle of Plataea, B.C. 379, which was the first of the five conflicts referred to by the oracle. The second was with the Argives and Tegeans at Tegea; the third, with the Arcadians at Dipaea; the fourth was the Third Messenian War (465–455); and the last was the battle of Tanagra, with the Athenians and their allies, in 457 (Herod. ix. 33–36).

Tisiphŏné. See EUMENIDES.

Tissaphernes (*Τισσαφέρνης*). A famous Persian, who was appointed satrap of Lower Asia in B.C. 414. He espoused the cause of the Spartans in the Peloponnesian War, but he did not give them any effectual assistance, since his policy was not to allow either Spartans or Athenians to gain the supremacy, but to exhaust the strength of both parties by the continuance of the war. His plans, however, were thwarted by the arrival of Cyrus in Asia Minor in 407. This prince supplied the Lacedaemonians with effectual assistance. Tissaphernes and Cyrus were not on good terms; and after the death of Darius they were engaged in continual disputes about the cities in the satrapy of the latter, over which Cyrus claimed dominion. The ambitious views of Cyrus towards the throne at length became manifest to Tissaphernes, who lost no time in repairing to the king with information of the danger. At the battle of Cunaxa, in 401, he was one of the four generals who commanded the army of Artaxerxes, and his troops were the only portion of the left wing that was not put to flight by the Greeks. When the Ten Thousand had begun their retreat Tissaphernes professed his great anxiety to serve them, and promised to conduct them home in safety. In the course of the march he treacherously arrested Clearchus and four of the other generals, who were put to death. After this, Tissaphernes annoyed and harassed the Greeks in their march, without, however, seriously impeding it, till they reached the Carduchian Mountains, at which point he gave up the pursuit. Not long after, Tissaphernes, as a reward for his great services, was invested by the king, in addition to his own satrapy, with all the authority which Cyrus had enjoyed in Western Asia. On his arrival he claimed dominion over the Ionian cities, which applied to Sparta for aid. Their request was granted, and the Spartans carried on war against Tissaphernes with success for some years under the command successively of Thimbron, Dercyllidas, and Agesilaüs (400–395). The continued want of success on the part of Tissaphernes led to grievous complaints against him, and the charges were transmitted to court, where they were backed by all the influence of Parysatis, eager for the revenge on the enemy of Cyrus, her favourite son. The result was that Tithraustes was commissioned by the king to put Tissaphernes to death and to succeed him in his government, which was accordingly done (395) (Thucyd. viii.; Xen. *Hell.* i. 1, 2, 5; iii. 1, 2, 4; *Anab.*; Diod. xiii. 46; xiv. 23–27, 80).

Titānes (*Τιτᾶνες*, sing. *Τιτάν*). (1) The sons and daughters of Uranus and Gê or Gaea (Earth), originally dwelling in heaven, whence they are called *Οὐρανίωνες* or *Οὐρανίδαι*. They were twelve or thirteen in number who fall generally into pairs, viz., Oceanus and Tethys representing the sea; Hyperion and Theia (sun and moon); Coeus and Phoebe (light or star deities); Creios and Eurybia (deities of strength); Cronus and Rhea (heaven and earth); Themis and Mnemosyné, and Iapetus who was to produce mankind (Hes. *Th.* 133; Apollod. i. 1, 3). It is said that Uranus, the first ruler of the world, threw his sons, the Hecatoncheires (Hundred-Handed)—Briareus, Cottys, Gyes—and the Cyclopes—Arges, Steropes, and Brontes—into Tartarus. Gaea, indignant at this, produced iron, persuaded the Titans to rise against their father, and gave to Cronus an iron sickle. They did as their mother bade them, with the exception of Oceanus. Cronus, with his sickle, mutilated his father. (See URANUS.) From the drops of his blood there sprang the Erinnyes, Alecto, Tisiphoné, and Megaera. The Titans then deposed Uranus, liberated their brothers who had been cast into Tartarus, and raised Cronus to the throne. But Cronus hurled the Cyclopes back into Tartarus, and married his sister Rhea. Having been warned by Gaea and Uranus that he should be dethroned by one of his own children, he swallowed successively his children Hestia, Demeter, Heré, Pluto, and Poseidon. Rhea therefore, when she was pregnant with Zeus, went to Crete, and gave birth to the child in the Dictaean Cave, where he was brought up by the Curetes. When Zeus had grown up he availed himself of the assistance of Thetis, the daughter of Oceanus, who gave to Cronus a potion which caused him to bring up the stone and the children he had swallowed. (See CRONUS; ZEUS.) United with his brothers and sisters, Zeus now began the contest against Cronus and the ruling Titans. This contest (usually called the TITANOMACHIA) was carried on in Thessaly, Cronus and the Titans occupying Mount Othrys, and the sons of Cronus Mount Olympus. It lasted ten years, till at length Gaea promised victory to Zeus if he would deliver the Cyclopes and Hecatoncheires from Tartarus. Zeus accordingly slew Campé, who guarded the Cyclopes, and the latter furnished him with thunder and lightning. The Titans then were overcome, and hurled down into an abyss below Tartarus, and the Hecatoncheires were set to guard them (Hes. *Th.* 617, 697, 851; Apollod. i. 2, 1; Pausan. viii. 37, 3; cf. *Il.* xiv. 279). It must be observed that the fight of the Titans is sometimes confounded by ancient writers with the fight of the Gigantes. (See GIGANTES.)

The myth of the Titans grew out of an attempt to reconcile the Greek religion with that of other non-Greek nations who had occupied the Greek lands before them. Hence many of its features, especially the account of the wounding of Uranus,

are not of a Greek character, and are ignored by Homer, but preserved by Hesiod. The Titan dynasties represent primitive alien supreme deities who have been brought into connection with the supreme Zeus of the Greeks and the other Olympian deities. In the Greek conception of the story, the Titans express the more terrible forces of nature, and also the struggle against the will of Zeus—*i. e.* against the lawful and orderly course of things (cf. *Il.* viii. 478, xiv. 200, xv. 224; Plat. *Leg.* iii. p. 701). See Meyer, *Die Giganten und Titanen* (Leipzig, 1887).

(2) The name Titanes is also given to those divine or semi-divine beings who were descended from the Titans, such as Prometheus, Hecaté, Latona, Pyrrha, and especially Helios (the Sun) and Selené (the Moon), as the children of Hyperion and Thia, and even the descendants of Helios, such as Circé.

Titanomachia. See TITANES.

Titaresius (Τιταρήσιος). Now Elassonitiko or Xeraghi; a river of Thessaly, also called Europus, rising in Mount Titarus, flowing through the country of the Perrhaebi, and falling into the Peneus, southeast of Phalanna

Tithenidia (τιθηνίδια). A festival held by those Spartan nurses (τιτθαί) who had charge of the male children of citizens. During its celebration they carried the boys to the Temple of Artemis and sacrificed sucking-pigs in their honour (Athen. iv. p. 139; Plut. *Sympos.* iii. 9).

Tithōnus (Τιθωνός). The son of Laomedon and Strymo, and brother of Priam. By the prayers of Eos, who loved him, he obtained from the gods immortality, but not eternal youth, in consequence of which he completely shrank together in his old age; whence a decrepit old man was proverbially called Tithonus. Eos changed him into a cicada, or katydid (Hes. *Theog.* 984; Apollod. iii. 12, 4; Ovid, *Fast.* i. 461). The story suggested Lord Tennyson's fine poem *Tithonus*. See EOS.

Tithorea. See NEON.

Tithraustes. (Τιθραύστης). A Persian, who succeeded Tissaphernes in his satrapy, and put him to death by order of Artaxerxes Mnemon, B.C. 395. See TISSAPHERNES.

Tities. One of the three ancient patrician tribes at Rome. See PATRICII; TRIBUS.

Titinius. A Roman comic poet, the earliest representative of the *fabula togata*. (See COMOEDIA.) He flourished about B.C. 150. Owing to his skill in portraying character he was ranked next to Terence. Of his comedies we only possess fifteen titles and three fragments of a popular character, given in Ribbeck's collection (1872).

Titles. See INDEX; LIBER; TITULUS.

Titŭlus. (1) A sort of placard or sign attached to a pole and carried by soldiers in the triumphal processions with the record of their victories and captains inscribed upon it (Ovid, *Trist.* iv. 2, 20). (2) The lettering of a book's title. (See INDEX; LIBER.) (3) The advertisement or handbill displayed upon a house to announce it as for sale or to let (Pliny, *Epist.* vii. 27, 7), the latter, in the words EST LOCANDA, still used by the Romans of to-day. (4) In general, any epitaph (*titulus sepulcralis*) or other inscription.

Triumphal Titulus. (Arch of Titus.)

Titus Flavius Sabīnus Vespasiānus. A Roman emperor, A.D. 79–81, commonly called by his praenomen **Titus**. He was the son of the emperor Vespasianus and his wife Flavia Domitilla. He was born on the 30th of December, A.D. 40. When a young man, he served as military tribune in Britain and in Germany with great credit. After having been quaestor, he had the command of a legion, and served under his father in the Jewish Wars. Vespasian returned to Italy, after he had been proclaimed emperor on the first of July, A.D. 69; but Titus remained in Palestine to prosecute the siege of Jerusalem, during which he showed the talents of a general with the daring of a soldier. The siege of Jerusalem was concluded by the capture of the place on the 8th of September, 70. Titus returned to Italy in the following year (71), and triumphed at Rome with his father. He also received the title of Caesar, and became the associate of Vespasian in the government. His conduct at this time gave no good promise, and his attachment to Berenicé, the sister of Agrippa II., also made him unpopular; but he sent her away from Rome after he became emperor. Titus succeeded his father in 79, and his government proved an agreeable surprise to those who had anticipated a return of the times of Nero. During his whole reign Titus displayed a sincere desire for the happiness of the people, and he did all that he could to relieve them in times of distress. He assumed the office of Pontifex Maximus after the death of his father, and with the purpose, as he declared, of keeping his hands free from blood, a resolution which he kept. The first year of his reign is memorable for the great eruption of Vesuvius, which desolated a large part of the adjacent country, and buried with lava and ashes the towns of Herculaneum and Pompeii. Titus endeavoured to repair the ravages of this great eruption; and he was

Titus. (Bust in the British Museum.)

also at great care and expense in repairing the damage done by a great fire at Rome, which lasted three days and nights. He completed the Colosseum, and erected the baths which were called by his name. He died on the 13th of September, A.D. 81, after a reign of two years, two months, and twenty days. He was in the 41st year of his age; and there were suspicions that he was poisoned by his brother, Domitian. See Stange, *De Titi Vita* (1870); and Beulé, *Tite et sa Dynastie* (1872).

Tityus (Τιτυός). Son of Gaea, or of Zeus and Elara, the daughter of Orchomenus. He was a giant in Euboea. Instigated by Heré, he attempted to offer violence to Artemis when she passed through Panopaeus to Pytho, but he was killed by the arrows either of Artemis or Apollo; according to others, Zeus destroyed him with a flash of lightning. He was then cast into Tartarus, and there he lay outstretched on the ground, covering nine acres, while two vultures (others say snakes) devoured his liver. See GIGANTES.

Tlepolĕmus (Τληπόλεμος). A son of Heracles by Astyoché, daughter of Phylas, or by Astydamia, daughter of Amyntor. He was king of Argos, but, after slaying his uncle Licymnius, he was obliged to take to flight, and, in conformity with the command of an oracle, he settled in Rhodes, where he built the towns of Lindos, Ialysus, and Camirus. He joined the Greeks in the Trojan War with nine ships, but was slain by Sarpedon (*Il.* ii. 658; v. 627).

Tmolus (Τμῶλος). (1) The god of Mount Tmolus in Lydia is described as the husband of Pluto, the daughter of Himantes, (or Omphalé) and father of Tantalus, and is said to have decided the musical contest between Apollo and Pan. (2) Now Dagh, a celebrated mountain of Asia Minor, running east and west through the centre of Lydia, and dividing the plain of the Hermus on the north from that of the Caÿster on the south.

Toga (τήβεννα). The distinctive garb of the Roman citizen when appearing in public (see illustrations). Its use was forbidden to exiles and to foreigners; it was indispensable on all official occasions, even in imperial times, when more convenient garments had been adopted for ordinary use. It consisted of a white woollen cloth of semicircular cut, about five yards long by four wide, a certain portion of which was pressed by the fuller into long, narrow plaits. This cloth was doubled lengthwise, not down the centre, but so that one fold was deeper than the other. It was next thrown over the left shoulder in such a manner that the end in front reached to the ground, and the part behind was about twice a man's height in length. This end was then brought round under the right arm, and again thrown over the left shoulder so as to cover the whole of the right side from the arm-pit to the calf. The broad folds in which it hung over were thus gathered together on the left shoulder. The part which crossed the breast diagonally was known as the *sinus*, or bosom. It was deep enough to serve as a pocket for the reception of small articles.

Ancient Mode of Wearing the Toga. (Dresden.)

In earlier times the Romans wore the *toga* even in warfare, although one of considerably less width. It was worn on such occasions in a peculiar mode called the *cinctus Gabinus*, or girding in the Gabian manner, after the town Gabii. In this, the end which, in the other mode, was thrown over the left shoulder, was drawn tightly round the body, so that in itself it formed a girdle, leaving both arms free and preventing the garment from falling off. This garb was subsequently retained only for certain ceremonial rites, as at the founding of towns, at the Ambarvalia, during incantations, at the opening of the Temple of Ianus, and at sacrificial observances of diverse kinds. After the *sagum* (q. v.) had been introduced as a military garment, the toga served as the exclusive garb and symbol of peace. Women also in olden times used to wear the toga· afterwards this was only the case with prostitutes; and disgraced wives were forbidden to wear the *stola*, the matron's dress of honour. The colour of the toga, as worn by men (*toga virilis*), was white: a dark-coloured toga (brown or black, *toga pulla* or *sordida*) was worn only by the lower classes, or in time of mourning, or by accused persons. A purple stripe woven in the garment was the distinctive mark of the curule magistrates and censors, of the State priests (but only when performing their functions), and afterwards of the emperors. This, which was called the *toga praetexta*, was also worn by boys until they attained manhood, and by girls until marriage. The *toga picta* was a robe adorned with golden stars; it was worn by a general on his triumph, by the magistrate who was giving public games, in imperial times by consuls on entering office, and by the emperor on festal occasions. (Cf. CLAVUS.) On the *toga candida*, see AMBITUS. The shoe appropriate to the toga was the *calceus* (q. v.).

Later Mode of Wearing the Toga. (*Museo Borbonico.*)

Togāta (sc. *fabula*). The general term for a play with an Italian plot and surroundings, including *praetextatae* (tragedies) and *tabernariae* (comedies). See Neukirch, *De Fabula Togata* (Leipzig, 1833); and the articles COMEDIA; PRAETEXTA.

Togāta Gallia. See GALLIA.

Toilet. See ACUS; BARBA; COMA; FUCUS; PECTEN; SAPO; UNGUENTUM.

Tokos. See FENUS.

Tolēnus or **Telonius.** Now the Turano; a river in the land of the Sabines, rising in the country of the Marsi and Aequi, and falling into the Velinus.

Tolētum. Now Toledo; the capital of the Carpetani in Hispania Tarraconensis, situated on the river Tagus, which nearly encompasses the town.

Tolistobogi, Tolistoboii. See GALATIA.

Tollēno. (1) A well-sweep (see ANTLIA). (2) A Roman siege-engine. See TORMENTUM.

Tolōsa. Now Toulouse; a town of Gallia Narbonensis, and the capital of the Tectosages. It was situated on the Garumna, near the frontiers of Aquitania. It was subsequently made a Roman colony, and was styled PALLADIA. Tolosa was a large and wealthy town, and contained a celebrated temple, in which is said to have been preserved a great part of the booty taken by Brennus from the Temple of Delphi. The town and temple were plundered by the consul Q. Servilius Caepio in B.C. 106.

Tolumnius, LAR. King of the Veientes, to whom Fidenae revolted in B.C. 438, and at whose instigation the inhabitants of Fidenae slew the four Roman ambassadors who had been sent to inquire into the reasons of their recent conduct. In the war which followed, Tolumnius was slain in single combat by Cornelius Cossus (Livy, iv. 17–19).

Tomacŭlum. A sort of sausage made of the intestines of a pig (Juv. x. 355), broiled and eaten hot (Petron. 31). It was sold about the streets of Rome in small tin ovens, like the modern Frankfürters.

Tomb. See SEPULCRUM.

Tomi or **Tomis.** Now Tomiswar or Jegni Pangola; a town of Thrace (subsequently Moesia), situated on the western shore of the Euxine, and at a later time the capital of Scythia Minor. It is renowned as the place of Ovid's banishment. See OVIDIUS.

Tomўris (Τόμυρις). A queen of the Massagetae, by whom the elder Cyrus was slain in battle, B.C. 529 (Herod. i. 205–214). See CYRUS.

Tongs. See FORCEPS.

Tonsa. A word used by the poets for the oar of a boat. The diminutive TONSILLA denotes a boat-hook (*Att. ap.* Fest. s. h. v.).

Tonsor (κουρεύς). A barber. The Greek and Roman barbers cut and dressed the hair and trimmed the beards of their customers, and also pared the nails and pulled out hairs with tweezers (*volsellae*). Persons of means were shaved and otherwise attended by valets of their own from among their slaves, but the common people frequented the barber-shop (κουρεῖον, *tonstrina*), which was with them a favourite lounging-place and famous for the gossip retailed there; for the ancient barbers were as fond of talk as those of modern times (Plaut. *Epid.* ii. 2, 16; *Asin.* ii. 2, 76; Polyb. iii. 20, 5; Hor. *Sat.* i. 7, 2). Female barbers (κουρεύτριαι, *tonstrices*) seem not to have been rare (Mart. ii. 17).

Ancient Barber at Work. (Baumeister, *Denkmäler.*)

The person who was to be operated on by the barber had a rough cloth (ἀμόλινον, *involucre*) laid on his shoulders, as now, to keep the hairs off his dress, etc. The second part of the business was shaving (*radere, rasitare,* ξυρεῖν). This was done with a ξυρόν, or *novacula,* a razor, which was kept in a razor-case (θήκη, ξυροθήκη, ξυροδόκης). Some, who would not submit to the operation of the razor, used instead some powerful depilatory ointments or plasters, as *psilothron, acida Creta, Venetum lutum, dropax,* etc. Stray hairs which escaped the razor were pulled out with small pincers or tweezers (*volsellae,* τριχολάβιον). The third part of the barber's work was, as stated above, to pare the nails of the hands, an operation which the Greeks expressed by the words ὀνυχίζειν and ἀπονυχίζειν. The instruments used for this purpose were called ὀνυχιστήρια, sc. μαχαίρια. See BARBA; COMA.

Tonstrīna. See TONSOR.

Toothpick. See DENTISCALPIUM.

Topia. Landscape paintings used to decorate the walls of a room. See PICTURA.

Topiarius. A landscape gardener. See HORTUS.

Toral, Torāle. A piece of cloth attached to the front of a dining-couch and extending from the mattress (*torus*) to the floor. It was usually of plain white cloth, so as to be readily washed (Hor. *Sat.* ii. 4, 84); but in the houses of the rich it was often of costly material, gold tissue or embroidery (Lamprid. *Elagab.* 19).

Torch. See FAX; TAEDA.

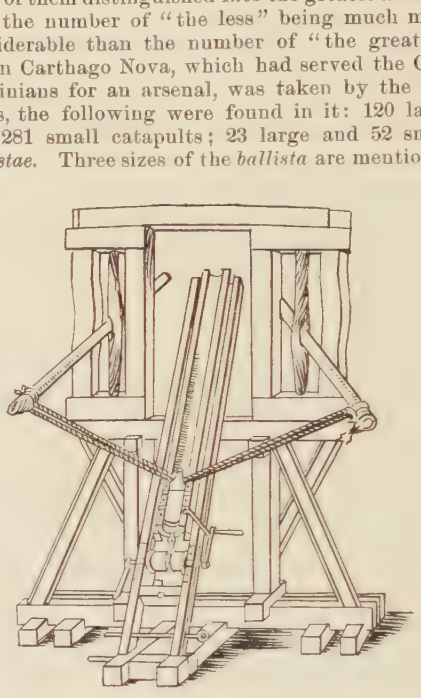
Torcŭlar (ληνός). A press used in making oil or wine. The earliest press was simply a block of stone raised by lever and allowed to descend on a basket (*fiscina*) of grapes or olives. The next development was a machine operated by the pressure of a beam (*prelum*) drawn down by ropes and worked by a sort of capstan (*sucula*). Still another press consisted of two uprights fixed in the earth and with cross-beams at the top and bottom. A number of boards (*tympana*) ran down each side of the uprights forced down upon the grapes by large blocks driven in as wedges by blows of a hammer or mallet. This last press is represented in the accompanying illustration. See OLIVUM; VINUM.

Torcular. (Herculanean painting.)

Torcularium (ληνεών). A room in which olive oil was produced. See TORCULAR.

Toreutĭcé (τορευτική). A name derived from the graver's tool (τορεύς), and denoting the art of ornamental work in metal. It is treated under CAELATURA.

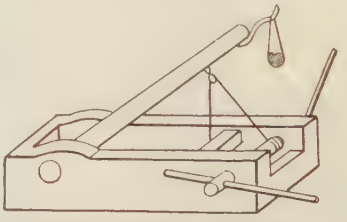
Tormentum (βάσανος). Torture. (1) GREEK. —By a decree of Scamandrius of uncertain date



it was ordained that no free Athenian could be put to the torture (Andoc. *De Myst.* 43), and this appears to have been the general rule. The evidence of slaves was, however, always taken with torture, and their testimony was not otherwise received. From this circumstance their testimony appears to have been considered of more value than that of freemen. Any person might offer his own slave to be examined by torture, or demand that of his adversary, and the offer or demand was equally called *πρόκλησις εἰς βάσανον*, "challenge to torture." The parties interested either superintended the torture themselves, or chose certain persons for this purpose, hence called *βασανισταί*, who took the evidence of the slaves. The official torturer was called *δήμιος* or *δημόκοινος*. (2) ROMAN.—During the time of the Republic, freemen were never put to the torture, and slaves only were exposed to this punishment, which might be by scourging, laceration with hooks, or burning. Slaves, however, could not be tortured to prove the guilt of their own master, except in the case of *incestum*, which was a crime against the gods, or unless the Senate made an exception in some special instance. At a later time, slaves might be tortured to bear witness against their masters in cases of *maiestas* and adultery. (See ADULTERIUM.) Under the emperors even free persons were put to the torture to extract evidence from them in cases of *maiestas;* and although this indignity was confined for the most part to persons in humble circumstances, we read of cases in which even Roman senators and knights were exposed to it. The torture was inflicted by the public slaves known as *tortores* and *carnifices*.

See Becker-Göll, *Charikles*, pp. 37 foll.; Mahaffy, *Social Life in Greece*, 3d ed. pp. 240 foll.; Rein, *Criminalrecht der Römer*, p. 542; and the articles CRUX; ECULEUS; FIDICULA; FLAGRUM; MAIESTAS; SERVUS.

Tormentum. A military engine for hurling missiles of any kind. All the missiles used in war, except those thrown from the sling (see FUNDA), were projected either by the hand alone or with the aid of elastic substances. Of elastic instruments, the bow (see ARCUS) was used by all ancient nations. The *tormentum* was so called from the twisting (*torquendo*) of hairs, thongs, and vegetable fibres; and the word is often used by itself to denote engines of various kinds; often, also, these engines are specified separately under the names of *ballistae* and *catapultae*, which names, however, most commonly occur together in the accounts of sieges and other military operations, because the two kinds of engines denoted by them were almost always used in conjunction. (See HELEPOLIS.) The *ballista* (*πετροβόλος*) was used to shoot stones, the *catapulta* (*καταπέλτης*, *καταπελτική*) to project darts, especially the *falarica* (q. v.), and a kind of missile four and a half feet long, called *trifax*. While, in besieging a city, the ram (see ARIES) was employed in destroying the lower part of the wall, the *ballista* was used to overthrow the battlements (*propugnacula*), and the catapult to shoot any of the besieged who appeared between them. The forms of these machines being adapted to the objects which they were intended to throw, the catapult was long, the *ballista* nearly square, which explains the following humorous enumeration by Plautus (*Capt.* iv. 2, 16) of the three *μηχαναί*, the application of which has just been explained:

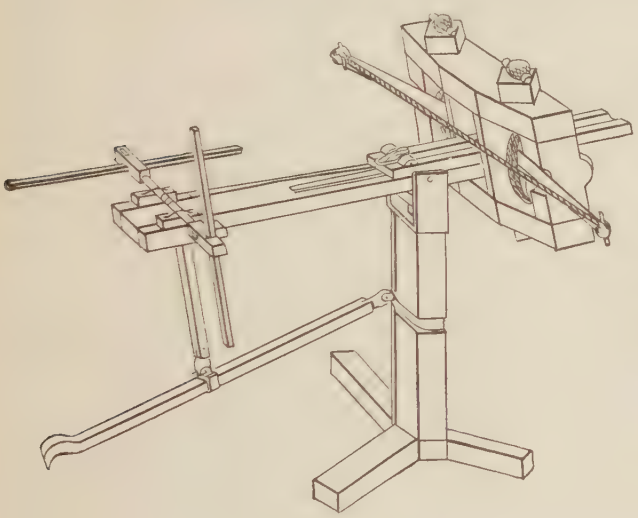


"Meus est ballista pugnus, cubitus catapulta est mihi,
Humerus aries."

In the same armament the number of catapults was commonly much greater than the number of *ballistae*. Also, these two classes of machines were both of them distinguished into the greater and the less, the number of "the less" being much more considerable than the number of "the greater." When Carthago Nova, which had served the Carthaginians for an arsenal, was taken by the Romans, the following were found in it: 120 large and 281 small catapults; 23 large and 52 small *ballistae*. Three sizes of the *ballista* are mentioned

Ballista. (Baumeister.)

by historians, (*a*) that which threw stones weighing half a hundredweight (*τριακονταμναίους λίθους*), (*b*) a whole hundredweight (*ballista centenaria*, *λιθοβόλος ταλαντιαίος*), and (*c*) three hundredweight (*πετροβόλος τριτάλαντος*). Besides these, Vitruvius (x. 11) mentions many other sizes, even down to the *ballista* which threw a stone of only two pounds' weight. In like manner, catapults were classified according to the length of the arrows shot from them. According to Iosephus, who gives some remarkable instances of the destructive force of the *ballista*, it threw stones to the distance of a quarter of a mile (*Bell. Iud.* iii. 7, 19–23). Neither from the best-known authors nor from the figures on the Column of Trajan are we able to form a very exact idea of the construction of these engines. Still less are we informed on the subject of the *scorpio* or *onager*, which was also a *tormentum*. The best notion of ancient artillery is to be gathered from the treatise of Hero (*Βελοποιϊκά*),



Onager or Scorpio. (Marquardt.)

and that of Philo (Περὶ Βελοποιϊκῶν), both written in the second or third century B.C.

The various kinds of *tormenta* appear to have been invented shortly before the time of Alexander the Great. When horsehair and other materials failed, the women in several instances cut off their own hair, and twisted it into ropes for the engines. (See PUNIC WARS.) These machines, with those who had the management of them, and who were called *ballistarii* and *ἀφεταί*, were drawn up in the rear of an advancing army, so as to throw over the heads of the front ranks. In order to attack a maritime city, they were carried on the decks of vessels constructed for the purpose (Diod. Sic. xx. 83–86).

Both of the chief varieties of *tormenta* were based upon the principle of the crossbow; but the elasticity of the bow was exchanged for elasticity in the twist of the cord. Consequently, as explained above, all pieces of heavy artillery were called by the Romans *tormenta*. The machine consisted of three parts: the stand, the groove for the shot, and the apparatus representing the bow. This consisted of a frame in three divisions, through the midmost of which passed the groove for the shot. In each of the lateral divisions was stretched, in a vertical direction, a set of strong elastic cords, made of the sinews of animals, or the long hair of animals or of women. These were stretched tight, and between each of them was fixed a straight unelastic arm of wood. The arms were joined by a cord, which was pulled back by a winch applied at the end of the groove. On letting this go, the arms, and with them the string and the object in front of it, were driven forward by the twisting of the vertical cords. The effectiveness of the engine thus depended on the power and twist of the cords, which may be said roughly to express its calibre. The engines were divided into two kinds, (1) *catapultae*, or *scorpiones*. In these the groove for the shot was horizontal, and they projected missiles of length and thickness varying according to the calibre; (2) *ballistae*, which shot stones, beams, or balls up to 162 lbs. weight, at an angle of 50 degrees. The calibre of the *ballista* was at least three times as great as that of the catapult. The average range of the catapult was about 383 yards, that of the *ballista* from about 295 to 503 yards.

Catapulta.

After Constantine we hear no more of catapults, but only of *ballistae* and the *onager*. The *ballista* now shot arrows, and is described either as a huge cross-bow with an elastic bow of iron, or as virtually identical with the old catapult. The *onager*, also called *scorpio*, was a sling for stones, consisting of a frame in which was fastened a sort of wooden arm with a sling at one end.

As a rule, the heavy artillery was employed only in sieges; but artillery accompanied armies in the field for purposes of conquest or defence. The legions and the cohorts of the Praetorian Guard had their own artillery, and at the end of the fourth century every *centuria* in the legion had a *ballista* of the later kind drawn on wheels by mules (*carroballista*), and served by eleven men. Every cohort had an *onager*, carried on a cart drawn by two oxen. See the article by A. Müller in Baumeister's *Denkmäler*, s. v. "Festungskrieg und Belagerungswesen," i. pp. 525 foll.; Droysen, *Die griechischen Kriegsalterthümer*, pp. 187–204; Wescher, *Poliorcétique des Grecs* (1867); and Rüstow and Köchly, *Geschichte des griechischen Kriegswesens* (1852).

Torōné (Τορώνη). A town of Macedonia, in the district of Chalcidicé, and on the southwest side of the peninsula Sithonia, from which the gulf between the peninsulas Sithonia and Pallené was called SINUS TORONAĪCUS.

Torquātus. The name of a patrician family of the Manlia gens. (1) T. MANLIUS IMPERIŌSUS TORQUĀTUS, the son of L. Manlius Capitolinus Imperiosus, dictator B.C. 363, was a favourite hero of Roman story. Manlius is said to have been dull of mind in his youth, and was brought up by his father in the closest retirement in the country. In 361 he served under the dictator T. Quintius Pennus in the war against the Gauls, and in this campaign earned immortal glory by slaying in single combat a gigantic Gaul. From the dead body of the barbarian he took the chain (*torques*) which had adorned him, and placed it around his own neck; and from this circumstance he obtained the surname of Torquatus. He was dictator in 353, and again in 349. He was also three times consul, namely, in 347, 344, and in 340. In the last of these years Torquatus and his colleague, P. Decius Mus, gained the great victory over the Latins at the foot of Vesuvius, which established forever the supremacy of Rome over Latium. Shortly before the battle, when the two armies were encamped opposite to one another, the consuls published a proclamation that no Roman should engage in single combat with a Latin on pain of death. This command was violated by young Manlius, the consul's son, who was in consequence executed by the lictor in presence of the assembled army. This severe sentence rendered Torquatus an object of detestation among the Roman youths

as long as he lived; and the recollection of his severity was preserved in after-ages by the expression *Manliana imperia* (Livy, iv. 5, 19–28; id. viii. 3–12; Cic. *De Off.* iii. 31). (2) T. MANLIUS TORQUĀTUS, consul B.C. 235, when he conquered the Sardinians; censor in 231; and consul a second time in 224. He possessed the hereditary sternness and severity of his family; and we accordingly find him opposing in the Senate the ransom of those Romans who had been taken prisoners at the fatal battle of Cannae.* He was dictator in 210. (3) L. MANLIUS TORQUĀTUS, consul B.C. 65 with L. Aurelius Cotta. He took an active part in suppressing the Catilinarian conspiracy in 63; and he also supported Cicero when he was banished in 58. (4) L. MANLIUS TORQUĀTUS, son of No. 3, belonged to the aristocratic party, and accordingly opposed Caesar on the breaking out of the Civil War in 49. He was praetor in that year, and was stationed at Alba with six cohorts. He subsequently joined Pompey in Greece, and in the following year (48) he had the command of Oricum intrusted to him; but was obliged to surrender both himself and the town to Caesar, who, however, dismissed Torquatus uninjured. After the battle of Pharsalia, Torquatus went to Africa, and upon the defeat of his party in that country in 46 he attempted to escape to Spain along with Scipio and others, but was taken prisoner by P. Sittius at Hippo Regius, and slain, together with his companions. Torquatus was well acquainted with Greek literature, and is praised by Cicero, with whom in early life he was closely connected, as a man well trained in every kind of learning. (5) A. MANLIUS TORQUĀTUS, praetor in B.C. 52, when he presided at the trial of Milo for bribery. On the breaking out of the Civil War he espoused the side of Pompey, and after the defeat of the latter retired to Athens, where he was living in exile in 45. He was an intimate friend of Cicero.

Torques and **Torquis** (*στρεπτός*). A twisted collar worn around the neck by the Persians, Gauls, and other foreign peoples; but on the breast

Roman Soldier with Torques. (From a bas-relief.)

by the Roman soldiers, to whom it was given as a decoration for valour (Juv. xvi. 60). TORQUIS BRACCHIĀLIS was a twisted bracelet. See ARMILLA.

Torus. A bed or couch.

Tower. See TURRIS.

Toys. See CREPUNDIA; NUCES; PUPA; TROCHUS; TURBO.

Trabea. The purple-striped cloak worn by Roman augurs and Roman *equites* (q. v.). See AUGUR; CLAVUS; EQUITES; TOGA.

Trabea, QUINTUS. A Roman comic dramatist, who occupies the eighth place in the canon of Volcatius Sedigitus. The period when he flourished is uncertain, but he has been placed about B.C. 130.

Trachis (*Τραχίς*) or **Trachin** (*Τραχίν*). (1) Also called HERACLĒA TRACHINIAE, or HERACLĒA PHTHIOTĪDIS, or simply HERACLĒA, a town of Thessaly in the district Malis, celebrated as the residence of Heracles for a time. (2) A town of Phocis, on the frontiers of Boeotia, and on the slope of Mount Helicon in the neighbourhood of Lebadea.

Trachonītis (*Τραχωνῖτις*) or **Trachon** (*Τράχων*). The northern district of Palestine beyond the Jordan, lying between Anti-Libanus and the mountains of Arabia, and bounded on the north by the territory of Damascus, on the east by Auranitis, on the south by Ituraea, and on the west by Gaulanitis.

Tractātor. A masseur; a slave who kneaded the body and limbs after the bath (Seneca, *Epist.* 66).

Trade. See COMMERCE; COMMERCIUM.

Traëns or **Traïs.** A river in Bruttium, now the Trionto, near which the Sybarites were defeated by the troops of Crotona in B.C. 510. See SYBARIS.

Tragoedia (*τραγῳδία*). I. Tragedy in GREECE originated in the lyric dithyramb; i. e. in the song of a chorus at the rites held in honour of Dionysus (see DIONYSIA). This song, in accordance with the cult of the god, expressed at one time exuberant joy, at another deep sorrow. The cult of Dionysus is also indicated by the very name of tragedy, signifying goat-song; i. e. (according to the usual explanation) the hymn sung by the chorus in their dance round the altar at the sacrifice of the goat (*τράγος*), dedicated to Dionysus. Others derive the name from the fact that, to represent Satyrs, the chorus were clad in goat-skins, and hence resembled goats. These choral songs seem to have received a certain dramatic form as early as the time of Arion, to whom the dithyramb owes its artistic development. The true drama, including tragic and satyric plays, was evolved subsequently in Athens.

Tradition ascribes the origin of tragedy to a contemporary of Solon named Thespis (q. v.), of Icaria, which was a chief seat of the cult of Dionysus. The date assigned to this is B.C. 540. Thespis was at the same time poet, leader of the chorus, and actor. According to the testimony of the ancients, his pieces consisted of a prologue, a series of choral songs standing in close connection with the action, and dramatic recitations introduced between the choruses. These recitations were delivered by the leader of the chorus, and were partly in the form of monologues, partly in that of short dialogues with the chorus, whereby the action of the play was advanced. The reciter was enabled to appear in different rôles by the aid of linen or wooden masks, which are also said to have been introduced by the poet himself. (See PERSONA.) The invention of Thespis, whose own pieces soon lapsed into oblivion, won the favour of Pisistratus and the approval of the Athenian public. Tragedy

thus became an important element in the Attic festival of Dionysus. Thespis's immediate followers were Choerilus, Pratinas (the inventor of the Satyric Drama), his son Aristias, and Phrynichus. Phrynichus especially did good service towards the development of tragedy by introducing an actor apart from the leader of the chorus, and so preparing the way for true dialogue. He further improved the chorus, which still, however, occupied a disproportionate space in comparison with the action of the play.

Tragedy was really brought into being by Aeschylus, when he added a second actor (called the *δευτεραγωνιστής*) to the first, or *πρωταγωνιστής*, and in this way rendered dialogue possible. He further subordinated the choruses to the dialogue. See AESCHYLUS.

Sophocles, in whom tragedy reaches its culminating-point, added to Aeschylus's two actors a third, or *τριταγωνιστής*: and Aeschylus accepted the innovation in his later plays. Thenceforward three actors were regularly granted by lot to each poet, at the public expense. Only rarely, and in exceptional cases, was a fourth employed. Sophocles also raised the number of the chorus from twelve to fifteen. The only other important innovation due to him was that he gave up the internal connection, preserved by Aeschylus, among the several plays of a tetralogy which were presented in competition by the tragic poets at the festival of Dionysus. See SOPHOCLES; TETRALOGIA; TRILOGIA.

The third great master of tragedy is Euripides, in whom, however, we already observe a decline in many respects from the severe standard of his predecessor (see EURIPIDES). During and after the age of these masters of the art, from whom alone have complete dramas come down to us, many other tragic poets were actively employed, whose works are known to us by name alone, or are only preserved in fragments.

It is remarkable that, in the case of the great tragic writers, the cultivation of tragic compositions seems to have been hereditary among their descendants, and among those of Aeschylus in particular, for many generations. His son Euphorion, his nephew Philocles, his grand-nephews Morsimus and Melanthius, his grandson Astydamas, and his great-grandsons Astydamas and Philocles, were poets of more or less note. In the family of Sophocles may be mentioned his son Iophon and his grandson Sophocles; and in that of Euripides, his son or nephew of the same name.

Among the other poets of the fifth century B.C., Ion, Achaeus, Aristarchus, and Neophron were accounted the most eminent. Agathon may also be included as the first who ventured to treat a subject of his own invention, whereas hitherto mythical history, especially that of Homer and the Cyclic Poets (q. v.), or, in rare instances, authentic history, had furnished the materials of the play. After the Peloponnesian War, tragedy shared the general and ever-increasing decline of political and religious vitality. In the fourth century, besides the descendants of Aeschylus, we must mention Theodectes, Aphareus, and Chaeremon, who partly wrote for readers only.

The number of tragedies produced at Athens is marvellous. According to the not altogether trustworthy records of the number of plays written by each poet, they amounted to 1400. The works of the foremost poets were represented over and over again, especially in the theatres of Asia Minor, under the successors of Alexander. During the first half of the third century Ptolemy Philadelphus built a great theatre in Alexandria, where he established competitions in exact imitation of those at Athens. This gave a new impetus to tragic poetry, and seven poets became conspicuous, who were known as the Alexandrian Pleiad, Alexander Aetolus, Philiscus, Sositheus, Homerus, Aeantides, Sosiphanes, and Lycophron. The taste of the Alexandrian critics deemed them worthy to occupy a place beside the five great tragic poets of Athens, Aeschylus, Sophocles, Euripides, Ion, and Achaeus. See CANON ALEXANDRINUS; PLEIAS.

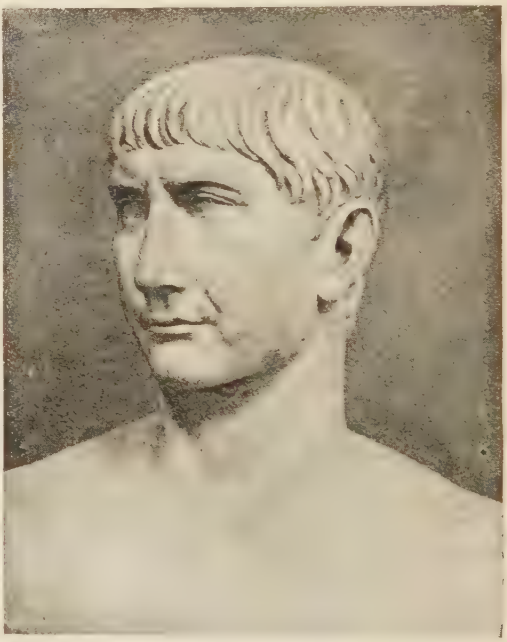
Inasmuch as tragedy developed itself out of the chorus at the Dionysiac festivals, so, in spite of all the limitations which were introduced as a result of the evolution of the true drama, the chorus itself was always retained. Hence Greek tragedy consisted of two elements: the one truly dramatic, the prevailing metre of which was the iambic trimeter; the other consisting of song and dance (see CHORUS) in the numerous varieties of Dorian lyric poetry. The dramatic portion was generally made up of the following parts: the *πρόλογος*, from the beginning to the first entry of the chorus; the *ἐπεισώδιον*, the division between each choral song and the next; and the *ἔξοδος*, or concluding portion which followed the last chorus. The first important choral part was called the *πάροδος*: and the song following an *episodium*, a *στάσιμον* (sc. *μέλος*). There were further songs of lamentation by the chorus and actors together, which were called *κόμμοι*. A solo was sometimes sung by the actor alone; and this became especially common in the later tragedies.

II. ROMAN tragedy was founded entirely on that of the Greeks. In early times there existed crude dramatic productions (see SATIRA), which provided an opening for the translation from the Greek dramas brought on the stage by Livius Andronicus. He was a Greek by birth, but was brought to Rome as a captive about B.C. 200. It is to him that Roman tragedy owes its origin. His dramas and those of his successors were more or less free versions of Greek originals. Even the tragedies, or historical plays, drawn from national Roman materials, called *fabulae praetextae* or *praetextatae* (see PRAETEXTA), the first writer of which was his immediate successor Naevius (about B.C. 235), were entirely modelled on the Greek. The most noteworthy representatives of tragedy under the Republic were Ennius (B.C. 239–170), Pacuvius (220–130), and Attius (170–84), besides whom only a few other poets produced any works about this time. It is true that the scanty fragments we possess of these dramas admit of no positive judgment as to their merit, but there is no doubt that they rank far below the original creations of the Greeks. It may also be clearly inferred from the fragments that declamation and pathos formed a characteristic attribute of Roman tragedy, which was intensified by a studied archaism of expression. Moreover, the titles of their plays that have come down to us show that preference was given to subjects relating to the Trojan epic cycle; this is to be explained by the Trojan origin claimed by the Romans. (See TROJAN WAR.) Next to this the most popular were the myths of the Pelopidae, of the Theban cycle, and of the Argonauts. Euripides

was the favourite model; after him Sophocles; rarely Aeschylus. Roman tragedy, like Greek, was made up of spoken dialogue in iambic trimeters and musical portions called *cantica*. See CANTICUM, and on the chorus in Roman tragedy see CHORUS (near the end).

In the time of Augustus the representatives of tragedy were Asinius Pollio, Varius, and Ovid; under Tiberius, Pomponius Secundus; under Nero and Vespasian, Curiatius Maternus, of whose works scarcely a line has been preserved. The only tragedies of Roman antiquity which we possess are those of the philosopher Seneca, which show great mastery of form and a fertile imagination, but suffer from an intolerable excess of rhetorical declamation. It is doubtful whether they were intended for the stage at all, and not rather for public recitation and for private reading. See SENECA (2).

See Schlegel, *Dramatic Literature*, Eng. trans. (London, 1844); Klein, *Griech. und röm. Drama*, 2 vols. (1865); Weissenfels, *Entwickelung der Tragödie der Griechen* (1892); Wecklein, *Ueber d. Stoff und Wirkung der griech. Tragödie* (1891); Günther, *Beiträge zur Geschichte und Aesthetik der antiken Tragödie* (1880); Kluge, *Die antike Tragödie in ihrem Verhältnisse zur modernen* (1880); Fritzsche, *De Origine Tragoediae* (1863); Armbruster, *Das Tragische und die Entwickelung der Tragödie* (1885); Walford, *Handbook of the Greek Drama* (London, 1856); Donaldson, *The Theatre of the Greeks* (8th ed. London, 1875); Bergk, *Griechische Litteraturgeschichte*, vol. iii. (Berlin, 1884); and the articles DRAMA; HISTRIO; SATYRIC DRAMA; THEATRUM.



Tragŭla. A sort of missile discharged by machinery (Varro, *L. L.* v. 115).

Traha. A sort of sledge or drag without wheels used by the ancients in threshing grain (Verg. *Georg.* i. 164).

Traianopŏlis. (1) A town in Mysia on the borders of Phrygia, refounded by Trajan in A.D. 117. (2) A town of Thrace on the Hebrus, founded by Trajan. (3) A town of Cilicia, otherwise called Selinus.

Traiānus, M. Ulpius. A Roman emperor (A.D. 98–117), born at Italica, near Seville, in Spain, September 18th, A.D. 52 or 53. He was trained to arms, and, after ten years' service as military tribune, rose through the lower offices to the rank of praetor in 85, served with distinction in the East and in Germany, to which country he was sent from Spain by Domitian on the occasion of the revolt of Antonius Saturninus, legatus, with the Spanish legion Adiutrix under his command. He was consul in 91, and at the close of 97 he was adopted by the emperor Nerva, who gave him the rank of Caesar and the names of Nerva and Germanicus, and shortly after the title of Imperator, and the *tribunicia potestas*. His style and title after his elevation to the imperial dignity were IMPERĀTOR CAESAR NERVA TRAIĀNUS AUGUSTUS. He was the first Roman emperor who was born out of Italy. Nerva died in January, 98, and was succeeded by Trajan, who was then at Colonia (Cologne). His accession was hailed with joy, and he did not disappoint the expectations of the people. He was a great soldier both in the field and in military organization; and he was scarcely less great as an administrator. His finances were prosperous, partly from his good economy, though partly also from the good fortune of certain Dacian mining operations. Personally, he was strong and healthy, of a majestic appearance, laborious, and inured to fatigue. Though not a man of letters, he had good sense, a knowledge of the world, and a sound judgment. His mode of living was very simple, and in campaigns he shared all the sufferings and privations of the soldiers, by whom he was both loved and feared. He was a friend to justice, and had a sincere desire for the happiness of the people. His career led to a proverbial expression which after this time was formulated in a wish to each new emperor that in his reign he might be even "more fortunate than Augustus, and better than Trajan" (*Augusto felicior, melior Traiano*).

Trajan did not return to Rome for some months, being employed in settling the frontiers on the Rhine and the Danube. Especially, he completed the fortifications of the Rhine and of the Agri Decumates (q.v.), founded a new military station, Colonia Traiana, near Vetera, and constructed new roads by the Rhine and by the Danube, the latter work in preparation for the Dacian War. In 99 he proceeded to Rome, which he entered on foot, ac-

Trajan. (Bust in the British Museum.

companied by his wife, Pompeia Plotina. In March, A.D. 101, Trajan left Rome for his campaign against the Daci. Decebalus, king of the Daci, had compelled Domitian to purchase peace by an annual payment of money; and Trajan determined on hostilities, which should settle matters so as to secure the peace of the frontier. This war employed Trajan between two and three years, but it ended with the defeat of Decebalus, who sued for peace at the feet of the Roman emperor. Trajan assumed the name of Dacius, and entered Rome in triumph (103). In the following year (104) Trajan commenced his second Dacian war against Decebalus, who had accepted the Roman terms merely to gain time, and now showed his intentions by building forts, collecting war material, and welcoming Ro-

Trajan giving a King to the Parthians. (Coin.)

man deserters. Decebalus was completely defeated, and put an end to his life (106). In the course of this war Trajan built (105) a permanent bridge across the Danube at the modern Turn Severin. The piers were of stone and of an enormous size, but the arches were of wood. (See PONS.) After the death of Decebalus, Dacia was reduced to the form of a Roman province, strong forts were built in various places, and Roman colonies were planted. (See DACIA.) The Column of Trajan at Rome was erected to commemorate his Dacian victories. In its sculptured illustrations of the campaign it has an historical value which has been well compared to that of the Bayeux Tapestry. (See COLUMNA.) On his return Trajan had a triumph, and he exhibited games to the people for 123 days. It is said that 11,000 animals were slaughtered during these amusements, and that 10,000 gladiators fought in the arena.

About this time Arabia Petraea was subjected to the Empire by A. Cornelius Palma, the governor of Syria, and an Indian embassy came to Rome. (See ARABIA.) The dominions of Agrippa II., who died A.D. 100, were also added to the province of Syria. In 114 Trajan left Rome to make war on the Armenians and the Parthians, the cause of the war being that the Parthian king, Chosroes, had deposed from the throne of Armenia Axidares, the Roman nominee. Trajan spent the winter of 114 at Antioch, and in the following year he invaded the Parthian dominions. The most striking and brilliant success attended his arms. In the course of two campaigns (115–116), he conquered the greater part of the Parthian Empire, and took the Parthian capital of Ctesiphon. In 116 he descended the Tigris and entered the Erythraean Sea (Persian Gulf). While he was thus engaged the Parthians rose against the Romans, but were again subdued by the generals of Trajan, Erucius Clarus, who reduced Babylonia and burned Seleucia, and Lucius Quietus, who reduced Mesopotamia. On his return to Ctesiphon, Trajan determined to give the Parthians a king, and placed the diadem on the head of Parthamaspates, son of Chosroes. In 117 Trajan fell ill, and as his complaint grew worse he set out for Italy. He lived to reach Selinus in Cilicia, afterwards called Traianopolis, where he died in August, 117, after a reign of nineteen years, six months, and fifteen days (*C. I. L.* vi. 1884). His ashes were taken to Rome in a golden urn, carried in triumphal procession, and deposited under the column which bears his name. He left no children, and he was succeeded by Hadrian. (See HADRIANUS.) Trajan constructed several great roads in the provinces and in Italy: among them was the road across the Pomptine Marshes, which he constructed with magnificent bridges over the streams. At Ostia he built a large new basin. At Rome he constructed the aqueduct called by his name, built a theatre in the Campus Martius, and, above all, made the Forum Traianum, with its basilicas and libraries, and his column in the centre. See the account of Trajan by Dierauer in vol. i. of Büdinger's *Untersuchungen* (1868), that by De la Berge (1877), and in Schiller's *Geschichte der röm. Kaiserzeit* (Gotha, 1883).

Traiectum. Now Utrecht; a town of the Batavi on the Rhine, later called TRAIECTUS RHENI, or TRAIECTUS AD RHENUM.

Tralles or **Trallis** (*αἱ Τραλλεῖς, ἡ Τράλλις*). A flourishing commercial city of Lydia, in Asia Minor. It stood on a plateau at the southern foot of Mount Messogis (with a citadel on a higher point), on the banks of the little river Eudon, a northern tributary of the Maeander, from which the city was distant eighty stadia (eight geographical miles). It was said to have been founded by Argives and Thracian settlers on the site of an older town called Anthea (Strab. p. 648; Diod. xvii. 65). Under the Seleucidae it bore the names of Seleucia and Antiochia.

Trama. See TELA.

Tranquillus, SUETONIUS. See SUETONIUS.

Transenna. A trap or gin for catching birds, made of network and shutting by a spring (Plaut. *Bacch.* iv. 5, 22).

Transtrum. A cross-beam; especially, in the plural, **Transtra** (*τὰ σέλματα*), the cross-benches upon which were seated the rowers in a ship. See NAVIS.

Transvectio. The festal parade of the Roman knights. See EQUITES.

Trapētum, Trapētus, and **Trapes.** A mill for bruising the olive and separating the fleshy part from the stone (Verg. *Georg.* ii. 519). It is described by Cato, *R. R.* xx.–xxii.

Trapeza (*τράπεζα*). A table. See MENSA.

Trapezītae (*τραπεζῖται*); in Latin ARGENTARII; MENSARII; NUMMULARII. Dealers in money; money-changers; usurers; bankers; so called from the "table" (*τράπεζα, mensa*) on which they did their business.

I. GREEK.—Bankers in Greece had their stands in the agora or other public places, and combined in their vocation a number of different pursuits. Thus, they gave change for coins of large denominations, as obols for drachmas; bought foreign money at a discount (*καταλλάττω*); furnished gold for export, lent money to merchants on the security of ships and cargoes, received money on deposit for which they paid interest, and acted as pawnbrokers, advancing cash on plate, jewels, and other personal property.

The notion of many Greeks that all taking of interest partook of the nature of usury was shared even by Aristotle (*Pol.* i. 10, 4); yet, while not altogether escaping the reproach which attached to their calling as such, the higher class of bankers in many instances acquired much personal respect, and a high reputation for ability combined with honesty (Dem. *Pro Phorm.* p. 957, § 44); their credit enabled them to raise money at a moment's notice in distant cities (id. *Contra Polycl.* p. 1224, § 56). Such confidence was placed in them that sometimes business was transacted with them

without witnesses; money and contracts of debt were deposited with them, and agreements were concluded or cancelled in their presence (Dem. *Contra Callipp.* p. 1242, § 24; *Contra Dionysod.* p. 1287, § 15). They thus became a sort of unofficial notaries-public.

Before the rise of a banking system, the place of banks was to some extent supplied by the temples, which played no unimportant part in early Greek commerce. They were used as safe places for the deposit of treasure; and having large funds of their own, derived from the rent of their estates and from votive offerings, they employed productively both these and the sums confided to their care. Thus Clisthenes and the Alcmaeonidae borrowed from the Delphic sanctuary, with the consent of the Amphictyons, the funds with which the Pisistratidae were overthrown (Isocr. *Antid.* § 232); and at the outbreak of the Peloponnesian War the Corinthians proposed to equip a fleet with loans effected at Delphi and Olympia (Thuc. i. 121). It has been thought that the temples confined themselves to State loans, and did not lend money to individuals: Büchsenschütz, however, has shown from the Delian *Marmor Sandvicense* (see AMPHICTYONES) and other inscriptions that private persons enjoyed this accommodation. To the undoubted general rule that no banks were either worked or guaranteed by the State, an exception was imagined to exist at Byzantium on the strength of a passage in Aristotle (*Oecon.* ii. 4, 4); but all that is really stated is that an impoverished government, among other expedients, sold a monopoly of money-changing to a particular bank.

II. ROMAN.—Bankers are known to have existed in Rome as early as 309 B.C. (Livy, ix. 40, 16), and their functions were substantially the same as in Greece. Originally an *argentarius* was a private banker, and a *nummularius* a State officer, connected with the Mint (see MONETA); but in later Latin both terms as well as *mensarius, mensularius,* and *collectarius* are used indiscriminately of any one engaged in the business of lending or changing money.

The branches of a Roman banker's business were the following: (1) *Permutatio,* or the exchange of foreign coin for Roman coin, in which case a small commission (*collybus*) was paid to them (Cic. *Verr.* iii. 78, 180). In later times, when the Romans became acquainted with the Greek custom of using bills of exchange, the Roman bankers, e. g., received sums of money which had to be paid at Athens, and then drew a bill payable at Athens by some banker in that city (*permutare Athenas,* Cic. *Ad Att.* xv. 15, 4). This operation was also called *permutatio.* (2) The keeping of sums of money for other persons. Such money might be deposited by the owner merely to save himself the trouble of keeping it and making payments, and in this case it was called *depositum;* the *argentarius* then paid no interest, and the money was called *vacua pecunia.* When a payment was to be made, the owner drew a cheque (Plaut. *Curcul.* ii. 3, 66, etc.; iii. 66, etc.). Or the money was deposited on condition of the *argentarius* paying interest: in this case the money was called *creditum,* and the *argentarius* might of course employ the money himself in any lucrative manner (Suet. *Aug.* 39). In case of failure the law enacted that the claims of *depositarii* should be satisfied before those of creditors who had money at interest in the bank (*Dig.* xvi. 3, 7, 2). The *argentarius* thus did almost the same sort of business as a modern banker. Many persons intrusted all their capital to them (Cic. *Pro Caec.* 6, 16); and instances in which the *argentarii* made payments in the name of those whose money they had in hand are mentioned very frequently. A payment made through a banker was called *per mensam, de mensa,* or *per mensae scripturam,* while a payment made by the debtor in person was a payment *ex arca* or *de domo.* An *argentarius* never paid away any person's money without receiving a cheque (*perscriptio*), and the payment was then made either in cash, or, if the person who was to receive it kept an account with the same banker, he had it added in the banker's book to his own deposit. This was likewise called *perscribere* or simply *scribere* (Plaut. *Asin.* ii. 4, 34, etc.; *Curc.* v. 2, 20; Cic. *Ad Att.* iv. 18, § 2, ix. 12, 3, xii. 51, 3; Hor. *Sat.* ii. 3, 76). We also find that *argentarii* made payments for persons who had not deposited any money with them: this was equivalent to lending money, which in fact they often did for a certain percentage of interest. Of all this business, of the receipts as well as of the expenditure, the *argentarii* kept accurate accounts in books called *codices, tabulae,* or *rationes* (*Dig.* 2, 13, 1, 1), and there is every reason for believing that they were acquainted with what is called in book-keeping double entry. (3) A connection with commerce and public auctions. This branch of their business seems to have been one of the most ancient. In private sales and purchases they sometimes acted as agents for either party (*interpretes*), and sometimes they undertook to sell the whole estate of a person, as an inheritance. At public auctions they were almost invariably present, registering the articles sold, their prices and purchasers, and receiving the payment from the purchasers. At auctions, however, the *argentarii* might transact business through their clerks or servants, who were called *coactores* from their collecting the money. Horace's father and Vespasian's grandfather were *coactores.* This business, connected with auctions, seems to have belonged exclusively to *argentarii.*

Banking establishments were often owned by several partners (*socii*). Slaves were allowed to act as bankers on their own account with their *peculium,* and the master was liable for the amount of the *peculium* sunk in the business; but generally the slave was only the manager of the bank (*institor*) for his master. During imperial times the *argentarii,* like so many other branches of the community, organized themselves into a *collegium* (Orelli, 913, 995).

As regards the respectability of the *argentarii,* the passages of the ancients seem to contradict one another, for some writers speak of their occupation as respectable and honourable (Cic. *Pro Caec.* 4, 10); Aurel. Vict. 72; Suet. *Vesp.* 1; Acron. *ad* Hor. *Sat.* i. 6, 86), while others speak of them with contempt (Plaut. *Curc.* iv. 2, 20, *Casin.* Prol. 25, etc.); but this contradiction may be easily reconciled by distinguishing between a lower and a higher class of *argentarii.* A wealthy *argentarius* who carried on business on a large scale was undoubtedly as much a person of respectability as a banker in modern times; but others who did business only on a small scale, or degraded their calling by acting as usurers, cannot have been held in

any esteem. It has already been observed that the *argentarii* had their shops round the Forum (Livy, ix. 40, xxvi. 11, 27); hence to become bankrupt was expressed by *foro cedere*, or *abire*, or *foro mergi*. The shops or booths were public property, and built by the censors, who sold the use of them to the *argentarii* (Livy, xxxix. 44, xl. 51).

BIBLIOGRAPHY.—On Greek banking, see Mahaffy's *Social Life in Greece*, ch. xiii. of the third edition; Hermann, *Privatalterth.* § 48; Becker-Göll, *Charikles*, sc. iv.; and Büchsenschütz, *Besitz und Erwerb*, pp. 500–510. On Roman banking, see Sieber, *De Argentariis* (Leipzig, 1737); Kraut, *De Argentariis* (Göttingen, 1826); Heimbach, *Die Lehre von dem Creditum* (Leipzig, 1849); Thomasset, *Des "Argentarii"* (Lyons, 1884); and Voigt, *Ueber die Bankiers . . . der Römer* (Leipzig, 1887). Cf. also the article FENUS.

Trapezophŏron (*τραπεζοφόρον*). A leg or other support for a table (*τράπεζα*), or for a sideboard. See ABACUS (6); MENSA.

Trapezūs (*Τραπεζοῦς*). (1) A city of Arcadia, on the Alpheus, the name of which was mythically derived from the *τράπεζα*, or altar, on which Lycaon was said to have offered human sacrifices to Zeus. At the time of the building of Megalopolis, the inhabitants of Trapezus, as was alleged, rather than be transferred to the new city, migrated to the shores of the Euxine, and their city fell to ruin (Paus. viii. 3, 2; Apollod. iii. 8, 1; Herod. vi. 127). (2) Now Tarabosan, Trabezun, or Trebizond); a colony of Sinopé, at almost the extreme east of the northern shore of Asia Minor. The city derived its name either from the table-like plateau on which it was built, or because emigrants from the Arcadian Trapezus took some part in its settlement (Paus. xiii. 27, 4). The former is the more likely statement, since there is no reason why the main body of colonists from Sinopé should have given it the name of another town. After Sinopé lost its independence, Trapezus belonged, first to Armenia Minor, and afterwards to the kingdom of Pontus. Under the Romans, it was made a free city, probably by Pompey, and, by Trajan, the capital of Pontus Cappadocius. Hadrian constructed a new harbour; and the city became a place of first-rate commercial importance. It was also strongly fortified. It was taken by the Goths in the reign of Valerian; but it had recovered, and was in a flourishing state at the time of Justinian, who repaired its fortifications (Procop. *Aed.* iii. 7). In the Middle Ages it was for some time the seat of a fragment of the Greek Empire, called the Empire of Trebizond.

Trasimēnus Lacus. Now Lago di Perugia; sometimes, but not correctly, written **Thrasymēnus.** A lake in Etruria, between Clusium and Perusia, memorable for the victory gained by Hannibal over the Romans under Flaminius, B.C. 217. See HANNIBAL.

Travesty. See PARODIA.

Treason. See MAIESTAS.

Treasury. See AERARIUM; THESAURUS; THOLUS.

Treba. Now Trevi; a town in Latium, near the sources of the Anio, northeast of Anagnia.

Trebatius Testa. See TESTA.

Trebellius Pollio. One of the six writers of the so-called *Augusta Historia*, flourished under Constantine. See AUGUSTAE HISTORIAE SCRIPTORES.

Trebia. Now the Trebbia; a small river in Gallia Cisalpina, falling into the Po near Placentia. It is memorable for the victory which Hannibal gained over the Romans, B.C. 218. See H. Müller, *Die Schlacht an der Trebia*, 2 pts. (1867–76); and the article HANNIBAL.

Trebonianus. See GALLUS.

Trebonius, GAIUS. A Roman who played a prominent part in the last days of the Republic. He commenced public life as a supporter of the aristocratic party, but changed sides soon afterwards, and in his tribunate of the plebs (B.C. 55) he proposed the *lex Trebonia*, by which Pompey obtained the two Spains, Crassus Syria, and Caesar the Gauls and Illyricum for another period of five years. (See CAESAR.) For this service he was rewarded by being appointed one of Caesar's legates in Gaul. In 48 Trebonius was city-praetor, and towards the end of 47 succeeded Q. Cassius Longinus as pro-praetor in the government of Farther Spain. Caesar raised him to the consulship in October, 45, and promised him the province of Asia. In return for all these honours and favours, Trebonius was one of the prime movers in the conspiracy to assassinate Caesar, and after the murder of his patron (44) he went as proconsul to the province of Asia. In the following year (43) Dolabella surprised Smyrna and put Trebonius to death.

Trebŭla. (1) Now Treglia; a town in Samnium situated in the southeastern part of the mountains of Cajazzo. (2) MUTUSCA, a town of the Sabines, of uncertain site.

Trechedipnum. A word of doubtful meaning (Juv. iii. 67). It may denote a kind of boot, or possibly a sort of coat. See Mayor *ad loc.*

Trendelenburg, FRIEDRICH ADOLF. A German scholar and student of philosophy, born at Eutin, November 30, 1802. He studied at Kiel and became Professor in the University of Berlin in 1833. He is best known for his exposition of Greek philosophy in relation to the modern schools of thought. He published *Elementa Logices Aristotelicae* (8th ed. 1878); and an edition of Aristotle's *De Anima* (2d ed. rev. by Belger, 1879); besides various works on the German philosophy, etc. He died January 24, 1872. See the memoir by Bratuschek (1873) and the work by Orphal (1891).

Trerus. Now the Sacco; a river in Latium, and a tributary of the Liris.

Tres Tabernae. (1) A station on the Via Appia in Latium, between Aricia and Forum Appii. It is mentioned in the account of St. Paul's journey to Rome. (2) Now Borghetto; a station in Gallia Cisalpina, on the road from Placentia to Mediolanum.

Tresvĭri. The Roman term for a board of three men. See TRESVIRI; and also VIGINTISEXVIRI.

Tresvĭri. Either ordinary magistrates or officers, or else extraordinary commissioners, who were frequently appointed at Rome to execute any public office. The form *triumvir* is quite legitimate, and the gen. plur. is often used as a predicate of a single individual; but it is doubtful whether there is any good authority for the nom. plur. *triumviri*, although it is often found in our texts: MSS. seem

MARSHALL LIBRARY

always to give *iiiviri*. The following is a list of the most important of both classes, arranged in alphabetical order:

(1) Tresvĭri Agro Dividundo. See Tresviri Coloniae Deducendae below.

(2) Tresvĭri Capitāles appear to have been regularly appointed first in about B.C. 290 (Livy, *Epit.* 11). At first the tresviri were not chosen by the people, but nominated, probably by the Praetor Urbanus, who at a later time presided at their election.

In criminal cases their main duty was to look to the safer custody of the convicted, and to execute capital punishment. The usual form of execution was, for the upper classes and for women, strangling in prison (*triumvirale supplicium*, Tac. *Ann.* v. 10), a fate which befell the fellow-conspirators of Catiline (Sall. *Cat.* 55); slaves were crucified, also under their supervision. They had also the duty of receiving charges (Plaut. *Aul.* 413) and of arresting offenders; and generally of looking after the police of Rome, for which purpose they had a post in the Forum near the Columna Maenia (Cic. *Pro Cluent.* 13, 39). Their duty was to go the round of the streets by night, and to seize and punish disorderly characters (Plaut. *Amph.* ad init.), and, as being charged with the safety of the city, they were required to be present at once in cases of fire. There is no trace of any independent criminal jurisdiction; even a slave had to be condemned by a regular court; but this does not preclude the administration of such punishment as was necessary to keep order. They had further to exact and to pay into the treasury the *sacramenta* due in civil suits, and to decide upon the obligation to serve as *iudices* (Cic. *Brut.* 31, 117). Here, as in other cases, they appear as the assistants of the praetors. Under the Empire their functions were mainly discharged by the *praefectus vigilum*. See Vigiles.

(3) Tresvĭri Coloniae Deducendae were persons appointed to superintend the formation of a colony. Since they had besides to superintend the distribution of the land to the colonists, we find them also called *Tresviri Coloniae Deducendae Agroque Dividundo*, and sometimes simply *Tresviri Agro Dando*. The number three was the most usual one, but we also find commissions of five, seven, ten, fifteen, or twenty, as might be determined by the law instituting the colony.

(4) Tresvĭri Epulones. See Epulones.

(5) Tresvĭri Equĭtum Turmas Recognoscendi, or Legendis Equĭtum Decuriis, were magistrates first appointed by Augustus to revise the lists of the *equites*, not at the census, but at the *transvectio equitum*, and to admit persons into the order, which was formerly part of the duties of the censors (Suet. *Aug.* 37).

(6) Tresvĭri Monetāles. See Moneta.

(7) Tresvĭri Reficiendis Aedĭbus, elected in the Comitia Tributa in the time of the Second Punic War, a commission for the purpose of repairing and rebuilding certain temples (Livy, xxv. 7).

(8) Tresvĭri Reipublĭcae Constituendae. We have no certain mention of officers or magistrates under this name till towards the close of the Republic, when the supreme power was shared between Lepidus, Antonius, and Caesar (Octavianus), who administered the affairs of the State under the title of *Tresviri Reipublicae Constituendae*. This office was conferred upon them in B.C. 43 by a law of P. Titius the tribune for five years (Livy, *Epit.* 120); and on the expiration of the term, in B.C. 38, was conferred upon them again, in B.C. 37, for five years more. The coalition between Iulius Caesar, Pompeius, and Crassus, in B.C. 60 (Vell. Pat. ii. 44; Livy, *Epit.* 103), is usually called the First Triumvirate, and that between Octavianus, Antony, and Lepidus, the Second; but it must be borne in mind that the former never bore the title of tresviri, nor were invested with any office under that name, whereas the latter were recognized as regular magistrates under the above-mentioned title.

(9) Tresvĭri Sacris Conquirendis Donisque Persignandis, extraordinary officers elected in the Comitia Tributa in the time of the Second Punic War, to take care that all property given or consecrated to the gods was applied to that purpose (Livy, xxv. 7). See Vota Publica.

(10) Tresvĭri Senatus Legendi, officers appointed, whenever required by Augustus, to admit persons into the Senate, which had been the duty of the censors heretofore.

Tresvĭri Nocturni. See Tresviri Capitales under Tresviri.

Trevĭri or **Trevĕri**. A powerful people in Gallia Belgica, who were faithful allies of the Romans, and whose cavalry was the best in all Gaul. The river Mosella flowed through their territory, which extended westward from the Rhine as far as the Remi. Their chief town was made a Roman colony by Augustus, and was called Augusta Trevirōrum (Trier or Trèves). It stood on the right bank of the Mosella, and became under the later Empire one of the most flourishing Roman cities north of the Alps. It was the capital of Belgica Prima; and after the division of the Roman world by Diocletian (A.D. 292) into four districts it became the residence of the Caesar who had the government of Britain, Gaul, and Spain. The modern city still contains many interesting Roman remains, among them a famous arch or gate known as the Porta Nigra, baths, an amphitheatre, and a palace once occupied by the emperor Constantine. See the monographs by Wilmowski (1874–1876), Hettner (1880), Steinbach (1883), and Beissel (1888), and Freeman's *Historical and Architectural Studies* (1876).

Porta Nigra at Trèves.

Trials at Law. See Diké; Actio (in the Appendix); Judicial Procedure.

Triarii. Heavily armed infantry soldiers in the Roman legions, of which they formed the third division, as the name implies. They were originally styled *pilani* from the heavy javelin (*pilum*) which they carried. See EXERCITUS; LEGIO; PILUM.

Triballi. A powerful people in Thrace, a branch of the Getae, dwelling along the Danube, who were defeated by Alexander the Great, B.C. 335 (Arrian, *Anab.* i. 2).

Tribocci. A German people, settled in Gallia Belgica, between Mount Vogesus and the Rhine, in the neighbourhood of Strasburg.

Tribon (*τρίβων*). A garment worn in Doric States by men and *ephebi*, generally in a double fold over the *chiton*. It was considerably shorter than the *himation* (q. v.). At Athens also there was a tendency to imitate Spartan simplicity, especially on the part of the philosophers, among whom this garment was worn chiefly by the Cynics (Auson. *Epist.* 53). Cf. ABOLLA.

Triboniānus. See CORPUS IURIS; IUSTINIANUS.

Tribŭla (*τὰ τρίβολα*) or **Tribŭlum.** A corn-drag, consisting of a thick and ponderous wooden board, which was armed underneath with pieces of iron or sharp flints, and drawn over the corn by a yoke of oxen, either the driver or a heavy weight being placed upon it, for the purpose of separating the grain and cutting the straw.

Tribŭlus (*τρίβολος*). A ball with sharp spikes, used to impede a charge of cavalry. It was also called *murex*. See illustration under MUREX.

Tribūnal (*δικαστήριον*). (1) A raised platform at one extremity of a law court, upon which the curule seats of the judges and other persons of distinction who wished to attend the proceedings were placed (Cic. *Verr.* ii. 38; Suet. *Tib.* 33).

(2) In a camp, the tribunal was an elevated platform upon which the general sat to administer justice (Tac. *Hist.* iv. 25); similar to the *suggestum* (q. v.).

(3) In a Roman theatre, the tribunal was an elevated seat in the pit (*orchestra*, Suet. *Claud.* 21), generally appropriated to the use of the praetor (id. *Aug.* 44).

Tribuni. See TRIBUNUS.

Tribūni Aerarii. The name given among the Romans in earlier times to the wealthy members of the several tribes who were intrusted with the levying of the war-tax (see TRIBUTUM) and the distribution of pay to the soldiers from the proceeds of it. What position they held after the payment of the troops was handed over to the quaestors is not clear, from want of information on the subject. In the first century B.C. they appear as a distinct class, from which, during the years B.C. 70–46, the third *decuria* of judges was appointed to represent the plebeians, the other two consisting of senators and knights.

Tribūni Milĭtum (*χιλίαρχοι*). Military tribunes; the superior officers of the Roman legions, six in number, two of whom always held the command for two months on alternate days. They were appointed before the levy took place, as they themselves had to be in office at that time. Originally they were nominated by the consuls; afterwards partly by them and partly by the people, inasmuch as the people elected twenty-four out of the number of candidates in the Comitia Tributa for the four legions which were levied regularly every year, while the consuls retained the appointment for the remaining legions. They were not as a rule taken from veteran centurions, but for the greater part from young men of senatorial or equestrian rank who had served their first campaign in the train or on the staff of a general, and then began their political career with this office. As a mark of distinction, all of them wore the gold ring of the equestrian order. They also wore a narrow or broad purple stripe on their *toga*, according as they were of equestrian or senatorial rank respectively. In the time of the Empire, they always led the legion on the march and in battle. They did not, however, as under the Republic, rank immediately below the commanders-in-chief, but under the *legatus legionis*, the commander of the legion and its auxiliary troops. See EXERCITUS; LEGIO.

Tribūnus, a tribune; a word that seems originally to have indicated an officer connected with a tribe (*tribus*), or who represented a tribe for certain purposes; and this is indeed the character of the officers who were designated by it in the earliest times of Rome, and may be traced also in the later officers of this name.

(1) TRIBUNES OF THE THREE ANCIENT TRIBES.—At the time when all the Roman citizens were contained in the three tribes of the Ramnes, Tities, and Luceres, each of these was headed by a tribune, and these three tribunes represented their respective tribes in all civil, religious, and military affairs; that is to say, they were in the city the magistrates of the tribes, and performed the sacra on their behalf, and in times of war they were their commanders. The TRIBUNUS CELĔRUM was the commander of the *Celeres*, the king's body-guard, and not the tribune of the tribe of the Ramnes, as is supposed by some modern writers. In what manner the Tribunus Celerum was appointed is uncertain, but it is probable that he was elected by the tribes; for we find that when the imperium was to be conferred upon the king, the Comitia were held under the presidency of the Tribunus Celerum; and in the absence of the king, to whom this officer was next in rank, he convoked the Comitia: it was in an assembly of this kind that Brutus proposed to deprive Tarquinius of the imperium. A law passed under the presidency of the Tribunus Celerum was called a *lex tribunicia*, to distinguish it from one passed under the presidency of the king. The tribunes of the three ancient tribes ceased to be appointed when these tribes themselves ceased to exist as political bodies, and when the patricians became incorporated in the local tribes of Servius Tullius. See TRIBUS.

(2) TRIBUNES OF THE SERVIAN TRIBES.—When Servius Tullius divided the commonalty into thirty local tribes, we again find a tribune at the head of these tribes. The duties of these tribunes, who were without doubt the most distinguished persons in their respective districts, appear to have consisted at first in keeping a register of the inhabitants in each district, and of their property, for purposes of taxation, and for levying the troops for the armies. When subsequently the Roman people became exempted from taxes, the main part of their business was taken from them, but they still continued to exist. The TRIBUNI AERARII, who occur down to the end of the Repub-

lic, were perhaps only the successors of the tribunes of the tribes. When (B.C. 406) the custom of giving pay (*stipendium*) to the soldiers was introduced, each of the Tribuni Aerarii had to collect the *tributum* (q. v.) in his own tribe, and with it to pay the soldiers; and in case they did not fulfil this duty, the soldiers had the right of *pignoris capio* against them. In later times their duties appear to have been confined to collecting the *tributum*, which they made over to the military quaestors who paid the soldiers. (See QUAESTOR.) The Lex Aurelia, B.C. 70, called the Tribuni Aerarii to the exercise of judicial functions along with the senators and equites, as these tribunes represented the body of the most respectable citizens. But of this distinction they were subsequently deprived by Iulius Caesar.

(3) TRIBŪNI PLEBIS (δήμαρχοι).—The ancient tribunes of the plebeian tribes had undoubtedly the right of convoking the meetings of their tribes, and of maintaining the privileges granted to them by King Servius, and subsequently by the Valerian laws. But this protection was very inadequate against the insatiable ambition and usurpations of the patricians. When the plebeians, impoverished by long wars, and cruelly oppressed by the patricians, at last seceded in B.C. 494 to the Mons Sacer, the patricians were obliged to grant to the plebeians the right of appointing tribunes (*tribuni plebis*) with more efficient powers to protect their own order than those which were possessed by the heads of the tribes. The purpose for which they were appointed was only to afford protection against any abuse on the part of the patrician magistrates; and that they might be able to afford such protection their persons were declared sacred and inviolable, and it was agreed that whoever invaded this inviolability should be an outlaw, and that his property should be forfeited to the Temple of Ceres. A subsequent law enacted that no one should oppose or interrupt a tribune while addressing the people, and that whoever should act contrary to this ordinance should give bail to the tribunes for the payment of whatever fine they should affix to his offence in arraigning him before the commonalty; if he refused to give bail, his life and property were forfeited. The tribunes were thus enabled to afford protection to any one who appealed to the assembly of the commonalty or required any other assistance. They were essentially the representatives and the organs of the plebeian order, and their sphere of action was the Comitia Tributa. With the patricians and their Comitia they had nothing to do. The tribunes themselves, however, were not judges, and could inflict no punishments, but could only propose the imposition of a fine to the commonalty (*multam irrogare*). The tribunes were thus in their origin only a protecting magistracy of the plebs, but in the course of time their power increased to such a degree that it surpassed that of all other magistrates, and the tribunes then became a magistracy for the whole Roman people, in opposition to the Senate and the oligarchical party in general, although they had nothing to do with the administration or the government. During the latter period of the Republic they became true tyrants, and may be compared to the National Convention of France during the first Revolution. At first the number of the tribunes was only two, but soon afterwards they were increased to five, one being taken from each of the five classes, and subsequently to ten, two being taken from each of the five classes. This last number appears to have remained unaltered down to the end of the Empire. The tribunes entered upon their office on the 10th of December, but were elected, at least in the time of Cicero, on the 17th of July. It is almost superfluous to state that none but plebeians were eligible to the office of tribune; hence when, towards the end of the Republic, patricians wished to obtain the office, they were obliged first to renounce their own order and to become plebeians; hence also, under the Empire, it was thought that the *princeps* (q. v.) should not be tribune because he was a patrician. But the influence which belonged to this office was too great for the emperors not to covet it. Hence Augustus was made tribune for life. During the Republic, however, the old regulation remained in force, even after the tribunes had ceased to be the protectors of the plebs alone. There is only one instance recorded in which patricians were elected to the tribuneship, and this was probably the consequence of an attempt to divide the tribuneship between the two orders. Although nothing appears to be more natural than that the tribunes should originally have been elected by that body of Roman citizens which they represented, yet the subject is involved in considerable obscurity. Some writers state that they were elected by the Comitia Curiata; others suppose that they were elected in the Comitia Centuriata; but whether they were elected in the latter or in the Comitia of the Tribes, it is certain that at first the sanction of the curies to the election was at all events necessary. But after the time of the Lex Publilia (B.C. 472) the sanction of the curies is not heard of, and the election of the tribunes was left entirely to the Comitia Tributa, which were convoked and held for this purpose by the old tribunes previous to the expiration of their office. One of the old tribunes was appointed by lot to preside at the election. As the meeting could not be prolonged after sunset, and the business was to be completed in one day, it sometimes happened that it was obliged to break up before the election was completed, and then those who were elected filled up the legitimate number of the college by *coöptatio*. But in order to prevent this irregularity, the tribune L. Trebonius, in B.C. 448, got an ordinance passed, according to which the college of the tribunes should never be completed by *coöptatio*, but the elections should be continued on the second day, if they were not completed on the first, till the number ten was made up. The place where the election of the tribunes was held was originally and lawfully the Forum, afterwards also the Campus Martius, and sometimes the area of the Capitol.

We now proceed to trace the gradual growth of the tribunitian power. Although its original character was merely protection (*auxilium* or βοήθεια) against patrician magistrates, the plebeians appear early to have regarded their tribunes also as mediators or arbitrators in matters among themselves. The whole power possessed by the college of tribunes was designated by the name *tribunicia potestas*, and extended at no time farther than one mile beyond the gates of the city; at a greater distance than this they came under the imperium of the magistrates, like every other citizen. As they

were the public guardians, it was necessary that every one should have access to them at any time; hence the doors of their houses were open day and night for all who were in need of help and protection, which they were empowered to afford against any one, even against the highest magistrates. For the same reason a tribune was not allowed to be absent from the city for a whole day, except during the Feriae Latinae, when the whole people were assembled on the Alban Mount. In B.C. 456 the tribunes, in opposition to the consuls, assumed the right of convoking the Senate, in order to lay before it a rogation, and discuss the same; for until that time the consuls alone had had the right of laying *plebiscita* before the Senate for approbation. Some years after, B.C. 452, the tribunes demanded of the consuls to request the Senate to make a *senatusconsultum* for the appointment of persons to frame a new legislation; and during the discussions on this subject the tribunes themselves were present in the Senate. The written legislation which the tribunes then wished can only have related to their own order; but as such a legislation would only have widened the breach between the two orders, they afterwards gave way to the remonstrances of the patricians, and the new legislation was to embrace both orders. From the second decemvirate the tribuneship was suspended, but was restored after the legislation was completed, and now assumed a different character from the change that had taken place in the tribes. (See TRIBUS.) The tribunes now had the right to be present at the deliberations of the Senate; but they did not sit among the senators themselves, but upon benches before the opened doors of the senate-house. The inviolability of the tribunes, which had before only rested upon a contract between the two estates, was now sanctioned and confirmed by a law of M. Horatius. As the tribes now also included the patricians and their clients, the tribunes might naturally be asked to interpose on behalf of any citizen, whether patrician or plebeian. Hence the patrician ex-decemvir Appius Claudius implored the protection of the tribunes. About this time the tribunes also acquired the right of taking the auspices in the assemblies of the tribes. They also assumed again the right, which they had exercised before the time of the decemvirate, of bringing patricians who had violated the rights of the plebeians before the Comitia of the Tribes. By the Lex Valeria, passed in the Comitia Centuriata (B.C. 449), it was enacted that a plebiscitum, which had been voted by the tribes, should bind the patricians as well. While the college thus gained outwardly new strength every day, a change took place in its internal organization which to some extent paralyzed its powers. Before B.C. 394, everything had been decided in the college by a majority; but about this time, we do not know how, a change was introduced, which made the opposition (*intercessio*) of one tribune sufficient to render a resolution of his colleagues void. This new regulation does not appear in operation till 394 and 393 B.C.; the old one was still applied in B.C. 421 and 415. From their right of appearing in the Senate, and of taking part in its discussions, and from their being the representatives of the whole people, they gradually obtained the right of intercession against any action which a magistrate might undertake during the time of his office, and this even without giving any reason for it. Thus we find a tribune preventing a consul from convoking the Senate, and preventing the proposal of new laws or elections in the Comitia; they interceded against the official functions of the censors; and even against a command issued by the praetor. In the same manner a tribune might place his veto upon an ordinance of the Senate; and he could thus either compel the Senate to submit the subject to a fresh consideration, or could raise the session. In order to propose a measure to the Senate they might themselves convene a meeting, or when it had been convened by a consul they might make their proposal even in opposition to the consul, a right which no other magistrates had in the presence of the consuls. The Senate, on the other hand, had itself, in certain cases, recourse to the tribunes. Thus, in B.C. 431 it requested the tribunes to compel the consuls to appoint a dictator, in compliance with a decree of the Senate, and the tribunes compelled the consuls, by threatening them with imprisonment, to appoint A. Postumius Tubertus dictator. From this time forward we meet with several instances in which the tribunes compelled the consuls to comply with the decrees of the Senate, *si non essent in auctoritate senatus*, and to execute its commands. In their relation to the Senate a change was introduced by the *plebiscitum Atinium*, which ordained that a tribune, by virtue of his office, should be a senator. When this plebiscitum was made is uncertain; but we know that in B.C. 170 it was not yet in operation. It probably originated with C. Atinius, who was tribune in B.C. 132. But as the quaestorship, at least in later times, was the office which persons held previously to the tribuneship, and as the quaestorship itself conferred upon a person the right of a senator, the law of Atinius was in most cases superfluous.

In their relation to other magistrates we may observe, that the right of *intercessio* was not confined to stopping a magistrate in his proceedings, but they might even command their *viatores* to seize a consul or a censor, to imprison him, or to throw him from the Tarpeian Rock. When the tribunes brought an accusation against any one before the people, they had the right of *prehensio*, but not the right of *vocatio;* that is, they might command a person to be dragged by their *viatores* before the Comitia, but they could not summon him. They might, as in earlier times, propose a fine to be inflicted upon the person accused before the Comitia, but in some cases they dropped this proposal and treated the case as a capital one. The college of tribunes had also the power of making edicts. In cases in which one member of the college opposed a resolution of his colleagues nothing could be done, and the measure was dropped; but this useful check was removed by the example of Tiberius Gracchus, in which a precedent was given for proposing to the people that a tribune obstinately persisting in his veto should be deprived of his office. From the time of the Hortensian law the power of the tribunes had been gradually rising to such a height that at length it was superior to every other in the State. They had acquired the right of proposing to the Comitia Tributa or the Senate measures on nearly all the important affairs of the State, and it would be endless to enumerate the cases in which their power was manifested. Their proposals were indeed usually made *ex auctoritate senatus*, or had been communi-

cated to and approved by it; but in cases in which the people itself had a direct interest, such as a general legal regulation, granting of the franchise, a change in the duties and powers of a magistrate, and others, might be brought before the people, without their having been previously communicated to the Senate, though there are also instances of the contrary. Subjects belonging to the administration could not be brought before the tribes without the tribunes having previously received through the consuls the *auctoritas* of the Senate. This, however, was done very frequently, and hence we have mention of a number of plebiscita on matters of administration. It sometimes even occurs that the tribunes brought the question concerning the conclusion of peace before the tribes, and then compelled the Senate to ratify the resolution, as expressing the wish of the whole people. Sulla, in his reform of the constitution on the early aristocratic principles, left to the tribunes only the *ius auxiliandi*, and deprived them of the right of making legislative or other proposals, either to the Senate or the Comitia, without having previously obtained the sanction of the Senate. But this arrangement did not last, for Pompey restored to them their former rights. During the latter period of the Republic, when the office of quaestor was in most cases held immediately before that of tribune, the tribunes were generally elected from among the senators, and this continued to be the case under the Empire. Sometimes, however, *equites* also obtained the office, and thereby became members of the Senate, where they were considered of equal rank with the quaestors. The tribunes of the people continued to exist down to the fifth century of our era, though their powers became naturally much limited, especially in the reign of Nero. They continued, however, to have the right of intercession against decrees of the Senate, and on behalf of injured individuals. See R. Müller, *Gesetz der zehn Tribunen* (Berlin, 1877); and the account in Bouché-Leclercq, *Institutions Romaines* (Paris, 1886); Mommsen, *Röm. Staatsrecht* (Leipzig, 1876); and for a simpler treatment, see Marlot, *Précis des Institutions Politiques de Rome* (Paris, 1886).

(4) TRIBŪNI MILĬTUM CUM CONSULĀRI POTESTATE.—When in B.C. 445 the tribune C. Canuleius brought forward the rogation that the consulship should not be confined to either order, the patricians evaded the attempt by a change in the constitution; the powers which had hitherto been united in the consulship were now divided between two magistrates—viz., the *tribuni militum cum consulari potestate* and the censors. Consequently, in B.C. 444, three military tribunes, with consular power, were appointed, and to this office the plebeians were to be equally eligible with the patricians. For the years following, however, the people were to be at liberty, on the proposal of the Senate, to decide whether consuls were to be elected according to the old customs, or consular tribunes. Henceforth, for many years, sometimes consuls and sometimes consular tribunes were appointed, and the number of the latter varied from three to four, until in B.C. 405 it was increased to six, and, as the censors were regarded as their colleagues, we have sometimes mention of eight tribunes. At last, however, in B.C. 367, the office of these tribunes was abolished by the Licinian law, and the consulship was restored. These consular tribunes were elected in the Comitia Centuriata, and undoubtedly with less solemn auspices than the consuls.

(5) TRIBŪNI MILITĀRES. See TRIBŪNI MILITUM, p. 1601.

Tribūnus Celĕrum. The designation, under the Roman Empire, of the commander of the cavalry, nominated by the emperor for the time being. See also under TRIBUNUS ad init.

Tribus (*φῦλον*, *φυλή*), a tribe. I. GREEK.—In the earliest times of Greek history mention is made of people being divided into tribes and clans. Homer speaks of such divisions in terms which seem to imply that they were elements that entered into the composition of every community. A person not included in any clan (*ἀφρήτωρ*) was regarded as a vagrant or outlaw. These divisions were rather natural than political, depending on family connection, and arising out of those times when each head of a family exercised a patriarchal sway over its members. The bond was cemented by religious communion, sacrifices, and festivals, which all the family or clansmen attended, and at which the chief usually presided.

Of the Dorian race there were originally three tribes, traces of which are found in all the countries which they colonized. Hence they are called by Homer *Δωριέες τριχάϊκες*. These tribes were the Hylleis (*Ὑλλεῖς*), Pamphyli (*Πάμφυλοι*), and Dymanatae or Dymanes (*Δυμανᾶται* or *Δυμᾶνες*). The first derived their name from Hyllus, son of Heracles, the two last from Pamphylus and Dymas, who are said to have fallen in the last expedition when the Dorians took possession of the Peloponnesus. The Hyllean tribe was perhaps the one of highest dignity; but at Sparta there does not appear to have been much distinction, for all the freemen there were by the constitution of Lycurgus on a footing of equality. To these three tribes others were added in different places, either when the Dorians were joined by other foreign allies, or when some of the old inhabitants were admitted to the rank of citizenship or equal privileges. Thus the Cadmean Aegeids are said by Herodotus to have been a great tribe at Sparta, descended (as he says) from Aegeus, grandson of Theras, though others have thought they were incorporated with the three Doric tribes. The subdivision of tribes into *phratriae* (*φρατρίαι*) or *patrae* (*πάτραι*), *gené* (*γένη*), *trittyes* (*τρίττυες*), etc., appears to have prevailed in various places. At Sparta each tribe contained ten *obae* (*ὠβαί*), a word denoting a local division or district; each *obé* contained ten *triacades* (*τριακάδες*), communities containing thirty families. But very little appears to be known of these divisions, how far they were local, or how far genealogical. After the time of Cleomenes the old system of tribes was changed; new ones were created corresponding to the different quarters of the town, and they seem to have been five in number. The first Attic tribes that we read of are said to have existed in the reign, or soon after the reign, of Cecrops, and were called Cecropis (*Κεκροπίς*), Autochthon (*Αὐτόχθων*), Actaea (*Ἀκταία*), and Paralia (*Παραλία*). In the reign of a subsequent king, Cranaüs, these names were changed to Cranaïs (*Κραναΐς*), Atthis (*Ἀτθίς*), Mesogaea (*Μεσόγαια*), and Diacris (*Διακρίς*). Afterwards we find a new set of names: Dias (*Διάς*), Athenaïs (*Ἀθηναΐς*), Poseidonias (*Ποσειδωνιάς*), and

Hephaestias (Ἡφαιστιάς), evidently derived from the deities who were worshipped in the country. Some of those secondly mentioned, if not all of them, seem to have been geographical divisions; and it is not improbable that, if not independent communities, they were at least connected by a very weak bond of union. But all these tribes were superseded by four others, which were probably founded soon after the Ionic settlement in Attica, and seem to have been adopted by other Ionic colonies out of Greece. The names Geleontes (Γελέοντες), Hopletes (Ὁπλῆτες), Argades (Ἀργάδεις), Aegicores (Αἰγικορεῖς), are said by Herodotus to have been derived from the sons of Ion, son of Xuthus. Upon this, however, many doubts have been thrown by modern writers. The etymology of the last three names would seem to suggest that the tribes were so called from the occupations which their respective members followed; the Hopletes being the armed men, or warriors; the Argades, labourers or husbandmen; the Aegicores, goatherds or shepherds. But whatever be the truth with respect to the origin of these tribes, one thing is certain, that before the time of Theseus, whom historians agree in representing as the great founder of the Attic commonwealth, the various people who inhabited the country continued to be disunited and split into factions. Theseus (q. v.) is said to have changed the relations of the tribes to each other, by introducing a gradation of ranks in each; dividing the people into Eupatridae (Εὐπατρίδαι), Geomori (Γεωμόροι), and Demiurgi (Δημιουργοί), of whom the first were nobles, the second agriculturists or yeomen, the third labourers and mechanics. At the same time, in order to consolidate the national unity, he enlarged the city of Athens, in which he incorporated several smaller towns, made it the seat of government, encouraged the nobles to reside there, and surrendered a part of the royal prerogative in their favour. The tribes or phylae were divided, either in the age of Theseus or soon after, each into three *phratriae* (*φρατρίαι*, a term equivalent to fraternities, and analogous in its political relation to the Roman *curiae*), and each *phratria* into thirty *gené* (*γένη*, equivalent to the Roman *gentes*), the members of a *genos* (*γένος*) being called *gennetae* (*γεννῆται*) or *homogalactes* (*ὁμογαλάκτες*). Each *genos* was distinguished by a particular name of a patronymic form, which was derived from some hero or mythic ancestor. These divisions, though the names seem to import family connection, were in fact artificial; which shows that some advance had now been made towards the establishment of a closer political union. The members of the *phratriae* and *gené* had their respective religious rites and festivals, which were preserved long after these communities had lost their political importance, and perhaps prevented them from being altogether dissolved. After the age of Theseus, the monarchy having been first limited and afterwards abolished, the whole power of the State fell into the hands of the Eupatridae or nobles, who held all civil offices, and had besides the management of religious affairs and the interpretation of the laws. Attica became agitated by feuds, and we find the people, shortly before the legislation of Solon, divided into three parties—Pediaei (Πεδιαῖοι) or lowlanders, Diacrii (Διάκριοι) or highlanders, and Parali (Πάραλοι) or people of the sea-coast. The first two remind one of the ancient division of tribes, Mesogaea and Diacris; and the three parties appear in some measure to represent the classes established by Theseus, the first being the nobles, whose property lay in the champaign and most fertile part of the country; the second, the smaller land-owners and shepherds; the third, the trading and mining class, who had by this time risen in wealth and importance. To appease their discords, Solon was called in; and thereupon framed his celebrated constitution and code of laws. Here we have only to notice that he retained the four tribes as he found them, but abolished the existing distinctions of rank, or at all events greatly diminished their importance, by introducing his property qualification, or division of the people into Pentacosiomedimni (Πεντακοσιομέδιμνοι), Hippeis (Ἱππεῖς), Zeugitae (Ζευγῖται), and Thetes (Θῆτες). (See SOLON.) The enactments of Solon continued to be the law at Athens, though in great measure suspended by the tyranny, until the democratic reform effected by Clisthenes. He abolished the old tribes, and created ten new ones, according to a geographical division of Attica, and named after ten of the ancient heroes: Erechtheïs, Aegeïs, Pandionis, Leontis, Acamantis, Oeneïs, Cecropis, Hippothoöntis, Aeantis, Antiochis. These tribes were divided each into ten *demi* (*δῆμοι*), the number of which was afterwards increased by subdivision; but the arrangement was so made that several demes not contiguous or near to one another were joined to make up a tribe. (See DEMUS.) The object of this arrangement was that, by the breaking of old associations, a perfect and lasting revolution might be effected in the habits and feelings as well as the political organization of the people. Solon allowed the ancient *phratriae* to exist, but they were deprived of all political importance. All foreigners admitted to the citizenship were registered in a phyle and demus, but not in a phratria or genos. The functions which had been discharged by the old tribes were now mostly transferred to the *demi*. Among others, we may notice that of the forty-eight *naucrariae* into which the old tribes had been divided for the purpose of taxation, but which now became useless, the taxes being collected on a different system. The reforms of Clisthenes (q. v.) were destined to be permanent. They continued to be in force (with some few interruptions) until the downfall of Athenian independence. The ten tribes were blended with the whole machinery of the constitution. Of the Senate of Five Hundred, fifty were chosen from each tribe. (See BOULÉ.) The allotment of dicasts was according to tribes; and the same system of election may be observed in most of the principal offices of State, judicial and magisterial, civil and military, etc. In B.C. 307, Demetrius Poliorcetes increased the number of tribes to twelve by creating two new ones—namely, Antigonias and Demetrias, which afterwards received the names of Ptolemaïs and Attalis; and a thirteenth was subsequently added by Hadrian, bearing his own name.

II. ROMAN.—The three ancient Romulian tribes, the Ramnes, Tities, and Luceres, or the Ramnenses, Titienses, and Lucerenses, to which the patri-

cians alone belonged, must be distinguished from the thirty plebeian tribes of Servius Tullius, which were entirely local—four for the city, and twenty-six for the country around Rome. The history and organization of the three ancient tribes are mentioned under PATRICII. They continued of political importance almost down to the period of the decemviral legislation; but after this time they no longer occur in the history of Rome, except as an obsolete institution. The institution and organization of the thirty plebeian tribes, and their subsequent reduction to twenty by the conquests of Porsena, are mentioned under PLEBES. The four city tribes were called by the same names as the regions which they occupied, viz., Suburana, Esquilina, Collina, and Palatina. The names of the sixteen country tribes which continued to belong to Rome after the conquest of Porsena are in their alphabetical order as follows: Aemilia, Camilia, Cornelia, Fabia, Galeria, Horatia, Lemonia, Menenia, Papiria, Pollia, Popillia, Pupinia, Romilia, Sergia, Veturia, and Voltinia. As Rome gradually acquired possession of more of the surrounding territory, the number of tribes also was gradually increased. When Appius Claudius, with his numerous train of clients, emigrated to Rome, lands were assigned to them in the district where the Anio flows into the Tiber, and a new tribe, the *tribus Claudia*, was formed. This tribe was subsequently enlarged, and was then designated by the name Crustumina or Clustumina. This name is the first instance of a country tribe being named after a place, for the sixteen older ones all derived their name from persons or heroes. In B.C. 387, the number of tribes was increased to twenty-five by the addition of four new ones—viz., the Stellatina, Tromentina, Sabatina, and Arniensis. In B.C. 358 two more, the Pomptina and Publilia, were formed of Volscians. In B.C. 332, the censors Q. Publilius Philo and Sp. Postumius increased the number of tribes to twenty-nine, by the addition of the Maecia and Scaptia. In B.C. 318 the Ufentina and Falerina were added. In B.C. 299 two others, the Aniensis and Terentina, were added by the censors, and at last, in B.C. 241, the number of tribes was augmented to thirty-five, by the addition of the Quirina and Velina. Eight new tribes were added upon the termination of the Social War, to include the Socii, who then obtained the Roman franchise; but they were afterwards incorporated among the old thirty-five tribes, which continued to be the number of the tribes to the end of the Republic. When the tribes, in their assemblies, transacted any business, a certain order (*ordo tribuum*) was observed, in which they were called upon to give their votes. The first in the order of succession was the Suburana, and the last the Arniensis. Any person belonging to a tribe had in important documents to add to his own name that of his tribe, in the ablative case. Whether the local tribes, as they were established by the constitution of Servius Tullius, contained only the plebeians, or included the patricians also, is a point on which the opinions of modern scholars are divided: but it appears most probable that down to the decemviral legislation the tribes and their assemblies were entirely plebeian. From the time of the decemviral legislation, the patricians and their clients were undoubtedly incorporated in the tribes. Respecting the assembly of the tribes, see COMITIA.

See Grotefend, *Imperium Romanum Tributim Descriptum* (1863); Kubitschek, *Imperium Romanum Tributim Descriptum* (1889); and Mommsen, *Die römischen Tribus* (Altona, 1844).

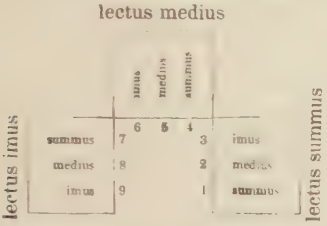
Tribūta Comitia. See COMITIA.

Tribūtum. Originally an extraordinary means of revenue among the Romans, levied on the burgesses in the proportion of one to three per thousand in times of war, when the means of the State treasury were of themselves not sufficient, and more especially after B.C. 406, when the State first took over the payment of the soldiers' wages. When the war was over, the money was generally repaid from contributions or from the booty. Subsequent to the conquest of Macedonia, B.C. 167, the income of the State from the provinces was so considerable that the burgesses, although not legally exempt, ceased any longer to be subject to this payment. The strictly regulated taxes of the provinces also went by the same name, *tributum soli*, the ground-tax, and *tributum capitis*, the personal tax. (See STIPENDIUM.) Italy, up to his time exempt, was also made liable to these taxes by Diocletian, towards the end of the third century A.D. Cf. PORTORIUM; VECTIGALIA.

Tricasses, Tricasii, or **Tricassini.** A people in Gallia Lugdunensis, east of the Senones, whose chief town was Augustobona, afterwards Tricassae (Troyes).

Tricastini. A people in Gallia Narbonensis, inhabiting a narrow slip of country between the Drome and the Isère. Their chief town was Augusta Tricastinorum, or simply Augusta (Aouste).

Tricca (Τρίκκη), subsequently **Tricăla** (Τρίκαλα). Now Trikkala; an ancient town of Thessaly in the district Hestiaeotis, situated on the Lethaeus, north of the Peneus. Homer represents it as governed by the sons of Asclepius; and it contained in later times a celebrated temple of this god.



Trichīla, Trichīlum, Tricla, and **Triclia.** A summer-house on the grounds of a villa or elsewhere. It was of wood or trellis-work and often entwined by ivy and other vines. Here the Romans often drank and took their meals in pleasant weather (Verg. *Copa*, 8).

Triciptīnus. See LUCRETIA GENS.

Tricliniarches and **Tricliniarcha.** The butler or major-domo who had the charge of the arrangements in the dining-room (*triclinium*). See TRICLINIUM.

Triclinium (τρίκλινον). The dining-room of a Roman house, as to the position of which, relatively to the other parts of the house, see DOMUS, pp 547, 549, with the diagrams there given. It was of an oblong shape, and was twice as long as it was broad. The superintendence of the dining-room in a great house was intrusted to a slave called *tricliniarcha*, who, through other slaves, took care that everything was kept and proceeded in proper order. A triclinium generally contained three couches, and as the usual number of persons occupying each couch was three, the triclinium afforded accommodation for a party of nine. Sometimes, however, as many as four lay on each of the couches. Each man, in order to feed himself, lay flat upon his breast, or nearly so, and stretched out his hand towards the table; but afterwards, when his hunger was satisfied, he turned upon his left

side, leaning on his elbow. To this Horace alludes in describing a sated person turning in order to repose upon his elbow (*Sat.* ii. 4, 39; but see Palmer *ad loc.*). We find the relative positions of two persons who lay next to one another commonly expressed in the prepositions *super* or *supra* and *infra*. A passage of Livy (xxxix. 43), in which he relates the cruel conduct of the consul L. Quintius Flamininus, shows that *infra aliquem cubare* was the same as *in sinu alicuius cubare*, and consequently that each person was considered as *below* him to whose breast his own head approached. On this principle we are enabled to explain the denominations both of the three couches, and of the three places on each couch. Supposing the annexed arrangement to represent the plan of a triclinium, it is evident that, as each guest re-

clined on his left side, the countenances of all when in this position were directed, first, from No. 1 towards No. 3, then from No. 4 towards No. 6, and lastly from No. 7 towards No. 9; that the guest No. 1 lay, in the sense explained, *above* No. 2, No. 3 *below* No. 2, and so of the rest; and that, going in the same direction, the couch to the right hand was *above* the others, and the couch to the left hand *below* the others. It will be found that in a passage of the Eighth Satire of the second book of Horace the guests are enumerated in the order of their reclining—an order exhibited in the annexed

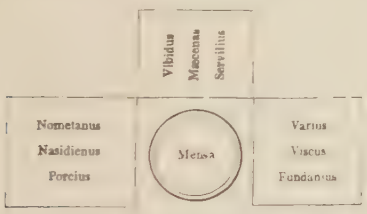


diagram. See CENA; MENSA. For the dinner dress, see SYNTHESIS.

Tricorii. A Ligurian people in Gallia Narbonensis, in the neighbourhood of Massilia (Marseilles) and Aquae Sextiae (Aix).

Tridens (*τριόδους, τρίαινα*). A trident. (1) A three-pronged fork for spearing fish. (2) A sort of pitchfork used by the class of gladiators called *retiarii*. (See GLADIATORES.) (3) The characteristic sign of Neptune, which in works of art he is depicted as carrying instead of a sceptre (Verg. *Aen.* ii. 610).

Tridentĭfer and **Tridentĭger.** "Trident-bearing"; adjectives often applied by the Latin poets to Neptune. See NEPTUNUS.

Tridentum. Now Trent, in Italian Trento; the capital of the TRIDENTĪNI, and the chief town of Rhaetia, situated on the river Athesis (Adige) and on the pass of the Alps leading to Verona.

Triens. A Roman copper coin worth one third of an *as* and originally weighing four ounces (Pliny, *H. N.* xxxiii. 13). See As; NUMISMATICS.

Triens.

Trierarches (*τριηραρχής*). Originally the commander of a trireme and afterwards of any large war-ship. See NAVIS.

Trierarchia (*τριηραρχία*). The superintendence of the equipment of a war-ship; one of the public burdens imposed on Athenian citizens. See LITURGIA.

Trīēres (*τριήρης*). A Greek ship with three banks of oars. See NAVIS.

Trifax. A missile three and a half cubits long, discharged from a catapult (Gell. x. 25, 1). See TORMENTUM.

Triga. A three-horse chariot. See CURRUS.

Triglўphus (*τρίγλυφος*, "three-channelled"). A name given in the Doric frieze to surfaces which, projecting over every column and between every two columns, are ornamented with three parallel channels, two complete ones in the middle and two halves at the corners. Between the triglyphs are the metopes. See ARCHITECTURA; PARTHENON.

Trigon. A kind of game played with a small hand-ball. See PILA.

Trigōnum (*τρίγωνον*). (1) A triangular piece of marble or tiling used in laying a mosaic pavement. (See PAVIMENTUM.) (2) A musical instrument, triangular in shape.

Trilogia (*τριλογία*). A set of three tragedies which, together with a satyric drama, formed a tetralogy. The several tragedies were generally, but not always, connected with each other in subject. The only surviving example is the *Oresteia* of Aeschylus, consisting of the *Agamemnon*, *Choephoroe*, and *Eumenides*. See Heimsoeth, *De Tragoediae Graecae Trilogiis* (1869); and the articles DRAMA; TETRALOGIA.

Trinacria. See SICILIA.

Trinobantes. One of the most powerful peoples of Britain, inhabiting the modern Essex. They offered a strong resistance to the Roman forces at the time of Claudius's invasion of the island (Tac. *Ann.* xiv. 31).

Triobŏlus (*τριώβολος*). A Greek silver coin worth three *oboli*, or half a drachma. The Attic triobol was worth about $0.08, and the Aeginetan about $0.12.

Triŏpas (*Τριόπας* and *Τρίοψ*). A son of Poseidon and Canacé, a daughter of Aeolus, or of Helios (the Sun) and Rhodos, and the father of Iphimedia and Erysichthon. Hence his son Erysichthon is called *Triopeïus*, and his granddaughter Mestra or Metra, the daughter of Erysichthon, *Triopeïs*. He is said to have expelled the Pelasgians from a part of Thessaly, but was himself at last obliged to leave the country, when he went to Caria in Asia Minor and founded Cnidus, hence called TRIOPIA (Herod. i. 1, 74; Apollod. i. 7, 4; Diod. v. 56). He or his son Erysichthon violated the sacred grove of Demeter, for which he was punished with endless hunger.

Triopia. See TRIOPAS.

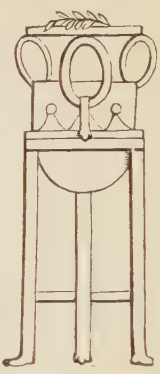
Triopium (*Τριόπιον*). Now C. Krio; the prom-

ontory which terminates the peninsula of Cnidus, forming the southwestern headland of Caria and of Asia Minor.

Triops. See TRIOPAS.

Triphiodōrus. See TRYPHIODORUS.

Triphylia (Τριφυλία). The southern portion of Elis, lying between the Alpheus and the Neda, and said to have derived its name from the three different tribes by which it was peopled. Its chief town was Pylos. See ELIS.



Tripŏlis (Τρίπολις). Properly the name of a confederacy composed of three cities, or a district containing three cities; but it is also applied to single cities which had some such relation to others as to make the name appropriate. (1) Now Kash Yenijji; a city on the Maeander, twelve miles west of Hierapolis, on the borders of Phrygia, Caria, and Lydia, to each of which it is assigned by different authorities. (2) Now Tireboli; a fortress on the coast of Pontus, on a river of the same name (Tireboli Su), ninety stadia east of the promontory Zephyrium (C. Zefreh). (3) Now Tripoli, Tarabulus; on the coast of Phœnicia, consisted of three distinct cities, one stadium (600 feet) apart, each having its own walls, but all united in a common constitution, having one place of assembly, and forming in reality one city. They were colonies of Tyre, Sidon, and Aradus respectively. (4) The district on the northern coast of Africa between the two Syrtes, comprising the three cities of Sabrata (or Abrotonum), Oea, and Leptis Magna, and also called TRIPOLITĀNA REGIO. See SYRTICA.

Triptolĕmus (Τριπτόλεμος). The son of Celeus, king of Eleusis, and Metanira or Polhymnia. Others describe him as a son of King Eleusis by Cothonea, or of Oceanus and Gaea, or of Trochilus by an Eleusinian woman. Triptolemus was the favourite of Demeter and the inventor of the plough and agriculture, and of civilization, which is the result of it. He was the great hero in the Eleusinian Mysteries. According to the common legend, he hospitably received Demeter at Eleusis, when she was wandering in search of her daughter. (See DEMETER; ELEUSINIA, p. 578.) The goddess, in return, wished to make his son Demophon immortal, and placed him in the fire in order to destroy his mortal parts; but Metanira screamed out at the sight, and the child was consumed by the flames. As a compensation for this bereavement, the goddess gave to Triptolemus a chariot with winged dragons and seeds of wheat. In this chariot Triptolemus rode over the earth, making man acquainted with the blessings of agriculture (Ovid, *Met.* v. 646; Pausan. i. 38, 6). On his return to Attica, Celeus endeavoured to kill him; but by the command of Demeter he was obliged to give up his country to Triptolemus, who now established the worship of Demeter, and instituted the Thesmophoria. (See THESMOPHORIA.) Triptolemus is represented in works of art as a youthful hero, sometimes with the *petasus*, on a chariot drawn by dragons, and holding in his hand a sceptre and corn ears.

Triptȳchon. See DIPTYCHON.

Tripudium. Literally a triple beat or stroke; but used in the language of Roman augury of the most favourable omen (*tripudium sollistimum*) given by the sacred chickens when they ate their food so greedily that some of it fell from their beaks to the ground (Cic. *De Div.* ii. 34). See AUGUR, p. 167.

Tripūs (τρίπους). A tripod; in general anything supported on three legs, as (1) a kettle or caldron which stood on three legs over the fire (Hom. *Il.* xxiii. 702; Isidor. *Orig.* xx. 8, 5). (2) A three-legged stool (Isidor. *Orig.* xx. 11, 12). (3) The seat of the Pythian priestess at Delphi. (See DELPHI; ORACULA.) (4) A sort of stand made of bronze or marble and either dedicated in a temple or used as an altar.

Tripod. (Fréjus.)

Trirēmis. See NAVIS.

Tritaea (Τρίταια). (1) A town of Phocis, northwest of Cleonae, on the left bank of the Cephissus and on the frontiers of Locris. (2) One of the twelve cities of Achaia, 120 stadia east of Pharae and near the frontiers of Arcadia.

Tritagonistes (τριταγωνιστής). The third actor in the Greek drama, who played in the least important parts. See DRAMA; HISTRIO; TRAGOEDIA.

Trito (Τριτώ) or **Tritogenīa** (Τριτογένεια). A surname of Athenê, derived by some from Lake Tritonis in Libya, by others from the stream Triton near Alalcomenae in Boeotia; and by the grammarians from τριτώ, which, in the dialect of the Athamanians, is said to signify "head" (cf. *Il.* v. 875; Apollod. i. 3, 6). See ATHENÊ.

Triton (Τρίτων). The son of Poseidon and Amphitrité (or Celaeno), and described as living with them in a golden palace in the depths of the sea. The mythical Lake Tritonis, near the Mediterranean coast of Libya, was regarded as his peculiar abode, especially in the story of the Argonauts. He was represented as a man in his upper parts, terminating in a dolphin's tail; his special attribute is a twisted sea-shell, on which he blows, now violently, now gently, to raise or calm the billows. In the course of time there grew up the notion of a large number of Tritons, all represented as beings of double form and sometimes with the fore-feet of a horse as well as a human body and a fish's tail (called Centauro-tritones or Ichthyotauri). They were, however, always regarded as attendants on the other sea-gods while riding or driving over the waves; and they were represented accordingly in works of art. See Dressler, *Triton und die Tritonen* (Würzen, 1892).

Triton. (From a Roman lamp.)

Triton (Τρίτων), **Tritōnis** (Τριτωνίς), or **Tritonītis** (Τριτωνῖτις) **Palus.** A river and lake on the Mediterranean coast of Libya, which are mentioned in several old Greek legends, especially in the mythology of Athenê, whom one account represented as born on Lake Tritonis. (See TRITO.) The lake is undoubtedly the great salt lake in the south of Tunis called El-Sibkah. Some of the ancient writers gave an altogether different locality to the legend, and identify the Triton with the river usually called Lathon in Cyrenaïca.

Triumphal Arches. See ARCUS TRIUMPHALIS.

Triumphalia. The insignia of a Roman general at his triumph. See TRIUMPHUS.

Triumphalia Carmĭna. Songs sung by the Roman soldiers as they marched through the city in a triumph. (See TRIUMPHUS.) On this occasion the greatest license was allowed them, and this license was reflected in their songs. Sometimes these were fierce and exultant, smacking of bloodshed and slaughter like the remarkable verses sung by the troops of Aurelian:

> Unus homo mille mille mille decollavimus!
> Mille mille mille mille bibat qui mille occidit;
> Tantum vini nemo habet quantum fudit sanguinis!

Sometimes they were full of ribaldry directed at their own commander, like the song sung by the soldiers of Iulius Caesar in his Gallic triumph:

> Urbani, servate uxores, moechum calvum adducimus.
> Aurum in Gallia effutuisti, hic sumpsisti mutuum.

(Vopisc. *Aurel.* 6; Suet. *Iul.* 51). This last recalls the ditties in which the British sailors used to celebrate Lord Nelson's too notorious amours.

Triumphus (*θρίαμβος*). A solemn procession in which a victorious Roman general entered the city in a chariot drawn by four horses. He was preceded by the captives and spoils taken in war, and was followed by his troops; and, after passing in state along the Via Sacra, ascended the Capitol to offer sacrifice in the Temple of Iupiter Capitolinus. From the early days of the Republic down to the extinction of liberty a regular triumph (*iustus triumphus*) was recognized as the climax of military glory, and was the cherished object of ambition to every Roman general. A triumph might be granted for successful achievements either by land or sea, but the latter were comparatively so rare that we may for the present defer the consideration of the naval triumph. After any decisive battle had been won, or a province subdued by a series of successful operations, the imperator forwarded to the Senate a laurel-wreathed despatch (*litterae laureatae*) containing an account of his exploits. If the intelligence proved satisfactory, the Senate decreed a public thanksgiving. (See SUPPLICATIO.) After the war had been concluded, the general with his army repaired to Rome, or ordered his army to meet him there on a given day, but did not enter the city. A meeting of the Senate was held without the walls, usually in the temple of either Bellona or Apollo, that he might have an opportunity of urging his pretensions in person, and these were then scrutinized and discussed with the most jealous care. The following rules were for the most part rigidly enforced, although the Senate assumed the discretionary power of relaxing them in special cases: (*a*) That no one could be permitted to triumph unless he had held the office of dictator, of consul, or of praetor. The honours granted to Pompey, who triumphed in his twenty-fourth year (B.C. 81), before he had held any of the great offices of the State, and again ten years afterwards, while still a simple knight, were altogether unprecedented. (*b*) That the magistrate should have been actually in office both when the victory was gained and when the triumph was to be celebrated. This regulation was insisted upon only during the earlier ages of the commonwealth. Its violation commenced with Q. Publilius Philo, the first person to whom the Senate ever granted a *prorogatio imperii* after the termination of a magistracy, and thenceforward proconsuls and propraetors were permitted to triumph without question. (*c*) That the war should have been prosecuted or the battle fought under the auspices and in the province and with the troops of the general seeking the triumph. Thus, if a victory was gained by the *legatus* of a general who was absent from the army, the honour of it did not belong to the former, but to the latter, inasmuch as he had the auspices. (*d*) That at least 5000 of the enemy should have been slain in a single battle, that the advantage should have been positive, and not merely a compensation for some previous disaster, and that the loss on the part of the Romans should have been small compared with that of their adversaries. Nevertheless, we find many instances of triumphs granted for general results, without reference to the numbers slain in any one engagement. (*e*) That the war should have been a legitimate contest against public foes, and not a civil contest. Hence Catulus celebrated no triumph over Lepidus, nor Antonius over Catiline, nor Cinna and Marius over their antagonists of the Sullan party, nor Caesar after Pharsalia; and when he did subsequently triumph after his victory over the sons of Pompey, it caused universal disgust. (*f*) That the dominion of the State should have been extended, and not merely something previously lost regained. The absolute acquisition of territory does not appear to have been essential. (*g*) That the war should have been brought to a conclusion and the province reduced to a state of peace, so as to permit of the army being withdrawn, the presence of the victorious soldiers being considered indispensable in a triumph.

The Senate claimed the exclusive right of deliberating upon all these points, and of giving or withholding the honour sought, and it for the most part exercised the privilege without question, except in times of great political excitement. The sovereignty of the people, however, in this matter was asserted at a very early date, and a triumph is said to have been voted by the tribes to Valerius and Horatius, the consuls of B.C. 446, in direct opposition to the resolution of the senators, and in a similar manner to C. Marcius Rutilus, the first plebeian dictator; while L. Postumius Megellus, consul B.C. 294, celebrated a triumph although resisted by the Senate and by seven out of the ten tribunes. Moreover, we read of a certain Appius Claudius, consul B.C. 143, who, having persisted in celebrating a triumph in defiance of both the Senate and the people, was accompanied by his daughter (or sister) Claudia, a Vestal Virgin, and by her interposition saved from being dragged from his chariot by a tribune. A disappointed general, however, seldom ventured to resort to such violent measures, but satisfied himself with going through the forms on the Alban Mount (*triumphus in Monte Albano*), a practice first introduced by C. Papirius Maso. If the Senate gave its consent, it at the same time voted a sum of money towards defraying the necessary expenses, and one of the tribunes *ex auctoritate Senatus* applied for a *plebiscitum* to permit the imperator to retain his imperium on the day when he entered the city. This last form could not be dispensed with either in an ovation or a triumph, because the imperium conferred by the Comitia

Curiata did not include the city itself; and when a general had once gone forth *paludatus*, his military power ceased as soon as he re-entered the gates, unless the general law had been previously suspended by a special enactment. In this manner the resolution of the Senate was, as it were, ratified by the plebs. For this reason, no one desiring a triumph ever entered the city until the question was decided, since by so doing he would *ipso facto* have forfeited all claim. We have a remarkable example of this in the case of Cicero, who, after his return from Cilicia, lingered in the vicinity of Rome day after day, and dragged about his lictors from one place to another, without entering the city, in the vain hope of a triumph.

In later times these pageants were marshalled with extraordinary pomp and splendour, and presented a most gorgeous spectacle. Minute details would necessarily be different according to circumstances, but the general arrangements were as follows: All the temples were thrown open, garlands of flowers decorated every shrine and image, and incense smoked on every altar. Meanwhile the imperator called an assembly of his soldiers, delivered an oration (*contio*) commending their valour, and concluded by distributing rewards to the most distinguished, and a sum of money to each individual, the amount depending on the value of the spoils. He then ascended his triumphal car and advanced to the Porta Triumpha-

Imperator in Triumphal Car. (From a marble in Seville.)

lis, where he was met by the whole body of the Senate, headed by the magistrates. The procession then defiled in the following order: (1) the Senate, headed by the magistrates; (2) a body of trumpeters; (3) a train of carriages and frames or litters loaded with spoils, those articles which were especially remarkable either on account of their beauty or rarity being disposed in such a manner as to be seen distinctly by the crowd. Boards were also borne aloft on *fercula*, on which were painted in large letters the names of vanquished nations and countries. Here, too, models were exhibited in ivory or wood of the cities and forts captured, and pictures of the mountains, rivers, and other great natural features of the subjugated region, with appropriate inscriptions, gold and silver in coin or bullion, arms, weapons, and cavalry trappings of every description, statues, pictures, vases, and other works of art, precious stones, elaborately wrought and richly embroidered stuffs, and every object which could be regarded as valuable or curious. (4) A body of flute-players. (5) The white bulls or oxen destined for sacrifice, with gilded horns, decorated with *infulae* and *serta*, attended by the slaughtering priests with their implements, and followed by the Camilli bearing in their hands *paterae* and other sacred vessels and instruments. (6) Elephants or any other strange animals peculiar to the conquered districts. (7) The arms and insignia of the leaders of the foe. (8) The enemy's leaders themselves, and such of their kindred as had been taken prisoners, followed by the whole band of inferior captives in fetters. (9) The crowns (*coronae*) and other tributes of respect and gratitude bestowed on the imperator by allied kings and States. (10) The lictors of the imperator in single file, their fasces wreathed with laurel. (11) The imperator himself in a circular chariot of a peculiar form, drawn by four horses, which were sometimes, though rarely, white. He was attired in a gold-embroidered robe (*toga picta*) and a flowered tunic (*tunica palmata*), and bore in his right hand a laurel bough, and in his left a sceptre. His brows were encircled with a wreath of Delphic laurel, in addition to which, in ancient times, his body was painted bright red. He was accompanied in his chariot by his children of tender years, and sometimes by very dear or highly honoured friends, while behind him stood a public slave, holding over his head a golden Etruscan crown ornamented with jewels. The presence of a slave in such a place at such a time seems to have been intended to avert *invidia* and the influence of the evil eye, and for the same purpose a *fascinum* (q. v.), a little bell, and a scourge were attached to the vehicle. Tertullian (*Apol.* 33) tells us that the slave ever and anon whispered in the ear of the imperator the warning words "*Respice post te, hominem memento te*," but this statement is not confirmed by early writers, though mentioned in Arrian. (12) Behind the chariot, or on the horses which drew it, rode the sons of the imperator, together with the *legati*, the *tribuni*, and the *equites*, all on horseback. (13) The rear was brought up by the whole body of the infantry in marching order, their spears adorned with laurel, some shouting "Io Triumphe!" and singing hymns to the gods, while others proclaimed the praises of their leader or indulged in keen sarcasms and coarse ribaldry at his expense, for the most perfect freedom of speech was granted and exercised. Just as the procession was ascending the Capitoline Hill, some of the hostile chiefs were led aside into the adjoining prison and put to death, a custom so barbarous that we could scarcely believe that it existed in a civilized age, were it not attested by the most unquestionable evidence. Pompey, indeed, refrained from perpetrating this atrocity in his third triumph, and Aurelian on a like occasion spared Zenobia (q. v.), but these are quoted as exceptions to the general rule. When it was announced that these murders had been completed, the victims were then sacrificed, an offering from the spoils was presented to Iupiter, the laurel wreath was deposited in the lap of the god, and the imperator was entertained at a public feast along with his friends in the temple. When he returned home in the evening he was preceded by torches and pipes, and escorted by a crowd of citizens. The whole of the proceedings, generally speaking, were brought to a close in one day; but when the quantity of spoil was very great, and the troops very numerous, a longer period was re-

Triumph of Marcus Aurelius. (Relief in the Palazzo dei Conser-

quired for the exhibition, as when the triumph of Flaminius continued for three days in succession. But the glories of the imperator did not end with the show, nor even with his life. It was customary to provide him at the public expense with a site for a house, such mansions being styled *triumphales domus*. After death his kindred were permitted to deposit his ashes within the walls, and laurel-wreathed statues standing erect in triumphal cars, displayed in the vestibulum of the family mansion, transmitted his fame to posterity.

A TRIUMPHUS NAVALIS appears to have differed in no respect from an ordinary triumph, except that it must have been upon a smaller scale, and would be characterized by the exhibition of beaks of ships (*rostra*) and other nautical trophies. The earliest upon record was granted to C. Duilius, who laid the foundation of the supremacy of Rome by sea in the First Punic War; and who was so elated by his success that during the rest of his life, whenever he returned home at night from dinner, he caused flutes to sound and torches to be borne before him. A second naval triumph was celebrated by Lutatius Catulus for his victory off the Insulae Aegates (B.C. 241); a third by Q. Fabius Labeo (B.C. 189) over the Cretans; and a fourth by C. Octavius over Perseus, without captives and without spoils.

TRIUMPHUS CASTRENSIS was a procession of the soldiers through the camp in honour of a tribune or any officer inferior to the general, who had performed some brilliant exploit. After the extinction of freedom, the emperor being considered as the supreme commander of all the armies of the State, every military achievement was understood to be performed under his auspices, and hence, according to the forms of even the ancient constitution, he alone had a legitimate claim to a triumph. This principle was soon fully recognized and acted upon; for although Antonius had granted triumphs to his *legati*, and his example had been freely followed by Augustus in the early part of his career, yet after the year B.C. 14 he entirely discontinued the practice, and from that time forward triumphs were rarely, if ever, conceded to any except members of the imperial family. But to compensate in some degree for what was then taken away, the custom was introduced of bestowing what were termed *triumphalia ornamenta*—that is, permission to receive the titles bestowed upon the imperator of republican times and in the robes worn by him, with the right to bequeath triumphal statues to their descendants. See Peine, *De Ornamentis Triumphalibus* (Leipzig, 1885).

Triumvirates. See TRESVIRI.

Triumvĭri. See TRESVIRI.

Trivīcum. Now Trivico; a small town in Samnium, situated among the mountains separating Samnium from Apulia.

Trivium (*τρίοδος*). A place where three roads met (Cic. *Div.* i. 54).

Troas (*Τρωάς*, sc. *χῶρα*). Now Chan; the territory of Ilium or Troy, forming the northwestern part of Mysia. It was bounded on the west by the Aegaean Sea, from the Promontorium Lectum to the Promontorium Sigeum at the entrance of the Hellespont; on the northwest by the Hellespont, as far as the river Rhodius, below Abydus; on the northeast and east by the mountains which border the valley of the Rhodius, and extend from its sources southwards to the main ridge of Mount Ida, and on the south by the northern coast of the Gulf of Adramyttium along the southern foot of Ida; but on the northeast and east the boundary is sometimes extended so far as to include the whole coast of the Hellespont and part of the Propontis, and the country as far as the river Granicus, thus embracing the district of Dardania, and somewhat more. Strabo extends the boundary still further east, to the river Aesopus, and also south to the Caïcus; but this clearly results from his including in the territory of Troy that of her neighbouring allies (*Il.* ix. 321, xxiv. 544; Herod. vii. 42; Strab. pp. 581–616). The Troad is for the most part mountainous, being intersected by Mount Ida and its branches: the largest plain is that in which Troy stood. The chief rivers were the Satnoïs on the south, the Rhodius on the north, and the Scamander (Mendere) with its affluent the Simoïs (Dombrek) in the centre.

Trochus (*τροχός*). A hoop for children. It was made of iron or bronze, and rolled by a sort of crooked stick or "key" (*clavis*). Sometimes, as with us, it had small bells fastened to it to jingle as the hoop rolled (Mart. xiv. 169).

Trochus. (From a gem.)

Trocmi and **Trocmii.** See GALATIA.

Troës. See TROIA.

Troezen (*Τροιζήν*). Now Dhamala; the capital of

TROEZENIA (Τροιζηνία), a district in the southeast of Argolis, on the Saronic Gulf, and opposite the island of Aegina. The town was situated at some little distance from the coast, on which it possessed a harbour called POGON (Πώγων), opposite the island of Calauria. Troezen was a very ancient city, and is said to have been originally called Poseidonia, on account of its worship of Poseidon. It received the name of Troezen from Troezen, one of the sons of Pelops; and it is celebrated in mythology as the place where Pittheus, the maternal grandfather of Theseus, lived, and where Theseus himself was born. In the historical period it was a city of some importance. The Troezenians sent five ships of war to Salamis and 1000 heavy-armed men to Plataea. When the Persians entered Attica the Troezenians distinguished themselves by the kindness with which they received the Athenians, who were obliged to abandon their city (Herod. viii. 41; Plut. *Them.* 10). The friendship continued till the Peloponnesian War, when the Troezenians allied themselves with Sparta (Thuc. ii. 56).

Trogiliae. Three small islands lying off the promontory of Trogilium near Mycalé.

Trogītis Lacus. See PISIDIA.

Troglodȳtae (Τρωγλοδύται, "dwellers in caves"). A name applied by the Greek geographers to various uncivilized people who had no abodes but caves, especially to the inhabitants of the western coast of the Red Sea, along the shores of Upper Egypt and Aethiopia (Herod. iv. 183). The Troglodytae of the west coast of the Red Sea are described by Agatharchides as a barbarous people, who wore little clothing, had wives in common, and put to death the aged and infirm. They lived on the produce of their flocks and herds. In the *Periplus* the Ethiopian Troglodytae are described as of a wild appearance and swifter than horses. This swiftness of foot is noticed also by Herodotus as characterizing the Ethiopian Troglodytae, and is said to be still a characteristic of the cave-dwellers in the same district. Herodotus adds that their language was like the twittering of bats, and that their food consisted of lizards and other reptiles. There were also Troglodytae in Moesia, on the banks of the Danube.

Trogus. See IUSTINUS; POMPEIUS TROGUS.

Troia (Τροία). The name of the city of Troy or Ilium; also applied to the country. The mythical account of the kingdom of Troy is briefly as follows. Teucer, the first king, had a daughter who married Dardanus, the chieftain of the country northeast of the Troad (Dardania). Dardanus had two sons, Ilus and Ericthonius, and the latter was the father of Tros, from whom the country and people derived the names of Troas and Troes. Tros was the father of Ilus, who founded the city, which was called after him Ilium, and also, after his father, Troia. The next king was Laomedon, and after him Priam. (See PRIAMUS.) In his reign the city was taken and destroyed by the confederated Greeks, after a ten years' siege. (For details see ACHILLES; AENEAS; AGAMEMNON; AIAX; HECTOR; HELENA; NEOPTOLEMUS; ODYSSEUS; PARIS; and especially TROJAN WAR.) As to the historical facts which may be regarded as established, there is evidence of a considerable city having been sacked and burned at a period which archæologists put not later than the twelfth century B.C. That this invasion may have been an enterprise of the Achaeans at that time is neither impossible nor unlikely. If the interpretation of recent Egyptian discoveries is right which makes Achaeans appear as assailants of Egypt in the reign of Rameses III., it would follow that the Achaeans of the twelfth or thirteenth century had power and spirit enough for such an enterprise; but in any case the history of Tiryns and Mycenae, as attested by their ruins, is evidence to the existence of their power at that time. There is therefore no reason why the traditions upon which the *Iliad* is based should not be regarded as true in their main outlines. It is probable enough that to avenge an act of piracy (which is a common and simple explanation of the rape of Helen) the Greeks of the "Achaean" period besieged and sacked Troy and thence returned to hold their own possessions undisturbed until the Dorian invasion. That there was no Greek settlement upon the site of Troy until a much later period is deduced from the remains of towns of a low state of civilization and of small importance which have been discovered above the ruins of the second city. On the literary use made of the legend of the Trojan War, see CYCLIC POETS; HOMERUS; VERGILIUS.

Troiae Ludus (Τροία) (frequently called in Latin TROIA, in the phrase *Troiam ludere*; in Suet. *Cal.* 18, *Troiae decursio*; in Tac. *Ann.* xi. 11, *ludicrum Troiae*). An equestrian sham-fight, performed in the Circus Maximus by boys of high rank. It was supposed to represent an exercise introduced by Aeneas and the Trojans after their landing in Italy, and celebrated afterwards by Ascanius at Alba (Verg. *Aen.* v. 597). The earliest mention in historical times is the celebration by Sulla in his dictatorship B.C. 81 (Plut. *Cat.* 3), and by Caesar when he dedicated the Temple of Venus (Dio Cass. xliii. 23). Augustus celebrated it certainly twice: first in B.C. 27 (Dio Cass. xlix. 43); on which occasion Tiberius at the age of fifteen was *ductor turmae puerorum maiorum* (Suet. *Tib.* 6); secondly, at the dedication of the Temple of Marcellus, B.C. 12, when his grandson Gaius took a chief part. He then discontinued the celebration because Asinius Pollio complained in the Senate that it was a dangerous sport, in which his grandson Aeserninus had broken his leg (Suet. *Aug.* 43). Caligula celebrated it in the first year of his reign, and again at the funeral games of Drusilla; and of Nero's boyhood we are told that he often *Troiam lusit* up to the age of eleven (Suet. *Ner.* 7).

The method of celebration may be gathered from Vergil (*Aen.* v. 553–603). In this account the Trojan boys are first marshalled in three squadrons of twelve each, under Ascanius, Priamus (son of Polites), and Atys. They come forward ceremoniously, much as the gladiators did, or as the performers in a modern bull-fight do now, to salute the spectators before the combat begins: then they break up their triple formation, and, forming into two equal bands, retire to opposite stations. After this, they charged and retired with evolutions so complicated that they seemed to Vergil comparable to nothing but the Cretan Labyrinth or troops of dolphins at play. It is hard to explain why Vergil introduces the difficulty of three leaders and three companies. In all historical accounts there were two. We can hardly doubt that Vergil, under cover of the story of Aeneas, is describing what he actually saw, and this must have

been the celebration in B.C. 27. In that contest we know from Suetonius (*Tib.* 12) that Tiberius was one leader, and from the same chapter it may be inferred that Marcellus was another. We may surmise that Vergil introduced this elaborate account for the same reason which led him to bring in the touching allusion to Marcellus in *Aen.* vi. There may have been a third leader in the preliminary display on that occasion, to give distinction to Sextus Apuleius, the son of Augustus's colleague in the consulship, who, as appears from Tac. (*Ann.* ii. 50), afterwards married Marcella, daughter of Octavia. Assuming, then, that in the real celebration of B.C. 27 there were three leaders for the procession, and that for the combat two lines were formed, according to custom, under Tiberius and Marcellus, we may suppose that Vergil makes three corresponding leaders in his Troia—viz., Iulus and Atys out of compliment to Augustus, and a Priamus as appropriate to the Trojan game.

Troïlus (Τρωΐλος). The son of Priam and Hecuba, or, according to others, son of Apollo. He fell by the hands of Achilles.

Trojan War. The story of the Trojan War, like the story of the Argonauts, underwent, in the course of time, many changes and amplifications. The main portion of the story is contained in the two epic poems ascribed to Homer, the *Iliad* and the *Odyssey*. The incidents, either narrated or briefly touched upon in these, were elaborated or developed by the post-Homeric poets, partly by connecting them with other popular traditions, and partly by the addition of further details of their own invention. While in Homer it is simply the rape of Helen which is the occasion of the war, a later legend traced its origin to the marriage of Peleus and Thetis, when Eris threw down among the assembled gods the golden apple inscribed "For the fairest" (τῇ καλῇ). The quarrel that ensued between Heré, Athené, and Aphrodité for the prize of beauty was decided by Paris in favour of Aphrodité, who in return secured him the possession of Helen, while Heré and Athené became, from that time onward, the implacable enemies of the whole Trojan race.

According to Homer, after Helen had been carried off by Paris, Menelaüs and Agamemnon visited all the Greek chieftains in turn, and prevailed on them to take part in the expedition which they were preparing to avenge the wrong. According to the later account, the majority of the chieftains were already bound to follow the expedition by an oath, which they had sworn to Tyndareos. Agamemnon was the chosen commander-in-chief; next to him the most prominent Greek heroes are his brother Menelaüs, Achilles, and Patroclus, the two Aiaxes, Teucer, Nestor and his son Antilochus, Odysseus, Diomedes, Idomeneus, and Philoctetes, who, however, at the very outset of the expedition, had to be left behind, and does not appear on the scene of action until just before the fall of Troy. Later epics add the name of Palamedes.

The entire host of 100,000 men and 1186 ships assembled in the harbour of Aulis. Here, while they were sacrificing under a plane-tree, a snake darted out from under the altar and ascended the tree, and there, after devouring a brood of eight young sparrows and the mother-bird herself, was turned into stone. This omen Calchas, the seer of the host, interpreted to mean that the war would last nine years, and terminate in the tenth with the destruction of Troy (*Iliad*, ii. 299–332). Agamemnon had already received an oracle from the Delphian god that Troy would fall when the best of the Greeks quarrelled. In Homer the crossing to Troy follows immediately; but in the later story the Greeks at first land by mistake in Mysia, in the country of Telephus (q. v.), and, being dispersed by a storm and driven back to Greece, assemble afresh at Aulis, whence they are only permitted to set out after the sacrifice of Iphigenia (an incident entirely unknown to Homer). On the Greek side the first to fall is Protesilaüs, who is the first to land. The disembarkation cannot take place until Achilles has slain the mighty Cycnus. After pitching their camp, Odysseus and Menelaüs proceed as ambassadors to Troy, to demand the surrender of Helen. But this proposal, in spite of the inclination of Helen herself and the admonition of the Trojan Antenor, falls to the ground, owing to the opposition of Paris, and war is declared. The number of the Trojans, whose chief hero is Hector, scarcely amounts to the tenth part of that of the besiegers; and although they possess the aid of countless brave allies, such as Aeneas, Sarpedon, and Glaucus, in their fear of Achilles they dare not risk a general engagement. On the other hand, the Achaeans can do nothing against the well fortified and defended town, and see themselves confined to laying ambuscades and devastating the surrounding country, and compelled by lack of provisions to have recourse to foraging expeditions in the neighbourhood, undertaken by sea and by land under the generalship of Achilles. At length the decisive tenth year arrives. The Homeric *Iliad* narrates the events of this year, confining itself to the space of fifty-one days.

Chryses, priest of Apollo, comes in priestly garb into the camp of the Greeks to ransom his daughter Chryseïs from Agamemnon. He is rudely repulsed, and Apollo consequently visits the Greeks with a plague. In an assembly of the Greeks summoned by Achilles, Calchas declares the only means of appeasing the god to be the surrender of the girl without ransom. Agamemnon assents to the general wish; but, by way of compensation, takes from Achilles, whom he considers to be the instigator of the whole plot, his favourite slave Briseïs. Achilles withdraws in a rage to his tent, and implores his mother Thetis to obtain from Zeus a promise that the Greeks should meet with disaster in fighting the Trojans until Agamemnon should give her son complete satisfaction. The Trojans immediately take the open field, and Agamemnon is induced by a promise of victory, conveyed in a dream from Zeus, to appoint the following day for a battle. The hosts are already standing opposed to one another, prepared for fight, when they agree to a treaty that the conflict for Helen and the plundered treasures be decided by a duel between Paris and Menelaüs. Paris is overcome in the duel, and is only rescued from death by the intervention of Aphrodité. When Agamemnon presses for the fulfilment of the treaty, the Trojan Pandarus breaks the peace by shooting an arrow at Menelaüs, and the first open engagement in the war begins, in which, under the protection of Athené, Diomedes performs miracles of bravery and wounds even Aphrodité and Ares. Diomedes and the Lycian Glaucus are on the point

of fighting, when they recognize one another as hereditary guest-friends. Hector goes from the battle to Troy, and the day ends with an indecisive duel between Hector and Aiax, son of Telamon. In the armistice ensuing, both sides bury their dead, and the Greeks, acting on the advice of Nestor, surround the camp with a wall and trench. When the fighting begins afresh, Zeus forbids the gods to take part in it, and ordains that the battle shall terminate with the discomfiture of the Greeks. On the following night Agamemnon already begins to meditate flight, but Nestor advises reconciliation with Achilles. The efforts of the ambassadors are, however, fruitless. Hereupon Odysseus and Diomedes go out to reconnoitre, capture Dolon, a Trojan spy, and surprise Rhesus, king of the Thracians, the newly arrived ally of the enemy. On the succeeding day Agamemnon's bravery drives the Trojans back to the walls of the town; but he himself, Diomedes, Odysseus, and other heroes leave the battle wounded; the Greeks retire behind the camp walls, to attack which the Trojans set out in five detachments. The opposition of the Greeks is brave; but Hector breaks the great gate with a rock, and the stream of enemies pours itself unimpeded into the camp. Once more the Greek heroes who are still capable of taking part in the fight, especially the two Aiaxes and Idomeneus, succeed, with the help of Poseidon, in repelling the Trojans, while Telamonian Aiax dashes Hector to the ground with a stone; but the latter soon reappears on the battle-field with fresh strength granted him by Apollo at the command of Zeus. Poseidon is obliged to leave the Greeks to their fate; they retire again to the ships, which Aiax in vain defends. The foremost ship is already burning, when Achilles gives way to the entreaties of his friend Patroclus, and sends him, clad in his own armour, with the Myrmidons to the help of the distressed Greeks. Supposing it to be Achilles himself, the Trojans in terror flee from the camp before Patroclus, who pursues them to the town, and lays low vast numbers of the enemy, including the brave Sarpedon, whose corpse is only rescued from the Greeks after a severe fight. At last Patroclus himself is slain by Hector with the help of Apollo; Achilles' arms are lost, and even the corpse is with difficulty saved. And now Achilles repents of his anger, reconciles himself to Agamemnon, and on the following day, furnished with new and splendid armour by Hephaestus at the request of Thetis, avenges the death of his friend on countless Trojans and finally on Hector himself. With the burial of Patroclus and the funeral games established in his honour, the restoration of Hector's corpse to Priam, and the burial of Hector, for which Achilles allows an armistice of eleven days, the *Iliad* concludes.

Immediately after the death of Hector the later legends bring the Amazons to the help of the Trojans, and their queen Penthesilea is slain by Achilles. Then appears Memnon, who is also mentioned by Homer; at the head of his Aethiopians he slays Antilochus son of Nestor, and is himself slain by Achilles. And now comes the fulfilment of the oracle given to Agamemnon at Delphi; for at a sacrificial banquet a violent quarrel arises between Achilles and Odysseus, the latter declaring craft and not valour to be the only means of capturing Troy. Soon after, in an attempt to force a way into the hostile town through the Scaean Gate, or, according to later legend, at the marriage of Priam's daughter Polyxena in the temple of the Thymbraean Apollo, Achilles falls slain by the arrow of Paris, directed by the god. After his burial, Thetis offers the arms of her son as a prize for the bravest of the Greek heroes, and they are adjudged to Odysseus. Thereupon his competitor, the Telamonian Aiax, slays himself. For these losses, however, the Greeks find some compensation. Acting on the admonition of Helenus, son of Priam, who had been captured by Odysseus, that Troy could not be conquered without the arrows of Heracles and the presence of a descendant of Aeacus, they fetch to the camp Philoctetes, the heir of Heracles, who had been abandoned on Lemnos, and Neoptolemus, the young son of Achilles, who had been brought up on Scyros. The latter, a worthy son of his father, slays the last ally of the Trojans, Eurypylus, the brave son of Telephus; and Philoctetes, with one of the arrows of Heracles, kills Paris. Even when the last condition of the capture of Troy (the removal of the Palladium from the temple of Athené on the citadel) has been successfully fulfilled by Diomedes and Odysseus, the town can only be taken by treachery. (See PALLADIUM.) On the advice of Athené, Epeius, son of Panopeus, builds a gigantic wooden horse, in the belly of which the bravest Greek warriors conceal themselves under the direction of Odysseus, while the rest of the Greeks burn the camp and embark on board ship, only, however, to anchor behind Tenedos. The Trojans, streaming out of the town, find the horse, and are in doubt what to do with it. According to the later legend they are deceived by the treacherous Sinon, a kinsman of Odysseus, who has of his own free will remained behind. He pretends that he has escaped from the death by sacrifice to which he had been doomed by the malice of Odysseus, and that the horse has been erected to expiate the robbery of the Palladium; to destroy it would be fatal to Troy, but should it be set on the citadel, Asia would conquer Europe. The fate of Laocoön removes the last doubt from the minds of the Trojans (see LAOCOÖN); the city gate being too small, they break down a portion of the wall and draw the horse up to the citadel as a dedicatory offering for Athené. While they are giving themselves up to transports of joy, Sinon in the night opens the door of the horse. The heroes descend and light the flames that give to the Greek fleet the preconcerted signal for its return. Thus Troy is captured; all the inhabitants are either slain or carried into slavery, and the city is destroyed. The only survivors of the royal house are Helenus, Cassandra, and Hector's wife Andromaché, besides Aeneas. For the fate of the rest see DEÏPHOBUS; HECUBA; POLYDORUS; POLYXENA; PRIAMUS; TROÏLUS.

After Troy has been destroyed and plundered, Agamemnon and Menelaüs, contrary to custom, call the drunken Greeks to an assembly in the evening. A division ensues, half siding with Menelaüs in a desire to return home at once; while Agamemnon and the other half wish first to appease by sacrifice the deity of Athené, who has been offended by the outrage of the Locrian Aiax (see AIAX, 1). The army consequently sets out on its journey in two parts. Only Nestor, Diomedes, Neoptolemus, Philoctetes, and Idomeneus reach home in safety; while Menelaüs and Odysseus have first to undergo wanderings for many a long year.

Death overtakes the Locrian Aiax on the sea, and Agamemnon immediately after his arrival home. See CYCLIC POETS; EPOS; HOMERUS; ILIUM; TROIA; TRYPHIODORUS; TZETZES; VERGILIUS.

The Trojan legend appears in later literature, both mediæval and modern, and has inspired much that is interesting and beautiful in art as well. The spurious histories of Dares Phrygius and Dictys Cretensis (see DARES; DICTYS) supplied the material for the writers of the Middle Ages, who worked it up into many forms. The Arthurian legends and the Fabliaux both draw from it, and in A.D. 1160 it was elaborated in literary form by Benoît de Sainte-More, whose poem, *Le Roman de Troie*, in some 30,000 lines, is dedicated to Queen Eleanor of Poitiers and England. In this, the poet has apparently invented new episodes, such as the loves of Briseïda, daughter of Calchas, with Diomedes and Troïlus; whence Boccaccio's poem *Filostrato*, Chaucer's *Troïlus and Cryseyde*, and Shakspeare's *Troïlus and Cressida*, while Gower in his *Confessio Amantis* also alludes to it. Benoît's poem was translated into German in the twelfth century, into Latin by Guido della Colonna in the thirteenth century, and later into Italian. From it, again, Lydgate derived his *Troye Book* (first printed in 1513), Caxton his *Recuyell of the Historyes of Troye* (1474), the first book ever printed in English, and Thomas Heywood his *Life and Death of Hector* (1614). Geoffrey of Monmouth, Gaimar, Wace, and Layamon tell of a Trojan hero, Brut, who found his way to Britain. See Moland and D'Héricault, *Nouvelles Françaises en Prose du XIVe Siècle* (1858); Joly, *Benoît de Ste.-More et le Roman de Troie* (1870); Greif, *Die Mittelalterlichen Bearbeitungen der Trojanersage* (1886); Collilieux, *Dictys et Dares* (1886); and Gorra, *Testi Inediti di Storia Trojana* (Turin, 1887).

Tropaeum (*τρόπαιον*). The Greek term for a monument of victory, composed of the arms captured as booty, and set up on the spot where the conquered enemy had turned (*τρέπειν*) to flight. Representations of the stump of a tree, with cross-pieces and armour or weapons suspended from them, are often to be seen on coins. The Romans borrowed the custom from the Greeks, but generally erected as memorials of victory permanent monuments, with representations of the war carved in relief, and with trophies of arms suspended over the undecorated portions.

Trophies of Augustus Caesar. (Capitoline Museum.)

Trophonius (*Τροφώνιος*) and **Agamēdes** (*Ἀγαμήδης*). The sons of Erginus of Orchomenus, legendary heroes of architecture. Many important buildings were attributed to them, among others the Temple of Apollo at Delphi (Strabo, p. 421), that of Poseidon at Mantinea (Pausan. viii. 10, 2), the *thalamos* of Alcmené in Thebes (*ib.* ix. 11, 1), the treasuries of Augeas in Elis (Schol. *ad* Aristoph. *Nubes*, 508), and Hyrieus in Boeotian Hyria (Paus. ix. 37, 4). In the last named they inserted one stone so cleverly that it could be easily removed from the outside and the treasure stolen by night. But on one occasion, when Agamedes was caught in the trap laid by Hyrieus to discover the thief, Trophonius, to save himself from being betrayed as his brother's accomplice, cut off the head of Agamedes. Being pursued, however, by the king, he was swallowed up in the earth at Lebadea, and by the command of Apollo a cult and an oracle were dedicated to him as Zeus Trophonius.

The oracle was situated in a subterranean chamber, into which, after various preparatory rites, including the nocturnal sacrifice of a ram and the invocation of Agamedes, the inquirers descended to receive, under circumstances of a mysterious nature, a variety of revelations, which were afterwards taken down from their lips and duly interpreted. The descent into the cave, and the sights which there met the eye, were so awe-inspiring that the popular belief was that no one who visited the cave ever smiled again (Athenaeus, 614 A; cf. Aristoph. *Nubes*, 508); and it was proverbially said of persons of grave and serious aspect that they had been in the cave of Trophonius—a phrase that has passed into modern literature as a classic allusion.

According to another story the brothers, after the completion of the Delphic temple, asked Apollo for a reward, and he promised they should have on the seventh day the best thing that could be given to man; and on that day they both died a peaceful death (Cicero, *Tusc.* i. 114; Plut. *Consolatio ad Apoll.* 14).

Tros (*Τρώς*). The son of Erichthonius and Astyoché, and grandson of Dardanus. He was married to Callirrhoë, by whom he became the father of Ilus, Assaracus, and Ganymedes, and was king of Phrygia. The country and people of Troy derived their name from him. (See TROIA.) He gave up his son Ganymedes to Zeus for a present of horses. See GANYMEDES.

Trossŭlum. Now Trosso; a town in Etruria, nine miles from Volsinii, which is said to have been taken by some Roman *equites*, without the aid of foot-soldiers; whence the Roman knights obtained the name of TROSSŪLI (Pliny, *H. N.* xxxiii. 9).

Trousers. See BRACAE.

Trua (*τρυήλα*). A kind of ladle perforated with holes; also a perforated cap or plate in a sink,

Trua. (From the House of Pansa, Pompeii.)

as in modern kitchens (Varro, *L. L.* v. 118). See TRULLA.

Truentum. A town of Picenum, on the river Truentus or Truentinus (Tronto).

Trulla (*τρουλλίον*). (1) A sort of ladle or dipper, practically the same as *trua*, of which this word is a diminutive. See TRUA.

(2) (*τρύβλιον*). Either used separately, or with the epithet *vinaria*. A drinking-cup, or utensil employed for taking the wine out of a larger recipient, which contained a quantity mixed with snow. It was a species of *cyathus* (q.v.), being furnished with an inner case perforated as a strainer, and fitting into the hollow bowl of the cup, so that when adjusted together the two would form but one body, which might be conveniently dipped into the large vessel, and filled; then, by removing the perforated case, any sediment or impurity deposited by the snow would be removed with it from the pure liquid left in the bowl (Cic. *Verr.* ii. 4, 27; Varro, *L. L.* v. 118; Pliny, *H. N.* xxxvii. 7).

Trulla, Fire-basket. (Rich.)

(3) The pan of a night-stool (Juv. iii. 118).

(4) A fire-basket of iron used for carrying hot coals from place to place (Livy, xxxvii. 11).

Trumpet. See SALPINX; TUBA.

Trutĭna (*τρυτάνη*.) See LANCULA; LIBRA; STATERA.

Trutulensis Portus. A harbour on the north-eastern coast of Britain, near the estuary Taïs (Tay).

Tryphiodōrus (*Τρυφιόδωρος*). A Greek epic writer of Egypt, who composed at the beginning of the sixth century B.C. a poem on the capture of Troy (*Ἰλίου Ἅλωσις*) in 691 hexameters, a very indifferent poem, containing an account of the stratagem of the wooden horse and the sack of the city. It is edited by Northmore (London, 1804) and Köchly (Zürich, 1850).

Tryphon (*Τρύφων*). (1) DIODŎTUS, a usurper of the throne of Syria during the reign of Demetrius II. Nicator. After the death of Alexander Balas in B.C. 146, Tryphon first set up Antiochus, the infant son of Balas, as a pretender against Demetrius, but in 142 he murdered Antiochus and reigned as king himself. Tryphon was defeated and put to death by Antiochus Sidētes, the brother of Demetrius, in 139, after a reign of three years (see DEMETRIUS II.). (2) SALVIUS, one of the leaders of the revolted slaves in Sicily, was supposed to have a knowledge of divination, for which reason he was elected king by the slaves in 103. He displayed considerable abilities, and in a short time collected an army of 20,000 foot and 2000 horse, with which he defeated the propraetor P. Licinius Nerva. After this victory Salvius assumed all the pomp of royalty, and took the surname of Tryphon, probably because it had been borne by Diodotus, the usurper of the Syrian throne. He chose the strong fortress of Triocala as the seat of his new kingdom. Tryphon was defeated by L. Lucullus in 102, and was obliged to take refuge in Triocala. But Lucullus failed to take the place, and returned to Rome without effecting anything more. Lucullus was succeeded by C. Servilius; and on the death of Tryphon, about the same time, the kingdom devolved upon Athenion, who was not subdued till 101 (Flor. iii. 19).

Tub. See DOLIUM.

Tuba (*σάλπιγξ*). The Latin name for a straight wind-instrument of deep, clangorous sound, which was used at sacrifices, games, funerals, and in war among the infantry to give the signal for attack and retreat, and was blown by the *tubicen*. See LITUUS; SALPINX; and cf. CORNU.

Tubĕro, AELIUS. (1) QUINTUS, son-in-law of L. Aemilius Paulus, served under the latter in his war against Perseus, king of Macedonia. (2) Q., son of the preceding, was a pupil of Panaetius, and is called "the Stoic." He had a reputation for talent and legal knowledge. He was praetor in 123, and consul suffectus in 118. He was an opponent of Tib. Gracchus, as well as of C. Gracchus, and delivered some speeches against the latter, 123. Tubero is one of the speakers in Cicero's dialogue *De Republica*. (3) LUCIUS, an intimate friend of Cicero. On the breaking out of the Civil War, Tubero espoused the party of Pompey, under whom he served in Greece. He was afterwards pardoned by Caesar, and returned with his son Quintus to Rome. Tubero cultivated literature and philosophy. (4) Q., son of the preceding, obtained considerable reputation as a jurist, and is often quoted in the Digest.

Tubĭcen (*σαλπιγκτής*). A trumpeter. See SALPINX; TUBA.

Tubilustrium. A Roman festival in honour of Mars. See SALII.

Tucca, PLOTIUS. A friend of Horace and Vergil, to whom and Varius the latter bequeathed his unfinished works. See VERGILIUS.

Tucētum. A dish of potted pork or beef, larded (Schol. *ad* Pers. ii. 42).

Tuder. Now Todi; an ancient town of Umbria, situated on a hill near the Tiber, and on the road from Mevania to Rome.

Tudicŭla. A machine for bruising olives and removing the stones before putting the fleshy part in the oil-press. See TORCULAR.

Tuditānus, SEMPRONIUS. (1) PUBLIUS, tribune of the soldiers at the battle of Cannae in B.C. 216, and one of the few Roman officers who survived that fatal day. In 214 he was curule aedile; in 213 praetor, with Ariminum as his province, and was continued in the command for the two following years (212, 211). He was censor in 209 with M. Cornelius Cethegus, although neither he nor his colleague had yet held the consulship. In 205 he was sent into Greece with the title of proconsul, for the purpose of opposing Philip, with whom, however, he concluded a treaty, which was ratified by the Romans. Tuditanus was consul in 204, and received Bruttii as his province. He was at first defeated by Hannibal, but shortly afterwards he gained a decisive victory over the Carthaginian general (Livy, xxii. 50, 60, xxiv. 43–47, xxvii. 11, xxix. 11–13, xxxi. 2; App. *Annib.* 26). (2) GAIUS, plebeian aedile 198, and praetor 197, when he obtained Nearer Spain as his province. He was defeated by the Spaniards with great loss, and died shortly afterwards of a wound which he had received in the battle (Livy, xxxii. 27, xxxiii. 42; App. *Hisp.* 39). (3) MARCUS, tribune of the plebs 193; praetor 189, when he obtained Sicily as his province; and consul 185. In his consulship he carried on war in Liguria, and defeated the Apuani, while his colleague was equally successful

against the Ingauni. He was carried off by the great pestilence which devastated Rome in 174 (Livy, xxxix. 40, 46, xli. 21). (4) Gaius, praetor 132, and consul 129. In his consulship he carried on war against the Iapydes in Illyricum, over whom he gained a victory chiefly through the military skill of his legate, D. Iunius Brutus. Tuditanus was an orator and an historian, and in both obtained considerable distinction (Vell. Pat. ii. 4; App. *B. C.* i. 19, *Illyr.* 10; Cic. *Brut.* 25; Dionys. i. 11).

Tugurium. A hut; usually made of wood, with a bark or thatched roof (Pliny, *H. N.* xvi. 14). Cf. Mapalia.

Tugurium. (Rich.)

Tullia. The name of the two daughters of Servius Tullius, the sixth king of Rome. See Tullius.

Tullia, frequently called by the endearing diminutive **Tulliŏla.** The daughter of Cicero and Terentia, born probably B.C. 79 or 78. She was betrothed in 67 to C. Calpurnius Piso Frugi, whom she married in 63, during the consulship of her father. During Cicero's banishment Tullia lost her first husband. She was married again in 56 to Furius Crassipes, a young man of rank and large property; but she did not live with him long, though the time and the reason of her divorce are alike unknown. In 50 she was married to her third husband, P. Cornelius Dolabella, who was a thorough profligate. The marriage took place during Cicero's absence in Cilicia, and, as might have been anticipated, was not a happy one. In 46 a divorce took place by mutual consent. At the beginning of 45 Tullia was delivered of a son, her second child by Dolabella. As soon as she was sufficiently recovered to bear the fatigues of a journey, she accompanied her father to Tusculum, but died there in February. To allay his grief at her death, Cicero wrote the treatise (now lost) *De Consolatione.* See Cicero.

Tullia Gens, patrician and plebeian. The patrician Tullii were one of the Alban families transplanted to Rome in the reign of Tullus Hostilius. The patrician branch of the gens appears to have become extinct at an early period, for after the early times of the Republic no one of the name occurs for some centuries, and the Tullii of a later age are not only plebeians, but, with the exception of their bearing the same name, cannot be regarded as having any connection with the ancient gens. The first plebeian Tullius who rose to the honours of the State was M. Tullius Decula, consul B.C. 81, and the next was the celebrated orator M. Tullius Cicero. See Cicero.

Tulliānum. See Carcer, p. 278.

Tullius Cicĕro. See Cicero.

Tullius, Servius. According to the legends, the sixth king of Rome. The stories about his reign merely express the popular idea of the original growth of the Roman constitution; and as he embodies a great part of this growth, the history of which was lost, he is represented as a king with a peaceful reign, devoted to legislation and to public works in the city, but also to military organization. The legendary account states that his mother, Ocrisia, was one of the captives taken at Corniculum, and became a slave of Tanaquil, the wife of Tarquinius Priscus (Dionys. iv. 2; Ovid, *Fasti*, vi. 625). He was born in the king's palace, and notwithstanding his servile origin was brought up as the king's son, since Tanaquil by her powers of divination had foreseen the greatness of the child; and Tarquinius gave him his daughter in marriage, and intrusted him with the government. His rule was mild and beneficent, and so popular did he become that the sons of Ancus Marcius, fearing lest they should be deprived of their inheritance, procured the assassination of Tarquinius. (See Tarquinius.) They did not, however, reap the fruit of their crime, for Tanaquil, pretending that the king's wound was not mortal, told the people that Tarquinius had commanded Servius meantime to discharge the duties of the kingly office. Servius began to act as king; and when the death of Tarquinius could no longer be concealed, he was already in firm possession of the royal power. The great deeds of Servius were deeds of peace, and he was regarded by posterity as the author of all their civil rights and institutions, just as Numa was of their religious rites and ordinances. Three important events are assigned to Servius by tradition. First, he gave a new constitution to the Roman State. The two main objects of this constitution were to give the plebs political independence, and to assign to property that influence in the State which had previously belonged to birth exclusively. In order to carry his purpose into effect, Servius made a twofold division of the Roman people—one territorial, and the other according to property. (For details, see Comitia.) Secondly, he was credited with the extension of the Pomerium, or boundary of Rome, and with the completion of the "Servian" city by incorporating with it the Quirinal, Viminal, and Esquiline Hills and its fortification. (See Roma.) Thirdly, he established an important alliance with the Latins, by which Rome and the cities of Latium became the members of one great league. By his new constitution Servius incurred the hostility of the patricians, who conspired against him with L. Tarquinius. Servius, soon after his succession, had given his two daughters in marriage to the two sons of Tarquinius Priscus. L. Tarquinius the elder was married to a domestic wife; Arruns, the younger, to an aspiring and ambitious woman. On the other hand, Lucius was proud and haughty, but Arruns unambitious and quiet. The wife of Arruns, fearing that her husband would tamely resign the sovereignty to his elder brother, resolved to destroy both her father and her husband. She persuaded Lucius to murder his wife, and she murdered her own husband; and the survivors straightway married. Tullia now urged her husband to murder her father. A conspiracy was formed with

the discontented patricians, and Tarquinius, having entered the Senate-house arrayed in the kingly robes, ordered the senators to be summoned to him as their king. At the first news of the commotion, Servius hastened to the Senate-house, and, standing at the doorway, ordered Tarquinius to come down from the throne. Tarquinius sprang forward, seized the old man and flung him down the steps. The king sought refuge in his house, but before he reached it he was overtaken by the servants of Tarquinius and murdered. Tullia drove to the Senate-house, and greeted her husband as king; and as she was returning, her charioteer pulled up, and showed her the corpse of her father lying across the road. She commanded him to drive on: the blood of her father spirted over the carriage and on her dress; and from that day forward the street bore the name of the Vicus Sceleratus—"Wicked Street." Servius had reigned forty-four years (Livy, i. 42–46; Dionys. iv. 2–12; Cic. *De Rep.* ii. 21; Ovid, *Fasti*, vi. 581).

Tullius Tiro. See TIRO.

Tullum. Now Toul; the capital of the Leuci in the southwestern part of Gallia Belgica (Ptol. ii. 9, 13).

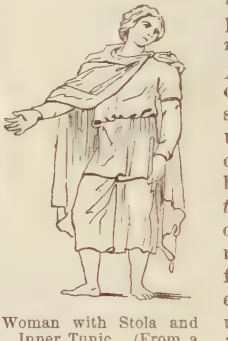
Tumultuarii, sc. *milites.* Soldiers sworn in *en masse* in times of great danger to the State (*in tumultu*), *tumultus* being technically an Italic or Gallic war. The form by which these troops were sworn was called *coniuratio,* and differed from the *sacramentum* or regular military oath in that persons sworn by it were freed from its obligations as soon as the crisis was over. The first instance of this *coniuratio* that is recorded was in B.C. 216, in the Second Punic War (Livy, xxii. 38). See Mommsen in the *Eph. Epigraph.* v. 143; and cf. the articles DELECTUS; SACRAMENTUM.

Tumŭlus (*τύμβος, κολώνη*). A sort of cairn or rough mound of earth and stones piled up in a pyramidal shape over a grave. Sometimes it served as the base of a column (*στήλη*) erected as a monument. The word is also used in the general sense of a grave or tomb (Hom. *Il.* xxiv. 798; xi. 371; Verg. *Ecl.* v. 42). See the illustration in the article HORATIUS, p. 844.

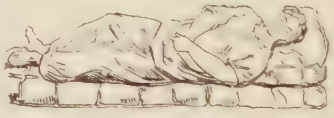
Tunes or **Tunis.** Now Tunis; a strongly fortified city of Northern Africa, at the inner end of the Carthaginian Gulf, ten miles southwest of Carthage, at the mouth of the little river Catada.

Tungri. A German people, who crossed the Rhine, and settled in Gaul in the country formerly occupied by the Aduatici and the Eburones. Their chief town was called Tungri or ADUĂCA TONGRŌRUM (Tongern) (Tac. *Germ.* 2).

Tunĭca (*χιτών*). A garment for men and women worn next the person. With men it was a loose shirt of woollen stuff, consisting of pieces sewed together at the sides, and having either no sleeves or only short ones reaching half-way down the arm. Longer sleeves were considered effeminate, and first came into general use in the third and fourth centuries A.D. Ordinarily the tunica was girded up over the hip, and reached to the knees only. It was considered unbecoming to allow it to appear beneath the lower part of the *toga.* It was worn by the Roman at home and at work, and also by slaves and strangers. Senators and patricians were distinguished by a *tunica* with a broad purple stripe (*latus clavus,* hence *tunica laticlavia*)



Ordinary Tunic. (Column of Trajan.)



Slit Tunic. (Pompeian painting.)

extending from the neck to the under seam; the knights by a narrow one (*angustus clavus,* hence *tunica angusticlavia*). (See CLAVUS.) The purple *tunica,* adorned with golden palm-branches (*tunica palmata*), was, with the *toga picta* (see TOGA), the dress of a general on the occasion of a triumph. (See TRIUMPHUS.) It very early became the custom to wear beneath the tunic proper a *tunica interior,* which was of wool. Linen shirts did not come into use until the fourth century A.D. Women wore a double tunic, an under one, a chemise (*tunica intima*), consisting of a garment fitting closely to the body and reaching over the knee, and over this the *stŏla* (q. v.). See EXOMIS; SUBUCULA.

Woman with Stola and Inner Tunic. (From a marble.)

Tunica Intima or Chemise. (Roman bas-relief.)

Turban. See MITRA.

Turbo (*βέμβιξ, ῥόμβος, στρόμβος*). A humming-top used by Greek and Roman children, and made to revolve by whipping (Verg. *Aen.* vii. 378; Tibull. i. 5, 3). It appears to have resembled those used by children in modern times.

Turdetāni. The most numerous people in Hispania Baetica, dwelt in the south of the province, on both banks of the Baetis, as far as Lusitania. Their district was called Turdetania. See HISPANIA.

Turdŭli. A people in Hispania Baetica, situated to the east and south of the Turdetani (q. v.), with whom they were closely connected.

Turia or **Turium.** Now the Guadalaviar, a river on the eastern coast of Spain, flowing into the sea at Valentia, memorable for the battle fought on its banks between Pompey and Sertorius (Plut. *Pomp.* 18; *Sert.* 19).

Turibŭlum. See TUS.

Turma (*ἴλη*). A subdivision of the Roman cavalry. The 300 knights originally belonging to each legion were divided into ten turmae of thirty men: each of these had three *decuriones,* the first of

whom commanded the whole *turma*, and three *optiones* (adjutants). The divisions of allied cavalry called *alae* (see ALA), each consisting of 300 men, contained five turmae of sixty men each. Under the Empire the independent divisions of cavalry of 500 or 1000 men, which were also called *alae*, consisted of sixteen or twenty-four turmae. The cavalry divisions of 120 horsemen in a cohort of 500 strong, which formed the unit in many cohorts, and of 240 horsemen in a cohort of 1000 strong, were divided into six and ten turmae respectively. See COHORS; EXERCITUS.

Turnēbus, ADRIĀNUS (ADRIEN TURNÈBE). A great French classical scholar of the sixteenth century, born at Andelys, near Rouen, in 1512, of Scottish descent, his family name having been originally Turnbull. He was educated at the University of Paris, in which he became Professor of Greek in 1547, and where J. J. Scaliger (q. v.) was one of his pupils. He was director of the royal press, in which capacity he did much for the dissemination of corrected classical texts, while winning a wide reputation for his own Hellenic scholarship. Montaigne, his personal friend, pronounced him the greatest man of letters whom Europe had seen for a thousand years. From the press which he directed came the *editio princeps* of Philo and of Synesius, and he himself edited Aeschylus, Aristotle's *Ethics*, Cicero *De Legibus*, and (with notes) Varro's treatise *De Lingua Latina* and Horace, with translations of Arrian, Oppian, Theophrastus, and portions of Plutarch. He died June 12th, 1565, greatly lamented. His miscellanies (*Opera*) were published in Strassburg in 1600 in 3 vols., containing, among other productions, his *Adversaria*, with critical emendations on many classical authors. See the account of Turnebus prefixed to that work, and also Maittaire's *Historia Typographorum Aliquot Parisiensium* (London, 1817).

Turnus (*Τύρνος*). (1) The son of Daunus and Venilia, brother of Iuturna (q. v.), king of the Rutulians at Ardea. He was induced by Amata, the sister of his mother, and wife of Latinus, to make war upon Aeneas for his bride Lavinia, who had already been betrothed to himself. After many hard fights he was slain in single combat by his rival (Verg. *Aen.* vii. 408; x. 76; xii. 408, 926; Livy, i. 2). His name is probably connected with Tyrrhenus, and in the legends is associated with that of Mezentius; so that the story is supposed by some to refer to a struggle of the Latins against the Etruscans. (See ETRURIA.) (2) A satirical poet who lived in the first and second centuries A.D. (Mart. vii. 97). Thirty hexameter lines that bear his name were written in the seventeenth century by J. L. G. Balzac. See Quicherat, *Mélanges de Philologie*, p. 259 (Paris, 1879).

Turŏnes, Turŏni, or **Turonii**. A people in the interior of Gallia Lugdunensis, between the Aulerci, Andes, and Pictones. Their chief town was Caesarodunum, subsequently TURŎNI (Tours), on the Liger (Loire) (Caes. *B. G.* ii. 35).

Turpilius, SEXTUS. A Roman writer of comedies, a younger contemporary of Terence. He died at Sinuessa in B.C. 103 or 101. We possess only some of the titles and a few fragments of his plays, printed in Ribbeck's collection (Leipzig, 1872). He was the last important writer of the *fabula palliata*.

Turpio, L. AMBIVIUS. A famous actor of the time of Terence (Cic. *De Sen.* 14).

Turris (*τύρσις, πύργος*). Any lofty building; a tower; a fort or fortified place. The regular tower of fortification was either round or square, several stories in height, with turrets (*pinnae*) surmounting them, loop-holes (*fenestrae*) in the walls, and an arched entrance (*fornix*) in the middle. A movable tower (*turris mobilis*) was used in sieges to protect the approach of the battering-ram to the walls. (See ARIES.) Such a tower was sometimes several stories in height, and could be raised or lowered in order to allow the troops in it to scale the walls (Livy, xxi. 11; Vitruv. x. 13). When elephants were used in battle, they carried a sort of tower on the back filled with soldiers (Livy, xxxvii. 40). For the towers on the decks of ships, see NAVIS.

Turris Hannibălis. Now Bourj Salektah; a castle on the coast of Byzacena, between Thapsus and Acholla, belonging to Hannibal, who embarked here when he fled to Antiochus the Great (Livy, xxxiii. 48).

Turris Stratōnis. See CAESAREA (3).

Tus and (incorrectly) **Thus** (*λιβανωτός*). Frankincense; a fragrant gum from a tree of Arabian growth, employed by the ancients at the sacrifice, in the service of the temples, and other ceremonials. It was carried to the altar by a boy (*camillus*) in a small square case (*acerra*), from which a few grains were taken out, and sprinkled over the burning altar (*ara turicrema*); or it was made up into pastilles, which were carried in a deep dish (*catinus*), and thence dropped upon a lighted brazier (*focus turicremus*); or, finally, it was kindled in a censer (*turibulum*), which was carried in the hand, and swung backwards and forwards to give out and diffuse its vapour, as in the ceremonies of the Roman Catholic Church (Hor. *Carm.* iii. 8, 2; Pers. v. 120). See the illustration from a Pompeian bronze original. Cf. ACERRA; SACRIFICIUM.

Turibulum. (Pompeian bronze.)

Tuscania. A town of Etruria on the river Marta (Pliny, *H. N.* iii. 52), in whose tombs many remains of the Etruscans have been found, including the inscribed dice that have given some clue to the Etruscan numerals. The town is now called Toscanella. See ETRURIA, p. 626.

Tusci, Tuscia. See ETRURIA.

Tusculum. Now Frascati; an ancient town of Latium, situated about ten miles southeast of Rome, on a lofty summit of the mountains, which are called after the town, TUSCULĀNI MONTES. It is said to have been founded by Telegonus, the son of Odysseus; and it was always one of the most important of the Latin towns. Cato the Censor was a native of Tusculum. Its proximity to Rome, its salubrity, and the beauty of its situation made it a favourite residence of the Roman nobles during the summer (Strabo, p. 239). Cicero, among others, had a favourite villa at this place, which he frequently mentions under the name of TUSCULĀNUM.

Tutēla. The office of guardian among the Ro-

mans. It affected not only minors, but also widows and grown-up daughters until the time of their marriage, with the exception of the Vestals. In the case of *impuberes* or *pupilli*, ordinary minors, the guardian (*tutor*) managed their property until the time of their majority, which with girls began at twelve, with boys at fourteen. (See INFANS; IMPUBES.) At this age the guardianship ended, and girls became, like widows, possessed of independent power over their property, but still remained so far under guardianship that they were unable to take legal proceedings without the consent of their guardians.

Three kinds of *tutores* have been distinguished: (*a*) *tutor testamentarius*, who was named in the will. By a provision in the will women were sometimes allowed the choice of their guardian, who was then called *tutor optivus* ("chosen guardian"), to distinguish him from the *tutor dativus* (or "specified guardian"). If no guardian was named in the will, or the guardian named declined the office, or subsequently resigned it, the next of kin stepped in as (*b*) *tutor legitimus*. In the case of a widow, this was the son, if of age, or the husband's brother, and so on. In the case of a daughter, the brother, if of age, the uncle on the father's side, and so on. Among the patricians, if there were no kinsmen, the *gentiles* undertook the duties. If there was neither a *tutor testamentarius* nor a *tutor legitimus*, then the praetor appointed (*c*) a *tutor Atilianus*, so called because the *lex Atilia* (about B.C. 188) had introduced this kind of guardian. Under the Empire these guardians were named by the consuls, from the time of Marcus Aurelius by a regular *praetor tutelaris*. Women having three children were exempted by Augustus from all guardianship. Then Claudius abolished guardianship on the part of the *agnati* in the case of all women. Diocletian extended this abolition to the case of minors. After the time of Diocletian, guardianship over women fell into disuse, and afterwards women were themselves allowed to act as guardians. A guardian found guilty of betraying his trust was punished by *infamia* (q. v.). See CURATOR.

Among the Athenians the guardian (*ἐπίτροπος*), if not named by the father in the will, was generally appointed by the archon from the nearest relations. The archon was also the proper authority in suits relating to guardianship, which, during the minority of the ward, could be brought forward in the form of a public prosecution; and, after the ward had attained his majority, in that of a private lawsuit. See EPITROPUS.

Tutelary Deities. See DAEMON; GENIUS; RELIGIO.

Tuticānus. A Roman poet, and friend of Ovid (Ovid, *Pont.* iv. 12).

Tutor. A guardian. See TUTELA.

Tutŭlus. A kind of Roman head-dress, formed by plaiting the hair high above the forehead. It was characteristic of the *flamen* and his wife. See COMA; FLAMEN.

Tutulus. (Herculanean painting.)

Tweezers. See VOLSELLAE.

Twelve Tables (DUODĔCIM TABŬLAE). The Twelve Tables, the first code of Roman law, adopted in B.C. 451 and 450. They remained the foundation of Roman jurisprudence (*fons omnis publici privatique iuris*, Livy, iii. 34) until the promulgation of the Corpus Iuris (q. v.) by the emperor Justinian (about A.D. 530). Livy (iii. 31–37) and Dionysius of Halicarnassus (x. 55–60) narrate the circumstances under which the code was enacted. The measure was a concession to the plebeians in their struggle with the patrician class. An agitation for written laws, which might serve as a check on the arbitrary acts of the patrician magistrates, had begun as early as 462 (Livy, iii. 9). The principal Greek communities had long enjoyed the advantages of such laws. In 454 a commission of three men was sent abroad to study the institutions of Athens and other Greek cities. This commission returned, and finally, in 451, ten men (*decemviri*), of whom Appius Claudius was the leading spirit, were chosen as the sole magistrates for the year, with power to draw up laws. The first ten tables were thus produced, and adopted by the Comitia Centuriata. The following year another board of decemviri, still headed by Appius Claudius, was elected, and two more tables were added. A divergent account (Diod. xii. 26) ascribes the composition of the last two tables to Horatius and Valerius, the consuls of the year 499. The laws were cut on bronze plates, which were hung in a conspicuous place in the Forum (Livy, iii. 57). Whether these original copies survived the sack of Rome by the Gauls in B.C. 390 is disputed, the question turning on the ambiguous expression of Livy in vi. 1.

The authority of the Twelve Tables during the republican period was very great. Boys learned them by heart in the schools (Cic. *De Leg.* ii. 4, 9, and 23, 59). Later, this practice was discontinued. Though never repealed, the laws were gradually overlaid by praetorian decisions (*edicta*), which modified and supplemented them according to existing needs. These edicts came to be more important than the laws themselves (Cic. *De Leg.* i. 5, 17). There were several ancient commentaries on the Twelve Tables; the latest of these, by Gaius (second century A.D.), is often quoted in the Digests.

In general, the code of the Twelve Tables is spoken of by ancient writers in terms of admiration. The eleventh and twelfth tables, the work of the unpopular Second Decemvirate, are called by Cicero (*Rep.* ii. 37, 63) *duae tabulae iniquarum legum*; but the chief ground for this estimate of them appears to be the law, afterwards annulled, forbidding the intermarriage of patricians and plebeians. It must not be supposed that these two tables were an afterthought; it is clear from the language of Livy and Dionysius that the first ten tables, at the time of their adoption, were understood to be only a partial code, and that further legislation was expected. It is a noteworthy fact that the remarkable set of laws discovered in 1884 at Gortyna in Crete is cut upon a wall in twelve columns. See GORTYNA.

We cannot exactly define the relation of the Twelve Tables to preëxisting Roman law. But it is certain that they contained both new and old elements. There existed already a body of legal usages, and some of these had been formulated in maxims, known as *leges regiae*. Some of these maxims would seem from the language of Livy (vi. 1) to have existed in written form. The Twelve

Tables were based in part on this older law of custom (*τὰ πάτρια ἔθη*, Dionys. x. 55; *οἱ παρὰ σφίσιν αὐτοῖς ἄγραφοι ἐθισμοί*, *ibid.* 57). At least one of the *leges regiae*, relating to the *patria potestas*, was embodied in them (Dionys. ii. 27). On the other hand, they contained new features, and some of these were certainly derived from Greek sources. Thus we are told in particular by Cicero (*De Leg.* ii. 23, 59; 25, 64) that certain clauses restricting expense at funerals were taken almost word for word from the laws of Solon. Like statements are made by Gaius (*Dig.* x. 1, 13; xlvii. 22, 4) about two other laws. An Ephesian Greek named Hermodorus is said to have aided the decemviri in their work (Strab. p. 642; Pliny, *H. N.* xxxiv. 5, 11). The fact of Greek influence in the decemviral legislation is further brought out by striking resemblances between the Twelve Tables and the inscriptional code of Gortyna just mentioned—resemblances extending even to particular expressions (*se fraude esto*=*ἄπατων ἤμην*).

We possess about 100 fragments of the Twelve Tables, some containing quotations of their exact words, others only statements of content. The most important sources are Gellius (especially the interesting chapter xx. 1), Festus, Cicero, and Gaius. The arrangement of these fragments and their distribution among the Twelve Tables have been much discussed. The following is the system of Dirksen, which has obtained a considerable currency: Tables i. and ii., civil process; iii., procedure for debt; iv., *patria potestas;* v., guardianship and inheritance; vi., rights of property; vii., contracts; viii., *delicta* and *crimina;* ix., *ius publicum;* x., *ius sacrum* (including burial); xi. and xii., supplements and additions. This system is based on two things: (1) a few citations in which the number of the table is expressly stated; and (2) the citations from Gaius's commentary, the assumption being that the six books of that commentary corresponded to the twelve tablets of laws taken in pairs. But the validity of this assumption respecting Gaius's six books has been denied by many recent scholars, and even the hypothesis which underlies this and all previous attempts at arrangement—that the disposition of the code was strictly systematic, and that the contents of each tablet constituted a sort of unity, like a chapter—has been shown to be unsupported by analogies. (See, on all this, Schoell's *Prolegomena*, pp. 67, 68.) It may be added that the arrangement of the Gortynian Code, already mentioned, shows little system, and that its twelve columns are like pages of a book, and have nothing to do with the divisions of the subject-matter. It should therefore be borne in mind that all that we certainly know respecting the location of the different fragments is this: the law permitting the release of a son from *patria potestas* by three mancipations (sales) stood in the fourth table (Dionys. ii. 27); the sumptuary laws regulating funerals in the tenth (Cic. *De Leg.* ii. 25, 64); the prohibition of *connubium* between patricians and plebeians in one of the last two tables (Dionys. x. 60). Probably, also, the law defining proper causes of postponement for a suit was in the second table (Festus, p. 273, but the text is conjectural). Lastly, that the first table began with the words *si in ius vocat, ito* may be fairly inferred from Cic. *De Leg.* ii. 4, 9. It is the opinion of Mommsen that the *Fasti* or Calendar were contained in the Twelve Tables (cf. Cic. *Ad Att.* vi. 1, 8; Macrob. *Sat.* i. 13, 21), and Schoell assigns them to the eleventh table.

The language of the Twelve Tables abounded in archaisms. As examples may serve *im*=*eum*, *nox*=*noctu*, *endo*=*in* (*endo iacito inicito*), *escit*=*est*, *lessus*=*luctus*, *ast* as conditional particle, 'and if.' The condensation of expression is extreme: for instance, the subject is constantly omitted, even where there is a sudden change; as, *si nox furtum faxsit, si im occisit, iure caesus esto.* The laws contain some noteworthy provisions. Thus, gold must not be buried with a corpse, except that used to fasten teeth. The person of a debtor was forfeited to his creditors, who might divide his body among them. No actual occurrence of this, we are told, was on record in historical times.

The fragments of the Twelve Tables have been often edited, but the editions which mark a distinct advance are: J. Gothofredus, *Fragmenta XII Tabularum* (Heidelberg, 1616) (reprinted in Otto's *Thesaurus Iuris Romani*, vol. iii.); H. E. Dirksen, *Uebersicht der bisherigen Versuche zur Kritik und Herstellung des Textes der Zwölftafeln-Fragmente* (Leipzig, 1824); Rudolf Schoell, *Legis Duodecim Tabularum Reliquiae* (with valuable Prolegomena) (Leipzig, 1866).

Tyăna (*Τύανα*). Now Kiz Hisar; a city of Asia Minor, stood in the south of Cappadocia, at the northern foot of Mount Taurus. Tyana was the native place of Apollonius, the supposed worker of miracles. (See APOLLONIUS.) The southern district of Cappadocia, in which the city stood, was called Tyanitis. Near Tyana in Roman times was a great temple of Iupiter.

Tyché (*Τύχη*). (1) The Greek goddess of Fortune; also identified with Isis in one of her phases, and with the Roman goddess Fortuna. When identified with Isis she is represented with the lotus-flower, with erected feathers on her head, with the crescent and orb, and as holding a *sistrum*. See FORTUNA. (2) See SYRACUSAE.

Tydeus (*Τυδεύς*). The son of Oeneus, king of Calydon, and Periboea. He was obliged to leave Calydon in consequence of some murder which he had committed, but which is differently described by different authors. He fled to Adrastus at Argos, who purified him from the murder, and gave him his daughter Deïpylé in marriage, by whom he became the father of Diomedes, who is hence frequently called TYDĪDES. He accompanied Adrastus in the expedition against Thebes, where he was wounded by Melanippus, who, however, was slain by him (*Il.* xiv. 114–132). When Tydeus lay on the ground wounded, Athené appeared to him with a remedy which she had received from Zeus, and which was to make him immortal. This, however, was prevented by a stratagem of Amphiaraüs, who hated Tydeus, for he cut off the head of Melanippus and brought it to Tydeus, who divided it and ate the brain, or devoured some of the flesh. Athené, seeing this, shuddered, and left Tydeus to his fate. He consequently died, and was buried by Macon (Apollod. iii. 6, 8; Eustath. *ad* Hom. p. 1273).

Tymbres or **Tembrogius**. A river in Phrygia flowing into the Sangarius.

Tymnes (*Τύμνης*). A writer of epigrams, seven of whose productions are included in the Greek Anthology. Nothing is known of his death or personal history.

Tympănum (*τύμπανον*). (1) A tambourine, used more especially at the noisy revels of Dionysus and Cybelé; a broad rim of wood or metal covered with skin; sometimes also set round with a concave and semicircular sound-board. (2) A treadwheel for raising heavy weights and worked by man-power (Lucret. iv. 907).

Tymphaei (*Τυμφαῖοι*). A people of Epirus, on the borders of Thessaly, so called from Mount Tymphé. Their country was called TYMPHAEA (*Τυμφαία*).

Tymphrestus (*Τυμφρηστός*). Now Elladha; a mountain in Thessaly, in the country of the Dryopes, in which the river Spercheus rises.

Tyndareus, Tyndareōs (*Τυνδάρεως*). The son of Perieres and Gorgophoné, or, according to others, son of Oebalus, by the nymph Batia or by Gorgophoné. Tyndareus and his brother Icarius were expelled by their step-brother Hippocoön and his sons; whereupon Tyndareus fled to Thestius in Aetolia, and assisted him in his wars against his neighbours. In Aetolia Tyndareus married Leda, the daughter of Thestius, and was afterwards restored to Sparta by Heracles. By Leda, Tyndareus became the father of Timandra, Clytaemnestra, and Philopoë. One night Leda was embraced both by Zeus and by Tyndareus, and the result was the birth of Pollux and Helena, the children of Zeus, and of Castor and Clytaemnestra, the children of Tyndareus. The patronymic TYNDARĬDAE is frequently given to Castor and Pollux, and the female patronymic TYNDĂRIS to Helen and Clytaemnestra. When Castor and Pollux had been received among the immortals, Tyndareus invited Menelaüs to come to Sparta, and surrendered his kingdom to him. See DIOSCURI; HELENA; LEDA.

Tyndăris (*Τυνδαρίς*) or **Tyndarium** (*Τυνδάριον*). Now Tindaro; a town on the northern coast of Sicily, a little west of Messana, founded by the elder Dionysius, B.C. 396.

Typhon (*Τυφάων*) or **Typhōeus** (*Τυφωεύς*). A monster of the primitive world, who is described sometimes as a destructive hurricane, and sometimes as a fire-breathing giant. According to Homer, he was concealed in the earth in the country of the Arimi, which was lashed by Zeus with flashes of lightning (*Il.* ii. 782). In Hesiod, Typhaon and Typhoeus are two distinct beings. Typhaon is represented as a son of Typhoeus, and a fearful hurricane, and as having become by Echidna the father of the dog Orthus, Cerberus, the Lernaean hydra, Chimaera, and the Sphinx. Typhoeus, on the other hand, is called the youngest son of Tartarus and Gaea, or of Heré alone, because she was indignant at Zeus having given birth to Athené. He is described as a monster with 100 heads, fearful eyes, and terrible voices, who wanted to acquire the sovereignty of gods and men, but, after a fearful struggle, was subdued by Zeus with a thunderbolt. He begot the winds, whence he is also called the father of the Harpies; but the beneficent winds Notus, Boreas, Argestes, and Zephyrus were not his sons. He was buried in Tartarus, under Mount Aetna, the workshop of Hephaestus, whence it is called by the poets *Typhoïs Aetna* (Ovid, *Fasti*, iv. 491). Typhus was identified by the Greeks with the Egyptian god Set, who typified the power of darkness, and who slew Osiris. See Herod. ii. 156; iii. 5; and the article OSIRIS.

Tyrannion (*Τυραννίων*). (1) A Greek grammarian, a native of Amisus in Pontus, was taken captive by Lucullus, and carried to Rome, B.C. 72. He was given by Lucullus to Murena, who manumitted him. At Rome Tyrannion occupied himself in teaching. He was also employed in arranging the library of Apellicon, which Sulla brought to Rome, and which contained the writings of Aristotle. Cicero speaks in the highest terms of his learning and ability (*Ad Att.* ii. 6; iv. 4). See Planer, *De Tyrannione Grammatico* (1852). (2) A native of Phœnicia, the son of Artemidorus, and a pupil of the preceding. He was for some time a slave of Terentia, the wife of Cicero, who manumitted him. He taught at Rome and wrote a number of works now lost.

Tyrannus (*τύραννος*). In the Heroic Age all the governments in Greece were monarchical, the king uniting in himself the functions of the priest, the judge, and military chief. In the first two or three centuries following the Trojan War various causes were at work, which led to the abolition, or at least to the limitation, of the kingly power. Emigrations, extinctions of families, disasters in war, civil dissensions, may be reckoned among these causes. Hereditary monarchies became elective; the different functions of the king were distributed; he was called Archon (*ἄρχων*), Cosmus (*κόσμος*), or Prytanis (*πρύτανις*), instead of Basileus (*βασιλεύς*), and his character was changed no less than his name. Noble and wealthy families began to be considered on a footing of equality with royalty; and thus in process of time sprang up oligarchies or aristocracies, which most of the governments that succeeded the ancient monarchies were in point of fact, though not as yet called by such names. These oligarchies did not possess the elements of social happiness or stability. The principal families contended with each other for the greatest share of power, and were only unanimous in disregarding the rights of those whose station was beneath their own. The people, oppressed by the privileged classes, began to regret the loss of their old paternal form of government, and were ready to assist any one who would attempt to restore it. Thus were opportunities offered to ambitious and designing men to raise themselves by starting up as the champions of popular rights. Discontented nobles were soon found to prosecute schemes of this sort, and they had a greater chance of success if descended from the ancient royal family. An example is Pisistratus, who was the more acceptable to the people of Athens as being a descendant of the family of Codrus. Thus in many cities arose that species of monarchy which the Greeks called *tyrannis* (*τυραννίς*), which meant only a despotism, or the irresponsible dominion of one man. This very frequently was nothing more than a revival of the ancient government, and, though unaccompanied with any recognized hereditary title, or the reverence attached to old name and long prescription, was hailed by the lower orders of people as a good exchange, after suffering under the domination of the oligarchy. All "tyrannies," however, were not so acceptable to the majority; and sometimes we find the nobles concurring in the elevation of a despot, to further their own interests. Thus the Syracusan *Gamori*, who had been expelled by the populace, on receiving the protection of Gelon, sovereign of Gela and Camarina, enabled him to

take possession of Syracuse, and establish his kingdom there. Sometimes the conflicting parties in the State, by mutual consent, chose some eminent man, in whom they had confidence, to reconcile their dissensions, investing him with a sort of dictatorial power for that purpose, either for a limited period or otherwise. Such a person they called *aesymnetes* (*αἰσυμνήτης*). The *tyrannus* must be distinguished, on the one hand, from the *aesymnetes*, inasmuch as he was not elected by general consent, but commonly owed his elevation to some violent movement or stratagem, such as the creation of a body-guard for him by the people, or the seizure of the citadel; and, on the other hand, from the ancient king, whose right depended, not on usurpation, but on inheritance and traditionary acknowledgment. The power of a king might be more absolute than that of a "tyrant," as Phidon of Argos is said to have made the royal prerogative greater than it was under his predecessors; yet he was still regarded as a king, for the difference between the two names depended upon title and origin, and not on the manner in which the power was exercised. The name "tyrant" was originally so far from denoting a person who abused his power, or treated his subjects with cruelty, that Pisistratus is praised for the moderation of his government. Afterwards, when "tyrants" themselves had become odious, the name also grew to be a word of reproach, just as *rex* did among the Romans. Among the early "tyrants" of Greece those most worthy of mention are: Clisthenes of Sicyon, grandfather of the Athenian Clisthenes, in whose family the government continued for a century from its establishment by Orthagoras, about B.C. 672; Cypselus of Corinth, who expelled the Bacchiadae, B.C. 656, and his son Periander, both remarkable for their cruelty; their dynasty lasted between seventy and eighty years; Procles of Epidaurus; Pantaleon of Pisa, who celebrated the thirty-fourth Olympiad, depriving the Eleans of the presidency; Theagenes of Megara, father-in-law to Cylon the Athenian; and Pisistratus, whose sons were the last of the early "tyrants" on the Grecian continent. In Sicily, where "tyranny" most flourished, the principal were Phalaris of Agrigentum, who established his power in B.C. 568; Theron of Agrigentum; Gelon, already mentioned, who, in conjunction with Theron, defeated Hamilcar the Carthaginian, on the same day on which the battle of Salamis was fought; and Hieron, his brother: the last three celebrated by Pindar. The following also are worthy of notice: Polycrates of Samos, Lygdamis of Naxos, Histiaeus and Aristagoras of Miletus. Perhaps the last mentioned can hardly be classed among the Greek "tyrants," as they were connected with the Persian monarchy.

The general characteristics of a "tyranny" were, that it was bound by no laws, and had no recognized limitation to its authority, however it might be restrained in practice by the good disposition of the "tyrant" himself, or by fear, or by the spirit of the age. It was commonly most odious to the wealthy and noble, whom the "tyrant" looked upon with jealousy as a check upon his power, and whom he often sought to get rid of by sending them into exile or putting them to death. The "tyrant" usually kept a body-guard of foreign mercenaries, by aid of whom he controlled the people at home; but he seldom ventured to make war, for fear of giving an opportunity to his subjects to revolt. The causes which led to the decline of "tyranny" among the Greeks were partly the degeneracy of the "tyrants" themselves, corrupted by power, indolence, flattery, and bad education; for even where the father set a good example, it was seldom followed by the son; partly the cruelties and excesses of particular men, which brought them all into disrepute; and partly the growing spirit of inquiry among the Greek people, who began to speculate upon political theories, and soon became discontented with a form of government which had nothing in theory, and little in practice, to recommend it. Few dynasties lasted beyond the third generation. Most of the tyrannies which flourished before the Persian War are said to have been overthrown by the exertions of Sparta, jealous, probably, of any innovation upon the old Doric constitution, especially of any tendency to ameliorate the condition of the Perioeci, and anxious to extend her own influence over the States of Greece by means of the benefits which she conferred. Upon the fall of "tyranny" the various republican forms of government were established, the Dorian States generally favouring oligarchy, the Ionian democracy. Of the "tyrants" of a later period, the most celebrated are the two Dionysii. The corruption of the Syracusans, their intestine discords, and the fear of the Carthaginian invaders, led to the appointment of Dionysius to the chief military command, with unlimited powers; by means of which he raised himself to the throne B.C. 406, and reigned for thirty-eight years, leaving his son to succeed him. The younger Dionysius, far inferior in every respect to his father, was expelled by Dion, afterwards regained the throne, and was again expelled by Timoleon, who restored liberty to the various States of Sicily.

See Plaes, *Die Tyrannis in ihren beiden Perioden bei den alten Griechen* (Bremen, 1852); Drumann, *De Tyrannis Graecorum* (Halle, 1812); Schömann, *Griech. Alterth.* i. pp. 169 foll.; Zeller in *Berichte der Berl. Acad.* (1865); and the articles OLIGARCHIA; TIMOCRATIA.

Tyras (*Τύρας*). Now the Dniester; subsequently called **Danastris**; a river in European Sarmatia, forming in the lower part of its course the boundary between Dacia and Sarmatia, and falling into the Pontus Euxinus north of the Danube. At its mouth was a town of the same name.

Tyriaeum (*Τυριαῖον*). Now Ilghin; a city of Lycaonia, twenty parasangs west of Iconium (Xen. *Anab.* i. 2, 24).

Tyro (*Τυρώ*). The daughter of Salmoneus and Alcidicé. She was the wife of Cretheus, and beloved by the river-god Enipeus in Thessaly, in whose form Poseidon appeared to her, and became by her the father of Pelias and Neleus. By Cretheus she was the mother of Aeson, Pheres, and Amythaon (*Od.* xi. 235; Apollod. i. 9, 8).

Tyros (*τυρός*). Cheese. See CASEUS.

Tyrrhēni, Tyrrhenia. See ETRURIA.

Tyrrhēnum Maré. See ETRURIA.

Tyrrhēnus (*Τυρρηνός* or *Τυρσηνός*). The son of the Lydian king Atys and Callithea, and brother of Lydus. He is said to have led a Pelasgian colony from Lydia into Italy, into the country of the Umbrians, and to have given to the colonists his name. Others call Tyrrhenus a son of Heracles by Omphalé, or of Telephus and Hiera, and a

brother of Tarchon (Dionys. i. 28). The name Tarchon is perhaps only another form of Tyrrhenus. See ETRURIA.

Tyrtaeus (Τυρταῖος or Τύρταιος). A Greek described as the son of Archembrotus of Aphidnae in Attica. In the seventh century he introduced the Ionic elegy into Sparta. According to the older tradition, the Spartans during the Second Messenian War were commanded by an oracle to take a leader from among the Athenians, and thus to conquer their enemies, whereupon they chose Tyrtaeus as their leader (Plato, *De Leg.* i. p. 629; Lycurg. *c. Leoch.* p. 211; Diod. xv. 66). Later writers state that Tyrtaeus was a lame schoolmaster, of low family and reputation, whom the Athenians, when applied to by the Lacedaemonians in accordance with the oracle, purposely sent as the most inefficient leader they could select, being unwilling to assist the Lacedaemonians in extending their dominion in the Peloponnesus, and little thinking that the poetry of Tyrtaeus would achieve that victory to which his physical infirmity seemed to forbid his aspiring (Paus. iv. 15, 3; Just. iii. 5; Themist. xv. p. 242; Schol. *ad* Hor. *A. P.* 402). The poems of Tyrtaeus exercised an important influence upon the Spartans, quieting their dissensions at home, and animating their courage in the field. In order to appease their civil discords, he composed his celebrated elegy entitled *Legal Order* (Εὐνομία: Arist. *Pol.* v. 7, 1; Paus. iv. 18, 2). But still more celebrated were the poems by which he animated the courage of the Spartans in their conflict with the Messenians. These poems were of two kinds: namely, elegies, containing exhortations to constancy and courage, and descriptions of the glory of fighting bravely for one's native land; and more spirited compositions, in the anapaestic measure, which were intended as marching-songs (ἐμβατήρια), to be accompanied by the music of the flute (Paus. iv. 14, 1; Athen. p. 630; Plut. *Cleom.* 2; Hor. *A. P.* 402; Suid. *s. v.*). He lived, it is said, to see the success of his efforts in the entire conquest of the Messenians, and their reduction to the condition of Helots. His life therefore lasted down to B.C. 668, which was the last year of the Second Messenian War. It has been observed that Tyrtaeus in a fragment of the *Eunomia* seems to speak of himself as a Lacedaemonian, and though this might be explained by his having been made a citizen of Sparta, yet Herodotus (ix. 35) does not include him among the few foreigners who became Spartan citizens. Hence some (following Strab. p. 362) have doubted the truth of his Athenian origin. On the other hand, there is so strong a consensus of ancient authorities, including Plato (*l. c.*), for his Athenian origin that it can hardly be resisted.

The fragments of his poems are edited by Bach, with the remains of the elegiac poets Callinus and Asius (Leipzig, 1831), and in Bergk's *Poet. Lyr. Graec.* ii. pp. 8–22 (1878). See Carus, *De Tyrtaei Patria et Aetate* (1863); Hölbe, *De Tyrtaei Patria* (1864); and Hoffmann, *Ueber Tyrtaeus und seine Kriegslieder* (1877).

Tyrus (Τύρος: Aram. Tura: O. T. Tsōr). Now Sur; one of the greatest and most famous cities of the ancient world, standing on the coast of Phoenicé, about twenty miles south of Sidon. It was a colony of the Sidonians, but gradually eclipsed the mother city, and came to be the chief place of all Phoenicé for wealth, commerce, and colonizing activity. Respecting its colonies and maritime enterprise, see PHOENICÉ and CARTHAGO. The Assyrian king Shalmaneser laid siege to Tyre for five years, but without success. It was again besieged for thirteen years by Nebuchadnezzar, and there is a tradition that he took it, but the matter is not quite certain. At the period when the Greeks began to be well acquainted with the city, its old site had been abandoned, and a new city erected on a small island about half a mile from the shore and a mile in length, and a little north of the remains of the former city, which was now called Old Tyre (Παλαίτυρος). This island, which Pliny estimated at two and three-quarter miles in circumference, was separated from the mainland by a channel seven-tenths of a mile broad (Strab. p. 756), or according to Diodorus and Curtius, four stadia (Diod. xvii. 60; Q. Curt. iv. 2). At present the breadth is only one-third of a mile. With the additional advantage of its insular position, this new city soon rose to a prosperity scarcely less than that of its predecessor; though under the Persian kings (?) it seems to have ranked again below Sidon. (See SIDON.) There were two harbours: one on the north of the island, known as the Sidonian Harbour, and the other on the south side, known as the Egyptian Harbour (Arr. *An.* ii. 20; Strab. *l. c.*), the names expressing the direction in which they faced. In B.C. 322 the Tyrians refused to open their gates to Alexander, who laid siege to the city for seven months, and united the island on which it stood to the mainland by a mole constructed chiefly out of the ruins of Old Tyre. This mole has ever since formed a permanent connection between the island and the mainland (Arr. ii. 17–26; Q. Curt. iv. 4–27; Diod. xvii. 40–45). After its capture and sack by Alexander, Tyre never regained its former consequence, and its commerce was for the most part transferred to Alexandria. It was subject to the Syrian kings, but became a free city with its own coinage in B.C. 126, and till the time of Augustus, when it lost its independence (Dio Cass. liv. 7). Septimius Severus made it a Roman colony. It was the see of a Bishop, and St. Jerome calls it the most beautiful city of Phœnicia. It was a place of considerable importance in mediæval history, especially as one of the last points held by the Christians on the coast of Syria. See Jeremias, *Tyrus bis zur Zeit Nebukadnezar's* (1891).

Tzetzes. (1) IOANNES (Ἰωάννης Τζέτζης). A Greek grammarian and poet of the second half of the twelfth century A.D. He lived in Constantinople, and though for his time he may be called learned, his erudition is wholly superficial, as is amply proved by his existing writings. Besides commentaries on Homer, Hesiod, Aristophanes, and other classical writers, which are valuable for the authorities quoted in them, he composed, in 1676 feeble hexameters, an epic poem entitled *Iliaca*, containing the legend of Troy from the birth of Paris till the opening of the *Iliad*, the incidents of the *Iliad* in detail, and the further course of the war up to the return of the Greeks. It is in three parts: (*a*) *Ante-Homerica;* (*b*) *Homerica;* (*c*) *Post-Homerica.* Besides this he wrote a book of histories in 12,661 "political verses"—i. e. verses based on accent rather than on syllabic quantity. (See POLITICI VERSUS.) These are commonly but wrongly called "chiliads" from an arbitrary division of the work into thirteen books of

1000 lines each. He is also the author of a collection of stories partly mythical, partly historical, worthless in themselves, but valuable as including numerous items of information which would otherwise have been unknown to us. The *Iliaca* is edited by Bekker (Berlin, 1816) and Lehrs (1840); the *Chiliades* by Kiessling (Leipzig, 1826).

(2) Isaac Tzetzes, brother of the preceding, was the author of a valuable commentary on Lycophron usually printed in editions of that author. See Hart, *De Tzetzarum Nomine, Vita, Scriptis* (1880).

U

U, as a symbol. See V.

Ubii. A German people, who originally dwelt on the right bank of the Rhine, but were transported across the river by Agrippa, in B.C. 37, at their own request, because they wished to escape the hostilities of the Suevi (Caes. *B. G.* iv. 3, 18; Tac. *Ann.* xii. 27; Suet. *Aug.* 21). They took the name of Agrippenses, from their town Colonia Agrippina (Cologne).

Ucalĕgon (*Οὐκαλέγων*). One of the elders at Troy, whose house was burned at the destruction of the city (*Il.* iii. 147; Verg. *Aen.* ii. 312). Hence Juvenal uses his name for a neighbour whose house is on fire (iii. 199).

Udo. A sort of sock or stocking made of goatskin (Mart. xiv. 140).

Ufens. Now the Uffente; a river in Latium, flowing from Setia, and falling into the Amasenus.

Uffūgum. A town in Bruttium, between Scyllacium and Rhegium.

Ulpiānus, Domitius. The most celebrated among Roman jurists next to Papinianus. Born at Tyre about A.D. 170, he began his career in Rome under Septimius Severus as colleague of Papinianus; and, under Elagabalus and Alexander Severus, whose preceptor and guardian he had been, he filled the office of a *praefectus praetorio*. During his tenure of this office he was murdered (228) before the eyes of the emperor by the Praetorians, whom he had exasperated by the strictness of his discipline. His two chief works, on the praetorian law (*Ad Edictum*), in eighty-three books, and on the civil law (*Ad Sabinum*), in fifty-one books, were held in high esteem, and formed the foundation of the Pandects of Justinian's *Corpus Iuris*. Of this portion the extracts from his writings form a full third. Besides these excerpts we have a small part of his *Regularum Liber Singularis* (ed. by Böcking [Bonn, 1855]), and of his *Institutiones*, included in Huschke's *Iurisprudentia Anteiustiniana*, 568, and edited by Vahlen (Bonn, 1856). See Schilling, *De Ulpiano* (Breslau, 1824); and Karlowa, *Röm. Rechtsgeschichte*, i. 743.

Ulpius Traiānus. See Traianus.

Ultor. "The avenger;" a surname of Mars, to whom Augustus built a temple at Rome in the Forum, after taking vengeance upon the murderers of his great-uncle, Iulius Caesar.

Ulŭbrae. A small town in Latium, of uncertain site, but in the neighbourhood of the Pontine Marshes.

Ulysses. See Odysseus.

Umbella. See Umbraculum.

Umbilīcus (*ὀμφαλός*). (1) See Delphi, p. 481. (2) See Liber, p. 951.

Umbo (*ἄμβων*). (1) A knob or boss projecting from the centre of a shield. (See Clipeus.) (2) A bunch or fold in a garment, especially that produced by drawing up a part of the toga and fastening it at the breast (Tertull. *Pall.* 5). (3) A curbstone; the raised margin of a sidewalk.

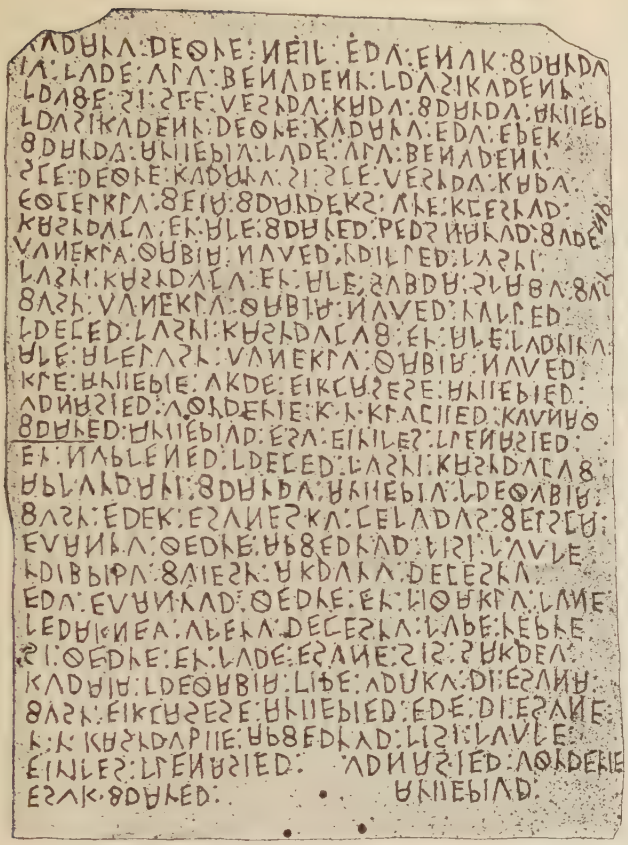
Umbra. (1) (*εἴδωλον, imago*). A ghost. The ancients believed that the spirit of the human body descended into subterranean regions after life was extinct, and there retained the same figure and appearance it had possessed during life, so as to be recognizable by the relatives and friends who followed it, but without any real corporeal substance; or, in other words, that it was visible but impalpable. Those who had passed a life of virtue were removed to Elysium (see Elysii Campi), where they continued in the enjoyment of perpetual youth, and sharing in the intercourse of such friends and relatives as had obtained the same lot. Those, on the contrary, who had lived in vice were removed to Tartarus, where they wore out an existence of perpetual punishment (Serv. *ad* Verg. *Aen.* iv. 654; Tibull. iii. 2, 9; Lucret. i. 120; Hor. *Carm.* iv. 7, 14). Hence the poets and artists always invest the shades with a corporeal form, and with the same appearances which the body presented during life. Popular tradition held that the spirits of the dead could revisit the earth; so that there are many passages in ancient literature that are curiously suggestive of the modern "ghost-story." Several such are found in a letter of Pliny (vii. 27), where all the accessories of strange noises, clanking chains, etc., are introduced, and where the longest tale is the literary prototype of Washington Irving's ghost-story in *Dolph Heyliger*. See Tylor, *Primitive Culture* (1871); and the article Larva. (2) A guest who comes to dinner on the invitation, not of the host, but of one whom the host has invited (Hor. *Epist.* i. 5, 28).

Umbracŭlum (*σκιάδειον*) and **Umbella.** A sunshade or parasol made like our own to open and shut (Aristoph. *Eq.* 1348). The ribs were called *virgae* (Ovid, *A. A.* ii. 209). It was usually carried

Lady with Maid carrying Umbraculum. (From a vase.)

by a female slave, who held it over the head of her mistress. The use of umbrellas was almost confined to women, for it was considered effeminate for men to use any protection against the sun except when travelling. Some luxurious men, how-

ever (Athen. xii. p. 534 *a*), occasionally braved public opinion and used them. In Hellenistic times a large straw hat came into fashion, doubtless as a substitute for the parasol. At Rome they were also taken to the amphitheatre as a protection against the sun. See Paciandi, *De Umbellae Gestatione* (Rome, 1752); Marquardt, *Privatleben*, p. 148. For the carrying of the parasol in processions, see SCIADEPHORIA.



Umbrella. See UMBRACULUM.

Umbria (Ὀμβρική). The portion of Central Italy between the rivers Sapis in the north and Nar in the south, the Apennines in the west, the Ager Gallicus near Ariminum and the Ager Picens near Hadria in the east; in Augustus's division, the sixth region of Italy, with about fifty important cities (Pliny, *H. N.* iii. 112 foll.), after B.C. 220, traversed by the Via Flaminia. It was able, at the time of the Second Punic War, to muster 20,000 warriors against the Keltic foe. The name Ὄμβρικοί (shorter Ὄμβροι) is first met in Herodotus as an undefined title for the Italic tribes in the region of the Po, of which the Etruscans took possession. The ancients derived the name from ὄμβρος, *imber*, making the people as old as the Deluge; the Umbrian-Roman comedian Plautus, with more probable correctness, in a joke (*Most.* 770) connects the word with *umbra*. The name probably designated the tribes of the western mountains from the standpoint of some of the Greeks.

Most nearly related to the Latins and the Sabellian tribes, the Umbrians were the ruling race of Northern Italy until the Romans, in the extension of their power, about B.C. 300, brought them also under their sway. The Sarsinates were the last to submit to the Roman *imperium* in the year 266, after a vain attempt to recover their freedom; the Sarsinate Plautus, who wrote for the Roman stage even before 200, is so completely Latinized that his ancient commentators had trouble to discover a single Umbrian word in his comedies. The historical importance of the Umbrians, therefore, belongs to an undefined period prior to the end of the fourth century B.C., when they formed a powerful barrier for the Italic peoples against the tribes of another race pushing on from the North. The elder Cato had placed the founding of the Umbrian city of Ameria in the year B.C. 1133, fifty years after the fall of Troy, as calculated by the Alexandrian scholars. Once subjugated by these strangers, or while still contending with them for supremacy in the plain of the Po and beyond the Apennines, the Umbrians had been more and more forced back, and at last confined to the above-named position in the valleys east of the Apennines. There they had been obliged to give place to the Kelts and Etruscans, who, to the last, were considered by the Umbrians the chief enemies of their own name. Various Keltic tribes had at different times pushed their way south through the plains of Lombardy into Umbrian territory (Livy, v. 34 foll.); the tomb of a Kelt, with Keltic and Roman inscriptions, was found at Tuder in the heart of Umbria. This race is represented in the ritual records of the Umbrians by the tribe of the Iapyds, which is not mentioned in the Roman annals until the second century B.C. The other hereditary enemy was the Etruscans. Not only did the Umbrians contend with Etruscans for the adjoining lands of the Po region, where many settlements were alternately Umbrian and Etruscan (Strabo, v. p. 216), but even in Etruria itself, many districts had been in the hands of the Umbrians before they were driven out by the Etruscans; and before the onsets of the Romans both nations made war against each other alternately to and fro across the Tiber, which formed the boundary between their territories. Thus the strongest barrier was set against the spread of the Umbrians to the north and west. It is no wonder, then, that the Umbrians, hemmed in by Kelts and Etruscans, were unable to offer any successful resistance to the conquering enemies of their own line pressing upon them from the Nar, since we see them without unity or centralized power, split up into a number of cities or States, which were just as hostile to each other as to the national enemy, as the Iguvini towards the Tadinates, the Sarsinates towards the rest of the Umbrians. The contrast to the political ideas and discipline of the Romans is apparent also in the contrasting application of an hereditary expression for their civil divisions. While the Romans subordinated the tribus as a fractional part to the *civitas*, with the Umbrians the *trifu*, i. e. the outlying country confederation belonging to the city, stood above the *tota*, as they called the city organization, as the essence of the State; e. g. the district of Iguvium or the tribus Sapinia on the northern boundary of the land (Livy, xxxi. 2). As in Rome, consuls, so at the head of Umbrian States we find *marones*, a word familiar through Vergil's cognomen.

The fact that we know a little more of the Umbrians, their language and civilization, than the scanty and inexact records of the ancient historians and geographers tell us, is due to the inscriptions on the monuments which the soil of the land has preserved for modern times. It is true that the smaller inscriptions from Asisium, Fulginia, Tuder, Ameria, including two dies for coinage, only seven in number, and of limited extent, give little information; but from the inscription of Assisi we may mention the mayor Propartis as the ancestor of the Umbrian Callimachus, who in the last verse of his elegy on Maecenas (iii. 9) evidently makes an allusion to the etymology, clearer in that form, of his name (*in partes*). Far richer and more valuable, in their extent almost unique in Italian epigraphy, are the seven bronze tablets excavated in 1444 in the theatre at Iguvium (now Gubbio) and still preserved at that place, written partly in the Umbrian, partly in the Latin alphabet, but all in the Umbrian dialect. They are the legacy of a religious brotherhood, which had at Iguvium nearly the same importance as the Pontifical Collegium at Rome, and at all events far surpassed the known Roman brotherhoods in weight and influence in the sacras of all the communities. The Temple of Iupiter Apenninus on the heights at Iguvium was famous in ancient times; but certain indications of the position of this temple and cult are lacking in the tablets.

These tablets (TABŬLAE IGUVĪNAE or EUGUBĪNAE) are the work of the Fratres Atiedii, who have here set down their ritual and in addition some decisions of their College. Of the ten great families for whose alliance a sacrifice of pigs and goats is offered twice a year, the *Atiedias familia* occupies the first place; the similarity of this name to the ethnic name of the Umbrian city Attidium is certainly not accidental. The most

One of the Eugubine Tablets. (Bréal.)

important tablets are I., VI., and VII., which describe the most essential sacrificial rites of the ancient communities, the lustration of the sacred citadel (*montem piare*), and the purification of the people (*circumferre populum*), from moment to moment and with all the ceremonies and prayers—Tablet I. briefly, VI. and VII. in greater detail, just as among the Roman *Fratres Arvales* the protocols of the rites are at first short, later more detailed and verbose. At the consecration of the citadel a procession went from gate to gate, and before and behind each gate a rich sacrifice was offered for the citadel and town of Iguvium. The celebration was concluded with sacrifices of bullocks at the Temple of Iupiter and a deity related to Iuno Curritis, which probably stood upon the citadel; the whole ceremony occupied the greater part of the day. "Then the citadel shall be purified; but if anything should be omitted, the officiating priest must observe the birds, turn back at the first gate, and begin the sacred rite anew." Tablet II. gives directions for a sacrifice improperly made and for the service of the dead, and on the other side for the half-yearly family reunions; III. and IV. add the ritual of the *ambarvalia* to the *amburbium* and *ambilustrium* described in I., VI., and VII.; V. contains decrees of the College as to what the officiating priest and the members of the society have to perform and to demand in regard to the expenses necessary for the *sacra*, the sacrificial feast, the distribution of the flesh, etc. As we possess no documents similar to these Umbrian remains concerning Roman religion and religious observances, and least of all from the time when the Roman cult was not yet permeated and adulterated by the Grecian, the great importance of these monuments for all investigation of Roman as well as of Italian ceremonial systems is self-evident. As the whole Roman literature, frequently as it refers to auspices and other kindred terms, does not tell us much of their nature, the arrangement of the temple, the methods and forms of auspices, etc., as the beginning of the sixth Umbrian tablet, its statements are necessarily the foundation for all scientific investigation of these questions. The significance of the *vacca honoraria* in contrast to the *hostiae piaculares* in the Roman Arval-rites had been shown in the Umbrian *vittu vufru*, before the recently discovered record of the Roman secular festival under Augustus had instructed even Roman antiquarians on the point (Mommsen, *Ephem. Epigraph.* viii. p. 270). See LUDI.

But infinitely greater in value than the information which these tablets contain is their linguistic importance, for we must not forget that some light is shed by the language upon those periods of the people on which history is silent, in so far as it interprets the origin of a race and its connection with or opposition to other peoples. Although in the last century, misled by the characters, scholars associated Umbrian and Etruscan, every one knows, from the language, that these two races had nothing in common. This, however, does not preclude the possibility that in consequence of centuries of proximity each one borrowed features from the other, or both from a third; as, e. g., the Umbrian-Italian words *maron* (city official) and *vinu* are found also in Etruscan. This much at least is sure, on the other hand, that the Umbrians received their writing and alphabet from the Etruscans. And this very point throws still further light on primitive times. For while their language unites the Umbrians with the Latins, Sabines, Samnites, and the smaller peoples of Central Italy, so that we roughly class them all as Italic, the writing separates the Umbrians from the Latins and Faliscans, and places them in a closer relation, produced probably by longer living together, with the Samnites (Oscans), who, together with the Umbrians, adopted the same Etruscan alphabet. In this alphabet, to which the sign 8 for the Italic fricative *f* is peculiar, the character for the vowel *o* was wanting (so in Umbrian *puplum* is written for *poplom*), as were also the characters for medial *g* (for which *Ikuvina* and *Iuvina* are written), and *d*, which is supplied partly by *t* (*tekuries* for the Latin *decuries*). But the Umbrians compensated for this by incorporating two new characters in their alphabet, both modifications of an older *r*-sign, as the sound represented by the first letter had really relationship with the *r*-sound. The second letter was then arbitrarily formed in imitation of the first. The first is q, represented

in Latin writing by *rs*, in general etymologically corresponding to the Greek δ—e.g., *persu*, for *πόδα*, *pedem*; sometimes to *l*, as in *karsitu* for *καλέιτω*, *calato*. The fact that the Latin transcription employed *r* as well as *s* indicates a dental sound, such as the rubbing of the tongue between the teeth produces. The other letter is **d**, rendered *s'* in the Latin writing, etymologically corresponding to *k* before *i* and *e*: *fas'ia* for Latin *faciat*, *pas'e* for Latin *pace*. This fact, that the Umbrian, in agreement with the Romance languages, changes the original guttural into the sibilant before light vowels, is the more remarkable since in related dialects no trace of this is found, nor in Latin before the time of Constantine. But this is one of many indications that important linguistic processes of the Romance languages have their beginning in the far-distant past of the Italic, but, pushed aside and restrained by the development and predominance of literary Latin, only with its decadence after the time of the Antonines come to the surface and into use again. The language of the Umbrians, as we know it from the monuments, embraces approximately the second century B.C. The inscriptions written in the Latin alphabet may be assigned on palaeographic and other grounds to the time of Sulla, roughly to B.C. 100; those written in Umbrian characters, therefore, tablets written from right to left as among the Etruscans, must be as much older as is required for certain changes in the language, shown in later tablets, to have become fixed. Among these changes the progress of rhotacism in place of an original *s* is especially prominent, as e.g. in the older tablets we find the genitive singular *totas* like *σοφίας*, *paterfamilias*, but in the later, *totar*. From this difference we distinguish Old Umbrian, written in the national alphabet, and New Umbrian, written in Latin; the former reaches scarcely beyond the war with Hannibal, but may perhaps, as appears from the older tablets (I. to V.), have been produced in different decades of the second century, since even in them slight differences in language appear.

On the whole, the Umbrian more nearly resembles the Oscan than the Latin, the reason for which has been already indicated in its phonology (Umbr.-Osc. *pantam*, Lat. *quantam*), in inflection (nominative plural Umbr.-Osc. *viros*, Lat. *viri*; Umbr.-Osc. *frateer*, Lat. *fratres*; fut. Umbr.-Osc. *fust*, Lat. *erit*, etc.), in vocabulary (Umbr.-Osc. *heriom*, Lat. *velle*). The discoveries of Oscan remains in recent years have confirmed the presumption of a very close agreement between Oscans and Umbrians in matter as well as in language (e.g. in the pentadic family order). But the Oscan gives the impression of a more vigorous plant, as though unfolded in the sunlight of Magna Graecia. It has more genuine, transparent, elegant forms, while with the Umbrians even their language reflects the pressure of their political relations, narrowing and stunted. All the diphthongs have disappeared (*oktur*, Lat. *auctor*, *kvestur*); the endings are mangled (*nome* for *nomen*, *emantu* for *emantur*, etc.); in composition four prepositions, appearing in Latin as *ab*, *ad*, *an*, and *in*, are reduced to the bare *a*-vowel.

If we bring Latin into comparison, the Umbrian has most similarity in its general structure with the Latin of two periods—the first, before it had been elaborated on literary lines, the second after the decline of the literature at its vulgarization and breaking up into provincial idioms. It is therefore not probable that a national literature preceded or accompanied the Umbrian which we know. Among the smaller tribes of Central Italy the Paeligni spoke a dialect occupying a place about midway between Umbrian and Oscan; but in spite of the greater separation in their positions, in historic times, the language of the Volsci comes near to the Umbrian. See ITALIA.

The principal authority is Aufrecht and Kirchhoff, *Die Umbrischen Sprachdenkmäler* (Berlin, 1849); Huschke, *Die Iguv. Tafeln* (Leipzig, 1859), chiefly for the facts; Bréal, *Les Tables Eugubines* (Paris, 1875, with photo-lithographic atlas), especially useful as an introduction to the language; Bücheler, *Umbrica* (Bonn, 1883); Von Planta, *Grammatik der Osk.-Umbr. Dialekte*, i. (Strassburg, 1893). For the history and geography, Nissen, *Italische Landeskunde*, i. p. 502 foll., and, above all, Borrmann in the *Corpus Inscript. Latinarum*, xi. 2, in which are collected the Latin inscriptions of Umbria. Cf. OSCI.

Umbro. Now the Ombrone; one of the largest rivers in Etruria, falling into the Tyrrhene Sea.

Uncia (*οὐγκία*). An ounce; the twelfth part of anything, especially of an *as*. It was the name of a small Roman copper coin (Varro, *L. L.* v. 171).

Roman Uncia (one-third of original size).

Uncials. See PALAEOGRAPHY.

Unctor. An anointer. See ALIPTAE; ATHLETAE; BALNEAE.

Undertaker. See FUNUS; USTOR.

Unelli. A people on the northern coast of Gaul, opposite Britain (Caes. *B. G.* ii. 34).

Unguentum (*ἔλαιον*, *μύρον*, *σμῆγμα*, *σμῆμα*). An ointment or perfume, both being extensively used by the ancients. The earliest and most common of unguents was olive-oil (see OLIVUM), used after the bath and in the preparation of the person for athletic contests. Other oils, more expensive and used partly for the skin and partly for the hair, are enumerated by Pliny (*H. N.* xiii. 4–18). They are usually named from the substance with which they were perfumed, as *irinum* (iris), *rosaceum* (rose), *narcissinum* (narcissus), *sesaminum* (sesame), *cardamomum* (cardamum), *cinnamomum* (cinnamon), *crocinum* (saffron), etc. Scented powders (*διαπάσματα*) were also popular (Theophr. *Odor.* 8). Luxurious persons carried oils and essences to the bath in little boxes (*narthecia*) or in scent-bottles (see ALABASTRUM). Perfumers were called *μυρεψοί*, *μυροπῶλαι*, *unguentarii*, and did a thriving business. In the effeminate city of Capua a whole street or square (the Seplasia) was given up to them (Cic. *In Pis.* ii. 24). See Boettiger, *Sabina*, last ed. rev. by Fischer (Munich, 1878); and for cosmetics the articles FUCUS; MELINUM. For soaps and powders see FULLO; SAPO; SPUMA.

Unio (*οἴνη*). (1) The one-spot on dice. See TALUS. (2) A solitaire pearl (Mart. viii. 81, 4).

Universities. See ALEXANDRIAN SCHOOL; EDUCATION.

Unlucky Days. See DIES.

Upis (*Οὖπις*). (1) A surname of Artemis as the goddess assisting women in childbirth. (2) The name of a mythical being, who is said to have reared Artemis, and who is mentioned by Vergil

as one of the nymphs in her train (*Aen.* xi. 532). The masculine Upis is mentioned by Cicero as the father of Artemis.

Ur. See EDESSA.

Urania (*Οὐρανία*). (1) One of the Muses, a daughter of Zeus by Mnemosyné. The ancient bard Linus is called her son by Apollo, and Hymenaeus also is said to have been a son of Urania. She was regarded, as her name indicates, as the Muse of Astronomy, and was represented with a celestial globe, to which she points with a small staff. (2) Daughter of Oceanus and Tethys, who also occurs as a nymph in the train of Persephoné. (3) A surname of Aphrodité, describing her as "the heavenly," or spiritual, to distinguish her from Aphrodité Pandemos. Plato represents her as a daughter of Uranus, begotten without a mother. Wine was not used in the libations offered to her. See APHRODITÉ.

Urănus (*Οὐρανός*). Sometimes called a son and sometimes the husband of Gaea (Earth). By Gaea, Uranus became the father of Oceanus, Coeus, Crius, Hyperion, Iapetus, Thia, Rhea, Themis, Mnemosyné, Phoebe, Tethys, Cronos; of the Cyclopes —Brontes, Steropes, Arges; and of the Hecatoncheires—Cottus, Briareus, and Gyes. According to Cicero, Uranus was also the father of Mercury by Dia and of Venus by Hemera (Cic. *N. D.* iii. 22, 55–58). Uranus hated his children, and immediately after their birth he confined them in Tartarus, in consequence of which he was castrated and dethroned by Cronos at the instigation of Gaea. Out of the drops of his blood sprang the Gigantes, the Melian nymphs, and, according to some, Silenus; and from the foam gathering around his limbs in the sea sprang Aphrodité (Hes. *Th.* 126–193; Apollod. i. 1).

Urbigēnus Pagus. See HELVETII.

Urbīnum. (1) HORTENSÉ. Now Urbino; a town in Umbria and a municipium. (2) METAURENSÉ. Now Urbania; a town in Umbria on the river Metaurus, and not far from its source.

Urceus, dim. **Urceŏlus** (*πρόχοος*). A one-handled jug used especially for pouring liquids from one vessel into another (Mart. xi. 56). It was a vessel in common use at the sacrifices. Its general shape was that shown in the illustration given under OENOCHOÉ.

Urcinium. Now Ajaccio; a town on the western coast of Corsica.

Uria. Called HYRIA by Herodotus; a town in Calabria, on the road from Brundusium to Tarentum, was the ancient capital of Iapygia, and is said to have been founded by the Cretans under Minos (Herod. vii. 170). It is now Oria.

Urinātor (*ἀρνευτήρ, κολυμβητής*). A trained diver (Livy, xliv. 10).

Urine as a detergent. See FULLO.

Urium. A small town in Apulia, from which the Sinus Urius took its name, being the bay on the northern side of Mount Garganus opposite the Diomedean Islands.

Urna.

Urna (*κάλπις*). (1) A Roman water-vessel of the shape shown in the accompanying illustration from an original. (2) A vessel of similar shape used for the ashes of the dead. (3) A vessel used for drawing lots at the Comitia, and as a ballot-box. See COMITIA.

Ursus. A contemporary of the emperor Domitian, whom he dissuaded from killing his wife Domitia. Statius addressed to him a poem of consolation on the death of a favourite slave (*Silv.* ii. 6), and he also mentions him in the preface to the second book of his *Silvae*.

Urvum or **Urbum.** The plough-tail, also called *bura*. See ARATRUM.

Usipĕtes or **Usipii.** A German people who, in the time of Caesar, took up their abode on the Lippe. At a later time they became lost under the general name of Alemanni (Caes. *B. G.* iv. 4; Tac. *Ann.* i. 50; xiii. 54).

Ustīca. A valley near the Sabine villa of Horace.

Ustor (*νεκροκαύστης*). The person who assisted the undertaker (*pollinctor, libitinarius*) in laying out a corpse upon the pyre for burning (Mart. iii. 93). The occupation was regarded as a low and somewhat degraded one (Lucan, viii. 731). See FUNUS.

Usucapio. A term of Roman law signifying the acquisition of full and complete ownership ("Quiritary") through undisputed possession for a prescribed period of time (*Dig.* xli. 3, 3). Only persons having *commercium* (q. v.) could exercise this right, and it did not, of course, apply to stolen property (*res furtivae*), and certain other things were exempted by law from acquisition through usucapio—e. g. property belonging to minors under guardianship, property belonging to towns, etc. (See also PIGNUS.) So sweeping, however, was the right of usucapio that if a man took possession of a piece of land or other property belonging to an inheritance, even though he knew that he had no title to it, and held it unchallenged for a year, it became his in full legal ownership (Gaius, ii. 54). See Schirmer, *Grundidee der Usucapion* (1855); Puchta, *Institutionen*, §§ 239, 240; and the article DOMINIUM.

Usūra. See FENUS.

Ususfructus. The so-called "real" right of using and taking the fruits of property, whether movable or immovable, whose use does not diminish its substance and value. It was one of the "servitudes," as to which see SERVITUTES.

Uter (*ἀσκός*). A bag made of the skin of an animal (an ox, pig, or goat), carefully stitched at the sides, and made tight by the application of pitch or wax. It was thus used (1) as a wine-skin (*uter vinarius*) chiefly for the transportation of wine from place to place (see VINUM); and (2) as a means of sport for the rustics, as shown in the article ASCOLIASMUS (q. v.) (Verg. *Georg.* ii. 384). Water was also carried in skin-bags by armies on the march. The persons in charge of the water-supply were therefore called UTRARII (Livy, xliv. 33).

Utĭca (*Οὐτίκη* and *Ἰτυκή*). Now Bon-Shater; the greatest city of ancient Africa next to Carthage. It was a Phœnician colony, much older, according to the ancient chronologists, than Carthage. Like others of the very ancient Phœnician colonies in the territory of Carthage, Utica maintained a comparative independence, even during the height of

the Punic power, and was rather the ally of Carthage than her subject. It stood on the shore of the northern part of the Carthaginian Gulf, a little west of the mouth of the Bagradas, and twenty-seven Roman miles northwest of Carthage; but its site is now inland, in consequence of the changes effected by the Bagradas in the coast-line. In the Third Punic War, Utica took part with the Romans against Carthage, and was rewarded with the greatest part of the Carthaginian territory. It afterwards became renowned to all future time as the scene of the last stand made by the Pompeian party against Caesar, and of the self-sacrifice of the younger Cato, who is, in consequence, usually styled Cato Uticensis. See CATO.

Utrarii. Water-carriers who supplied the soldiers on the march with water from skins (*utres*) (Livy, xliv. 33.)

Uxantis. Now Ushant; an island off the western coast of Gaul.

Uxellodūnum. A town of the Cadurci in Gallia Aquitanica. It is now Issolu. It was besieged and taken by Iulius Caesar (*B. G.* viii. 32–44).

Uxentum. Now Ugento; a town in Calabria, northwest of the Iapygian promontory.

Uxii (Οὔξιοι). A warlike people, of predatory habits, who had their strongholds in Mount Parachoathras, on the northern border of Persis, in the district called Uxia, but who also occupied a considerable tract of country in Media.

Uxor. See MATRIMONIUM.

V

V (Υ), as a symbol.

IN GREEK.—Υ = *υἱός* (*C. I. G.* 5762). As a numeral = 20 (old system). $\upsilon' = 300$. $,\upsilon = 300{,}000$.

IN LATIN.—V = veteranus, verna, via, Vibius, vicit, villa, Virtus, utere, uxor.

V·A·L = vices agens legati.

V·A·S·L·M = votum animo solvit libens merito.

V·B·D·R·P = vir bonus dignus re publica.

V·B·M·P = voto bene merenti posuit.

V·B·O·V·F = virum bonum ora vos faciatis.

V·B·S = vir bonus sanctus.

V·C (E·P)·A·V·P = vir clarissimus (egregius perfectissimus) agens vices praesidis.

V·C·L·M = voti compos libens merito.

V·C·P·P = vir clarissimus pater patrum.

V·C·Q·K = vir clarissimus quaestor candidatus.

V·C·R = voluntarii cives Romani.

V·D·P·R·L·P = unde de plano recte legi possit.

V·F = Viennae fecit.

V·F·S = verba facta sunt, vivus fecit sibi.

V·I (H, L, O, P, R) = vir illustris (honestus, laudabilis, optimus, perfectissimus, religiosus).

V·L = veteranus legionis.

V·L·L·M·S = votum libens laetus merito solvit.

V·M·F = vene (i. e. bene) merenti fecerunt.

V·P·A = vixit pius annis.

V·P·P·P·H (N, R) = vir perfectissimus praeses provinciae Hispaniae (Numidiae, Raetiae).

V·Q = viator quaestorius.

V·Q·R·F·E·V·S·D·M = uti quod recte factum esse volet sine dolo malo.

V·S = urbs sacra, vici situ.

V·S·F = votum solvit feliciter.

V·S·I = vice sacra iudicans.

V·S·L·A·F = votum solvit libens animo feliciter.

V·V = virgo Vestalis, uti voverat, Venus victrix.

V·V·S·L·M = ut voverat solvit, libens merito.

V·V·V = vale! vale! vale!

As a numeral = 5, as the half of X. See NUMERUS.

Vacca, Vaga, or **Vaba.** Now Beja. A city of Zeugitana in northern Africa, a day's journey south of Utica. It was destroyed by Metellus in the Jugurthine War, but was restored and colonized by the Romans. Justinian named it THEODORIAS in honour of his wife.

Vaccaei. A people in the interior of Hispania Tarraconensis, occupying the modern Toro, Palencia, Burgos, and Valladolid. Their chief towns were Palantia and Intercatia.

Vacūna. A Sabine goddess, worshipped especially in a sacred grove near the Lacus Velinus and Reaté (Pliny, *H. N.* iii. 109); and also in a temple near Horace's farm (Hor. *Epist.* i. 10, 49). Vacuna was particularly regarded as the goddess of victory, but was also a great national deity of the Sabines (Ovid, *Fasti*, vi. 307); she also presided over the works of the garden and field (hence identified both with Venus and with Ceres), and over the woods and hunting (hence identified with Diana). Moreover, as goddess of victory in war she is sometimes confused with Bellona and sometimes with Minerva (Dionys. i. 15; Schol. *ad* Hor. l. c.).

Vadimōnis Lacus. Now Lago di Bassano; a small lake of Etruria, of a circular form, with sulphureous waters, and renowned for its floating islands. It is celebrated in history for the defeat of the Etruscans in two great battles, first by the dictator Papirius Cursor, in B.C. 309; and again in 283, when the allied forces of the Etruscans and Gauls were routed by the consul Cornelius Dolabella.

Vadimonium. See ACTIO in the Appendix.

Vagienni. A petty people in Liguria, whose chief town was Augusta Vagiennorum.

Vagīna (κολεός, ξιφοθήκη). The scabbard of a sword, usually made of wood, but sometimes apparently of leather. See GLADIUS.

Vahălis. See RHENUS.

Valckenaer, LUDWIG CASPAR. A distinguished Dutch classical scholar, born at Leeuwarden in 1715. He was Professor at Franeker (1741) and in the University of Leyden (1766), and died in 1785. His best known works are an edition of Homer's *Iliad* with the scholia (1747); of the *Phoenissae* of Euripides (1755; 4th ed. Leipzig, 1824); of the *Hippolytus* of Euripides, with a remarkable discussion on the fragments of the lost plays of that dramatist (1768; new ed. Leipzig, 1823); of the Greek bucolic and didactic poets (1781); of the fragments of Callimachus (rev. by Luzac, 1799); and a *Diatribe de Aristobulo* (ed. by Luzac, 1806). See L. Müller, *Geschichte der classischen Philologie in den Niederlanden*, pp. 82 foll. (Leipzig, 1869).

Valens. An emperor of the East A.D. 364–378, born about A.D. 328, and made emperor by his brother Valentinian. (See VALENTINIANUS.) The greater part of Valens's reign was occupied by his

wars with the Goths. At first he gained great advantages over the barbarians, and concluded a peace with them in 370, on the condition that they should not cross the Danube. In 376 the Goths were driven out of their country by the Huns, and were allowed by Valens to cross the Danube and settle in Thrace and the country on the borders of the Danube. Dissensions soon arose between the Romans and these dangerous neighbors, and in 377 the Goths took up arms under Fritigern. Valens collected a powerful army, and marched against the Goths, but he was defeated by them with immense slaughter, near Adrianople, on the 9th of August, 378. Valens was never seen after the battle: some say he died on the field; and others relate that he was burned to death in a peasant's house, to which he was carried, and which the barbarians set fire to without knowing who was in it (Amm. Marc. xxxi. 13). The reign of Valens is important in the history of the Empire on account of the admission of the Goths into the countries south of the Danube—the commencement of the decline of the Roman power. Furious contests between the rival creeds of the Catholics and the Arians also characterize this reign.

Valens, Fabius. One of the principal generals of the emperor Vitellius. In A.D. 69 he marched into Italy through Gaul, and, after forming a junction with the forces of Caecina, defeated Otho in the decisive battle of Bedriacum, which secured for Vitellius the sovereignty of Italy. Vitellius raised Valens and Caecina to the consulship, and left the whole government in their hands. Valens remained faithful to Vitellius when Antonius Primus, the general of Vespasian, marched into Italy; but as he had not sufficient force to oppose Antonius after the capture of Cremona, he resolved to sail to Gaul and rouse the Gallic provinces to support the cause of Vitellius. He was taken prisoner at the islands of the Stoechades (Hyères), off Massilia, and was shortly afterwards put to death at Urbinum (Urbino) (Tac. *Hist.* i. 7, 52–66; ii. 24–30, 56, 92, 99; iii. 40, 62; Plut. *Oth.* 6). See Vitellius.

Valentia. (1) Now Valencia; the chief town of the Edetani on the river Turia, three miles from the coast, and on the road from Carthago Nova to Castulo. (2) Now Valence; a town in Gallia Narbonensis on the Rhône, and a Roman colony. (3) A town of Sardinia of uncertain site. (4) Or Valentium, a town in Apulia, ten miles from Brundusium. (5) A province in the north of Britain, beyond the Roman wall. It existed for only a short time. See Britannia.

Valentiniānus. (1) A Roman emperor (A.D. 364–375), was the son of Gratianus, and was born A.D. 321, at Cibalis in Pannonia. His first wife was Valeria Severa, by whom he became the father of the emperor Gratianus. He held important military commands under Julian and Jovian; and on the death of the latter, in February, 364, Valentinian was elected emperor by the troops at Nicaea. A few weeks after his elevation Valentinian, by the desire of the soldiers, associated in the empire his brother Valens, and assigned to him the East, while he himself undertook the government of the West. Valentinian was a Catholic, though his brother Valens was an Arian; but he did not persecute either Arians or heathens. He possessed good abilities, prudence, and vigour of character. He had a capacity for military matters, and was a vigilant, impartial, and laborious administrator. The greater part of Valentinian's reign was occupied by the wars against the Alemanni and the other barbarians on the Roman frontier, in which his operations were attended with success. He not only drove the Alemanni out of Gaul, but on more than one occasion crossed the Rhine, and carried the war into the enemy's country. His usual residence was Treviri (Trèves). In 375 he went to Carnuntum on the Danube, in order to repel the Quadi and Sarmatians, who had invaded Pannonia. After an indecisive campaign he took up his winter-quarters at Bregetio. In this place, while giving an audience to the deputies of the Quadi, and speaking with great heat, he fell down in a fit and expired suddenly, on the 17th of November (Amm. Marc. xxviii.–xxx.; Zosim. iv. 17).

(2) A Roman emperor (A.D. 375–392), younger son of the preceding, proclaimed Augustus by the army after his father's death, though he was then only four or five years of age. His elder brother Gratianus, who had been proclaimed Augustus during the lifetime of their father, assented to the choice of the army, and a division of the West was made between the two brothers. Valentinian had Italy, Illyricum, and Africa; Gratian had the Gauls, Spain, and Britain. In 383 Gratian was defeated and slain by Maximus, who left Valentinian a precarious authority out of fear for Theodosius, the emperor of the East; but in 387 Valentinian was expelled from Italy by Maximus, and fled for refuge to Theodosius. In 388 Theodosius defeated Maximus, and restored Valentinian to his authority as emperor of the West. Theodosius returned to Constantinople in 391; and in the following year (392) Valentinian was murdered by the general Arbogastes, who raised Eugenius to the throne. Valentinian perished on the 15th of May, being only a few months above twenty years of age. His funeral oration was pronounced by St. Ambrose.

(3) Roman emperor A.D. 426–455, was born 419, and was the son of Constantius III. by Placidia, the sister of Honorius and the daughter of Theodosius I. He was declared Augustus in 425 by Theodosius II., and was placed over the West, but as he was only six years of age the government was intrusted to his mother Placidia. During his long reign the Empire was repeatedly exposed to the invasions of the barbarians; and it was only the military abilities of Aëtius which saved the Empire from ruin. In 429 the Vandals under Genseric crossed over into Africa, which they conquered, and of which they continued in possession till the reign of Justinian. The weakness of the Empire during this reign was shown also by the fact that the Britons (from whose country the Roman troops had been withdrawn forty years before), finding it vain to apply to Rome for aid against the incursions of the Picts, invited the Jutes under Hengest and Horsa to help them, in 449. The Goths likewise established themselves in Gaul; but Aëtius finally made peace with them (439), and with their assistance gained a great victory over Attila and the vast army of the Huns at Châlons in 451. (See Atila.) The power and influence of Aëtius excited the jealousy and fears of Valentinian, who murdered his faithful general in 454. (See Aëtius.) In the following year the emperor himself was slain by Petronius Maximus, whose wife he had violated.

Valeria. (1) A sister of P. Valerius Publicola, who advised the Roman matrons to ask Veturia, the mother of Coriolanus, to go to the camp of Coriolanus in order to deprecate his resentment. See CORIOLANUS. (2) The last wife of Sulla. She was the daughter of M. Valerius Messala, and bore a daughter soon after Sulla's death. (3) GALERIA VALERIA, daughter of Diocletian and Prisca. She was, upon the reconstruction of the Empire in A.D. 292, united to Galerius, one of the new Caesars. After the death of her husband in 311 Valeria rejected the proposals of his successor Maximinus, who in consequence stripped her of her possessions, and banished her along with her mother. After the death of Maximinus, Valeria and her mother were executed by order of Licinius, in A.D. 315. (4) MESSALĪNA. See MESSALINA.

Valeria Gens. One of the most ancient patrician houses at Rome. It was of Sabine origin, and the founder, Volesus or Volusus, is said to have settled at Rome with Titus Tatius. One of the descendants of this Volesus, P. Valerius, afterwards surnamed Publicola, plays a distinguished part in the story of the expulsion of the kings, and was elected consul in the first year of the Republic, B.C. 509. From this time down to the latest period of the Empire, for nearly 1000 years, the name occurs more or less frequently in the Fasti, and it was borne by several of the emperors. The Valeria gens enjoyed extraordinary honours and privileges at Rome. In early times they were always foremost in advocating the rights of the plebeians, and the laws which they proposed were the great charters of the liberties of the second order. (See LEX.) The Valeria gens was divided into various families under the Republic, the most important of which bore the name of CORVUS, FLACCUS, MESSALA, and PUBLICOLA.

Valeriānus. (1) P. LICINIUS, a Roman emperor, A.D. 253–260. He was entrapped into a conference by the Persians, taken prisoner (260) by Sapor, and passed the remainder of his life in captivity, subjected to every insult which Oriental cruelty could devise. His skin was stuffed after his death and hung in one of the Persian temples for many years. (2) A son of the preceding, who perished along with Gallienus at Milan in 268. See GALLIENUS.

Valerius. See VALERIA GENS.

Valerius. (1) ANTIAS. See ANTIAS.

(2) MAXĬMUS, a Roman historian. Of his life we know only that he accompanied the proconsul Sextus Pompeius to Asia in A.D. 27 (ii. 6, 8). On his return he composed, between A.D. 29 and 32, a collection of historical anecdotes in nine books, *Factorum et Dictorum Memorabilium Libri*, which he dedicated to the emperor Tiberius. The book consists of an uncritical collection of extracts taken mostly from Livy and Cicero, but also from Sallust and Pompeius Trogus. These are divided into domestic and foreign instances under different headings, mostly descriptive of moral qualities, sometimes grouped according to subjects and sometimes not. The style is bad, and full of rhetorical declamation; the character of the compiler reveals itself in his gross flattery of Tiberius. Nevertheless, owing to the convenient selection of anecdotes which the book offered to orators and authors, it was much quoted in the succeeding generations down to the Middle Ages. It has come down to us with two epitomes, drawn up in late Roman times, by Iulius Paris and Ianuarius Nepotianus. The short dissertation *De Praenominibus*, appended to the work, has nothing to do with Valerius himself. It is an epitome drawn up by the above-mentioned Paris from the first portion of a work on Roman names by an unknown writer, who quotes old authorities on the subject, especially Varro. There are good text-editions of Valerius Maximus by Halm (Leipzig, 1865) and Kempf (2d ed. Leipzig, 1888); and with English notes on selected passages, by Smith (Boston, 1895).

(3) GAIUS VALERIUS FLACCUS BALBUS SETĪNUS, a Latin writer of epic verse, born at Setia, who flourished under Vespasian and Titus, and died before A.D. 90. We have an unfinished epic by him on the expedition of the Argonauts (*Argonautica*) in eight books, which was begun about the time of the destruction of Jerusalem (70), and was dedicated to Vespasian. The poem is a free paraphrase of the work of Apollonius Rhodius, with his characteristic style and manner, in language which, though careful and tastefully chosen, is sometimes difficult and obscure, and overladen with rhetorical adornment. Editions by Thilo (Halle, 1863); Schenkl (Berlin, 1871); and Bährens (Leipzig, 1875). See Peters, *De Valerii Flacci Vita et Carmine* (Königsberg, 1890).

(4) IULIUS VALERIUS, of Africa, who lived about the end of the third century A.D., and wrote a Latin translation of the Pseudo-Callisthenes. See CALLISTHENES.

(5) VALENTĪNUS. See TAPPULA LEX.

Valerius Volŭsus Maxĭmus, MARCUS OR MANIUS. A Roman who was dictator in B.C. 494, when the dissensions *de nexis* between the burghers and commonalty of Rome were at the highest. (See NEXUM.) Valerius was popular with the plebs, and induced them to enlist for the Sabine and Aequian wars by promising that when the enemy was repulsed the condition of the debtors (*nexi*) should be alleviated. He defeated and triumphed over the Sabines; but, unable to fulfil his promise to the plebeians, resigned his dictatorship (Livy, ii. 30, 31).

Valetudinarium (*νοσοκομεῖον*). A room set apart for the reception and treatment of sick slaves—a sort of domestic hospital and infirmary (Col. xi. 1, 18; Sen. *De Ira*, i. 16). There were also military hospitals attached to the Roman camps; but there is no mention of public hospitals before the fourth century (Hieron. *Epist.* iii. 10). The nearest approach to a public hospital in Greece was the dispensary (*ἰατρεῖον*) of the physicians who treated the poor gratuitously and received a fixed salary from the State. See Daremberg, *Hist. de la Médecine*, ch. i.; and the articles MEDICINA; MEDICUS.

Valgius. See VARUS.

Valgius Rufus, GAIUS. A Roman poet, contemporary with Vergil and Horace.

Valla, LAURENTIUS. A celebrated Italian scholar of the period of the Renaissance. He was born at Rome in 1405, and studied at Florence, where, as also at Pavia, he taught the classics. His life was one of a vagrant indolence, interspersed by violent controversies with contemporary scholars; yet he was a remarkably gifted man, and his Latin style has always been justly admired. He edited and translated Herodotus, Xenophon, and Thucydides, and wrote a sort of manual of Latin usage (*Elegantiae Linguae Latinae*), which had an immense

success and did much to expel the barbarisms of mediæval Latinity from the speech and the writings of the learned. See the elaborate monograph by Mancini (Florence, 1891); the chapter in Nisard, *Les Gladiateurs de la République des Lettres* (Paris, 1860); and the article RENAISSANCE.

Vallum (*χαράκωμα*). A palisade made of sharp stakes like *chevaux-de-frise*, and often placed by the ancient soldiers around the outer edge of the mound of earth (*agger*) thrown up about their camps (Polyb. xvii. 1, 1). The term often denotes both palisade and rampart. See the illustration under AGGER.

Vallus (*χάραξ*). A sharp stake used in making the *vallum* (q. v.).

Valvae (*θύραι διάπριστοι*). A folding door or shutter, i. e. one made of two or more leaves which fold back one behind the other. The house-doors were sometimes of this sort, as the marks on a threshold in Pompeii show (Pliny, *Epist.* ii. 17, 5; Isid. *Orig.* xv. 7, 4).

Van of an Army. See EXERCITUS.

Vandăli, Vandalii, or **Vindalii.** A confederacy of German peoples, who dwelt originally on the northern coast of Germany, but were afterwards settled north of the Marcomanni in the Riesengebirge, which are hence called VANDALICI MONTES. They subsequently appear for a short time in Dacia and Pannonia; but at the beginning of the fifth century (A.D. 409) they traversed Germany and Gaul, and invaded Spain. In that country they subjugated the Alani, and founded a powerful kingdom, the name of which is still preserved in Andalusia (Vandalusia). In A.D. 429 they crossed over into Africa, under their king Genseric (q. v.) and conquered all the Roman dominions in that country. Genseric subsequently invaded Italy, and took and plundered Rome in 455. The Vandals continued masters of Africa till 535, when their kingdom was destroyed by Belisarius, and annexed to the Byzantine Empire. See Papencordt, *Geschichte der vandalischen Herrschaft* (Berlin, 1837); Hodgkin, *Italy and her Invaders*, vols. ii. and iii.; and on their language, Wrede, *Ueber die Sprache der Wandalen* (Strassburg, 1886).

Vangiŏnes. A German people dwelling along the Rhine, in the neighbourhood of the modern Worms (Caes. *B. G.* i. 51).

Vannus (*λίκνον*). A large shallow basket used in winnowing. The basket in which the Bacchanals carried the sacrificial vessels and the offerings to Bacchus was styled VANNUS MYSTĬCA (Verg. *Georg.* i. 166).

Vaporarium. A sort of furnace for heating a room by means of flues (Cic. *Ad Q. Fratr.* iii. 1, 1). See BALNEAE; DOMUS.

Vappa. The dregs or lees of wine, or wine that had become flat (Hor. *Sat.* ii. 3, 144).

Vara (*σταλίς*). (1) The stake that supported a hunting-net. See illustration in the article RETIS. (2) An andiron on which logs of wood were laid and which supported the spit (*veru*). See VERU.

Roman Andiron. (Paestum.)

Varāgri. See VERAGRI.

Varguntēius. A Roman senator and one of Catiline's conspirators, who undertook, in conjunction with C. Cornelius, to murder Cicero in B.C. 63, but whose plan was frustrated by information conveyed to Cicero through Fulvia. He was afterwards brought to trial, but could find no one to defend him (Sall. *Cat.* 17, 47).

Varius Hybrĭda, QUINTUS. A tribune of the plebs, B.C. 90, who was a native of Sucro in Spain, and received the surname of Hybrida because his mother was a Spanish woman. In his tribuneship he carried a law *de maiestate*, in order to punish all those who had assisted or advised the *socii* to take up arms against the Roman people. Under this law many distinguished senators were condemned; but in the following year Varius himself was convicted under his own law, and was put to death (App. *B. C.* i. 57; Val. Max. viii. 6, 4; Cic. *De Or.* i. 25; *N. D.* iii. 33).

Varius Rufus, LUCIUS. A celebrated Roman poet whose poetical career began in the later days of the Republic. Like his younger friend Vergil, he was much honoured and appreciated by Augustus and Maecenas, to whom he also introduced his friend Horace. Vergil, at his death, in B.C. 19, left him and Plotius Tucca his literary remains, and Augustus intrusted to them the revision and publication. (See VERGILIUS.) He died before the year B.C. 12. At the opening of the Augustan era he was the most conspicuous of the Latin epic poets; but he obtained his greatest reputation by his tragedy *Thyestes*, which, with the *Medea* of Ovid, was considered the greatest effort of Roman literature in this department. The work was brought out at the games held in honour of the victory at Actium B.C. 29, and was rewarded by Augustus with an honorarium of a million sesterces ($40,000). Of this, as of his epic poems (on the death of Caesar and panegyric on Augustus), only a few verses survive.

Varro Atacīnus. See under VARRO.

Varro, TERENTIUS. (1) GAIUS, consul B.C. 216 with L. Aemilius Paulus. Varro is said to have been the son of a butcher, to have carried on business himself as a factor in his early years, and to have risen to eminence by pleading the causes of the lower classes against the opposition of the nobility (Livy, xxii. 25; Val. Max. iii. 4, 4). Notwithstanding the strong influence of the aristocracy, he was raised to the consulship by the people, who thought that it only needed a man of energy at the head of an overwhelming force to bring the war against Hannibal to a close, and who, moreover, had an excessive mistrust of the aims and motives of the Senate. His colleague was L. Aemilius Paulus, one of the leaders of the aristocratic party. The two cônsuls were defeated by Hannibal at the memorable battle of Cannae. (See HANNIBAL.) The battle was fought by Varro against the advice of Paulus. The Roman army was all but annihilated. Paulus and almost all the officers perished. Varro was one of the few who escaped and reached Venusia in safety, with about seventy horsemen. His conduct after the battle seems to have deserved praise. He proceeded to Canusium, where the remnant of the Roman army had taken refuge, and there adopted every precaution which the exigencies of the case required. His defeat was forgotten in the services he had lately rendered. On his return to the city all classes went

out to meet him, and the Senate returned him thanks because he had not despaired of the commonwealth. This marked the determination of patricians and plebeians to work heartily together against the foreign enemy (Livy, xxii. 35–61; Polyb. iii. 106–116; Plut. *Fab.* 14–18; App. *Ann.* 17–26). Varro continued to be employed in Italy for several successive years in important military commands till nearly the close of the Punic War.

(2) M. Terentius Varro Reatīnus, a celebrated writer, whose vast and varied erudition in almost every department of literature earned for him the title of the "most learned of the Romans" (Quint. x. i. 95; Dionys. ii. 21; August. *C. D.* vi. 2). He was born at Reatē B.C. 116, and was trained under L. Aelius Stilo Praeconinus, and afterwards by Antiochus, a philosopher of the Academy. Varro held a high naval command in the wars against the pirates and Mithridates, and afterwards served as the *legatus* of Pompeius in Spain in the Civil War, but was compelled to surrender his forces to Caesar (Flor. ii. 13, 29; Caes. *B.C.* i. 38, ii. 17–20). He then passed over into Greece, and shared the fortunes of the Pompeian party till after the battle of Pharsalia, when he obtained the forgiveness of Caesar, who employed him in superintending the collection and arrangement of the great library designed for public use (Suet. *Iul.* 44; Isid. *Orig.* vi. 5). For some years after this period Varro remained in literary seclusion, passing his time chiefly at his country seats near Cumae and Tusculum, occupied with study and composition. Caesar had forced Antony to restore to Varro an estate which he had seized (Cic. *Phil.* ii. 40, 103), and, perhaps in consequence, upon the formation of the Second Triumvirate his name appeared upon the list of the proscribed; but he succeeded in making his escape, and, after having remained for some time concealed, he obtained the protection of Octavian. His life is said to have been saved by Fufius Calenus (App. *B. C.* iv. 47), and it is probable that he recovered a great portion of his estates; but most of his magnificent library had been destroyed (Gell. iii. 10). The remainder of his career was passed in tranquillity, and he continued to labour in his favourite studies. His death took place B.C. 28, when he was in his eighty-ninth year.

Not only was Varro the most learned of Roman scholars, but he was likewise the most voluminous of Roman authors. Gellius (l. c.) states that Varro claimed to have written 490 books before he was seventy-seven: Ausonius gives in round numbers 600 as the total number of books written by Varro (*Prof. Burd.* xx. 10); and this agrees with a list given by St. Jerome which makes out the writings of Varro to consist of seventy-four different works, containing altogether 620 books. (Cf. also Augustin. *De Civ. Dei*, vi. 2; and Cic. *Acad.* i. 9.) Hence it would appear that 130 of the books were written in the last twelve years of his life. Of these works only two have survived: (*a*) *De Re Rustica Libri III*, still extant, written when the author was eighty years old, and the most important of all the treatises upon ancient agriculture now extant, being far superior to the more voluminous production of Columella, with which alone it can be compared. It is edited by Keil (Halle, 1884 foll.), and in the *Scriptores Rei Rusticae Veteres Latini*, by Schneider (Leipzig, 1764–1797). (2) *De Lingua Latina*, a grammatical treatise which extended to twenty-four books; but six only (v.–x.) have been preserved, and these in a mutilated condition. The remains of this treatise are particularly valuable, since they have been the means of preserving many terms and forms which would otherwise have been altogether lost, and much curious information is here treasured up connected with the ancient usages, both civil and religious, of the Romans. Editions by Spengel (Berlin, 1826, reëdited 1885); in Didot's collection (Paris, 1875); and by O. Müller (last ed. Leipzig, 1883). The remains of Varro's other grammatical treatises are discussed by Wilmanns (1864). The work entitled *Antiquitatum Libri* was divided into two sections: *Antiquitates Rerum Humanarum*, in twenty-five books, and *Antiquitates Rerum Divinarum*, in sixteen books. It described the political and religious institutions of Rome, and was Varro's greatest work, upon which chiefly his reputation for profound learning was based; but unfortunately only a few fragments of it have come down to us, printed in Merkel's edition of Ovid's *Fasti*, pp. cvi.–ccxlvii. (1841). With the second section of the work we are, comparatively speaking, familiar, since St. Augustine drew very largely from this source in his *De Civitate Dei*.

Varro wrote also a collection of biographies called *Imagines* or *Hebdomades* in fifteen books, which contain 700 lives or sketches of famous Greeks and Romans, arranged in groups of seven. It is said to have been illustrated with portraits and afterwards to have appeared in a cheaper edition without pictures. Another work, *Disciplinae*, in nine books, described the "liberal arts," viz., grammar, dialectic, rhetoric, geometry, arithmetic, astrology, music, medicine, and architecture (see Liberales Artes); and he wrote other works on philosophy (*Logistorici* in seventy-six books), geography, and law. Among his poetical works were the *Saturae*, which were composed in a variety of metres and with an admixture of prose. Varro in these pieces copied to a certain extent the productions of Menippus the Gadarene (see Menippus), and hence designated them as *Saturae Menippeae s. Cynicae*. They appear to have been a series of disquisitions on a vast variety of subjects, frequently, if not uniformly, couched in the shape of dialogue, the object proposed being the inculcation of moral lessons and serious truths in a familiar, playful, and even jocular style. The best editions of the fragments of these *Saturae* are by Riese (Leipzig, 1865), and Bücheler (with Petronius) (Berlin, 1882). The *Sententiae Varronis*, a collection of pithy sayings, may possibly have been gathered from the writings of Varro Reatinus, but this is wholly uncertain. They are edited by Devit (Padua, 1843). See Boissier, *Études sur M. T. Varron* (Paris, 1861); and Ritschl, *Die Schriftstellerei des Varro* in his *Opuscula*, iii. 419–505; id. *Parerga*, pp. 70 foll.

(3) P., a Latin poet of considerable celebrity, surnamed Atacīnus, from the Atax, a river of Gallia Narbonensis, his native province, was born B.C. 32. Of his personal history nothing further is known. He seems to have written, first, an epic on one of Caesar's Gallic wars, called *Bellum Sequanicum* (Prisc. *Gr. Lat.* ii. 497), and *Saturae* in imitation of Lucilius (Hor. *Sat.* i. 10, 46); and also at a later time to have written *Argonautica*, perhaps a free translation of the like work of Apollonius Rhodius; *Chorographia*, a sort of metrical system of geography and astronomy; and *Libri*

Navales, perhaps a poem on navigation. Only fragments of these productions have survived to the present time.

Varus. A cognomen in many Roman *gentes*, signifying a person who had his legs bent inward, and differed from VALGIUS, which signified a person having his legs turned outward.

Varus. A river in Gallia Narbonensis, forming the boundary between that province and Italy. It rises in Mount Cema in the Alps, and falls into the Mediterranean Sea between Antipolis and Nicaea. It is now the Var.

Varus, ALFĒNUS. (1) A Roman jurist, the *Alfenus vafer* of Horace, was a native of Cremona, where he carried on the trade of a barber or a cobbler. Having come to Rome, he became a pupil of Servius Sulpicius, attained the dignity of the consulship, and was honoured with a public funeral. (2) A general of Vitellius in the Civil War of A.D. 60.

Varus, QUINTILIUS. A Roman consul B.C. 13, and subsequently appointed to the government of Syria, where he acquired enormous wealth. Shortly after his return from Syria he was made governor of Germany (probably about A.D. 7), and was instructed by Augustus to introduce the Roman jurisdiction into that newly conquered country. The Germans, however, were not prepared to submit thus tamely to the Roman yoke, and found a leader in Arminius, a noble chief of the Cherusci, who organized a general revolt of all the German tribes between the Visurgis and the Weser. When he had fully matured his plans, he suddenly attacked Varus, at the head of a countless host of barbarians, as the Roman general was marching with his three legions through a pass of the Saltus Teutoburgiensis, a range of hills covered with wood, which extends north of the Lippe from Osnabrück to Paderborn, and is known in the present day by the name of the Teutoburgerwald or Lippische Wald. The battle lasted three days, and ended with the entire destruction of the Roman army. Varus put an end to his own life. His defeat was followed by the loss of all the Roman possessions between the Weser and the Rhine, and the latter river again became the boundary of the Roman dominions. When the news of this defeat reached Rome, the whole city was thrown into consternation; and Augustus, who was both weak and aged, gave way to the most violent grief, tearing his garments and calling upon Varus to give him back his legions—"Vare, Vare, redde legiones!" (Suet. *Aug.* 23; *Tib.* 16). See ARMINIUS; GERMANIA.

Vas. In law, a form of bail. See ACTIO (in the Appendix); JUDICIAL PROCEDURE; PRAES.

Vas. A vase; in the plural (*vasa*) a generic term for earthenware. In a technical sense it is also applied to the baggage of a Roman army in the field.

The shaping of baked clay into vessels was probably suggested and influenced by the use of gourds as vessels in primitive times; and the gourd-shape is that which predominates in the forms of Greek and Roman pottery. The earliest known types of Greek ceramic art are represented in the pottery exhumed by Schliemann at Hassarlik. This is rude in construction and clumsy in design, and in general falls under two classes—the first being shown in the two-handled vase represented below, and the so-called "owl-vase" exhibited in the second illustration. The first was identified by Schliemann with the Homeric δέπας ἀμφικύπελλον, and the second has an interest of its own in being a

Two-handled Vase from Hassarlik. (Schliemann.)

primitive attempt to give to a vase some of the attributes of a living model. These vases are made by hand, and have the dull, blackish colour produced by the smoke of the furnace.

Owl-vase from Hissarlik. (Schliemann.)

A more advanced type is found in the vases derived from the groves of Cyprus, especially at Alambra (Dali) and Larnaca (Kition), places colonized by the Phœnicians. These Cypriote vases are either (*a*) covered with a vitreous slip and baked to some shade of red, and occasionally decorated with slips of clay often in the shape of serpents; and (*b*) of fine clay delicately moulded, in colour gray or pale black. In shape they are either long and

gourdlike or flat and broad like a shallow cup. Vases of the same general type have been found also on several of the Aegean Islands, such as Amorgos, Antiparos, Naxos, and Melos. Painted vases gave a new direction to the taste and ingenuity of the potter; and many such have been found at Thera (Santorin) whose ware is made entirely by the wheel, and are furnished with a foot so as to stand by themselves and not to be hung by a handle. In these, red, brown-black, and white are used on prepared grounds of gray, buff, and brownish red. It has been asserted by some, on the evidence of geology, that this ware dates back to the fifteenth or even to the twentieth century before Christ.

The next stage of development is represented by the "Mycenaean" ware, found, however, in many localities. It consists of vases painted either with opaque or with lustrous colours (violet-brown, red, or white) upon red or pale clay, and the ornamentation is derived largely from marine forms. A few specimens of early vases imitate in clay the Phœnician glass, painted in wavy lines of orange on red and highly polished. In both the Alambra and Mycenaean pottery are seen the beginnings of a new style of decoration known as the "geometric," influenced by the technique of metal-work, and exhibiting the ornamental designs of concentric arches, rosettes, spirals, etc. The finest specimens of this style after it is fully established come from Athens, which is regarded as the principal seat of its manufacture. The geometric style became the most popular of all, and it gave the artist sureness of hand and eye, and a sense of form and proportion that was very valuable.

A new feature is exemplified in vases found at Phalerum which employ new animal types, designed and grouped under the influence of Oriental models. A development of this style combined with the geometric is called by Conze the "Melian." From the production of this pottery, Oriental influence increases and adds much to the beauty and effectiveness of the painted vase.

Under the further influence of metal-work and embroidery, polychromy enters fully into the methods of the vase-painter. Light and shade, and discrimination of planes of surface, were made possible by the combination of silhouette and outline-drawing introduced by the potters of the island of Rhodes. The subjects chosen by this school are chiefly animals (goats, lions, bulls, boars, rams), and, later, the human figure. A definite scene (from the Epic) is first found depicted in clay on the Euphorbus Pinax, assigned by Kirchhoff to the seventh century B.C., and depicting the battle of Menelaüs and Hector over the body of Euphorbus. The polychromatic school reached its highest development at Naucratis. The Oriental style is found in its perfection in the ware of Corinth, which is crowded with ornament, so that at a little distance the separate figures cannot be distinguished, but the general effect is that of a rich Oriental brocade. Scenes from mythology and also from ordinary life now appear. (See Dodwell Vase.) This growing sense that human action is the true subject for the vase-painter's art led to the decline of Orientalism, which held to animals. After this change was thoroughly established, the great centre of fictile production was Athens (cir. 650–300 B.C.).

Oenochoë of quasi-Oriental type. (Birch.)

Athenian pottery has two epochs—the "black-figure" and the "red-figure." A new discovery contributed to the rapid advance of Athenian ceramics — a deep-black varnish of the highest brilliancy, with a surface like polished metal, insensible to ordinary reagents, but not interfering with that porousness of the clay which under a Greek sun is so necessary for the coolness of water or wine. Its manufacture is still a secret; nor is it known where the invention first saw the light. So popular did it immediately become that the vase-painter covered the whole surface with it, leaving as field for the actual picture only a square panel of red ground-colour.

It is with the masters of black-figure style that the point first comes adequately to express the lines of musculature and bodily form. The rendering of drapery is a mark of relative date. At first the *chiton* is a straight daub of colour, as in Corinthian ware, and is often purple in hue with perhaps a black girdle; then patterns are scratched in, or elaborately painted on with white; folds begin to be marked, are outlined with the point, and dress gives some hint of the underlying contour of the body. An alternate use of purple and black for the folds is occasionally carried so far as to express light and shade. A like use of purple is to be seen in the treatment of muscles in animals, especially the horse. White is throughout a flesh-tint for female figures, but is also employed, on later vases, for the long *chiton* of a charioteer and the gray hair of old men.

Drawing is almost entirely in profile; full-face is rendered with little more adroitness than had been shown before. The eyes of men remain large and round; of women, oval and small. In more recent vases a trick grows up of crowding the field with long, purely conventional ivy sprays: equally conventional in rendering are the landscape features sometimes introduced, and no attempt is made at pictorial perspective.

The subjects of vases become now of less importance for their general history. In black-figure ware they are mainly mythological, sometimes *genre*. In mythology, the Dionysiac cycle and the

feats of Heracles are by far most frequent; after them, the legends of Athenê and Hermes. Frequently as scenes from the Cyclic poets appear, scarcely any can be traced to the *Iliad* or *Odyssey*.

Ornament, as distinct from painted scenes, becomes stereotyped. Signed vases are now in vogue, and the *cylices* are especially fruitful in artists' signatures which have preserved their names. Ergotimos and Clitias, who made and painted the great François *crater*, were followed by Nearchus, whose sons Tleson and Ergoteles, with Ergotimos's son Euchirus, have signed many of the earlier *cylices*. Other names are Xenocles, Hermogenes, Archicles. In *amphorae* Exekias takes first place for spirited and careful drawing; Amasis carries nicety of detail almost to extravagance; Hischylos represents transition style. The most prolific and clever, as also the most popular, was Nicosthenes, who originated a new *cylix*, and is also known by a peculiar form of *amphora* introduced by him. On Nicosthenes, see Löschcke in the *Archäolog. Zeitung* for 1881, pp. 33 foll.

It is not known precisely where the making of red-figure ware originated; but its origin is assigned approximately to the year B.C. 500, and is said to have owed its development to high art. Hitherto, the ceramic art of the Greeks had been properly classed as "ornament"; hereafter it became a branch of painting. (See PICTURA.) It shows a great advance in drawing and is free from the conventionalism of the black-figure ware. In its development the influence of Polygnotus was very great. Contemporary with the red-figure vases is the polychromatic ware with a white ground. The great majority of this class are *lekythi*, though these are found also in red-figure.

Three classes of *lekythi* may be distinguished: (*a*) Figures generally in red or sienna; subjects entirely funereal; polychromy sober and restrained; style, fine. (*b*) Figures in black or brown; subjects generally funereal, but sometimes drawn from family life, the pantheon, or even mythology; polychromy brilliant and often directly pictorial; style fine. (*c*) Figures in yellow; painting almost always monochrome; style decadent, often careless. Still another type of ware is represented by vases simply covered with a lustrous black varnish, ornamented after the fourth century B.C. with gilding and an occasional figure in colours. Many are of great beauty. Vases in the shape of human heads and *rhyta* (see RHYTON) and others of terra-cotta modelled in the form of human busts are found.

From about the time of Alexander the Great (B.C. 325), the manufacture of red-figured vases was transferred to Italy, where there have always existed native schools of pottery. With the opening of the Hellenistic as opposed to the Hellenic Age, art became provincial. Sculpture and painting passed to Pergamum, Alexandria, and Rhodes, and in like manner pottery was chiefly cultivated in the cities of Magna Graecia.

No new world-wide trade, like that of Athens, no important novelty in technique, marked the transference. Although Apulia produced *amphorae* and *crateres* of great splendour, the decadence of style, which had already begun at Athens, is painfully apparent. Men sought to add fresh life to a waning industry by inventing giant vases and richer shapes, by bringing into play all the resources of polychromy, and even summoning plastic to their aid; but profuse ornament and gaudy colouring scarcely cloak bad drawing and bad taste. Yet the artists had a pride in their work, and signatures again occur, though in no great number. Two traits are characteristic: (*a*) The strict relation maintained on most examples between the use of the vase for service at the tomb and its decoration (either a scene of offerings at the tomb, or an appropriate myth); and—where the subject is not funereal—(*b*) the frequent borrowing from the stage (farces especially), and the rendering of other than dramatic scenes with dramatic accessories (cf. Heydemann, *Jahrbuch*, 1886, pp. 260 foll.).

Three separate South Italian fabrics may be distinguished, LUCANIAN, CAMPANIAN, APULIAN. The technique in all is that of red-figure ware. Each class exhibits a peculiarity in depicting the human figure, a peculiarity suggestive of difference of social type; each, too, introduces details of national costume.

Lucanian vases may be relatively somewhat older; at least their manufacture seems to have sooner come to an end. Though somewhat helpless in draughtmanship, their style is comparatively restrained; polychromy is little used, and the heavy, clumsy drapery seldom bears a trace of ornament. A favourite shape is the campaniform crater; another, a kind of amphora only found in Lucania.

Later examples show great fondness for polychromy, tints especially prominent being white and yellow — the latter, in most cases, a cheap substitute for gilding. Tendrils of vine, ivy, and other plants are often introduced, as also on Apulian ware, with a happy effect; and occasionally motifs are taken direct from nature, as, for instance, a bird singing on a spray. The most important class, and that of highest artistic merit, is the Apulian, a product probably of Tarentine activity. Characteristic are the giant *amphorae*, one blaze of ornament from head to foot; characteristic, too, the heavy Doric chin of the men, the slender neck and stout barrel of the horses, the zones of fishes and marine forms employed as ornament.

As regards colours in South Italian polychrome ware, the red ground-clay is often changed to brown, and white used as a flesh-tint for women, but also, with a dash of yellow, for men. Yellow is perhaps the favourite decorative colour. The South Italian (Greek) vase-making died out about B.C. 250, at which time LATIN painted vases begin to appear. Their ornamentation is quite simple and rude—a spray of vine or olive with perhaps an Eros in the centre (*Annali dell' Inst.* 1884). These are the last painted vases, and they are immediately succeeded by the Cales ware, black, metallic, and moulded (Gamurrini, *Gazette Archéol.* for 1879, pp. 47 foll.). Henceforth pottery, for so much life as is left to it, became a branch of plastic. On the Calene style followed the SAMIAN and ARETINE. Greek ceramic art had given place to Roman. The pottery of ROME is in itself of less importance, and is noted under FICTILÉ; but it has a value of its own, as the link by which the secrets of classical ceramic art were communicated to the Northern nations, among whom the Kelts rank first. Samian and Aretine vases were freely imitated in Gaul and England, where native fabrics grew up under Roman influence.

BIBLIOGRAPHY.—The literature of this subject is very extensive. The student may most conveniently refer to Jahn, *Einleitung zur Beschreibung der Vasensammlung zu München* (Munich, 1824);

Dumont and Chaplain, *Les Céramiques de la Grèce Propre* (Paris, 1881 foll.); Genick, *Griechische Keramik* (Berlin, 1883); Lau, *Griechische Vasen* (Munich, 1877); Birch, *Hist. of Ancient Pottery* (new ed. London, 1873); Jacquemart, *Hist. of the Ceramic Art*, Eng. trans. (London, 1873); Jännicke, *Grundriss der Keramik* (Stuttgart, 1879); Dennis, *Cities and Cemeteries of Etruria* (London, 1878); Heydemann, *Humoristische Vasenbilder* (Berlin, 1870); and, in general, Baumeister, *Denkmäler*, s. v. "Vasenkunde" (Munich, 1889), and Westropp's and Murray's manuals. Arndt's *Studien zur Vasenkunde* (Munich, 1887) is to be used with caution. Compare also the articles FICTILE; PICTURA; and TERRA-COTTAS.

Vascŏnes. A powerful people on the northern coast of Hispania Tarraconensis, between the Iberus and the Pyrenees, in the modern Navarre and Guipuzco. Their chief towns were Pompelon and Calagurris. Their name is preserved in that of the Basques.

Vascŭla Dresseliāna. See EPIGRAPHY.

Vatia Isauricus, P. Servilius. (1) A Roman consul in B.C. 79, who was sent in the following year as proconsul to Cilicia, in order to clear the seas of the pirates, whose ravages now spread far and wide. He carried on the war with great ability and success, and from his conquest of the Isauri he obtained the surname of Isauricus. After giving Cilicia the organization of a Roman province he entered Rome in triumph in 74. After his return Servilius took a leading part in public affairs. In 70 he was one of the *iudices* at the trial of Verres; in 66 he supported the rogation of Manilius for conferring upon Pompey the command of the war against the pirates; in 63 he was a candidate for the dignity of Pontifex Maximus, but was defeated by Iulius Caesar; in the same year he spoke in the Senate in favour of inflicting the extreme penalty upon the Catilinarian conspirators; in 57 he joined the other nobles in procuring Cicero's recall from banishment; in 56 he opposed the restoration of Ptolemy to his kingdom; and in 55 he was censor with M. Valerius Messala Niger. He took no part in the Civil Wars, probably on account of his advanced age, and died in 44. (2) A Roman praetor, in B.C. 54, who belonged originally to the aristocratic party, but espoused Caesar's side on the breaking out of the Civil War, and was consul with Caesar in 48. In 46 he governed the province of Asia as proconsul, during which time Cicero wrote to him several letters. After the death of Caesar in 44, he supported Cicero and the rest of the aristocratic party, in opposition to Antony; but became reconciled to Antony, and was again consul in 41.

Vatican Library. See LIBRARIES.

Vatican Museum. See MUSEUM.

Vaticānus Mons. A hill at Rome, forming the prolongation of the Ianiculum towards the north, and supposed to derive its name from the Latin word *vates*, "a soothsayer," or *vaticinium*, "divination," as it was once the seat of Etruscan divination (Fest. s. h. v.). The Campus Vaticanus included all the space between the foot of this range and the Tiber. According to Tacitus, the air of this part of Rome was considered very unwholesome (*Hist.* ii. 93). The ground now covered by St. Peter's, the papal palace, museum, and gardens, was anciently designated as *Vaticani loci*, "places belonging to the Vatican Hill" (Tacit. *Hist.* l. c.).

Vatinius. (1) PUBLIUS. A political adventurer in the last days of the Republic, who is described by Cicero as one of the greatest villains that ever lived. Vatinius was quaestor B.C. 63, and tribune of the plebs in 59, when he sold his services to Caesar, who was then consul along with Bibulus. In 56 he appeared as a witness against Milo and Sestius, two of Cicero's friends, in consequence of which the orator made a vehement attack upon the character of Vatinius, in the speech which has come down to us. Vatinius was praetor in 55, and in the following year (54) he was accused by C. Licinius Calvus of having gained the praetorship by bribery. He was defended on this occasion by Cicero, in order to please Caesar, whom Cicero had offended by his former attack upon Vatinius. During the Civil War Vatinius attached himself to the fortunes of Caesar. (2) Of Beneventum, one of the vilest and most hateful creatures of Nero's court, equally deformed in body and in mind, and who, after being a shoemaker's apprentice and a buffoon, ended by becoming a *delator*, or public informer (Tac. *Ann.* xv. 34). A variety of drinking-cup bore his name (Juv. v. 46).

Vectigalia. A Roman term originally denoting only the revenues flowing into the State chest from the State domains, and for the most part collected by contract. The domains consisted of cultivated grounds, the rent of which was paid in money or kind; of pastures and meadows, for the use of which a payment (*scriptura*) was made (see SCRIPTURA); of forests, from which revenue was derived mainly by the letting of pitch huts; of lakes and rivers let for fishing; and of mines and salt-works. With a view to protecting the citizens from exorbitant prices, the sale of salt had already been made a State monopoly in the earliest years of the Republic, and it remained such till late into the times of the Empire. In letting salt mines the price of the salt was fixed in the contract, as was also the case with many articles produced from mines (see METALLUM). The term *vectigal* also includes the rent paid for buildings, shops, booths, and baths erected on public sites; the payment for the use of bridges and roads, of public water-ways, and sewers in cases where private properties drained into them; export and import tolls (see PORTORIUM), as well as all other indirect taxes. Such was the tax which was introduced into Rome in B.C. 357, and under the emperors was levied throughout the whole Empire, the *vicesima libertatis* or *manumissionis*; a tax of five per cent. paid on every manumitted slave, either by himself or his master (see SERVUS). To these were added under Augustus the *centesima rerum venalium*, a tax of one per cent. on all articles sold at auctions; the *quinta et vicesima mancipiorum*, a tax of four per cent. on every slave sold; and the *vicesima hereditatum et legatorum*, a tax of five per cent. on all inheritances over 100,000 sesterces ($4000), and on all legacies not falling to the next of kin. This impost, with the increase of celibacy and the custom of leaving complimentary legacies to the whole circle of one's friends, proved exceedingly productive, and, though originally limited to Roman citizens, was, with the franchise, extended by Caracalla to all the inhabitants of the Empire, and at the same time raised to ten per cent. Plutarch states (*Pomp.* 45) that before Pompey's earlier conquests the vectigalia of the Roman State amounted to the annual sum of

200,000,000 sesterces ($8,000,000). See Naquet, *Les Impôts Indirects chez les Romains* (Paris, 1875); and the articles AERARIUM; PUBLICANI.

Vectis or **Vecta**. Now the Isle of Wight; an island off the southern coast of Britain. It was conquered by Vespasian in the reign of Claudius (Suet. *Vesp.* 4). Remains of Roman villas have been found at Carisbrook and Brading.

Vectis (*μοχλός*). A bar of wood or iron used for (1) a lever or handspike; (2) a crowbar; (3) the bar of a door (see IANUA); (4) a capstan-bar, etc.

Vediŏvis. See VEIOVIS.

Vedius Pollio. See POLLIO.

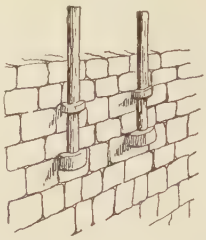
Vegetius, FLAVIUS RENATUS. The author of a treatise, *Rei Militaris Instituta*, or *Epitoma Rei Militaris*. The exact date is not established, but it was probably composed early in the fifth century A.D. It is a question whether its dedication to Theodosius is genuine, and some writers maintain that it was addressed to Valentinian III. The materials were derived, according to the declaration of the writer himself, from Cato the Censor *De Disciplina Militari*, from Cornelius Celsus, from Frontinus, from Paternus, and from the imperial constitutions of Augustus, Trajan, and Hadrian. The work is divided into four books. The first treats of the levying and training of recruits, including instructions for the fortification of a camp; the second, of the different classes into which soldiers are divided, and especially of the organization of the legion; the third, of the operations of an army in the field; the fourth, of the attack and defence of fortresses, and of marine warfare. Another division makes the number of books five, the fifth being the part relating to marine warfare. The value of this work, which is a somewhat uncritical compilation from different historians, is much diminished by the fact that the usages of periods the most remote from each other are mixed together into one confused mass, and not unfrequently, we have reason to suspect, are blended with arrangements which never existed except in the fancy of the author. It is probably right to ascribe to the same Vegetius the work on veterinary art called *Mulomedicina* (on the treatment of horses and mules), though it is written in a more popular style, as being intended for the use of less refined readers. The military work is edited by Oudendorp and Bessel (Strasburg, 1806); and the *Res Militaris* by Lang (Leipzig, 1885). The *Mulomedicina* is edited by Schneider (Leipzig, 1797).

Vehicŭlum (*ὄχημα*). A generic term for a vehicle or conveyance by water as well as by land (Cic. *Ad Att.* 10).

Veiento, FABRICIUS. A Roman praetor in A.D. 55, when he ran dogs instead of horses in the games. He was banished A.D. 62, in consequence of having published several libels. He afterwards returned to Rome, and became, in the reign of Domitian, one of the most infamous informers (*delatores*) and flatterers of that emperor. He also enjoyed the friendship of Nerva (Tac. *Ann.* xiv. 50; Dio Cass. lxi. 6; Pliny, *Ep.* iv. 22; Juv. iii. 185; iv. 113).

Veii. Now Isola Farnese; one of the most ancient and powerful cities of Etruria, situated on the river Cremera, about twelve miles from Rome. It was one of the twelve cities of the Etruscan Confederation, and apparently the largest of all. (See ETRURIA.) So far as we can judge from its present remains, it was about seven miles in circumference, which agrees with the statement of Dionysius that it was equal in size to Athens. Its territory (Ager Veiens) was extensive, and appears originally to have extended on the south and east to the Tiber; on the southwest to the sea, embracing the *salinae* or salt-works at the mouth of the river; and on the west to the territory of Caeré. The Ciminian forest appears to have been its northwestern boundary; on the east it must have embraced all the district south of Soracté and eastward to the Tiber. The cities of Capena and Fidenae were colonies of Veii. The Veientes were engaged in almost unceasing hostilities with Rome for more than three centuries and a half, and we have records of fourteen distinct wars between the two peoples. Veii was at length taken by the dictator Camillus, after a siege which is said to have lasted ten years. From this time Veii was abandoned; but after the lapse of ages it was colonized afresh by Augustus, and made a Roman municipium. The new colony, however, occupied scarcely a third of the ancient city, and had again sunk into decay in the reign of Hadrian.

Veil. See COA VESTIS; FLAMMEUM; RICINUM.



Veiŏvis (also **Vediŏvis**). An old Italian deity whose peculiar attributes were early forgotten. At Rome he had a famous shrine in the depression between the two peaks of the Capitoline Hill, the Capitol and the Arx (Ovid, *Fast.* iii. 430; Gell. v. 12). There lay his asylum and afterwards his temple between two sacred groves. His statue, by the side of which stood a goat as a symbol, had a youthful, beardless head, and carried a bundle of arrows in its right hand; it was therefore supposed that he was the same as the Greek Apollo. Others saw in him a youthful Iupiter; while at a later date he was identified with Dis, the god of the world below. He was probably a god of expiation, and hence at the same time the protector of runaway criminals. The goat, which was sacrificed to him annually on the 7th of March, appears elsewhere in the Roman cult as an expiatory sacrifice. Etymologists differ as to the composition of the name Veiovis. Some regard the prefix *ve-* as diminutive, hence "little Iupiter" (Ovid, *Fast.* iii. 445), i.e. youthful. Others make it intensive, as in *vepallidus*, and hence interpret "mighty" or "destructive" Iupiter. It is probably separative and negative in its nature, as in *vecors*, *vesanus*; and hence the name is really the "Anti-Iupiter," i.e. the antithesis of Iupiter, referring to Iupiter Inferus as the god of the lower world—Dis or Pluto, as noted above.

Velābrum. A district in Rome, originally a morass, on the western slope of the Palatine Hill, between the Vicus Tuscus and the Forum Boarium. See ROMA.

Velāmen. A general term for a loose covering for the person.

Velamenta (plural). Objects carried by suppliants as symbols of their condition, such as olive-branches, fillets of wool, *caducei*, etc. The Greek term is *ἱκετήρια* (Livy, xxiv. 30; Tac. *Hist.* i. 66).

Velarium. An awning which covered the unroofed part of the Roman theatres and amphitheatres (Juv. iv. 124). It was rolled and unrolled by means of ropes and pulleys fastened to masts set on the outer wall.

Masts for Velaria. (Pompeii.)

Velauni or Vellāvi. A people in Gallia Aquitanica, in the modern Velay, who were originally subject to the Arveni, but subsequently appear as an independent people.

Velĕda. A prophetic virgin, who by birth belonged to the Bructeri, and in the reign of Vespasian was regarded as a divine being by most of the nations in Central Germany. She lived in a tower near the river Luppia (Lippe). See Tac. *Germ.* 8; *Hist.* iv. 61, 65; v. 22, 24; Stat. *Silv.* i. 4, 90; Dio Cass. lxvii. 5.

Veles. See VELITES.

Velia or **Elea** (Ἐλέα), also called **Hyĕlē** (Ὑέλη). Now Castellamare; a Greek town of Lucania, on the western coast between Paestum and Buxentum, was founded by the Phocaeans, who had abandoned their native city to escape from the Persian sovereignty, about B.C. 543. It was situated about three miles east of the river Hales, and possessed a good harbour. It is celebrated as the birthplace of the philosophers Parmenides and Zeno, who founded a school of philosophy usually known under the name of the Eleatic. (See PHILOSOPHIA.) The different forms of the name of the town arise from the fact that the Romans preserve the original Aeolic digamma, representing it by their semi-consonantal V.

Velīnus. Now the Velino; a river in the territory of the Sabines, rising in the central Apennines and falling into the Nar. This river in the neighbourhood of Reaté overflowed its banks and formed several small lakes, the largest of which was called Lacus Velinus (Piè di Lago, also Lago delle Marmore).

Velītes (*γροσφομάχοι*, "skirmishers"). The name given in the old Roman legion to the 1200 citizens of the lowest class in the census, who were distributed among the sixty centuries; they differed from the other soldiers in having lighter armour. (See LEGIO.) When Marius introduced a uniform type of armour throughout all the ranks, this distinction disappeared.

Velītrae. Now Velletri; an ancient town of the Volscians in Latium, but subsequently belonging to the Latin League. It is chiefly celebrated as the birthplace of the emperor Augustus (Livy, iii. 41; Suet. *Aug.* 1).

Velius Longus. A Latin grammarian of the first half of the second century A.D. He was the composer of a work, *De Orthographia*, which is still extant, and is printed in Keil's *Grammatici Latini*.

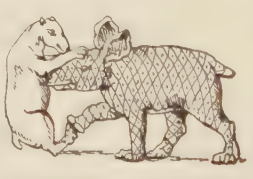
Vellaunodūnum. Now Beaune; a town of the Senones in Gallia Lugdunensis (Caes. *B. G.* vii. 11).

Vellāvi. See VELAUNI.

Vellēius Paterculus. See PATERCULUS.

Vellocasses. A people in Gallia Lugdunensis, northwest of the Parisii, extending along the Sequana as far as the ocean. Their chief town was Rotomagus (Rouen) (Caes. *B. G.* ii. 4).

Velum. (1) (*ἱστίον*). A sail, especially the large square mainsail, as distinguished from the foresail (*dolon*) and the topsail (*supparum*). (See NAVIS.) (2) (*παραπέτασμα*). A curtain hung before the door of a house like a modern portière-curtain. The name is also applied to any other curtain, as a window-curtain or the curtain at a theatre. See THEATRUM.



Velum.

Venabŭlum. A hunting-spear. It had a long or broad head (Mart. xiv. 31), shaped like a lozenge.

Venāfrum. Now Venafro; a town in the north of Samnium, near the river Vulturnus, and on the confines of Latium, celebrated for the excellence of its olives (Juv. v. 86).

Venantius Fortunātus, HONORIUS CLEMENTIANUS. A Latin poet, born about A.D. 535 at Tarvisium (Treviso) in North Italy. After a learned education in Ravenna, he proceeded, about 560, to Gaul, where he became an ecclesiastic at Poitiers, and died as bishop about 600. Among his works we possess an epic poem on St. Martin, as well as a collection of three hundred poems in eleven books, of very various kinds, including panegyrics, epigrams, letters, elegies, hymns, and hence called *Miscellanea*. These poems, which are mostly elegiac, are not unsuccessful in form, and are of great value for the history of the time. One of the most interesting is the companion piece to the *Mosella* of Ausonius (q. v.), the description of a journey by the Moselle and Rhine from Metz to Andernach (*De Navigio Suo*). The prose works are edited by Krusch and the poems by Leo (Berlin, 1881–85).

Venatiōnes. The contests of beasts with one another, or of men with beasts, that formed part of the shows of which the Romans were passionately fond. They were first introduced at the games of Marcus Fulvius Nobilior, B.C. 186 (Livy, xxxix. 22). Those who took part in these contests were called *bestiarii*. They were either criminals and prisoners of war, who were poorly armed or completely unarmed, pitted against wild beasts which had previously been made furious by hunger, branding, and goading; or else hired fighters who, like gladiators, were trained in special schools and fully armed. Even in the last century of the Republic, and still more under the Empire, incredible expenses were incurred in the collection of the rarest animals from the remotest quarters of the globe and in the other arrangements for their baiting. Sulla first exhibited lions let loose in the Circus (Sen. *De Brev. Vit.* 13); Clodius Pulcher first gave an elephant fight; Scaurus first showed a hippopotamus and crocodiles in a pond or trench (Pliny, *H. N.* viii. 96). Pompey provided a show of 500 lions, 18 elephants, and 410 other African animals; and Caligula caused 400 bears and the same number of animals from Africa to tear each other to

Fight between Bear and Rhinoceros. (Rich, from a terra-cotta lamp.)

pieces. When the great amphitheatre of Titus was dedicated 9000 animals were killed; and at the Dacian celebration of Trajan, 11,000 (Suet. *Tit.* 7; Dio Cass. lxviii. 15). Occasionally at these combats with wild beasts the man condemned to death

Venatio. (Pompeian painting.)

was attired in an appropriate costume, so as to represent a sanguinary scene from mythology or history, as, for example, Orpheus being torn to pieces by bears. Down to the end of the Republic these shows took place in the Circus, and the greater exhibitions were held there even after that time, until the amphitheatres became the usual places of performance; and, indeed, when they were combined with the gladiatorial exhibitions, they took place in the early morning before them. They were continued down to the sixth century. See Friedländer, *Sittengeschichte Roms*, 5th ed. ii. pp. 348 foll.; Marquardt, *Staatsverwaltung*, iii. 565.

Among the Greeks, especially the Athenians, cock-fights and quail-fights were very popular. At Athens cock-fights were held once a year in the theatres at the public expense. The training of fighting-cocks was conducted with great care. Certain places, such as Tanagra in Boeotia, Rhodes, and Delos, had the reputation of producing the largest and strongest. To whet their eagerness for the combat, they were previously fed with garlic. Their legs were armed with brass spurs, and they were set opposite to each other on tables furnished with raised edges. Bets, often to an enormous amount, were laid on the fights by the gamesters as well as by the spectators.

Venĕdi or **Venĕdae**. A people in European Sarmatia, dwelling on the Baltic, east of the Vistula. The Sinus Venedĭcus (Gulf of Riga), and the Venedĭci Montes, a range of mountains between Poland and East Prussia, were called after this people. The name is preserved in that of the curious people called the Wends, who in East Prussia still preserve many of the Slavonic traits of their ancestors.

Venefĭca. A witch, poisoner, sorceress. See Saga.

Veneficium. The crime of poisoning which became common under the Empire, and even earlier, as is clear from the oration of Cicero for Cluentius. Several names of women have obtained an infamous immortality by reason of their skill as poisoners, among them Locusta, who poisoned Claudius at the desire of his wife Agrippina, and Britannicus, to please Nero. Poisoning was much resorted to by expectant heirs and by unfaithful wives. Mayor in his note on Juv. i. 70 has collected notices of the Roman *causes célèbres* that turn on charges of poisoning. By a law of Sulla, passed in B.C. 82 (*lex Cornelia de Sicariis et de Veneficis*), persons concerned in poisoning were punished by confiscation of property and *deportatio in insulam*. In later times, those of lower rank were thrown to wild beasts. On poisons for abortion, see Abortio.

Venĕris Pervigilium. See Pervigilium.

Venĕti. See Circus.

Venetia. (1) A district in the north of Italy, originally included under the general name of Gallia Cisalpina, but made by Augustus the tenth *regio* of Italy. It was bounded on the west by the river Athesis, which separated it from Gallia Cisalpina; on the north by the Carnic Alps; on the east by the river Timavus, which separated it from Istria; and on the south by the Adriatic Gulf. Its inhabitants, the Veneti, frequently called Heneti (Ἐνετοί) by the Greeks, were not an Italian race, but their real origin is doubtful, as their language was certainly not Keltic (Polyb. ii. 17). Herodotus speaks of them as an Illyrian race, and this is probably a correct view (Herod. i. 196; v. 9). In consequence of their hostility to the Keltic tribes in their neighbourhood, they formed at an early period

an alliance with Rome; and their country was defended by the Romans against their dangerous enemies. On the conquest of the Cisalpine Gauls, the Veneti likewise became included under the Roman dominions. The Veneti continued to enjoy great prosperity down to the time of the Marcomannic wars, in the reign of the emperor Aurelius; but from this time their country was frequently devastated by the barbarians who invaded Italy; and at length, in the fifth century, many of its inhabitants, to escape the ravages of the Huns under Attila, took refuge in the islands off their coast, on which now stands the city of Venice. The chief towns of Venetia in ancient times were Patavium, Altinum, and Aquileia. (2) A district in the northwest of Gallia Lugdunensis, inhabited by the Veneti. Off their coast was a group of islands called Insŭlae Venetĭcae (Belle-Ile). The name is preserved in the modern Vannes.

Venĕtus Lacus. See Brigantinus Lacus.

Venilia. A nymph, daughter of Pilumnus, sister of Amata, wife of King Latinus, and mother of Turnus and Iuturna by Daunus.

Vennŏnes. A people of Rhaetia, and according to Strabo the most savage of the Rhaetian tribes, inhabiting the Alps near the sources of the Athesis (Adige).

Venta. (1) Belgārum. Now Winchester; the chief town of the Belgae in Britain. The modern city still contains several Roman remains. (2) Icenōrum. (See Iceni.) (3) Silŭrum. Now Caerwent; a town of the Silures in Britain, in Monmouthshire.

Venti. See Ventus.

Ventidius Bassus, Publius. A celebrated Roman general, who at first gained a poor living by letting mules and carriages to officials. Caesar, however, saw his abilities, and employed him in Gaul, and in the Civil War (Dio Cass. xliii. 51; Gell. xv. 4). After Caesar's death Ventidius sided with M. Antony, and in B.C. 43 was made consul suffectus. In 39 Antony sent Ventidius into Asia, where he defeated the Parthians and Labienus; and in the second campaign gained a still more brilliant victory over the Parthians, who had again invaded Syria. For these services he obtained a triumph in 38. His later history is unknown (Dio Cass. xliii. 51; Gell. xv. 4; Eutrop. vii. 3; Plut. *Ant.* 34; Juv. vii. 199).

Medal commemorating the Parthian Triumph of Ventidius.

Ventrālé (κοιλιόδεσμος). The ancient representation of the sash which in our time has begun to be worn by men in warm weather (Pliny, *H. N.* viii. 73). It was a square piece of cloth tied around the loins and over the abdomen, sometimes for medical purposes and sometimes for comfort. It was also arranged so as to be used for the purposes of a money-belt (Ulp. *Dig.* xlviii. 20, 6).

Ventus (ἄνεμος). Winds were regarded by Greeks and Romans alike as divine beings. In Homer, who mentions only the four chief winds, Boreas (North), Zephyrus (West), Eurus (East), and Notus (South), they are, according to one account (*Od.* x. 1–75), committed by Zeus to the charge of Aeolus (q. v.). But elsewhere they appear as independent personalities, who, dwelling in Thrace, display their activity at the command of Zeus and other gods, and are invoked by men with prayers and sacrifices (*Il.* xxiii. 195). Hesiod (*Theog.* 378) calls these winds children of Astraeus and Eos, and distinguishes them as beneficent beings from the destructive winds, the children of Typhoeus (*Theog.* 869). Some particular myths speak only of Boreas and Zephyrus, from whom, on account of their swiftness, famous horses were supposed to be descended. Thus (*Il.* xvi. 150) the horses of Achilles are called the children of Zephyrus and Podargé, one of the Harpies (see Harpyiae). The latter, in accordance with their original nature, are also deities of the wind, or rather of the storm. In historical times the cult of the winds in general, or that of Boreas or Zephyrus in particular, flourished at special places in Greece. In Italy also the winds were held in much veneration, particularly the fructifying wind Favonius, which corresponded to Zephyrus. In Rome the tempests (*tempestates*) had a sanctuary of their own with regular sacrifices at the Porta Capena, which was founded in B.C. 259, in consequence of a vow made for the preservation of a Roman fleet in a storm at sea. Roman generals when embarking usually offered prayers to the winds and storms, as well as to the other gods, and cast offerings and bloody sacrifices into the waves to propitiate them. To the beneficent winds white animals were offered, and those of a dark colour to the malignant equinoctial and winter storms. The victims were generally rams and lambs.

In works of art the winds are usually represented with winged heads and shoulders, open mouth, and inflated cheeks. The most noteworthy monument, from an artistic point of view, is the Tower of the Winds, still standing in excellent preservation at Athens, on which eight winds are represented (Boreas, North; Kaikias, Northeast; Apeliotes, East; Eurus, Southeast; Notus, South; Lips, Southwest; Zephyrus, West; and Argestes or Sciron, Northwest).

Venus. An Italian goddess, who, after the Greek mythology influenced the Roman, was identified with Aphrodité, and in Latin literature has the same myths and characteristics (see under Aphroditē), though originally the Italian Venus was a goddess of gardens and of spring. Prior to her identification with Aphrodité she was one of the least important of the native deities; yet her cult was established at Rome at a very early date. A stone altar with an image of Venus Murtea or Murcia stood in the Circus near the place where the altar of Consus was concealed (see Circus), and a sanctuary of the goddess below the Aventine had a myrtle-grove before it. Another ancient name of Venus was Cloacīna, which is said to have been derived from her image having been found in the great sewer (*cloaca*); but this tale is nothing but a *volksetymologie*, as the name, which is probably connected with *cluere*, rather marks her out as "the purifier." Under this title her statue was erected by Titus Tatius in a temple near the Forum. Venus was also styled Calva ("the bald") and as such she had two temples near the Capitol. To

explain this title the story was told that one of the temples was built by Ancus Marcius because his wife was in danger of losing her hair; others thought that it was a monument of a patriotic act of the Roman women, who, during the siege of the Gauls, cut off their hair and gave it to the men to make strings for their bows; and others again supposed it to refer to the fancies and caprices of lovers, *calvere* signifying "to tease." Very likely it refers to the fact that on her wedding-day the bride, either actually or symbolically, cut off a lock of hair to sacrifice it to Venus. (See MATRIMONIUM.) In these, the most ancient surnames of Venus, one can recognize her primitive character and attributes. She is also styled PAETA, as to which see PAETUS.

In later times, as her worship became much more extended, her identification with the Greek Aphroditê introduced various new attributes. At the beginning of the Second Punic War the worship of Venus Erycina was introduced from Sicily (see ERYX), and a temple was dedicated to her on the Capitol, to which subsequently another was added outside the Colline Gate. In the year B.C. 114, a Vestal Virgin was killed by lightning; and as the general moral corruption, especially among the Vestals, was believed to be the cause of this disaster, the Sibylline Books (see SIBYLLAE), upon being consulted, commanded that a temple should be built to Venus Verticordia (the goddess who turns the hearts of men) on the Via Salaria. After the close of the Samnite War, Fabius Gurges founded the worship of Venus Obsequens and Postvorta; Scipio Africanus the younger, that of Venus Genetrix, in which he was afterwards followed by Caesar, who added that of Venus Victrix. The worship of Venus was promoted by Caesar, who traced his descent from Aeneas, who was supposed to be the son of Mars and Venus. (See AENEAS.) The month of April, as the beginning of spring, was thought to be peculiarly sacred to the goddess of love, and recalled also the early Italian conception of her functions. Both ideas are beautifully blended in the magnificent apostrophe to Venus Genetrix with which Lucretius commences his poem *De Rerum Natura*, in which she is regarded as the creative, vivifying force of Nature, the source of life and strength in all things. Respecting the Greek goddess see APHRODITÉ.

Venus (Ἀφροδίτη). A name given to the best possible throw of the dice (*tesserae* or *tali*), which was the one in which the numbers all came up different (Suet. *Aug.* 71). See TALUS; TESSERA.

Venus de' Medici. See CLEOMENES.

Venus di Milo. See APHRODITÉ.

Venusia. Now Venosa; an ancient town of Apulia, south of the river Aufidus, and near Mount Vultur, situated in a romantic country, and memorable as the birthplace of the poet Horace. See HORATIUS.

Verāgri or **Varāgri.** A people in Gallia Belgica, on the Pennine Alps, near the confluence of the Dranse and the Rhône (Caes. *B. G.* iii. 1).

Verandah. See PORTICUS; STOA.

Verbānus Lacus. Now Lago Maggiore; a lake in Gallia Cisalpina, and the largest in all Italy, being about forty miles in length from north to south; its greatest breadth is eight miles.

Verbēna. Probably the vervain; an herb used by the Roman *fetiales* (q. v.) in their symbolical ceremonies. Cf. also SAGMINA.

Verber. The thong of a whip (see FLAGRUM); (2) the leathern part of a sling (Verg. *Georg.* i. 309). See FUNDA.

Vercellae. Now Vercelli; the chief town of the Libici in Gallia Cisalpina (Tac. *Hist.* i. 70).

Vercingetŏrix. A celebrated chieftain of the Arverni in Gaul, who carried on war with great ability against Caesar in B.C. 52. The history of this war occupies the seventh book of Caesar's commentaries on the Gallic War. Vercingetorix fell into Caesar's hands on the capture of Alesia, was subsequently taken to Rome, where he adorned the triumph of his conqueror in 45, and was afterwards put to death.

Verdict. See JUDICIAL PROCEDURE.

Veredarius. A government messenger among the Romans who carried official letters and despatches. The name is derived from that of the horses (*veredi*) that carried or drew him (Sidon. *Epist.* v. 7). See CURSUS PUBLICUS.

Verēdus. A fast horse used either as a hunter or a post-horse. See VEREDARIUS.

Verētum. Now Alessano; more anciently called Baris, a town in Calabria, on the road from Leuca to Tarentum, and 600 stadia southeast of the latter city.

Vergellus. A rivulet in Apulia, said to have been choked by the dead bodies of the Romans slain in the battle of Cannae (Flor. ii. 6, 18; Val. Max. ix. 2, 2).

Vergilius Maro, PUBLIUS. The most famous of the Roman poets, born on the 15th of October, B.C. 70, at Andes (Pietola), a small village near Mantua, in Cisalpine Gaul. There is no doubt that *Vergilius* is the more correct spelling, since inscriptions of the time of the Republic and the Early Empire where the name occurs give *Vergilius*, and never *Virgilius*. The same is true of the older MSS., as the Medicean; while the Greek authors write Βεργίλιος and Οὐεργίλιος. In the Middle Ages (from about the ninth century) the form *Virgilius* came into use by a fanciful derivation from *virga* "a rod," "a wand," Vergil being regarded as a great necromancer, as explained later in the present article. Even in the fifteenth century, however, Politian proved this form to be erroneous, and almost the only scholars to defend it in recent times are F. Schultz in his *Orthogr. Quaestiones* (Paderborn, 1855), and Oberdick in *Studien z. lat. Orthographie* (Münster, 1879). (See Hübner in *Jahn's Jahrbücher*, lxii. 360, and Ritschl, *Opuscula*, ii. 779.) The earliest known instance of the spelling *Virgilius* is in the fifth century A.D. (*C. I. L.* vi. 1710).

Vergil's father probably had a small estate which he cultivated, and he is said to have eked out his means by keeping bees. His mother's name was Magia Polla. He was educated at Cremona and Mediolanum (Milan), and assumed the *toga virilis* at Cremona on the day on which he began his sixteenth year, in 55. It is said that he subsequently studied at Neapolis (Naples) under Parthenius, a native of Bithynia, from whom he learned Greek. He was further instructed by Siron, an Epicurean, whose lectures were attended also

by Alfenus Varus at Rome, where he also studied rhetoric under Epidius at the same time as did Octavianus. Vergil's writings prove that he received a learned education, and traces of Epicurean opinions are apparent in them (e. g. *Georg.* ii. 490). The health of Vergil was always feeble, and there is no evidence of his attempting to rise by those means through which many Romans gained distinction—oratory and arms.

After completing his education, Vergil appears to have retired to his paternal property. After the battle of Philippi (42) Octavian assigned to his soldiers lands in various parts of Italy. Octavius Musa, who was charged with this allotment in the Cremona district, extended the limits so as to include Mantua (cf. *Ecl.* ix. 28), and the farm belonging to Vergil's father was assigned to a centurion, whose name is given as Arrius. Asinius Pollio, the *legatus* of Transpadane Gaul, and Cornelius Gallus interested themselves in Vergil, who was probably already known to them as a poet, and advised him to apply to Octavian at Rome. Vergil did so, his father's farm was restored, and the First Eclogue expresses gratitude to Octavian. But there was a second spoliation when, after the war of Perusia, Alfenus Varus became *legatus* in Pollio's place. A primipilaris named Milienus Toro got possession of the farm, and Vergil himself was nearly killed by the violence of a certain Clodius. Vergil and his father took refuge in a country-house belonging to Siro (*Catal.* 10), and thence removed to Rome, where he wrote the Eclogues (*Eclogae, Bucolica*). Here Maecenas also became interested in Vergil, who was compensated by Augustus. He did not, indeed, recover his paternal estate, but land was given him elsewhere—possibly the estate which he had near Nola in Campania (Gell. vi. 20). His friendship with Maecenas was soon so firmly established that he was able to gain the same patronage for Horace (Hor. *Sat.* i. 6, 54). Horace, in one of his Satires (*Sat.* i. 5), in which he describes the journey from Rome to Brundusium, mentions Vergil as one of the party, and in language which shows that they were then in the closest intimacy. The most finished work of Vergil, his *Georgica*, an agricultural poem, was undertaken at the suggestion of Maecenas (*Georg.* iii. 41); the concluding lines were written at Naples (*Georg.* iv. 559); and the poem was completed after the battle of Actium, B.C. 31, while Octavian was in the East. Some of his pastoral poetry seems to have been written in the country about Tarentum (Prop. iii. 24, 67). His Eclogues had all been completed probably before the *Georgica* were begun.

The epic poem of Vergil, the *Aeneid*, was probably long contemplated by the poet. While Augustus was in Spain (27), he wrote to Vergil to express his wish for some great monument of his poetical talent. Vergil appears to have begun the *Aeneid* about this time. In 23 died Marcellus, the son of Octavia (Caesar's sister) by her first husband; and Vergil introduced into his sixth book of the *Aeneid* (883) the well-known allusion to the promise of this youth, who was cut off by a premature death. Octavia is said to have been present when the poet was reciting this allusion to her son, and to have fainted from her emotions. She rewarded the poet munificently for his excusable flattery.

Vergil Reading to Maecenas. (Painting by Jalabert.)

When Augustus was returning from Samos, where he had spent the winter of 20, he met Vergil at Athens. The poet, it is said, had intended to make a tour in Greece, but he accompanied the emperor to Megara and thence to Italy. His health, which had long been declining, was now completely broken, and he died soon after his arrival at Brundusium, on the 22d of September, B.C. 19, not having quite completed his fifty-first year. His remains were transferred to Naples, which had been his favourite residence, and on the road from Naples to Puteoli (Pozzuoli) a monument is still shown, supposed to be the tomb of the poet. The inscription said to have been placed on the tomb,

Mantua me genuit, Calabri rapuere, tenet nunc
Parthenope. Cecini pascua, rura, duces,

we cannot suppose to have been written by him. Vergil named as *heredes* in his testament his half-brother Valerius Proculus, to whom he left one-half of his property, and also Augustus, Maecenas, L. Varius, and Plotius Tucca. It is said that in his last illness he wished to burn the *Aeneid*, to which he had not given the finishing touches, but that his friends would not allow him. What-

ever he may have wished to be done with the *Aeneid*, it was preserved and published by his friends Varius and Tucca. The poet had been enriched by the liberality of his patrons, and he left behind him a considerable property and a house on the Esquiline Hill near the gardens of Maecenas. He used his wealth liberally, and it is said that he supported his father, who had become blind, but did not die before his son had attained a mature age.

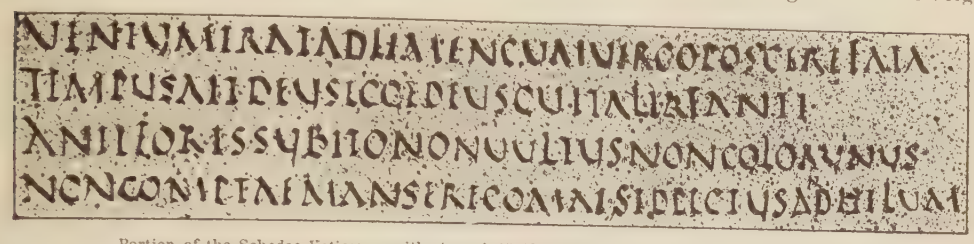
In his fortunes and his friends Vergil was a happy man. Munificent patronage gave him ample means of enjoyment and of leisure, and he had the friendship of all the most accomplished men of the day, among whom Horace especially entertained a strong affection for him. He was an amiable, good-tempered man, free from the mean passions of envy and jealousy; and in all but health he was prosperous. His fame, which was established in his lifetime, was cherished after his death as an inheritance in which every Roman had a share, and his works became school-books even before the death of Augustus. They were even consulted for chance oracles (*sortes Vergilianae*) under the Roman Empire (Capit. *Albin.* 5; Lamprid. *Alex. Sev.* 4; Spartian. *Hadr.* 2). (See SORTES.) The poems being full of learned and antiquarian allusions, soon gave employment to commentators and critics. Aulus Gellius has numerous remarks on Vergil; and Macrobius, in his *Saturnalia*, has filled four books (iii.–vi.) with his critical remarks on the poems. One of the most valuable commentaries on Vergil, in which a great amount of curious and instructive matter has been preserved, is that of Servius Maurus Honoratus. See SERVIUS.

The chief authority for the life of Vergil, apart from casual notices in his own poems or in those of contemporary poets, is the biography prefixed to the commentary written by Aelius Donatus in the fourth century A.D. This life was derived by Donatus from the biography composed by Suetonius in his *De Viris Illustribus*. (See DONATUS.) Suetonius is said to have derived this information from accounts by Varius, and by Melissus, who was a freedman of Maecenas (Gell. xvii. 10). Another life of Vergil was compiled from the commentary of Valerius Probus; a third, found in Jerome, is also derived from Suetonius; a fourth, of unknown authorship, is prefixed to the commentary of Servius on the *Aeneid*; and a fifth, also of unknown date, is found in the Bernese MS. of Vergil. The grammarian Phocas, in the fifth century, made a version in hexameters of Donatus's Life of Vergil. (See Nettleship's essay prefixed to Conington's edition of Vergil.) No authentic portrait of Vergil has been preserved.

The ten short poems called *Bucolica* were the earliest extant works of Vergil, and probably all written between 41 and 39. These *Bucolica* are not *Bucolica* in the same sense as the poems of Theocritus, which have the same title. They have all a pastoral form and colouring, but some of them have nothing more. They are also called *Eclogae* ("selections"), but there is no reason to suppose that this name originated with the poet. Their merit consists in their versification (which was smoother and more polished than any hexameters which the Romans had yet seen), and in their many natural and simple touches. But as an attempt to transfer the Syracusan style into Italy, they bear the stamp of imitation, and, however graceful and melodious, cannot be ranked with the more genuine pastorals of Theocritus. The Fourth Eclogue, entitled *Pollio*, which may have been written in 40, after the peace of Brundusium, has nothing of the pastoral character about it. It is half allegorical, half historical and prophetical—anything, in fact, but bucolic. The First Eclogue is bucolic in form and in treatment, with an historical basis. The Second Eclogue, the *Alexis*, is an amatory poem, with a bucolic colouring. The third, the fifth, the seventh, and the ninth are more clearly modelled on the form of the poems of his Sicilian prototype; and the eighth, the *Pharmaceutria* ("Incantation"), is a direct imitation of the original Greek. The tenth, entitled *Gallus*, perhaps written the last of all, is a love poem, which, if written in elegiac verse, would be more appropriately called an Elegy than a Bucolic.

The *Georgica*, or "Agricultural Poem," in four books, written B.C. 37–30, is a didactic poem, which Vergil dedicated to his patron Maecenas. He treats of the cultivation of the soil in the first book, of fruit-trees in the second, of horses and cattle in the third, and of bees in the fourth. This is generally regarded as his masterpiece, and it is unquestionably the most finished and perfect of his works, showing wonderful skill in treating the more prosaic subjects of practical daily life and embellishing them with magnificent bursts of poetry, yet so as still to present a complete and harmonious work. Its versification is the perfection of the Latin hexameter. Yet, great as are these merits, the *Aeneid* is the greater poem of the two. In grandeur, in poetical matter, and, to most readers, in interest, it is superior, and yields only to the *Georgics* in artistic completeness. The *Georgics* are, no doubt, based on the works of Hesiod and Aratus, but are so treated as to be rightly regarded as an original poem. In the first book he enumerates the subjects of his poem, among which is the treatment of bees; yet the management of bees seems but meagre material for one-fourth of the whole poem, and the author accordingly completed the fourth book with matter somewhat extraneous—the long story of Aristaeus.

The *Aeneid*, or adventures of Aeneas after the fall of Troy, is an epic poem on the model of the Homeric poems. It was founded upon an old Roman tradition that Aeneas and his Trojans settled in Italy, and were the founders of the Roman State. In the first book we have the story of Aeneas being driven by a storm on the coast of Africa, and being hospitably received by Dido, queen of Carthage, to whom he relates in the episode of the second and third books the fall of Troy and his own wanderings. In the fourth book the poet has elaborated the story of the love-affair of Dido and Aeneas, the departure of Aeneas in obedience to the will of the gods, and the suicide of the Carthaginian queen. The fifth book contains the visit to Sicily, and the sixth the landing of Aeneas at Cumae in Italy, and his descent to the infernal regions, where he sees his father Anchises, and has a prophetic vision of the glorious destinies of his race and of the future heroes of Rome. In the first six books the adventures of Odysseus in the *Odyssey* are the model, and these books contain more variety of incident and situation than those which follow. The last six books, the history of the struggles of Aeneas in Italy, are modelled



after the battle-scenes of the *Iliad*. Latinus, the king of the Latini, offers the Trojan hero in marriage his daughter Lavinia, who had been betrothed to Turnus, the warlike king of the Rutuli. The contest is ended by the death of Turnus, who falls by the hand of Aeneas. The fortunes of Aeneas and his final settlement in Italy are the subject of the *Aeneid;* but it is the national epic of the Roman people, and its real object is to set forth the glories of Rome, and, less directly, of the Julian house, to which Augustus belonged, and to foster in the Romans a patriotic feeling, and, still more, a religious sentiment for the gods and heroes of their ancestors. In the first book, the foundation of Alba Longa is promised by Iupiter to Venus (*Aeneid*, i. 254), and the transfer of empire from Alba to Rome; from the line of Aeneas will descend the "Trojan Caesar," whose empire will be limited only by the ocean, and his glory by the heavens. The future rivalry between Rome and Carthage and the ultimate triumph of Rome are predicted. The poem abounds in allusions to the history of Rome; and the aim of the poet to confirm and embellish the popular tradition of the Trojan origin of the Roman State, and the descent of the Iulii from Venus, is apparent throughout. More interest is excited by Turnus than by Aeneas. It is true that it might be said of the *Iliad* that the character of Hector wins more admiration than that of Achilles; but the cases are not parallel, since Aeneas is in himself a weak and priggish person, and one unsuited to be the hero of an epic.

Vergil imitated other poets besides Homer, and he has occasionally borrowed from them, especially from Apollonius of Rhodes. The historical colouring which pervades it, and the great amount of antiquarian learning which he has scattered through it, make the *Aeneid* a study for the historian of Rome. In fact, Vergil's free use of all that his predecessors had written has been often misinterpreted both in ancient and in modern times so as to be made the basis of a charge of wholesale plagiarism. One Perellius Faustus even published a book on these alleged literary thefts (*furta*), while Octavius Aribius made an elaborate collection of the resemblances (ὁμοιότητες) between lines and expressions found in Vergil and those previously existing in the Greek. In fact these *obtrectatores* were so vehement and so numerous among his own countrymen that their assertions have found an echo in modern times. An English scholar has, however, well expressed the proper view of this phase of Vergilian criticism in the following sentences:

"A most interesting feature in the *Aeneid* is its incorporation of all that was best in preceding poetry. All Roman poets had imitated, but Vergil carried imitation to an extent hitherto unknown. Not only Greek but Latin writers are laid under contribution in every page. Some idea of his indebtedness to Homer may be formed from Conington's commentary. Sophocles and the other tragedians, Apollonius Rhodius and the Alexandrians are continually imitated, and almost always improved upon. And still more is this the case with his adaptations from Naevius, Ennius, Lucretius, Hostius, Furius, etc., whose works he had thoroughly mastered, and had stored in his memory their most striking rhythms or expressions. Massive lines from Ennius, which as a rule he has spared to touch, leaving them in all their rugged grandeur planted in the garden of his verse to point back like giant trees to the time when that garden was a forest, bear witness at once to his reverence for the old bard and to his own wondrous art. It is not merely for literary effect that the old poets are transferred into his pages. A nobler motive swayed him. The *Aeneid* was meant to be, above all things, a National Poem, carrying on the lines of thought, the style of speech, which national progress had chosen; it was not meant to eclipse so much as to do honour to the early literature. Thus those bards who like Naevius and Ennius had done good service to Rome by singing, however rudely, her history, find their *imagines* ranged in the gallery of the *Aeneid*. There they meet with the flamens and pontiffs unknown and unnamed, who drew up the ritual formularies, with the antiquarians and pious scholars who had sought to find a meaning in the immemorial names, whether of places or customs or persons; with the magistrates, moralists, and philosophers who had striven to ennoble or enlighten Roman virtue; with the Greek singers and sages, for they too had helped to rear the towering fabric of Roman greatness. All these meet together in the *Aeneid* as if in solemn conclave, to review their joint work, to acknowledge its final completion, and predict its impending fall. This is beyond question the explanation of the wholesale appropriation of others' thought and language, which otherwise would be sheer plagiarism. With that tenacious sense of national continuity which had given the Senate a policy for centuries, Vergil regards Roman literature as a gradually expanded whole; coming at the close of its first epoch, he sums up its results and enters into its labours. So far from hesitating whether to imitate, he rather hesitated whom not to include, if only by a single reference, in his mosaic of all that had entered into the history of Rome. His archaism is but another side of the same thing. Whether it takes the form of archaeological discussion, of antiquarian allusion, of a mode of narration which recalls the ancient source, or of obsolete expressions, forms of inflection, or poetical ornament, we feel that it is a sign of the poet's reverence for what was at once national and old. The structure of his verse, while full of music, often reminds us of the earlier writers. It certainly has more affinity with that of Lucretius than with that of Lucan. A learned Roman reading the *Aeneid* would feel his mind stirred by a thousand patriotic associations. The quaint old laws, the maxims and religious formulae he had learned in childhood would mingle with the richest poetry of Greece and Rome in a stream flowing evenly, and, as it would seem, from a single spring; and he who by his art had effected this wondrous union would seem to him the prophet as well as the poet of the era."

The larger editions of Vergil contain some short poems, which are attributed to him. The *Culex* ("Gnat") is a kind of bucolic poem in 413 hexameters, often very obscure. Vergil is known to have written a poem with this title (Donat. *Vit.;* Suet. *Vit. Lucan.;* Stat. *Silv.* ii. 7, 73); but it is on the whole probable that the poem which we have is by an imitator of Vergil. The *Ciris*, or the myth of Scylla, the daughter of Nisus, king of Megara, in 541 hexameters, borrows Vergil's forms, but was probably written by an imitator of Catullus, belonging to the literary circle of

Messala. The *Moretum* ("Hotchpotch") in 123 verses, the name of a dish of various ingredients, is a poem in hexameters, on the daily labour of a cultivator; but it contains only the description of the labours of the first part of the day, which consists in preparing the *moretum*. It is suggested, with probability, that this may be a translation or adaptation by Vergil of a Greek poem of Parthenius. The *Copa* ("Barmaid"), in 19 elegiac couplets, is an invitation by a barmaid or servant attached to a *caupona* to passers-by to come in and enjoy themselves. There is no good reason against accepting this as Vergil's work. There are also fourteen short pieces in various metres, classed under the general name of *Catalepton* (sometimes written as *Catalecta*). The name is derived from a title (*κατὰ λεπτόν*) which Aratus gave to a set of short poems (Strabo, p. 486). They were written in the period of Vergil, and it is probable that many are by Vergil—some the work of his earlier years.

Portion of the Schedae Vaticanae with *Aen.* vi. 45–48. (Written about the fourth century A. D.)

In the Middle Ages, Vergil was a great favourite, but was much misunderstood as regards his history and personality. Partly because of a vague remembrance by the people of the episode of the Descent into Hell which forms the subject of the Sixth Book of the *Aeneid*, and partly because his Fourth Eclogue was believed to be a heathen prophecy of the birth of Christ, Vergil came at last to be regarded as a great magician. His mother's name, Magia Polla (*magia*, "magic," *polla* as from *polleo*, "mighty"), appeared to confirm this notion, and his own name as finally derived from *virga*, "a wand," helped along the myth. In the strange mirage-like blending of fact and fancy that characterizes the legends of the mediævals, Vergil was finally described as a benevolent enchanter living at Rome under King Servius, or Darius, or Octavianus, the son of a king from "Campania in the Ardennes" and the daughter of a Roman Senator under the emperor Remus, who killed his uncle Romulus. Vergil was said to have studied at the University of Toledo, but to have spent most of his time at Rome and Naples. The latter city, in fact, he was said to have founded and to have buoyed it up in the sea on eggs. See Tunison, *Vergil in the Middle Age* (Cincinnati, 1889); Milberg, *Mirabilia Vergiliana* (Meissen, 1867), and especially Comparetti, *Vergil in the Middle Ages*, Eng. trans. (New York, 1896). The influence of Vergil on Dante is well known.

MANUSCRIPTS.—More than 150 manuscripts of Vergil, of all degrees of value, have been discovered and classified, among them some of a very early date. The most valuable are the Codex Vaticanus (3867), of the fourth or fifth century; the Codex Palatinus (Vatican), of the same age; and the Codex Mediceus or Laurentianus (Florence), which contains corrections made in the fifth century. Important fragments of manuscripts also exist, among them the Schedae Vaticanae, a set of sheets with illustrations, the Schedae Rescriptae Sangallenses (palimpsest), and the Schedae Rescriptae Veronenses (palimpsest). Another good source is the Codex Gudianus (Wolfenbüttel) of the ninth century. Three Codices in Berne of the ninth or tenth century also deserve mention. On the MSS. see Ribbeck's Prolegomena to his Vergil (1866); the fac-similes published by Wattenbach, Zangemeister, and Chatelain; and the paper by Nolhac, *Les Peintures des MSS. de Virgile* (*Mélanges de l'École Française à Rome*, 1884).

BIBLIOGRAPHY.—The *editio princeps* of Vergil appeared at Rome about 1469. Early editions of the complete works are those of La Cerda (Madrid, 1608–17); D. Heinsius (Leyden, 1636; rev. by N. Heinsius, 1664, 1676); Delphin ed. (Paris, 1675); Burmann (Amsterdam, 1746). Later are those of Heyne, 4 vols. (Leipzig, 1767–75; third ed. in 6 vols. with glossary by Schlegel, 1798–1800); the same revised by Wagner with the minor poems (Leipzig, 1830–41) in 5 vols.; Forbiger, 4th ed. (Leipzig, 1872–75); Dübner (Paris, 1858); Ribbeck, with critical prolegomena, 5 vols. (Leipzig, 1859–68); Benoist, 3 vols. (2d ed. Paris, 1876); with English notes by Conington and Nettleship, 3 vols. (4th ed. London, 1881–83). More elementary are the editions by Wagner (3d ed. Leipzig, 1861); Ladewig and Schaffer (10th ed. Berlin, 1886); Kennedy (2d ed. London, 1879); Kappes, 4th ed. Leipzig, 1887); Papillon, 2 vols. (London, 1882); and Sidgwick (Cambridge, 1890). Good prose translations are those of Conington (3d ed. London, 1882); and Lonsdale and Lee (12th ed. London, 1890). Verse translations into English are those of Dryden, and of Bowen (incomplete). A good verse translation of the *Aeneid* is that of William Morris; of the *Eclogues* that of Calverley (1866) and Palmer (1883); of the *Georgics* that of Rhodes.

A good annotated edition of the *Bucolics* (Eclogues) and *Georgics* are those of Keightley (London, 1848); of the *Aeneid* by Papillon and Haigh (Oxford, 1890); of the *Copa* by Ilgen (Halle, 1820); of the *Ciris* by Unger (Halle, 1885); of the *Moretum* by Bährens in the *Poet. Latini Minores* (1886).

On Vergil's life and literary qualities see Nettleship's *Ancient Lives of Vergil* (London, 1879); Ste.-Beuve, *Étude sur Virgile* (Paris, 1870); Sellar, *Roman Poets of the Augustan Age* (1877); a paper by Myers in his *Classical Essays*; and the admirable chapters on Vergil in Tyrrell's *Latin Poetry* (Boston, 1895); and Mackail's *Latin Literature* (New York, 1895). See also the numerous monographs cited in the Teuffel-Schwabe-Warr *Hist. of Roman Lit.*, vol. i. pp. 425–450. On Vergil in the Middle Ages, see above.

Verginius. See VIRGINIUS.

Verna. A domestic slave born of a slave. See SERVUS.

Verner's Law, so named from the brilliant discoveries of Karl Verner, first published in *Kuhn's Zeitschrift*, xxiii. 97–130 (1875). It embodies an explanation of certain apparent exceptions to the laws for the first or Teutonic shifting of consonants (see GRIMM'S LAW), affecting the representation in Teutonic of the Indo-European voiceless explosives (tenues) *k, t, p*, and the voiceless sibilant *s*; thus, while the *th* of Eng. *tooth* corresponds regularly to the *t* of Greek *ὀδόντος*, in Eng. *hard* it is a *d* which represents the *t* of Greek *κρατύς*: so Germ. *bruder* and *vater*, representing Gothic *brōþar* and *fadar*, correspond to Lat. *frāter* and *pater*, both having *t*. There is divergence even within the forms of the same word. The *c* (*k*) of Lat. *dūco* is represented in Germ. *ziehen : gezogen* both by *h* and *g*. It appears that Indo-European *k, t, p* produce not only Teutonic *h, þ*(*th*), *f*, as set forth in Grimm's law, but also *g, d, b*. The essential feature of Verner's discovery, which explained this diversity, was the recognition that it was connected with the diversity of the original word-accent in Indo-European. The syllable on which this accent fell varied in different words and in different forms of the same word. This method of accentuation is partially preserved in Sanskrit and Greek, as well as in the Balto-Slavic languages; cf. Gr. *δέκα*: Skr. *dáça;* Gr. *ὀκτώ*: Skr. *aṣṭá;* Gr. *πέντε*: Skr. *páñca;* Gr. *ἔτι*: Skr. *áti;* Gr. *ἐγώ*: Skr. *ahám;* Gr. *γένος*: Skr. *jánas;* Gr. *κλυτός*: Skr. *çrutá-s;* Gr. *νέος*: Skr. *náva-s;* Gr. *ἡδύς*: Skr. *svādú-s;* Gr. *μέθυ*: Skr. *mádhu;* Gr. *ζυγόν*: Skr. *yugá-m;* Gr. *πούς, ποδός, πόδα*: Skr. *pād, padás, pādam*.

The law is this: Indo-Europ. medial *k, t, p, s* become Teutonic *h, þ*(*th*), *f, s*, which then, if associated with voiced sounds, become voiced (*ɜ, d, þ, z*), when the Indo-Europ. accent rested upon any other than the preceding syllable; or, to state it in another form, I.-E. *k, t, p, s* appear as *h, th, f, s* when the I.-E. accent immediately preceded, otherwise (except before *s* or *t*) as *g, d, b, z*.

Examples: K. Gr. *δέκα*: Goth. *taihun*, "ten"; Skr. *çváçura-s :* Germ. *Schwäher*, "father-in-law"; on the other hand, Skr. *çvaçrú :* Germ. *Schwieger* (*mutter*), mother-in-law; Gr. *δεκάς*: Goth. *tigus*, number 10.—T. Skr. *bhrātar-*, Gr. *φράτωρ*: Goth. *brōþar*, Eng. *brother*, but Gr. *κλυτός*: Eng. *loud;* Gr. *ἑκατόν*: Goth. *hund*, Eng. *hund-red;* Skr. *kētú-s*: Goth. *háidus*, Eng. *-hood;* Skr. *damitá-s:* Eng. *tamed*. —P. Skr. *limpāmi:* Goth. *bileiban*. — S. (Teutonic *z* becomes in Germ. and Eng. *r*) Skr. *bhárasē* 2 sg. indic. pres. pass: Goth. *baíraza*. The I.-E. causatives were accented on the syllable following the root; hence I.-E. *noséyeti* appears as Germ. *nähren*, Goth. *nasjan*, "make healthy," causat. of root *nes-*, cf. Gr. *νέομαι, νόστος*, "return," Goth. *ganisan*, Germ. *genesen;* I.-E. *loiséyeti* appears as Germ. *ehren* (cf. Eng. *lore*), Goth. *laisjan* "make to know," causat. of root *leis-;* cf. Lat. *lira*, Germ. *geleise;* I.-E. *woséyeti*, Skr. *vāsáyati* appears as Goth. *wasjan*, cf. Eng. *wear*, causat. of root *wes-*, in Lat. *vestis*, etc.; so compare Goth. *reisan*, Eng. rise, with Goth. *urraisjan*, O. Eng. *rǣran*, Eng. *rear*, "make rise." For a parallel effect upon *t*-roots, cf. Skr. *vartáyati* (I.-E. *wortéyeti*), Goth. *fra-wardjan*, "spoil," from root *wert-* of Lat. *verto*, Goth. *waírþan;* I.-E. *sontéyeti*, Goth. *sandjan*, Eng. *send*, from root *seṅt-*, "go," in Goth. *sinþs*, "time," Lat. *sentis*, "path"; I.-E. *loitéyeti*, "cause to go," Eng. *lead*, Germ. *leiten*, causat. of root *leit-*, in Goth. *leiþan*, Germ. *leiden*.

The difference of the consonants in Eng. *was : were* is due to the fact that in Indo-Europ. the perfect was accented on the root in the singular and on the ending in the plural, cf. Skr. *véda* (=οἶδα), "I know," but *vidmá* (=ἴδμεν for ἰδμέν), "we know." To a similar variation in the I.-E. accent are due the phenomena of "grammatical interchange," such as: Germ. *ziehen : gezogen; leiden : gelitten; schneiden : geschnitten;* Eng. *lose : forlorn* (Germ. *verloren*); Eng. *seethe : sodden*.

Phil.*, § 104 (Oxford, 1894).

Verolamium or **Verulamium.** Now Old Verulam, near St. Albans. The chief town of the Catuellani in Britain, probably the residence of King Cassivellaunus, conquered by Caesar.

Veromandui. A people in Gallia Belgica, between the Nervii and Suessiones, in the modern Vermandois. Their chief town was Augusta Veromanduorum (St. Quentin).

Verōna. Now Verona; an important town in Gallia Cisalpina, on the river Athesis. It was originally the capital of the Euganei, but subsequently belonged to the Cenomani. At a still later time it was made a Roman colony, with the surname Augusta; and under the Empire it was one of the largest and most flourishing towns in the north of Italy. It was the birthplace of Catullus; and, according to some accounts, of the elder Pliny. There are still many Roman remains at Verona, and among others an amphitheatre in a good state of preservation.

Roman Amphitheatre at Verona.

Verres, GAIUS. A Roman quaestor in B.C. 82 to Cn. Papirius Carbo, and who therefore at that period belonged to the Marian party. He, however, deserted Carbo and went over to Sulla, who sent him to Beneventum, where he received a share of the confiscated estates. Verres next appears as the legate of Cn. Cornelius Dolabella, praetor of Cilicia from 80 to 79, one of the most rapacious of the provincial governors. On the death of the regular quaestor, C. Malleolus, Verres became the pro-quaestor of Dolabella. In Verres, Dolabella found an active and unscrupulous agent, and, in return, connived at his excesses. But the pro-quaestor proved as faithless to Dolabella as he had been to Carbo, and turned evidence against him on his prosecution by M. Scaurus in 78. Verres was Praetor Urbanus in 74, and afterwards propraetor in Sicily, where he remained nearly three years (73–71). The extortions and exactions of Verres in the island have become notorious through the celebrated orations of Cicero. No class of the inhabitants of Sicily was exempted from his avarice, his cruelty, or his insults. The wealthy had money or works of art to yield up; the middle classes might be made to pay heavier imposts; and the exports of the vineyards, the arable land, and the loom he saddled with heavier burdens. By capricious changes or violent abrogation of their compacts, Verres reduced to beggary both the producers and the farmers of the revenue. His three years' rule desolated the island more effectually than the two recent Servile Wars and than the old struggle between Carthage and Rome for the possession of the island. So diligently did he employ his opportunities that he boasted of having amassed enough for a life of opulence, even if he were compelled to disgorge two-thirds of his plunder in stifling inquiry or purchasing an acquittal.

As soon as he left Sicily the inhabitants resolved to bring him to trial. They committed the prosecution to Cicero, who had been Lilybaean quaestor in Sicily in 75, and had promised his good offices to the Sicilians whenever they might demand them. Cicero entered heartily into the cause of the Sicilians, and spared no pains to secure a conviction of the great criminal. Verres was defended by Hortensius (q. v.) and was supported by the whole power of the aristocracy. At first his partisans attempted to stop the prosecution by bribes, flatteries, and menaces; but finding this to be impossible, they endeavoured to substitute a sham prosecutor in the place of Cicero. Hortensius therefore offered as prosecutor Q. Caecilius Niger, who had been quaestor to the defendant, had quarrelled with him, and had consequently, it was alleged, the means of exposing officially his abuse of the public money. But the Sicilians rejected Caecilius altogether, not merely as no match for Hortensius, but as foisted into the cause by the defendant or his advocate. By a technical process of the Roman law called *divinatio*, the *iudices*, without hearing evidence, determined from the arguments of counsel alone who should be appointed prosecutor. They decided in Cicero's favour. The oration which Cicero delivered on this occasion was the *Divinatio in Q. Caecilium*. The pretensions of Caecilius were thus set aside. Yet hope did not forsake Verres and his friends. Evidence for the prosecution was to be collected in Sicily itself. Cicero was allowed 110 days for the purpose. Verres once again attempted to set up a sham prosecutor, who undertook to impeach him for his former extortions in Achaia, and to gather the evidence in 108 days. But the new prosecutor never went even so far as Brundisium in quest of evidence, and the design was abandoned. Instead of the 110 days allowed, Cicero, assisted by his cousin Lucius, completed his researches in fifty, and returned with a mass of evidence and a crowd of witnesses gathered from all parts of the island. Hortensius now grasped at his last chance of an acquittal, and it was not an unlikely one. Could the impeachment be put off to the next year, Verres was safe. Hortensius himself would then be consul, with Q. Metellus for his colleague, and M. Metellus would be Praetor Urbanus. For every firm and honest *iudex* whom the upright M'. Acilius Glabrio, then Praetor Urbanus, had named, a partial or venal substitute would be found. Glabrio himself would give place as *quaesitor* or president of the court to M. Metellus, a partisan, if not a kinsman, of the defendant. It was already the month of July. The games to be exhibited by Cn. Pompey were fixed for the middle of August, and would occupy a fortnight; the Roman games would immediately succeed them, and thus forty days intervene between Cicero's charge and the reply of Hortensius, who again, by dexterous adjournments, would delay the proceedings until the Games of Victory and the commencement of the new year. Cicero therefore abandoned all thought of eloquence or display, and, merely introducing his case in the first of the Verrine orations, rested all his hopes of success on the weight of testimony alone. Hortensius was quite unprepared with counter-evidence, and after the first day he abandoned the cause of Verres. Before the nine days occupied in hearing evidence were over, Verres quitted the city in despair, and was condemned in his absence. He retired to Marseilles, retaining so many of his treasures of art as to cause eventually his proscription by M. Antony in 43. Of the seven Verrine orations of Cicero, two only, the *Divinatio* and the *Actio Prima*, were spoken, while the remaining five were compiled from the depositions after the verdict. Cicero's own division of the impeachment is the following:

(*a*) Preliminary.
1. In Q. Caecilium or. Divinatio.
2. Prooemium—Actio Prima—Statement of the Case.

These alone were spoken.

(*b*) Orations founded on the depositions.
3. Verres's official life to B.C. 73.
4. Iurisdictio Siciliensis.
5. Oratio Frumentaria.
6. " De Signis.
7. " De Suppliciis.

These were circulated as documents or pamphlets after the flight of Verres. The result of the whole affair was to make Cicero the leader of the Roman bar in place of Hortensius.

See accounts of this very famous case given in the lives of Cicero by Brückner (1852); Forsyth (1869); and Trollope (1880); and cf. the articles CICERO; HORTENSIUS.

Verrius Flaccus, MARCUS. A Roman freedman, "who obtained renown chiefly by his method of teaching. To exercise the wits of his pupils, says Suetonius, he used to pit against each other those of the same age, give them a subject to write upon, and reward the winner with a prize, generally in the shape of a fine or rare copy of some ancient author" (Nettleship's *Essays*, p. 203). He educated the grandsons of Augustus and died un-

der Tiberius. He devoted himself to literary and antiquarian studies resembling those of the learned Varro. Thus, he wrote *De Orthographia* and *Rerum Memoria Dignarum Libri;* but his most important work was entitled *De Verborum Significatu,* which may claim to be the first Latin lexicon ever written. It was arranged alphabetically; it gave interpretations of obsolete words, and explained the meaning of the oldest institutions of the State, including its religious customs, etc. We possess only fragments of an abridgment made by Festus, and a further abridgment of the latter, dedicated to Charlemagne, by Paulus. (See FESTUS; PAULUS.) A calendar of Roman festivals drawn by him was set up in marble at Praeneste, near Rome; of this there are some fragments still preserved containing the months of January to April inclusive and December. These fragments are known as the Fasti Praenestini (*C. I. L.* i. p. 311). See Nettleship's *Lectures and Essays,* pp. 201–247 (Oxford, 1885).

Ver Sacrum (*ἔτος ἱερόν*). "A sacred spring." A dedication practised by the Italian tribes, whereby, in times of severe hardship, all the products of the succeeding spring, i. e. the months of March and April, were consecrated to the gods. All the fruits and cattle were actually offered up in sacrifice; while the children that were then born, as soon as they were grown up, were driven out of the country as forfeited to heaven, and required to seek a new home. Originally both men and children were undoubtedly sacrificed, but expatriation was substituted for death as the sentiment of mercy grew more general. Whole generations in this way left their country, those of the Sabine stock being led by the animals sacred to Mars—a bull, a woodpecker, or a wolf. In Rome, whose origin is traced back by many to a Ver Sacrum, the *pontifices* superintended the vow and its fulfilment. The Ver Sacrum was vowed for the last time in the Second Punic War, B.C. 217, after the battle of Lake Trasimenus (Livy, xxii. 10). The vow was not fulfilled, however, until twenty-one years afterwards, B.C. 195 and 194 (Livy, xxxiii. 44; xxxiv. 44). See Marquardt, *Staatsverwaltung,* iii. 281; and Ihering, *Die Vorgeschichte der Indoeuropaeer.*

Versipellis. "Turn-skin." One who changes his skin; thence, one who transforms himself, or is transformed, into another person's figure, as of Iupiter into Amphitryon (Plaut. *Amphitr.* 121. Prol.); and so a wily, dissembling fellow who can assume any character (id. *Bacch.* iv. 4, 12). But the term designates more especially a man transformed into a wolf—a "were-wolf" (*loup-garou*). Thus, in an ancient legend of Arcadia, every member of a certain family was changed into a wolf for nine years, and after that period resumed his original shape (Pliny, *H. N.* viii. 22). Belief in were-wolves is very ancient. Herodotus (iv. 105) says that among the Neuri, a semi-Scythian people, each man became a wolf for a few days every year —a story repeated by Mela (ii. 1). Vergil in the Eighth Eclogue makes his enchanter, Moeris, do the same. It is supposed that the notion arose from the stories of the "wolf-boys" of India, of whom Mowgli, in Rudyard Kipling's *Jungle Book,* stands to the modern reader as a type. The best were-wolf story in ancient literature is that told by Petronius (ch. 62). See also Herz, *Der Werwolf* (1862); and Baring-Gould's *Book of Werewolves* (1866).

Versūra. See FENUS.

Versus Memoriāles. Verses written to aid the memory; e. g. containing the names of the Muses (*Poet. Lat. Min.* iii. 243), the names of the winds (id. v. 383), on the constellations (id. v. 349 foll.). They are in Latin, and do not in all probability antedate the fifth or sixth century A.D. Cf. Isidor. *De Re Nat.* 37.

Verticordia. See VENUS.

Vertumnus or **Vortumnus.** An alleged Etruscan divinity, but this origin seems to be refuted by his genuine Roman name (from *verto*). The Romans connected Vertumnus with all occurrences to which the verb *verto* applies, such as the change of seasons, purchase and sale, the return of rivers to their proper beds, etc. But in reality the god was connected only with the transformation of plants and their progress from blossom to fruit. Hence the story that when Vertumnus was in love

Vertumnus. (Berlin Museum.)

with Pomona he assumed all possible forms, until at last he gained his end by metamorphosing himself into a blooming youth. Gardeners accordingly offered to him the first produce of their gardens and garlands of budding flowers. The whole people celebrated a festival to Vertumnus on the 23d of August, under the name of the VORTUMNALIA, denoting the transition from the beautiful season of autumn to the less agreeable one. The importance of the worship of Vertumnus at Rome is evident from the fact that it was attended to by a special flamen (*flamen Vortumnalis*). See FLAMEN.

Veru (1) ὀβελός. A spit used for roasting meat (Varro, *L. L.* v. 127). It was often made of wood (Plin. *H. N.* xxx. 37; Verg. *Georg.* ii. 396; Ovid, *Fast.* ii. 363), sharpened at the point, so as to be driven through the meat (Sen. *Thyest.* 1063; Verg. *Aen.* i. 212), and placed over the fire (id. *Aen.* v. 103), and probably turned by the hand upon fire-dogs or andirons (*varae*). See VARA.

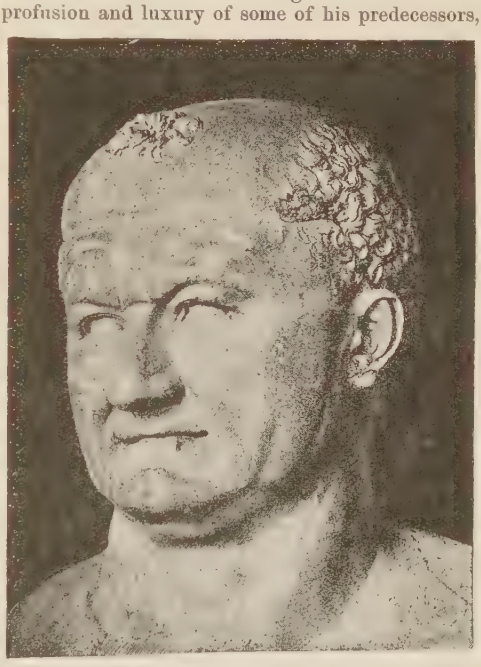
(2) (σαύνιον.) A missile weapon (Verg. *Aen.* vii. 665), adopted from the Samnites by the light infantry of the Romans. It had a sharp, round, iron point, like the spit after which it was named (Festus, s. v. "Samnites").

Verucŭlum and **Vericŭlum** (ὀβελίσκος). A small javelin carried by the Roman soldiers. It had an iron handle and was about three and a half feet long (Veget. *Mil.* ii. 15).

Verŭlae. Now Verdi; a town of the Hernici in Latium, southeast of Aletrium, and north of Frusino, subsequently a Roman colony.

Verulamium. See VEROLAMIUM.

Verus, L. AURELIUS. The colleague of M. Aurelius in the Empire, A.D. 161–169. He was born in 130, and his original name was L. Ceionius Commodus, was adopted by Hadrian in 136; and on the death of his father in 138, he was, in pursuance of the command of Hadrian, adopted, along with M. Aurelius, by M. Antoninus. On the death of Antoninus in 161, Verus succeeded him as emperor in conjunction with Marcus Aurelius. As to the events of his rule see AURELIUS. He died in A.D. 169.



Vescīnus Ager. A district of the Aurunci in Latium.

Vesēvus. See VESUVIUS.

Vesontio. Now Besançon; the chief town of the Sequani in Gallia Belgica, situated on the river Dubis (Doubs), which flowed around the town, with the exception of a space of 600 feet, on which stood a mountain, forming the citadel of the town. The place still has remains of a Roman aqueduct, an amphitheatre, and some other less important ruins.

Vespae Iudicium. A *jeu d'esprit* in Latin, probably written in the second or third century A.D. and consisting of 99 hexameters. It relates a contest between a cook and a baker with Vulcan for judge. The lines are neat and musical, and the sentiments show the writer to be a pagan in his faith and a rhetorician in his profession. A number of jokes and puns that are interspersed are rather academic in their tone. The poem is printed by Bährens in his *Poet. Lat. Min.* iv. 326. See Haupt, *Opuscula*, iii. 20.

Vespasiānus, TITUS FLAVIUS SABĪNUS. A Roman emperor from A.D. 70 to A.D. 79. He was born in the Sabine country on the 17th of November, A.D. 9. His father was a man of mean condition, of Reaté, in the country of the Sabini. His mother, Vespasia Polla, was the daughter of a *praefectus castrorum*, and the sister of a Roman senator. She was left a widow with two sons, Flavius Sabinus and Vespasian. Vespasian served as military tribune in Thrace, and was quaestor in Crete and Cyrené. He was afterwards aedile and praetor. About this time he married Flavia Domitilla, the daughter of a Roman *eques*, by whom he had two sons, both of whom succeeded him. In the reign of Claudius he was sent into Germany as *legatus legionis*, and in 43 he held the same command in Britain, and reduced Vectis (Isle of Wight). He was consul in 51, and proconsul of Africa under Nero. He was at this time very poor, and was accused of getting money by dishonourable means; but he had a great military reputation, and was liked by the soldiers. Nero afterwards sent him to the East (66), to conduct the war against the Jews. His conduct of the Jewish War had raised his reputation, when the war broke out between Otho and Vitellius after the death of Galba. He was proclaimed emperor at Alexandria on the 1st of July, 69, and soon after all through the East. He reached Rome in the following year (70), leaving his son Titus to continue the war against the Jews. Titus took Jerusalem after a siege of five months; and a formidable insurrection of the Batavi, headed by Civilis, was put down about the same period. Vespasian, on his arrival at Rome, worked with great industry to restore order in the city and in the Empire. He disbanded some of the mutinous soldiers of Vitellius, and maintained discipline among his own. He co-operated in a friendly manner with the Senate in the public administration. The simplicity and frugality of his mode of life formed a striking contrast with the profusion and luxury of some of his predecessors,

Vespasian. (Naples Museum.)

and his example is said to have done more to reform the morals of Rome than all the laws which had ever been enacted. He lived more like a private person than a man who possessed supreme power: he was affable and easy of access to all persons. The personal anecdotes of such a man are some of the most instructive records of his reign. He was never ashamed of the meanness of his origin, and ridiculed all attempts to make out for him a distinguished genealogy. When Vologeses, the Parthian king, addressed to him a letter commencing in these terms, "Arsaces, king of kings, to Flavius Vespasianus," the answer began, "Flavius Vespasianus to Arsaces, king of kings."

If it be true, as it is recorded, that he was not annoyed at satire or ridicule, he exhibited an elevation of character almost unparalleled in one who filled so exalted a station. He knew the evil character of his son Domitian, and as long as he lived he kept him under proper restraint. The stories that are told of his avarice and of his modes of raising money, if true, detract from the dignity of his character; and it seems that he had a taste for petty saving and coarse humour. Yet it is admitted that he was liberal in all his expenditure for purposes of public utility. In 71 Titus returned to Rome, and both father and son triumphed together on account of the conquest of the Jews. The reign of Vespasian was marked by the conquest of North Wales and the island of Anglesey by Agricola, who was sent into Britain in 78. Vespasian also busied himself in securing the German frontier: he fortified the Agri Decumates and strengthened the defences of the Limes Germanicus. (See GERMANIA.) In Italy he reorganized the Praetorian Guard, forming one of nine cohorts composed of Italians only. His financial management was marked by great economy; but he was the author of some remarkable public works at Rome, the building of the magnificent Temple of Peace, and the rebuilding of the Temple of Iupiter Capitolinus. In the summer of 79, Vespasian, whose health was failing, went to spend some time at his paternal house in the mountains of the Sabini, but derived no benefit from treatment. He still attended to business, just as if he had been in perfect health, and, on feeling the approach of death, he said that an emperor should die standing; and in fact he did die in this attitude, on the 24th of June, 79, being sixty-nine years of age. His last words were characteristic of his somewhat cynical humour, "Methinks I am becoming a god" (*Ut puto, deus fio*) (Suet. *Vesp.* 23; Dio Cass. cxvi.). See the account of Vespasian in Merivale's *History of the Romans under the Empire* (1865).

Vesta. An Italian goddess of the hearth, and more especially of the fire on the hearth, both in name and in nature akin to the Greek Hestia (q.v.), but worshipped by the Italian nations, particularly by the Latins, from ancient times independently of any connection with Greece. It has been shown that the worship of Vesta had its origin in the difficulty and the necessity of obtaining fire in primitive times. Hence, as even in the present time among savage tribes, arose the custom of keeping a fire always alight somewhere for the use of the community and of carrying fire thence for any new settlement. This custom was preserved by the conservatism of religion among civilized Greeks and Romans, after the necessity had ceased to exist, and the State-hearth was preserved in each Latin State, just as in Greece in the Prytaneа; and in like fashion an outgoing settlement carried its sacred fire from the parent city. It was natural that from these observances the sacred flame itself should become personified as a goddess (Ovid, *Fast.* vi. 291) who presided over the hearth of each house, and in the State-hearth or sanctuary of Vesta over the whole commonwealth. Vesta was thus intimately connected with the Penates as deities of the household and of the State (see PENATES); and the fact that the sacred fire was brought from the parent city made the Romans trace back the origin of the cult to the more ancient Latin settlements, first to Lanuvium and Alba, and, after the idea of a Trojan origin prevailed, to Troy itself, whence it was supposed the sacred fire of Vesta as well as the Penates had come (Verg. *Aen.* ii. 296). To this cause belongs the ancient custom at Rome that praetors, consuls, and dictators, before they began their functions, sacrificed at Lanuvium, that town having been an ancient religious centre of the Latins. At Rome, as in other Latin cities, the sacred fire was tended and the service of Vesta maintained by a body of virgin priestesses, who lived together in a house (Atrium Vestae) to the southeast of the Forum, and under the northwest side of the Palatine, abutting on the Via Nova. This house, as rebuilt under Hadrian, was excavated in 1883, and from its character and the inscriptions (as late as the beginning of the fourth century A.D.) and sculptures found in it much additional light has been thrown on the Vestal service. See Jordan, *Das Tempel-der Vesta und d. Haus der Vestalinnen* (Berlin, 1886); and Lanciani, in his *Ancient Rome*, ch. vi. (Boston, 1888).

It is no doubt right to assume that the Vestals represented the daughters of the chief in the primitive tribe, who maintained the State-fire in their father's hut. When Vesta was recognized as a personal deity it became necessary that the priestesses should dwell in a sort of nunnery, and that the goddess should have a separate temple; but this Aedes Vestae preserved the shape of the primitive chief's hut, and was a round building (see illustration under ROMA). The public worship of Vesta was maintained in this temple: her private worship belonged to every domestic hearth —in the earliest Roman houses in the *atrium*. In her aspect as a benign goddess of fire Vesta seems to have been akin to or identical with STATA MATER (q.v.). See Preuner, *Hestia-Vesta* (Tübingen, 1864); Maes, *Vesta e Vestali* (Rome, 1883); the discussion by Frazer in the (English) *Journal of Philology*, vol. xiv., and the articles LARES, PENATES, and VESTALES, in this Dictionary.

Vestāles or **Virgĭnes Vestāles.** Vestal Virgins; the priestesses of Vesta. At Rome their number was at first four, but had already been increased to six during the last years of the kings. Every girl possessing the necessary qualification was liable to be called on to undertake the duty, and no exemption was granted, except upon very strict conditions. The office was confined to girls of not less than six and not more than ten years of age, without personal blemish, of free, respectable families, whose parents were still alive and resident in Italy. The choice was made by lot out of a number of twenty, nominated by the Pontifex. The virgin appointed to the priestly office immediately quitted her father's authority and entered that of the goddess. After her inauguration by the Pontifex, she was taken into the Atrium of Vesta, her future place of abode, was duly attired, and shorn of her hair. The time of service was by law thirty years, ten of which were set apart for learning, ten for performing, and ten for teaching the duties. At the end of this time leave was granted to the Vestals to lay aside their priesthood, return into private life, and marry. They seldom took advantage of this permission. They were under the control of the Pontifex, who, in the name of the goddess, exercised over them paternal authority. He administered corporal chastisement if they neglected their duties, more particularly if they allowed the sacred fire to go out;

and, if any one of them violated her vow of chastity, he had her carried on a bier to the Campus Sceleratus, near the Colline Gate, beaten with rods, and immured alive. Her seducer was scourged to death. In fact, it has been noted that the Vestals typified to the Romans womanly chastity, just as *flamen* and *flaminica* typified the purity of the marriage-relation.

No man was allowed to enter the apartments of the Vestals. Their service consisted in maintaining and keeping pure the eternal fire in the Temple of Vesta, watching the sacred shrines, performing the sacrifices, offering the daily and, when necessary, the special prayers for the welfare of the nation, and taking part in the feasts of Vesta, Tellus, and Bona Dea. They were dressed entirely in white, with a coronet-shaped head-band (*infula*), and ornamented with ribbons (*vittae*) suspended from it, and at a sacrifice covered with a white veil or hood (*suffibulum*) made of a piece of white woollen cloth with a purple border, rectangular in form. It was folded over the head and fastened in front below the throat by a *fibula* (Festus, p. 340, ed. Müller). The chief part in the sacrifices was taken by the eldest, the Virgo Vestalis Maxima.

Vestal Virgin.

The Vestal Virgins enjoyed various distinctions and privileges. When they went out, they were accompanied by a lictor, to whom even the consul gave place; at public games they had a place of honour; they were under a guardian, and were free to dispose of their property; they gave evidence without the customary oath; they were, on account of their incorruptible character, intrusted with important wills and public treaties; death was the penalty for injuring their person; those whom they escorted were thereby protected from any assault. To meet them by chance saved the criminal who was being led away to punishment; and to them, as to men of distinguished merit, was assigned the honour of burial in the Forum. See the works cited under VESTA.

Vestibŭlum. An entrance-court before a Roman house. See DOMUS.

Vestīni. A Sabellian people in Central Italy, lying between the Apennines and the Adriatic Sea, and separated from Picenum by the river Matrinus, and from the Marrucini by the river Aternus. They were conquered by the Romans in B.C. 328, and from this time appear as the allies of Rome (App. *B. C.* i. 39, 52).

Vestiplĭca. A lady's maid who had charge of her mistress's wardrobe (Quint. *Decl.* 363).

Vestis. The generic name for clothing. See, for the principal articles of wearing apparel, the articles ABOLLA; BRACAE; CALCEUS; CHITON; CHLAMYS; CREPIDA; FIMBRIAE; MANICA; PALLA; PALLIUM; PETASUS; PILLEUS; SAGUM; SERICUM; SOCCUS; STOLA; TOGA; TUNICA; and consult Weiss, *Kostümkunde* (1872); Köhler, *Trachten der Völker* (1872); Teirich, *Blätter für Kunstgewerbe*, vol. iv. (1875); Von Heyden, *Tracht der Kulturvölker Europas* (Leipzig, 1889); and the illustrations in Hope's *Costume of the Ancients* (2d ed. 1875); Moyn-Smith's *Ancient Greek Female Costume* (1882); and Racinet, *Le Costume Historique*, vol. ii. (Paris, 1887).

Vestispĭca. A lady's maid whose duty it was to look over her mistress's wardrobe and keep it in repair (Plaut. *Trinum.* ii. 1, 29).

Vesuvius, also called **Vesēvus**, **Vesbius**, and **Vesvius** (τὸ Βέσβιον ὄρος). A volcanic mountain in Campania, rising out of the plain southeast of Neapolis (Naples). There are no records of any eruption of Vesuvius before the Christian era, but the ancient writers were aware of its volcanic nature from the igneous appearance of its rocks. In A.D. 63 the volcano gave the first symptoms of agitation in an earthquake, which occasioned considerable damage to several towns in its vicinity; and on the 24th of August, A.D. 79, occurred the first great eruption of Vesuvius, which overwhelmed the cities of Stabiae, Herculaneum, and Pompeii. It was in this eruption that the elder Pliny lost his life. See HERCULANEUM; POMPEII.

Vetĕra Castra. The chief military station of the Roman troops on the Lower Rhine, near the modern Birten (Tac. *Ann.* i. 48).

Veterāni. During the later Republican period and under the Empire a term applied to those who at the end of their time of military service retired from the legion. They were kept with the army under the standard, under which they were taken to the military colonies appointed for them, and again served there for an indefinite period. See EVOCATI; EXERCITUS; LEGIO; and VEXILLARII.

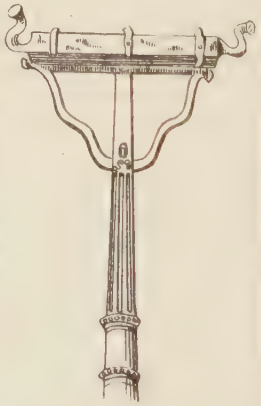
Veterinarius. A veterinary; one who prescribed for cattle, horses, and dogs (Columel. vi. 8, 1; vii. 5, 14).

Vetranio. A Roman who commanded the legions in Illyria and Pannonia in A.D. 350, when Constans was treacherously destroyed, and was proclaimed emperor by his troops; but at the end of ten months resigned in favour of Constantius (Amm. Marcell. xv. 1; xxi. 8).

Vettius, LUCIUS. A Roman *eques*, in the pay of Cicero in B.C. 63, to whom he gave some valuable information respecting the Catilinarian conspiracy. In 59 he accused Curio, Cicero, L. Lucullus, and many other distinguished men, of having formed a conspiracy to assassinate Pompey. Cicero regarded this accusation as the work of Caesar, who used the tribune Vatinius as his instrument. On the day after he had given his evidence, Vettius was found strangled in prison (Suet. *Iul.* 17, 20; Cic. *In Vatin.* 10, 11; id. *Ad Att.* ii. 24). See CATILINA.

Vettŏnes or **Vectŏnes.** A people in the interior of Lusitania, east of the Lusitani and west of the Carpetani, extending from the Durius (Douro) to the Tagus.

Vetulonia, Vetulonium, or **Vetulonii.** An ancient city of Etruria, and one of the twelve cities of the Etruscan confederation. (See ETRURIA.) From this city the Romans are said to have borrowed the insignia of their magistrates—the fasces, sella curulis, and toga praetexta—as well as the use of the brazen trumpet in war (Dionys. iii. 51; Strabo, p. 220; Flor. i. 5; Sil. Ital. viii. 483). Its site has been discovered near a small village called Magliano, between the river Osa and the Albegna, and about eight miles inland.



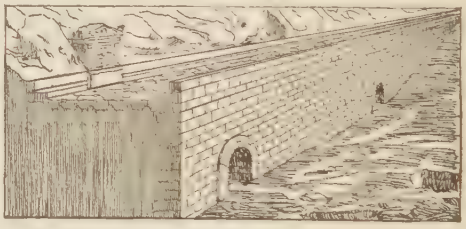
Veturia Gens. A gens both patrician and plebeian, whose most distinguished families bore the names of CALVĪNUS, CICURĪNUS, and PHILO.

Veturius Mamurius. A mythical personage, said in Roman legend to have been the armourer who made the eleven *ancilia* exactly like the one that was sent from heaven in the reign of Numa (Plut. *Numa*, 13). His praises formed one of the chief subjects of the songs of the Salii. The name is really equivalent to Mars Vetus—the ancient Mars. This "Old Mars" was represented by a man clothed in skins who was driven out of the city (Lyd. iv. 36) to symbolize the old season of wintry darkness driven out before the new spring year. Similar ceremonies to represent the driving out of winter have been observed in the folklore of other countries. See SALII.

Vetus, ANTISTIUS. (1) Propraetor in Further Spain about B.C. 68, under whom Caesar served as quaestor (Plut. *Caes.* 5). (2) GAIUS, son of the preceding, quaestor in B.C. 61, and tribune of the plebs in 57, when he supported Cicero in opposition to Clodius. In the Civil War he espoused Caesar's party, and we find him in Syria in 45, fighting against Q. Caecilius Brassus. In 34 Vetus carried on war against the Salassi, and in 30 was consul suffectus. He accompanied Augustus to Spain in 25, and on the illness of the emperor continued the war against the Cantabri and Astures, whom he reduced to submission (Cic. *Ad Q. Fr.* ii. 1; Dio Cass. xlvii. 27, liii. 25; Flor. iv. 12, 21). (3) LUCIUS, Roman consul with the emperor Nero, A.D. 55. In 58 he commanded a Roman army in Germany, and formed the project of connecting the Mosella (Moselle) and the Arar (Saône) by a canal, and thus forming a communication between the Mediterranean and the Northern Ocean, as troops could be conveyed down the Rhone and the Saône into the Moselle through the canal, and down the Moselle into the Rhine, and so into the Ocean. Vetus put an end to his life in 65, in order to anticipate his sentence of death, which Nero had resolved upon (Tac. *Ann.* xiii. 11, 53; xiv. 57; xvi. 10).

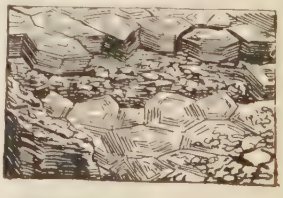
Vexillarii. The oldest class of Roman veterans, who, at the end of their period of service, retired from the legion, but were kept together under a standard (*vexillum*) up to the time of their final dismissal. They formed, by the side of the legion, a select corps like the *evocati* of earlier times. They were exempt from ordinary service, and only bound to take part in actual fighting. See EVOCATI.

Vexillum. The Latin name for a four-cornered flag (Tertull. *Apol.* 16), attached to a cross-pole, and carried by the *vexillarius*. (See SIGNUM). Every squadron (*turma*), and probably every detachment of a body of troops which formed a separate command, had a red, white, or purple *vexillum* of this kind, and hence were themselves called a *vexillum*, or sometimes a *vexillatio*. The latter word, however, from the end of the third century A.D., signifies a squadron of cavalry. At Rome a red flag was displayed on the Capitol during the deliberations of the Comitia Centuriata, and was in time of war planted as the signal for battle on the general's tent or the admiral's ship. Vexilla served also as marks of distinction for the higher officers. See LABARUM; SIGNUM.



Staff for Vexillum. (From a bronze original, given by Rich.)

Via (*ὁδός*). A road. The earliest roads in Greece were the sacred ways, which led to the most important religious centres, where national festivals were celebrated, such festivals also serving the purpose of public markets or fairs. In general, the Greeks set a high value on well-levelled roads, which made travelling easy; but, in the best days of Greece, only unpaved roads were known, paved roads being of comparatively late origin.



The finest work in ancient road-making was that done by the Romans, who, mainly for military purposes, connected Rome with her newly acquired provinces by means of high-roads. They laid out their roads as far as possible in straight lines. The nature of the ground was almost entirely disregarded; where mountains intervened they were broken through, and interposing streams and valleys were spanned with bridges and viaducts.

The first Roman high-road, which, even in its present condition, is worthy of admiration, was the Via Appia, so called after the censor Appius

Via Appia, near Ariccia. (Canina.)

Claudius, who constructed it. It was made in B.C. 312 to join Rome to Capua, and was afterwards continued as far as Brundisium. This "queen of roads," *regina viarum* (Stat. *Silv.* ii. 2, 12), was a stone causeway, constructed, according to the nature of the country, with an embankment either beneath or beside it, and was of such a width that two broad wagons could easily pass each other. The surface was paved with polygonal blocks of hard stone, generally basalt, fitted closely together, and so laid down that the middle of the road was at a higher level than the sides, to allow the rain-water to run off. According to a subsequent method, the Roman roads first received a foundation of rubble or *breccia*, on which rested a layer of flat stones eight inches thick; above this was an equally thick layer of stones set in lime, which was covered by another layer of rubble about three inches deep. Above the rubble was laid down the pave-

Pavement of Via Appia. (Piranesi.)

ment proper, consisting of either hard stone (*silex*) or else irregular blocks of basaltic lava.

In the time of the emperor Hadrian, the cost of constructing such a road amounted to $4500 per Roman mile (about $\frac{4}{5}$ English mile). From the end of the second century B.C. posts set up at a distance of 1000 paces from each other served to measure distances. See MILIARIUM.

The making and maintenance of the roads in Italy were provided for at the expense of the *aerarium*, or State treasury. During the republican age the roads were under the supervision of the censors. From the time of Augustus they were under imperial officials entitled *curatores viarum*. In the provinces, in general, the cost of the military roads, and indeed of all public works, was defrayed out of the provincial taxes. In the imperial provinces soldiers were also frequently employed in constructing roads. In a few cases toll was levied by special imperial permission. The following list of the great Roman roads that issued directly from the capital will be convenient for reference:

I. The VIA APPIA, the Great South Road. It was in perfect repair when Procopius wrote, long after the devastating inroads of the northern barbarians; and even to this day the cuttings through hills and masses of solid rock, the filling up of hollows, the bridging of ravines, the substructions to lessen the rapidity of steep descents, and the embankments over swamps, demonstrate the vast sums and the prodigious labour that must have been lavished on its construction. It issued from the Porta Capena, and, passing through Aricia, Tres Tabernae, Appii Forum, Tarracina, Fundi, Formiae, Minturnae, Sinuessa, and Casilinum, terminated at Capua, but was eventually extended through Calatia and Caudium to Beneventum, and finally from thence through Venusia, Tarentum, and Uria, to Brundisium.

The ramifications of the Via Appia most worthy of notice are:

(*a*) The VIA SETĪNA, which connected it with Setia.

(*b*) The VIA DOMITIANA struck off at Sinuessa, and, keeping close to the shore, passed through Liternum, Cumae, Puteoli, Neapolis, Herculaneum, Oplonti, Pompeii, and Stabiae to Surrentum, making the complete circuit of the Bay of Naples.

(*c*) The VIA CAMPĀNA or CONSULARIS, from Capua to Cumae, sending off a branch to Puteoli, and another through Atella to Neapolis.

(*d*) The VIA AQUILLIA began at Capua, and ran south through Nola and Nuceria to Salernum; from thence, after sending off a branch to Paestum, it took a wide sweep inland through Eburi and the region of the Mons Alburnus up the valley of the Tanager; it then struck south through the very heart of Lucania and Bruttium, and, passing Nerulum, Interamnia, and Consentia, returned to the sea at Vibo, and thence through Medma to Rhegium. This road sent off a branch near the sources of the Tanager, which ran down to the sea at Blanda or the Laus Sinus, and then continued along the whole line of the Bruttian coast through Laus and Terina to Vibo, where it joined the main stem.

(*e*) The VIA EGNATIA began at Beneventum, struck north through the country of the Hirpini to Equus Tuticus, entered Apulia at Aecae, and, passing through Herdonia, Canusium, and Rubi, reached the Adriatic at Barium, and followed the coast through Egnatia to Brundisium.

(*f*) The VIA TRAIĀNA began at Venusia and ran in a nearly straight line across Lucania to Heraclea on the Sinus Tarentinus; thence following, southward, the line of the east coast, it passed through Thurii, Crotona, and Scyllacium, and completed the circuit of Bruttium by meeting the Via Aquillia at Rhegium.

(*g*) A VIA MINUCIA is mentioned by Cicero, and a VIA NUMICIA by Horace, both of which seem to have passed through Samnium from north to south, connecting the Valerian and Aquillian, and cutting the Appian and Latin Ways. Their course is unknown. Some believe them to be one and the same.

II. The VIA LATĪNA, another great line leading to Beneventum, but keeping a course farther inland than the Via Appia. Soon after leaving the city, it sent off a short branch (VIA TUSCULĀNA) to Tusculum, and, passing through Compitum Anagninum, Ferentium, Frusino, Fregellae, Fabrateria, Aquinum, Casinum, Venafrum, Teanum, Allifae, and Telesia, joined the Via Appia at Beneventum.

A cross-road, called the VIA HADRIĀNA, running from Minturnae through Suessa Aurunca to Teanum, connected the Via Appia with the Via Latina.

III. From the Porta Esquilina issued the VIA LABICĀNA, which, passing Labicum, fell into the Via Latina at the station ad Bivium, thirty miles from Rome.

IV. The VIA PRAENESTĪNA, originally the VIA GABINA, issued from the same gate with the former. Passing through Gabii and Praeneste, it joined the Via Latina just below Anagnia.

V. Passing over the VIA COLLATĪNA as of little importance, we find the VIA TIBURTĪNA, which issued from the Porta Tiburtina, and, proceeding northeast to Tibur, a distance of about twenty miles, was continued from thence, in the same direction, under the name of the VIA VALERIA, and, traversing the country of the Sabines, passed through Carseoli and Corfinium to Aternum on the Adriatic, thence to Adria, and so along the coast to Castrum Truentinum, where it fell into the Via Salaria.

A branch of the Via Valeria led to Sublaqueum, and was called VIA SUBLACENSIS. Another branch extended from Adria along the coast southward through the country of Frentani to Larinum, being called, as some suppose, VIA FRENTĀNA APŪLA.

VI. The VIA NOMENTĀNA, anciently FICULNENSIS, ran from the Porta Collina, crossed the Anio to Nomentum, and, a little beyond, fell into the Via Salaria at Eretum.

VII. The VIA SALARIA, also from the Porta Collina (passing Fidenae and Crustumerium), ran north and east through Sabinum and Picenum to Reate and Asculum Picenum. At Castrum Truentinum it reached the coast, which it followed until it joined the Via Flaminia at Ancona.

VIII. Next comes the VIA FLAMINIA, the Great North Road, commenced in the censorship of C. Flaminius, and carried ultimately to Ariminum. It issued from the Porta Flaminia, and proceeded nearly north to Ocriculum and Narnia in Umbria. Here a branch struck off, making a sweep to the east through Interamna and Speletium, and fell again into the main trunk (which passed through Mevania) at Fulginia. It continued through Fa-

The Via Appia Restored. (Falke.)

num Flaminii and Nuceria, where it again divided, one line running nearly straight to Fanum Fortunae on the Adriatic, while the other, diverging to Ancona, continued from thence along the coast to Fanum Fortunae, where the two branches, uniting, passed on to Ariminum through Pisaurum. From thence the Via Flaminia was extended under the name of the VIA AEMILIA, and traversed the heart of Cisalpine Gaul through Bononia, Mutina, Parma, Placentia (where it crossed the Po), to Mediolanum. From this point branches were sent off through Bergomum, Brixia, Verona, Vicentia, Patavium, and Aquileia to Tergesté on the east, and through Novaria, Vercelli, Eporedia, and Augusta Praetoria to the Alpis Graia on the west, besides another branch in the same direction through Ticinum and Industria to Augusta Taurinorum. Nor must we omit the VIA POSTUMIA, which struck from Verona right down across the Apennines to Genoa, passing through Mantua and Cremona, crossing the Po at Placentia, and so through Iria, Dertona, and Libarna, sending off a branch from Dertona to Asta.

Of the roads leading out of the Via Flaminia in the immediate vicinity of Rome, the most important is the VIA CASSIA, which, diverging near the Pons Mulvius, and passing not far from Veii, traversed Etruria through Baccanae, Sutrium, Vulsinii, Clusium, Arretium, Florentia, Pistoria, and Luca, joining the Via Aurelia at Luna.

(*a*) The VIA AMERĪNA broke off from the Via Cassia near Baccanae, and held north through Falerii, Tuder, and Perusia, reuniting itself with the Via Cassia at Clusium.

(*b*) Not far from the Pons Mulvius the VIA CLODIA separated from the Via Cassia, and, proceeding to Sabaté on the Lacus Sabatinus, there divided into two, the principal branch passing through central Etruria to Rusellae, and thence due north to Florentia, the other passing through Tarquinii, and then falling into the Via Aurelia.

(*c*) Beyond Baccanae the VIA CIMĪNA branched off, crossing the Mons Ciminus, and rejoining the Via Cassia near Fanum Voltumnae.

IX. The VIA AURELIA, the Great Coast Road, issued originally from the Porta Ianiculensis, and subsequently from the Porta Aurelia. It reached the coast at Alsium, and followed the shore of the lower sea, along Etruria and Liguria, by Genua, as far as Forum Iulii in Gaul. In the first instance it extended no farther than Pisa.

X. The VIA PORTUENSIS kept the right bank of the Tiber to Portus Augusti.

XI. The VIA OSTIENSIS originally passed through the Porta Trigemina, afterwards through the Porta Ostiensis, and kept the left bank of the Tiber to Ostia. From thence it was continued, under the name of VIA SEVERIĀNA, along the coast southward through Laurentum, Antium, and Circaei, till it joined the Via Appia at Tarracina. The VIA LAURENTĪNA, leading direct to Laurentum, seems to have branched off from the Via Ostiensis at a short distance from Rome.

XII. Lastly, the VIA ARDEATĪNA, from Rome to Ardea. According to some, this branched off from the Via Appia.

Travelling on the public roads was facilitated by the establishment of (*a*) *mutationes* (ἀλλαγαί) or posting-houses, where horses were changed and vehicles were obtainable if required; and (*b*) *mansiones* (καταλύσεις), stations, caravansaries, or resting-places, where the journey could be conveniently broken. The towns and places where a halt on one ground or the other could be made are frequently detailed in the Antonine Itinerary. See CURSUS PUBLICUS; ITINERARIA.

The following illustration of a part of the Via Stabiana at Pompeii shows four stepping-stones.

Via Stabiana at Pompeii, with Stepping-stones. (From a photograph.)

They are to be found in nearly every street in the town, whatever its breadth. The narrower streets are practically blocked by single large stones in their centres; the broader streets are crossed by rows, containing from two to five stones. Their shape is, generally, a flat-topped oval: larger and smaller stones lying side by side. They measure, very commonly, about three feet by eighteen inches, and have their longer axis parallel to the

footway on either side of the street. The height of the footway ranges from twelve to eighteen inches above the carriage-way, and the particular height is, in most cases, that of the stepping-stones also. The surface of the street being elliptical, the stone on the centre stands slightly higher than those at the sides. Many streets are marked with wheel-ruts, some of them deeply cut. They are found both in the interstices between the stepping-stones and elsewhere. The distance from rut to rut measures, as a rule, one yard, which was, accordingly, the gauge of the ordinary vehicles. Some special consideration of these stepping-stones is desirable.

Until the reign of Septimius Severus (A.D. 193–211) riding and driving, both in Rome and in the provincial towns, were closely restricted, and at times forbidden, by law (*C. I. L.* i. 206; Marquardt, *Privatleben*, ii. 727–738). Claudius (A.D. 41–54) forbade travellers to drive in carriages through provincial towns (Sueton. *Claud.* c. 25). Marcus Aurelius (A.D. 161–180) again forbade riding and driving in provincial towns. Under Severus carriages, in Rome at least, seem to have been more commonly used (Dio Cass. lxiv. 4).

Thus, the street-traffic of the ordinary Roman provincial town seems to have resembled that of the Tangier or Tetuan of to-day. Heavy burdens were carried on the backs of horses, mules, or cattle. Walking was the rule, riding on horseback or in a litter was the exception, driving almost unknown. Before the date of the edict of Claudius, and perhaps later, the law was probably indulgent to towns such as Baiae and Pompeii. Thither came the "carriage-company" of Rome to seek health and spend money. In the case of Pompeii carriages and horses were, beyond a doubt, confined to certain streets. An extant inscription shows that the station of the *cisiarii* was not even within the town walls. (See CISIUM.) Other streets were always reserved for foot-passengers, and possibly for litters. Others, again, once open to all traffic, and still bearing the marks of wheels, were afterwards closed to all but foot-passengers by huge stepping-stones or iron gratings.

The deep ruts already mentioned were the natural result of confining the traffic to a few streets. None of these were broad enough to allow of any considerable variation of the track, even had the fixed stepping-stones presented no additional difficulty. Moreover, there is evidence that some of the existing pavements bore traffic for at least 120 years. It is not surprising that even a small amount of wheeled traffic, unrelieved by the use of springs, and acting on the same stones for so many years, should have left deep traces behind.

The reasons for the erection of very large stepping-stones were, no doubt, at once local and practical. Pompeii occupies the summit and slopes of a small hill. Hence the lower streets, according to the drainage level of the ground, received the rain-water and refuse of the upper. In times of heavy rain the lower streets must have flowed like a torrent. No sewerage-system could have at once mastered the downward rush of the water. Indeed a similar sight may now be witnessed, during the winter rains, in the heavily paved streets of Florence, where stepping-stones of the largest size would not be out of place. At Pompeii, where the lie of the ground, together with the close-set stone surface and sides of the streets, provided a ready-made watercourse, sidewalks of substantial height were absolutely necessary to foot-passengers. The means of crossing from one sidewalk to another, in any weather, were therefore naturally provided by stepping-stones of corresponding size.

See Bergier, *Histoire des Grands Chemins de l'Empire Romain* (Brussels, 1736); Burn, *Rome and the Campagna* (London, 1870); and Middleton, *Remains of Ancient Rome* (1892).

Viădus. Now the Oder; a river of Germany, falling into the Baltic (Ptol. ii. 11, 2).

Viands. See VICTUS.

Viatĭcum (*ἐφόδιον*). Anything necessary as a preparation for a journey, as food, money, clothes, etc. (Pliny, *Epist.* vii. 12). It is also technically applied to the provision made by the State for an official when going upon a public mission (also called *legativum*), generally furnished by contractors (*redemptores*) for a fixed sum (Livy, xli. 1; Dio Cass. liii. 15). See Mommsen, *Röm. Staatsrecht*, i. 301

Viātor ("roadster"). A subordinate official (see APPARITORES) employed by the Roman magistrates for sending a message or a summons, or for executing an arrest. The consuls and praetors had probably three *decuriae* of viatores; the tribunes had a special *decuria*, as also had the quaestors of the Treasury, and the officers who took their place under the Empire—i. e. the *praefecti aerarii;* also the aediles, the *tresviri capitales*, and the *quattuorviri viis purgandis*. They also appear in connection with provincial governors and sacerdotal bodies (Cic. *De Sen.* 16; Livy, vi. 15; Gell. xiii. 12).

Vibius Pansa. See PANSA.

Vibius Sequester. See SEQUESTER.

Vibo. Now Bivona; the Roman form of the Greek name HIPPONIUM, a town situated on the south-west coast of Bruttium, and on a gulf called after it SINUS VIBONENSIS, or HIPPONIĀTES. It is said to have been founded by the Locri Epizephyrii; but it was destroyed by the elder Dionysius, who transplanted its inhabitants to Syracuse. It was afterwards restored; and at a later time it fell into the hands of the Bruttii, together with the other Greek cities on this coast. It was taken from the Bruttii by the Romans, who colonized it B.C. 194, and called it VIBO VALENTIA. Cicero speaks of it as a municipium; and in the time of Augustus it was one of the most flourishing cities in the south of Italy.

Vicentia or **Vicetia**, less correctly **Vincentia**. Now Vicenza; a town on the river Togisonus in Venetia, in the north of Italy, and a Roman municipium.

Vicesĭma Hereditātum. See VECTIGALIA.

Vicesĭma Libertātis. See VECTIGALIA.

Victĭma (*ἱερεῖον*). See SACRIFICIUM.

Victor, Sex. Aurelius. A Latin author who flourished in the middle of the fourth century under the emperor Constantius and his successors. He was born of humble parents, but rose to distinction by his zeal in the cultivation of literature. Having attracted the attention of Julian when at Sirmium, he was appointed by him governor of one division of Pannonia (Amm. Marc. xxi. 10, 6). At a subsequent period he was made city prefect by Theodosius, and is perhaps the same

as the Sex. Aurelius Victor who was consul with Valentinian in A.D. 373. The following works, which present in a condensed form a continuous record of Roman affairs from the fabulous ages down to the death of the emperor Theodosius, have all been ascribed to this writer; but evidence upon which the determination of authorship depends is slender, and in all probability the third alone belongs to the Sex. Aurelius Victor whom we have noticed above. (*a*) *Origo Gentis Romanae*, in twenty-three chapters, containing the annals of the Roman race, from Ianus and Saturnus down to the era of Romulus. It is probably a production of some of the later grammarians who were desirous of prefixing a suitable introduction to the series. (*b*) *De Viris Illustribus Urbis Romae*, in eighty-six chapters, commencing with the birth of Romulus and Remus, and concluding with the death of Cleopatra, a work of merit, though of unknown authorship. (*c*) *De Caesaribus*, in forty-two chapters, exhibiting short biographies of the emperors, from Augustus to Constantius. There is no reason to doubt that this was a genuine work of Aurelius Victor. He uses Suetonius to a great extent in the earlier *Lives*. (*d*) *Epitome de Caesaribus*, in forty-eight chapters, beginning with Augustus and concluding with Theodosius. There are editions of these four works by Arntzen (1733) and by Schröter (1831). The *Origo* is edited separately by Sepp (Munich, 1879), and the *De Vir. Illustr.* by Keil (Breslau, 1872).

Victoria. The Roman goddess of Victory, said to be the daughter of Minerva, by whose command a temple to her was said to have been erected on the Palatine by Evander. In later times there were at least three sanctuaries in Rome that bore her name. For the Greek goddess of Victory, see NIKÉ.

Victoriātus. A Roman coin struck under the Republic, and named from its having borne as its "type" an image of Victory crowning a trophy. Its weight was about forty-five grains—i. e. three-fourths of the *denarius*, but was later reduced to equal half a *denarius*. The half victoriatus was also coined.

Victorīnus. One of the Thirty Tyrants, was the third of the usurpers who in succession ruled Gaul during the reign of Gallienus. He was assassinated at Agrippina by one of his own officers in A.D. 268, after reigning somewhat more than a year. See THIRTY TYRANTS.

Victorīnus Afer, GAIUS MARIUS. A scholar of African birth who taught rhetoric at Rome in the middle of the fourth century, with so much reputation that his statue was erected in the Forum of Trajan. In his old age he embraced Christianity; and when the edict of Julian prohibiting Christians from giving instruction in polite literature was promulgated, Victorinus chose to shut up his school rather than deny his religion. Besides his commentaries on the Scriptures, and other theological works, many of which are extant, Victorinus wrote: (*a*) *Commentarius* or *Expositio in Ciceronis Libros de Inventione*, the best edition of which is in the fifth volume of Orelli's edition of Cicero; (*b*) *Ars Grammatica de Orthographia et Ratione Metrorum*, a complete and voluminous treatise upon metres, in four books, printed in Keil's *Grammatici Latini*, vi. 1.

Victorius, PETRUS (PIETRO VETTORI). A great classical scholar and critic of the time of the Italian Renaissance, born in 1499 and died in 1584. He published editions of Cicero (with commentary), Sophocles (with commentary and scholia), Aeschylus, Aristotle's *Rhetoric, Ethics, Politics, Poetics, De Partibus Animalium* (translation and commentary), Xenophon's *Memorabilia*, Terence, Sallust, Varro *De Re Rustica*, Demetrius Phalereus *De Elocutione*, Dionysius, Isaeus, Dinarchus, Hipparchus (in part), Clemens Alexandrinus, and Porphyrius *De Abstinentia*, and thirty-eight books of readings (*Variae Leotiones*). See his life by Bandini (Florence, 1758); and Creuzer, *Opuscula*, pp. 21–36.

Victrix. An epithet of Venus (q. v.).

Victus; Cibus. Generic terms for food. Both the Greeks and the Romans gave much attention to gastronomy, the latter people, however, getting their knowledge of scientific cookery from the former. The chief sources of our information are, apart from the many casual allusions in the classic writers in general, Athenaeus (whose *Deipnosophistae* is full of curious lore regarding food, cookery, and the *ana* of distinguished epicures), Pliny the Elder, and the pseudo-Apicius. (See APICIUS; ATHENAEUS; PLINIUS.) As early as the second century B.C. there existed special dictionaries of terms employed in cookery. See LEXICON.

The articles of diet found in the ancient *menus* include most of the things that are eaten in modern times—the fish, flesh, and fowl at any rate. Of the fish, the mullet (*mullus*), turbot (*rhombus*), and carp (*cyprinus*) were especially prized. A sort of fish-sauce (*garum*), resembling anchovy-sauce or perhaps caviare, was also held in high esteem by gourmets. Oysters were dear in price and greatly liked, the best natives coming from Circeii. British oysters were imported from Rutupiae (Richborough), on the southern coast of Britain. Of meats, pork was held to be a dainty, whether as ham (*perna*) or in the form of *glandulae*, over which the parasite in the *Captivi* of Plautus grows so enthusiastic, or potted in the *tucetum* (q. v.). The breasts of a sow killed just after she had littered, but before she had given suck, were much sought, and the matrix (*vulva*) of the same animal, stuffed with onions, is often spoken of as extremely delectable. Sausages (*botuli*) were popular, but less the diet of the wealthy than of the poor, being hawked about the streets by itinerant venders. Beef and lamb were not very highly esteemed; nor was chicken a great dainty, capons excepted. Thrushes (*turdi*), pheasants (*phasiani*), fig-peckers (*ficedulae*), larks (*alaudae*), guinea-hens (*meleagrides*), and many other birds were sought as food. As in Italy and Southern France to-day, snails formed an esteemed article of diet. They were fattened on meal especially for the market, and sometimes attained to a huge size. The Romans served up dormice (*glires*) at expensive banquets. Maecenas introduced at Rome the flesh of young asses as a fashionable dish. The common people ate comparatively little meat, but made bread, fruit, salad, and the national dish *puls* (see PULS) their principal fare. Tripe (*omentum*) was also an especially plebeian dish. Oil was liberally used in the various dishes, as in Italy to-day. (See OLIVUM.) The most frequently mentioned condiments were salt (*sal*), pepper (*piper*), garlic (*allium*), leek (*porrum*), mustard (*sinapis*), and poppy-seeds. Asafoetida (*silphium*) was also used as a seasoning, its flavour being not unlike that of garlic. On vinegar, see ACETUM.

The ordinary fruits and vegetables were sold in the markets: grapes, apples, pears, peaches, plums, oranges, figs, quinces, melons, pomegranates, nuts, and pease, beets, cucumbers (which were also pickled), lettuce, beans, onions, turnips, cabbages, cauliflowers, and radishes.

The skill of the pastry-cook did much towards making a formal dinner successful. Pastry was set upon the table in the most varied forms, animal and vegetable, some idea of which may be gathered from the *Cena Trimalchionis*. Eggs of paste were served which, when broken, revealed young birds inside delicately cooked in sauce that counterfeited the appearance of a yolk. Cakes and sweetmeats were made in great quantities, honey being used for sweetening them. (See PLACENTA; SCRIBLITA.) Cheese entered largely into Roman cookery, especially into the manufacture of cakes, and the description of some of these as so made is very appetizing. (See CASEUS.) Butter was not largely used, its place being taken by oil. (See BUTYRUM.) For the methods of making bread and for the various kinds of bread, see the article PISTOR. Information regarding wines will be found under VINUM, and reference may also be made to the article SYMPOSIUM. For beer, see CERVESIA, and for other drinks, CALDA; POSCA. On the ancient notions regarding diet and the nutritive value of foods, see DIAETETICA, and cf. ATHLETAE; CENA.

On the whole general subject of food in antiquity, see Saalfeld, *Küche und Keller in Alt-Rom* (Berlin, 1883); Baudrillart, *Hist. du Luxe Privé*, etc., vol. ii. (Paris, 1880); and the special sections in Becker-Göll, *Charikles;* id. *Gallus;* and Friedländer's *Sittengeschichte Roms*. Prof. C. G. Herbermann has given an interesting table of the approximate cost of various articles of food in the Roman markets in his *Business Life in Ancient Rome* (New York, 1880). Cf. also the article SUMPTUARIAE LEGES.

Vicus (*κώμη*). Originally a habitation, taken in a collective sense, as a number of houses contiguous to each other; thence, a street with houses on each side, both in a country village or a city; and so a division or quarter of a town consisting of a certain number of dwellings.

Vienna. Now Vienne; the chief town of the Allobroges in Gallia Lugdunensis, situated on the Rhône, south of Lugdunum (Lyons).

Vigĭles. (1) Sentinels who were on duty about a camp at night. (See CASTRA.) (2) A name given to the police of Rome. Of these there were seven *cohortes* or battalions with fourteen station-houses (*excubitoria*). They were under the command of a superintendent (*praefectus vigilum*), who was responsible for the order of the city, it being his duty to protect the citizens from all forms of lawlessness. He was also charged with the duty of preventing and extinguishing fires, so that the vigiles were really a police and fire department combined. Policemen were regularly detailed for duty at the theatres, public baths, and other places of public resort; and had very considerable powers, resembling those exercised by the police in the Continental cities. As firemen they were provided with axes, ropes, buckets, and also operated a kind of hand fire-engine (*sipho, sipo*), whence they received the popular nickname of *siponarii*. Each of the seven cohorts was commanded by a captain (*tribunus*), and the whole force numbered 7000 men. In 1868, an *excubitorium* belonging to the seventh cohort was excavated at Rome, and on its walls were found many interesting inscriptions, scratched by the policemen when off duty, and giving a curious picture of the life and thought of the ancient vigiles, being of every possible description—humorous, complaining, serious, and obscene. See the account of this discovery and of the Roman police in general in Lanciani, *Ancient Rome in the Light of Recent Discoveries*, ch. viii. (Boston, 1888).

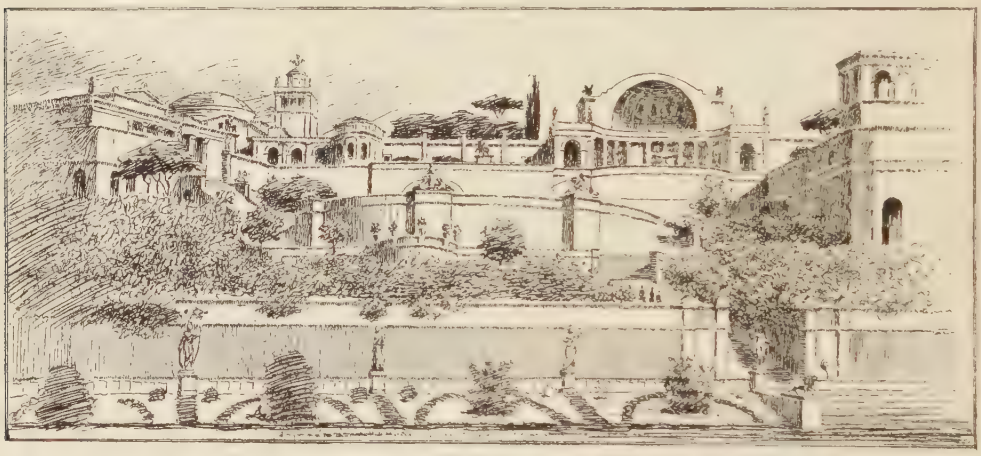
Vigiliae. See CASTRA.

Vigintisexvĭri (also, under the Empire, **Vigintivĭri**). A group of minor magistrates at Rome whose offices and functions were of different origin, but which as a rule must have been discharged by a person as a preliminary to his candidacy for the quaestorship. (See HONORES.) These magistrates were the *tresviri capitales*, the *tresviri monetales*, the *quattuorviri viis in urbe purgandis*, the *duoviri viis extra urbem purgandis*, the *decemviri litibus iudicandis*, and the *quattuor praefecti Capuam Cumas*. The fourth and sixth of these magistrates were abolished under Augustus. See Mommsen, *Röm. Staatsrecht*, ii. 578–595.

Vigintivĭri. See VIGINTISEXVĪRI.

Vilĭcus. A farm-bailiff; a slave who had the superintendence in chief of all the stock and business of a farm, the surveillance of the labouring slaves, the management and direction of the farming operations, and the duty of selling the produce of the estate. See VILLA.

Villa. A Roman farm or country-house, of which Roman writers mention two kinds—(*a*) the *villa rustica* or farm-house, and (*b*) the *villa urbana* or *pseudo-urbana*, a residence in the country or in the suburbs of a town. When both of these were attached to an estate, they were generally united in the same range of buildings, but sometimes they were placed at different parts of the estate. The part of the *villa rustica* in which the produce of the farm was kept was called *villa fructuaria*.



(*a*) The *villa rustica* is described by Varro (*R. R.* i. 11–13), Vitruvius (vi. 9), and Columella (i. 4, § 5 foll.).

The villa, which must be of size corresponding to that of the farm, is best placed at the foot of a wooded mountain, in a spot supplied with running water, and not exposed to severe winds nor to the effluvia of marshes, nor (by being close to a road) to a too frequent influx of visitors. If there was no running stream, tanks were constructed, one under cover for men, one in the open air for the beasts. The villa attached to a large farm had two courts (*cohortes, chortes, cortes*, Varro, i. 13). At the entrance to the outer court was the abode of the *vilicus* or steward, that he might observe who went in and out, and over the door was the room of the *procurator* (Colum. i. 6). Near this, in as warm a spot as possible, was the kitchen, which, besides being used for the preparation of food, was the place where the slaves (*familiae*) assembled after the labours of the day, and where they performed certain indoor work. Vitruvius places near the kitchen the baths and the press (*torcular*) for wine and oil. In the outer court were also the cellars for wine and oil (*cellae vinariae et olearae*), which were placed on the level ground, and the granaries, which were in the upper stories of the farm-buildings, and carefully protected from damp.

heat, and insects. These store-rooms form the separate *villa fructuaria*.

In both courts were the chambers (*cellae*) of the slaves, fronting the south; but the *ergastulum* for those who were kept in chains (*vincti*) was underground, being lighted by several high and narrow windows. The inner court was occupied chiefly by the horses, cattle, and other live-stock, and here were the stables and stalls (*bubilia, equilia, ovilia*). A reservoir of water was made in the middle of each court — that in the outer court for soaking pulse and other vegetable produce, and that in the inner, which was supplied with fresh water by a spring, for the use of the cattle and poultry.

(*b*) The *villa urbana* or *pseudo-urbana* was so called because its interior arrangements corresponded for the most part to those of a town-house. (See DOMUS.) Vitruvius (vi. 8) merely states that the description of the latter will apply to the former also, except that in the town the *atrium* is placed close to the door, but in the country the peristyle comes first, and afterwards the *atrium*, surrounded by paved porticoes, looking upon the *palaestra* and *ambulatio*.

Hadrian's Villa at Tibur. (Restoration.)

A striking difference in the general aspect of a country-house from that of a town-house lay in the fact that the blank walls of the latter were replaced by long colonnades, broken by towers, apses, and the like.

The chief sources of information on this subject are two letters of Pliny, in one of which (ii. 17) he describes his Laurentine villa, in the other (v. 6) his Tuscan. The former of these, however, was not, strictly speaking, a *villa*, as it had no estate or farm-buildings attached to it; the latter was connected with a large estate. There are also a few allusions in one of Cicero's letters (*Ad Quint.* iii. 1) to the remains of a suburban villa at Pompeii, besides several Roman villas of which ruins exist in England.

See Becker-Göll, *Gallus*, iii. pp. 46–63; Overbeck, *Pompeii*, pp. 325 foll.; and for the remains of the Roman villas in England, Neville in the *Archæological Journal*, vols. ii., vi., vii., x. For Pliny's Laurentine villa, cf. Cowan's edition of Pliny, i.–ii. (with a plan); Burn's *Rome and the Campagna*, pp. 411–415 (with a plan); Aitchison in *The Builder* for Feb. 8th, 1890; and a paper by Dr. H. W. Magoun in the *Proceedings of the American Philological Association for* 1895.

Villius Annālis. See ANNALIS.

Viminālis Porta. A gate of Rome in the Servian walls, leading to the Via Tiburtina. See ROMA.

Vincŭlum. The generic term for a fetter of any kind. See CATENA; COMPES; MANICA.

Vindălum. A town of the Cavares in Gallia Narbonensis. It was situated at the junction of the Sulgas (Sorgue) and the Rhodanus (Rhône) (Strabo, p. 185).

Vindelĭci. See VINDELICIA.

Vindelicia. A Roman province, bounded on the north by the Danube, which separated it from Germany, on the west by the territory of the Helvetii in Gaul, on the south by Rhaetia, and on the east by the river Oenus (Inn), which separated it from Noricum, thus corresponding to the north-eastern part of Switzerland, the southeast of Baden, the south of Würtemberg and Bavaria, and the northern part of the Tyrol. It was originally a part of the province of Rhaetia, and was conquered by Tiberius in the reign of Augustus. At a later time Rhaetia was divided into two provinces, RHAETIA PRIMA and RHAETIA SECUNDA, the latter of which names was gradually supplanted by that of Vindelicia. It was drained by the tributaries of the Danube, of which the most important were the Licias, or Licus (Lech), with its tributary the Vindo, Vinda, or Virdo (Werlach), the Isarus (Isar), and Oenus (Inn). The eastern part of the Lacus Brigantinus (Lake of Constance) also belonged to Vindelicia. It derived its name from its chief inhabitants, the VINDELĬCI, a warlike people dwelling in the south of the country. The other tribes in Vindelicia were the Brigantii on the Lake of Constance, the Licatii or Licates on the Lech, and the Breuni (in the north of the Tyrol) on the Brenner. The chief town in the province was Augusta Vindelicorum (Augsburg), at the confluence of the Vindo and the Licus.

Vindemia (*τρύγητος*). Strictly a vintage or gathering of the grapes; then, by an extension of usage, applied to the harvesting of other produce, as

olives, honey, etc. (Pliny, *H. N.* xv. 2; Columell. ix. 15, 1).

Vindex. See ACTIO in the Appendix.

Vindex, C. IULIUS. A propraetor of Gallia Celtica in the reign of Nero, and the first of the Roman governors who disowned the authority of Nero (A.D. 68). He did not, however, aspire to the Empire himself, but offered it to Galba. Virginius Rufus, the governor of Upper Germany, marched with his army against Vindex. The two generals had a conference before Vesontio (Besançon), in which they appear to have come to some agreement; but as Vindex was about to enter the town, he was attacked by the soldiers of Virginius, and put an end to his own life.

Vindicatio. In Roman law, the name given to an action (*actio*) of the class known as "real" (*in rem*) or one relating to the title to ownership (*dominium*). The word is opposed to *condictio*, which is applied to a "personal" action (*in personam*) or actions for the enforcement of obligations arising from contract or debit (Gaius, iv. 2–5). See ACTIO in the Appendix.

Vindicius. A slave, who is said to have given information to the consuls of the conspiracy which was formed for the restoration of the Tarquins, and who was rewarded in consequence with liberty and the Roman franchise (Livy, ii. 5).

Vindicta. A rod with which the praetor, or the praetor's lictor, tapped the head of a slave as a sign that he was thus made free (Livy, ii. 5; Cic. *Top.* 2; Pers. v. 88.) See MANUMISSIO; SERVUS.

Vindobŏna. Now Vienna; the German Wien. A town in Pannonia, on the Danube, originally a Keltic place, and subsequently a Roman municipium. Under the Romans it became a town of importance; it was the chief station of the Roman fleet on the Danube, and the headquarters of a Roman legion. Here the emperor Marcus Aurelius died in A.D. 180. The place was taken and sacked by Attila (Ptol. ii. 15, 3; Iornand. *Get.* 50).

Vindonissa. Now Windisch; a town in Gallia Belgica, on the triangular tongue of land between the Aar and Reuss. It was an important Roman fortress in the country of the Helvetii (Tac. *Hist.* iv. 61, 70). Some Roman remains are still to be seen here, among them the traces of an amphitheatre, an aqueduct, and the foundations of walls.

Vinea. A shed employed by the Roman soldiers to protect themselves from the missiles of the enemy whilst occupied in undermining or breaching the walls of a fortress. It had a sloping roof of planks and wicker-work supported upon uprights, and was closed on three of its sides by similar materials, the whole frame being covered outside with raw hides or horse-hair cloth, to prevent its being set on fire. Each *vinea*, by itself, was about eight feet high and sixteen in length; but a number of them were joined together in a line and run up to the walls, so that the ram could be securely plied underneath them (Caes. *B. C.* ii. 2; Livy, xxxvii. 26; Veg. *Mil.* iv. 15).

Vinegar. See ACETUM.

Vinum (*οἶνος*). From the earliest times wine was the usual drink of the Greeks, and was made in every Hellenic country. The best was produced on the coasts and islands of the Aegean, such as Thasos, Rhodes, Cyprus, and, above all, Chios and Lesbos. The Greeks noted three colours in wines: (*a*) red (*μέλας*); (*b*) white or straw-coloured (*λευκός*); and brown or amber-coloured (*κιρρός*). The processes of making wine were substantially the same among both Greeks and Romans; but the more detailed information given by the ancient writers relates to the wines produced in Italy.

The cultivation of the vine was common in Lower Italy before its colonization by the Greeks, and the Romans had vineyards in very early times. In fact, one of the early names of Italy was Oenotria, or "land of the vine-pole." Wine was, however, long regarded as an article of luxury, and was limited in its use. The regular production of wine (the method of which was imported from Greece, together with the finer varieties of vines) first came in with the decline of the cultivation of cereals. The home-grown wines were of little esteem, as compared with the Greek, and especially the highly prized island wines, until the first century B.C. After this date the careful treatment of a number of Italian, and more particularly of Campanian, brands (such as the Falernian, Caecuban, and Massic) gained for them the reputation of being the first wines of the world. They formed an important article of export, not merely to the collective provinces of the Roman Empire, Greece herself not excepted, but also beyond the Roman frontier, so that even in India they were known (Arrian, *Peripl.* 6, 49). It was to protect the Italian wine-growers that, in the western provinces, down to the third century A.D., the cultivation of the vine was subject to certain limitations. No new vineyards could be added to those already existing, and the Italian vines could not be introduced, although Gaul produced many varieties of wine. Under the Empire, wine was the main article of produce and of trade in Italy, Greece, and Asia; and the wine merchants of Rome, who had, from the commencement of the second century, formed two corporations, one for the eastern and another for the western trade, held an important position. In the first century there were already eighty famous brands in the Roman market, of which number Italy supplied two-thirds. The finest wine made in Italy was the Setine (*vinum Setinum*), the chosen drink of Augustus, and made at Setia, near the Pontine Marshes. Next comes the Falernian, which required ten years to mature; then the Alban, both sweet and dry; the Massic, often mentioned by Horace; the Surrentine, which was not at its best until kept for twenty-five years; the Calene, a light wine; the Veliternian, and the Signine. The Mamertine, a light, sweet wine, was the favourite drink of Iulius Caesar (Mart. xiii. 117). Etruscan wines were generally bad, and so were the wines of Gaul, these being often "doctored" with aloes and other drugs. Good wine was imported from Asia Minor, especially from parts of Pontus, Paphlagonia, Bithynia, and Phoenicia. The Mareotic wine of Egypt was also much esteemed. It was a white wine, sweet and light, and with a delightful *bouquet*. Even more popular was the *vinum Taenioticum* from the Egyptian Delta.

The vine was grown partly on poles or espaliers, partly on trees, especially on elms, which, if the ground between were still used for agriculture, were planted at a distance of forty, sometimes of twenty, feet apart. The grapes intended for manufacture

into wine were trodden with naked feet and then brought under the press. The must was then immediately poured into large pitched earthenware jars (*πίθος, dolium*). These were placed under ground in a wine-cellar, facing the north to keep them cool, and kept uncovered for a year in order to ferment thoroughly. The inferior wines which were of no great age were drunk immediately from the jar (Cic. *Brutus*, 228). The better kinds, which were meant for preservation, were poured into *amphorae*. (See AMPHORA.) These were closed with stone stoppers, sealed with pitch, clay, or gypsum, marked with a brand, furnished with a label (*tessera* or *nota*) giving their year and measure, and placed in the *apotheca*. This was a room in the upper story, built by preference over the bath-room in order to catch the smoke from the furnace, and thus to make the wine more mellow. Wine was also "improved" or its process of mellowing hastened by exposing the *amphorae* to the full glow of the sunlight, and sometimes by the use of chemicals. Sometimes, again, the vessels containing the must were sunk in the sea, the wine being then styled *thalassites* (Pliny, *H. N.* xiv. 78). By the Greeks, at least in the early period, wines were drunk mixed with various substances, as grated cheese and flour (*Il.* xi. 638), barley-meal and honey (*Od.* x. 234).

The most famous vintage year in Roman history was the year B.C. 121, when L. Opimius was consul. Great quantities of this year's wine were stored up, and some was in existence in Pliny's time, about two hundred years later (*H. N.* xiv. §§ 55, 94). It was known as *vinum Opimianum*, and is often mentioned in literature.

One method of improving the wine which was used in the East and in Greece was to keep the wine in goat-skins (*ἀσκοί, utres*), because the leather tended to cause evaporation of the water. In Italy the wine-skins appear to have been only used in transport. To produce flavour, strength, and bouquet, various means were employed, such as adding gypsum, clay, chalk, marble, resin, pitch, and even sea water, the last being especially in use in Greece and Asia Minor. Bad wines were improved by being mixed with fine brands and good lees; adulteration was extremely common. The number of artificial wines was very large; e. g. honey wine (*mulsum*), raisin wine (*passum*), and boiled must (the beverage of the common people and slaves), a poor drink prepared by pouring water on the remains of the pressed grapes, and called *θάμνα, lora*.

The place of our liqueurs was taken by flavoured wines, of which more than fifty kinds are mentioned. These were simply extracted from herbs, flowers, or sweet-smelling woods (thyme, myrtle, sweet rush, rose, heart's-ease, pine-cones and pine-wood, cypress, etc.), or mixed with oils, such as nard or myrrh. There were also wines made from fruits, such as apples, pomegranates, pears, dates, figs, or mulberries. In respect of colour three sorts of wine were distinguished: the black or dark red (*color sanguineus* and *niger*) which was considered the strongest; the white (*albus*), which was thought thin and weak; and the brown or amber-coloured (*fulvus*), which was considered particularly serviceable for promoting digestion. As in its ordinary treatment the wine often retained much sediment, it had to be made clear before it was drunk. This was done either with yolk of eggs or by straining the wine through a cloth or sieve, which was filled with snow to make it cool. Greeks and Romans alike generally drank their wine liberally mixed with water; and to drink it unmixed (*merum, ἄκρατον*) was regarded as a sign of great intemperance. See CENA; DIAETETICA; and cf. SYMPOSIUM.

For particulars regarding the production and use of wine by the ancients, the reader is referred to the following works: Barry, *The Wines of the Ancients* (London, 1775); Henderson, *History of Ancient and Modern Wines* (London, 1824); Becker-Göll, *Charikles*, ii. pp. 337–352; id. *Gallus*, iii. pp. 412–442; Marquardt, *Röm. Privatalterthümer*, ii. 54–84; and Mew and Astion, *The Drinks of the World* (London, 1892). For beer, see CERVESIA.

Vipsania Agrippīna. (1) The daughter of M. Vipsanius Agrippa by his first wife Pomponia. Augustus gave her in marriage to his step-son Tiberius, by whom she was much beloved; but after she had borne him a son, Drusus, Tiberius was compelled to divorce her by the command of the emperor, in order to marry Iulia, the daughter of the latter. Vipsania afterwards married Asinius Gallus. She died in A.D. 20. (2) Daughter of M. Vipsanius Agrippa by his second wife Iulia, better known by the name of Agrippina. See AGRIPPINA.

Vipsanius Agrippa, MARCUS. See AGRIPPA.

Virbius. A Latin divinity worshipped along with Diana in the grove at Aricia, at the foot of the Alban Mount. He is said to have been the same as Hippolytus, who was restored to life by Asclepius at the request of Artemis. It was told that Hippolytus was placed by this goddess under the care of the nymph Aricia, and received the name of Virbius. By this nymph he became the father of a son, who was also called Virbius, and whom his mother sent to the assistance of Turnus against Aeneas (Verg. *Aen.* vii. 761; Ovid, *Met.* xv. 545). This is a transference to Italy of the story of Hippolytus being devoted to the service of Artemis. It has been suggested with great probability that Virbius was originally a tree spirit of the sacred grove, to whom horses (as representatives of the spirit) were sacrificed. Hence they were in time represented as hostile to the deity Virbius, and therefore excluded from the grove. This was explained by making Virbius the same as Hippolytus, whose death was caused by his horses running away. See HIPPOLYTUS.

Virdo. See VINDELICIA.

Virdumărus. See VIRIDOMARUS.

Virga (*ῥάβδος*). A twig, bough, or switch cut from a tree. Hence (1) a riding-whip (Mart. ix. 23); (2) a switch for punishing school-boys (Juv. vii. 210) (see LUDUS LITTERARIUS); (3) a walking-stick (see BACULUM); (4) a wand of office carried by the Roman lictors (see FASCES; LICTOR); (5) a magic wand (Verg. *Aen.* iv. 242); and (6), in the plural, the ribs of an umbrella (Ovid, *A. A.* ii. 209).

Circé with Wand. (From a marble.)

Virgilius. See VERGILIUS.

Virgĭnes Vestāles. See VESTALES.

Virginia or Verginia. The daughter of L. Virginius, a Roman centurion. She was a beautiful and innocent girl, betrothed to L. Icilius. Her beauty excited the lust of the decemvir Appius Claudius, who instigated one of his clients to seize the maiden and claim her as his slave. Her father, who had come from the camp the morning on which Claudius gave judgment assigning Virginia to his client, seeing that all hope was gone, prayed the decemvir to be allowed to speak one word to the nurse in his daughter's hearing, in order to ascertain whether she was really his daughter. The request was granted; Virginius drew them both aside, and snatching up a butcher's knife from one of the stalls, plunged it into his daughter's breast, exclaiming, "There is no way but this to keep thee free"; then, holding his bloody knife on high, he rushed to the gate of the city, and hastened to the Roman camp. The result is known. Both camp and city rose against the decemvirs, who were deprived of their power, and the old form of government was restored. L. Virginius was the first who was elected tribune, and by his orders Appius was dragged to prison, where he put an end to his own life (Livy, iii. 44–58; Dionys. xi. 28–46). See CLAUDIUS.

Virginia or Verginia Gens. A gens both patrician and plebeian. The patrician Virginii frequently filled the highest honours of the State during the early years of the Republic. They all bore the name Tricostus.

Virginius or Verginius, LUCIUS. The father of Virginia, whose tragic fate occasioned the downfall of the decemvirs, B.C. 449. See VIRGINIA.

Virginius Rufus. A Roman consul A.D. 63, and governor of Upper Germany at the time of the revolt of Iulius Vindex in Gaul (68). The soldiers of Virginius wished to raise him to the Empire; but he refused the honour, and marched against Vindex, who perished before Vesontio. (See VINDEX.) After the death of Nero, Virginius supported the claims of Galba, and accompanied him to Rome. After Otho's death the soldiers again attempted to proclaim Virginius emperor, and in consequence of his refusal of the honour he narrowly escaped with his life. Virginius died in the reign of Nerva, in his third consulship, A.D. 97, at eighty-three years of age. He was honoured with a public funeral, and his panegyric was pronounced by the historian Tacitus, who was then consul. His epitaph, composed by himself, notices his refusal of the throne:

Hic situs est Rufus, pulso qui Vindice quondam
Imperium adseruit non sibi sed patriae.

The younger Pliny, of whom Virginius had been the tutor or guardian, also mentions him with praise (Tac. *Hist.* i. 8, 77; ii. 49, 68; Plut. *Galb.* 4, 6, 10; Dio Cass. lxiii. 24–27; lxiv. 4; lxviii. 2; Pliny, *Epist.* ii. 1; v. 3; vi. 10; ix. 19).

Viriāthus. A celebrated Lusitanian who is described by the Romans as originally a shepherd or huntsman, and afterwards a robber, or, as he would be called in Spain in the present day, a guerrilla chief. He was one of the Lusitanians who escaped the treacherous and savage massacre of the people by the proconsul Galba in B.C. 150. (See GALBA.) He collected a formidable force, and for several successive years defeated one Roman army after another. In 140 the proconsul Fabius Servilianus concluded a peace with Viriathus in order to save his army, which had been enclosed by the Lusitanians in a mountain pass. But Servilius Caepio, who succeeded to the command of Farther Spain in 140, renewed the war, and shortly afterwards procured the assassination of Viriathus by bribing three of his friends (Appian, *Hisp.* 60–75; Eutrop. iv. 16; Val. Max. ix. 6, 4).

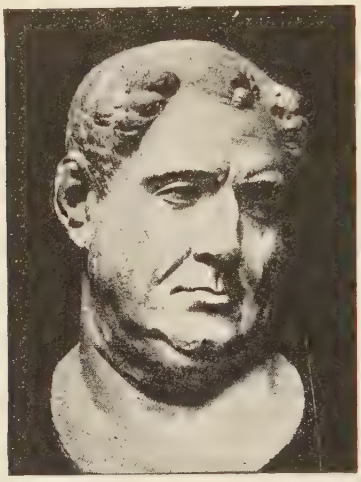
Viridarium. A sort of conservatory in a Roman house. See DOMUS.

Viridomārus. (1) Or BRITOMARTUS. A leader of the Gauls, slain by Marcellus. (See MARCELLUS.) (2) Or VIRDUMĀRUS, a chieftain of the Aedui, whom Caesar had raised from a low rank to the highest honour, but who afterwards joined the Gauls in their great revolt in B.C. 52 (Caes. *B. G.* vii. 38, 54, 63).

Viriplāca. One of the Roman *dii indigetes*, a goddess who enabled wives to please their husbands. See INDIGETES.

Viroconium or Urioconium. Now Wroxeter; a town in Britain on the roads from Deva (Chester) to Londinum and to Glevum (Gloucester). It stood at the confluence of the Terne with the Severn, and here Ostorius Scapula fortified a camp for the Fourteenth Legion as a defence for the Welsh border (Tac. *Ann.* xii. 31; cf. Ptol. ii. 3, 19).

Virtus. The Roman personification of manly valour. She was represented with a short tunic, her right breast uncovered, a helmet on her head, a spear in her left hand, a sword in the right, and standing with her right foot on a helmet. A temple of Virtus was built by Marcellus close to the one of Honor. See HONOR.



Vis. The general term used in Roman law for criminal violence. The *lex Plotia* (B.C. 89) was the first regular statute punishing those who pillaged houses, occupied public places in arms, and assembled armed men for the purpose of overawing the Senate or the magistrates. Several *leges Iuliae* of Iulius Caesar and of Augustus were also passed to complete and consolidate previous enactments. Two kinds of vis are mentioned — *vis publica*, which probably meant violence immediately directed against the State, and *vis privata*, which would be violence primarily against an individual right, but criminal because it interfered with public order. The punishments assigned by the *leges Iuliae* ranged from death (house-pillaging, abduction, riot resulting in death) to exile. See Rein, *Criminalrecht der Römer*, pp. 732 foll.

Vistŭla. Now the Vistula (in German, Weichsel); an important river of Germany, forming the boundary between Germany and Sarmatia, rising in the Hercynia Silva and falling into the Mare Suevicum or the Baltic.

Visurgis. Now the Weser; an important river of Germany, falling into the German Ocean.

Vitellius. (1) LUCIUS, father of the Roman emperor. He was a consummate flatterer, and by his arts gained promotion. After being consul in A.D. 34, he had been appointed governor of Syria, and had made favourable terms of peace with Artabanus. But all this only excited Caligula's jealousy, so that he sent for Vitellius to put him to death. The governor saved himself by his abject humiliation and the gross flattery which pleased and softened the savage tyrant. He paid similar court to

Claudius and Messalina, and was rewarded by being twice consul with Claudius, and also censor (Dio Cass. lix. 27; Tac. *Ann.* xi. 1–3; xii. 42). (2) LUCIUS, son of the preceding, and brother of the emperor, was consul in 48. He was put to death by the party of Vespasian on his brother's fall (Tac. *Hist.* iv. 2; Dio Cass. lxv. 22). (3) AULUS, Roman emperor from January 2 to December 22, A.D. 69. He was the son of No. 1. He was consul during the first six months of 48, and his brother Lucius during the following six. He had some knowledge of letters and some eloquence. His vices made him a favourite of Tiberius, Gaius Caligula, Claudius, and Nero, who loaded him with

Vitellius. (Bust in Vienna.)

favours. It caused great surprise, however, when Galba chose such a man to command the legions in Lower Germany, for he had little military talent. Both Upper and Lower Germany had been attached to Virginius Rufus, and disliked the rule of Galba; the two legions at Moguntiacum (Mayence) had not taken the oath of allegiance to him. Accordingly, they had already been disposed to find a nominee of their own, and when the news of Galba's death arrived, the legions of both Germanies combined to acknowledge Vitellius as Imperator, and he was proclaimed at Colonia Agrippinensis (Cologne) on the 2d of January, 69. His generals Fabius Valens and Caecina marched into Italy, defeated Otho's troops at the decisive battle of Betriacum, or Bedriacum, and thus secured for Vitellius the undisputed command of Italy. The soldiers of Otho, after his death, took the oath of fidelity to Vitellius. (See OTHO.) Vitellius reached Rome in July. He disturbed no one in the enjoyment of what had been given by Nero, Galba, and Otho, nor did he confiscate any person's property; and though some of Otho's adherents were put to death, he let the next of kin take their possessions. Yet though he showed moderation in this part of his conduct, he showed none in his expenditure. He was a glutton and an epicure, and his chief amusement was the table, on which he spent enormous sums of money. Meantime Vespasian, who had at first taken the oath of allegiance to Vitellius, was proclaimed emperor at Alexandria on the 1st of July. Vespasian was speedily recognized by all the East; and the legions of Illyricum under Antonius Primus entered the north of Italy and declared for Vespasian. Vitellius despatched Caecina with a powerful force to oppose Primus; but Caecina was not faithful to his master. Primus defeated the Vitellians in two battles, and afterwards took and pillaged the city of Cremona. Primus then marched upon Rome, and forced his way into the city, after much fighting. Vitellius was seized in the palace, led through the streets with every circumstance of ignominy, and dragged to the Gemoniae Scalae, where he was killed with repeated blows. His head was carried about Rome, and his body was thrown into the Tiber; but it was afterwards buried by his wife, Galeria Fundana. A few days before the death of Vitellius, the Capitol had been burned in the assault made by his soldiers upon this building, where Flavius Sabinus, the brother of the emperor Vespasian, had taken refuge (Tac. *Hist.* ii., iii.; Suet. *Vitell.*; Dio Cass. lxv.).

Vitrum (*ὕαλος*). Glass. The Egyptians made glass at a very early period, the oldest existing specimen being a blue vase of opaque glass now in the British Museum, as old as the sixteenth century B.C. Cups and bottles of uncertain date have been taken in considerable numbers from the tombs and mummy-cases. In the paintings of Beni-Hassan (about 2300 B.C.) the process of glass-blowing is clearly depicted. The Assyrians likewise made admirable glass, the oldest existing specimen being a sort of bottle of green glass found at Nimroud, and dating from 719 B.C. It is now in the British Museum.

A story has been preserved by Pliny (*H. N.* xxxvi. § 191) that glass was first discovered accidentally by some merchants who, having landed on the Syrian coast at the mouth of the river Belus, and being unable to find stones to support their cooking-pots, brought for this purpose from their ship some of the lumps of nitre which composed the cargo. This being fused by the heat of the fire, united with the sand upon which it rested and formed a stream of vitrified matter. The Phœnicians probably learned the art of glass-making from the Egyptians; but the tale is no doubt connected with the fact recorded by Strabo (xvi. p. 758) and Iosephus (*Bell. Iud.* ii. 9), that the sand of the district in question was esteemed peculiarly suitable for glass-making, and exported in great quantities to the workshops of Sidon, long the most famous in the ancient world. Alexandria, another centre of the industry, sustained its reputation for many centuries; Rome derived thence a great portion of its supplies, and as late as the reign of Aurelian we find the manufacture still flourishing (Cic. *Pro Rabir. Post.* xiv. 40; Strabo, l. c.; Martial, xi. 11; xii. 74; xiv. 115; Vopisc. *Aurel.* 45).

Homer does not certainly mention glass, but at Mycenae and Tiryns glass beads and other ornaments have been found. The words *ὕαλος* and *ὕελος* in the early Greek writers (e. g. Herod. iii. 24) do not always refer to glass, but often to rock-crystal, rock-salt, amber, or alabaster; and it is not till Theophrastus, the pupil of Aristotle, that the word is surely to be rendered "glass." Of the Roman writers, Lucretius is the first to use the term *vitrum* (iv. 604; vi. 991), but it must have been known at Rome long before this time, as Cicero (l. c.) speaks of it as a common article of merchandise. Phœnician glass is found in the

Etruscan cemeteries at Tarquinii dating from the eighth century B.C. Scaurus in his temporary theatre, erected in B.C. 58, used glass freely in the interior decoration (see THEATRUM); and the Augustan poets often mention the substance (e. g. Verg. *Georg.* iv. 350; *Aen.* vii. 759; Ovid, *Amor.* i. 6, 55; Hor. *Carm.* iii. 13, 1). Pliny states that glass was made in Italy, Gaul, and Spain, and that drinking-cups of glass had superseded those of gold and silver (Pliny, *H. N.* xxxvi. §§ 192–199). Under Alexander Severus we find the glass-makers (*vitrearii*) enumerated in the tax-lists with other artisans. Strabo notes the cheapness of glass, and says that a glass drinking-cup sold in his time for half an *as*, or less than a cent.

The following are the chief uses to which glass was applied:

(*a*) Bottles, vases, cups, and urns for the ashes of the dead (*cinerariа*). Of all of these great numbers exist, in a great variety of forms and colours, some having been blown into moulds so as to take the shape of—e. g. a bunch of grapes, a sea-shell, a negro's head, etc. (See illustration, s. v. DIATRETA.) The finest of all under this class is the celebrated Portland Vase in the British Museum, found in the sixteenth century near Rome. See PORTLAND VASE.

(*b*) Glass pastes giving fac-similes of engraved precious stones. These were worn by those who could not afford real gems (Pliny, *H. N.* xxxv. 48). Precious stones were also imitated in glass with very great skill, so that only experts could detect the imposition. The sapphire, amethyst, carbuncle, and especially the emerald, were the oftenest counterfeited (Pliny, *H. N.* xxxvii. 197; Trebell. Poll. *Gall.* 12; Seneca, *Epist.* 90; Isidor. *Orig.* xvi. 15, 27). See GEMMA.

(*c*) One very elegant application of glass deserves to be particularly noticed. A number of fine stalks of glass of different colours were placed vertically, and arranged in such a manner as to depict upon the upper surface some figure or pattern, upon the principle of a minute mosaic. The filaments thus combined were then subjected to such a degree of heat as would suffice to soften without melting them, and were thus cemented together into a solid mass. It is evident that the picture brought out upon the upper surface would extend down through the whole of the little column thus formed, and hence, if it was cut into thin slices at right angles to the direction of the fibres, each of these sections would upon both sides represent the design which would be multiplied to an extent in proportion to the total length of the glass threads. Further, if the column is heated and drawn out, the design becomes proportionately minute. When these sections have been again fused together side by side, the result is *millefiori* glass. Many mosaic pavements and pictures (*opus musivum*) belong to this head, since the cubes were frequently composed of opaque glass as well as marble. See MUSIVUM OPUS.

(*d*) One method of decoration employed by the ancients consisted in enclosing designs in gold-leaf between two layers of transparent glass. This is most common from the third century A.D., when small Christian subjects are thus represented.

(*e*) Thick sheets of glass of various colours appear to have been laid down for paving floors, and to have been attached as a lining to the walls and ceilings of apartments in dwelling-houses, just as *scagliola* is frequently employed in Italy. Rooms fitted up in this way were called *vitreae camerae*, and the panels *vitreae quadraturae*. Such was the kind of decoration introduced by Scaurus for the scene of his theatre, not columns nor pillars of glass as some, nor bas-reliefs as others, have imagined (Pliny, *H. N.* xxxvi. § 189; Stat. *Sil.* i. 5, 42; Seneca, *Ep.* 76; Vopisc. *Firm.* 3).

(*f*) The question whether glass windows were known to the ancients has, after much discussion, been set at rest by the excavations at Pompeii, for not only have many fragments of flat glass been disinterred from time to time, but in the *tepidarium* of the public baths a bronze lattice came to light with some of the panes still inserted in the frame, so as to determine at once not only their existence, but the mode in which they were secured and arranged (Mazois, *Ruines de Pompéi*, iii. p. 77).

For the use of glass in mirrors, see SPECULUM.

The numerous specimens existing prove that the ancients were well acquainted with the art of imparting a great variety of colours to their glass; they were probably less successful in their attempts to render it perfectly pure and free from all colour, since we are told by Pliny that it was considered most valuable in this state. It was wrought according to the different methods now practised, being fashioned into the required shape by the blowpipe; or cut, as we term it, although "ground" (*teritur*) is a more accurate phrase, upon a wheel; or engraved with a sharp tool, like silver (Pliny, *H. N.* xxxvi. § 193). The process was difficult, and accidents occurred frequently (Mart. xiv. 115). The art of etching upon glass, now so common, was entirely unknown to the ancients, since it depends upon the properties of fluoric acid, a chemical discovery of the last century.

Petronius and Dio Cassius assert that malleable glass was discovered in the reign of the emperor Tiberius. They tell a story of how a man demanded an interview with the emperor, and, on being admitted, showed him a glass vessel and then dashed it violently upon the ground. When taken up, it was neither broken nor cracked, but dinted like a piece of metal. The man then produced a mallet, and hammered it back into its original shape. The emperor inquired whether any one was acquainted with the secret, and was answered in the negative; upon which the order was given that the man should be instantly beheaded, lest the precious metals might lose their value, should such a composition become generally known.

See Nesbitt, *Notes on the History of Glass-making* (1871); Blümner, *Technologie*, iv. p. 379 (1887); Deville, *Histoire de l'Art de la Verrerie* (1873); Fröhner, *La Verrerie Antique* (1879); Beckmann, *History of Inventions* (1856); Marquardt and Mommsen, *Röm. Alterthümer*, vii. pp. 774 foll. (1886).

Vitruvius Pollio, MARCUS. A celebrated Roman writer on architecture, of whom nothing is known except a few facts contained in scattered passages of his own work. He appears to have served as a military engineer under Iulius Caesar, in the African War (B.C. 46), and he was broken down with age when he composed his work, which is dedicated to the emperor Augustus. Though he usually speaks of the emperor as "Imperator" or "Caesar," he employs also the title Augustus, which was adopted in B.C. 27, and he mentions (iii. 2, 7) the Temple of Quirinus, which was built

B.C. 16; but he knows only one stone theatre at Rome (iii. 2, 2): whence it is inferred that the work was completed between B.C. 16 and B.C. 13, in which year two more stone theatres were built. He professes his intention to furnish the emperor with a standard by which to judge of the buildings he had already erected, as well as those which he might afterwards erect; which can have no meaning, unless he wished to protest against the style of architecture which prevailed in the buildings already erected. That this was really his intention appears from several other arguments, and especially from his frequent references to the unworthy means by which architects obtained wealth and favour, with which he contrasts his own moderation and contentment in his more obscure position. In a word, having apparently few great buildings of his own to point to as embodying his views (the basilica at Fanum is the only work of his which is mentioned), he desired to lay before the world in writing his principles of architecture. His work is a valuable compendium of those written by numerous Greek architects, whom he mentions chiefly in the preface to his seventh book, and by some Roman writers on architecture. Its chief defects are its brevity, of which Vitruvius himself boasts, and which he often carries so far as to be unintelligible, and the obscurity of the style, arising in part from the natural difficulty of technical language, but in part also from the author's want of skill in writing, and sometimes from his imperfect comprehension of his Greek authorities. His work is entitled *De Architectura Libri X.* In the first book, after the dedication to the emperor and a general description of the science of architecture and an account of the proper education of an architect, he treats of a choice of a proper site for a city, the disposition of its plan, its fortifications, and the several buildings within it. The second book is on the materials used in building. The third and fourth books are devoted to temples and the four orders of architecture employed in them, namely: the Ionic, Corinthian, Doric, and Tuscan. The fifth book relates to public buildings, the sixth to private houses, and the seventh to interior decorations. The eighth is on the subject of water: the mode of finding it; its different kinds; and the various modes for conveying it for the supply of cities. The ninth book treats of various kinds of sundials and other instruments for measuring time; and the tenth of the machines used in building, and of military engines. Each book has a preface, upon some matter more or less connected with the subject; and these prefaces are the source of most of our information about the author. The best editions of Vitruvius are those of Schneider, 3 vols. (Leipzig, 1807–8); Stratico, 4 vols. (Udine, 1825–30), with plates and a lexicon; Marini, 4 vols. (Rome, 1836), recently revised by Lorentzen; and of Rose and Müller-Strübing (Leipzig, 1867). There is a German translation with a commentary by Reber (Stuttgart, 1864), and an English version by Gwilt (revised ed. London, 1874). There is an index by Nohl (1876). The language of Vitruvius belongs in a way to the *sermo plebeius*, being that of a professional engineer with no pretensions to general culture. See SERMO PLEBEIUS.

Vitta. A ribbon or band worn round the forehead and head by free-born ladies, both before and after marriage (Verg. *Aen.* ii. 168),

Vitta. (From a medal.)

to confine the hair, and to distinguish them from women of the town (Ovid, *Rem. Am.* 386). The name also designates the sacred fillet (*infula*) worn by the Vestals and other priestesses, though strictly it was the ribbon which held together the flock of wool. (See INFULA.) The word also denotes a ribbon used for any other purpose, as in garlands, festoons, etc.

Vivarium (*ζωγρεῖον*). A general term for any place in which beasts, fowls, fish, or any kind of animals were kept alive, either for the purposes of gain or pleasure; a park for game, a rabbit-warren, fish-pond, decoy, preserve for oysters, etc. (Gell. ii. 20; Pliny, *H. N.* viii. 50, 78; id. ix. 81).

Viviscus. Now Vevey; a town on the eastern shore of Lacus Lemannus (Lake Geneva).

Vocatio in Ius. See ACTIO in the Appendix.

Voconia Lex. A law passed by Q. Voconius Saxa, tribune of the people (B.C. 169), and containing two provisions: (1) that no one enrolled as having a property of 100,000 *asses* ($1000) should make any woman his heir; and (2) that no such person should leave to another a sum greater than that which the regular heirs were to receive. The intention of this law was to curb the extravagance of women by limiting their pecuniary means (Gell. xvii. 6; xx. 1). It was evaded in various ways: (*a*) by a person avoiding enrollment in the census; and (*b*) by the creation of trusts (*fidei commissa*) for the benefit of women. See Vangerow, *Lex Voconia* (1863); and cf. the article SUMPTUARIAE LEGES.

Voconius Saxa. See SAXA.

Vocontii. A powerful and important people in Gallia Narbonensis, inhabiting the southeastern part of Dauphiné and a part of Provence between the Drac and the Durance, bounded on the north by the Allobroges, and on the south by the Salyes and Albioeci. They were allowed by the Romans to live under their own laws, and as the allies rather than the subjects of Rome.

Vogĕsus, Vosăgus, or **Vosgĕsus.** Now the Vosges; a range of mountains of Gaul, in the territory of the Lingones, running parallel to the Rhine, and separating its basin from that of the Mosella. The rivers Sequana (Seine), Arar (Saône), and Mosella (Moselle) rise in these mountains.

Volaterrae. Now Volaterra, called by the Etruscans **Velathri**; one of the twelve cities of the Etruscan confederation, built on a lofty and precipitous hill, about 1800 English feet above the level of the sea. It was the most northerly city of the confederation, and its dominions extended eastward as far as the territory of Arretium, which was fifty miles distant; westward as far as the Mediterranean, which was more than twenty miles off; and southward at least as far as Populonia, which was either a colony or an acquisition of Volaterrae. In consequence of possessing the two great ports of Luna and Populonia, Volaterrae, though so far inland, was reckoned as one of the powerful maritime cities of Etruria. We have no record of its conquest by the Romans. Like most of the Etruscan cities, it espoused the Marian party

Arch at Volaterrae.

against Sulla; and it was not till after a siege of two years that the city fell into Sulla's hands. After the fall of the Western Empire, it was for a time the residence of the Lombard kings. The modern town contains several interesting Etruscan remains.

Volaterrāna Vada. A small town in the territory of Volaterrae.

Volcae. A powerful Keltic people in Gallia Narbonensis, divided into the two tribes of the Volcae Tectosages and Volcae Arecomici, extending from the Pyrenees and the frontiers of Aquitania along the coast as far as the Rhône. They lived under their own laws, without being subject to the Roman governor of the province, and they also possessed the *ius Latii*. The Tectosages inhabited the western part of the country from the Pyrenees as far as Narbo, and the Arecomici the eastern part from Narbo to the Rhône, and even beyond the Rhône (Liv. xxi. 26; Strab. p. 203). The chief town of the Tectosages was Tolosa. A portion of the Tectosages left their native country under Brennus, and were one of the three great tribes into which the Galatians in Asia Minor were divided. See GALATIA.

Volcanalia. See VULCANUS.

Volcānus. See VULCANUS.

Volcatius Gallicānus. One of the writers of the *Augusta Historia*. See AUGUSTAE HISTORIAE SCRIPTORES.

Volcatius Sedigĭtus. See SEDIGITUS.

Volci or **Vulci.** (1) Now Vulci; an inland city of Etruria, about eighteen miles northwest of Tarquinii. Of the history of this city we know nothing; but its extensive sepulchres, and the vast treasures of ancient art which they contain, prove that Vulci must at one time have been a powerful and flourishing city. (2) Vallo, a town in Lucania, thirty-six miles southeast of Paestum on the road to Buxentum.

Volĕro Publilius. See PUBLILIUS.

Vologēses. The name of five kings of Parthia. See ARSACES XXIII., XXVII., XXVIII., XXIX., XXX.

Volsci. An ancient people in Latium, originally distinct from the Latins. They dwelt on both sides of the river Liris, and extended down to the Tyrrhene Sea. Their language was nearly allied to the Umbrian. (See UMBRIA.) They were from an early period engaged in almost unceasing hostilities with the Romans, and were not completely subdued by the latter till B.C. 338, after which time they disappear from history. See ITALIA.

Volsellae (*τριχολαβίς*). (1) A pair of tweezers for pulling out hair (Mart. ix. 28, 5). (2) A pair of forceps (Celsus, vi. 12, 1) used by surgeons and dentists. See CHIRURGIA.

Volsellae, Tweezers. (Rich.)

Volsinii or **Vulsinii.** Now Bolsena; called **Velsĭna** or **Velsunna** by the Etruscans. One of the most ancient and most powerful of the twelve cities of the Etruscan Confederation, was situated on a lofty hill on the northeastern extremity of the lake called after it LACUS VOLSINIENSIS and VULSINIENSIS (Lago di Bolsena). The Volsinienses carried on war with the Romans in B.C. 392, 311, 294, and 280, but were on each occasion defeated, and in the last of these years appear to have been finally subdued. Their city was then razed to the ground by the Romans, and its inhabitants were compelled to settle on a less defensible site in the plain, that of the modern Bolsena.

Volturcius or **Vulturcius,** TITUS. One of Catiline's conspirators, who turned informer upon obtaining the promise of pardon. He was one of those who accompanied the ambassadors of the Allobroges and was arrested with them on the Pons Mulvius. See Cicero's third oration against Catiline.

Volūmen. See LIBER; PAPYRUS; WRITING AND WRITING MATERIALS.

Volumnia. The wife of Coriolanus. See CORIOLANUS.

Volupia or **Voluptas.** The personification of sensual pleasure among the Romans, and honoured with a temple near the Porta Romanula.

Volusius Maecĭānus, LUCIUS. A Roman jurist who was in the consilium of Antoninus Pius, and was one of the teachers of Marcus Aurelius. Maecianus wrote several works; and there are forty-two excerpts from his writings in the Digest. A treatise *De Asse et Ponderibus* is attributed to him, but there is some doubt about the authorship. It is edited by Böcking (Bonn, 1831).

Volŭsus or **Volĕsus.** The reputed ancestor of the Valeria gens, who is said to have settled at Rome with Titus Tatius. See VALERIA GENS.

Vomānus. Now the Vomano; a small river in Picenum.

Vomitorium. See AMPHITHEATRUM.

Vonōnes. The name of two kings of Parthia. See ARSACES XVIII., XXII.

Vopiscus. A Roman praenomen, signifying a twin-child who was born safe, while the other twin died before birth (Pliny, *H.N.* vii. 47; Solin. 1). Like many other ancient Roman praenomens, it was afterwards used as a cognomen.

Vopiscus Flavius. A native of Syracuse, and one of the six *Scriptores Historiae Augustae*. He flourished about A.D. 300. See AUGUSTAE HISTORIAE SCRIPTORES.

Vortumnalia. See VERTUMNUS.

Vosăgus. See VOGESUS.

Vosgĕsus. See VOGESUS.

Vota Publĭca. Vows made by the State in great crises, as during war (Livy, v. 21) or pestilence (Livy, iv. 25). They were in the nature of promises to the gods of gifts or sacrifices in return for aid and favour. The vow was made on behalf of the State by a consul, praetor, or dictator, who was said *suscipere votum*, at the behest of the Senate. The announcement of the vow (*nuncupatio*) was publicly made in a set formula dictated by the Pontifex Maximus (Livy, xxxvi. 2), and it was entered in the public records. The vow was generally fulfilled by the magistrate who made it or by his regular successor, but it might devolve upon another (Livy, xxxvi. 2). Besides these extraordinary public vows, there was an annual *votum publicum* (of victims to be offered) made by the new consuls on January 1st, *pro rei publicae salute*. Under the Republic a special vow was added for the emperor's safety (Dio Cass. li. 9). See Marquardt, *Staatsverwaltung*, iii. pp. 265–268; Mommsen, *Röm. Staatsrecht*, i. 244; ii. 810; and for the most remarkable of all the public vows, see the article VER SACRUM.

Voting. See COMITIA; DIKÉ; OVILÉ; TABELLARIAE LEGES.

Votōrum Nuncupatio. See VOTA PUBLICA.

Vowels. See PHILOLOGIA.

Vulcaniae Insŭlae. See AEOLIAE INSULAE.

Vulcānus or **Volcānus** (which is the earlier form of the word). The Italian god of fire. Vulcanus differed originally from Vesta in being the god rather of destructive fire than of the kindly hearth-fire; and it is probable that the VULCĀNAL as one of the central sanctuaries in an Italian town (e.g. the altar and Area Vulcani in the Comitium at Rome) was originally a place for propitiatory offerings against destructive fire. In this way Vulcanus was connected with the goddess who stayed conflagrations (Stata Mater). That, however, in some places he was at one time also regarded as a god of the hearth-fire is indicated by the story of his son Caeculus (see CAECUS), and perhaps by that of Servius Tullius. But another primitive characteristic was his benign influence also as a god of summer heat, which led to his being paired with Maia, the goddess of spring or summer crops fostered by the sun (Gell. xiii. 23; Macrob. i. 12; Varr. *L. L.* v. 84); and in this aspect he may have been connected with the Italian Venus even before the Greek influence introduced this association from the analogy of Hephaestus and Aphrodité. As regards the connection of the Italian Vulcan with the smith's works of forging and melting, there is no clear evidence. It is asserted that MULCĪBER, a synonym of Vulcanus (and possibly once the name of another deity amalgamated or identified with him), represents this function of Vulcan, and is derived from *mulcere*, to soften metals; but this is by no means certain, and it is possible that the connection of Vulcanus (or Mulciber) with metal-work and the smithy is merely part of the transference to him of all the attributes of Hephaestus, with whom he is entirely identified in literature. For the myths thus transferred to Vulcanus, see HEPHAESTUS.

Vulci. See VOLCI.

Vulgāta. See HIERONYMUS; ITALA; SERMO PLEBEIUS.

Vulgientes. An Alpine people in Gallia Narbonensis, whose chief town was Apta Iulia (Apt).

Vulsinii. See VOLSINII.

Vulso, Manlius. (1) LUCIUS, consul B.C. 256 with M. Atilius Regulus. He invaded Africa with his colleague (see REGULUS No. 3). Vulso returned to Italy at the fall of the year with half of the army, and obtained the honour of a triumph. In 250 Vulso was consul a second time with T. Atilius Regulus Serranus, and with his colleague commenced the siege of Lilybaeum (Polyb. i. 39–48; Zonar. viii. 15). (2) GNAEUS, curule aedile B.C. 197, praetor with Sicily as his province 195, and consul 189. He was sent into Asia in order to conclude the peace which Scipio Asiaticus had made with Antiochus, and to arrange the affairs of Asia. He attacked and conquered the Gallograeci or Galatians in Asia Minor without waiting for any formal instructions from the Senate. His march is important in the discussion of the topography of Asia Minor, and has been carefully traced by Professor Ramsay. It was from Ephesus to Ancyra, in the country of the Tectosages, and as far as the banks of the Halys (Livy, xxxviii. 12–27; Polyb. xxii. 16). He set out on his return to Italy in 188, but in his march through Thrace he suffered much from the attacks of the Thracians, and lost a considerable part of the booty he had obtained in Asia. He reached Rome in 187. His triumph was a brilliant one, but his campaign in Asia had a pernicious influence upon the morals of his countrymen. He had allowed his army every kind of license, and his soldiers introduced into Rome the luxuries of the East (Livy, xxxviii. 37–50; xxxix. 6; Polyb. xxii. 24; App. *Syr.* 42).

Vultur. A mountain dividing Apulia and Lucania near Venusia, is a branch of the Apennines. It is celebrated by Horace as one of the haunts of his youth (*Od.* iii. 4, 9–16; Lucan, ix. 185). It attains an elevation of 4433 feet above the sea. From it the southeast wind was called Vulturnus by the Romans.

Vulturnum. Now Castel di Volturno; a town in Campania, at the mouth of the river Vulturnus, was originally a fortress erected by the Romans in the Second Punic War (Livy, xxv. 20, 22). At a later time it was made a colony (Livy, xxxiv. 45; Varr. *L. L.* v. 5).

Vulturnus. Now the Volturno; the chief river in Campania, rising in the Apennines in Samnium, and falling into the Tyrrhene Sea.

Week. The Greeks originally divided their month into three parts of ten days each, and the Romans had a sort of week of eight days—between the *nundinae* or market-days. (See NUNDINAE.) The Egyptians, however, like the Jews, had a week of seven days, named from the seven planets, and from Alexandria this seven-day week (*ἑβδομάς, hebdomas, septimana*) spread to Greece, and, at about the beginning of the Christian era, to Rome also. In the Codex Theodosianus (q.v.) the name *septimana* first appears in the sense of "week," and from it came the Italian *settimana*, the Spanish *semana*, and the French *semaine*.

Winckelmann, JOHANN JOACHIM. A very distinguished German archæologist, born in Stendal, Prussia, December 9th, 1717, the son of a shoemaker. With great difficulty young Winckelmann gained a preparatory training in the schools of his native town, and at Berlin and Salzwedel, whence he went to the Universities of Halle and Jena, at which he showed a remarkable proficiency in the Greek and Latin languages, and a strong bent towards the study of archæology and ancient art. After teaching for several years at Seehausen, he was made librarian at Nöthnitz, near Dresden. The magnificent collections of the latter place filled him with a desire to visit Rome, learning of which the Papal Nuncio, Archinto, promised to provide him with the means on condition of his joining the Church—a condition which Winckelmann, after a long period of hesitation, accepted in 1755. In the same year he received from the Pope a small pension. He at once journeyed to Rome, where he formed the acquaintance of Raphael Mengs, who greatly aided him in his studies of classic art.

Winckelmann now entered upon a period of prosperity, becoming librarian to Cardinal Alessandro Albani, in whose palace and villa he was made at home; and in 1763, the Pope appointed him Professor of Antiquities, and Hellenist to the great Vatican Library. His improved circumstances allowed him to travel, so that he spent some time at Florence, Naples, Pompeii, and Herculaneum, declining an appointment at Berlin, in order to remain in Italy. In 1768, having visited Vienna, he received from the Empress Maria Theresa the gift of some exceedingly rare gold coins, whose value tempted the cupidity of an Italian thief, one Arcangeli, and led him to assassinate Winckelmann while returning to Rome (June 8th). He was buried in the cemetery adjoining the cathedral of Trieste, where he died.

Winckelmann was the founder of archæology as a science, and laid down the lines of antiquarian investigation and research that modern scholars have so successfully followed out. His influence was much more than a purely scholastic one, however. To his views of the beautiful and to his enthusiasm for classical antiquity may be traced much of the inspiration of Lessing and Heyne, and other writers of the Augustan Age of German literature. His greatest work is the *Geschichte der Kunst des Alterthums* (1764), with its supplementary work *Anmerkungen über die Geschichte der Kunst* (1767), both included in the Vienna edition of 1776 (Eng. trans. by Lodge, 2d ed. 4 vols. 1856–72). Other works are the *Gedanken über die Nachahmung der griechischen Werke in Malerei und Bildhauerkunst* (1755); *Description des Pierres Gravées du feu Baron de Stosch* (1760); *Monumenti Antichi Inediti*, 2 vols. (1767–68; 2d ed. 1821); *Versuch einer Allegorie* (1766, republished with additions from manuscripts, 1866); and several reports on Herculaneum, etc. His letters were edited and

published by F. Forster, in 2 vols., *Winckelmann's Briefe* (Berlin, 1824); and his complete works have been published under the care of Fernow, H. Meyer, and Schultz, in 8 vols. (Dresden, 1808–1820).

On his literary influence the reader is referred to Goethe's *Winckelmann und sein Jahrhundert*, published in collaboration with H. Meyer and others (Tübingen, 1805). His life was written by Karl Justi, *Winckelmann, sein Leben, seine Werke und seine Zeitgenossen*, 3 vols. (Leipzig, 1866–72).

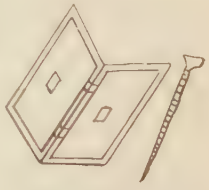
Wolf, FRIEDRICH AUGUST. A great Homeric scholar, born in Hainrode, in Germany, on February 15th, 1759. He was educated in the University of Göttingen, where he also gave private lessons; and in 1779 removed to Ilfeld, where he became the teacher of a school. In 1782 he was made rector of the public school at Osterode, and in 1783 Professor of Philosophy at the University of Halle, where he remained until the university was closed in 1806, when he removed to Berlin and took an active part in the foundation of the new university in that city, being employed by the Minister of Public Instruction. Wolf had already won a commanding position among the scholars of Germany by his epoch-making *Prolegomena in Homerum*, prefixed to the second edition of his *Homeri et Homeridarum Opera*, which appeared in 1795. In it he set forth the so-called Wolfian theory of the origin of the Homeric poems, claiming that the *Iliad* is made up of a number of ballads and songs which at first existed separately in the verses of different rhapsodists, by whom they were handed down from generation to generation until they were united by Pisistratus in the singer's epic that was afterwards ascribed to Homer. This theory he based upon his assertion that writing was not known at the time of the composition of the poems, and also upon the contradictions and inconsistencies to be detected in the poems themselves. (See HOMERUS; RHAPSODUS.) The Wolfian hypothesis was not original with Wolf himself, having been advanced before his time by other scholars (Casaubon, Vico, Bentley, Hedelin, Perrault, and Wood); but Wolf was the first to present the arguments with sufficient acuteness, logic, and impressiveness to make a profound impression upon the scholarship of the day.

Other valuable works of Wolf are his *Demosthenis Leptinea*, with a most learned introduction (1789); editions of Plato's *Symposium;* of Hesiod's *Theogony;* of Cicero's *Tusculanae;* of several of the Ciceronian Orations (*Post Reditum in Senatu, Ad Quirites de Domo Sua, De Haruspicum Responsis*, and the *Oratio pro Marcello*, which Wolf regarded as spurious); of the *Clouds* of Aristophanes; and of Casaubon's Suetonius. His *Kleine Schriften*, edited by G. Bernhardy, appeared in 2 vols. in 1869. Wolf died at Marseilles, August 8th, 1824. See Körte, *Leben und Studien F. A. Wolf's*, 2 vols. (Essen, 1833); Arnoldt, *Wolf in seinem Verhältnisse zum Schulwesen und zur Pädagogik*, 2 vols. (Brunswick, 1861–62); Bursian, *Geschichte der class. Philologie* (Munich, 1883); and Jebb's *Homer* (Glasgow, 1877). Cf. the article TEXTUAL CRITICISM.

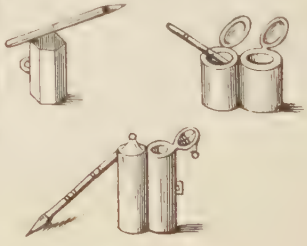
Wonders, THE SEVEN. See SEVEN WONDERS.

Wood-nymphs. See NYMPHAE.



Word-books. See LEXICON.

Worship. See RELIGIO; SACRIFICIUM; TEMPLUM.



Writing. See ALPHABET; PALAEOGRAPHY.

Writing and Writing Materials. Ancient writing was done on (*a*) leaves, as of the olive and bay; (*b*) bark, as of the lime-tree (*φιλύρα*); (*c*) linen cloth; (*d*) clay and pottery; (*e*) walls; (*f*) metals, rarely gold or silver, often lead plates and bronze; (*g*) wood, either coated with wax or some kind of glaze or not; (*h*) papyrus; (*i*) skins, especially parchment or vellum (*διφθέραι, membranae*). (See the articles CODEX; EPIGRAPHY; FICTILE; GRAFFITI; LIBER; OSCI; PALAEOGRAPHY; PAPYRUS; TABULA.) Paper was not found in Europe until its use was learned from the Arabs in the eighth century A.D.

The pen used in writing upon papyrus was a split reed (*calamus*), the best being supplied by Egypt and Cnidus in Caria. The ink (*atramentum*) employed was a preparation resembling India ink, made of soot and gum, or of the juice of the cuttle-fish. Both of these could be erased with a sponge (*spongia*), whereas ink made of oxide of iron and gall-nuts, which appears to have been introduced later, and to have been the only kind capable of being used for parchment, left more or less clear traces behind, even if rubbed out with pumice-stone. Red ink was also used in very early times. The ink-bottle was called *μελανδόχον*, *atramentarium*, and was a small cylindrical jar, or two such jars, one for black and one for red ink. In ordinary life people used for letters, notices, and despatches, as also in schools, wooden tablets (*tabellae*) with a

Wax Tablet and Stilus. (Perret, *Catacombes de Rome.*)

Ancient Inkstands.

raised rim, within which was spread a thin layer of wax. On this the characters were scratched with the point of a metal or ivory instrument called a *stilus;* they could be effaced with the other end of the instrument, which was bent or flattened out like a paper-folder (see STILUS). Two or more such tablets could be fastened together in the form of a book. (See DIPTYCHON.) See Thompson, *Greek and Latin Palaeography*, pp. 12–53 (New York, 1893); and the article PALAEOGRAPHY in this Dictionary.

Writing Case. See CAPSA.

X

X, as a symbol.

IN GREEK.—Ξ = *ξένοι* on Attic ephebic inscriptions. As a numeral = 14 (old system). ξ′ = 60; ,ξ = 60,000.

IN LATIN.—X = 10. See NUMERUS.

Xanthippé (*Ξανθίππη*). The wife of the Athenian philosopher Socrates. Many anecdotes have come down in the pages of ancient writers regarding this famous woman, whose name has become proverbial in all languages as that of a typical shrew. It is likely, however, that many of these are apocryphal, and that, on the other hand, there was much in the unpractical ways of Socrates to provoke even a good-tempered woman who loved order and a reasonable degree of conventionality. It is fair to remember, also, that Socrates himself, in a conversation with his son Lamprocles (Xen. *Mem.* ii. 2), ascribes to Xanthippé numerous domestic virtues; while it is recorded that she showed great affection and solicitude for her husband during his imprisonment. See SOCRATES.

Xanthippus (*Ξάνθιππος*). (1) The son of Ariphron and father of Pericles. He succeeded Themistocles as commander of the Athenian fleet in B.C. 479, and commanded the Athenians at the decisive battle of Mycalé. (2) A Lacedaemonian, who commanded the Carthaginians against Regulus. See REGULUS.

Xanthus (*Ξάνθος*). (1) See SCAMANDER. (2) Now the Echen Chai; the chief river of Lycia, rises in Mount Taurus, and flows south through Lycia, between Mount Cragus and Mount Massicytus, falling at last into the Mediterranean Sea a little west of Patara. It is navigable for a considerable part of its course.

Xanthus (*Ξάνθος*). Now Gunik; the most famous city of Lycia, standing on the west bank of the river of the same name, sixty stadia from its mouth. Twice in the course of its history it sustained sieges, which terminated in the self-destruction of the inhabitants with their property, first against the Persians under Harpagus, and long afterwards against the Romans under Brutus. The city was never restored after its destruction on the latter occasion. Xanthus was rich in temples and tombs, and other monuments of a most interesting character, and several important remains of its works of art are now exhibited in the British Museum.

Xanthus (*Ξάνθος*). A Greek historian. See LOGOGRAPHI.

Xenāgus (*ξεναγός*). The Spartan commander of the several contingents in the Peloponnesian League (Thuc. ii. 75; Xen. *Hellen.* iv. 2, 19).

Xenarchus (*Ξέναρχος*). (1) The son of Sophron, and, like his father, a celebrated writer of mimes. He lived during the Rhegian War (B.C. 399–389), at the court of Dionysius (Arist. *Poët.* 2). (2) An Athenian comic poet of the Middle Comedy, who lived as late as the time of Alexander the Great (Suid. *s. v.*). Several fragments of his writings are collected in Meineke's *Fragm. Com. Graec.*

Xenelasia (*ξενηλασία*). The right possessed and exercised by the Lacedaemonian magistrates of expelling from Sparta any stranger whose presence was injurious to the public order or morals. This was an enactment of Lycurgus himself, and was intended to preserve the native character of the Spartans from any taint of foreign influence (Xen. *De Rep. Lac.* 14, 4). See Schömann, *Antiq. of Greece*, Eng. trans. p. 278.

Xeni (*ξένοι*). See MERCENARII.

Xenia (*ξενία*). See HOSPITIUM in the Appendix.

Xenia (*ξένια*). (1) Presents that it was customary among the Greeks and Romans for a host to give or send to his guests, as a mark of hospitality and friendship (Pliny, *Epist.* vi. 31, 14), consisting, for the most part, of delicacies for the table; as may be collected from the thirteenth book of Martial, which is inscribed with the title *Xenia*, and relates chiefly to articles of food.

(2) Pictures of still-life, such as dead game, poultry, fish, fruit, vegetables, etc. (Vitruv. vi. 7, 4; Philostrat. *Imag.* i. 31, ii. 25); so termed because they represented such objects as a host sent in presents to his guests. Many pictures of this kind have been found among the paintings of Pompeii, one of which is given under PICTURA.

Xenias Graphé (*ξενίας γραφή*). An action brought at Athens against any one who unlawfully exercised the rights of citizenship. If convicted, such a person was sold as a slave and his property was forfeited to the State.

Xenŏcles (*Ξενοκλῆς*). An Athenian tragic poet, ridiculed by Aristophanes, and yet the conqueror of Euripides on one occasion (B.C. 415). He was of dwarfish stature, and son of the tragic poet Carcinus. In the *Peace*, Aristophanes applies the term *μηχανοδίφας* to the family. From the scholiast it appears that Xenocles was celebrated for introducing stage machinery and spectacular effects, especially in the ascent or descent of his gods.

Xenocrătes (*Ξενοκράτης*). A philosopher, born at Chalcedon in B.C. 400. He first attached himself to Æschines, but afterwards became a disciple of Plato, who took much pains in cultivating his genius, which was naturally heavy. Plato, comparing him with Aristotle, who was also one of his pupils, called the former a dull ass who needed the spur, and the latter a mettlesome horse who required the curb. His temper was gloomy, his aspect stern, and his manners little tinctured with urbanity. These material defects his master took great pains to correct, frequently advising him to sacrifice to the Graces; and the pupil, patient of instruction, knew how to value the kindness of his preceptor. He compared himself to a vessel with

a narrow orifice, which receives with difficulty, but firmly retains whatever is put into it. So attached was Xenocrates to his master that when Dionysius, in a violent fit of anger, threatened to find one who should cut off his head, he said, "Not before he has cut off this," pointing to his own. As long as Plato lived, Xenocrates was one of his most esteemed disciples; after his death he closely adhered to his doctrine; and in B.C. 339 he took the chair in the Academy as the successor of Speusippus. Aristotle, who, about this time, returned from Macedonia, in expectation, as it should seem, of filling the chair, was greatly disappointed and chagrined at this nomination, and immediately instituted a school in the Lyceum, in opposition to that of the Academy where Xenocrates continued to preside till his death. Xenocrates was celebrated among the Athenians, not only for his wisdom, but also for his virtues (Val. Max. ii. 10; Cic. *Ad Att.* ii. 16; Diog. Laërt. iv. 7).

So eminent was his reputation for integrity that when he was called upon to give evidence in a judicial transaction, in which an oath was usually required, the judges unanimously agreed that his simple asseveration should be taken, as a public testimony to his merit. Even Philip of Macedon found it impossible to corrupt him. When he was sent, with several others, upon an embassy to that king, he declined all private intercourse with him, that he might escape the temptations of a bribe. Philip afterwards said that of all those who had come to him on embassies from foreign States, Xenocrates was the only one whose friendship he had not been able to purchase (Diog. Laërt. iv. 8). During the time of the Lamiac War, being sent an ambassador to the court of Antipater for the redemption of several Athenian captives, he was invited by the prince to sit down with him at supper, but declined the invitation in the words of Odysseus to Circé (*Odyss.* x. 383). This pertinent and ingenious application of a passage in Homer, or, rather, the generous and patriotic spirit which it expressed, was so pleasing to Antipater that he immediately released the prisoners. It may be mentioned as another example of moderation in Xenocrates, that when Alexander, to mortify Aristotle, against whom he had an accidental pique, sent Xenocrates a magnificent present of fifty talents, he accepted only thirty minae, returning the rest to Alexander with this message: that the large sum which Alexander had sent was more than he should have been able to spend during his whole life. So abstemious was he with respect to food that his provision was frequently spoiled before it was consumed. His chastity was invincible, and Laïs, a celebrated Athenian courtesan, attempted, without success, to seduce him. He was an admirer of the mathematical sciences, and was so fully convinced of their utility that when a young man who was unacquainted with geometry and astronomy desired admission, he refused his request, saying that he was not yet possessed of the handles of philosophy. In fine, Xenocrates was eminent both for the purity of his morals and for his acquaintance with science, and supported the credit of the Platonic School by his lectures, his writings, and his conduct. He lived until B.C. 316, when he lost his life by accidentally falling, in the dark, into a reservoir of water.

The philosophical tenets of Xenocrates were truly Platonic, but in his method of teaching he made use of the language of the Pythagoreans. He made Unity and Diversity principles in nature, or gods; the former of whom he represented as the father, and the latter as the mother, of the universe. He taught that the heavens are divine, and the stars gods; and that, besides these divinities, there are terrestrial demons of a middle order, between the gods and man, which partake of the nature both of mind and body, and are therefore, like human beings, capable of passions and liable to diversity of character.

(2) A Greek physician of Aphrodisias, a work of whose is still remaining, on the food afforded by fishes. It is edited by Coray (Paris, 1814).

Xenophănes (*Ξενοφάνης*). The founder of the Eleatic school of philosophy was a native of Colophon, and born about B.C. 556. Xenophanes early left his own country and took refuge in Sicily, where he supported himself by reciting, at the court of Hiero, elegiac and iambic verses, which he had written in criticism of the Theogonies of Hesiod and Homer. From Sicily he passed over into Magna Graecia, where he took up the profession of philosophy, and became a celebrated preceptor in the Pythagorean school. Indulging, however, a greater freedom of thought than was usual among the disciples of Pythagoras, he ventured to introduce new opinions of his own, and in many particulars to oppose the doctrines of Epimenides, Thales, and Pythagoras. He held the Pythagorean chair of philosophy for about seventy years, and lived to the extreme age of a hundred. In metaphysics, Xenophanes taught that if there had ever been a time when nothing existed, nothing could ever have existed; that whatever is, always has been from eternity, without deriving its existence from any prior principles; that nature is one and without limit; that what is one is similar in all its parts, else it would be many; that the one infinite, eternal, and homogeneous universe is immutable and incapable of change; that God is one incorporeal eternal being, and, like the universe, spherical in form; that he is of the same nature with the universe, comprehending all things within himself; is intelligent, and pervades all things, but bears no resemblance to human nature either in body or mind. See V. Cousin, *Xénophane, Fondateur de l'École d'Élée*, in his *Nouveaux Fragments Philos.* (Paris, 1828); Bergk, *Commentatio de Arist. Libello de Xenophane, Zenone, et Gorgia* (Marburg, 1843); Reinhold, *De Genuina Xenophanis Disciplina* (Jena, 1847); Kern, *Quaestionum Xenophanearum Capita Duo* (Naumburg, 1864); Rüffer, *De Philosoph. Xenophanis Coloph. Parte Morali* (Leipzig, 1868); and Ueberweg's *Hist. of Philos.* i. pp. 49–54 (Eng. trans. N. Y. 1872). The fragments of his writings are collected in Karsten's *Philosophorum Graecorum Veterum Operum Reliquiae*, vol. i. (Amsterdam, 1835), and in Schneidewin's *Elegiaci Graeci* (1838).

Xenŏphon (*Ξενοφῶν*). (1) An Athenian, the son of one Gryllus, born about B.C. 444. In his early life he was a pupil of Socrates; but the turning-point in his career came when he decided to serve in the Greek contingent raised by Cyrus against Artaxerxes in 401. Xenophon himself mentions (*Anab.* iii. 1) the circumstances under which he joined this army. Proxenus, a friend of Xenophon, was already with Cyrus, and he invited Xenophon to come to Sardis, and promised to introduce him

to the Persian prince. Xenophon consulted his master, Socrates, who advised him to consult the oracle of Delphi, as it was a hazardous matter for him to enter the service of Cyrus, who was considered to be the friend of the Lacedaemonians and the enemy of Athens. Xenophon went to Delphi, but he did not ask the god whether he should go or not: he probably had made up his mind. He merely inquired to what gods he should sacrifice in order that he might be successful in his intended enterprise. Socrates was not satisfied with his pupil's mode of consulting the oracle, but as he had got an answer, he told him to go; and Xenophon went to Sardis, which Cyrus was just about to leave. He accompanied Cyrus into Upper Asia. In the battle of Cunaxa (B.C. 401) Cyrus lost his life, his barbarian troops were dispersed, and the Greeks were left alone on the wide plains between the Tigris and the Euphrates. (See CYRUS.) It was after the treacherous massacre of Clearchus and others of the Greek commanders by the Persian satrap Tissaphernes (q.v.) that Xenophon came forward. He had held no command in the army of Cyrus, nor had he, in fact, served as a soldier, yet he was elected one of the generals, and took the principal part in conducting the Greeks in their memorable retreat along the Tigris over the high table-lands of Armenia to Trapezus (Trebizond) on the Black Sea. From Trapezus the troops were conducted to Chrysopolis, which is opposite to Byzantium. The Greeks were in great distress, and some of them under Xenophon entered the service of Seuthes, king of Thrace. As the Lacedaemonians under Thimbron, or Thibron, were now at war with Tissaphernes and Pharnabazus, Xenophon and his troops were invited to join the army of Thimbron, and Xenophon led them back out of Asia to join Thimbron (399). Xenophon, who was very poor, made an expedition into the plain of the Caïcus with his troops before they joined Thimbron, to plunder the house and property of a Persian named Asidates. The Persian, with his women, children, and all his movables, was seized, and Xenophon, by this robbery, replenished his empty pockets (*Anab.* vii. 8, 23). He tells the story himself, and is evidently not at all ashamed of it. In other ways also he showed himself the prototype of an adventurous leader of *condottieri*, with no ties of country or preference of nationality. He formed a scheme for establishing a town with the Ten Thousand on the shores of the Euxine; but it fell through. He joined the Spartans, as has been seen, and he continued in their service even when they were at war with Athens. Agesilaüs, the Spartan, was commanding the Lacedaemonian forces in Asia against the Persians in 396, and Xenophon was with him at least during part of the campaign. When Agesilaüs was recalled (394), Xenophon accompanied him, and he was on the side of the Lacedaemonians in the battle which they fought at Coronea (394) against the Athenians. As a natural consequence a decree of exile was passed against him at Athens. It seems that he went to Sparta with Agesilaüs after the battle of Coronea, and soon after he settled at Scillus in Elis, not far from Olympia, a spot of which he has given a description in the *Anabasis* (v. 3, 7). Here he was joined by his wife, Philesia, and his children. His children were educated in Sparta.

Xenophon was now a Lacedaemonian so far as he could become one. His time during his long residence at Scillus was employed in hunting, writing, and entertaining his friends; and perhaps the *Anabasis* and part of the *Hellenica* were composed here. The treatise on hunting and that on the horse were probably also written during this time, when amusement and exercise of this kind formed part of his occupation. On the downfall of the Spartan supremacy, at Leuctra in 371, Xenophon was at last expelled from his quiet retreat at Scillus by the Eleans, after remaining there about twenty years. The sentence of banishment from Athens was repealed on the motion of Eubulus, but it is uncertain in what year. There is no evidence that Xenophon ever returned to Athens. He is said to have retired to Corinth after his expulsion from Scillus, and as we know nothing more, we assume that he died there. In the battle of Mantinea (B.C. 362) the Spartans and the Athenians were opposed to the Thebans, and Xenophon's two sons, Gryllus and Diodorus, fought on the side of the allies. Gryllus fell in the same battle in which Epaminondas lost his life. The events alluded to in the epilogue to the *Cyropaedia* (viii. 8, 4) show that the epilogue at least was written after 362. The time of his death, for reasons given above, seems to have been later than 357.

The following is a list of Xenophon's works: (1) The *Anabasis* (Ἀνάβασις), a history of the expedition of the Younger Cyrus, and of the retreat of the Greeks who formed part of his army. It is divided into seven books. As regards the title it will be noticed that under the name "The March *Up*" (*ἀνά*, i. e. inland from the coast of Cunaxa) is included also the much longer account of the return march *down* to the Euxine. This work has immortalized Xenophon's name. It is a clear and fascinating narrative, written in a simple style, free from affectation, and giving a great deal of curious information on the country which was traversed by the retreating Greeks, and on the manners of the people. It was the first work which made the Greeks acquainted with some portions of the Persian Empire, and it showed the weakness of that extensive monarchy. The skirmishes of the retreating Greeks with their enemies, and the battles with some of the barbarian tribes, are not such events as elevate the work to the character of a military history, nor can it as such be compared with Caesar's *Commentarii*. There is no weight whatever in the argument that, because Xenophon (*Hellen.* iii. 1, 2) speaks of the expedition of Cyrus as having been related by Themistogenes, the *Anabasis* is therefore not Xenophon's work. The statement can be explained either on the theory that Xenophon speaks of his own work under a fictitious name (which was possibly the case also with the *Oeconomicus*), or, more simply, by supposing that another account was actually written by Themistogenes. It is known that a separate account was written by Sophaenetus, and there may have been others. If the latter theory be correct, it would be a natural inference that Xenophon's *Anabasis* was written after the third book of the *Hellenica*. (2) The *Hellenica* (Ἑλληνικά) of Xenophon is divided into seven books, and covers the forty-eight years from the time when the History of Thucydides ends (see THUCYDIDES) to the battle of Mantinea (B.C. 362). The *Hellenica* is generally a dry narrative of events, and there is

nothing in the treatment of them which gives a special interest to the work. Some events of importance are briefly treated, but a few striking incidents are presented with some particularity. The *Hellenica* was not written at one time. Differences are traced between the first two and the later books as regards the arrangement, which in the earlier books is year by year, while, in the later, events growing out of one another are grouped together; and, as regards political sentiment, in the diminished admiration for Sparta which appears in the last three books. It is clear that book vi. was written after 357, since it mentions the death of Alexander of Pherae (vi. 4, 35); but the first four books were probably written a good deal earlier. (3) The *Cyropaedia* (Κυροπαιδεία), in eight books, is a kind of political romance, the basis of which is the history of the Elder Cyrus, the founder of the Persian monarchy. It shows how citizens are to be made virtuous and brave; and Cyrus is the model of a wise and good ruler. As a history it has no authority at all. Xenophon adopted the current stories as to Cyrus and the chief events of his reign, without any intention of subjecting them to a critical examination; nor have we any reason to suppose that his picture of Persian morals and Persian discipline is anything more than a fiction. Xenophon's object was to represent what a State might be, and he placed the scene of his fiction far enough off to give it the colour of possibility. His own philosophical notions and the usages of Sparta were the real materials out of which he constructed his political system. The *Cyropaedia* is evidence enough that Xenophon did not like the political constitution of his own country, and that a well-ordered monarchy or kingdom appeared to him preferable to a democracy like Athens. (4) The *Agesilaüs* (Ἀγησίλαος) is a panegyric on Agesilaüs II., king of Sparta, the friend of Xenophon. The genuineness is disputed, not without reason, and a recent critic holds it to be the work of a young rhetorician of the school of Isocrates. (5) The *Hipparchicus* (Ἱππαρχικός) is a treatise on the duties of a commander of cavalry, and it contains many military precepts. (6) The *De Re Equestri*, a treatise on the horse (Ἱππική), was written after the *Hipparchicus*, to which treatise he refers at the end of the treatise on the horse. This essay is not limited to horsemanship as regards the rider: it shows how a man is to avoid being cheated in buying a horse, how a horse is to be trained, and the like. (7) The *Cynegeticus* (Κυνηγετικός) is a treatise on hunting; and on the dog, and the breeding and training of dogs; on the various kinds of game, and the mode of taking them. It is a treatise written by a genuine sportsman who loved the exercise and excitement of the chase, and it may be read with pleasure by a sportsman of the present day. (8, 9) The *Respublica Lacedaemoniorum* and *Respublica Atheniensium*, the two treatises on the Spartan and Athenian States (Λακεδαιμονίων Πολιτεία and Ἀθηναίων Πολιτεία), were both ascribed to Xenophon, but the *Respublica Atheniensium* is certainly not by his hand. It was written by some one of the oligarchical party, and possibly it is right to date it as early as 420, and therefore to regard it as the earliest Attic prose work. On the other hand, a modern critic of Xenophon (Hartmann) believes it to be by a later writer compiling from Xenophon, Aristophanes, and other sources of information. The same critic denies the genuineness of the *Resp. Laced.*, which is more generally accepted. (10) The *De Vectigalibus*, a treatise on the Revenues of Athens (Πόροι ἢ περὶ Προσόδων), is designed to show how the public revenue of Athens may be improved. (11) The *Memorabilia of Socrates*, in four books (Ἀπομνημονεύματα Σωκράτους), was written by Xenophon to defend the memory of his master against the charge of irreligion and of corrupting the Athenian youth. Socrates is represented as holding a series of conversations, in which he develops and inculcates his moral doctrines. It is entirely a practical work, such as we might expect from the practical nature of Xenophon's mind, and it professes to exhibit Socrates as he taught. It is true that it may exhibit only one side of the Socratic argumentation, and that it does not deal in subtleties of philosophy. Xenophon was a hearer of Socrates, an admirer of his master, and anxious to defend his memory. The charges against Socrates for which he suffered were, that "Socrates was guilty of not believing in the gods which the State believed in, and introducing other new daemons (δαιμόνια): he was also guilty of corrupting the youth." Xenophon replies to these two charges specifically, and he then goes on to show what Socrates' mode of life was. The whole treatise is intended to be an answer to the charge for which Socrates was executed, and it is therefore, in its nature, not intended to be a complete exhibition of Socrates. That it is a genuine picture of the man is indisputable, and its value therefore is very great. (12) The *Apology of Socrates* (Ἀπολογία Σωκράτους πρὸς τοὺς Δικαστάς) is a short speech, containing the reasons which induced Socrates to prefer death to life. It is not one of the author's best works, and was possibly a rhetorical exercise much later than Xenophon. (13) The *Symposium* (Συμπόσιον), or Banquet of Philosophers, in which Xenophon delineates the character of Socrates. The speakers are supposed to meet at the house of Callias, a rich Athenian, at the celebration of the Great Panathenaea. Socrates and others are the speakers. The piece is interesting as a picture of an Athenian drinking-party, and of the amusement and conversation with which it was diversified. The nature of love and friendship is discussed. It is probable that Plato wrote his *Symposium* later, to some extent as a corrective. (14) The *Hiero* (Ἱέρων ἢ Τυραννικός) is a dialogue between King Hiero and Simonides, in which the king speaks of the dangers and difficulties incident to an exalted station, and the superior happiness of a private man. The poet, on the other hand, enumerates the advantages which the possession of power gives, and the means which it offers of obliging and doing services. (15) The *Oeconomicus* (Οἰκονομικός) is an excellent treatise in the form of a dialogue between Socrates and Critobulus, in which Socrates gives instruction in the art called economic, which relates to the administration of a household and of a man's property.

In language as well as in politics, Xenophon was a cosmopolitan. His long residence in other lands resulted in his losing or abandoning pure Attic: he admits words from all dialects; hence he cannot be adduced as an authority for strict Attic usage, and it has been well shown by abundant instances that his diction is in many respects an anticipation of the common dialect of the Macedonian period.

Of each of Xenophon's treatises there are from thirty to forty manuscripts. Of the *Anabasis*, the best is a Codex Parisinus (No. 1640), and dating from the fourteenth century. Of the *Cyropaedia*, the most esteemed is also in Paris (No. 1635), of the fifteenth century, though a copy at Wolfenbüttel (Codex Guelferbytanus) of about the twelfth century is also valuable. Of the twenty-one manuscripts of the *Hellenica*, the best are two Codices Parisini (Nos. 1642 and 1738) of the fourteenth and fifteenth centuries.

Editions of the whole of Xenophon are those of Dindorf, 5 vols. (1875), Henning (1863), and Sauppe (1867). The *editio princeps* was by Boninus, printed by P. Giunta at Florence in 1516. Good separate editions, with notes, are the following: of the *Anabasis* by Macmichael (1883), Cobet (1873), bks. i.–iv. by Goodwin and White (1886), Stone (1890); of the *Cyropaedia* by Holden (1887); of the *Hellenica* by Breitenbach (1873); Keller (1890); bks. i.–iv. by Manath (1888), bks. i.–ii. by Dowdall (1890); of the *Memorabilia* by Winans (1878), and Marshall (1891); of the *Hiero* by Holden (1885); of the *Oeconomicus* by Holden (1888); of the *De Re Equestri* by Morgan (1893); of the *Agesilaüs* by Güthling (1887); of the *Symposium* by Hug (1880). There is a good English translation of Xenophon by Dakyns, 2 vols. (New York, 1890–93). There is a good lexicon to Xenophon by Sturz (1801), and Sauppe's *Lexilogus Xenophonteus* (1865) is also recommended. There is a special *Wörterbuch zur Xenophon's Anabasis* by Vollbrecht (1876). See also Taylor's *Syntax to the Anabasis* (1880); and on Xenophon the studies by Roquette (1884) and Croiset (1873).

(2) Of Ephesus, a writer of prose fiction, as to whose date and personality nothing is known. His remaining work is entitled *Ephesiaca, or the Loves of Anthia and Abrocomas* (Ἐφεσιακὰ, *τὰ κατὰ* Ἀνθίαν *καὶ* Ἀβροκόμην). The style of the work is simple, and the story is conducted without confusion, notwithstanding the number of personages introduced; but the adventures are of a very improbable kind. Xenophon was possibly the oldest of the Greek romance writers. Editions of his work are those by Peerlkamp (Haarlem, 1818); and by Passow (Leipzig, 1833). See NOVELS AND ROMANCES.

Xerxes (Ξέρξης). (1) A king of Persia from B.C. 485 to 465. He was the son of Darius Hystaspis and Atossa. By the influence of Atossa, who was a daughter of Cyrus, Artabazanes, the son of Darius by his former wife, was set aside from the succession and Xerxes made him heir. Xerxes succeeded to the throne in B.C. 485, Darius having died in the midst of his warlike preparations against Greece, which had been delayed by a revolt of the Egyptians. Bred up in the luxury of the Persian court, among slaves and women, a mark for their flattery and intrigues, Xerxes had none of the experience which Darius had gained in early life. He was probably inferior to his father in ability; but the difference between them in fortune and education seems to have left more traces in their history than any disparity of nature. Ambition was not the prominent feature in the character of Xerxes; and, had he followed his unbiassed inclination, he would, perhaps, have been content to turn the preparations of Darius against the revolted Egyptians, and have abandoned the expedition against Greece, to which he was not urged on by any personal motives. But he was surrounded by men who were led by various passions and interests to desire that he should prosecute his father's plans of conquest and revenge. Mardonius was eager to renew an enterprise in which he had been foiled through unavoidable mischance, and not through his own incapacity. He had a reputation to retrieve, and might look forward to the possession of a great European satrapy, at such a distance from the court as would make him almost an absolute sovereign. He was warmly seconded by those Greeks who had been drawn to Susa by the report of the approaching invasion of their country, and who wanted foreign aid to accomplish their designs. The Thessalian house of the Aleuadae, either because they thought their power insecure, or expected to increase it by becoming vassals of the Persian king, sent their emissaries to invite him to the conquest of Greece. The exiled Pisistratidae had no other chance for the recovery of Athens. They had brought a man named Onomacritus with them to court, who was one of the first among the Greeks to practise the art of forging prophecies and oracles. While their family ruled at Athens he had been detected in fabricating verses, which he had interpolated in a work ascribed to the ancient seer Musaeus, and Hipparchus, previously his patron, had banished him from the city. But the exiles saw the use they might make of his talents, and had taken him into their service. They now recommended him to Xerxes as a man who possessed a treasure of prophetical knowledge, and the young king listened with unsuspecting confidence to the encouraging predictions which Onomacritus drew from his inexhaustible stores. These various devices at length prevailed. The imagination of Xerxes was inflamed with the prospect of rivalling or surpassing the achievements of his glorious predecessors, and of extending his dominion to the ends of the earth (Herod. vii. 8). He resolved on the invasion of Greece. First, however, in the second year of his reign, he led an army against Egypt, and brought it again under the Persian yoke, which was purposely made more burdensome and galling than before. He intrusted this conquest to the care of his brother Achaemenes, and then returned to Persia, and bent all his thoughts towards the West. Only one of his counsellors, his uncle Artabanus, is said to have been wise and honest enough to endeavour to divert him from the enterprise, and especially to dissuade him from risking his own person in it. If any reliance could be placed on the story told by Herodotus about the deliberations held on this question in the Persian cabinet, we might suspect that the influence and arts of the Magian priesthood, which we find in this reign rising in credit, had been set at work by the adversaries of Artabanus to counteract his influence over the mind of his nephew, and to confirm Xerxes in his martial mood. The vast preparations were continued with redoubled activity, to raise an armament worthy of the presence of the king. His aim was not merely to collect a force sufficient to insure the success of his undertaking and to scare away all opposition, but also, and perhaps principally, to set his whole enormous power in magnificent array, that he might enjoy the sight of it himself, and display it to the admiration of the world.

For four years longer Asia was still kept in restless turmoil; no less time was needed to provide

the means of subsistence for the countless host that was about to be poured out upon Europe. Besides the stores that were to be carried in the fleet which was to accompany the army, it was necessary that magazines should be formed along the whole line of march as far as the confines of Greece. But, in addition to these prudent precautions, two works were begun, which scarcely served any other purpose than that of showing the power and majesty of Xerxes, and proving that he would suffer no obstacles to bar his progress. It would have been easy to transport his troops in ships over the Hellespont; but it was better suited to the dignity of the monarch, who was about to unite both continents under his dominion, to join them by a bridge laid upon the subject channel, and to march across as along a royal road. The storm that had destroyed the fleet which accompanied Mardonius in his unfortunate expedition had made the coast of Athos terrible to the Persians. The simplest mode of avoiding this formidable cape would have been to draw their ships over the narrow, low neck that connects the mountain with the mainland. But Xerxes preferred to leave a monument of his greatness and of his enterprise in a canal cut through the isthmus, a distance of about a mile and a half. This work employed a multitude of men for three years. The construction of the two bridges which were thrown across the Hellespont was intrusted to the skill of the Phœnicians and Egyptians.

When these preparations were drawing to a close, Xerxes set forth for Sardis, where he designed to spend the following winter, and to receive the reinforcements which he had appointed there to join the main army (B.C. 481). During his stay at Sardis the Phœnician and Egyptian engineers completed their bridges on the Hellespont; but the work was not strong enough to resist a violent storm, which broke it to pieces soon after it was finished. How far this disaster was owing to defects in its construction, which might have been avoided by ordinary skill and foresight, does not appear; but Xerxes is said to have been so much angered by the accident that he put the architects to death. Such a burst of passion would be credible enough in itself, and is only rendered doubtful by the extravagant fables that gained credit on the subject among the Greeks, who, in the bridging of the sacred Hellespont, saw the beginning of a long career of audacious impiety, and gradually transformed the fastenings with which the passage was finally secured into fetters and scourges with which the barbarian, in his madness, had thought to chastise the aggression of the rebellious stream. The construction of new bridges was committed to other engineers, perhaps to Greeks; but their names have not come down, like that of Mandrocles. By their skill two broad causeways were made to stretch from the neighbourhood of Abydus to a projecting point on the opposite shore of the Chersonesus, resting each on a row of ships, which were stayed against the strong current that bore upon them from the north by anchors and by cables fastened to both sides of the channel. The length was not far short of a mile. When all was in readiness the mighty armament was set in motion.

Early in the spring (B.C. 480) Xerxes began his march from Sardis, in all the pomp of a royal progress. The baggage led the way: it was followed by the first division of the armed crowd that had been brought together from the tributary nations; a motley throng, including many strange varieties of complexion, dress, and language, commanded by Thessalian generals, but retaining each tribe its national armour and mode of fighting. An interval was then left, after which came 1000 picked Persian cavalry, followed by an equal number of spearsmen, whose lances, which they carried with the points turned downward, ended in knobs of gold. Next, ten sacred horses, of the Nisaean breed, were led in gorgeous trappings, preceding the chariot of the Persian Zeus, drawn by eight white horses, the driver following on foot. Then came the royal chariot, also drawn by Nisaean horses, in which Xerxes sat in state; but from time to time he exchanged it for an easier carriage, which sheltered him from the sun and changes of the weather. He was followed by two bands of horse and foot, like those which went immediately before him, and by a body of 10,000 Persian infantry, the flower of the whole army, who were called the Immortals, because their number was kept constantly full. A thousand of them, who occupied the outer ranks, bore lances tipped with gold; those of the rest were similarly ornamented with silver. They were followed by an equal number of Persian cavalry. The remainder of the host brought up the rear. In this order the army reached Abydus, and Xerxes, from a lofty throne, surveyed the crowded sides and bosom of the Hellespont, and a sort of mimic sea-fight; a spectacle which Herodotus might well think sufficient to have moved him with a touch of human sympathy. The passage did not begin before the king had prayed to the rising sun, and had tried to propitiate the Hellespont itself by libations, and by casting into it golden vessels and a sword. After the bridges had been strewed with myrtle and purified with incense, the ten thousand Immortals, crowned with chaplets, led the way. The army crossed by one bridge, the baggage by the other; yet the living tide flowed without intermission for seven days and seven nights before the last man, as Herodotus heard, the king himself, the tallest and most majestic person in the host, had arrived on the European shore. In the great plain of Doriscus, on the banks of Hebrus, an attempt was made to number the land force. A space was enclosed large enough to contain 10,000 men; into this the myriads were successively poured and discharged, till the whole mass had been rudely counted. They were then drawn up according to their natural divisions, and Xerxes rode in his chariot along the ranks, while the royal scribes recorded the names, and most likely the equipments, of the different races. The real military strength of the armament was almost lost among the undisciplined hordes who could only impede its movements as well as consume its stores. The Persians were the core of both the land and the sea force; none of the other troops are said to have equalled them in discipline or in courage; and the 24,000 men who guarded the royal person were the flower of the whole nation. Yet these were much better fitted for show than for action; and of the rest, we hear that they were distinguished from the mass of the army, not only by their superior order and valour, but also by the abundance of gold they displayed, by the train of carriages, women, and servants that followed them, and by the provisions set apart for their use.

Marching through Thrace and Macedonia, Xerx-

es met no resistance until he reached the Pass of Thermopylae between Mount Oeta and the sea. This the Spartan king Leonidas, with about 7000 men, had occupied. For two days they beat back the huge masses of Persians who assailed the pass, but whose very numbers proved an impediment to their success. Even the Immortals were unsuccessful, and Xerxes, who was watching the battle, leaped thrice from his throne in his rage. Presently, however, by the treachery of a Malian named Ephialtes, a body of Persian troops was led by a secret path to the rear of the Greeks. Leonidas at once dismissed all his men except his immediate guard of 300 Spartans and a body of Thespians, and with these advanced into the plain and perished after an heroic struggle (B.C. 480). Meantime a storm had wrecked 400 of the Persian ships of war, and an indecisive naval battle had been fought off Artemisium. Xerxes occupied Athens, pillaged the Acropolis, but suffered a great naval defeat at Salamis, where 200 of his ships were sunk.

After this disastrous defeat at Salamis, Xerxes felt desirous of escaping from a state of things which was now becoming troublesome and dangerous, and Mardonius saw that he would gladly listen to any proposal that would facilitate his return. He was aware that, without a fleet, the war might probably be tedious, in which case the immense bulk of the present army would be only an encumbrance, from the difficulty of subsisting it. Besides, the ambition of Mardonius was flattered with the idea of his becoming the conqueror of Greece, while he feared that, if he now returned, he might be made answerable for the ill success of the expedition which he had advised. He therefore proposed to Xerxes to return into Asia with the body of the army, leaving himself, with 300,000 of the best troops, to complete the conquest of Greece. Xerxes assented, and, the army having retired into Boeotia, Mardonius made his selection, and then, accompanying the king into Thessaly, there parted from him, leaving him to pursue his march towards Asia, while he himself prepared to winter in Thessaly and Macedonia.

Widely different from the appearance of the glittering host, which a few months before had advanced over the plains of Macedonia and Thrace to the conquest of Greece, was the aspect of the crowd which was now hurrying back along the same road. The splendour, the pomp, the luxury, the waste, were exchanged for disaster and distress, want and disease. The magazines had been emptied by the careless profusion or peculation of those who had the charge of them; the granaries of the countries traversed by the retreating multitude were unable to supply its demands; ordinary food was often not to be found; and it was compelled to draw a scanty and unwholesome nourishment from the herbage of the plains, the bark and leaves of the trees. Sickness soon began to spread its ravages among them, and Xerxes was compelled to consign numbers to the care of the cities that lay on his road, already impoverished by the cost of his first visit, in the hope that they would tend their guests, and would not sell them into slavery if they recovered. The passage of the Strymon is said to have been peculiarly disastrous. The river had been frozen in the night hard enough to bear those who arrived first. But the ice suddenly gave way under the heat of the morning sun, and numbers perished in the waters. It is a little surprising that Herodotus, when he is describing the miseries of the retreat, does not notice this disaster, which is so prominent in the narrative of the Persian messenger in Aeschylus. There can, however, be no doubt as to the fact; and perhaps it may furnish a useful warning not to lay too much stress on the silence of Herodotus, as a ground for rejecting even important and interesting facts which are only mentioned by later writers, though such as he must have heard of, and might have been expected to relate. It seems possible that the story he mentions of Xerxes embarking at Eïon (viii. 118) may have arisen out of the tragical passage of the Strymon.

In forty-five days after he had left Mardonius in Thessaly, he reached the Hellespont; the bridges had been broken up by foul weather, but the fleet was there to carry the army over to Abydus. Here it rested from its fatigues, and found plentiful quarters; but intemperate indulgence rendered the sudden change from scarcity to abundance almost as deadly as the previous famine. The remnant that Xerxes brought back to Sardis was a wreck, a fragment, rather than a part of his huge host.

The history of Xerxes, after the termination of his Grecian campaign, may be comprised in a brief compass. He gave himself up to a life of dissolute pleasure, and was slain by Artabanus, a captain of the royal guards, B.C. 464.

(2) A son of Artaxerxes Mnemon, who succeeded his father, but was slain, after a reign of forty-five days, by his brother Sogdianus.

Xestes (*ξέστης*). The same as the Latin *sextarius*, from which the word is derived. See SEXTARIUS.

Xiphilīnus (*Ξιφιλῖνος*). A native of Trapezus, who was a monk at Constantinople, and made an abridgment of Dio Cassius, from the thirty-sixth to the eightieth book, at the command of the emperor Michael VII. Ducas (A.D. 1071 to 1078). The work is executed with carelessness, and is of value only as preserving the main facts of the original, the greater part of which is lost. It is printed in most of the editions of Dio Cassius (q. v.).

Xiphos (*ξίφος*). The straight, two-edged sword of the Greeks. See ARMA; GLADIUS.

Xoăna. See STATUARIA ARS.

Xoïs (*Ξόϊς*) or **Choïs** (*Χόϊς*). An ancient city of Lower Egypt, north of Leontopolis, on an island of the Nile, in the Nomos Sebennyticus, the seat, at one time, of a dynasty of Egyptian kings. Its site is very doubtful.

Xuthus (*Ξοῦθος*). Son of Hellen by the nymph Orseïs, and a brother of Dorus and Aeolus. He was king of Peloponnesus, and the husband of Creüsa, the daughter of Erechtheus, by whom he became the father of Achaeus and Ion (q. v.). Others state that after the death of his father, Hellen, Xuthus was expelled from Thessaly by his brothers, and went to Athens, where he married the daughter of Erechtheus. After the death of Erechtheus, Xuthus, being chosen arbitrator, adjudged the kingdom to his eldest brother-in-law, Cecrops, in consequence of which he was expelled by the other sons of Erechtheus, and settled in Aegialus, in the Peloponnesus.

Xyēlé (*ξυήλη*). The short, slightly curved, one-edged sword of the Spartans.

Xypětē (*Ξυπέτη*). A deme of Attica belonging to the tribe Cecropis, to the west of Athens.

Xystarcha or **Xystarches** (*ξυστάρχης*). An officer who superintended the exercise of the *xystus* (Ammian. xxi. 1).

Xystĭcus (*ξυστικός*). An athlete who practised his exercise in a covered corridor or *xystus* (Suet. *Aug.* 45; *Galb.* 15).

Xystus or **Xystum** (*ξυστός*). (1) Among the Greeks, a covered corridor in the gymnasium (q. v.), where the athletes exercised in winter (Vitruv. v. 11, 4; vi. 7, 5). (2) Among the Romans, an open walk or terrace in a garden, amidst flower-beds edged with box (Suet. *Aug.* 72; Phaedr. ii. 5). See HORTUS.

Y

For the Greek Υ as a symbol, see under V.

Yard. See AREA.

Year, DIVISIONS OF THE. See CALENDARIUM.

Yoke. See IUGUM.

Z

Z, as a symbol.

IN GREEK.—Z = *ζήσας*, *ζήσαντ*. As a numeral *ζ'* = 7; *͵ζ* = 7000.

IN LATIN.—Z = centurio.

Zabătus (*Ζάβατος*). The Zab; a river of Assyria, rising on the south of Armenia and flowing southwest into the Tigris below Larissa (Xen. *Anab.* ii. 5, 1).

Zacynthus (*Ζάκυνθος*). Now Zanté; an island in the Ionian Sea, off the coast of Elis, about forty miles in circumference. It contained a large and flourishing town of the same name upon the eastern coast, the citadel of which was called Psophis. Zacynthus was inhabited by a Greek population at an early period. It is said to have derived its name from Zacynthus, a son of Dardanus, who colonized the island from Psophis in Arcadia. It was afterwards colonized by Achaeans from Peloponnesus. It formed part of the maritime empire of Athens, and continued faithful to the Athenians during the Peloponnesian War. At a later time it was subject to the Macedonian monarchs, and on the conquest of Macedonia by the Romans passed into the hands of the latter (Livy, xxxvi. 32). It was said to have colonized the Spanish city of Saguntum (q. v.). See Partsch, *Die Insel Zante* (Gotha, 1891).

Zagreus (*Ζαγρεύς*). A surname of the mystic Dionysus (Bacchus), whom Zeus, in the form of a serpent, is said to have begotten by Persephoné, before she was carried off by Pluto. He was torn to pieces by the Titans, after he had assumed various shapes to evade them. His mangled remains were buried at Delphi, and Athené brought his heart to Zeus, who swallowed it and thereupon brought forth a new Dionysus called Iacchus, who was nursed by nymphs and satyrs in a winnowing-basket (*vannus*), thenceforth a symbol of Dionysus. The story, nearly akin to the Egyptian myth of Osiris, whom the Greeks identified with Dionysus, is now regarded as a myth, in the first place, of the death in winter and renewal in spring of the vegetation; for the swinging of the basket was the ritual by which in early times it was sought to rouse the plant-life from its sleep; and, in the second place, it expressed the belief in a death and a resurrection: for both these reasons Iacchus (or Dionysus) was associated with Demeter and Coré (or Persephoné) in the Mysteries. The notoriety of the evils resulting from the worst festivals of Dionysus, and the evil repute of the Bacchanalia, have tended to obscure the purer and more elevating part of the religion, but it is important not to forget it. The rending of Dionysus-Zagreus cannot be dismissed as merely the crushing of the grape; it is rather the tearing of the victims in savage sacrifices, possibly in "totem" sacrifices; and in such sacrifices the deity, that is, sacred animal (at one time a human sacrifice), was often slain, and the eating of the slaughtered victim was supposed to give to the worshippers some of the strength and power of the deity. Out of some such ritual the story of the death of Zagreus probably arose. The rites spread westward from Crete through the islands, and so reached Athens (Diod. v. 74). Hence perhaps the savage worship of Dionysus *ὠμηστής* (eater of raw flesh) at Lesbos, Chios, and Tenedos, betokening human sacrifice to the god of vines in early times, though it may as probably have been derived from Thrace or Phrygia; for the frantic worship of the Thracian or the Boeotian *thiasus* had the same characteristics. At Naxos his rites were less barbarous, and that island, which claimed also to be the birthplace of the god, seems to have passed on some of the ritual, including the marriage of Dionysus, to Athens. Dionysus, or Bacchus, was introduced into the Roman worship through Magna Graecia and Etruria, and with all the worst features of the rites, and the name and story of Bacchus took the place of the native Italian deity of the vintage. See DIONYSIA; DIONYSUS; MYSTERIA.

Zagros (*Ζάγρος*). A range of mountains forming the southeastern continuation of the Taurus along the Tigris and Euphrates rivers.

Zaleucus (*Ζάλευκος*). The celebrated lawgiver of the Epizephyrian Locrians, is said by some to have been originally a slave, but is described by others as a man of good family. He could not, however, have been a disciple of Pythagoras, as some writers state, since he lived upwards of one hundred years before Pythagoras. The date of the legislation of Zaleucus is assigned to B.C. 660. His code, which was severe, is stated to have been the first collection of written laws that the Greeks possessed (Strabo, pp. 259, 398). Among other enactments we are told that the penalty of adultery was the loss of the eyes (Ael. *V. H.* xiii. 24; Val. Max. v. 5, 3). There is a celebrated story of the son of Zaleucus having become liable to this penalty, and the father himself suffering the loss of one eye, that his son might not be utterly blinded. It is further related that among his laws was one forbidding any citizen, under penalty of death, to enter the senate-house in arms. On one occasion, however, on a sudden emergency in time of war, Zaleucus transgressed his own law, which was remarked to him by one present; whereupon he fell upon his own sword, declaring that he would himself vindicate the law (Eustath. *ad Il.* p. 62). Other

authors tell the same story of Charondas, and of Diocles (Diod. xii. 19; Val. Max. vi. 5, 4).

Zalmoxis (*Ζάλμοξις*) or **Zamolxis** (*Ζάμολξις*). Said to have been so called from the bear's skin (*ζάλμος*) in which he was clothed as soon as he was born. He was, according to the story current among the Greeks on the Hellespont, a Getan, who had been a slave to Pythagoras in Samos, but was manumitted, and acquired not only great wealth, but large stores of knowledge from Pythagoras, and from the Egyptians, whom he visited in the course of his travels. He returned among the Getae, introducing the civilization and the religious ideas which he had gained, especially regarding the immortality of the soul. Herodotus, however, suspects that he was an indigenous Getan divinity (Herod. iv. 95).

Zama Regia (*Ζάμα*). Now Zowarîn, southeast of Kaff. A strongly fortified city in the interior of Numidia, on the borders of the Carthaginian territory. It was the scene of one of the most important battles in the history of the world, that in which Hannibal was defeated by Scipio, and the Second Punic War was ended, B.C. 202. See Köhn, *De Pugna ad Zamam Commissa* (Halle, 1888); and the articles HANNIBAL; PUNIC WARS.

Zancha or **Zanga**. A high and close boot, made of soft black leather (Acron. *ad* Hor. *Sat.* i. 6, 27), worn by the Oriental races under their trousers (*bracae*) (Imp. Gall. *ap.* Treb. *Claud.* 17).

Zanclé. See MESSANA.

Zarangae. The same as the Drangae, or natives of Drangiana (q. v.).

Zela (*τὰ Ζῆλα*) or **Ziēla**. Now Zilleh; a city in the south of Pontus, not far south of Amasia. The surrounding district was called ZELETIS or ZELITIS. At Zela the Roman general Valerius Triarius was defeated by Mithridates; but the city is more celebrated for another great battle, that in which Iulius Caesar defeated Pharnaces, and of which he wrote his famous despatch to Rome—*Veni, vidi, vici* (Plut. *Caes.* 50; App. *Mithr.* 89; *Bell. Alex.* 73).

Zelēa (*Ζέλεια*). An ancient city of Mysia, at the foot of Mount Ida, and on the river Aesopus, eighty stadia from its mouth, belonging to the territory of Cyzicus. It was the headquarters of the Persian army at the time of Alexander's invasion (ARR. *Anab.* i. 13).

Zelus (*Ζῆλος*). The personification of zeal or strife, described as a son of Pallas and Styx, and a brother of Niké.

Zema (*ζέμα*). A vessel used for boiling (Apic. viii. 1).

Zeno (*Ζήνων*). (1) The founder of the School of the Stoics, born at Citium, in the island of Cyprus. His father was a merchant, but, noticing in his son a strong bent towards learning, he early devoted him to the study of philosophy. In his mercantile capacity, the father had frequent occasions to visit Athens, where he purchased for the young Zeno several of the writings of the most eminent Socratic philosophers. These he read with great avidity; and, when about thirty years of age, he determined to take a voyage to a city which was so celebrated. Upon his first arrival in Athens, going accidentally into the shop of a bookseller, he took up a volume of the commentaries of Xenophon, and, after reading a few passages, was so much delighted with the work, and formed so high an idea of its author, that he asked the bookseller where he might meet with such men. Crates, the Cynic philosopher, happening at that instant to be passing by, the bookseller pointed to him, and said, "Follow that man." Zeno soon found an opportunity of attending upon the instructions of Crates, and was so well pleased with his doctrine that he became one of his disciples. But, though he highly admired the general principles and spirit of the Cynic School, he could not easily reconcile himself to their peculiar manners. Besides, his inquisitive turn of mind would not allow him to adopt that indifference to every scientific inquiry which was one of the characteristic distinctions of the sect. He therefore attended upon other masters, who professed to instruct their disciples in the nature and causes of things. When Crates, displeased at his following other philosophers, attempted to drag him by force out of the school of Stilpo, the Megarian, Zeno said to him, "You may seize my body, but Stilpo has laid hold of my mind." After continuing to attend the lectures of Stilpo for several years, he passed over to other schools, particularly those of Xenocrates and Diodorus Chronus. By the latter he was instructed in dialectics. At last, after attending almost every other teacher, he offered himself as a disciple of Polemo. This philosopher appears to have been aware that Zeno's intention in thus passing from one school to another was to collect materials from various quarters for a new system of his own; for, when he came into Polemo's school, the latter said to him, "I am no stranger to your Phœnician arts, Zeno; I perceive that your design is to creep slyly into my garden and steal away my fruit." Polemo was not mistaken in his opinion. Having made himself master of the views of others, Zeno determined to become the founder of a new sect. The place which he made choice of for his school was called the Poecilé (*Ποικίλη Στοά*), or "Painted Porch," a public portico, so called from the pictures of Polygnotus and other eminent masters with which it was adorned. This portico, being the most famous in Athens, was called, by way of distinction, *Στοά*, "the Porch." It was from this circumstance that the followers of Zeno were called *Stoics* (*Στωϊκοί*), i. e. "men of the Porch."

Zeno excelled in that kind of subtle reasoning which was then popular. At the same time, he taught a strict system of moral doctrine, and exhibited a model of moral discipline in his own life. The Stoic School, in fact, was a branch of the Cynic, and, so far as respected morals, differed from it more in words than in reality. Its founder, while he avoided the eccentricities of the Cynics, retained the spirit of their moral teaching; and at the same time, from a diligent comparison of the tenets of other masters, he framed a new system of speculative philosophy. It is not at all surprising, therefore, that he obtained a considerable vogue, and even enjoyed the favour of the great. Antigonus Gonatas, king of Macedon, while residing at Athens, attended his lectures, and, upon his return, earnestly invited him to his court. Zeno, in fact, possessed so large a share of esteem among the Athenians that, on account of his approved integrity, they deposited the keys of their citadel in his hands. They also honoured him with a golden crown and a statue of bronze. Among his countrymen, the inhabitants of Cyprus, and with the Si-

donians, from whom his family was derived, he was likewise highly esteemed.

In his person Zeno was tall and slender; his aspect was stern, and his brow contracted. His constitution was feeble, but he preserved his health by great abstemiousness. His food consisted only of figs, bread, and honey; yet his table was frequently honoured with the company of great men. He paid more attention to neatness in his personal appearance than did the Cynic philosophers. In his dress, indeed, he was plain, but this is not to be imputed to avarice, but to a contempt of external magnificence. He showed as much respect to the poor as to the rich, and conversed freely with persons of the meanest occupations. He had only one servant, or, according to Seneca, none. Although Zeno's sobriety and continence were even proverbial, he was not without enemies. Among his contemporaries, several philosophers of great ability and eloquence employed their talents against him. Arcesilaüs and Carneades, the founders of the Middle Academy, were his professed opponents. Towards the close of his life, also, he found another powerful antagonist in Epicurus (q. v.), whose temper and doctrines were alike inimical to the severe gravity and philosophical pride of the Stoic sect. Hence mutual invectives passed between the Stoics and other sects.

Zeno lived to the extreme age of ninety-eight, and at last, in consequence of an accident, put an end to his life. As he was walking out of his school he fell down, and in the fall broke one of his fingers. He was so affected by this with a consciousness of infirmity that, striking the earth, he exclaimed, Ἔρχομαι, τί μ' ἀνεις; "I am coming, why do you call me?" and immediately went home and strangled himself. He died B.C. 264. The Athenians, at the request of Antigonus, erected a monument to his memory in the Ceramicus.

His writings, of which a list is given by Diogenes Laërtius (vii. 4), have all been lost. They treated of the State, and of the Life according to Nature. For his doctrines, see Zeller, *Stoics, Epicureans, and Skeptics* (1870), and the articles PHILOSOPHIA; STOÏCI.

(2) The Eleatic philosopher, a native of Elea (Velia) in Italy, son of Teleutagoras, and the favourite disciple of Parmenides. He was born about B.C. 488, and at the age of forty accompanied Parmenides to Athens. (See PARMENIDES.) He appears to have resided some time at Athens, and is said to have unfolded his doctrines to men like Pericles and Callias for the price of 100 minae. Zeno is said to have taken part in the legislation of Parmenides, to the maintenance of which the citizens of Elea had pledged themselves every year by an oath. His love of freedom is shown by the courage with which he exposed his life in order to deliver his native country from a tyrant. Whether he perished in the attempt or survived the fall of the tyrant is a point on which the authorities vary. They also state the name of the tyranny differently. Zeno devoted all his energies to explain and develop the philosophical system of Parmenides. See Zeller's *Pre-Socratic Schools* (1881).

(3) An Epicurean philosopher, a native of Sidon, and a contemporary of Cicero, who heard him when at Athens. He was sometimes termed *Coryphaeus Epicureorum*. He seems to have been noted for the disrespectful terms in which he spoke of other philosophers, calling, for instance, Socrates "the Attic buffoon." He was a disciple of Apollodorus, and is described as a clear-headed thinker and perspicacious expounder of his views.

Zenobia (Ζηνοβία). A celebrated princess, wife of Odenathus, and after his death queen of Palmyra (q. v.). With equal talents for jurisprudence, finance, and government, her agile and elastic frame enabled her to direct and share the toils of war. Disdaining the litter, she was continually on horseback, and could even keep pace on foot with the march of her soldiery. History has preserved some reminiscences of her personal appearance, her dress, and her habits, which represent her as a woman of engaging beauty, gifted with the graces of a court, and accomplished in intellectual endowments. In complexion a brunette, her teeth were of a pearly whiteness, and her eyes black and sparkling; her mien was animated, and her voice clear and powerful. With a helmet on her head, and wearing a purple mantle fringed with gems and clasped with a buckle at the waist, so as to leave one of her arms bare to the shoulder, she presented herself at the council of war; and adopting from policy a regal pomp, she was worshipped with Persian prostration. Pure in her manners to the utmost refinement of delicacy, and temperate in her habits, she would nevertheless challenge in their cups her Persian and Armenian guests, and retire the victor without drunkenness. Chiefly versed in the languages of Syria and Egypt, her diffidence restrained her from conversing freely in Latin; but she had read the Roman history in Greek, was herself an historian, and had compiled the annals of Alexandria and the East. Her authority was acknowledged by a large portion of Asia Minor when the Roman emperor Aurelian succeeded to the throne. Jealous of her power, and determined to dispossess her of some of the rich provinces comprehended in her dominions, he marched at the head of a powerful army to Asia. Having defeated the queen's general near Antioch, he compelled her to retreat to Emesa. Under the walls of this city another engagement was fought, in which the emperor was again victorious. The queen fled to Palmyra, determined to support a siege. Aurelian followed her, and, on making his approaches to the walls, found them mounted in every part with mural engines, which plied the besiegers with stones, darts, and fire-balls. To the summons for a surrender of the city and kingdom, on the condition of her life being spared, Zenobia replied in a proud and spirited letter, written in Greek by her secretary, the celebrated Longinus (q. v.). Her hopes of victory soon vanished; and, though she harassed the Romans night and day by continual sallies from her walls and the working of her military engines, she despaired of success when she heard that the armies which were marching to her relief from Armenia, Persia, and the East had either been intercepted or gained over by the foe. She fled from Palmyra in the night on her dromedaries, but was overtaken by the Roman cavalry while attempting to cross the Euphrates, and was brought into the presence of Aurelian, and tried before a tribunal at Emesa, Aurelian himself presiding. The soldiers were clamorous for her death, but she, in a manner unworthy of her former fame, saved her own life by throwing the blame on her counsellors, especially on Longinus, who was, in consequence, put to death. Zenobia was carried

to Rome, to grace the emperor's triumph (A.D. 274), and was led along in chains of gold. She is said to have almost sunk beneath the weight of jewels with which she was adorned on that occasion. She was treated with great humanity, and Aurelian gave her large possessions near Tiber, where she was permitted to pass the remainder of her days. Her two sons afterwards married into distinguished families at Rome. See the life of Aurelian by Vopiscus; and Ware's historical romance, *Zenobia* (N. Y. 1837).

Zenobius (*Ζηνόβιος*). A Greek Sophist of Antioch, who lived at Rome as teacher of rhetoric in the first half of the second century B.C., and, availing himself of the works of earlier writers, made a collection of proverbs, still extant in an abridged form, arranged alphabetically and divided into hundreds. In all there are 552, the last division being incomplete. They are printed by Schott in his *Paroemiae Hellenicae* (Antwerp, 1612). See Jungblut, *De Zenobio* (1882).

Zenodōrus (*Ζηνόδωρος*). A Greek statuary, whose native country is uncertain. He practised his art in Cisalpine Gaul, and also in Rome during the reign of Nero. Pliny speaks of a Mercury of his, and also of a colossal statue of Nero 110 feet high, afterwards dedicated to the Sun on the downfall of that emperor. See Colossus.

Zenodŏtus (*Ζηνόδοτος*). A celebrated grammarian of Ephesus, superintendent of the great library at Alexandria, who flourished under Ptolemy Philadelphus, about B.C. 308. Zenodotus was employed by Philadelphus, together with his two contemporaries, Alexander the Aetolian and Lycophron the Chalcidian, to collect and revise all the Greek poets. Alexander, we are told, undertook the task of collecting the tragedies, Lycophron the comedies, and Zenodotus the poems of Homer and of the other illustrious poets. Zenodotus, however, devoted his chief attention to the *Iliad* and *Odyssey*. Hence he is called the first reviser (*διορθωτής*) of Homer, and his recension (*διόρθωσις*) of the *Iliad* and *Odyssey* obtained the greatest celebrity. The corrections which Zenodotus applied to the text of Homer were of three kinds: (1) He expunged verses; (2) he marked some as spurious, but left them in his copy; (3) he introduced new readings and transposed or altered verses. The great attention which Zenodotus paid to the language of Homer caused a new epoch in the grammatical study of the Greek language. The results of his investigations respecting the meaning and the use of words were contained in two works which he published under the title of a glossary (*Γλῶσσαι*), and a dictionary of barbarous or foreign phrases. See Düntzer, *De Zenodoti Studiis Homericis* (Göttingen, 1848); Römer, *Ueber die Homerrecension des Zenod.* (Munich, 1885); and the article Textual Criticism.

Zephyrium (*Ζεφύριον*, sc. *ἀκρωτήριον*, i. e. "the western promontory"). The name of several promontories of the ancient world, not all of which, however, faced the west. The chief of them were: (1) Now C. di Brussano, a promontory in Bruttium, forming the southeastern extremity of the country, from which the Locri, who settled in the neighbourhood, are said to have obtained the name of Epizephyrii. (See Locri.) (2) A promontory on the west coast of Cyprus. (3) In Cilicia (prob. C. Cavaliere), a far-projecting promontory, west of Prom. Sarpedon.

Zephyrus (*Ζέφυρος*). The personification of the west wind, described by Hesiod as a son of Astraeus and Eos. Zephyrus and Boreas are frequently mentioned together by Homer, and both

Zephyrus. (From the Tower of the Winds at Athens.)

dwelt together in a palace in Thrace. By the Harpy Podargé, Zephyrus became the father of the horses Xanthus and Balius, which belonged to Achilles (*Il.* xvi. 150); but he was married to Chloris, whom he had carried off by force, and by whom he had a son, Carpus.

Zerynthus (*Ζήρυνθος*). A town of Thrace, in the territory of Aenos, with a temple of Apollo and a cave of Hecaté, who are hence called Zerynthius and Zerynthia respectively.

Zetes (*Ζήτης*) and **Calăis** (*Κάλαϊς*). The sons of Boreas and Orithyia, frequently called the Boreadae, are mentioned among the Argonauts, and are described as winged beings (Pind. *Pyth.* iv. 325; Ap. Rh. i. 219). Their sister, Cleopatra, who was married to Phineus, king of Salmydessus, had been thrown with her sons into prison by Phineus at the instigation of his second wife. Here she was found by Zetes and Calaïs, when they arrived at Salmydessus in the Argonautic expedition. They liberated their sister and her children, gave the kingdom to the latter, and sent the second wife of Phineus to her own country, Scythia (Diod. iv. 44). Other accounts relate that the Boreadae delivered Phineus from the Harpies; for it had been foretold that the Harpies might be killed by the sons of Boreas, but that the sons of Boreas must die if they should not be able to overtake the Harpies (Apollod. i. 9, 21). Others, again, state that the Boreadae perished in their pursuit of the Harpies, or that Heracles killed them with his arrows near the island of Tenos (Hyg. *Fab.* 14). Their tombs were said to be in Tenos, adorned with sepulchral *stelae*, one of which moved whenever the wind blew from the north. Calaïs is also mentioned as the founder of the Campanian town of Cales (Sil. It. viii. 515). See Harpyiae.

Zetētae (*ζητηταί*). Officials at Athens appointed on special occasions: (1) as investigators of crimes, to discover the authors and to bring them to punishment; and (2) to discover property confiscated to the State, and to receive information against persons who concealed property to which the State had a claim. See Schöll, *Quaestiones Fiscales Iuris Attici*, etc. (Berlin, 1893).

Zethus (*Ζῆθος*). Brother of Amphion. See Amphion.

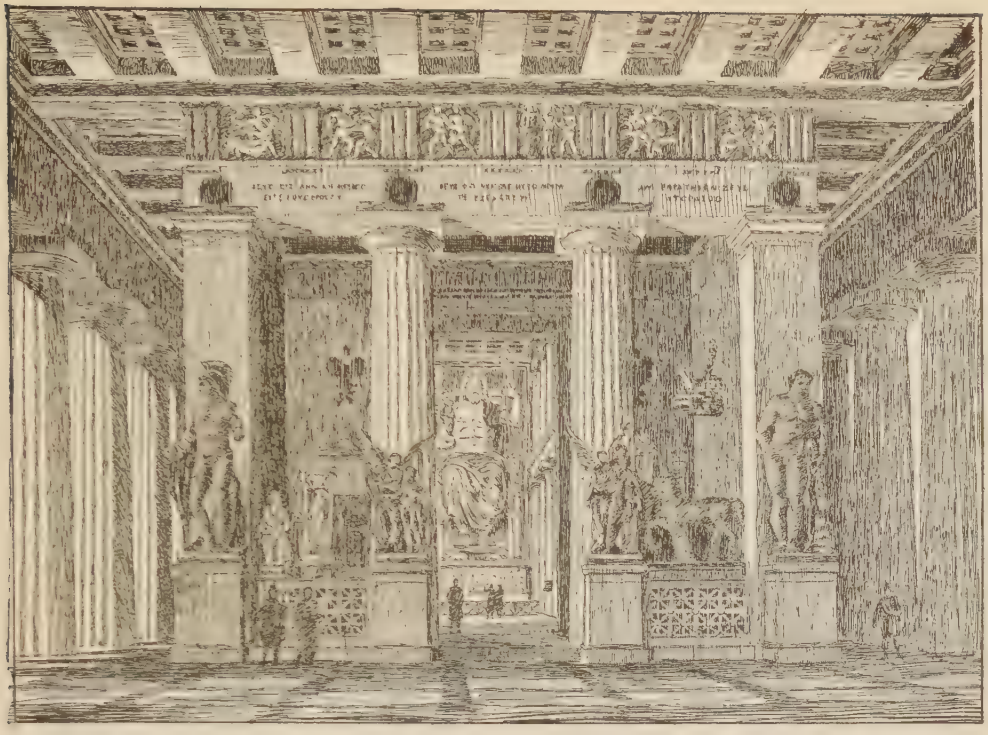
Zeugis, Zeugitāna Regio (*ἡ Ζευγιτανή*). The northern part of Tunis. The northern district of Africa Propria. See Africa.

Zeugītae (*ζευγῖται*). See Solon.

Zeugma (*Ζεῦγμα*). Probably Rumkaleh; a city of Syria, on the borders of Commagené and Cyr-

rhesticé, built by Seleucus Nicator on the western bank of the Euphrates, at a point where the river was crossed by a bridge of boats, which had been constructed by Alexander the Great (Polyb. v. 43).

Zeus (*Zεύς*). The supreme god in the Greek mythology; according to the common legend, the eldest son of Cronus and Rhea, hence called CRONIDES. According to a myth indigenous to Crete, he was the youngest son, and Rhea, in dread of Cronus, who had swallowed all his previous children, bore him secretly in a cave of the island, where he was suckled by the goat Amalthea (q. v.), while the Curetes (q. v.) drowned the cries of the child by the clash of their weapons; but Rhea outwitted Cronus by giving him a stone to swallow instead. When he was grown up, Zeus married Metis (q. v.), who, by means of a charm, compelled Cronus to disgorge the children he had swallowed. When, with the help of his brothers and sisters, Poseidon, Hades, Hestia, Demeter, and Heré, he had overthrown Cronus and the Titans, the world was divided into three parts, Zeus obtaining heaven,



Zeus of Otricoli. (Vatican.)

Poseidon the sea, and Hades the lower world; the earth and Olympus being appointed for the common possession of all the three. But the king of the gods is Zeus, whose power, as Homer says, is greater than that of all the other gods together.

Next to him, but in a subordinate position, stands, as queen of the gods, his sister and consort Heré, the mother of Ares, Hephaestus, and Hebé, who was regarded as preëminently his rightful wife. Not incompatible with this, however, was the idea that the marriage with Heré was the earliest of a series of marriages with other goddesses—first, according to Hesiod, with Metis, whom he swallowed, in order to bring forth Athené from his own head; then with Themis, the mother of the Hours and the Fates; afterwards with Eurynomé, the mother of the Graces; Demeter, the mother of Persephoné; Muemosyné, the mother of the Muses; and Leto, the mother of Apollo and Artemis. The fact that still later, in Dodona, Dioné, the mother of Aphrodité, was also honoured as the wife of Zeus shows the origin of the legend. Originally different wives of Zeus were recognized in the different local cults. When the legend of the marriage with Heré had become the predominant one, an attempt was made to harmonize the different versions of the story by the supposition of successive marriages. In the same way the loves of Zeus with half-divine, half-mortal women, of whom Alcmené, the mother of Heracles, was said to be the last, were originally rural legends, which derived the descent of indigenous divinities, like Hermes and Dionysus, or of heroes and noble families, from the highest god; and not until they had become the common property of the whole Greek people, which was practically the case as early as the time of Homer, could the love affairs of the greatest of the gods become the theme of those mythical stories which are so repugnant to modern taste.

The very name of Zeus (Skt. *dyaus*, "the bright sky") identifies him as the god of the sky and its phenomena. As such he was everywhere worshipped on the highest mountains, on whose summits he was considered to be enthroned. Of all places the Thessalian mountain Olympus (q. v.), even in the earliest ages, met with the most general recognition as the abode of Zeus and of the gods who were associated with him. From Zeus come all changes in the sky or the winds; he is the gatherer of the clouds, which dispense the fertilizing rain, while he is also the thunderer, and the hurler of the irresistible lightning. As by the shaking of his aegis (q. v.) he causes sudden storm and tempest to break forth, so he calms the elements again, brightens the sky, and sends forth favouring winds. The changes of the seasons also proceed from him as the father of the Hours.

As the supreme lord of heaven, he was worshipped under the name of Olympian Zeus in many parts of Greece, but especially in Olympia, where the Olympian Games (q. v.) were celebrated in his honour. The cult of Zeus at the ancient seat of the oracle at Dodona recognized his character as dispenser of the fertilizing dew. Among the numerous mountain-cults in the Peloponnesus, the oldest and most original was that of the Lycaean Zeus, on Mount Lycaeus in Arcadia, where human beings were actually sacrificed to him in propitiation. (See LYCAEA.) In Attica, again, many festivals refer to the god as a personification of the powers of nature. Various rites of purification and expiation were observed in his honour as the god of wrath (*Μαιμάκτης*), in the month Maemacterion (Nov.–Dec.), at the beginning of the winter storms; while towards the end of winter he was worshipped as the gracious god (*Μειλίχιος*) at the festival of the Diasia (q. v.). Among the islands, Rhodes and Crete were the principal seats of the

Interior of the Temple of Zeus in Olympia. (Restoration by Bühlmann.)

worship of the sky-god; not only his birth but also his death was there celebrated, and even his grave was shown, in accordance with the widely spread notion that the annual death of Nature in winter was the death of the god. In Asia, the summit of Mount Ida in the Troad was especially and beyond all other places sacred to Zeus.

As he presides over the gods and the whole of nature, so also is he the ruler of men, who all stand in need of his help, and to whom, according to Homer, he weighs out their destinies on golden scales, and distributes good and evil out of the two jars which stand in his palace, filled the one with good and the other with evil gifts. But his natural attributes are goodness and love; hence Homer calls him "the father of gods and men." He gives to all things a good beginning and a good end: he is the saviour in all distress. To Zeus the Saviour (Σωτήρ) it was customary to drink the third cup at a meal, and in Athens to sacrifice on the last day of the year. From him comes everything good, noble, and strong, and also bodily vigour and valour, which were exhibited in his honour, particularly at the Olympian and Nemean Games. He is also the giver of victory; indeed, the goddess of victory (see NIKÉ), and her brothers and sister, Force, Might, and Strife (Βία, Κράτος, Ζῆλος), are his constant companions. From him, as ruler of the world, proceed those universal laws which regulate the course of all things, and he knows and sees everything, the future as well as the past. Hence all revelation comes in the first instance from him. At times he himself announces to mortals his hidden counsels by manifold signs, thunder and lightning and other portents in the sky; by birds, especially the eagle, which was sacred to him; by prophetic voices (see MANTIKÉ) and special oracles. (See AMMON; DODONA; ORACULA.) At times he makes use of other deities for this purpose, chiefly of his son Apollo, through whose mouth he speaks at Delphi in particular. Thus the course of the world is ordained by him; he is the author and preserver of all order in the life of men. In conjunction with Themis, Diké, and Nemesis, he watches over justice and truth, the foundations of human society; in particular he is the special god who guards the sanctity of the oath; he is also the avenger of perjury, the keeper of boundaries and of property, the defender of the laws of hospitality and the rights of the suppliant. But nevertheless to him who has offended against the laws of human life, Zeus, as the supreme god of atonement, offers the power of expiating his guilt by rites of purification. As he presides over the family and community of the gods, so also he is the chief patron of the family and of all communal life. In the former relation he was especially worshipped in all branches of the family as protector of house and home (Ἑρκεῖος), and defender of the domestic hearth (Ἐφέστιος): in the latter, as the shield of the State, e. g. in Athens at the Diipolia (q. v.); as director of the popular assembly and of the council; as the god of covenants; as the source of kingship, whose symbol, the sceptre, was traced back to him. From him also proceed both national and personal freedom; hence a sanctuary was dedicated at Athens by freedmen to Zeus the Liberator (Ἐλευθέριος); and after the battle of Plataea a thanksgiving festival, Eleutheria (q. v.), was instituted by the allied Greeks, which was still celebrated by the Plataeans in Roman times, and attended by deputies from the other States.

Zeus is to the Greeks—as Iupiter (q. v.), who in

his principal characteristics exactly corresponds to him, is to the Romans—the essence of all divine power. No deity received such widespread worship; all the others were, in the popular belief, subordinated to him at a greater or less distance. The active operations of most of the gods appear only as an outcome of his being, particularly those of his children, among whom the nearest to him are Athenê and Apollo, his favourites, who often seem to be joined with their father in the highest union.

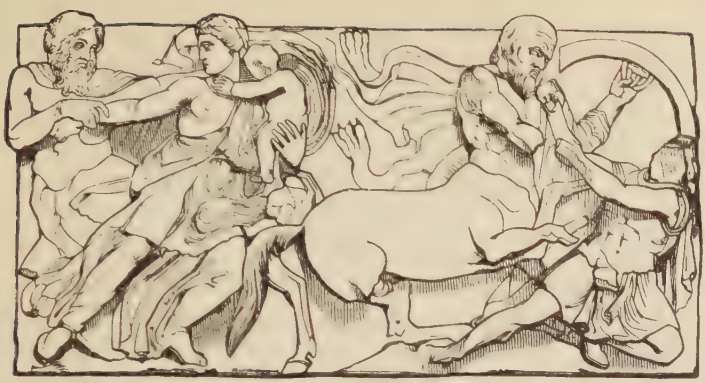
The eagle and the oak were sacred to Zeus; the eagle, together with the sceptre and the lightning, is also one of his customary attributes. The most famous statue of Zeus in antiquity was that executed by Phidias in gold and ivory for the temple at Olympia. It represented the enthroned Olympian god with a divine expression of the highest dignity, and at the same time with the benevolent mildness of the deity who graciously listens to prayer. The figure of the seated god was about forty feet high; and since the base was as high as twelve feet, the statue almost touched with its crown the roof of the temple, so as to call forth in the spectator the feeling that no earthly dwelling would be adequate for such a divinity. The bearded head was ornamented with a wreath of olive leaves, the victor's prize at Olympia. The upper part of the body, made of ivory, was naked, the lower part was wrapped in a golden mantle falling from the hips to the feet, which, adorned with golden sandals, rested on a footstool. Beside this lay golden lions. The right hand bore the goddess of victory, the left the sceptre, surmounted by an eagle. Like the base, and the whole space around, the seat of the throne was decorated with various works of art. It was supported by figures of the goddess of victory; and on the back of the throne, which rose above the head of the god, were represented the hovering forms of the Hours and the Graces. This statue was the model for most of the later representatives of Zeus. Among those that are extant the well-known bust of Zeus found at Otricoli (Ocriculum in Umbria), and now in the Vatican Museum, is supposed to be an imitation of the great work of Phidias. In the most direct relation to the latter stand the figures of Zeus on the coins of Elis (see ELIS, p. 587). Among the standing statues of Zeus the most famous was the bronze colossus, forty cubits (or sixty feet) high, by Lysippus at Tarentum. See COLOSSUS. On the general relation of Zeus to the mythological system of the Greeks, see Preller, *Griechische Mythologie* (last ed. rev. by Robert, Berlin, 1887); and Welcker, *Griechische Götterlehre* (1857–63).

Zeuxis (*Ζεῦξις*). A celebrated Greek painter of the Ionic School, a contemporary of Parrhasius; he was a native of Heraclea in South Italy, and lived till about B.C. 400 at different places in Greece, at last, as it appears, settling in Ephesus. According to the accounts of his works which have been preserved, in contrast to the great mural painter, Polygnotus, he especially devoted himself to painting on panels. He endeavoured above all things to make his subjects attractive by investing them with the charm of novelty and grace. He also has the merit of having further improved the distribution of light and shade, introduced by his elder contemporaries. Especially celebrated was his picture of Helen, painted for the temple of Heré on the Lacinian promontory (Cic. *De Invent.* ii. 1, 1). He aimed at the highest degree of illusion. As is well known, he is said to have painted grapes so naturally that the birds flew to peck at them (Pliny, *H. N.* xxxv. 61–66). See PARRHASIUS; PICTURA.

Zodiăcus, sc. *circulus* (*ζωδιακὸς κύκλος*). The circle of the Zodiac (Aul. Gell. xiii. 9, 3).

Zoïlus (*Ζωΐλος*). A grammarian, a native of Amphipolis, who flourished in the time of Philip of Macedon. He was celebrated for the asperity with which he assailed Homer (*Ὁμηρομάστιξ*), and his name became proverbial for a captious and malignant critic (Ael. *V. H.* xi. 10). See Spindler, *De Zoïlo Homeromastige Qui Vocatur*, 2 pts. (1888–89).

Zona (*ζώνη*). (1) A flat and rather broad girdle worn by young unmarried women (*ζώνη παρθενική*) around their hips (Hom. *Od.* v. 231; Ov. *Fast.* ii. 231), as exemplified in the accompanying illustration; whereas the common girdle (*cingulum*) was placed immediately under the bosom. The zone was not laid aside until after the wedding, when the bridegroom had unfastened it with his own hands; whence the expression *zonam solvere* (Catull. ii. 13; Ovid, *Her.* ii. 115) means "to enter the married state." (2) A broad belt worn by men round their loins (Hom. *Il.* xi. 234; Plaut. *Merc.* v. 2, 84), and made double or hollow like our shot-belts, for the purpose of carrying money deposited in it about the person (C. Gracch. *ap.* Gell. xv. 12; Suet. *Vit.* 16); whence the expression *zonam perdere* (Hor. *Ep.* ii. 2, 40) means "to lose one's money." (3) The Greek writers also use the term for a soldier's belt, worn round the loins, to cover the juncture of the cuirass and the kilt of leather straps. See THORAX.



Flora, showing Zona. (National Museum, Naples.)

Zonăras, IOANNES (*Ἰωάννης ὁ Ζωναράς*). A Greek historian, who lived at Constantinople as chief of the imperial body-guard and first private secretary to the emperor under Alexius I. (Comnenus). He next became a monk, and composed a history of the world (*Χρονικόν*) down to A.D. 1118, divided into eighteen books. Its value consists in its exact quotations from lost works of earlier writers, especially from those of Dio Cassius, referring to the Empire. The history of his own time he recorded as an eye-witness. The work is edited by Du Cange (Paris, 1686), and Dindorf (Leipzig, 1868–75). A lexicon by Zonaras is edited by Tittmann (Leipzig, 1808).

Zoné (*Ζώνη*). A town of Thrace, where Orpheus is said to have sung (Herod. vii. 59).

Zophŏrus (*ζῳφόρος*). "Bearing animals"; a word applied to a panel or relief, and hence used of the continuous carved frieze of the Ionic and Corinthian architecture, which represents the triglyphs and metopes of the Doric buildings (Vitruv. iii. 5, 10).

Zophorus.

Zopyrus (*Ζώπυρος*). (1) A distinguished Persian, son of Megabyzus. After Darius Hystaspis had besieged Babylon for twenty months in vain, Zopyrus resolved to gain the place for his master by the most extraordinary self-sacrifice. Accordingly, one day he appeared before Darius with his body mutilated in the most horrible manner; both his ears and nose were cut off, and his person otherwise disfigured. After explaining to Darius his intentions, he fled to Babylon as a victim of the cruelty of the Persian king. The Babylonians gave him their confidence, and placed him at the head of their troops. He soon found means to betray the city to Darius, who severely punished the inhabitants for their revolt. Darius appointed Zopyrus satrap of Babylon for life, with the enjoyment of its entire revenues (Herod. iii. 153–160). (2) The Physiognomist, who attributed many vices to Socrates, which the latter admitted were his natural propensities, but said that they had been overcome by philosophy (Cic. *Tusc. Disp.* iv. 37; *De Fato*, 5).

Zoroaster or **Zoroastres** (*Ζωροάστρης*). The prophet of ancient Iran, and one of the great religious teachers of the East. He is commonly spoken of as a Magian (*Μάγος, Magus*), or as a reformer of the old faith of Persia; the religion which he founded is best designated as Zoroastrianism, after his own name, for the lessons of his teaching sank deep into the heart of Iran. There can be no question as to the fact that Zoroaster was an actual historical personage in spite of doubts that have been raised on the subject.

Considerable uncertainty has prevailed as to the exact date at which Zoroaster lived; so much, however, is certain, that his era must be placed at least six centuries before Christ; and although the historical origin of Zoroastrianism has not yet been cleared up, the religion presumably became the faith of the great Achaemenian kings, and entered upon its long history as one of the important early religions of the world. The national power of the creed was broken by the victorious invasion of Alexander the Great, but Zoroastrianism outlived the blow, and still lingered in Iran under the Seleucid government and the Parthian sway until the third century of our own era, when it once more rose to supremacy at the time of the Sassanidae (A.D. 226–651), and was restored to its pristine glory. (See PERSIA.) The final overthrow of the Zoroastrian belief, however, came in the seventh century with the rise of Islam; for the religion of Ormazd was almost blotted out in Iran by the Mohammedan conquest, although a few true followers of Zoroaster are still to be found scattered here and there in their old home. The small band, however, which preferred exile to conversion and sought refuge in India became the ancestors of the flourishing community of Parsis to-day in Bombay; these are the veritable Zoroastrian descendants of the persecuted faithful who found among the Hindus a place of safe retreat and of freedom to worship Ormazd. They are the chief conservators of what remains of the sacred literature, which has naturally suffered from the various vicissitudes and crises through which the religion has passed.

Respecting Zoroaster's life and teaching, our sources of information are either directly the Avesta, or Zend-Avesta, and the Pahlavi books, below mentioned, or they are indirectly the statements found in other Oriental writings or contained in allusions in the classics. Next to the ancient Avesta and the Pahlavi writings, which latter belong chiefly to Sassanian times (A.D. 226–651), the most important Oriental contributions to our knowledge come from the later Persian national epic Shāh-Nāmah, or "book of kings" (tenth century A.D.), and from the Zartusht Nāmah, a legendary sketch of Zoroaster's life (thirteenth century A.D.). Both of these, however, must be used with proper judgment. Considerable valuable information, moreover, is to be gathered from Arabic writings; though these statements are often tinged by a Mohammedan colouring.

All classical antiquity is agreed on the point of Zoroaster's being an historical personage, even if he was in the eyes of the authors of the time a more or less hazy figure. He was regarded by the writers of Greece and Rome as the arch-representative of the Magi, and was more famous sometimes perhaps on account of the magic arts attributed to him than for the depth of his philosophy or his legislation, his religious or moral teaching. The Magi were the reputed masters of learning in ancient times (Cic. *De Div.* 1, 23, et al.), but it is difficult to form a clear picture of their doctrines and teachings, except so far as we may believe them to be reflected in Zoroaster, making due allowance, however, for changes or reforms which he may have instituted. The tradition preserved to the effect that Pythagoras studied under these masters in Babylon, or that he may have caught some Zoroastrian ideas, may not be altogether without foundation (Cic. *De Fin.* v. 29; Val. Max. viii. 7; Pliny, *H. N.* xxx. 1, 2; Apul. *Florid.* p. 19; Porphyr. *Vita Pythag.* 41; Lactant. *Institut.* iv. 2; Iambl. *Vita Pythag.* c. 19; Clem. Alex. *Strom.* i. p. 357, et al.). Plato, moreover, according to tradition, was anxious to visit the Orient and to study with the Magi had he not been prevented by the Persian wars (Diog. Laërt. iii. 7; Apul. *De Habitud. Doctrin. Plat.* p. 569). The followers of the sophist Prodicus are reported as boasting of possessing secret writings of Zoroaster (Clem. Alex. *Strom.* i. p. 357), and even a Magian teacher named Gobryas has been claimed for

Socrates (cf. *Axiochos* attributed to Plato). Instances might be multiplied. Aristotle, Eudoxus of Cnidus, Deinon, and especially Theopompus, were familiar with Zoroastrian tenets (cf. Diog. Laërt. *Prooem.* 8; Pliny, *H. N.* xxx. 1, 20; Plut. *Is. et Os.* 47). An allusion is also found to a work bearing Zoroaster's name by Heracleidus Ponticus, a pupil of Plato and Aristotle (cf. Plut. *Adv. Colot.* p. 1115 A). Hermippus, moreover, made careful studies of Magism and of Zoroastrian writings (cf. Pliny, *H. N.* xxx. 1, 2); finally, there are common enough references to Zoroastrian ideas to be found in Plutarch, Strabo, Pliny, and others. A number of purported books by Zoroaster, such as Περὶ Λίθων Τιμίων, Περὶ Φύσεως, Λόγια, Βίβλιοι Ἀπόκρυφοι Ζωροάστρου, Ἀστεροσκοπικά (cf. Suidas and Pliny), or Gemistus Pletho's Μαγικὰ Λόγια τῶν ἀπὸ τοῦ Ζωροάστρου Μάγων, from which citations are quoted, are doubtless apocryphal; they nevertheless show the reputation which Zoroaster later enjoyed (for references cf. Fabricius, *Bibl. Graec.* vol. i. p. 304 seq.), although his name is not mentioned by Herodotus nor by Xenophon, and there are only doubtful grounds for assuming its presence in the fragments that happen to be preserved of Ctesias. The earliest authenticated allusion to Zoroaster by name in the classics seems to be that in the Platonic *Alcibiades*, i. 122; but according to Diogenes Laërtius (*Prooem.* 2) he is mentioned by the earlier Xanthus of Lydia. The Greek form Ζωροάστρης, under which the sage is known to fame, is a modified form of *Zarathushtra* (cf. Mod. Pers. *Zardusht*), which is the prophet's actual name in the Avesta; Diodorus Siculus (i. 94) once has Ζαθραύστης.

In regard to the date at which Zoroaster lived a wide diversity of opinion has prevailed. The statements of antiquity on the subject may conveniently be divided into three groups. First (1) may be considered those classical references that assign to him the extravagant age of B.C. 6000. These are confined simply to the classics, but they have the claim of being based upon information possessed by Aristotle, Eudoxus, and Hermippus (cf. Pliny, *H. N.* xxx. 1, 2; Plut. *Is. et Os.* 46; Schol. Plato's *Alcibiades*, i. 122; Diog. Laërt. *De Vita Philos. Prooem.* 2; Lactant. *Institut.* vii. 16; and cf. Suid. s. v. *Zoroastres*). Such extraordinary figures are presumably due to the Greeks' misunderstanding the statements of the Persians in regard to the position of Zoroaster's millennium in the great world-period of 12,000 years. Second (2) come those statements which connect the name of Zoroaster with that of the uncertain Semiramis and Ninus (Diod. Sic. ii. 6; Fragm. of Ceph. in Euseb. *Chron.* i. 43, and iv. 35; Syncel. *Chronograph.* i. p. 315; Theon, *Progymnasmata*, 9; Justin, *Hist. Philippic.* i. 1; Arnob. *Adv. Gent.* i. 5; compare also Suidas, s. v. *Zoroastres*, and the Armenian Moses of Khorni, i. 16). Third (3), the direct Zoroastrian tradition as found in the Pahlavi books *Bundahish*, xxxiv. 7–8; *Ardā-i Vīrāf*, i. 1–5, supported also by abundant Arabic allusions (Albīrūnī, Masūdī, etc.), is unanimous in placing the opening of Zoroaster's ministry at 258 years before the era of Alexander, or 272 years before the close of his dominion, which would give Zoroaster's date as falling between the latter half of the seventh century B.C. and the middle of the sixth century; in fact, in the period just preceding the Achaemenian dynasty. This is doubtless not far from the truth, and may be finally regarded as the best view to adopt. Tradition has it that Zoroaster was forty-two years old when he first converted King Vishtaspa, who became his patron; but there is no good ground for identifying this ruler with Hystaspes the father of Darius. Such identification is made by Ammianus Marcellinus (xxvi. 6, 32), and has met with considerable support, but the doubt which Agathias (ii. 24) raises on this subject is better founded.

Like Homer, Zoroaster's native place is debated ground, but the Oriental tradition cannot be far astray that assigns Atropatené in Media, or even more precisely the city of Oroomiah, as his native land, and places the field of his religious activity in Bactria, where the faith became the organized State religion and apparently spread back towards Media and Persia. Such a view, at least, finds support when the Avesta and the Pahlavi books, supplemented also by Arabic and Syriac writings, are combined with statements found in the classics (Diod. Sic. ii. 6; Fragm. Ceph. in Euseb. *Chron.* i. 43, and iv. 35: *Praeparatio Evang.* x. 9; Theon, *Progym.* 9; Justin, *Hist. Philippic.* i. 1; Arnob. *Adv. Gent.* i. 5; Ammian. Marcel. 23, 6, 32; Clem. Alex. *Strom.* i. p. 357; Pliny, *H. N.* xxx. 1, 2; Diog. Laërt. *Prooem.* 2; Suid. s. v. *Zoroastres;* cf. also the Armenian Moses of Khorni, i. 16).

Numerous legends and myths early gathered about the name of Zoroaster, and several of these are preserved in classical writers. The tradition, for example, about his laughing instead of crying when he was born, as told by Pliny (*H. N.* vii. 16, 15), is found also in the East; but the romantic story of his death by lightning (Suid. s. v. *Zoroastres;* Pseud.-Clem. *Recogn.* iv. 27–29, *Homil.* ix. 3; *Chronic. Pasch.* i. p. 67) is not in accordance with the prevailing Oriental testimony to the effect that he was massacred at the age of seventy-seven when Balkh was stormed by the Turanians. In his lifetime he is said to have performed a number of miracles; the report, moreover, that he lived in silence in the wilderness for a number of years is doubtless to be explained as alluding to a period of religious meditation and preparation (Pliny, *H. N.* xi. 42, 97; Schol. Plato's *Alcibiades*, i. 122; Plut. *Quaest. Sympos.* iv. 1, p. 660). The consistent Oriental tradition that he began his ministry at the age of thirty appears also in the Scholion to the *Alcibiades*. Furthermore, Pliny (*H. N.* xxx. 1, 2), Diogenes Laërtius (*Prooem.* 2), and Suidas (s. v. *Magoi*) are able to give the names of some of the Magi that succeeded him.

Zoroaster's religion may be characterized primarily as dualism in so far as it proclaims the incessant warfare that reigns on earth between the good principle, Ahura Mazda or Ormazd (Ὡρομάσδης), and the evil spirit, Anra Mainyu, Ahriman (Ἀρειμάνιος). At the end of the world the good will finally triumph, evil will be destroyed, and a general resurrection of the dead will take place (Plut. *Is. et Os.* 47). The doctrine of rewards and punishments for the immortal soul is a cardinal theme in Zoroaster's preaching; the principle, moreover, is inculcated of preserving the purity of the body and of the care of useful animals, especially the cow. The exercise of scrupulous caution is enjoined for preserving the elements, fire, water, and earth, from defilement, particularly from contact with dead matter; hence arose the strange custom of exposing corpses upon the *dakhmas*, or towers of silence, to be devoured by dogs and birds—a custom which has been commented

upon from the days of Herodotus to the present (Herod. i. 140; Porphyr. *De Abstin.* iv. 21, etc.). The general spirituality of the Persian religious ideas was often remarked upon by the Greeks (Herod. i. 131; Deinon Fragm. 9; Diog. Laërt. *Prooem.* 6; Plut. *Is. et Os.* 46; Porphyr. *Vita Pythag.* 41); and owing to the more or less close relations between Iran on the one side and Greece and Rome upon the other, the figure of Zoroaster is one of considerable interest to the student of the classics; while, by way of criticism, it may be added that in classical writers there is hardly a statement regarding him or the Magian faith which does not find some support, corroboration, or parallel in the sacred texts themselves.

BIBLIOGRAPHY.—The most complete collection as yet of allusions in the classics to Zoroaster, the Magi, and the Persians is to be found in Kleuker, *Zend-Avesta*, Anhang ii. 3 (Leipzig and Riga, 1783); consult also Rapp in *Zeitschrift d. deutschen morgenländischen Gesellschaft*, xix. 1–89, xx. 49 seq., and Windischmann, *Zoroastrische Studien* (Berlin, 1863). The standard text of the Zoroastrian Scriptures is edited by Geldner, *Avesta* (Stuttgart, 1884–1895). Translations from the Avesta and the Pahlavi literature by Darmesteter, Mills, and West have appeared in the *Sacred Books of the East*, vol. iv. (Oxford, 1880 foll.); the most recent translation is in French by Darmesteter, *Annales du Musée Guimet* (Paris, 1892–93). For a complete list of works of reference consult the articles "Avesta," "Pahlavi," and "Religion of Iran" in Geiger and Kuhn's *Grundriss der iranischen Philologie* (Strasburg, 1895–96).

Zosĭmus (Ζώσιμος). A Greek historian who lived as a high officer of State at Constantinople in the second half of the fifth century A.D., and composed a work, distinguished for its intelligent and liberal views, on the fall of the Roman Empire. It is in six books: i. giving a sketch of the time from Augustus to Diocletian; ii.–iv. a fuller account of events down to the division of the Empire by Theodosius the Great; v. and vi. treat in greater detail of the period from 395 to 410; the conclusion of book vi. is probably wanting, as Zosimus had the intention of continuing the history up to his own time. He attributes the fall of the Empire in part to the overthrow of heathenism and the introduction of Christianity, with which, of course, he was not acquainted in its purest form, but only in the degenerate state into which it had sunk in some places in the fourth century. This history is edited by Bekker (1837) and by Mendelssohn (1887). See Martin, *De Fontibus Zosimi* (1866). A monograph on the various prodigies, oracles, etc., recorded by Zosimus was published by H. Piristi in 1893.

Zoster (Ζωστήρ). Now C. of Vari; a promontory on the west of Attica, between Phalerum and Sunium.

Zothēca. A small private room or study, adjoining a large one (Pliny, *Epist.* ii. 17, 21).

Zumpt. (1) KARL GOTTLIEB, a German classical scholar, born in Berlin March 20th, 1792. He pursued his studies under Kreuzer at Heidelberg, under Wolf and Böckh at Berlin, and on finishing his university course became in succession Professor of Classics at the Joachimsthal Gymnasium, of History at the Military School, Professor Extraordinary of Roman Literature at the University of Berlin, and Professor Ordinarius in the same university in 1838. He died at Karlsbad, June 25th, 1849. He published a very popular Latin Grammar (Berlin, 1818), which has gone through many editions (Eng. trans. by Schmitz, 3d ed. London, 1852), and which has been the basis of several other grammars in English. He also edited Quintilian (Leipzig, 1831); parts of Cicero; and Quintus Curtius (Brunswick, 1849); and was the author of the following treatises: *Annales Veterum Regnorum et Populorum imprimis Romanorum* (1819, 3d ed. 1862); *Ueber die bauliche Einrichtung des römischen Wohnhauses* (2d ed. 1851); *Die Religion der Römer* (1845). (2) AUGUST WILHELM, nephew of the preceding, was born in Königsberg Dec. 4th, 1815, and was educated at the University of Berlin. He became professor in the Friedrich-Wilhelm Gymnasium, and died April 22d, 1877. He wrote various works on Roman epigraphy and antiquities, and especially *Das Criminalrecht der römischen Republik*, 2 vols. (1869). See Padaletti, *A. W. Zumpt* (Leipzig, 1878).

Zythum and **Zythus** (ζῦθος). A kind of ale or beer made of barley or other grain, for which see the article CERVESIA.

APPENDIX

A

Actio. In the widest sense, *actio* means right of action, and is nearly equivalent to *ius* in the sense of a private right. In the narrower and original sense, it means proceedings taken to enforce a right.

(1) The LEGIS ACTIONES were the forms of procedure proper to the old civil law. They were not all suits in the modern sense, i. e. they did not all imply the submission of the case to the judgment of a court: *legis actio per pignoris capionem*, the enforcement of a claim by distress, was wholly extra-judicial, and *legis actio per manus iniectionem*, enforcement of a claim by the arrest of the debtor, involved merely a formal recognition by the magistrate that the arrest was technically justified (*addictio*). The action by distress was admissible only in certain special and peculiar cases where sacral or public interests were involved (see Gaius, *Inst.* iv. 26–29), but the action by arrest was admissible wherever the defendant's right was technically clear, not only when judgment had actually been rendered—*manus iniectio pro iudicato*—but in other cases, e. g. against the nexal debtor (cf. NEXUM). In such cases the arrested debtor could not himself dispute the creditor's right: a *vindex* must intervene in his behalf, who, if defeated, became liable for twice the amount of the debt (*duplum*). In the later Republic, however, the debtor, if not *iudicatus*, was regularly permitted to dispute the arrest and act as his own *vindex* (*lex Vallia*), so that arrest, except on a judgment-debt, became simply a method of opening a suit—*manus iniectio pura*. Cf. Gaius, *Inst.* iv. 21–25.

The *legis actio sacramento* (also *sacramenti* and *per sacramentum*), on the contrary, was from the outset a suit in the modern sense. It was the regular form of procedure (*actio generalis*) for obtaining a decision in a case of disputed right. (Cf. Gaius, *Inst.* iv. 13–17.) The plaintiff summoned the defendant to appear before the magistrate—*in ius vocatio*. If the latter refused to come he was treated as having confessed judgment, and the plaintiff might proceed to *manus iniectio*, a rule which insured prompt compliance with the plaintiff's summons. The litigants stated their case by the use of set and formal phrases, accompanied by ceremonial acts. The forms varied according to the nature of the suit. (*a*) If a property right is in dispute (*actio in rem*), the plaintiff asserted his right, and the defendant replied by a counter-assertion of right, the assertion in each case (and hence the action itself) being termed *vindicatio*. Cases of disputed right over wife or children, as over slaves, were treated as proceedings *in rem* (family rights not being distinguished from property rights); but here the *vindicatio* of one of the parties might be *in libertatem*, i. e. he might assert that the person claimed as slave or child or wife was really free from *potestas* or *manus*. In all these vindicatory proceedings each party held a staff (*festuca*), which, according to Gaius, represented a spear (*quasi hastae loco*), and the entire ritual suggested an impending appeal to the ordeal of battle. But at this point the magistrate enjoined peace, and the antagonists challenged each other to wager a certain sum (*sacramentum*, 50 or 500 *asses*, according to the value of the object in dispute) on the truth of their respective assertions. Each party presented sureties (*praedes*) for the payment of the sum wagered. The magistrate then *dabat vindicias*—i. e. assigned the person or thing in dispute to the custody of one of the litigants, who presented sureties for its redelivery in case sentence should be rendered against him. Where a question of liberty was at stake, ancient usage, confirmed by the Twelve Tables, assigned the custody of the person *secundum libertatem*, i. e. to the party asserting liberty (cf. the case of Virginia, Livy, 3, 44; *Dig.* 1, 2, 2, § 24); and provided that in such cases the smaller *sacramentum* of 50 *asses* should always be employed. (*b*) It is probable that where *manus iniectio* had been initiated against a debtor and a *vindex* intervened, the latter used the forms of the *vindicatio in libertatem*; and Brinz conjectures that there was originally no other means of testing a question of debt by *actio sacramento* (Grünhut's *Zeitschr.* i. 23). But according to the ordinary opinion, based on Gaius, *Inst.* iv. 13–15, 20, and Valer. Prob. *De Iuris Not. Signif.* iv. 1, 2, the sacramental action ran *in personam*, for the recovery of a definite sum owed, whether on contract or by reason of tort, and without vindicatory forms, the plaintiff asserting and the defendant denying the debt, and each then challenging the other to the customary wager. In both cases, whether the action was *in rem* or *in personam*, the proceedings *in iure*, i. e. before the magistrate, closed up with *litis contestatio*, i. e. the calling in of witnesses to attest the issue raised by the pleadings; and the case was then sent for trial to a *iudex* or body of *iudices*. These had only to find that the *sacramentum* of the one party was *iustum*, that of the other *iniustum*. The sum wagered by the defeated party fell into the public treasury.

Another true suit was the *legis actio per iudicis arbitrive postulationem*, which opens with a direct request for the appointment of a *iudex* or referee. This was probably the form of action used whenever the direct averment of a definite right was impossible, e. g. when the sum in dispute was uncertain, or when it was necessary to draw the line

between opposing rights, e. g. to determine boundaries or to divide an inheritance.

The latest of the *legis actiones*, established by a special statute (*lex Silia*) was that *per condictionem*, called also simply *condictio*. It was simpler in form than the *actio sacramento;* ran for the recovery of any definite sum of money (*certa pecunia*), and later (by a *lex Calpurnia*) of any definite object (*omnis certa res*); and provided roughly for the payment of damages to the victorious party, each antagonist promising the other at the beginning of the suit to pay a penalty of one-third of the amount in litigation in case the division went against him (*stipulatio et restipulatio tertiae partis*).

The *legis actiones* were so called, according to Gaius, either because they were introduced by *leges* or because the pleadings were based upon the language of the *leges*, and were observed like laws (*Inst.* iv. 11). The former explanation, at least, is untrue. All the *legis actiones*, except the *condictio*, are obviously older than the Twelve Tables. They were of customary origin, and the special forms employed were worked out by the *pontifices*. This is particularly clear in the case of the *actio sacramento*. *Sacramentum* is properly an oath, not a wager; and it is clear that in the original form of this action a religious issue was raised for priestly decision by the opposition of the oaths of the two parties. Even after the Twelve Tables, the *pontifices* controlled the forms of action, and all the details of procedure until A.U.C. 450, when a book of forms, drawn up by Appius Claudius Caecus, was published (*populo traditus*) by his client, the scribe Cn. Flavius. The law of civil pleadings then came to be known as *ius Flavianum* (Livy, ix. 46; *Dig.* 1, 2, 2, §§ 5, 6). A century later Sext. Aelius Paetus published, in his *Tripertita*, the text of the Twelve Tables, the established pontifical *interpretatio*, and a revised formulary of actions (*ius Aelianum*).

Procedure in Iudicio.—The *legis actiones* were really only forms of pleading. All that took place *in iure* before the magistrate served simply to define the issue. The actual trial of the suit took place before a special *iudex* selected by the parties or appointed by the magistrate, or before a standing body of elected *iudices*, where the case fell under the special competence of such a board (cf. CENTUMVIRI; DECEMVIRI). Proceedings *in iudicio* were minutely regulated by the Twelve Tables. The parties were to appear before noon of the day set for trial. In case of the absence of either, sentence was rendered in favour of the party present. Both parties appearing, each briefly stated his case (*causae coiectio*), and then each submitted a fuller argument (*peroratio*) with evidence. The decision had to be reached by sunset.

Execution of Judgment.—The *iudices* were not magistrates, and they could issue no commands. They simply expressed an opinion (*sententia*) on the issue submitted to them. If the *sententia* sustained the plaintiff's claim and the defendant failed to satisfy judgment within 30 days, the plaintiff (his right being now clear) proceeded to arrest the debtor (*manus iniectio pro iudicato*). If no *vindex* intervened the creditor held the debtor in chains for 60 days, leading him out *in comitium* on three successive market-days (*trinis nundinis continuis*) and proclaiming the amount of the judgment. After this, judgment being still unsatisfied, the debtor was sold into foreign slavery (*trans Tiberim*). If there were several creditors they might cut him in pieces. This latter provision of the Twelve Tables, the ancients asserted, was never enforced; and some moderns have tried to explain it as referring to the estate, not the person, of the debtor. The right of selling the debtor was commuted, either by custom or law (*lex Poetilia?*) into a right of holding him to work off the debt, and ultimately into a simple right of imprisonment.

All the *legis actiones* were *iuris civilis*, and could not be brought by or against foreigners. Where the private rights of the latter were guaranteed by treaty a special form of action was provided for their protection—the *recuperatio*. As in the case of the civil actions, the preliminary pleadings took place before a magistrate, and the decision was referred to special judges called *recuperatores*.

For full description of the *legis actiones*, see Muirhead, *Roman Law*, pp. 181–235.

(2) THE PRAETORIAN FORMULA.—Towards the end of the Republic the *legis actiones* were almost wholly superseded by a new and freer system of pleading worked out by the praetors—the procedure by *formula*. It probably originated in the courts established for non-citizen subjects of Rome (*peregrini dediticii*), who could not proceed according to the *ius civile* of Rome, for they had no share in it; nor by their own civil laws, for they had lost these by the overthrow of their *civitates;* nor by *recuperatio*, for they enjoyed no treaty rights.

In fact, there was for them no law save that which the Roman magistrates—the praetor of the Peregrini at Rome and the Roman governors in the provinces—saw fit to make for them. It therefore became usual for the magistrate, after hearing what the parties had to say, to send the case to a *iudex*, with instructions to investigate such and such allegations of the parties, and if the allegations of the plaintiff appeared true, and those of the defendant untrue, to condemn the defendant. The advantage of this freer form of procedure proved so great that it was extended by a *lex Aebutia* and two *leges Iuliae* (Gaius, *Inst.* iv. 30) to suits between Romans. It then became possible for the city praetor either to instruct the *iudex* to decide according to the old civil law (*formula in ius concepta*) or according to the freer principles of the *ius gentium* (cf. IUS), in which case the *formula* was in *factum concepta*. The *formula in factum concepta* was thus in reality a law-making formula; it was the instrument by which the praetor carried through the reforms which were embodied in the edict. In proportion as the praetorian law came to be recognized as *ius*, this distinction faded; and in the earlier Empire *actio in factum* came to mean a special action, outside of the established forms (cf. below, *actio utilis*). The formula was always addressed in writing to the *iudex*, and was cast in hypothetical form. The essential allegations of the plaintiff—his statement of facts (*demonstratio*) and his assertion of right (*intentio*)—were set forth as supposititious; if they proved true, the *iudex* was to condemn the defendant (*condemnatio*). If the defence consisted in a general denial, no mention of it was necessary in the formula; but if the defendant alleged special reasons why the plaintiff's claim could not be legally or equitably enforced, these were submitted to the *iudex* in an *exceptio*. Counter-allegations by the plaintiff might also require mention (*replicatio*), and so on, possibly, to a *triplicatio;* the allegations of the plaintiff appearing regularly in the positive form, *si, aut*

si, nec non, etc., and those of the defendant in the negative, *nisi, nec*, etc. Where, as in partition suits, it was desirable that the referee should assign certain pieces of property to one or the other of the parties, a power to do this was inserted (*adiudicatio*). The praetorian formula was equally applicable to actions *in rem* and *in personam*. It always ran, indeed, for condemnation in money damages; but where the plaintiff was suing to recover property, the *iudex* was empowered to advise restitution (*arbitrium restituendi*), and to condemn in exemplary damages if his advice was not obeyed. The written formula did away with the necessity of *litis contestatio* in the old sense, but the term was retained to designate the conclusion of proceedings *in iure*.

Procedure *in iudicio* remained substantially unchanged. Argument by professional advocates (*oratores*) became usual in important cases, and hearings might be continued from day to day. Execution of judgment still took place by the arrest and imprisonment of the debtor. Levy on the entire estate was introduced in cases of bankruptcy, but the seizure of single articles to satisfy judgment did not appear until the Imperial period. By voluntary *cessio bonorum* a debtor might escape the infamy which attached itself to forced bankruptcy, and by an oath of poverty (*eiuratio bonae copiae*) he freed himself from imprisonment.

In spite of the development of the formula, the *legis actio sacramento* was employed in the Imperial period in two classes of cases: (*a*) where the decision was to be rendered according to the *ius civile* and by the centumviral court (Gaius, *Inst.* iv. 31); (*b*) where a sham suit was employed for purposes of emancipation, adoption, etc. In the later Imperial period the use of *legis actio* was confined to this second class of cases, and the term came to mean the authority of a magistrate to preside over and legalize such transactions, being thus equivalent to *iurisdictio voluntaria*.

For fuller account of procedure by the *formula*, see Muirhead, *Roman Law*, pp. 357–377; Sohm, *Institutes*, pp. 163–212.

(3) Iudicia Extraordinaria, characteristic of Roman precedence, both by *legis actio* and by *formula*, was the separation of *ius* and *iudicium*, i. e. of the pleadings and the actual trial. This *ordo iudiciorum* (*privatorum*), which took the decision of the case out of the hands of the magistrate and placed it in those of a free and independent citizen, was regarded by the Romans of the Republic as one of the chief bulwarks of personal liberty. In the Empire this *ordo iudiciorum* was first undermined and then swept away. Procedure *extra ordinem*, where an imperial official hears the evidence as well as the pleadings and himself renders the decision, appeared at the beginning of the Imperial period, both in special cases where new remedies were granted, and for the more speedy decision of all sorts of cases. Later it became usual, even in the ordinary courts, to select persons attached to the court (assessors or advocates) for services as *iudices*, private citizens being excused from this duty. The presiding magistrate and those subaltern *iudices* hear the entire case together, both the pleadings and the evidence, and the *iudices* retire *pro forma* to render the decision.

The *formula* thus became unnecessary, the *iudices* having heard the pleadings. In other cases the hearing of pleadings and evidence was delegated from the outset to a *iudex*. Constantine forbade such delegation when the magistrate was able to try the case himself. With this implied recognition of the power of the magistrate to render sentence, the distinction between *ius* and *iudicium* disappeared; and in the time of Justinian all *iudicia* were declared to be *extraordinaria*.

Execution of judgment took place in the later Empire — *manu militari*, i. e. by officers of the court, and was always directed primarily against the estate and only in second instance against the person.

(4) Classification of Actions. — Through all the periods of Roman procedure a sharp distinction was drawn between actions *in rem* or *petitiones*, which are based on some right in the thing and run against all who interfere with this right, and actions *in personam*, which run against a particular person and his legal successors by reason of something which he has done to bind himself (*se obligare*), e. g. his contract or tort (*delictum*)—actions which logically ran *in personam* only, but which were made to run *in rem* (e. g. *actio quod metus causa*)—were termed *actiones in rem scriptae*. *Actiones mixtae* were such as ran at the same time for recovery of property and of a penalty, or for the recovery of debt and penalty; but the same term was also applied to cases in which both parties might be regarded as being at once plaintiff and defendant, and in which either or both parties might be condemned (e. g. actions of partition). *Actio certa* (*condictio certi*) ran for the recovery of a definite object or sum; *incerta*, for unliquidated damages. *Actio directa* is the action which regularly arises from a contract or other legal act; possible counter-claims, growing out of the same transaction, are enforced by *actio contraria*. *Actio directa* was also used to designate an established and familiar form of action, in distinction from *actio utilis* or *in factum* (cf. the English "action on the case"), which is given where no established action lies—*ad exemplum actionis directae*. The relation of an adapted and widened action to the earlier and narrower remedy was often expressed by *quasi* (e. g. *actio Serviana, quasi-Serviana*); actions in which the *iudex* was instructed to decide what was due on grounds of general equity (*ex fide bona*) were called *bona fide actiones*, in distinction from *actiones strictae* or *stricti iuris*. *Actio civilis, legitima* was one that lay at *ius civili*; actions created by the praetors or aediles were termed *honorariae*. *Actiones temporales, temporariae*, were such as must be brought within a certain time after the right of action arose. All others were *perpetuae*. In the later Empire all actions were subject to limitation or prescription, but those which ran for thirty or more years were still termed *perpetuae*. *Actio popularis* was one in which any citizen might appear as plaintiff. Such actions were designed to secure some public interest. They resembled the ordinary (private) actions only in that the penalty recovered usually went in whole or in part to the plaintiff. *Actio praeiudicialis*, cf. Praeiudicium.

The best manual of Roman civil procedure is Von Keller's *Römischer Civilprocess* (6th ed. by Wach, Leipzig, 1883; French translation by Capmas, Paris, 1876).

Album (λεύκωμα). A space or patch covered with white plaster against the walls of a building, upon which public announcements or advertisements to the public were written; and thence the

name is given to any sort of white tablet bearing an inscription, such as a list of the senators, the praetor's edicts, or things of a like nature (Paul. *Sentent.* i. t. 14; Seneca, *Ep.* 48; Cic. *Orat.* ii. 12). The annual edicts of the praetor were posted up in this way; and Cicero states that the *annales maximi* were posted on an album by the Pontifex Maximus (*De Orat.* ii. 12, 52).

ALBUM SENATORIUM is the official list of the senators (Tac. *Ann.* iv. 42); ALBUM IUDĬCUM is the panel of the *iudices*. See IUDEX.

Anthon, CHARLES. An American classical scholar born in New York in 1797. He was educated at Columbia College, where he became Adjunct Professor of Greek and Latin in 1820, and full Professor in 1825. He died in 1867. Dr. Anthon did a great deal towards disseminating a fuller and richer knowledge of the Greek and Latin literatures in the United States by his editions of the best known authors elaborately annotated, and was among the first of English-speaking scholars to draw largely upon the results of German research in his own work. His best known editions are those of Horace (1830), Homer, Livy, Tacitus, Caesar, and Euripides. He also wrote a number of text-books for the teaching of Greek and Latin, and was the author of a widely used *Classical Dictionary*, besides re-editing for American use some of Dr. William Smith's dictionaries relating to antiquities and ancient literature.

Asȳlum (*ἄσυλον*). Among the Greeks the right of sanctuary appertained to those who took refuge in temples, altars, sacred groves, and at statues of the gods, and these were resorted to by debtors, slaves, and criminals as places of refuge. Only certain definite places, however, gave absolute protection, and we read of persons being forced from the sanctuary by the application of fire, while others were starved out, as in the well-known case of Pausanias (q. v.). In Roman times the *ius asyli* was so frequently an obstruction to the course of justice that the Senate limited it to a few cities (Tac. *Ann.* iii. 60).

The Roman law did not recognize the right of sanctuary in general, and Livy speaks of it as a Greek custom (xxxv. 51). Yet by special enactment the Temple of Divus Iulius was made an asylum of refuge (Dio Cass. xlvii. 19), and slaves in the provinces, if ill-treated by their masters, could take refuge before a statue of the emperor (Gaius, i. 53; cf. SERVUS).

On the general subject, see Förster, *De Asylis Graecorum* (Berlin, 1847); Neu, *De Asylis* (Göttingen, 1837); Bringer, *De Asylorum Origine, Usu*, etc. (Leyden, 1828); and Rein, *Criminalrecht der Römer*, p. 896.

B

Brunck, RICHARD FRANÇOIS PHILIPPE. A classical scholar, born at Strassburg, December 30th, 1729. He was educated in Paris, and took up the study of Greek, in which he won a sound reputation for keen criticism of texts. He was noted for his great skepticism as to the accuracy of copyists. He died June 12th, 1803. His chief works are *Analecta Veterum Poetarum Graecorum* (1772–76); and editions of Anacreon (1778); Apollonius Rhodius (1780); Aristophanes (1781–83); the Gnomic Poets (1784); Vergil (1785); and Sophocles (1786).

C

Calgăcus and Galgăcus. A British chieftain who fought against the Romans at the time when Agricola was in command in Britain. A spirited oration is put into his mouth by Tacitus (*Agric.* 29 foll.).

Canon Porsoniānus. A rule laid down by Richard Porson (q. v.), in his preface to the *Hecuba* of Euripides, to the effect that in the tragic (iambic) trimeter of the Greeks the fifth foot should not commence with a long syllable when it is itself the end of a word of several syllables and is followed by a word of three syllables; e. g. that *εἰκὸς σ' εἰδέναι* could not finish an iambic trimeter line.

Culpa. Any wrongful act or omission, whether due to intent or not. Taken generally, it includes what the Romans term *dolus malus*, but properly the latter is distinguished from culpa when this term is used accurately; *dolus malus* being an intentional and deliberate violation, whether by act or omission, of another's rights, and culpa an unintentional violation, consisting apparently always in the omission or neglect of some legal duty. It is true that *damnum* under the Lex Aquilia is often the consequence of some act; but the act usually derives its culpable character rather from the omission of some duty than from the positive act which is done; the latter, in itself, does not entail legal liability, but because it is done wilfully, heedlessly, or rashly. See Hasse, *Die "Culpa" des römischen Rechts* (1838); and Mommsen, in his *Obligationenrecht*, iii. pp. 345 foll.

Cumae (*Κύμη*). A town of Campania, the most ancient of the Greek colonies in Italy and Sicily. It was founded from Cymé in Aeolis, in conjunction with Chalcis and Eretria in Euboea (Strab. p. 243; Verg. *Aen.* vi. 2). Its foundation is placed in B.C. 1050, but the date must be regarded as uncertain. It was situated on a steep hill of Mount Gaurus, a little north of the promontory Misenum. It became in early times a great and flourishing city; its commerce was extensive; its territory included a great part of the rich Campanian plain; its population was at least 60,000; and its power is attested by its colonies in Italy and Sicily—Puteoli, Palaeopolis (afterwards Neapolis), Zanclé (afterwards Messana). But it had powerful enemies to encounter in the Etruscans and the Italian nations. It was also weakened by internal dissensions, and one of its citizens, Aristodemus, made himself tyrant of the place. Its power became so much reduced that it was only saved from the attacks of the Etruscans by the assistance of Hiero, who annihilated the Etruscan fleet, 474. It maintained its independence till 417, when it was taken by the Campanians and most of its inhabitants sold as slaves (Diod. xii. 76). From this time Capua became the chief city of Campania; and although Cumae was subsequently a Roman municipium and a colony, it continued to decline in importance. At last the Acropolis was the only part of the town that remained, and this was eventually destroyed by Narses in his wars with the Goths. Cumae was celebrated as the residence of the earliest Sibyl, and as the place where Tarquinius Superbus died. See SIBYLLAE.

D

Decurtātum Bosii. See DUBOIS, SIMÉON.

Dino (*Δείνων* and *Δίνων*). The father of the historian Clitarchus (q. v.), and himself the author of a history of Persia, frequently referred to by the ancient writers—e. g. Nepos (*Con.* 5), Plutarch (*Alex.* 36, et saep.), Aelian (*H. A.* xvii. 10), and Diogenes Laërtius (i. 8). He flourished about 275 B.C. Only fragments of his history survive.

Dubois, SIMÉON. A French classical scholar (1535–80), better known by his Latinized name BOSIUS, who forged a number of variant readings to Cicero's letters in an edition which he published at Limoges in 1580. This edition he pretended to have based on a MS. which he had obtained from a private soldier, and from readings said to have been furnished by one Crusellius. The MS. is usually styled the *Decurtatum Bosii*, and the readings *Lectiones Crusellianae*. The fraud of Dubois was not thoroughly proven until Haupt and Mommsen, in 1855, instituted an elaborate criticism of his readings and showed their spurious nature.

G

Genealogical Theory of Language. See INDO-EUROPEAN LANGUAGES.

H

Hospitium. (1) An inn. See CAUPONA. (2) (*ξενία, προξενία*). Hospitality was one of the characteristic features of almost all nations in the primitive period. In civilized countries the necessity of general hospitality is not so much felt; but at a time when the State or the laws of nations afforded scarcely any security, and when the traveller on his journey did not meet with any places destined for his reception and accommodation, the exercise of hospitality was absolutely necessary. Among the nations of antiquity, with whom the right of hospitality was sanctified by religion, it was to some degree observed to the latest period of their existence, and acquired a political importance which it has never had in any other age. It was in Greece, as well as at Rome, of a twofold nature, either private or public, in as far as it was either established between individuals (*hospitium privatum, ξενία*) or between two States (*hospitium publicum, προξενία*).

The stranger who appeared with no hostile object was regarded in the light of a suppliant and under the especial protection of Zeus Xenios. Hence he was kindly received, and on his departure broke a die (*ἀστράγαλος, tessera*) with the host, each keeping a half for mutual recognition by themselves or by their descendants in future times. The ties of hospitality thus formed were hereditary in families. At Rome a stranger (*hospes*) was equally protected by custom and law, and the *tessera hospitalis* was equally a pledge and a symbol of this relation of host and guest. A formal hospitality when once declared could only be broken off in an equally formal way by a solemn *renuntiatio*. Public, as opposed to private, hospitality was a like relation between nations and cities, who were bound to show especial kindness to each other's citizens. See CIVITAS; FOEDERATAE CIVITATES; POLITEIA; PROXENUS; TESSERA.

I

Ius Anŭli Aurei. The right to wear a gold ring was originally a military distinction (Cic. *Verr.* iii. 80, 187), and was ultimately the prerogative of the knights (*equites*) of the military tribune (App. *Pun.* 104), and also of such senators as were *nobiles* or had served as *legati*. The right was also granted as a special privilege to individuals by the military commanders and provincial governors, and carried with it all the dignities of knighthood. Thus Sulla gave the *anulus aureus* to the actor Roscius (Macrob. *Sat.* ii. 10). Under the Empire, the emperor bestowed the *ius anuli* at will. See Lange, *Röm. Alterth.* ii. 8, 163; Marquardt, *Privatleben*, 680 foll., and Herbert Spencer's *Ceremonial Institutions*, ch. ix.

L

Libri Lintei. A name given to such of the Roman *libri magistratum* or early lists of the annual magistrates as were written on linen (*linteum*). They were kept in the Capitol, and are frequently mentioned by Livy as one of his sources of information (Livy, iv. 20, 8; cf. Pliny, *H. N.* xiii. 69). See H. Peter, *Hist. Rom. Reliq.* i. cccxlv.

Linteum (*ὀθόνη*). Generally any cloth made of linen; but Pliny (*H. N.* xii. 22) applies the same term to cotton fabrics. Especially a towel, napkin, or handkerchief (Plaut. *Most.* i. 3, 110), the same as *sudarium* (q. v.); a curtain to close the sides of a *lectica*, or palanquin (Mart. ii. 57); the sail of a ship, which was made of strips of cloth sewed together (Verg. *Aen.* iii. 686).

Linum (*λίνον*). Flax; thence anything made with flax; as, a sewing-thread; a fishing-line; a string of pearls; a string bound round the tablets (*tabellae*) upon which letters or any other documents were written, and then tied in a knot, over which the seal was affixed (Cic. *Cat.* iii. 5; Plaut. *Bacch.* iv. 3, 79–111; cf. EPISTOLA); a net, the meshes of which were made of string.

Lyons Mosaic. See CIRCUS, p. 355.

M

Madvig, JOHAN NIKOLAI. A Danish statesman, educator, and classical scholar, born at Svaneke, August 7th, 1804. He was educated at Frederiksborg and Copenhagen, and in 1829 was called to the chair of Latin in the University at the latter place. He twice held the ministerial portfolio of Religion and Education, and was several times presiding officer of the Danish Parliament. As a scholar and especially as a text critic Madvig had a world-wide reputation, and in his work upon the texts of Cicero and Livy he won especial distinction. His most valuable works are *Emendationes in Ciceronis Libros Philosophicos* (1828); *Emendationes Livianae* (1860; 2d ed. 1876); *Adversaria Critica* (3 vols. 1871–84); *Opuscula Academica* (2 vols. 1834–42; last ed. 1887); editions of Cicero, *De Finibus* (1839; 3d ed. 1876); Cicero, *De Senectute* and *De Amicitia* (1835; 2d ed. 1869); of Livy (4 vols. 1861–66); and two grammatical works, a *Latin Grammar* (1841; 7th ed. 1881); and a *Greek Syntax*

(1846), both having been widely used in England and the United States in English translations and revisions. He also wrote a work on the constitution and administration of the Roman State, intended to correct and supplement Mommsen's *History* (2 vols. 1881–82). See his *Autobiography* (1887).

Maemacterion (*Μαιμακτηριών*). The fifth month in the Attic year, corresponding roughly to our November. See CALENDARIUM.

Maemactes (*Μαιμάκτης*). See ZEUS.

Malus Ocŭlus (*ὀφθαλμὸς βάσκανος*). The superstition of the "evil eye" is mentioned by Aristotle (*Probl.* xx. 34), and seems to have been very general among both the Greeks and Romans, as it is in Italy to-day under the name of *jettatura*. Amulets were worn as charms against it, and Theocritus speaks of "spitting thrice" to avert it (vi. 39). The evil eye was supposed to injure children particularly, but sometimes cattle also; whence Vergil (*Ecl.* iii. 103) says:

> Nescio quis teneros oculus mihi fascinat agnos.

Various amulets were used to avert the influence of the evil eye. The most common of these appears to have been the *phallus* (q. v.), called by the Romans *fascinum*, which was hung round the necks of children (Varr. *L. L.* vii. 97, ed. Müller). Pliny (*H. N.* xix. § 50) also says that *Satyrica signa*, by which he means the phallus, were placed in gardens and on hearths as a protection against the fascinations of the envious; and we learn from Pollux (viii. 118) that blacksmiths were accustomed to place the same figures before their forges with the same design. Sometimes other objects were employed for this purpose. Pisistratus is said to have hung the figure of a kind of grasshopper before the Acropolis as a preservative against fascination (Hesych. s. v. *Καταχήνη*). To point the middle finger (*digitus infamis, digitus impudicus*) at a person was a way of averting his evil influence, and this gesture is still common in Southern Italy, especially Naples, to-day. Cf. Wachsmuth in the Berlin *Athenaeum*, ii. pp. 209 foll.; Jahn, *Ueber den Aberglauben des bösen Blicks* (1855); and on various charms used against the evil eye, see the articles AMULETUM; BULLA; FASCINUM; PHALLUS; and cf. SUPERSTITIO.

O

Ocŭlus Malus. See MALUS OCULUS.

P

Pindărus Thebānus. The name given to the metrical abridgment of the *Iliad* of Homer in Latin, now generally regarded as a youthful production of Silius Italicus. (See SILIUS.) It consists of 1070 hexameters, of which 537 are based upon bks. i.–v. of the *Iliad*. The Catalogue of the Ships is reproduced with much care, but many other more interesting details are omitted. The name HOMĒRUS LATĪNUS is also found in the MSS. Edited by Weytingh (Leyden, 1809); and Plessis (Paris, 1885). See the treatise by Müller (Berlin, 1857).

Poseideon (*Ποσειδεών*). The sixth month of the Attic year, corresponding roughly to our December. See CALENDARIUM.

R

Recipröci Versus. See ECHOĪCI VERSUS.

Reiske, JOHANN JACOB. A celebrated Greek scholar, born at Zörbig, in Saxony, on Christmas Day, 1716. He was educated at Leipzig, where he gave much attention to the study of the Semitic languages, especially Arabic, but also took up medicine, graduating as a physician in 1746. In 1758, after living in great indigence, he secured the rectorship of the Nikolai Gymnasium, an office which he held till his death, August 14th, 1774. As rector he devoted his attention chiefly to Hellenic literature, in which he became a recognized authority. His most important published works are editions of Plutarch (including notes and translation), in 12 vols. (1782); Dionysius of Halicarnassus, 6 vols. (1777); of the Greek orators, in 12 vols. (1770–75); and of Dio Chrysostom, Libanius, Theocritus, and Tyrius Maximus; besides his *Animadversiones in Graecos Auctores*, in 5 vols. (1757–66). Some of these works, as the dates show, were published after his death by his wife, Ernestine Christine Reiske. See his *Autobiography* (1783); and Haupt, *Opuscula*, iii. pp. 137 foll.

Ritschl, FRIEDRICH WILHELM. One of the most eminent classical philologists of modern times, born at Grossvargula, in Thuringia, April 6th, 1806. He studied at Leipzig under Hermann, and from 1826 to 1829 at Halle, where he eagerly availed himself of the lectures and society of Reissig. In 1832 he was called to Breslau as Extraordinary Professor, receiving at the same time a joint directorship of the philological seminary. Two years afterwards he became Ordinary Professor, and spent the winter and spring of 1836–37 on a tour through Italy. In 1839 he accepted an invitation to Bonn as Professor of Classical Literature and Rhetoric. The Prussian government conferred on him the rank of Privy-Councillor in 1856. His first literary works were devoted to the Greek grammarians, as the edition of Thomas Magister (Halle, 1832), the acute and penetrating treatise *De Oro et Orione* (Breslau, 1834), and the richly elucidatory *Die alexandrin. Bibliotheken und die Sammlung der Homerischen Gedichte durch Peisistratus* (Breslau, 1838), sufficiently prove; but his greatest work is his edition of Plautus (Bonn, 1848–53), executed with the richest critical apparatus, and accompanied by comprehensive prolegomena on the Plautine metres. This work secured for him a splendid reputation among his countrymen. Among the numerous productions of Ritschl which may be regarded as preparatory to this *chef-d'œuvre*, the most important is his *Parerga Plautina et Terentiana* (Leipzig, 1848). Subsequently his literary activity took another direction — a systematic treatment of Latin inscriptions, with the view of illustrating the history of the Latin language. His labours in this department were crowned with success, for Ritschl has thrown more light upon the successive phases of the language than almost any other single individual. To this field belong his *Lex Rubria* (Bonn, 1851); *Titulus Mummianus* (Berlin, 1852); *Monumenta Epigraphica Tria* (Berlin, 1852); *Inscriptio Columnae Rostratae* (Berlin, 1852); *Anthologiae Latinae Corollarium* (Berlin, 1853); *De Sepulcro Furiorum* (Berlin, 1853); *De Fictilibus Litteratis*, etc. (Berlin, 1853); *Poesis Saturninae Spicelegium* (Bonn, 1854); *De Titulo Metri-*

co Lambacensi (1855); *De Varronis Hebdomadum Libris* (1856); *In Leges Viselliam, Antoniam, Corneliam Observationes Epigraphicae* (1860); and *Prooemiorum Bonnensium Decas* (1862). Besides these works, Ritschl contributed a large number of learned dissertations to the programmes of the University of Bonn, to the transactions of the Archæological Institute of Rome, and to the *Rheinisches Museum für Philologie*. On the twenty-fifth anniversary of his appointment to Bonn, there began to be published *Symbola Philologorum Bonnensium in Honorem Frid. Ritschelii* (1864–67). He died November 8th, 1876. See L. Müller, *Friedrich Wilhelm Ritschl* (Berlin, 1877); and Ribbeck, *F. W. Ritschl* (Leipzig, 1881).

Ruhnken, DAVID. A classical scholar, born January 2d, 1723, at Stolpe, in Pomerania. He was educated at the Königsberg Gymnasium and at Wittenberg University, where he spent two years in the assiduous study of ancient literature, history, and jurisprudence. Afterwards he went to Leyden, where for six years he prosecuted his classical studies under the guidance of Hemsterhuis, and bestowed particular attention on the Greek writers. He planned a new edition of Plato, collected the scholia of that author, and published an edition of Timaeus's *Lexicon Vocum Platonicarum* (Leyden, 1754; reëdited in a much improved form, 1833). He went in 1755 to Paris, where, for a whole year, he examined the MSS. of the Royal Library and of the Library of Saint-Germain. Hemsterhuis had him appointed as *lector* (reader) in the University of Leyden, in which capacity he was the assistant and colleague of his great master. In October, 1757, he introduced his series of lectures by a discourse, *De Graecia Artium et Doctrinarum Inventrice* (Leyden, 1757). For four years he discharged the duties of his office with skill and success, and in 1761 succeeded Oudendorp in the chair of Eloquence and History. In 1774 he succeeded Gronovius as librarian to the University, which he enriched with a multitude of valuable books and MSS. He died May 14th, 1798, and in gratitude to his memory the city of Leyden purchased his great library, and gave his widow an annuity of 500 florins.

Ruhnken will long be remembered as one of the best scholars and critics of the eighteenth century. His fine taste and sagacity, aided by an astonishing memory and vast learning, enabled him to illustrate the authors of antiquity with wonderful success. He was also a brilliant lecturer, for which he was, no doubt, indebted to the extreme lucidity and grace of his Latin style. In addition to the works already noted, he published editions of vol. ii. of Alberti's *Hesychius;* of Rutilius Lupus; of Velleius Paterculus; of Muretus; of the Homeric Hymns; and wrote a history of the Greek orators (1768; last ed. Leipzig, 1841). He contributed to the editions of the classics by Ernesti and Schweighäuser. His life has been written by his famous pupil Wyttenbach (Leyden, 1799; new ed. Leipzig, 1824; Freiburg, 1846).

S

Sal Attĭcum. See ACETUM.

Schliemann, HEINRICH. An archæologist born at Neubuckow, in Germany, January 6th, 1822. He was the son of a Lutheran pastor, who inspired him at an early age with an enthusiastic admiration of the heroes of ancient Greece. His mother died when he was nine years old, and he then lived for two years with his uncle at Kalkhorst. At fourteen he was compelled to enter a grocer's shop as a clerk at Fürstenberg to support himself. He remained in that humble position for over five years, when he obtained a position as clerk to an Amsterdam firm, and in 1846 was sent to St. Petersburg by the firm as their local agent; and a year later established there a business of his own. In the course of a busy life he travelled extensively in Europe and America, and acquired many languages. After he had amassed wealth he commenced his archæological investigations and excavations in the East. In 1874 he obtained permission from the Greek government to excavate Mycenae, where, in 1877, he made the marvellous discovery of the five royal tombs which local tradition had pointed out to Pausanius as those of Agamemnon and his companions, who had been murdered by Aegisthus. His later excavations are well known. He published *Ithaka, der Peloponnes und Troja; Trojanische Alterthümer* (1874); *Reise in der Troas* (1881); *Mykenae* (1877); *Orchomenos* (1881); *Troja* (1883); *Tiryns* (1886); and *Bericht über die Ausgrabungen ins Troja im Jahre 1890* (1891). He died December 27th, 1890. See Schuchardt's *Schliemann's Excavations* (Eng. trans., 1891).

Scirophorion (*Σκιροφοριών*). The twelfth month in the Attic year, corresponding roughly to our June. See CALENDARIUM.

Septimontium. The fortified group of the seven hills at Rome. See ROMA.

Septizonium. A particular kind of edifice, of great magnificence, consisting of seven stories of columns, one above the other, supporting seven distinct entablatures or zones, from which it received the name. Two such structures are specially recorded in the city of Rome—one in the Twelfth Region, which existed before the time of the emperor Titus (Suet. *Tit.* 2; Ammian. xv. 6, 3); and the other in the Tenth Region, under the Palatine Hill, and near the Circus Maximus, which was built by Septimius Severus (Spart. *Sev.* 19). Three stories of this last structure remained standing during the pontificate of Sixtus V., but were taken down by him for the purpose of employing the columns in building the Vatican. See Middleton, *Remains of Ancient Rome*, i. 218; 219 (note).

Spanish Period of Latinity. A name given to the first century A.D., in which period so many of the leading writers of Latin literature were men of Spanish birth, the most conspicuous being the younger Seneca, Quintilian, Lucan, and Martial.

Specŭla (*σκοπιά, σκοπή*). A watch-tower whence signals were transmitted, and where they were received by the guards stationed there.

T

Tetrapŏlis (*Τετράπολις*). One of the twelve districts into which Attica was divided before the time of Theseus. See MARATHON; THESEUS.

V

Viermänner Scholien. "Scholia of the Four Men." A name given by German scholars to an epitome, made about 200 A.D., of four works relating to the *Iliad* of Homer, and written by four men (Didymus, Aristonicus, Herodian, and Nicanor). See HOMERUS, p. 838.

GREEK AND ROMAN TABLES OF WEIGHTS AND MEASURES.

TABLE I.

GRECIAN MEASURES OF LENGTH. (Attic Standard.)

I. SMALLER MEASURES.										Decimals of a Metre.	Decimals of a Foot.	Feet.	Inches.
Δάκτυλος										.0185	.0607	..	.7281
2	Κόνδυλος									.037	.1213	..	1.4562
4	2	Παλαστή, Δῶρον, Δοχμή, or Δακτυλοδοχμή								.074	.2427	..	2.9124
8	4	2	Διχάς, or Λιχάς							.148	.4852	..	5.8248
11	$5\frac{1}{2}$	$2\frac{3}{4}$	$1\frac{3}{8}$	Ὀρθοδῶρον						.203	.6673	..	8.0091
12	6	3	$1\frac{1}{2}$	$1\frac{1}{11}$	Σπιθαμή					.222	.7281	..	8.7372
16	8	4	2	$1\frac{6}{11}$	$1\frac{1}{8}$	ΠΟΥ΄Σ				.296	.9708	..	11.6496
18	9	$4\frac{1}{2}$	$2\frac{1}{4}$	$1\frac{7}{11}$	$1\frac{1}{2}$	$1\frac{1}{8}$	Πυγμή			.333	1.0921	1	1.1058
20	10	5	$2\frac{1}{2}$	$1\frac{9}{11}$	$1\frac{2}{5}$	$1\frac{1}{4}$	$1\frac{1}{5}$	Πυγών		.370	1.2135	1	2.562
24	12	6	3	$2\frac{2}{11}$	2	$1\frac{1}{3}$	$1\frac{1}{4}$	$1\frac{1}{6}$	ΠΗ῀ΧΥΣ	.444	1.4562	1	5.4744
72	36	18	9	$6\frac{6}{11}$	6	$4\frac{1}{2}$	4	$3\frac{3}{5}$	3	Ξύλον	1.332	4.3686	4	4.4232
96	48	24	12	$8\frac{8}{11}$	8	6	$5\frac{1}{3}$	$4\frac{4}{5}$	4	$1\frac{1}{3}$	ΟΡΓΥΙΑ΄.	1.776	5.8248	5	9.8976

Note.—For other Standards, see Notes to Table II.

TABLE II.

ROMAN MEASURES OF LENGTH.

I. SMALLER MEASURES.						Decimals of a Metre	Decimals of a Foot	Feet	Inches.
Digitus						.0185	.060675	..	.7281
$1\frac{1}{3}$	Uncia or Pollex					.0247	.0809	..	.9708
4	3	Palmus				.074	.2427	..	2.9124
12	9	3	Palmus Maior (of late times)			.222	.7281	..	8.7372
16	12	4	$1\frac{1}{3}$	Pes		.296	.9708	..	11.6496
20	15	5	$1\frac{2}{3}$	$1\frac{1}{4}$	Palmipes	.370	1.2135	1	2.562
24	18	6	2	$1\frac{1}{2}$	$1\frac{1}{5}$	Cubitus	.444	1.4562	1	5.4744

NOTES TO TABLES I. AND II.

A metre is 39.37 English inches; an English foot is .3048 metre.

It is not thought necessary to give the whole scale of the Uncial divisions of the foot. They can easily be calculated from the Uncia.

Other Standards.—The *relations* of the measures to one another were always, with hardly any exception, those above given; but the *standards* varied in different places and at different times. Thus the Attic ποῦς being .296 m., the Aeginetan was .333 m., the Olympic .3205 m., the Philetaerean 333 m., the Ionic .350 m., the Phrygian .2775 m.

In the West, though the Roman foot was .296 m., the same as the Attic, the older Italian foot was only .275 m., and the Drusian foot, used in Gaul and Germany, was .333 m.

In Egypt, under the Pharaohs, the Royal ell was .525 m., the smaller ell .425 m.; under the Ptolemies the Royal ell was .533 m., the greater foot .355 m., and the smaller foot .303 m.

The Great Babylonian ell was .550 m., the Royal or Persian ell .495 m., the Phœnician ell .4435 m.

Compared with one another, the Attic, Roman, and Phœnician feet are the same; the Aeginetan, Philetaerean, and Drusian are the same; the Italian and Phrygian are the same; the Ionic and Royal (or Greater) Egyptian are the same—either exactly or very nearly indeed.

TABLE III.

GRECIAN MEASURES OF LENGTH. (Attic Standard.)

II. LARGER MEASURES.—LAND AND ITINERARY.										Decimals of a Metre	Decimals of a Mile	Miles.	Feet.	Inches.
ΠΟΥ΄Σ										0.296	.0001838	..	..	11.6496
$1\frac{1}{2}$	ΠΗ῀ΧΥΣ									0.444	.0002757	..	1	5.4744
$2\frac{1}{2}$	$1\frac{2}{3}$	Βῆμα								0.739	.0004596	..	2	5.124
6	4	$2\frac{2}{5}$	ΟΡΓΥΙΑ΄							1.774	.001103	..	5	9.8976
10	$6\frac{2}{3}$	4	$1\frac{2}{3}$	Κάλαμος, Ἄκαινα, or Δεκάπους						2.957	.001838	..	9	8.496
100	$66\frac{2}{3}$	40	$16\frac{2}{3}$	10	Πλέθρον					29.57	.01838	..	97	0.96
600	400	240	100	60	6	ΣΤΑ΄ΔΙΟΝ or ΣΤΑ΄ΔΙΟΣ				177.4	.11028	..	582	5.76
1200	800	480	200	120	12	2	Δίαυλος			354.8	.22056	..	1164	11.52
2400	1600	960	400	240	24	4	2	Ἱππικόν			.44112	..	2329	11.04
18,000	12,000	7200	3000	1800	180	30	15	$7\frac{1}{2}$	Παρασάγγης		3.3084	3	1634	4.8
36,000	24,000	14,400	6000	3600	360	60	30	15	2	Σχοῖνος	6.6168	6	3268	9.6

Note.—The σχοῖνος, above given, is that of Herodotus, but the measure seems to have varied in different reaches of the Nile, and the Romans reckoned it about 4 Roman miles. On the parasang, see note to next Table.

TABLE IV.

ROMAN MEASURES OF LENGTH.

II. LARGER MEASURES.—LAND AND ITINERARY.							Decimals of a Metre.	Decimals of a Mile.	Miles.	Feet.	Inches.
Pes							0.296	.0001838	..	..	11.6496
1½	Cubitus						0.444	.0002757	..	1	5.4744
2½	1⅔	Gradus, or Pes Sestertius					0.740	.0004596	..	2	5.124
5	3⅓	2	Passus				1.48	.0009193	..	4	10.248
10	6⅔	4	2	Decempeda, or Pertica			2.96	.001838	..	9	8.496
120	80	48	24	12	Actus (in length)		35.52	.2206	..	116	5.952
5000	3333⅓	2000	1000	500	41⅔	Mille Passuum	1480	.9193	..	4854	..

NOTES TO TABLES III. AND IV.

N.B.—The Roman mile only differs from the English by less than $^1/_{10}$.

Ancient Road Measures.—As in Tables I. and II., so here, the relations of the measures to one another are correctly given, but the standards varied. It is proper, therefore, to add the length of various road measures according to the standards in use in different parts of the ancient world.

The Attic *stadium* being 177 m., the Olympic was 192 m., the Ptolemaic 185 m., the Ionic 210 m. (A metre is 39.37 English inches.)

The Romans, using round numbers, reckoned 8 stadia to the mile. According to this relation, the Roman stadium would be 185 m., and the old Italian 165 m.

Similarly the Greeks reckoned 30 stadia to the parasang, but the parasang was really 30 *Persian* stadia, which were longer than the Greek, being 196.8 m. The true parasang was therefore 5904 m., or 3 miles 1180 yards. (So Oppert, but Hultsch reckons it as 5670 m.)

The Gallic *leuga* was 2220 m.; the German *rasta* 4440 m.

TABLE V.

GRECIAN MEASURES OF SURFACE. (Attic Standard.)

ORDINARY LAND MEASURES.			Square Metres.	Square Feet.	Perches.	Square Feet.
ΠΟΥ΄Σ *τετράγωνος* (Square Foot)			0.087	.94245	..	.94245
100	*Ἄκαινα* (Square of the *κάλαμος*)		8.74	94.245	..	94.245
10,000	100	ΠΛΕ΄ΘΡΟΝ	8740	9424.5	34	167.5

NOTES.

The English acre being 160 perches or 4840 sq. yds., the *πλέθρον* is obviously less than ¼ of an acre.

The Egyptian *ἄρουρα* (Herod. ii. 168) was a square of 50 Egyptian ells each way. The ell being taken at 0.524 m., or about 21 English inches, this gives a value of about 820 sq. yds. for the *ἄρουρα*.

TABLE VI.

ROMAN MEASURES OF SURFACE.

ORDINARY LAND MEASURES.									Square Feet.	Acres.	Roods.	Perches.	Square Feet.
Pes Quadratus									.94245	..	..	..	.9425
100	Scrupulum, or Decempeda Quadrata*								94.245	..	..	..	94.245
480	4⅘	Actus Simplex							452.377	..	..	1	180.127
2400	24	5	Uncia†						2261.89	..	..	8	83.885
3600	36	7½	1½	Clima					3392.83	..	..	12	125.83
14,400	144	30	6	4	Actus Quadratus				13,571.318	..	1	9	231.07
28,800	288	60	12	8	2	Iugerum			27,142.636	..	2	19	189.89‡
57,600	576	120	24	16	4	2	Heredium		54,285.272	1	0	39	107.53
5,760,000	57,600	12,000	2400	1600	400	200	100	Centuria.	5,428,527.2	124	2	19	135.25
23,040,000	230,400	48,000	9600	6400	1600	800	400	4 Saltus	21,714,108.8	498	1	37	268.75

* This was the square of the *pertica* or standard 10-foot measuring-rod.

† The *As* to which this *Uncia* and the above *Scrupulum* belong is the *Iugerum*. The other uncial divisions of the *Iugerum* may easily be calculated from the *Uncia*. The *Semissis* is, of course, the *Actus Quadratus*.

‡ i. e. almost ⅘ of an acre. The Italian *Versus* was about $^3/_{10}$ of a *Iugerum*, or nearly 18 perches.

TABLE VII.

GRECIAN MEASURES OF CAPACITY.

TABLE XI.

N.B.—One pound avoirdupois is exactly 7000 grains; one ounce avoirdupois is 437½ grains. 1 gramme is 15.43234 grains.

(A.) Aeginetan and Attic Commercial Weights.

	Grammes.	Grains.
Obol	1.05	16
6 Drachm	6.30	97
12 2 Didrachm (*στατήρ*)	12.60	195
600 100 50 Mina	630	9,750
36,000 6000 3000 60 Talent	37,800	585,000

(B.) Euboic Weights.

	Grammes.	Grains.
Drachm	4.20	65
2 Stater	8.40	130
100 50 Mina	420	6,500
6000 3000 60 Talent	25,200	390,000

N.B.—Just as the Euboic drachm is ⅘ of the Aeginetan stater, so the Corinthian drachm is ⅘ of the Euboic stater.

(C.) Attic Weights (Solonian Coinage).

	Grammes.	Grains.
Drachm	4.40	67.5
2 Didrachm or Stater.	8.80	135
100 50 Mina	440	6,750
6000 3000 60 Talent	26,400	405,000

N.B.—It will be seen that the ratio of the Aeginetan stater (195 gr.) to the Attic (135 gr.) is a good deal larger than 100:73 or 138:100 or 83⅓:60, which are the ratios ascribed to Solon's reduction of the Attic coinage.

(D.) Various Oriental Weights.

Royal 8vo, over 1600 pages, more than 1500 Illustrations. One volume, Cloth. Half Leather. Two Volumes, Cloth. Half Leather.

It is now some fifty years since Dr. Charles Anthon prepared his well-known books of reference, the *Classical Dictionary* and the *Dictionary of Greek and Roman Antiquities*. The universal employment of these two works by several generations of students and scholars affords striking testimony to their practical value. But meanwhile, archæological research has been making steady and exceptional progress. A wealth of new material has been presented for scientific investigation. The work of discovery, pursued with increasing intelligence and enthusiasm, has brought to light fresh treasures of ancient art and ornament, and has made plain and in every way intelligible much that before was doubtful and obscure. The discoveries of Schliemann, Dörpfeld, Flinders Petrie, Lanciani, and others would alone have made the past three decades a new and brilliant era in the history of classical archæology, even had these discoveries not been supplemented and illustrated by the labors of scholars less known, perhaps, but not less able. Epigraphy, too, in the last fifty years has experienced a marked development. It would be easy to name certain inscriptions whose discovery has given an entirely new meaning to the investigation of ancient life and manners, and especially to the study of the Greek and Roman law. Moreover, the literary productiveness of the period in its relation to the study of antiquity has been wonderfully rich in giving a lucid and scientific exposition of these discoveries, and in deducing from them the facts which they embody or suggest. Finally, the whole sphere of classical study has been greatly enlarged, and the standard of scholarship raised, so that to-day even the undergraduate is expected to possess a fund of collateral information regarding the sources of

texts, the history of classical philology, the *apparatus criticus* of the authors read, and many other matters that formerly were left untouched.

It is evident, therefore, that the time has come for the preparation of a work that shall revise the statements and theories of earlier investigators in the light of the scholarship of the present day. Such a work the publishers desire to announce as ready; and in so doing, they would call attention to those features which give it a distinctive character.

I. SCOPE. The Dictionary presents, within the limits of a single volume of some 1600 pages and under a single alphabet, the subjects that have usually been treated of in separate works. Its topics comprise:

(*a*) GREEK AND ROMAN ANTIQUITIES, in the conventional sense of the word, including subjects falling under the general heads of Amusements, Architecture, Art, Costume, Domestic Life, Law, Music, Numismatics, Philosophy, and Religion.

(*b*) BIOGRAPHY, including not only the personages of Ancient History but also the great classical scholars, archæologists, and philologists from the Renaissance to the present day, such as Bentley, Bergk, Bopp, Casaubon, Corssen, the Dindorfs, Du Cange, Erasmus, Fabretti, Facciolati, Forcellini, the Gronovii, Halm, Lachmann, Lambinus, Munro, Muretus, Niebuhr, Orelli, Poggio, Politian, Porson, Ritschl, the Scaligers, Turnebus, Valckenaer, Winckelmann, Wolf, Zumpt, and many others.

(*c*) GEOGRAPHY AND HISTORY. The Geographical and Topographical articles will contain notices of the most recent researches, such as those of Newton, Fellows, Carapanos, Wood, Homolle, Schliemann, Dörpfeld, Brugsch, Lanciani, and others, the important articles being illustrated by topographical plans and diagrams. The Historical articles will equally embody the results of the latest investigations.

(*d*) LITERATURE. The articles that treat of the ancient literatures will be especially helpful to the student. Such titles as "Anthology," "Cento," "Colometry," "Epigramma," "Echoïci Versus," "Epos," "Homeric Question," "Graffiti," "Grammatica," "Cyclici Poetæ," "City Editions of Homer," "Lexicon," "Rhetorica," "Poetæ Novelli," "Novels and Romances," sufficiently indicate the variety of information afforded. Moreover, the great works of classical literature will be given under separate titles, with information as to the latest and best editions. The principal topics are also treated from the standpoint of Comparative Literature.

(*e*) MYTHOLOGY. The conclusions of the latest schools of Comparative Mythology are noted in the leading mythological articles.

(*f*) COLLATERAL INFORMATION. A great deal of space will be devoted to topics that are of the utmost interest to the student, and that meet him everywhere in the way of allusion, but that no single work has yet systematically collected for separate treatment. The following titles, taken at random, will serve to illustrate this feature of the Dictionary: "Abbreviations," "African Period of Latinity," "Alliteration," "Alphabet," "Borghese Gladiator," "Boustrophedon," "Chorizontes," "Caricature," "Cista Ficoroniana," "Choragic Monument," "Cuneiform," "Delphin Edition," "Dialects," "Dittography," "Dodwell Vase," "Duenos Inscription," "Epigraphy," "Formello Alphabet," "Glossa," "Jests," "Monumentum Ancyranum," "Palæography," "Palimpsest," "Pronunciation of Greek," "Pronunciation of Latin," "Rhotacism," "Schema Pindaricum," "Sermo Plebeius," "Tabula Bantina," "Tabulae Iguvinae," "Textual Criticism," "Verner's Law," and many other topics with which an acquaintance on the part of the student is too often presupposed.

(*g*) BIBLIOGRAPHY. Each important article gives a carefully selected list of the best and most recent works relating to the subject, thus directing the student to a fuller course of supplementary reading in English, German, French, and Italian.

II. ILLUSTRATIONS AND MAPS. The text is explained by more than 1500 illustrations, partly from the antique and partly from restorations by Bühlmann, Hoffmann, Wagner, Benvenuti, and others. Many are from original photographs, and have never before been published. Maps and diagrams, taken from the most approved sources, are also freely introduced.

III. CONVENIENCE. It is scarcely necessary to do more than mention the great gain in time and comfort to the student in having before him in a single volume, and arranged under a single alphabet, the material which hitherto he has been obliged to seek in several separate and expensive volumes. Important subjects relating to Antiquities are given not merely under their Greek and Latin titles, but under their English names as well, so that one who wishes to find a particular article and cannot recall the Greek or Latin name, can turn to it in English, and there find the reference to the proper title—a plan which does away with the necessity of a set of cumbersome indexes.

This Dictionary is in reality a condensed Classical Encyclopædia, embodying in a concise and convenient form the principal features of Pauly's great work in German.
